Subject : **Phase I Environmental site assessment (ESA)**
Property located at 1660 Merivale Road, Nepean, Ottawa, ON
Reference Number : HARN1660P1

Mr. Wilkins,

We are pleased to present this Phase I Environmental Site Assessment report, conducted for the property located at 1660 Merivale Road, Nepean, Ottawa, Ontario.

We trust this report will meet your expectations. Should you have any questions or require further information, please feel free to contact our team who will be more than pleased to assist you.

Sincerely,

Mathieu Bélisle, P. Eng., M. Sc.A.
Project Manager

This document is the property of Groupe C. Laganière (1995) inc. and is legally protected. It is intended solely for the purpose for which it was created. Any reproduction or adaptation, in whole or in part, is strictly prohibited without the prior written permission of Groupe C. Laganière (1995) inc. and its Client. If tests have been conducted, the results are valid only for the samples described in this report. All subcontractors of Groupe C. Laganière (1995) inc. involved in on-site or laboratory work are qualified according to the procurement procedures detailed in our quality manual. For any additional information, please contact your assigned project manager.

EXECUTIVE SUMMARY

The property under study is currently occupied by a gas station with a convenience store and a car wash. As part of a renovation project to be submitted to the City, Phase I and II Environmental Site Assessments (ESAs) are required. The intent of these assessments is not to register a Record of Site Condition.

Groupe C. Laganière (1995) inc. (hereafter "GCL") has been commissioned by Harnois Groupe Immobilier inc. (hereafter "Harnois"), the owner of the Site, to conduct a Phase I ESA on the property located at 1660, Merivale Road, Nepean, Ottawa, Ontario. This report is in accordance with the service proposal dated June 6, 2024. (Reference Number: 2024-126-CE-REV2).

The goal of the mandate is to identify potential or actual contamination risks at the site due to current, past, and/or neighboring activities.

The general information obtained from this study is presented in the table below:

Site Address	1660 Merivale Road, Nepean, Ottawa, Ontario
Geographical Coordinates of the Land	Lat. : 45,343350 Long.: -75,729600
Lot Number	Part of Lot 30, concession 1 of Rideau Front
Land Area (m^2)	1 968,10 m^2
Landowner	Harnois Groupe immobilier Inc.
Land Occupants	+ Commercial use: • Proxy (convenience store with car wash) • Esso Service-Station
Former land occupants	+ Commercial use: • Convenience store since 1984 with or without a restaurant • Car wash since 1984 • Gas station since 1968 • Mechanical garage from 1968 to 1984
Current Use	Commercial
Projected Future Use	Commercial
Municipal Zoning	AM10 (Arterial Mainstreet Zone)
Permitted Usage	+ Commercial + Residentials
Neighbours	+ North: Viewmount Drive followed by a parking and a mall + South: Residential buildings + East: Merivale Road followed by a school + West: Glenmanor Drive followed by residential buildings
General Site Description	+ Two buildings: a convenience store and a car wash

	+ Convenience store: one-story building without a basement, featuring sales, office and storage areas as well as a cold room and wash room; + Car wash building: one-story without a basement, with a washing area and mechanical room and storage room
Topography and Surface	+ Light descending slope to the southwest, more pronounced toward the south of the car wash + Convenience store (95 m²): concrete slab primarily, with a ceramic cover, generally in good condition + Car wash (110 m^2): concrete slab + Pump island: concrete slab, generally in good condition + Circulation area: asphalt pavement in poor condition, with numerous cracks + Grass and tree cover along the west and south limits of the site, in the northeast corner, site entrances and northwest of the car wash
Potential Contamination Sources	+ Underground storage tanks in the northeast corner since 1984, possibly since 1968 at this location + Pump islands north of the store since 1984 + Underground pipes between the underground tanks and the pump islands + Former pump island north and east of the store from 1968 to 1984 + Former mechanical garage west of the store from 1968 to 1984 + Car wash in the south section since 1984
Real Contamination identified	+ Groundwater : BTEX, PH F1-F4, Ha and Pb contamination in some wells since 2011, mostly on the east side of the site
Potential Receptors and Exposure Pathways	+ Sewer on site and under neighboring streets; + Buildings on site and south neighboring buildings
Selected Standards	+ On. Reg 153/04, Table 3 Full Depth Generic Site Condition Standards in a Non-Potable Ground Water Condition / Fine textured soils
Geology	+ Sand and gravel backfill material up to 1 or 2 meters thick + Brown to grey silt till up to 3 to 5 m BGS + Limestone bedrock at depths of 2,7 to more than 5,49 m BGS
Hydrogeology	+ Groundwater flows to the southwest + Groundwater level is around the interface of the bedrock and the surface soils or in the bedrock, at depths varying between 2.3 m and 5.0 m BGS

Potential Contamination Substances	+ Gasoline (underground tanks, pump islands, underground pipes, former pump islands, former mechanical garage, car wash): BTEX, PH F1 to F4, Ha, Pb + Oils, used oils, lubricants (former mechanical garage, car wash): PAH's, MTX
Potentiel Light Non-Aqueous phase liquids (LNAPL)	+ Gasoline: BTEX, PH F1 to F4

Following a thorough analysis of the information gathered, the following environmental risks were identified:

Risk #	Risk Identification	Area (m^2)	Analytical Parameters
1	Underground storage tanks in the northeast corner of the site probably since the 1960s	150	BTEX, PH F1 to F4, Ha, Pb
2	Pump islands north of the store since 1984	250	BTEX, PH F1 to F4, Ha, Pb
3	Underground pipes connecting the pump islands and the underground tanks	200	BTEX, PH F1 to F4, Ha, Pb
4	Former pump islands north and east of the store from the 1960s to 1984	2x 50	BTEX, PH F1 to F4, Ha, Pb
5	Former mechanical garage west of the store from the 1960s to 1984	175	BTEX, PH F1 to F4, Ha, PAH, MTX
6	Car wash in the south area since 1984	125	BTEX, PH F1 to F4, Ha, PAH, MTX
7	BTEX, PH F1-F4, Ha and locally Pb contamination in groundwater	-	BTEX, PH F1-F4, Ha and Pb

Therefore, a Phase II ESA is recommended for the identified risk areas.

1. INTRODUCTION

1.1 Context

The property is occupied by a gas station with a convenience store and a car wash. As part of a project to be submitted to the City, the conduction of Phase I and II Environmental Site Assessments (ESAs) are required. These assessments are not intended to register a Record of Site Condition.

1.2 Mandate and Objective

Groupe C. Laganière (1995) inc. (hereafter "GCL") has been commissioned by Harnois Groupe Immobilier inc. (hereafter "Harnois"), the owner of the site, to conduct a Phase I ESA on the property located at 1660, Merivale Road, Nepean, Ottawa, Ontario (hereafter "the Site"). This is in accordance with the service proposal dated June 6, 2024, (Reference Number: 2024-126-CE-REV2).

The goal of the mandate is to identify potential or actual contamination risks at the site due to current, past, and/or neighboring activities.

This Phase I ESA was conducted following the standard methodologies outlined in Ontario Regulation 153/04 (O.Reg. 153/04)– Record of Site Condition – Part XV.I of the Environmental Protection Act (EPA) and in the Canadian Standard CSA-Z768-01 – Phase I Environmental Site Assessment.

1.3 Site Description

Table 1 below provides a general description of the site. The general location of the site is illustrated in Figure 1 of Appendix 2. For the purposes of this study, Merivale Road is oriented in a north-south axis.

Table 1 : Description of the site

Site Address	1660 Merivale Road, Nepean, Ottawa, Ontario
Geographical Coordinates of the Land	Lat. : 45,343350 Long.: -75,729600
Lot number	Part of Lot 30, Concession 1 of Rideau Front
Land Area (m^2)	1 968,10 m^2
Landowner	Harnois Groupe immobilier Inc.
Land Occupants	+ Commercial: • Proxy • Esso Service-Station
Current Use	+ Commercial
Projected Future Use	+ Commercial
Municipal Zoning	AM10 (Arterial Mainstreet Zone)
Permitted Usage	+ Commercial + Residential
Site Description	+ Convenience store in the middle + Car wash in the south section

	+ Gas pump to the north of the store + Underground storage tanks at the northeast corner + Paved parking and circulation areas around the buildings
Building Construction Date	1984
Building Modification Date	No major modification
Current and Previous Heating Systems	Electric and natural gas
Drinking Water Supply	Aqueduct
Wastewater Treatment System	Municipal sewer

1.4 Adjacent Properties

The Site is located at the southwest corner of the intersection of Merivale Road and Viewmont Drive. It is surrounded by a mix of commercial, residential and public sites. The adjacent properties are as follows :

- North : Viewmount drive followed by a parking lot and a commercial mall;
- South : Residential buildings;
- East : Merivale Road followed by a school;
- West: Glenmanor Drive, followed by residential buildings.

The zoning by-laws for the adjacent properties are as follows:

- Residential to the west (R2M) and southwest (R1FF);
- Mixt commercial and residential to the southeast (AM10[2205]) and to the north (AM10[2676]);
- Institutional to the east (I1A[409]).

2. SCOPE OF THE INVESTIGATION

The objective of the mandate is to identify potential or actual contamination risks at the site due to current, past, and/or neighboring activities.

The scope of work of this Phase I ESA included:

- Reviewing the site's historical occupancy using relevant aerial photographs, directories, land title deeds and other sources;
- Reviewing geological and hydrogeological maps and well records, if available;
- Reviewing of the EcoLog Environmental Risk Information Services Ltd (ERIS) report for the site and neighbouring properties;
- Reviewing environmental records owned by different public institutions;
- Reviewing available environmental reports for the site;
- Conducting a site inspection and interviews with representatives;
- Reviewing the current use of neighbouring properties.

This Phase I ESA did not include any sampling, intrusive inspection or analysis of soil, groundwater or any other material.

GCL does not guarantee the completeness or accuracy of the information obtained. Appendix 9 outlines the limitations and general conditions related to the completed study.

3. RECORDS REVIEW

3.1. General

3.1.1. Phase I Study Area Determination

The site is located southwest of the intersection of Merivale Road and Viewmount Drive. The Phase I ESA included a review of the properties within a 250-meter radius of the site. This radius was used to determine if the neighboring properties may have impacted the soil and groundwater environmental quality at the site.

The neighboring properties are currently occupied by malls to the north and northeast, a high school to the east and residential properties to the west and south. Figure 1 in Appendix 1 illustrates the different uses of the neighboring properties within this radius.

3.1.2. First Developed Use Determination

Based on the information gathered, including title deeds, aerial photographs, historical plans and previous studies, the site was vacant and likely agricultural until its acquisition by Imperial Oil Limited Limited, a petroleum company, in 1956. The first building on the site was constructed in the 1960s, likely around 1968.

3.1.3. Fire Insurance Plans and Documents

An information request was sent on June 14, 2024 to *Opta, Intelligence informationnelle inc.*, part of SCM Gestion des Risques (RMS) and SCMTech de SCM Services d'Assurances. On June 20, 2024, Opta responded that a single inspection report, dated 1977, was available, but no fire insurance plan could be found.

This inspection report was deemed relevant and therefore was ordered from *Opta*. A copy of this document is provided in Appendix 6. The main information from this report is summarized in Table 2 below.

Table 2 : Insurance Inspection Report

Date	Building	Heating system	Site Occupation	Neighbour Occupation
Nov. 1977	+ 30'x60' + Concrete floor + Construction year not specified	+ Suspended oil-fired heaters + Fuel oil tank type and location not specified	+ Auto repair garage	+ Not specified

3.1.4. Chain of Titles

Research of deeds of sale and title history was completed by ERIS on July 14, 2024. This research aimed to identify past site owners, types of transactions, changes in cadastral designation and any contamination or restriction of use notices. It also sought to determine if the site was owned or occupied by industrial or heavy commercial entities that could have contaminated the site. The title search traced ownership back to 1916 and is presented in Appendix 8.

According to this title search, the property is located in part of Lot 30, Concession 1 of Rideau Front. No changes in the cadastral designation was noted. The site has been owned by petroleum companies from 1956 to the present. The ownership history is as follows:

- From 1956 to 2022: *Imperial Oil Limited Limited*
- From 2022 to present : *Harnois Groupe Immobilier Inc*.

No leases, contamination, or restriction of use notices were identified by this title search.

3.1.5. City Directories

City directories list the residents or companies occupying the territory by address. For the Nepean area, directories are available from the 1960s to the 2020s. ERIS searched these directories to obtain information about the site.

According to this search, the site has been used as a gas station since 1971:

- 1971: Beckstead service center service station
- 1976 to 2012: Esso
- 2017 and 2021: Canadian Tire

A restaurant was also listed for the site in 1997 and 2017.

3.1.6. Environmental Reports

Numerous environmental reports concerning the site and/or adjoining properties were brought to the attention of GCL. These reports are summarized in the following sections. The full reports are presented in Appendix 6, along with the TSSA response to the access to information request, or in Appendix 7.

3.1.6.1 Phase I–Environmental Assessment - Barenco 2011

- Barenco inc., *Phase I Environmental Assessment 1660 Merivale Road Ottawa, Ontario*. November 9, 2011, Job Number 11010.

A Phase I – Environmental Assessment was conducted by *Barenco Inc.* in October 2011 on behalf of *Imperial Oi Limited*.

This study noted the presence of a gas station operated by Imperial Oil Limited Limited on the site since approximately 1968. The land had been owned by Imperial Oil Limited Limited since 1956.

In 2011, the site featured a service kiosk in the centre of the site with an attached canopy, three pump islands and four underground fibreglass fuel tanks (three with a capacity of 22,700 liters (L) and one with a capacity of 45,460 L) installed in 1987 in the northeast corner. Additionally, there was a car wash in the southern portion of the site. The neighbouring properties are residential to the west and south, and commercial to the north and east.

The report concluded that environmental risks were identified due to the gas station's operations on the site. Specifically, the risks included the underground tanks in the northeast corner, a former mechanical garage from 1968 to 1984 located to the west of the current kiosk and the presence of unknown backfill material on the site.

3.1.6.2 Phase II/Baseline Environmental Assessment – Barenco 2011

- Barenco inc., *Phase II Environmental Assessment 1660 Merivale Road Ottawa, Ontario*. September 14, 2011, Job Number 11010.
- Barenco inc., *Baseline Environmental Assessment 1660 Merivale Road Ottawa, Ontario*. December 5, 2011, Job Number 11010.

Soil and groundwater Phase II and baseline environmental assessment were conducted by *Barenco Inc*. in September 2011 on behalf of *Imperial Oil Limited Limited* as part of a due diligence prior to the replacement of underground tanks. A granulometric analysis of natural soils was carried out by *EXP Associates Inc*. using soils collected during the environmental characterization.

Over this initial characterization, five boreholes were drilled to bedrock, with bedrock coring to a depth of 5.8 m. Observation wells were installed in each borehole. The wells were located to the west (TH1 and TH2) and east (TH4 and TH5) of the pump islands, as well as to the west of the underground tanks (TH3).

The studies determined that the natural soils on the site are till composed of sandy and clayey silt with a hydraulic conductivity of approximately 10^-5 cm/s. Bedrock was encountered between 2.7 and 3.4 m below ground surface (BGS).

The analyses demonstrated the absence of soil contamination in the five boreholes.

Groundwater was encountered between 3.15 and 4.21 m BGS, generally around the level of the top of the bedrock. No free phase was observed in the wells. Groundwater flow was directed towards the southwest, as indicated by the measured water level elevations.

Groundwater analyses revealed contamination above Table 3 standards in three of the five wells (TH3, TH4 and TH5) for petroleum hydrocarbon parameters F1 to F4, Hexane (Ha) and BTEX.

In October 2011, two additional boreholes were drilled further south, west and east of the car wash. Observation wells were also installed in the bedrock. No contamination above selected standard was detected in the soils and groundwater from these wells.

3.1.6.3 Tank Replacement Program– Barenco 2011

- Barenco inc., *Tank Replacement Program 1660 Merivale Road Ottawa, Ontario*. December 23, 2011, Job Number 11010.

A tank replacement program was conducted in December 2011 on behalf of *Imperial Oil Limited Limited*, with the service station operating under the ESSO banner.

The four underground tanks present on the site were emptied, cleaned, dismantled and then removed in October 2011. The underground piping connecting the tanks to the pump islands and ventilation pipes was left in place.

The bottom of the excavation and part of the walls consisted of bedrock or crushed stone. Samples were taken from the walls of the excavation where sand and gravel backfill material was present at nine locations on each wall. On-site measurements with a gas detector were taken. Fourteen soil samples from the walls were underwent chemical analysis. Low concentrations of BTEX were detected in some soil samples, but none exceeded the Table 5 standard.

Four piles of approximately 50 tonnes each of excavation material that could be reused were temporarily placed near the excavation. Sub-samples from each pile were taken during storage. Two of these samples were submitted for laboratory analysis, which confirmed the absence of contamination. A total of 627 tonnes of soil that could not be reused as backfill material was disposed of off-site.

The new tanks were installed in the excavation made for the removal of the old tanks. The excavation was backfilled with crushed stone from the uncontaminated material and other crushed stone.

3.1.6.4 Phase II–ESA / EXP 2013 - 2014

- Exp Energy Services Ltd., *Phase II Environmental Site Assessment Adjacent to 1660 Merivale Road Ottawa, Ontario*. December 5, 2013, Project Number 11010.
- Exp Energy Services Ltd., Supplemental *Phase II Environmental Site Assessment Adjacent to 1660 Merivale Road Ottawa, ON*. November 20, 2014, Project Number 11010.

An environmental characterization of soils and groundwater was conducted by Exp Energy Services Ltd (EXP) (formerly Barenco inc.) on behalf of Imperial Oil Limited Limited.

Five boreholes were drilled along the streets north of the property (Viewmount Drive, TH8 and TH9) and east of the property (Merivale Road, TH10 to TH12) to delineate the contaminated groundwater plume.

No soil contamination above Table 3 standard was detected. However, F1 and F2 contamination above Table 3 standards was found in the groundwater in the three wells located along Merivale Road. The groundwater level was found in the bedrock, encountered at 2.44 m BGS. The groundwater flow direction is towards the southwest. Well TH9 was dry.

