- General Notes**
1. Site plan prepared using information provided on October 1, 2025.
 2. All drawings are property of Landscape Architect.
 3. Site clean up is incidental to the work.
 4. All landscape areas are to be sloped to ensure positive drainage away from structures, unless noted otherwise.
 5. All drawings are metric unless otherwise noted.
 6. Refer to related disciplines as indicated on plans where applicable.
 7. Disturbance outside of the Property Line to be repaired to the satisfaction of the Landscape Architect.

- Demolition Notes**
1. Contractor is responsible to install all construction fencing indicating the limit of disturbance/ construction before commencing any demolition activities on site.
 2. Contractor shall install tree protection fencing per City of Calgary Tree Protection Requirements. Tree Protection shall be approved on-site by Urban Forestry before demolition activities commence.
 3. Contractor shall remove and dispose of items as indicated on drawings.
 4. Contractor shall legally dispose of all waste off site at an approved waste disposal site.
 5. Contractor is responsible for confirming exact extent and quantities of removals and demolition of site elements.
 6. Confirm with City for the disposal, refurbishment, and removal to City Operations lot for any site items not captured on this plan before final removal.
 7. Any exposed roots to be immediately root pruned and covered with soil.
 8. Contractor shall make good any damages outside of the limit of disturbance to pre disturbance condition as approved by the Landscape Architect.
 9. Contractor shall rehabilitate construction staging area to pre-construction condition.

5. All drawings are metric unless otherwise noted.
6. Refer to related disciplines as indicated on plans where applicable.
7. Disturbance outside of the Property Line to be repaired to the satisfaction of the Landscape Architect.

Tree Protection Notes

1. Tree Protection shall be approved on-site by the City of Calgary before any construction activities commence.
2. Tree protection barriers must be 1.2 meters high and highly visible.
3. Existing trees must be protected at a distance of 4 m from the trunk or to the full extent of the drip line (canopy)—whichever is greater. This area shall be designated as the minimum Tree Protection Zone (TPZ).
4. Barriers can consist of either:
 - 4.1. A solid wood frame with orange snow fencing stapled to the outside
 - 4.2. Metal fencing
5. Call Alberta Utility Safety Partners at 1-800-242-3447 before installing any fencing
6. No work is to be carried out inside of the tree protection zone.
7. Protected trees are to be watered at least once a week during construction.
8. Site construction fencing to serve as tree protection fencing along south property line.
9. Attach signage reading: "TREE PROTECTION ZONE - NO ENTRY OR STORAGE".
10. The Contractor shall be responsible for ensuring all site personnel are aware of tree protection requirements before works commence.
11. All works within the TPZ to be carried out under qualified arborist supervision.
12. Arborist to inspect and document root protection measures before, during, and after construction.
13. Immediately report any damage to roots, trunk, or canopy to the arborist for assessment and remedial action.
14. No storage of materials, fuel, chemicals, or waste within the TPZ.
15. Avoid trenching within the TPZ. Where unavoidable, employ non-destructive excavation methods e.g., air spade, hand digging, or hydro excavation.
16. Exposed roots >30 mm diameter must be retained where possible and immediately covered with damp soil.
17. Cut roots cleanly with sterilized, sharp tools under arborist supervision.
18. If roots are damaged, implement immediate remedial pruning and soil treatments as directed by the arborist (e.g., mulching, watering, or de-compaction).
19. Backfill trenches as soon as practicable with friable soil and water thoroughly.
20. Maintain adequate soil moisture; irrigate trees regularly during prolonged dry periods or as directed by the arborist.
21. The arborist shall monitor retained trees for a period of 12 months following completion of construction, assessing health, structure, and stability. Supplemental watering and maintenance (e.g., mulching, soil aeration, or pest management) shall be carried out as required during this period to promote recovery and ensure tree health.