In 2014, EXP conducted another characterization campaign in the neighboring streets, further from the site. Three additional wells (TH100 to TH102) were installed further east and northeast. No soil contamination above Table 3 standard was detected in samples from these boreholes. However, the groundwater in wells TH101 and TH102, located east of wells TH10 to TH 12 on Merivale Street, was contaminated above Table 3 standards with F1 and F2. The

well located northeast, TH100, did not show any contamination. Groundwater from well TH9 was contaminated above Table 3 standards with F1, F2, and F3.

3.1.6.5 Groundwater Monitoring– EXP 2014 et Golder 2015-2021

- Exp Energy Services Ltd., *2014 Ground Water Monitoring and Sampling Program 1660 Merivale Road Ottawa, Ontario*. October 8, 2014, Project Number 11010.
- Golder Associates, *Ground Water Monitoring and Sampling Program adjacent to 1660 Merivale Road Ottawa, ON*. May 6, 2016, Project Number 1536518-1155.

- Golder Associates, *2020 Groundwater and Soil Vapor Probe Monitoring and Sampling Report 1660 Merivale Road Ottawa, Ontario*. December 18, 2020, Project Number 1791706-1155.
- Golder Associates, *2021 Groundwater and Soil Vapor Probe Monitoring and Sampling Report 1660 Merivale Road Ottawa, Ontario*. September 9, 2021, Project Number 20447743-1155.
- Golder Associates, Supplemental Subsurface Investigation *1660 Merivale Road Ottawa, Ontario, Former Retail Fuel Outlet*. June 30, 2022, Project Number 21506016-1155.

Groundwater characterizations in wells on the site and in the surrounding streets were conducted by EXP and Golder Associates (Golder) on behalf of Imperial Oil Limited Limited. Sampling campaigns were carried out from 2014 to 2022.

In 2015, two wells (MW15-01 and MW15-02) were installed to the south of the car wash, near the southern boundary adjacent to the residential area. Two soil vapor probes (SV16-01 and SV16-02) were also installed in 2016 near the southern site boundary. Additionally, a damaged well (TH10) was replaced with MW16-01 on Merivale Road. In December 2021, two new wells (MW21-01 and MW21-02) were installed near the western boundary of the site, and two wells (MW22-01 and MW22-02) were installed east of Merivale Road in 2022. Three new vapor

probes were also installed near the southern (SV21-03), eastern (SV21-02), and western (SV21-01) boundaries of the site.

From 2011 to 2022, no groundwater contamination above Table 3 standards was detected in wells located on the west side of the facilities, including TH2, TH6, MW15-01, MW21-01, and MW21-02, and until 2019 in TH1. However, F2 to F4 contamination above Table 3 standards was measured in TH1 in 2020, and the well was damaged in 2021.
Contamination of F1 and F2 in well TH3 showed a decrease over time, meeting Table 3 standards by 2015, with only a brief rise in F2 concentration above Table 3 standards in 2021.

Concentrations of BTEX, Ha, F1, F2, and F3 in well TH4 also decreased over time. However, light non-aqueous phase liquid (LNAPL) was observed in the groundwater in 2021, leading to the sample not being analyzed. Lead (Pb) concentration was above Table 3 standards only in 2018. By 2022, concentrations were similar to those observed before 2021. All those concentrations were above Table 3 standards.

In well TH5, concentrations of BTEX, Ha, and F1 decreased, while those of F2, F3, and F4 initially increased in 2013 before declining in 2014 and rising again in 2016, with further increases from 2019 to 2021. Pb concentration was above Table 3 standards only in 2020-2021. All those concentrations were above Table 3 standards. LNAPL was observed in this well in 2022.

Well TH7 showed increasing concentrations of BTEX, F1, and F2 above Table 3 standards until 2014, falling below Table 3 standards by 2018. Well MW15-02, installed in 2015 south of TH7, exhibited BTEX, F1, and F2 contamination above Table 3 standards in 2015 and 2016 but has since been below this standard since 2017.

Overall, contamination appears to have slightly migrated southward and westward, with the main contamination still present in wells TH4 and TH5, located south and east of the pump islands.

Soil vapor samples from the probes installed were analyzed from 2016 to 2021, with concentrations found to be below the selected standards.

Groundwater monitoring was also conducted until 2017 in the wells located in the surrounding streets, with a general decrease in water concentrations noted in most wells from 2013 to 2021.

3.1.6.6 Contaminant Management Plan / Risk assessment – EXP 2015 et Golder 2016

- Exp Energy Services Ltd., *Interim Contaminant Management Plan 1660 Merivale Road Ottawa, Ontario*, April 2, 2015, Project Number 11010.
- Golder Associates, *Screening Level Risk Assessment – Right of-way adjacent to 1660 Merivale Road Ottawa, ON*, May 3, 2016, Project Number 1536518-1155.
- Golder Associates, *Contaminant Management Plan Adjacent to 1660 Merivale Road Ottawa, ON*, May 19, 2017, Project Number 1669090-1155.

An interim Contaminant Management Plan was recommended by EXP in 2015. This plan included annual monitoring of floating phase contaminants and groundwater analysis. Additionally, it suggested the installation of additional test holes and monitoring wells upgradient, cross-gradient, and downgradient to further delineate groundwater impacts.

In 2016, Golder Associates also recommended a Contaminant Management Plan for groundwater contamination in the surrounding streets. This plan involved annual monitoring of floating phase contaminants and groundwater analysis.

Golder Associates conducted a risk level analysis related to groundwater contamination in the rock in 2016. This analysis demonstrated that the groundwater contamination in the rock beneath the street did not pose a risk to human health or ecological receptors.

3.1.6.7 Soil and Groundwater Quality Investigation– GHD 2022

A soil and groundwater characterization was conducted by GHD for the Canadian Tire Corporation (CTP) in August 2022. This study aimed to compare the current state of contamination to that present in 2011, before CTP began operating the service station on the site.

Groundwater was sampled from existing wells on the site, and drilling was conducted near these wells to sample the soils. One of the wells (TH1) was no longer functional and was replaced with MW1-22.

The concentrations measured in soil samples taken above the bedrock and in the backfill materials were all below the applicable standards according to Table 3 of the MOE.

Groundwater concentrations in wells TH1, TH2, TH3, TH6, TH7, and MW15-02 were all below the Table 3 standards. However, exceedances were measured for BTEX, F1, and F2 in wells TH4 and TH5, which are located to the east and south of the pump islands.

3.1.6.8 Professional Advice – Soil and Groundwater Quality and Conformity of Previous Studies– GCL 2022

In 2022, GCL conducted a review of previous studies for Harnois Energies. The objective was to evaluate whether Canadian Tire Petroleum, the tenant of the site from 2011 to 2022, had impacted the soil or groundwater at the site.

The previous studies reviewed in this report include those presented in sections 3.1.6.1 to 3.1.6.4, 3.1.6.6, and 3.1.6.7, as well as the groundwater monitoring on-site up to 2016 and off-site up to 2017, as detailed in section 3.1.6.5.

The review concluded that persistent groundwater contamination is present on-site, mainly in the areas to the east and south of the pump islands. A general reduction in concentrations was observed over time, with occasional increases likely due to solubilization caused by variations in groundwater levels.

3.1.6.9 Soil and Groundwater Environmental Quality on site

In summary, according to all the listed previous studies, no soil contamination above Table 3 standards for the parameters BTEX, PH F1 to F4, Ha, MTX and/or PAH was detected in any of the soil characterization conducted on-site.

Regarding groundwater, concentrations above Table 3 standards were measured on-site in the following wells:

- TH1 (2020): F2 to F4
- TH3 (2011 to 2014 and 2021): F1 and F2

- TH4 (all years): BTEX, Ha, F1 to F3, Pb in 2018, LNAPL in 2021
- TH5 (all years): BTEX, Ha, F1 to F4, Pb in 2020-2021, LNAPL in 2022
- TH7 (2014 to 2017): BTEX, F1 and F2
- MW15-02 (2015 and 2016): BTEX, F1 and F2

No concentrations above Table 3 standards were measured in wells TH2, TH6, MW16-01, MW21-01 and MW21-02.

Soil vapor monitoring probes were sampled for BTEX/VOC measurements, with all results being below the selected standards.

3.2. Environmental Source information

3.2.1. Public source information

A review of relevant existing data in public inventories, directories and other lists was performed by ERIS. The analysis focused on properties located within a 250-meter radius of the site. The information collected may indicate potential environmental concerns for the site. The ERIS review, including the list of the consulted public inventories, directories and other lists, as well as the properties within the selected radius, is presented in Appendix 8.

The following main points of concern for the site were noted from this analysis:

- Listed as a gas retail store (Private and retail fuel storage tanks, 1996);
- Four single wall underground gasoline storage tanks (three of 22 700L and one of 45 460L) registered in 1987 (List of expired Fuels Safety Facilities, oct 2023/ Fuel storage Tank historic, 2010);
- Four 25 000 L double wall fiberglass underground liquid fuel storage tanks registered in 2011 (Fuel Storage Tank, oct 2023);
- Registered from 2013 to 2022 as a generator of waste oils and lubricants, oil skimming and sludges, and light fuels (Ontario Regulation 347 Waste Generators Summary, 2022)
- Spill registered in 1988 from a container overflow of about 4.5 L of gasoline (Ontario Spills, 2023)
- Spill registered in 1992 due to plugged tank vent, resulting in 4-5 L spill of gasoline (Ontario Spills, 2023).

Additionally, some neighbouring properties were noted in the ERIS analysis, including:

- Merivale High School: Generator of different solvents, paints and fuel products (Ontario Regulation 347 Waste Generators Summary, 2022);
- 160 Viewmount: 450 L furnace oil tank spill on the floor slab and ground contamination (Ontario Spills, 2023);
- 1642 Merivale Road: 10-gallon hydraulic oil spill from a Waste Management truck (Ontario Spills, 2023);
- 1642 Merivale Road: Multiple stores listed as generators of solvents, petroleum distillates and other products (Ontario Regulation 347 Waste Generators Summary, 2022);

- 1705 Merivale Road: Freon-22 leak to the atmosphere (Ontario Spills, 2023).
- 1642 Merivale Road: Occupied by a dry cleaner, pesticide store and other commercial stores.

According to the Phase I ESA summarized in 3.1.6.1 and presented in Appendix 6, the dry-cleaning store in the mall did not handle chemicals on-site, and only small quantities of pesticides were stored in the pesticide store.

The information gathered about the neighbouring properties does not represent a significant environmental risk for the property under study, considering their distance from the site, the limited volume of the spills, and/or the interior activities generally on a concrete floor.

3.2.2. Access to information requests

To complete the site information, access to information requests were submitted on June 14, 2024 to the MECP, the City of Ottawa and to TSSA to obtain any documented environmental information concerning the site.

The relevant information provided by these authorities is summarized in Table 3 below, while the complete documentation can be found in Appendix 6.

Table 3 : Access to information requests

Authority / Date of Answer	Type of Document - Date	Description of the Document	Considered as Environmental Risk
MECP	Occurrence report - 1992	**Spill of 4-5 L of gasoline** : The gasoline spilled onto the ground covered with snow due to a plugged tank vent. The gasoline was absorbed with a dry sorbent material and was disposed of offsite.	☒
	Hazardous waste information	Generation of wastes liquids by Imperial Oil Limited or Canadian Tire : 221-L, 251-L and 252-L	☐
City of Ottawa – Building branch **July 2 2024**	None	No site plan available	☐

	Environmental Assessment Phase I and II	+ 2011 by Barenco. See section 3.1.6	☒

3.3. Physical Setting Sources

3.3.1. Aerial Photographs

A review of available aerial photographs was conducted by ERIS. An aerial photograph was consulted for each decade, when available, and at any major change in land use as determined by the property's history. For this study, a review of aerial photographs from five different years was carried out, covering the period from 1950 to 1993. Furthermore, available satellite images of *Google Earth*™ from 2004 to 2022 were examined.

A detailed description of these aerial photographs and satellite images is provided in Table 4. The aerial photographs supplied by ERIS are also presented in Appendix 4.

In summary, the site was vacant until at least 1960. In 1975, the site was occupied by a building located west of the current store. This building was replaced by the existing store, including a canopy and a second building in the south section between 1982 and 1994.

Table 4 : Observation of Aerial Photographs

Aerial Photograph			Description of Observed Elements on the Site	Description of Observed Elements on Adjacent Properties	
Source	Year	Scale			
National air photo library	1950	1 : 10 000	The site is vacant and situated in an agricultural area.	North : South : East : West :	A road followed by an agricultural field and a house. Vacant agricultural fields. A road followed by vacant agricultural fields. Vacant agricultural fields.
National air photo library	1960	1 : 10 000	The site remains vacant, but the surface appears to be reworked or backfilled.	North : South : East : West :	No changes have been observed since 1950. Five residential buildings were constructed to the southeast. No change have been observed since 1950. Some residential buildings were built further west. This area appears to have been backfilled.
National air photo library	1975	1 : 10 000	A building was constructed in the center of the site. A paved area is present to the north and east of the building.	North : South : East : West :	The residential building has been demolished. New residential buildings were constructed to the southwest. Merivale Street appears to have been enlarged. Most of the current buildings east of this street were constructed. The street and residential buildings to the west were built.
National air photo library	1982	1 : 10 000	No changes have been observed since 1975.	North : South : East : West :	The current building with a parking area was constructed north of the street. No changes have been observed since 1975. No changes have been observed since 1975. No changes have been observed since 1975.
National air photo library	1993	1 : 10 000	The original building was replaced by a new structure to the east, which includes what appears to be a canopy to the north of the building. Another building is present to the south of the central one. The paved area was extended to the west and south.	North : South : East : West :	No changes have been observed since 1982. No changes have been observed since 1982. No changes have been observed since 1982. No changes have been observed since 1982.

Aerial Photograph			Description of Observed Elements on the Site	Description of Observed Elements on Adjacent Properties	
Source	Year	Scale			
Google Earth	2004		No changes have been observed since1993	North : South : East : West :	A building was constructed in the southeast section of the parking area north of Viewmount Drive and four buildings were built east of Merivale Road. No changes have been observed since 1993. No changes have been observed since 1993. No changes have been observed since 1993.
Google Earth	2012		A concrete slab appears to be present in the northeast corner of the site	North : South : East : West :	No changes have been observed since 2004.
Google Earth	2022		No changes have been observed since2012	North : South : East : West :	No changes have been observed since 2012. No changes have been observed since 2012. The building was extended to the northwest. No changes have been observed since 2012.

3.3.2. Topography, Hydrology, Geology

3.3.2.1 Topography

According to the topographic maps of the studied area (Ottawa 31G05), the site is located at an elevation of approximately 93 meters. The site is situated in an area with a general slope descending from north to south, and then southeast towards Nepean Creek, which is located approximately 360 meters southeast of the site. This creek subsequently joins the Rideau Canal to the east of the site.

Topographic maps from 1925, 1948, 1958, 1976, and 1998 were studied on the BAnQ website. These maps depict the site and the surrounding properties. Excerpts from these maps are presented in Appendix 1. The main observations made from these maps are summarized in Table 5.

Table 5 : Observation of Topographic Maps

Topographic Maps		Description of Observed Elements on the Site	Description of Observed Elements in the Area
Year	Scale		
1925 and 1948	1 : 63 360	+ Site is vacant	+ Merivale Road is present. + Canadian National Railway is present to the south. + Nepean Creek is present to the southeast and continues west of Merivale Road. + An east-west road is present to the north. + Isolated buildings are present around Merivale Road and the east-west road .
1958	1 : 50 000	+ Site is vacant	+ New developments are evident to the northwest.
1976	1 :50 000	+ Site looks vacant	+ The surrounding area is developed, including most of neighbouring sites. + Viewmount Drive is shown in its current form. + A school is present to the east of Merivale Road. + An isolated building is present north of Viewmount Drive. + Nepean Creek is no longer shown west of Merivale Road.
1998	1 :50 000	+ One building is showed on site	+ A shopping center is shown north of Viewmount Drive

The consultation of topographic maps showed that a building has been present on the site since at least 1998, and that the surrounding area was developed between 1958 and 1976.

A topographic plan by VRSB Arpenteurs-Géomètres, obtained from Harnois and presented in Appendix 5, shows the buildings, and infrastructure, as well as surface elevations. The plan indicates a slight elevation change from the northeast corner (approximately 87.8 m) to the southwest corner of the pavement (approximately 86.5 m). A significant drop in elevation is present south of the car wash, from 86.5 m to 85.3 m.

3.3.2.2 Geology

According to the Paleozoic Geology map of the Ottawa area from the Ministry of Natural Resources of Ontario (Map P2716, 1984), the bedrock in the site area is of lower to middle Ordovician age. It is part of a narrow band of the Oxford Formation, composed of sublithographic to fine crystalline dolostone, extending from east to west. This formation is surrounded to the north and south by the Rockcliffe Formation, which consists of interbedded fine-grained light greenish-gray quartz sandstone, shaly limestone, and shale.

Historical environmental studies indicate that the bedrock on the site is composed of limestone, encountered at depths ranging from 2.7 m to more than 5.5 m BGS.

3.3.2.3 Surficial deposits and unconsolidated deposits

According to the surficial geology map of the Ottawa area from the Geological Survey of Canada (Map 1506A, 1982), the site is located in an area of offshore marine deposits composed of clay and silt underlying erosional terraces. However, the northeastern part of the site is at the boundary between these deposits and glacial deposits composed of till.

Historical environmental studies on site report that the surficial deposits are composed of sand and gravel, approximately 1 to 2 meters thick, followed by brown to gray silt till.

3.3.2.4 Hydrology et Hydrogeology

The regional hydrographic network indicates that groundwater flow in the area is directed towards Nepean Creek, located approximately 360 meters to the southeast. This creek flows east towards the Rideau Canal, which then flows north to the Ottawa River.

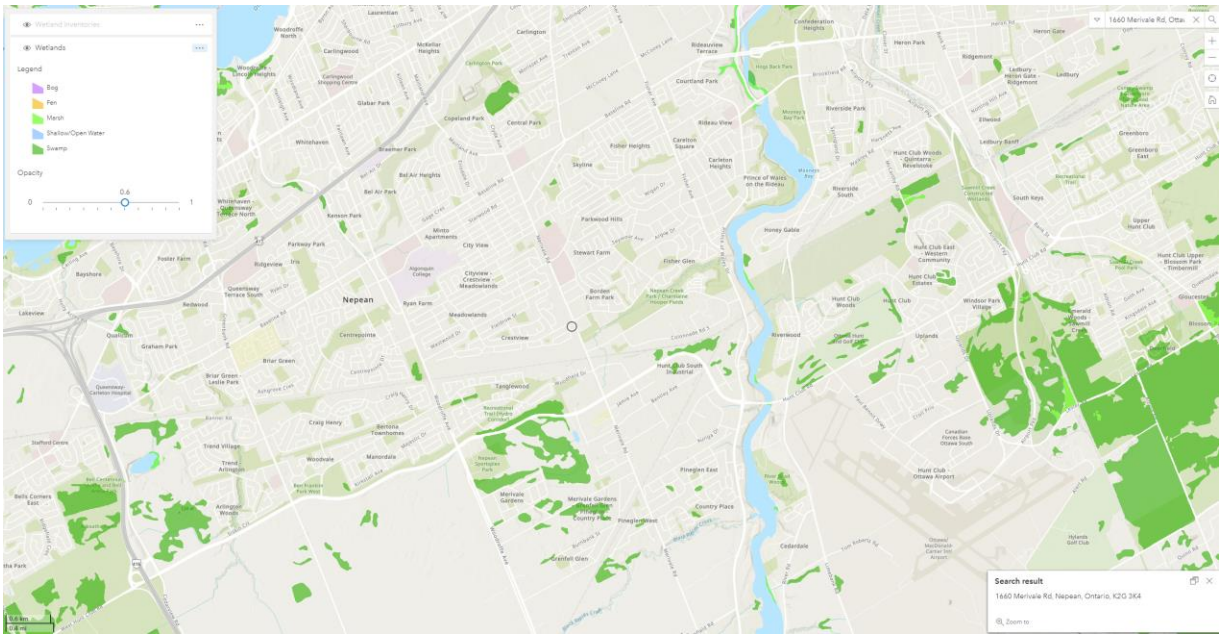
Historical environmental studies suggest that groundwater flow is generally directed to the southwest. The groundwater level is around the interface between the bedrock and surface soils or within the bedrock, at depths varying between 2.3 m and 5.0 m BGS.

3.3.3 Fill Materials

Fill materials are likely present around all infrastructure, such as underground tanks and pipes, civil works (e.g., aqueducts, sewers, electrical wiring), pavement, building foundations, and site leveling. It should be noted that the car wash area is approximately 1.5 meters higher than the southern boundary of the site.

Previous studies indicate that a relatively homogeneous layer of sand and gravel, sometimes referred to as backfill material, is present under the pavement, with a thickness ranging from 1 to 2 meters. Samples from this layer were analyzed, and none exhibited concentrations above Table 3 standards.

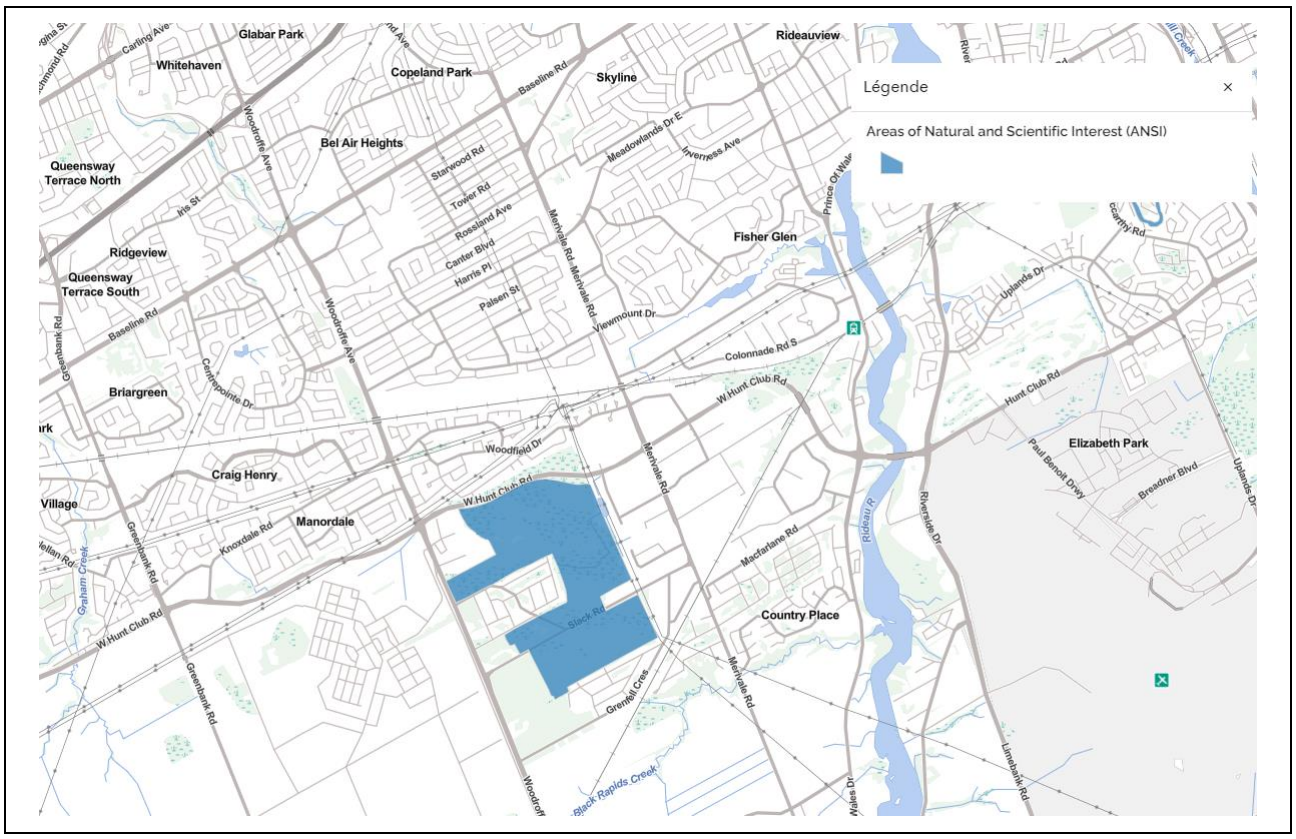
3.3.4 Water Bodies, Areas of Natural Significance and Ground Water Information



3.3.4.1 Water Bodies

No water bodies are present within a 250-meter radius of the site. The nearest water body is Nepean Creek, a tributary of the Rideau Canal, located approximately 350 meters southeast of the site.

3.3.4.2 Wetlands and Areas of Natural Significance



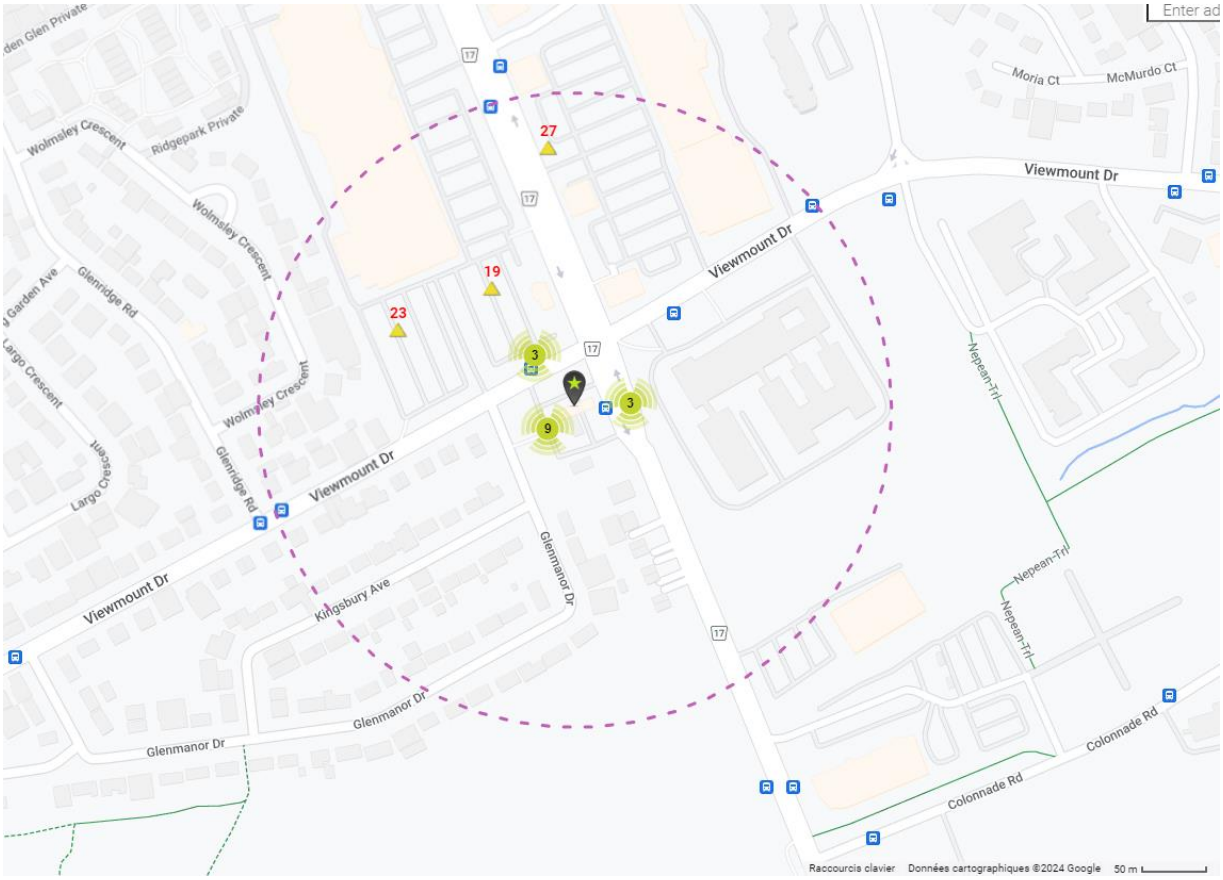
Research on wetlands was conducted on July 31, 2024, using the Ducks Unlimited Canada website. No wetlands were identified within a 250-meter radius of the site. A map showing the wetlands in the area is presented in Figure 1.

Figure 1 : Wetlands – Ducks Unlimited Canada

Research on areas of natural significance was also conducted on July 31, 2024, using the Ontario GeoHub map of Areas of Natural and Scientific Interest (ANSI) from Land Information Ontario. No ANSI sites were identified within a 250-meter radius of the site. A map showing the ANSI sites in the area is presented in Figure 2.

Figure 2 : ANSI – Land information Ontario

3.3.4.3 Potable Water Information



The City of Ottawa has a municipal aqueduct network for potable water. According to the Mississippi-Rideau Source Protection Plan (see Appendix 8), the City has two municipal surface water intakes in the Ottawa River, located approximately 6 km northeast (upgradient) and 8.5 km northwest (upgradient) of the site. Municipal potable water wells are also used in agricultural zones. The site is not located within the protection zones of these municipal water intakes.

3.3.5 Well Records

A total of 18 water wells was listed in the ERIS search results. Complementary information was obtained from the Well Records map on the MECP website. These wells appear to be used for environmental groundwater monitoring. Figure 3 from the ERIS system shows the location of these wells within a 250-meter radius. The wells on-site and in the neighboring streets are represented by triangles or grouped into icons indicating the number of wells in each small area represented by the icon.

The stratigraphy is generally described as sand and gravel fill material to a depth of 1 or 2 meters BGS, followed by silty gravel till down to the bedrock, which is found at depths ranging from 3 to 6 meters BGS. Water levels are generally not mentioned, with some exceptions indicating water levels between 3.0 and 4.1 meters BGS.

Figure 3 : Water Wells – ERIS

3.4. Site Operating Records

Harnois was requested to provide relevant documents concerning the site. Several environmental studies and contamination management plans (CMPs) from 2011 to 2022 were provided by Harnois. These documents are presented in Section 3.1.6.

No additional documents or plans were provided by Harnois. However, one of the reports analyzed in 2022 is a Phase I ESA conducted by Barenco in 2011. In the context of this ESA, Imperial Oil Limited, the owner at the time, provided site plans. These plans are listed and described in chronological order below:

- **Feb., 1968 - Survey plan**: The site boundaries are shown, but no buildings are depicted.
- **Jan. to Nov 1984 - Site plans**: Two buildings are shown on the site: a sales kiosk in the middle and a car wash to the southwest. A change in elevation is indicated south of the car wash. Four underground tanks (three with a capacity of 25,000 L and one with a capacity of 45,000 L) are shown in the northeast corner of the site. A canopy with three pump islands is located north of the sales kiosk. The plans also show former pump islands to be removed, one north of the sales kiosk and one to the east. Additionally, a three-bay service station is indicated for removal. Underground drainage, sewer, aqueduct, and electrical infrastructure are also shown on these plans.

- **April 1984 - Canopy detail drawing**: This plan illustrates the connection details for the canopy.
- **January 1984 - Piping details plan**: This plan provides details of the piping for the underground tanks, including a plan view of the pipes connecting the tanks to the pump islands.
- **February 1992 - Floor/equipment plan for the kiosk**: This plan details the interior of the store, including the toilets and freezer to the southeast, the mechanical room to the southwest, and what appears to be a food counter.
- **August 2009 - Sketch**: This sketch appears to show the updated piping arrangements between the underground tanks and the pump islands.

These documents are available in Appendix 5.

4. INTERVIEWS

Questions were addressed to Mr. Jean-Philippe Wilkins, Director, Operations and Real-Estate Development, and authorized representative of the owner, and to Mr. Martin Caron, Chief Property Manager for Harnois, which owns the site since 2022.

The owner's representative informed the interviewer that no modifications have been made to the petroleum infrastructure or the buildings since they took ownership, except for a banner change. However, the suspended natural gas infrared tube heaters in the car wash's mechanical room have been replaced with a similar new system.

Mr. Caron mentioned that all of Harnois' sites are equipped with spill kits. For the site under study, no spills or leaks exceeding one liter of gasoline have been registered since 2022, and therefore, no spill registry has been filled out. Minor spills of approximately 0.1 liters may have occurred occasionally. In the event of a spill, absorbent material is used to absorb the product and contain the spill. The used absorbent material is then placed in an identified 208-liter drum located west of the site and managed by Veolia for disposal at an authorized site when convenient. It typically takes more than a year to fill the drum due to the small quantities of absorbent used.

5. SITE RECONNAISSANCE

5.1 General Requirements

The site visit was conducted on July 8, 2024, from approximately 10:00 to 11:00 a.m. by Mr. Mathieu Bélisle, P.Eng., M.App.Sc., and Project Manager at GCL. The visit took place on a sunny day, and the gas station and car wash were operating normally for a weekday.

A photographic report, which includes relevant views and brief descriptions, is presented in Appendix 3. A plan showing the orientations of the photographs precedes the photographic report.

5.2 Site Observations

5.2.1 General Site Observations

Table 6 presents the physical characteristics of the site.

Table 6 : Property description

Aspect	Description
Use (commercial, industrial or other)	+ Commercial: gas station with a convenience store and a car wash
Site limits (Visibility, fence, ditch, watercourse)	+ South and west limits: fence + South limit: trees + North and east limits: open area
Site Access	+ Two car access east of the site from Merivale Road + Two car access north of the site from Viewmount Drive + One pedestrian access west of the site from Glenmanor Drive
General description of the site	+ Convenience store in the center (1984) + Car wash south of the store (1984) + Asphalted area around the main building in poor condition numerous cracks + Pump island and canopy north of the store + Underground storage tanks in the northeast corner of site

Aspect	Description
General description of the buildings	+ Convenience store: • One story without a basement, • Concrete slab covered with ceramic and/or floor vinyl tiles • Steel frame with brick and/or metal exterior cladding • Sales area in the north section with access from the east and west sides • Office and storage area, including a cold room south of the sales area • Toilet room located southeast, accessible from outside + Car wash : • one story without basement • Concrete slab cover • Steel frame with a brick and/or metal exterior cladding • Washing area in the north with access from the east and west sides • Mechanical room in southwest section • Storage room in southeast section
General description of the petroleum infrastructures	+ Canopy north of the store with three dispensers on individual pump islands with a concrete slab generally in good condition + Four 25,000 L double wall fiberglass underground gasoline storage tanks located in the northeast corner of the site, covered by a concrete slab + No above-ground petroleum tanks
Other installations	+ Propane gas tanks rack located east of the store + Air pressure service kit located northwest of the car wash + Garbage bins located west of the asphalted area
Other known underground infrastructure	+ Sewer and aqueduct southeast of the store + Electricity wires between the streetlamps and between the buildings + Natural gas line southwest of the car wash
Presence of lakes and/or water course	+ No
Presence of wells	+ No potable water well on site + Groundwater monitoring wells (some damaged)
Condition (vegetation, drainage network, surface water and sediment)	+ Grass and tree cover along the west and south limits of the site, in the northeast corner, between the site entrance north and east, and northwest of the car wash + Water drains east and west of the car wash

Aspect	Description
Topography	+ Small descending slope from northeast to southwest, more pronounced south of the car wash
Sensitive or critical environments for diversity	+ No
Sensitive users	+ No
Archeological potential	+ No

5.2.2 Enhanced Site Investigation

The general operation on site includes a gas station located north of the convenience store. Underground storage tanks are situated in the northeast corner of the site, while gasoline dispensers are positioned on individual pump islands under the canopy north of the store. A car wash is located south of the store. No industrial activities are conducted on site.

Table 7 presents the site observations and identified environmental risk.

Table 7 : Observation and Potentiel Risk Aspects

Aspect	Observed		Description	Considered as environmental risk
	Yes	No		
Heating and cooling systems (type et localisation)	☒	☐	+ Electric heating and climate control systems for the store including a rooftop unit + Suspended natural gas infrared tube heater for the car wash + Natural gas used for the car wash hot water system	☐
Former heating system	☐	☒	+ No information available	
Soil pile, fill, excavation and reworking zones	☒	☐	+ Significant denivelation south of the car wash, with the potential presence of backfill materials	☒
Spills, leaks, explosions and visible traces on the ground	☒	☐	+ Some stains were observed on the concrete slab of the pump islands	☒
Ground stain (hydrocarbons or other)	☒	☐	+ Some stains were noted on the concrete slab of the pump islands	☒
Area likely to produce biogas (organic matter backfill)	☐	☒	+ No	☐

Aspect	Observed		Description	Considered as environmental risk
	Yes	No		
Barrel, raw material, residual material, equipment (description and volume)	☒	☐	+ Car wash soap stored in the mechanical room southwest of the car wash + Drums for used absorbent located west of the pavement	☐
Residual hazardous materials	☒	☐	+ Used absorbent is collected in a drum and managed through Veolia	☐
Visible information on drums, canisters, tanks, etc.	☐	☒	+ Soap, wax and drying agent in the car wash	☐
Storage and transshipment area	☒	☐	+ Storage area south of the convenience store + Cleaning products stored in the mechanical room of the car wash	☐
Presence of reservoir (location, contents, capacity, size, age, piping and venting, general condition)	☒	☐	+ Underground storage tanks located in the northeast corner of the site + Vent pipes are situated northeast of the tanks	☒
Presence of oil/water separators	☐	☒		☐
Wastewater discharge points	☐	☒	+ Sewer east of the building	☐
Drain and sump	☒	☐	+ Drains east and west of the car wash, west of the store, and west of the site. No stains noted	☐
Presence of transformers or other equipment that may contain oils and/or PCBs	☐	☒	+	☐
Other high-risk components e.g. elevators, hydraulic cylinders, freight elevators, compactors	☒	☐	+ Gasoline dispensers on three pump islands north of the store	☒

Table 8 presents the visual observations made regarding the presence of substances requiring special attention. It should be noted that no exhaustive verification, wall openings, or sampling of materials was conducted within the scope of this mandate. A description of these substances, their effects, and the regulatory context surrounding them is provided in Appendix 10.

Table 8 : Substance Requiring Special Attention

Substance	Observed		Description
	Suspected (S)	Not S	
Asbestos	☐	☒	Given the age of the buildings (1984), the presence of asbestos-containing materials is unlikely.
Polychlorinated biphenyls (PCB's)	☐	☒	Given the age of the buildings (1984), presence of PCB's is unlikely.
Halocarbons	☐	☒	Given the presence of a cold room in the convenience store, which has likely been in place since 1984, the presence of halocarbons is possible
Urea-formaldehyde insulating foam (UFIM)	☐	☒	Given the age of the buildings (1984), presence of UFIM isolating materials is unlikely.
Pb based paints	☐	☒	Given the age of the buildings (1984), presence of Pb based paints is not suspected.
Moisture	☐	☒	No traces of moisture were observed during the site visit.

5.3 Immediate neighborhood

Attention was given to the immediate neighbors during the site visit to identify potential environmental hazards that could pose a risk to the property under study. This summary assessment was conducted from the boundaries of the property and/or from public roads. The key findings are presented in Table 9.

Table 9 : Neighbours description and potential risk elements

Aspect	Description	Considered as environmental risk
Neighbour's activities	+ North: Viewmount Drive followed by a parking area and mall	☐
	+ South : Residential buildings	☐
	+ East : Merivale Road followed by a high school	☐
	+ West : Glenmanor Drive followed by residential buildings	☐

Aspect	Observed		Description	Considered as environmental risk
	Yes	No		

Aspect	Description			Considered as environmental risk
Underground or aboveground storage tank	☐	☒		☐
Potable water well, observation well, ditch	☐	☒		☐
Water course (water level, flow rate)	☐	☒		☐
Sensible use or ecosystem	☐	☒		☐

5.4 Written Description of Investigation

A gas station and a car wash were operating on site during the inspection. The car wash appeared to be in good condition, and no concerns were noted regarding this activity.

For the gas station, no major stains were observed during the visit. However, minor stains were noted around the pump islands, and the asphalt surface around the canopy was cracked. Overall, the main environmental concerns on site are the underground storage tanks, the dispensers at the pump islands, and the underground pipes connecting these infrastructures.

6. REVIEW AND EVALUATION OF INFORMATION

6.1 Current and Past Uses

Table 10 lists the activities observed on site, from this day back to when the site was still vacant.

Table 10 : Reverse chronological list of activities on site

Owner	Occupant	Activities	Period	Description of activities considered as an environmental risk
Harnois	Esso, Proxy	Gasoline Service Station with convenience store and car wash	2022 until now	Four underground storage tanks, three pump islands, underground pipes
Imperial Oil Limited	Canadian Tire, Tim Hortons	Gasoline Service Station with convenience store, restaurant and car wash	2012 to 2022	Four underground storage tanks, three pump islands, underground pipes
Imperial Oil Limited	Esso	Gasoline Service Station with convenience store and car wash	1984 to 2012	Four underground storage tanks, three pump islands, underground pipes
Imperial Oil Limited	Moe's Esso	Mechanical garage with Service Station	Early 1980s	Underground storage tanks, two pump islands, underground pipes, Mechanical garage
Imperial Oil Limited	Beckstead Service Station	Mechanical garage with Service Station	1968 to 1970s	Underground storage tanks, two pump islands, underground pipes, Mechanical garage
Imperial Oil Limited	Vacant	Vacant	1956 to 1968	
Individuals	Vacant	Vacant	Up to 1956	

6.2 Potentially contaminating activity

The activities that have occurred on-site since its initial construction were compared to Table 2 of Section 19 from O. Reg. 153/04. The following potentially contaminating activity (PCA) listed in this table was identified as having occurred on the site à:

- 28: Gasoline and Associated Products Storage in Fixed Tanks (from the 1960's to now)

6.3 Areas of Potential Environment Concern

The areas of potential environmental concern (APEC) identified on site in this Phase I ESA are summarized in table 11.

Table 11 : Environmental risks

Area No.	APCE	PCA	Surface (m^2)	Potential Contaminants	Media Potentially impacted
1	Underground storage tanks in the northeast corner of the site since 1968	Gas station from the 1960s to present	150	BTEX, PH F1 to F4, Ha, Pb	Soil, Groundwater
2	Pump islands north of the store since 1984		250	BTEX, PH F1 to F4, Ha, Pb	Soil, Groundwater
3	Underground pipes connecting the pump islands and the underground tanks		200	BTEX, PH F1 to F4, Ha, Pb	Soil, Groundwater
4	Former pump islands north and east of the store from the 1960s to 1984		2x 50	BTEX, PH F1 to F4, Ha, Pb	Soil, Groundwater
5	Former mechanical garage west of the store from the 1960s to 1984	Mechanical garage from the 1960's to 1984	175	BTEX, PH F1 to F4, Ha, PAH, MTX	Soil, Groundwater
6	Car wash in the south section since 1984	Car wash since 1984	125	BTEX, PH F1 to F4, Ha, PAH, MTX	Soil, Groundwater

These APECs are presented in Figure 2 of Appendix 2. Note that 5 L gasoline spills were registered for the site in 1988 and 1992, occurring in the areas of the underground tanks and the pump islands. These spills corroborate the APECs presented in Table 12.

Furthermore, according to numerous previous studies, groundwater contamination is present on site and is considered a real environmental concern (REC) due to the APECs. The groundwater level is located at the contact between the bedrock and the soil surface or within the bedrock fractures at a depth of approximately 3 to 5 meters BGS. The groundwater is contaminated primarily with BTEX, PH F1 to F4, and Ha, with occasional exceedances of Pb in two wells in 2018 and 2020–2021.

Additionally, according to the numerous studies, the backfill material is relatively homogeneous and consists of sand and gravel without signs of debris or contamination. It was likely newly imported backfill used for pavement, buildings, and other infrastructure foundations. All available backfill concentration measurements comply with Table 3 standards. Although a systematic validation of backfill has not been performed, it is not considered a significant APEC based on the available information.

In addition to groundwater and soil, gas vapor measurements taken at the site limits have not indicated any concerns regarding volatilization or infiltration risks.

As presented in section 3.2.1, no significant APEC issues were identified from properties off-site based on the public sources reviewed by ERIS. No environmental concerns from neighboring properties were noted during the site visit.

6.4 Phase I Conceptual Model

The Phase I ESA results are synthesized by developing a qualitative conceptual model of the site. This model helps identify potential contaminant sources, the types of contaminants, and the primary migration and exposure pathways.

Figure 4 schematically illustrates the potential current sources of contamination on site and their migration and exposure pathways. Table 12 summarizes the information related to the property's description, the main potential receptors, and potential sources of contamination.

Figure 2 of Appendix 2 provides a plan view of the potential contaminant sources.

Figure 4 : Conceptual Model

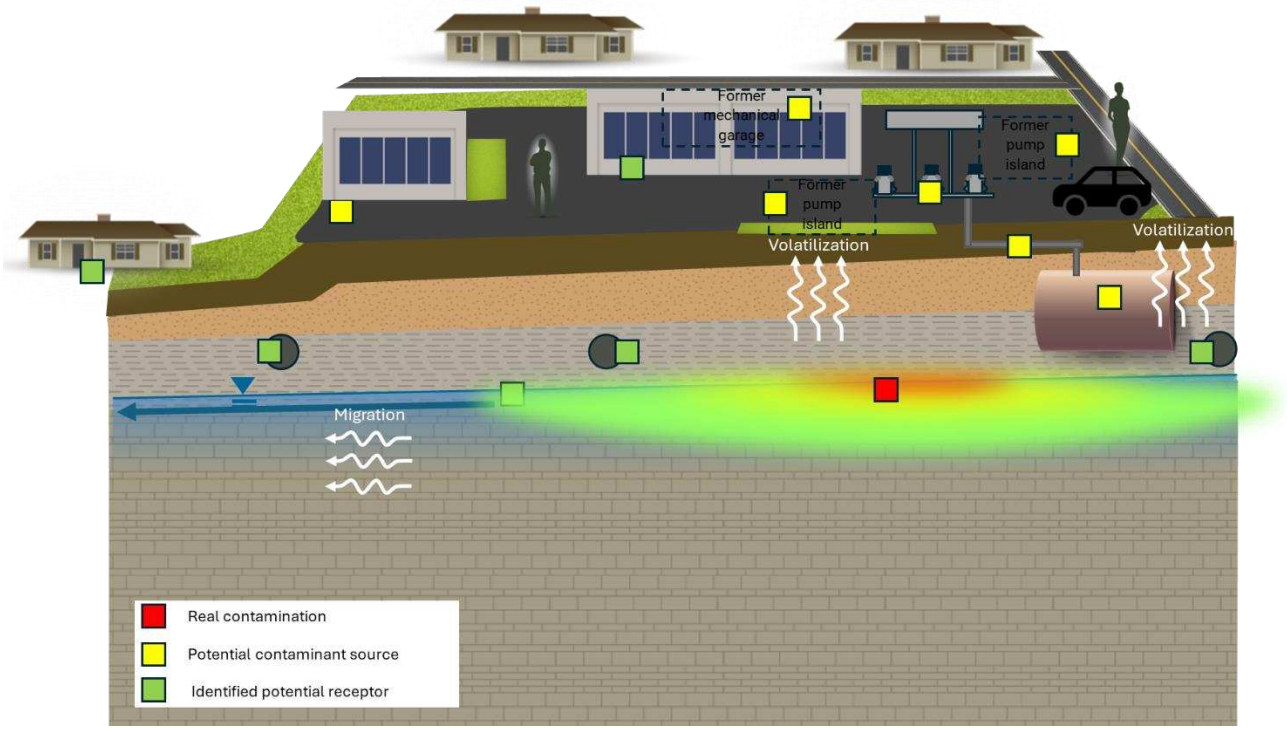


Table 12 : Summary of information

Site Address	1660 Merivale Road, Nepean, Ottawa, Ontario
Geographical Coordinates of the Land	Lat. : 45,343350 Long.: -75,729600
Lot number	Part of Lot 30, concession 1 of Rideau Front
Land Area (m^2)	1 968,10 m^2
Landowner	Harnois Groupe immobilier Inc.
Land Occupants	+ Commercial : • Proxy (convenience store with car wash) • Esso Service-Station
Former land occupants	+ Commercial: • Convenience store since 1984 with or without restaurant • Car wash since 1984 • Service station since 1968 • Mechanical garage from 1968 to 1984
Current Use	Commercial
Future Use	Commercial
Municipal Zoning	AM10 (Arterial Mainstreet Zone)
Permitted Uses	+ Commercial + Residentials
Neighbours	+ North: Viewmount Drive followed by a parking and a mall + South: Residential buildings + East: Merivale Road followed by a school + West: Glenmanor Drive followed by residential buildings
Site Description	+ Two buildings: Convenience store and car wash + Convenience store: one story without a basement, featuring sales, office and storage areas as well as a cold room and wash room + Car wash: one story without a basement, with a washing area and mechanical room and storage room
Topography and Surface	+ Small descending slope to the southwest, more pronounced south of the car wash + Convenience store (95 m^2): concrete slab primarily with ceramic cover, generally in good condition + Car wash (110 m^2): concrete slab + Pump island: concrete slab, generally in good condition + Circulation area: asphalt pavement in poor condition, with numerous cracks + Grass and tree cover along the west and south limits of the site, in the northeast corner, site entrances and northwest of the car wash
Potential Contamination sources	+ Underground storage tanks in the northeast corner since 1984, possibly since 1968 at this location + Pump islands north of the store since 1984 + Underground pipes between the underground tanks and the pump islands + Former pump island north and east of the store from 1968 to 1984

	+ Former mechanical garage west of the store from 1968 to 1984 + Car wash in the south section since 1984
Real contamination identified	+ Groundwater : BTEX, PH F1-F4, Ha and Pb contamination in some wells since 2011, mostly in the east side of the site
Potential receptors and exposure pathways	+ Sewer on site and under neighboring streets; + Buildings on site and south neighboring buildings
Selected Standards	+ On. Reg 153/04, Table 3 Full Depth Generic Site Condition Standards in a Non-Potable Ground Water Condition / Fine textured soils
Geology	+ Sand and gravel backfill material up to 1 or 2 meters thick + Brown to grey silt till up to 3 to 5 m BGS + Limestone bedrock at depths of 2,7 to more than 5,49 m BGS
Hydrogeology	+ Groundwater flows to the southwest + Groundwater level is around the interface of the bedrock and the surface soils or in the bedrock, at depths varying between 2.3 m and 5.0 m BGS
Potential Contamination Substances	+ Gasoline (underground tanks, pump islands, underground pipes, former pump islands, former mechanical garage, car wash): BTEX, PH F1 to F4, Ha, Pb + Oils, used oils, lubricants (former mechanical garage, car wash): PAH's, MTX
Potentiel Light Non-Aqueous phase liquids (LNAPL)	+ Gasoline: BTEX, PH F1 to F4

The conceptual model identified potential sources of contamination related to the petroleum infrastructure on site, which has been present since approximately 1968. Currently, these infrastructures include four underground storage tanks in the northeast corner of the site and three pump islands located southwest of these tanks, with underground pipes connecting them.

Additional potential sources of contamination were identified, including a mechanical garage that operated on site from the 1960s to 1984, located west of the current store, and former pump islands that were situated north and east of the current store. No soil verifications have been conducted at the locations of these former infrastructures.

7. CONCLUSION AND RECOMMENDATIONS

The property is occupied by a gas station with a convenience store and a car wash. As part of a project to be submitted to the City, Phase I and II Environmental Site Assessments (ESAs) are required. These assessments are not intended to register a Record of Site Condition.

GCL has been commissioned by Harnois, the owner of the site, to conduct a Phase I ESA on the property located at 1660, Merivale Road, Nepean, Ottawa, Ontario. This is in accordance with the service proposal dated June 6, 2024, (Ref No: 2024-126-CE-REV2).

The objective of the mandate is to identify potential or actual contamination risks at the site due to current, past, and/or neighboring activities.

Based on the analysis of the information gathered, the following environmental risks have been identified:

Table 13 : Environmental Risks

Risk #	Risk Identification	Area (m^2)	Analytical Parameters
1	Underground storage tanks in the northeast corner of the site probably since the 1960s	150	BTEX, PH F1 to F4, Ha, Pb
2	Pump islands north of the store since 1984	250	BTEX, PH F1 to F4, Ha, Pb
3	Underground pipes connecting the pump islands and the underground tanks	200	BTEX, PH F1 to F4, Ha, Pb
4	Former pump islands north and east of the store from the 1960s to 1984	2x 50	BTEX, PH F1 to F4, Ha, Pb
5	Former mechanical garage west of the store from the 1960s to 1984	175	BTEX, PH F1 to F4, Ha, PAH, MTX
6	Car wash in the south section since 1984	125	BTEX, PH F1 to F4, Ha, PAH, MTX
7	BTEX, PH F1-F4, Ha and locally Pb contamination in groundwater	-	BTEX, PH F1-F4, Ha and Pb

Therefore, a Phase II ESA is recommended for the identified risk areas.

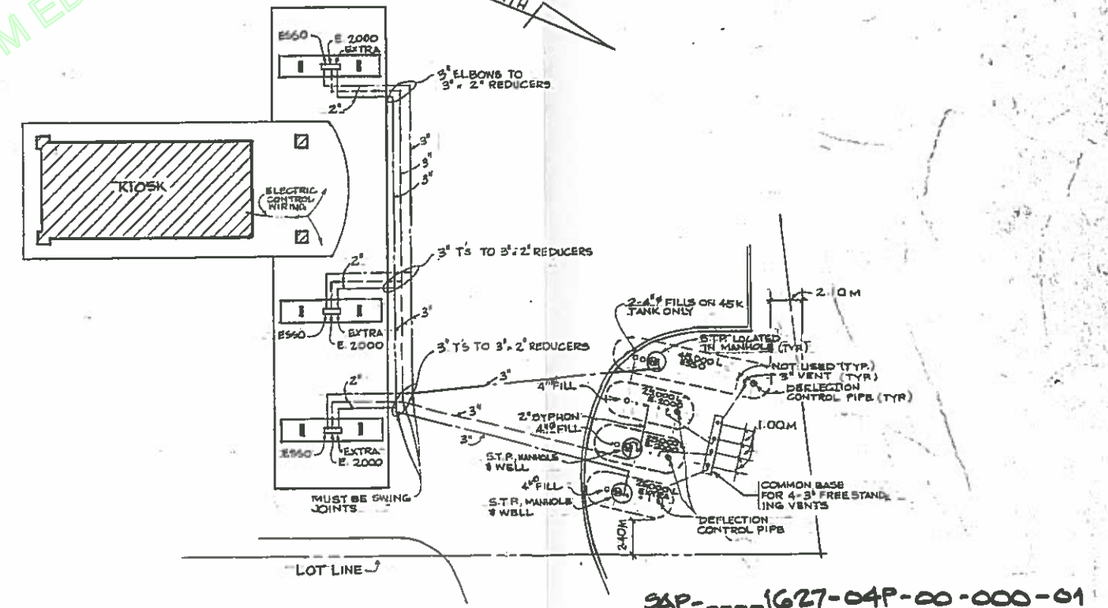
2 PLAN OF SUBMERSIBLE PUMP INSTALLATION (S.T.P.)
1" = 1'-0"

3 FILL CAP INSTALLATION BEHIND CURB
1" = 1'-0"

6 TYPICAL MANHOLE INSTALLATION
1" = 1'-0"



SPECIFICATION

INSTALLATIONS

1. All piping installations to comply with the Local Gasoline Handling Code.
2. Bottom of all tanks to be level and at the same elevation (min. cover 3'-0").
3. Vent lines and discharge lines shall have a slope of ¼" per foot back to tank.
4. All lines shall be braced with concrete block at 5'0" intervals to prevent sagging.
5. The use of close nipples, street elbows or 45° elbows for swing joints is not permitted.
6. Plugs in tank openings will not be removed until piping is ready for connection.
7. All installations shall be consistent with local municipal regulations.
8. Unless otherwise specified all pipe will be galvanized standard weight and conform to A.P.I. 5L test requirements. All fittings will be galvanized 150 P.S.I.
9. Tanks to be held in place with petroleum product only. No product to be placed in tanks until fill pipes and vent lines installed and all other tank openings plugged to minimize vapor accumulation in excavation.
10. △ Lifting lugs to be used for all movements of tanks.
11. Min. 12" back fill beneath tanks (i.e. over natural ground hole or concrete slab).
12. Min. 24" backfill between tanks and around sides of tanks.
13. Min. cover 2', max. cover 5'
14. Back fill material. Pea gravel not less than 1/8" or greater than 3/4", clean free flowing and naturally rounded aggregate. Alternate stone or gravel crushings not less than 1/8" or greater than 1/2" clean free flowing material.
15. Rake and fill all voids beneath tank and between ribs in max. 12" layers throughout the backfilling process.
16. △ Should wet conditions require a concrete anchor, it is to be placed beneath the tanks and of acceptable design to the tank supplier and with anchor straps suitable to the rib design of the tanks.

TESTING

1. All discharge piping shall be pressure tested independently prior to backfilling. Tankage and piping will be isolated from the submerged turbine pumping units and island dispensers while undergoing the pressure test.
2. All pressure tests will be carried out with compressed air.
3. All discharge piping will be tested at a pressure of 50 P.S.I.G. not to exceed 100 P.S.I.G.
4. During the pressure test all valves will be maintained in a open position.
5. Prior to backfilling the record of the pressure test will be identified by the location, piping run, date of test, and carry the signature of the contractor performing the test and approval signature of the I.O.L. representative.

Dear Mathieu Bélisle:

RE: MECP FOI A-2024-03939 – Record Release Letter

This letter is further to your request made pursuant to the Freedom of Information and Protection of Privacy Act (the Act) relating to:

1660 Merivale Road, Nepean
Timeframe: January 1, 1950 to July 14, 2024

Your final fee payment was received by this office. If payment was not in Canadian dollars, please contact our office immediately.

Attached is a copy of the records.

You may request a review of my decision within 30 days from the date of this letter by contacting the Information and Privacy Commissioner/Ontario at http://www.ipc.on.ca. Please note there may be a fee associated with submitting the appeal.

If you have any questions, please contact Roxanne Chambers at (807) 456-3035 or roxanne.chambers@ontario.ca.

Yours truly,

Roxanne Chambers

Hazardous Waste Information

These are historical waste records from the Hazardous Waste Infomation Network (HWIN) and System (HWIS), and paper manifests when available, operated by the Ontario Ministry of the Environment. As of January 1, 2023, Resource Productivity and Recovery Authority's (RPRA) Hazardous Waste Program Registry and HazTrack mobile app replace HWIN and the use of paper manifests.

Dear Mathieu Belisle,

Re: Information Request
1660 Merivale Road Ottawa, Ontario ("Subject Property")

Internal Department Circulation:

The Planning, Infrastructure and Economic Development Department has the following information in response to your request for information regarding the Subject Property:

- **Environmental Remediation Unit:** The Environmental Remediation Unit has 10 environmental reports issued for the site and/or adjacent right-of-way dating from 2011 to 2022. To request copies of these reports, please submit an access to information request at the following link: https://ottawa.ca/en/city-hall/open-transparent-and-accountable-government/access-information-and-protection-privacy/access-information#section-633034ae-8518-4ba9-a5fb-b2e66443e9bf

- **Ottawa Public Health - Environmental Health:** all public inspection results are publicly available on the Ottawa Public Health website: https://www.ottawapublichealth.ca/en/public-health-services/public-health-inspections.aspx

- **Sewer Use Program:** No records found for this property.

- **Solid Waste Services:** No records found for this property.

Documents Provided:

HLUI Summary Report and HLUI Map

The HLUI Summary Report Excel spreadsheet identifies HLUI area, point and line features within 250 metres of the Subject Property, as shown on the provided HLUI Map PDF. Within 500 metres of the Subject Property, landfills and Environmental Risk Management Area (ERMA) are also identified if applicable. 1660 Merivale Road1660 Merivale Road

For more information on how to interpret the HLUI data identified in the attached excel sheet ('ADDRESS – HLUI Summary report.xlsx'), please refer to the Overview and User Guide."

HLUI Map

The HLUI Map PDF shows HLUI area, point and line features within 250 metres of the Subject Property. Within 500 metres of the Subject Property, landfills and Environmental Risk Management Area (ERMA) are also identified if applicable.

Additional information may be obtained by contacting:

Ontario's Environmental Registry

The Environmental Registry found at https://ero.ontario.ca/ contains "public notices" about environmental matters being proposed by all government ministries covered by the Environmental Bill of Rights. The public notices may contain information about proposed new laws, regulations, policies and programs or about proposals to change or eliminate existing ones. By using keys words i.e. name of proponent/owner and the address one can ascertain if there is any information on the proponent and address under the following categories: Ministry, keywords, notice types, Notice Status, Acts, Instruments and published date (all years).

The Ontario Land Registry Office

Registration of real property is recorded in the Ontario Land Registry Office through the Land Titles Act or the Registry Act. Documents relating to title and other agreements that may affect your property are available to the public for a fee. It is recommended that a property search at the Land Registry Office be included in any investigation as to the historic use of your property. The City of Ottawa cannot comment on any documents to which it is not a party.

Fax: (613) 239-1422

Ottawa Public Health

Ottawa Public Health inspects many different types of establishments. To view inspection results, please visit the Ottawa Public Health website: Public Health Inspections - Ottawa Public Health

Please note that Ottawa Public Health is not the lead agency on land use contamination in the City of Ottawa – contact the Ministry of Environment Conservation and Parks (MECP) for further information.

Please note, as per the HLUI Disclaimer, that the information contained in the HLUI database has been compiled from publicly available records and other sources of information. The HLUI may contain erroneous information given that the records used as sources of information may be flawed. For instance, changes in municipal addresses over time may introduce error. Accordingly, all information from the HLUI database is provided on an "as is" basis with no representation or warranty by the City with respect to the information's accuracy or exhaustiveness in responding to the request.

Furthermore, the HLUI database and the results of this search in no way confirm the presence or absence of contamination or pollution of any kind. This information is provided on the assumption that it will not be relied upon by any person for any purpose whatsoever. The City of Ottawa denies all liability to any persons attempting to rely on any information provided from the HLUI database.

Please note that in responding to your request, the City of Ottawa does not guarantee or comment on the environmental condition of the Subject Property. You may wish to contact the Ontario Ministry of Environment and Climate Change for additional information.

If you have any further questions or comments, please contact HLUI@ottawa.ca.

Sincerely,

Spencer Mulvaney

Subject: **1660 Merivale Rd, Nepean, Ontario, Canada, K2G 3K4**
Your File No.: **HARN1660**
WO No.: **14350826**

Dear Madam/Sir:

We are in receipt of your correspondence wherein you requested the release of information regarding the above noted address.

Requested records relating to the following Program(s) were located:

Program	Record	Documents Attached
Fuels Safety	☒	☒
Boiler/Pressure Vessel**	☐	☐
Elevating & Amusement Devices	☐	☐
Other	☐	☐

**For BPV, if it has been indicated that records have been located but are not attached, it is likely that TSSA may not be the keeper of the records you are looking for, see note below.

TSSA does not make any representations or warranties with respect to the accuracy or completeness of any records released. The requestor assumes all risk in using or relying on the information provided.

Should you have any questions, please contact Public Information at publicinformationservices@tssa.org.

Yours truly,

M. Fowler

Melanie Fowler
Public Information Services Agent

Limitations and Notices:

General:

TSSA, as a safety regulator, uses inspection resources to address the greatest harm posed to the public. Thus, inspection only follows-up on safety orders it issues based on the degree of risk posed by the non-compliance identified in the order(s). All high-risk orders will result in a follow-up inspection by TSSA until the non-compliance is resolved. TSSA no longer follows-up on low or medium risk orders referred to as safety tasks, therefore, TSSA can no longer provide you with a report indicating the safety tasks (low and medium-risk orders) have been resolved. This information should be obtained from the device/facility owner or their contractor. One can also engage a third-party contractor to confirm device/facility compliance.

The Public Information Department, (PID), can only provide ***existing*** records for a specific location, facility, or device. If an inspection or any other type of record does not exist, PID cannot instruct TSSA to do work, such as an inspection, to create a record. TSSA, as an outcome-based regulator, deploys all of its resources, including, inspections to address the greatest harm posed to the public; and as such, cannot deploy resources to create records to satisfy an inquiry.

Please Note: *While the PID provides existing records for a specific location, facility, or device; it does not interpret or provide further explanations of the content contained in the document.*

Change of Ownership

Please be advised, if the new owner has acquired a property that contains TSSA regulated devices, i.e. elevators, boilers and pressure vessels, they would be required to complete a change of ownership to obtain new licences. Visit our website at www.tssa.org under the Licencing & Registration section for the Change of Ownership process or contact our Customer Service department at 1.877.682.8772

TSSA Fuels Safety:

If you have environmental concerns regarding this property, you should consider hiring an environmental consultant to conduct an environmental assessment of the property in question.

- Sites that have not been licensed since 1987 may not be in TSSA records.
- Be advised, TSSA Fuels Safety Division did not register:
    - private fuel underground/ aboveground storage tanks prior to January of 1990; and
    - furnace oil tanks prior to May 1, 2002.
- If records being released to you relate to private fuel outlets ("PFOs") or fuel oil furnace tanks, please note the following:
    - PFOs are defined in O. Reg. 217/01 (Liquid Fuels), where "private outlet" means "any premise, other than a retail outlet, where gasoline or an associated product is put into the fuel tanks of motor vehicles or floating motorized watercraft or into portable containers". After 2001, PFOs were no longer required to be licenced in Ontario. Thus, TSSA's records and information regarding PFOs is dated and unverified.
    - Underground furnace fuel oil tanks were required to be registered with TSSA commencing in 2001. These underground tanks are registered; however, TSSA does not inspect or verify the registered tank information. It is incumbent on the fuel distributor to ensure that the tanks are registered. Above ground fuel oil furnace tanks do not require TSSA registration.
    - Please be advised that while the TSSA releases information relating to PFOs or fuel oil furnace tanks pursuant to the TSSA's Access and Privacy Code, the TSSA cautions against reliance on this information.

- In particular, because PFOs do not require a license and there is no requirement to submit any documentation to TSSA for review or approval, TSSA has limited information on these facilities. The TSSA cautions that any information provided may be inaccurate, incomplete, or out of date.

- Fuels Safety Division does not register

  - private waste oil tanks in apartments, office buildings, residences etc.; and
  - aboveground gas or diesel tanks.

- The *Technical Standards and Safety Act* and associated regulations do not require the registration of private fuel outlets, nor does it require that any documentation on these facilities be submitted to or reviewed or approved by TSSA. As a result, TSSA has limited information on these facilities. TSSA cautions that any information provided may be inaccurate, incomplete or out of date.

TSSA Elevating & Amusement Devices Program Notice:

- All orders and/or directions issued by the TSSA Inspector have a compliance date and the owner or designated contractor are required to comply within the specified time limit. Compliance is the responsibility of the owner or operator of the device.

- All written declarations of compliance (where eligible) should be sent to TSSA. Once a declaration of compliance has been received, the outstanding order will be resolved.

- Each report shows the details and date of the inspection conducted by TSSA at the requested location.

- The Ontario Amusement Devices Regulation (O. Reg. 221/01) was adopted in 2001. Since that time, TSSA retains copies of technical dossiers of new amusement devices in Ontario (as per TSSA's retention policy). However, for rides that existed prior to the adoption of the Regulation, which were subject to a "grandfathering-in" clause, technical dossiers were not required to be filed with the TSSA. However, if the amusement ride remains in operation, as per ASTM requirements, the owner/licensee must possess an operations document for the device in question.

Federal Elevators

- Please be advised that without the express written consent of the owner, the TSSA does not release any information with respect to federal elevators or federal elevating equipment. The TSSA is a provincial regulator for the province of Ontario and federal elevators do not fall within the scope of TSSA's provincial mandate and the *Technical Standards and Safety Act* and associated Regulations. Further, the TSSA's Access and Privacy Code only applies to information collected, used, or disclosed by the TSSA in the course of TSSA's administration of the *Act*. Therefore, information with respect to federal elevators or federal elevator equipment is outside of the administration of the *Act,* and outside of the scope of the TSSA's Access and Privacy Codes.

Indigenous Lands

- Please be advised that the TSSA does not release any information with respect to indigenous lands, which are outside of the TSSA's mandate, without the express written permission from the Band. The *Technical Standards and Safety Act*, associated regulations, and TSSA's Access and Privacy Code does not apply to indigenous lands.

TSSA Boilers and Pressure Vessels (BPVs) Program Notice:

- Be advised, TSSA does not typically periodically inspect BPVs. These inspections are usually performed by insurance companies.

- **Inspection reports may not be submitted to TSSA by insurance companies; therefore, while TSSA may have some evidence of a BPV at a location on file, there may be no inspection records pertaining to BPVs located at the address provided.

- As of July 1, 2018, BPVs in Ontario may not be operated unless the Director has issued a current certificate of inspection (COI) to the owner or operator. A COI will be issued to the owner or operator of the BPV by TSSA after TSSA has received a Record of Inspection (ROI) from the insurer/third-party inspector, the associated fees have been paid and the BPV has passed a periodic inspection.

- Please note that if the BPV in question is insured, the insurance company may have additional inspection records. Please contact the insurer directly should you wish to obtain further information.

Inspection Report

Work Order # 14201101
Inspection Report # 10147940

Inspection Address: 1660 MERIVALE RD NEPEAN ON K2G 3K4 Canada	Reference Number(s): 9714891	Inspection Completion Date: May 24, 2024
	Facility Type: Liquid Fuels	Equipment Type:
Customer Name and Address: HARNOIS GROUPE IMMOBILIER INC. 80 RTE 158 ST THOMAS QC J0K 3L0 Canada	Task Type: FS Follow-up Inspection - New LF	
	The facility/equipment is inspected in accordance with Ontario's Technical Standards & Safety Act and the appropriate regulations and codes. When an Inspector's order is issued, time limits for compliance reflect the severity of the violation and serve to avoid disruption of service.	

INSPECTION NOTES

Inspection Order(s) are issued pursuant to my authority under section 21. (1) of the Technical Standards and Safety Act, 2000.

Where inspection orders are issued, TSSA will perform a follow-up inspection to confirm compliance. The responsible party is expected to make all the necessary corrections within the compliance time specified.

TSSA Inspector David Barclay travelled to 1660 Merivale Rd; Nepean (Harnois Groupe Immobilier Inc) on May 24, 2024 to conduct a follow up inspection regarding orders previously issued. While onsite verifying compliance this Inspector discovered the transition sump contains approx. 5" of water, missing electronic sump sensor. Received and reviewed annual inspection report regarding shear valve/ leak sensor sump testing, resolved.

*Require installation of sump sensor within transition sump which is currently missing.
*Require a copy of the annual inspection report regarding the testing of the "natural gas appliances" within the car wash.

FYI:
Technical Standards and Safety Act. 37 (1) - Offences
Every person who,
(a) contravenes or fails to comply with any provision of this Act, the regulations or a Minister's order;
(b) knowingly makes a false statement or furnishes false information under this Act, the regulations or a Minister's order;
(c) contravenes or fails to comply with a term or condition of an authorization;
(d) contravenes or fails to comply with an order or requirement of a director or an inspector, or obstructs an inspector,
is guilty of an offence and on conviction is liable to a fine of not more than $50,000 or to imprisonment for a term of not more than one year, or to both, or, if the person is a body corporate, to a fine of not more than $1,000,000. 2000, c. 16, s. 37 (1); 2009, c. 28, s. 14 (1).

INSPECTION ORDER(S) ISSUED TO: HARNOIS GROUPE IMMOBILIER INC.

INDIVIDUAL(s) ENSURING COMPLIANCE: Katrine Boucher

Inspection Report # 10053967

Inspection Address: 1660 MERIVALE RD NEPEAN ON K2G 3K4 Canada	Reference Number(s): 9714891	Inspection Completion Date: Oct 12, 2022
	Facility Type: Liquid Fuels	Equipment Type:
Customer Name and Address: HARNOIS GROUPE IMMOBILIER INC. 80 RTE 158 ST THOMAS QC J0K 3L0 Canada	Task Type: FS Owner Change New Inspection - LF Station	
	The facility/equipment is inspected in accordance with Ontario's Technical Standards & Safety Act and the appropriate regulations and codes. When an Inspector's order is issued, time limits for compliance reflect the severity of the violation and serve to avoid disruption of service.	

INSPECTION NOTES

Inspection Order(s) are issued pursuant to my authority under section 21. (1) of the Technical Standards and Safety Act, 2000.

TSSA Inspector David Barclay travelled to 1600 Merivale Rd; Nepean (Harnois Groupe Immobilier Inc) on October 12, 2022 to conduct a petroleum facility inspection regarding Change of License Holder. Consulted with Mr. Araji - Manager on site during inspection of the petroleum and propane facility licenses, emergency stop, camera system, Veederoot, signage, spill kit, fire extinguishers, dispensing equipment, stp and dispenser sumps, vehicular protection, fill and vent pipes, propane cylinder storage, car wash natural gas appliances, testing of intercom, and discovered the following deficiencies:

*Transition sump near the petroleum storage tank vent pipes is not electronically monitored.
*Require copy of the annual inspection report regarding the shear valve and leak detection system.
*Require copy of the annual inspection report regarding the natural gas appliances within the Car Wash.

*A compliance date of January 10, 2023 has been issued.

Inspection Complete.

INSPECTION ORDER(S) ISSUED TO: HARNOIS GROUPE IMMOBILIER INC.
INDIVIDUAL(s) ENSURING COMPLIANCE: Philippe Grondin

No.	Inspection Order(s)	Issued Date	Compliance Date
1.	**Liquid Fuels Handling Code Clause 4.6.9** **Shear valves and leak detection systems shall be maintained and tested at least once per year or in accordance with the manufacturer's instructions and a written record of the maintenance and testing shall be retained.** **Shear Valve and Leak Detection Inspection Report.** **Require copy of annual inspection report regarding Shear Valve and Leak Detection Inspection.**	**Oct 16, 2022**	**Jan 10, 2023**

Re: IOL's response to TSSA's letter dated April 11th, 2022-Groundwater Monitoring Program-1660 Merivale Road, Ottawa, Ontario (TSSA Service Request #791084)

Dear Ms. Islam,

Please find enclosed the *2021 Supplemental Subsurface Investigation Report* prepared by Golder dated June 30, 2022 which documents findings of the scope outlined in the 2022 Action Plan dated February 4, 2022. An excerpt report that focuses on MW22-01 and MW22-02 has been provided to the Ottawa Carleton District Schoolboard (OCDSB).

As requested, two monitoring wells, MW22-01 and MW22-02, were installed on the OCDSB to the east of 1660 Merivale Road Ottawa, ON ("Site") while two additional monitoring wells, MW21-02 and MW21-01, were installed onsite at the western property boundary. At all four of these locations, the concentrations in both soil and groundwater were below the applicable criteria; therefore, concentrations in groundwater are delineated cross-gradient (east and west) and down-gradient (south) of the retail fuel outlet. At upgradient locations, TH9 and TH8 are both compliant for all parameters except for F3 concentrations at TH8 which are slightly above criteria (590 ug/l compared to a criteria of 500 ug/l). Monitoring wells MW16-01, TH8, TH9, TH11, TH12, TH100 to TH102 will be monitored and sampled on an annual basis in accordance to the 2017 Offsite Containment Management Plan prepared by Golder dated May 19, 2017. Similarly, the onsite monitoring wells (TH1 to TH7) will be monitored and sampled on an annual basis as outlined in the 2015 Interim Containment Management Plan prepared by EXP dated April 2, 2015.

The soil vapour analytical results for SV16-01, SV16-02, SV21-03, SV21-01 and SV21-02 were all below the residential Health-Based Indoor Air Criteria.

The retail fuel outlet and carwash at 1660 Merivale Road Ottawa, ON has been sold to Harnois Energies who will be managing both the onsite and offsite Containment Management Plans. Please direct any further inquiries and concerns to Jean-Philippe Wilkins at jeanphilippewilkins@harnoisenergies.com. As delineation has been obtained, Imperial Oil Limited will decommission the offsite wells, MW22-01 and MW22-02, in accordance to O. Reg 903 by August 31, 2022.

Best regards,

Sabreen Sherwani
Project Manager, Execution

Executive Summary

Site Background

Site location	1660 Merivale Road, Ottawa, Ontario
Type of facility	Former Retail Fuel Outlet
Current Site condition	Canadian Tire Gas Station and Car Wash
Site zoning	Arterial Mainstreet (AM) – commercial/mixed use zone
Adjacent land use	North: Viewmount Drive followed by Arterial Mainstreet (AM) – commercial businesses East: Merivale Road followed by Minor Institutional (I1) – school South: Arterial Mainstreet (AM) – residential properties West: Residential (R2) – residential properties

Field Work

Dates of field work	December 1 and 3, 2021 (on-site drilling, groundwater monitoring and sampling) December 9 and 10, 2021 (soil vapour sampling) March 16 to 30, 2022 (off-site drilling and on-site groundwater monitoring and sampling) April 13, 2022 (off-site roadway groundwater monitoring and sampling)
Number of boreholes drilled	2 in December 2021 (MW21-01 and MW21-02) 2 in March 2022 (MW22-01 and MW22-02)
Number of monitoring wells installed	2 in December 2021 (MW21-01 and MW21-02) 2 in March 2022 (MW22-01 and MW22-02)
Number of groundwater wells sampled	2 in December 2021 10 in March 2022 7 in April 2022
Number of soil vapour probes sampled	5

Site Stratigraphy and Hydrogeology

Predominant soil type	Coarse-textured
Depth to shallow groundwater	March 2022 (on-site wells) – from 1.67 to 3.14 metres below ground surface (mbgs) April 2022 (roadway) – from 2.61 to 3.09 mbgs

Overburden groundwater flow direction	South
Light non-aqueous phase liquid (LNAPL)	Detected in one monitoring well (TH5) Sheen detected in two monitoring wells (TH8 and TH9)

Nearby Receptors

Groundwater use within 300 metres (m)	The City of Ottawa sources drinking water from the Ottawa River, approximately 5.5 kilometres (km) north of the Site (City of Ottawa 2022, internet site). One domestic/livestock water supply well was identified approximately 245 m northeast of the Site. It is unknown if this well is currently used for drinking water supply.
Surface water body within 500 m	Nepean Creek is approximately 330 m east of the Site. The Rideau River is approximately 2.5 km east of the Site.

Selected Criteria

Benzene, toluene, ethylbenzene, xylenes (BTEX), petroleum hydrocarbons (PHC) fractions F1 to F4, volatile organic compounds (VOCs), lead	**Soil:** Ministry of the Environment (MOE, now Ministry of the Environment, Conservation and Parks [MECP]) Ontario Regulation (O.Reg.) 153 (MOE 2011) Table 3 Full Depth Generic Site Condition Standards for industrial/commercial/community property use for coarse textured soil in a non-potable groundwater condition. **Groundwater:** MECP O. Reg. 153 (MOE 2011) Table 3 Full Depth Generic Site Condition Standards for all types of property use for groundwater in coarse textured soil in a non-potable groundwater condition. **Soil Vapour:** Health-Based Indoor Air Criteria (HBIAC) – Industrial lower risk level provided by MECP Modified Soil vapour screening level (SVSL) for residential land use calculated by dividing HBIAC by an attenuation factor of 0.02.

Soil Analytical Results Exceeding Selected Criteria

BTEX, PHC Fractions F1 to F4	No exceedances were identified.
n-Hexane	No exceedances were identified.
Lead	No exceedances were identified.

Groundwater Analytical Results Exceeding Selected Criteria

BTEX, PHC Fractions F1 to F4	Exceedances were identified at five locations (MW16-01, TH4, TH8, TH11, and TH101).
Dissolved Lead	No exceedances were identified.

1.0 INTRODUCTION

Golder Associates Ltd. (Golder) was retained by Imperial Oil Limited (Imperial) to conduct a Supplemental Subsurface Investigation (SSI) at the former retail fuel outlet located at 1660 Merivale Road in Ottawa, Ontario (the Site). The Site location is presented in Figures 1 to 3.

This report documents the methods and results of the SSI conducted between December 1 and 10, 2021, March 16 to 30, 2022, and April 13, 2022.

1.1 Objective

The objective of the investigation was to further delineate soil impacts previously identified on-site and complete groundwater monitoring and sampling of existing and new monitoring wells.

1.2 Scope of Work

The scope of work for this investigation consisted of the following activities:

December 2021

- Drilling two boreholes to a maximum depth of 6 mbgs and completing both boreholes as monitoring wells;
- Collecting soil samples for analysis of BTEX, PHC Fractions F1 to F4, n-hexane, and lead;
- Developing and monitoring the newly installed monitoring wells;
- Collecting groundwater samples from the newly-installed monitoring wells for analysis of BTEX, PHC Fractions F1 to F4, and dissolved lead; and
- Collecting soil vapour samples from five soil vapour probes for analysis of BTEX, PHC Fractions F1 and F2, and VOCs.

March/April 2022

- Drilling two off-site boreholes to a maximum depth of 4.8 mbgs and completing both boreholes as monitoring wells;
- Collecting soil samples for analysis of BTEX, PHC Fractions F1 to F4, n-hexane, and lead;
- Developing and monitoring the newly installed monitoring wells;
- Collecting groundwater samples from existing and newly-installed monitoring wells for analysis of BTEX, PHC Fractions F1 to F4, and dissolved lead; and
- Preparing an SSI report documenting and detailing the methods and results of the investigation activities.

1.3 Summary of Previous Work

Previous environmental assessments were reviewed by Golder to assess the historical Site conditions and as a source of information for reporting. A summary of the relevant information identified as part of this review follows.

General Findings From Previous Phase I Environmental Site Assessments (ESAs):

- The Site operated as a gas station and service garage from 1968 to 1984, and an operating gas station with a carwash from 1984 to present (Barenco 2011b).

- Former infrastructure included a kiosk, an attached canopy, three dispensers on individual pump islands, four fibreglass underground storage tanks (USTs), and a car wash (Barenco 2011b).
- On-site areas of potential environmental concern (APECs) were identified as the four USTs, the six dispensers, and product piping, the former service garage, and the unknown source of imported fill that was brought to the Site during construction of the carwash. Potential contaminants of concern (PCOCs) were considered to be BTEX, PHC Fractions F1 to F4, polycyclic aromatic hydrocarbons (PAHs), VOCs, metals, and polychlorinated biphenyls (PCBs) (Barenco 2011b).

General Findings From Previous Phase II ESAs:

- In 2011, five boreholes were advanced to a maximum depth of 5.8 mbgs, and completed as monitoring wells (TH1 to TH5). Soil samples collected from the boreholes were submitted for BTEX, PHC Fractions F1 to F4, hexane, 2-and 3-ring PAHs, and selected metals. All soil samples yielded concentrations of all parameters below the Table 3 standard. Groundwater samples from the newly-installed monitoring wells were submitted for analysis of BTEX, PHC Fractions F1 to F4, and dissolved lead. Groundwater samples from three monitoring wells yielded concentrations of one or more of benzene, ethylbenzene, hexane, and PHC Fractions F1 to F4. Groundwater was encountered between 3.25 and 4.21 mbgs. Groundwater flow was inferred to the southwest (Barenco 2011a).
- In 2011, two boreholes were advanced on-site, and completed as monitoring wells (TH6 and TH7). Soil samples were submitted for analysis of BTEX, PHC Fractions F1 to F4, hexane, PAHs, and select metals. All soil samples yielded concentrations of all parameters below the Table 3 standards. Groundwater samples were collected from the newly-installed monitoring wells and submitted for analysis of BTEX, PHC Fractions F1 to F4, and dissolved lead. All groundwater samples yielded concentrations of all parameters below the Table 3 standards. Groundwater flow was inferred to the southwest (Barenco 2011c).
- A tank replacement program was undertaken in 2011. Approximately 870 litres (L) of residual products were purged from the four USTs. The four USTs were removed from the Site. One of the tanks stored gasoline and had a 45,000L capacity. The other three tanks had a capacity of 25,000 L, two of which were used for storage of regular unleaded gasoline and the third was used for storage of super unleaded gasoline. The product piping lines connecting the USTs to the dispensers and the vent lines were not removed during this investigation. During this investigation, the following standards were used: the Table 5 standards for commercial/industrial/community property use and fine and medium textured stratified soils. Soil samples collected from the tank excavations were submitted for analysis of one or more of BTEX, PHC Fractions F1 to F4, lead, and 2-and 3-ring PAHs. All soil samples yielded concentrations of all parameters below the Table 5 standards (Barenco 2011d).
- In 2012, five boreholes were advanced to a maximum depth of 5.0 mbgs, and completed as monitoring wells (TH8 to TH12). These boreholes were advanced off-site, along Viewmount Drive (TH8 and TH9) and Merivale Road (TH10 to TH12). Soil samples collected were submitted for analysis of BTEX, PHC Fractions F1 to F4, hexane, select PAHs, and lead. All soil samples yielded concentrations of all parameters below the Table 3 standards. Groundwater samples were submitted for analysis of BTEX, PHC Fractions F1 to F4, hexane and dissolved lead. The groundwater samples for one monitoring well yielded concentrations of PHC Fractions F1 and F2 above the Table 3 standards. All other groundwater samples yielded concentrations of all parameters below the Table 3 standards. Groundwater was encountered between 2.75 and 3.03 mbgs. Groundwater flow was inferred to the south (exp 2013).

- In 2014, three boreholes were advanced along Viewmount Drive and Merivale Road, to a maximum depth of 5.0 mbgs, and completed as monitoring wells (TH100 to TH102). Soil samples were submitted for analysis of BTEX, PHC Fractions F1 to F4, hexane, methyl-t-butyl ether (MTBE), and dissolved lead. All soil samples yielded concentrations of all parameters below the Table 3 standards. Groundwater samples were submitted for analysis of BTEX, PHC Fractions F1 to F4, hexane, MTBE, and dissolved lead. Groundwater samples from three of the four monitoring wells sampled yielded concentrations of one or more of PHC Fractions F1 to F4 above the Table 3 standards. Groundwater was encountered between 3.02 and 3.60 mbgs. Groundwater flow was inferred to the southwest (exp 2014).

Previous Remediation Activities:

- At the time of writing this report, there were no remediation reports available to Golder to review.

2.0 SITE BACKGROUND

2.1 Site Description

The Site is a former retail fuel facility, currently operating as a Canadian Tire retail fuel outlet and car wash, located southwest of the intersection of Merivale Road and Viewmount Drive in Ottawa, Ontario. The Site is a square-shaped property and approximately 0.65 hectares in size.

The general features of the Site are illustrated in Figures 2 and 3. Site photographs are presented in Appendix A.

2.2 Land Use

The Site is zoned as Arterial Mainstreet (AM) (City of Ottawa 2022, internet site) and surrounding properties are zoned as Arterial Mainstreet, Minor Institutional and Residential.

3.0 REGULATORY FRAMEWORK AND SELECTED CRITERIA

The MECP standards considered to be applicable at the Site are those specified in Table 3 of the document titled “Soil, Ground Water, and Sediment Standards for Use Under Part XV.1 of the *Environmental Protection Act*,” dated April 15, 2011 (MOE 2011) (hereafter referred to as Table 3 Standards. More specifically for soil, Table 3 is defined as Full Depth Generic Site Condition Standards for industrial/commercial/community property use for coarse textured soil in a non-potable groundwater condition. More specifically for groundwater, Table 3 is defined as Full Depth Generic Site Condition Standards for all types of property use for groundwater in coarse textured soil in a non-potable ground water condition.

The soil vapour results were compared against the SVSL for residential land use. In order to derive soil vapour screening criteria, the Ontario Ministry of the Environment and Climate Change (MOECC) (now MECP's) Modified Generic Risk Assessment (MGRA) “Approved Model” Health Based Indoor Air Criteria (HBIAC; November 1, 2016) were divided by the MECP residential attenuation factor of 0.02 (MOECC 2016).

3.1 Site Sensitivity

The Site would not be considered environmentally sensitive, based on the following:

- No part of the Site is on or within 30 m of an area of natural significance (MNRF 2022, internet site).

3.2 Groundwater Condition

The groundwater condition is considered non-potable based on the following:

- The City of Ottawa sources drinking water from the Ottawa River, approximately 5.5 km north of the Site (City of Ottawa 2022, internet site). One domestic/livestock water supply well was identified approximately 245 m northeast of the Site. It is unknown if this well is currently used for drinking water supply.

3.3 Shallow Soil Property

The Site is not considered to be a shallow soil property, based on the following:

- The available borehole logs and geologic records indicate that more than one-third of the area of the Site consists of soil greater than 2 m in depth beneath the ground surface, excluding any non-soil surface treatment greater than 0.5 m thick.

3.4 Nearby Water Body

A water body, in whole or in part, is not on the Site or within 30 m of the Site boundaries.

3.5 Soil Texture

The applicable soil texture for the Site is based on the following:

- Coarse textured soils, as determined by borehole logs.

3.6 Property Use

The applicable property use is as follows:

- Industrial/Commercial/Community property use, as the Site is currently zoned Arterial Mainstreet (AM), which allows for commercial and industrial properties.

3.7 Full Depth or Stratified Site Condition Standards

The full depth rather than the stratified generic site condition standards were selected.

4.0 FIELD WORK AND METHODS

4.1 Pre-Investigation Activities

Prior to any drilling, public and private utility locates were conducted to avoid underground facilities during the subsurface activities.

4.2 Borehole Drilling and Monitoring Well Installation

Two boreholes were drilled on the Site in 2021, and were completed as monitoring wells (MW21-01 and MW21-02). Two boreholes were drilled on an adjacent property (1755 Merivale Road) in 2022, and were completed as monitoring wells (MW22-01 and MW22-02).

Prior to drilling, boreholes were hydro-excavated to 2.4 mbgs, for utility clearance. The hydro-vac truck was operated by Badger Daylighting, from Ottawa, Ontario. Borehole drilling was completed using a track-mounted Geoprobe 7822DT. The drill rig was operated by Strata Drilling Group from Ottawa, Ontario. Boreholes were advanced through the bedrock using the air rotary method.

All non-dedicated sampling equipment (i.e., sidewall sampler) was decontaminated after each use by removing all soil with a brush and scrubbing with a phosphate-free detergent and water, and then rinsing with tap water.

Monitoring well completion consisted of 0.010-inch slot screens, and 10-20 silica sand was placed around the screen to a level of approximately 0.3 m above the top of the screen. Well annuli above the sand pack were sealed with hydrated bentonite chips. Monitoring wells were completed with lockable flushmount steel casings set in concrete.

The monitoring well locations are presented in Figure 2. The MECP well record for the new well installed is presented in Appendix B and boreholes logs with well completion details are presented in Appendix C.

4.3 Soil Sampling

The soil conditions identified during the subsurface investigations were recorded on Golder's standard field logs. The soil was logged consistently with the Unified Soil Classification System (ASTM 2009).

Each soil sample collected was split, with half being placed in laboratory-supplied sample jars for analysis and half placed into resealable plastic bags for combustible gas measurements. These measurements were completed by allowing a quarter-filled soil bag to equilibrate for about 30 minutes at a temperature at or above 15 degrees Celsius (°C). Soil in the bag was broken apart and the probe of a combustible RKI Eagle Organic Vapour Monitor (OVM) with methane elimination was inserted into the bag. The peak headspace reading was then recorded for the sample. The OVM readings are provided on the borehole logs.

The OVM was bump tested daily to 15% lower explosive limit (LEL) using a hexane standard. If the bump test differed more than 10% from the known concentration, the OVM was adjusted to match the exact concentration of the calibration gas. Calibrations were logged at the start of each day.

Soil for volatile analysis was placed into 40 millilitre (mL) glass, septum-topped vials prefilled with 10 mL of methanol preservative and a single 120-mL glass jar. Disposable syringe soil sampling devices were used to extrude approximately 5 grams (g) of soil into each vial. Soil for semi-volatile analysis was placed in a single 120 mL glass jar. Soil for metal analysis was placed in a single 250-mL glass jar.

Ten samples, including two duplicates, were collected and submitted to Bureau Veritas Laboratories (BVL) for analysis of one or more of BTEX, PHC Fractions F1 to F4, n-hexane, and lead.

Soil samples for laboratory analysis were selected based on physical observations (e.g., evidence of staining, soil colour and/or texture, evidence of odours), field screening results (e.g., highest readings), and/or in accordance with the sampling and analytical plan. All samples were submitted under chain-of-custody to BVL in Mississauga, Ontario, a Standards Council of Canada (SCC) accredited laboratory.

4.4 Groundwater Well Development

Following drilling and prior to groundwater sampling, the newly-installed wells were developed by surging and pumping water from the well, with the objective of removing fine particulate matter from the well and restoring the hydraulic interface between the well and the geologic formation. High density polyethylene (HDPE) tubing and surge blocks were used to develop the monitoring wells. Purged water was retained on the Site in a 205-L drum. Once the field program was completed, the drum was transported off the Site and appropriately disposed of at an approved facility in accordance with O. Reg. 347, as amended by O.Reg. 777/20 (MOE 2000).

4.5 Groundwater Monitoring and Sampling

Groundwater monitoring was completed on the accessible new and existing monitoring wells. A summary of the monitoring data is provided in Table 1. A Site plan showing monitoring well locations is provided in Figures 2 and 3.

Depth to groundwater was measured and, if present, the thickness of LNAPL using an oil/water interface probe. If LNAPL was detected, its presence was confirmed visually using a bailer. Prior to use in each well, the interface probe was cleaned using a phosphate-free detergent and water solution and rinsed with distilled water to minimize the potential for cross-contamination. Depth to groundwater measurements were taken from the top of the polyvinyl chloride casing.

Groundwater samples were collected using the low-flow sampling method. Water was pumped from each well, at a rate of 0.1 and 0.2 litres per minute (L/min), using HDPE tubing connected to a peristaltic pump with a portion of silicon tubing. Routine water quality indicator parameters were measured during pumping using a multi-parameter water quality meter and flow through cell. The parameters measured included dissolved oxygen, electrical conductivity, oxidation-reduction potential, pH, temperature, and turbidity. Calibration of the meter was completed as per the manufacturer's instructions. Purged water was collected in pails, transferred to a drum and retained on the Site. Once the field program was completed, the drum was transported off the Site and appropriately disposed of at an approved facility in accordance with O.Reg. 347, as amended by O.Reg. 777/20 (MOE 2000).

In December 2021, three samples including one field duplicate and two groundwater samples were collected and submitted to BVL for analysis of BTEX, PHC Fractions F1 to F4, and dissolved lead. A field blank and trip blank were also submitted for analysis.

In March 2022, 11 samples, including one field duplicate, and 10 groundwater samples were collected and submitted to BVL for analysis of BTEX, PHC Fractions F1 to F4, and dissolved lead. A field blank and trip blank were also submitted for analysis.

In April 2022, eight samples, including one field duplicate, and seven groundwater samples were collected and submitted to BVL for analysis of BTEX, PHC Fractions F1 to F4, and dissolved lead. A field blank and trip blank were also submitted for analysis.

Groundwater samples were placed in laboratory-supplied containers suitable for the analytes, and where applicable, the appropriate laboratory-supplied preservative was added to the samples. Sample containers were properly filled, placed in an ice filled cooler and submitted under chain-of-custody to BVL for analysis.

4.6 Soil Vapour Probe Purging and Leak Testing

Five soil vapour probes (SV16-01, SV16-02, and SV21-01 to SV21-03) were sampled on December 9 and 10, 2021. Prior to sample collection, each soil vapour probe was purged of three probe volumes using a pump calibrated to approximately 200 mL per minute (mL/min) prior to field screening. Purge gas was collected into a 1-L Tedlar bag using a vacuum chamber to eliminate cross-contamination from the sampling pump. The concentrations of methane, carbon dioxide, oxygen and combustible gases in the screening sample were measured using an RKI6000 GX and Landtec GEM 2000.

Flow rate and vacuum pressure were also measured during the field screening. Flow rates were measured using a Bios International Defender 510M primary standard calibrator. Vacuum pressures were measured using Dwyer Magnehelic® differential pressure gauges.

Tubing connections between the probe and field screening equipment were made using 6.25 millimetre (mm) (0.25 inch) PTFE tubing. The soil vapour field gas readings are presented in Table 4.

4.7 Soil Vapour Sampling

Following purging and field screening, vapour probes were allowed to re-equilibrate for approximately 30 minutes before collecting a sample for laboratory submission. Soil vapour samples were collected into a laboratory-supplied 1.4-L SummaTM canister. Tubing connections between the probe and sampling media were made using 6.25 mm (0.25 inch) PTFE tubing.

Soil vapour samples were collected following procedures outlined in the United States Environmental Protection Agency Method TO-15. A flow regulator supplied by BVL was used to regulate the volumetric soil vapour flow rate into the SummaTM canister at a flow rate of approximately 175 mL/min during an approximate 8-minute sampling period.

The 1.4-L Summa canisters, certified by BVL to be free of contaminants, were fitted with a vacuum gauge for sample collection. Prior to sampling, the initial Summa canister vacuums were confirmed to be on the order of 26 inches Mercury when gauged.

Soil vapour samples were collected and submitted to the BVL Mississauga facility, an SCC-accredited laboratory, for analysis of BTEX, PHC Fractions F1 and F2, and VOCs.

Six samples, including one field duplicate, and five soil vapour samples, were submitted to BVL for analysis. One field blank and one trip blank were also submitted for analysis.

4.8 Weather Conditions during Soil Vapour Sampling

Date	Temperature (°C)	Relative Humidity (%)	Barometric Pressure (kilopascals [kPa])
December 9, 2021	-7.2 to -6.9	68 to 70	100.91 to 100.96
December 10, 2021	-5.4 to -7.3	82 to 86	100.20 to 100.28

The weather information above was taken from the meteorological station (*2021 Historical Hourly Data Report. Ottawa International Airport*) located closest to the Site.

5.0 RESULTS

5.1 Site Stratigraphy

A description of the soil profile for the four boreholes advanced at the Site during this investigation is presented in the borehole logs provided in Appendix C.

- Fill materials consisting of sand, gravel and cobbles were observed from surface to 1.5 mbgs, overlying sandy clay and a thin layer of sand to 2.4 mbgs. Bedrock was encountered from 2.4 mbgs to 6.0 mbgs, the maximum depth of investigation.

Based on field observations and previous investigations, coarse-grained soils represent the dominant soil type at the Site.

5.2 Site Hydrogeology

5.2.1 Groundwater Monitoring Results

The groundwater monitoring results from the activities conducted at the Site in December 2021, March 2022, and April 2022 are presented in Table 1 and summarized below:

Field Parameters	March 2022 (on-site)		April 2022 (roadway)	
	Minimum	Maximum	Minimum	Maximum
LNAPL (mm)	Not detected	2	Not detected	Sheen
Depth to groundwater in shallow monitoring wells (mbgs)	1.67	3.14	2.61	3.09

The groundwater elevations are presented in Table 1. The groundwater flow was inferred to the south (Figure 4).

5.3 Soil Analytical Results

The soil analytical results are illustrated in Figure 5, and summarized in Table 2. Copies of the laboratory certificates of analysis are included in Appendix D.

All soil samples yielded concentrations of BTEX, PHC Fractions F1 to F4, n-hexane, and lead below the applicable standards.

5.4 Groundwater Analytical Results

The groundwater analytical results are illustrated in Figure 6, and summarized in Table 3. Copies of the laboratory certificates of analysis are included in Appendix D.

Groundwater samples from five monitoring wells yielded concentrations of one or more of BTEX and PHC Fractions F1 to F4 above applicable standard. All groundwater samples yielded concentrations of lead below the applicable standard.

5.5 Soil Vapour Analytical Results

The soil vapour analytical results are illustrated in Figures 7 and 8. The analytical results are summarized in Tables 4 to 6. Copies of the laboratory certificates of analysis are included in Appendix D.

All soil vapour samples yielded concentrations of BTEX, PHC Fractions F1 and F2, and VOCs below the applicable SVSL.

6.0 FIELD AND LABORATORY QUALITY ASSURANCE/ QUALITY CONTROL (QA/QC)

A quality assurance/quality control (QA/QC) program was followed to manage and quantify the quality of the investigation results. The program included field procedures, laboratory procedures and the use of QC samples to quantify the results of the program. Two duplicate soil samples, three duplicate groundwater samples, three water field blanks, three water trip blank samples, one soil vapour duplicate sample, one ambient air field blank, and one air trip blank were submitted as part of this program. A discussion of the QA/QC program is included in Appendix E.

The analytical results of the soil, groundwater and soil vapour samples collected by Golder field staff between December 1 and 10, 2021, March 16 to 30, 2022, and April 13, 2022 as part of the SSI, are considered reliable.

7.0 CONCLUSIONS

A summary of the findings from this investigation program follows.

- Fill materials consisting of sand, gravel and cobbles were observed from surface to 1.5 mbgs, overlying sandy clay and a thin layer of sand to 2.4 mbgs. Bedrock was encountered from 2.4 to 6.0 mbgs, the maximum depth of investigation.
- Measurable LNAPL was detected in one monitoring well (TH5), and sheen was observed in two monitoring wells (TH8 and TH9).
- The depths to groundwater ranged from 1.67 to 3.14 mbgs in March 2022, and 2.61 to 3.09 mbgs in April 2022.
- The groundwater flow was inferred to the south.
- The applicable standards for the contaminants of concern, based on the results of the water well survey completed, were considered to be the MECP Table 3 Full Depth Generic Site Condition Standards for industrial/commercial/community property use for coarse textured soil in a non-potable groundwater condition.
- All soil samples yielded concentrations of BTEX, PHC Fractions F1 to F4, n-hexane, and lead below the applicable standards.
- Groundwater samples from five monitoring wells yielded concentrations of one or more of BTEX and PHC Fractions F1 to F4 above applicable standard. All groundwater samples yielded concentrations of lead below the applicable standard.
- The applicable criteria for the contaminants of concern in soil vapour were considered to be the SVSL for residential land use, calculated by dividing the HBIAC MECP MGRA (November 2016), by an attenuation factor of 0.02.
- All soil vapour samples yielded concentrations of BTEX, PHC Fractions F1 and F2, and VOCs below the applicable SVSL.
- Based on the review of the QA/QC results, the data presented in this report are considered to be reliable.

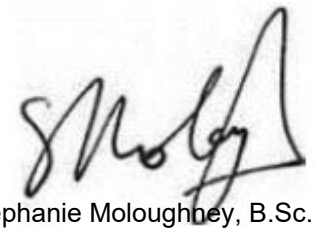
9.0 LIMITATIONS OF LIABILITY, SCOPE OF REPORT AND THIRD PARTY RELIANCE

This report has been prepared and the work referred to in this report has been undertaken by Golder Associates Ltd. for Imperial Oil Limited. It is intended for the sole and exclusive use of Imperial Oil Limited, its affiliated companies and partners and their respective insurers, agents, employees and advisors (collectively, “Imperial Oil”). Any use, reliance on or decision made by any person other than Imperial Oil based on this report is the sole responsibility of such other person. Imperial Oil and Golder Associates Ltd. make no representation or warranty to any other person with regard to this report and the work referred to in this report, and they accept no duty of care to any other person or any liability or responsibility whatsoever for any losses, expenses, damages, fines, penalties or other harm that may be suffered or incurred by any other person as a result of the use of, or reliance on, any decision made or any action taken based on this report or the work referred to in this report.

The investigation undertaken by Golder Associates Ltd. with respect to this report and any conclusions or recommendations made in this report reflect Golder Associates Ltd.’s judgement based on the site conditions observed at the time of the site inspection on the date(s) set out in this report, and on information available at the time of preparation of this report. This report has been prepared for specific application to this site and it is based, in part, upon visual observation of the site, subsurface investigation at discrete locations and depths, and specific analysis of specific chemical parameters and materials during a specific time interval, all as described in this report.



Unless otherwise stated, the findings cannot be extended to previous or future site conditions, portions of the site which were unavailable for direct investigation, subsurface locations which were not investigated directly, or chemical parameters, materials or analysis which were not addressed. Substances other than those addressed by the investigation described in this report may exist within the site, substances addressed by the investigation may exist in areas of the site not investigated and concentrations of substances addressed which are different than those reported may exist in areas other than the locations from which samples were taken.

If site conditions or applicable standards change or if any additional information becomes available at a future date, modifications to the findings, conclusions and recommendations in this report may be necessary.

Other than by Imperial Oil, copying or distribution of this report, use of or reliance on the information contained herein, in whole or in part, is not permitted without the express written permission of Golder Associates Ltd. Nothing in this report is intended to constitute or provide a legal opinion.

- SOIL VAPOUR PROBE LOCATION

NOTES

1. LOCATIONS WHERE CURRENT SOIL VAPOUR SAMPLE MEETS APPLICABLE GUIDELINES/STANDARDS FOR ALL PARAMETERS ANALYZED SHOWN AS AN **GREEN DIAMOND (♦)**.
2. LOCATIONS WHERE CURRENT SOIL VAPOUR SAMPLE EXCEEDS APPLICABLE GUIDELINES/STANDARDS FOR AT LEAST ONE OF THE PARAMETERS ANALYZED SHOWN AS A **RED CIRCLE (●)**.
3. EXCEEDANCES OF APPLICABLE GUIDELINES/STANDARDS IN TEXT ARE SHOWN IN **RED.**

LIST OF APPLICABLE ABBREVIATIONS

<	LESS THAN	B	BENZENE
µg/m³	MICROGRAMS PER METRE CUBE	T	TOLUENE
-	NOT AVAILABLE OR NO DATA	E	ETHYLBENZENE
Ali >C_5-C_6	ALIPHATICS >C_5-C_6	X	XYLENES
Ali >C_6-C_8	ALIPHATICS >C_6-C_8	F1	PETROLEUM HYDROCARBON FRACTION 1 (C_6-C_{10}) LESS BTEX
Ali >C_8-C_{10}	ALIPHATICS >C_8-C_{10}	F2	PETROLEUM HYDROCARBON FRACTION 2 (C/10-C/16)
Ali >C_{10}-C_{12}	ALIPHATICS >C_{10}-C_{12}	m	METRE
Ali >C_{12}-C_{16}	ALIPHATICS >C_{12}-C_{16}	mbgs	METRES BELOW GROUND SURFACE
Aro >C_7-C_8	AROMATIC >C_7-C_8	n/s	NO STANDARD
Aro >C_8-C_{10}	AROMATIC >C_8-C_{10}	RDL	REPORTABLE DETECTION LIMIT
Aro >C_{10}-C_{12}	AROMATIC >C_{10}-C_{12}	SVSL	SOIL VAPOUR SCREENING LEVEL
Aro >C_{12}-C_{16}	AROMATIC >C_{12}-C_{16}

Notes:
[(a)] Elevations are relative to a local benchmark (centre of storm sewer catch basin approximately 5 m west of kiosk), with an assigned elevation of 100.00 m (exp. 2013).
LNAPL - light non-aqueous phase liquid
m - metres
mbgs - metres below ground surface
mbtoc - metres below top of casing
mm - millimetres
n/a - not applicable
n/d - not detected
n/m - not measured
< - less than

Notes:

[(a)] Elevations are relative to a local benchmark (centre of storm sewer catch basin approximately 5 m west of kiosk), with an assigned elevation of 100.00 m (exp. 2013).

< - less than

LNAPL - light non-aqueous phase liquid

m - metres

mbgs - metres below ground surface

mbtoc - metres below top of casing

mm - millimetres

n/a - not applicable

n/d - not detected

n/m - not measured

Borehole and Monitoring Well Logs

LIST OF APPLICABLE ABBREVIATIONS

▽	GROUNDWATER LEVEL
%LEL	LOWER EXPLOSIVE LIMIT
µS/cm	MICROSIEMENS PER CENTIMETRE
1,2-DBA	1,2-DIBROMOETHANE
1,2-DCA	1,2-DICHLOROETHANE
ARS	AIR RETURN SAMPLE
As	ARSENIC
AS	AUGER SAMPLE
B-hws	BORON, HOT WATER SOLUBLE
Ba	BARIUM
Bsp	SATURATED PASTE BORON
B	BENZENE
T	TOLUENE
E	ETHYLBENZENE
X	XYLENES
Cr	CHROMIUM
CS	CORE SAMPLE
Cu	COPPER
DP	DIRECT PUSH
dS/m	DECISIEMENS PER METRE
EC	ELECTRICAL CONDUCTIVITY
EPH	EXTRACTABLE PETROLEUM HYDROCARBONS
ELEV.	ELEVATION
F1-F4	PETROLEUM HYDROCARBON FRACTION 1 TO FRACTION 4
FOC	FRACTION ORGANIC CARBON
GS	GRAB SAMPLE
HEPH	HEAVY EXTRACTABLE PETROLEUM HYDROCARBONS
LEPH	LIGHT EXTRACTABLE PETROLEUM HYDROCARBONS
m	METRE
mg/L	MILLIGRAMS PER LITRE
mald	METRES ABOVE LOCAL DATUM
mard	METRES ABOVE RELATIVE DATUM
masl	METRES ABOVE SEA LEVEL
mS/cm	MILLISIEMENS PER CENTIMETRE
MTBE	METHYL TERT-BUTYL ETHER
mTPH	MODIFIED TOTAL PETROLEUM HYDROCARBONS
n/a	NOT APPLICABLE
NA	NOT AVAILABLE
NBN	SEGREGATED ICE IS NON-VISIBLE, WELL BONDED, WITH NO EXCESS ICE.
OVM	ORGANIC VAPOUR MONITOR
PAH	POLYCYCLIC AROMATIC HYDROCARBONS
Pb	LEAD
PCB	POLYCHLORINATED BIPHENYL
pH	CaCl (2:1) WET pH
PHC	PETROLEUM HYDROCARBONS
PJ	PION JAR
ppmv	PARTS PER MILLION BY VOLUME
RC	ROCK CORE
SAL	SALINITY
SC	SOIL CORE
SPT	STANDARD PENETRATION TEST
Sr	STRONTIUM
SS	SPLIT SPOON
ST	STYRENE
USCS	UNIFIED SOIL CLASSIFICATION SYSTEM
VPH	VOLATILE PETROLEUM HYDROCARBONS
VOC	VOLATILE ORGANIC COMPOUNDS
w<PL	MATERIAL IS ESTIMATED TO BE DRIER THAN THE PLASTIC LIMIT
w~PL	MATERIAL IS ESTIMATED TO BE CLOSE TO THE PLASTIC LIMIT
w>PL	MATERIAL IS ESTIMATED TO BE WETTER THAN THE PLASTIC LIMIT
WS	WET SAMPLE
Zn	ZINC

Acid Extractable Metals Analysis by ICP	5	CAM SOP-00408	EPA 6010D m
Moisture	5	CAM SOP-00445	Carter 2nd ed 51.2 m

Remarks:

Bureau Veritas is accredited to ISO/IEC 17025 for specific parameters on scopes of accreditation. Unless otherwise noted, procedures used by Bureau Veritas are based upon recognized Provincial, Federal or US method compendia such as CCME, MELCC, EPA, APHA.

All work recorded herein has been done in accordance with procedures and practices ordinarily exercised by professionals in Bureau Veritas' profession using accepted testing methodologies, quality assurance and quality control procedures (except where otherwise agreed by the client and Bureau Veritas in writing). All data is in statistical control and has met quality control and method performance criteria unless otherwise noted. All method blanks are reported; unless indicated otherwise, associated sample data are not blank corrected. Where applicable, unless otherwise noted, Measurement Uncertainty has not been accounted for when stating conformity to the referenced standard. All samples were analyzed within hold time unless otherwise flagged.

Bureau Veritas liability is limited to the actual cost of the requested analyses, unless otherwise agreed in writing. There is no other warranty expressed or implied. Bureau Veritas has been retained to provide analysis of samples provided by the Client using the testing methodology referenced in this report. Interpretation and use of test results are the sole responsibility of the Client and are not within the scope of services provided by Bureau Veritas, unless otherwise agreed in writing. Bureau Veritas is not responsible for the accuracy or any data impacts, that result from the information provided by the customer or their agent.

Solid sample results, except biota, are based on dry weight unless otherwise indicated. Organic analyses are not recovery corrected except for isotope dilution methods.
Results relate to samples tested. When sampling is not conducted by Bureau Veritas, results relate to the supplied samples tested.
This Certificate shall not be reproduced except in full, without the written approval of the laboratory.
Reference Method suffix “m” indicates test methods incorporate validated modifications from specific reference methods to improve performance.
* RPDs calculated using raw data. The rounding of final results may result in the apparent difference.
(1) No lab extraction date is given for F1BTEX & VOC samples that are field preserved with methanol. Extraction date is the date sampled unless otherwise stated.
(2) All CCME PHC results met required criteria unless otherwise stated in the report. The CWS PHC methods employed by Bureau Veritas Laboratories conform to all prescribed elements of the reference method and performance based elements have been validated. All modifications have been validated and proven equivalent following “Alberta Environment’s Interpretation of the Reference Method for the Canada-Wide Standard for Petroleum Hydrocarbons in Soil Validation of Performance-Based Alternative Methods September 2003”. Documentation is available upon request. Modifications from Reference Method for the Canada-wide Standard for Petroleum Hydrocarbons in Soil-Tier 1

GENERAL COMMENTS

Each temperature is the average of up to three cooler temperatures taken at receipt

Package 1	1.7°C

Sample RHG799 [MW21-01-04] : F1/BTEX Analysis: Soil weight exceeds the protocol specification of approximately 5g in the field preserved vial. Additional methanol was added to the vial to ensure extraction efficiency.

Sample RHG800 [MW21-02-03] : F1/BTEX Analysis: Soil weight exceeds the protocol specification of approximately 5g in the field preserved vial. Additional methanol was added to the vial to ensure extraction efficiency.

Results relate only to the items tested.

Duplicate: Paired analysis of a separate portion of the same sample. Used to evaluate the variance in the measurement.

Matrix Spike: A sample to which a known amount of the analyte of interest has been added. Used to evaluate sample matrix interference.

LCS: A blank matrix sample to which a known amount of the analyte, usually from a second source, has been added. Used to evaluate method accuracy.

Method Blank: A blank matrix containing all reagents used in the analytical procedure. Used to identify laboratory contamination.

Surrogate: A pure or isotopically labeled compound whose behavior mirrors the analytes of interest. Used to evaluate extraction efficiency.

NC (Matrix Spike): The recovery in the matrix spike was not calculated. The relative difference between the concentration in the parent sample and the spike amount was too small to permit a reliable recovery calculation (matrix spike concentration was less than the native sample concentration)

DATA QUALITY REVIEW CHECKLIST - IMPERIAL OIL PROJECTS

Consultant: Golder Associates

Sampling Date: December 1, 2021

Location: 1660 Merivale Road, Ottawa, ON

Laboratory: Bureau Veritas Mississauga

Consultant Project Number: 20447743-1155

Sample Submission Number: C1Y2874

Are All Laboratory QC Within Acceptance Criteria (Yes, No, Not Applicable)?

	Yes	No	NA	Comments
Instrument Surrogate Recovery	X			All laboratory QC results are within
Extraction Surrogate Recovery	X			acceptance criteria.
Method Blank Concentration	X			
Matrix Duplicate RPD	X			
Matrix Spike Recovery	X			
Lab Control Sample Recovery	X			

Are All Field QC Samples Within Alert Limits (Yes, No, Not Applicable)?

	Yes	No	NA	Comments
Field Blank Concentration			X	All field QC samples are within
Trip Blank Concentration			X	alert limits.
Field Duplicate RPD	X			

Has CoA been signed off (Yes/No)?:	Yes
Has lab warranted all tests were in statistical control in CoA (Yes/No)?:	Yes
Has lab warranted all tests were analyzed following SOP's in CoA (Yes/No)?:	Yes
Were all samples analyzed within hold times (Yes/No)?:	Yes
All volatiles samples methanol extracted (if required) within 24 hours (Yes/No)?:	Yes
Is Chain of Custody completed and signed (Yes/No)?:	Yes
Were sample temperatures acceptable when they reached lab (Yes/No)?:	Yes

Is data considered to be reliable (Yes/No/Suspect)?: Yes

If answer is "No", describe and provide rationale:

Remarks:

Bureau Veritas is accredited to ISO/IEC 17025 for specific parameters on scopes of accreditation. Unless otherwise noted, procedures used by Bureau Veritas are based upon recognized Provincial, Federal or US method compendia such as CCME, MELCC, EPA, APHA.

All work recorded herein has been done in accordance with procedures and practices ordinarily exercised by professionals in Bureau Veritas' profession using accepted testing methodologies, quality assurance and quality control procedures (except where otherwise agreed by the client and Bureau Veritas in writing). All data is in statistical control and has met quality control and method performance criteria unless otherwise noted. All method blanks are reported; unless indicated otherwise, associated sample data are not blank corrected. Where applicable, unless otherwise noted, Measurement Uncertainty has not been accounted for when stating conformity to the referenced standard. All samples were analyzed within hold time unless otherwise flagged.

Bureau Veritas liability is limited to the actual cost of the requested analyses, unless otherwise agreed in writing. There is no other warranty expressed or implied. Bureau Veritas has been retained to provide analysis of samples provided by the Client using the testing methodology referenced in this report. Interpretation and use of test results are the sole responsibility of the Client and are not within the scope of services provided by Bureau Veritas, unless otherwise agreed in writing. Bureau Veritas is not responsible for the accuracy or any data impacts, that result from the information provided by the customer or their agent.

Solid sample results, except biota, are based on dry weight unless otherwise indicated. Organic analyses are not recovery corrected except for isotope dilution methods.
Results relate to samples tested. When sampling is not conducted by Bureau Veritas, results relate to the supplied samples tested.
This Certificate shall not be reproduced except in full, without the written approval of the laboratory.
Reference Method suffix “m” indicates test methods incorporate validated modifications from specific reference methods to improve performance.
* RPDs calculated using raw data. The rounding of final results may result in the apparent difference.
(1) All CCME PHC results met required criteria unless otherwise stated in the report. The CWS PHC methods employed by Bureau Veritas Laboratories conform to all prescribed elements of the reference method and performance based elements have been validated. All modifications have been validated and proven equivalent following “Alberta Environment’s Interpretation of the Reference Method for the Canada-Wide Standard for Petroleum Hydrocarbons in Soil Validation of Performance-Based Alternative Methods September 2003”. Documentation is available upon request. Modifications from Reference Method for the Canada-wide Standard for Petroleum Hydrocarbons in Soil-Tier 1 Method: F2/F3/F4 data reported using validated cold solvent extraction instead of Soxhlet extraction.

			F2 (C10-C16 Hydrocarbons)	2021/12/12		102	%	60 - 130
			F3 (C16-C34 Hydrocarbons)	2021/12/12		114	%	60 - 130
			F4 (C34-C50 Hydrocarbons)	2021/12/12		114	%	60 - 130

Duplicate: Paired analysis of a separate portion of the same sample. Used to evaluate the variance in the measurement.

Matrix Spike: A sample to which a known amount of the analyte of interest has been added. Used to evaluate sample matrix interference.

LCS: A blank matrix sample to which a known amount of the analyte, usually from a second source, has been added. Used to evaluate method accuracy.

Method Blank: A blank matrix containing all reagents used in the analytical procedure. Used to identify laboratory contamination.

Surrogate: A pure or isotopically labeled compound whose behavior mirrors the analytes of interest. Used to evaluate extraction efficiency.

NC (Duplicate RPD): The duplicate RPD was not calculated. The concentration in the sample and/or duplicate was too low to permit a reliable RPD calculation (absolute difference <= 2x RDL).

DATA QUALITY REVIEW CHECKLIST - IMPERIAL OIL PROJECTS

Consultant: Golder Associates

Sampling Date: December 3, 2021

Location: 1660 Merivale Road, Ottawa, ON

Laboratory: Bureau Veritas Mississauga

Consultant Project Number: 20447743-1155

Sample Submission Number: C1Y3398

Are All Laboratory QC Within Acceptance Criteria (Yes, No, Not Applicable)?

	Yes	No	NA	Comments
Instrument Surrogate Recovery	X			All laboratory QC results are within
Extraction Surrogate Recovery	X			acceptance criteria.
Method Blank Concentration	X			
Matrix Duplicate RPD	X			
Matrix Spike Recovery	X			
Lab Control Sample Recovery	X			

Are All Field QC Samples Within Alert Limits (Yes, No, Not Applicable)?

	Yes	No	NA	Comments
Field Blank Concentration			X	All field QC samples are within
Trip Blank Concentration			X	alert limits.
Field Duplicate RPD	X			

Has CoA been signed off (Yes/No)?:	Yes
Has lab warranted all tests were in statistical control in CoA (Yes/No)?:	Yes
Has lab warranted all tests were analyzed following SOP's in CoA (Yes/No)?:	Yes
Were all samples analyzed within hold times (Yes/No)?:	Yes
All volatiles samples methanol extracted (if required) within 24 hours (Yes/No)?:	n/a
Is Chain of Custody completed and signed (Yes/No)?:	Yes
Were sample temperatures acceptable when they reached lab (Yes/No)?:	Yes

Is data considered to be reliable (Yes/No/Suspect)?: Yes

If answer is "No", describe and provide rationale:

Remarks:

Bureau Veritas is accredited to ISO/IEC 17025 for specific parameters on scopes of accreditation. Unless otherwise noted, procedures used by Bureau Veritas are based upon recognized Provincial, Federal or US method compendia such as CCME, MELCC, EPA, APHA.

All work recorded herein has been done in accordance with procedures and practices ordinarily exercised by professionals in Bureau Veritas' profession using accepted testing methodologies, quality assurance and quality control procedures (except where otherwise agreed by the client and Bureau Veritas in writing). All data is in statistical control and has met quality control and method performance criteria unless otherwise noted. All method blanks are reported; unless indicated otherwise, associated sample data are not blank corrected. Where applicable, unless otherwise noted, Measurement Uncertainty has not been accounted for when stating conformity to the referenced standard. All samples were analyzed within hold time unless otherwise flagged.

Bureau Veritas liability is limited to the actual cost of the requested analyses, unless otherwise agreed in writing. There is no other warranty expressed or implied. Bureau Veritas has been retained to provide analysis of samples provided by the Client using the testing methodology referenced in this report. Interpretation and use of test results are the sole responsibility of the Client and are not within the scope of services provided by Bureau Veritas, unless otherwise agreed in writing. Bureau Veritas is not responsible for the accuracy or any data impacts, that result from the information provided by the customer or their agent.

Solid sample results, except biota, are based on dry weight unless otherwise indicated. Organic analyses are not recovery corrected except for isotope dilution methods.
Results relate to samples tested. When sampling is not conducted by Bureau Veritas, results relate to the supplied samples tested.
This Certificate shall not be reproduced except in full, without the written approval of the laboratory.
Reference Method suffix “m” indicates test methods incorporate validated modifications from specific reference methods to improve performance.
* RPDs calculated using raw data. The rounding of final results may result in the apparent difference.
(1) All CCME PHC results met required criteria unless otherwise stated in the report. The CWS PHC methods employed by Bureau Veritas Laboratories conform to all prescribed elements of the reference method and performance based elements have been validated. All modifications have been validated and proven equivalent following “Alberta Environment’s Interpretation of the Reference Method for the Canada-Wide Standard for Petroleum Hydrocarbons in Soil Validation of Performance-Based Alternative Methods September 2003”. Documentation is available upon request. Modifications from Reference Method for the Canada-wide Standard for Petroleum Hydrocarbons in Soil-Tier 1 Method: F2/F3/F4 data reported using validated cold solvent extraction instead of Soxhlet extraction.

LCS: A blank matrix sample to which a known amount of the analyte, usually from a second source, has been added. Used to evaluate method accuracy.

Method Blank: A blank matrix containing all reagents used in the analytical procedure. Used to identify laboratory contamination.

Surrogate: A pure or isotopically labeled compound whose behavior mirrors the analytes of interest. Used to evaluate extraction efficiency.

DATA QUALITY REVIEW CHECKLIST - IMPERIAL OIL PROJECTS

Consultant: Golder Associates

Sampling Date: December 3, 2021

Location: 1660 Merivale Road, Ottawa, ON

Laboratory: Bureau Veritas Mississauga

Consultant Project Number: 20447743-1155

Sample Submission Number: C1Y3401

Are All Laboratory QC Within Acceptance Criteria (Yes, No, Not Applicable)?

	Yes	No	NA	Comments
Instrument Surrogate Recovery	X			All laboratory QC results are within
Extraction Surrogate Recovery	X			acceptance criteria.
Method Blank Concentration	X			
Matrix Duplicate RPD			X	
Matrix Spike Recovery			X	
Lab Control Sample Recovery	X			

Are All Field QC Samples Within Alert Limits (Yes, No, Not Applicable)?

	Yes	No	NA	Comments
Field Blank Concentration	X			All field QC samples are within
Trip Blank Concentration	X			alert limits.
Field Duplicate RPD			X	

Has CoA been signed off (Yes/No)?:	Yes
Has lab warranted all tests were in statistical control in CoA (Yes/No)?:	Yes
Has lab warranted all tests were analyzed following SOP's in CoA (Yes/No)?:	Yes
Were all samples analyzed within hold times (Yes/No)?:	Yes
All volatiles samples methanol extracted (if required) within 24 hours (Yes/No)?:	n/a
Is Chain of Custody completed and signed (Yes/No)?:	Yes
Were sample temperatures acceptable when they reached lab (Yes/No)?:	Yes

Is data considered to be reliable (Yes/No/Suspect)?: Yes

If answer is "No", describe and provide rationale:

Remarks:

Bureau Veritas is accredited to ISO/IEC 17025 for specific parameters on scopes of accreditation. Unless otherwise noted, procedures used by Bureau Veritas are based upon recognized Provincial, Federal or US method compendia such as CCME, MELCC, EPA, APHA.

All work recorded herein has been done in accordance with procedures and practices ordinarily exercised by professionals in Bureau Veritas' profession using accepted testing methodologies, quality assurance and quality control procedures (except where otherwise agreed by the client and Bureau Veritas in writing). All data is in statistical control and has met quality control and method performance criteria unless otherwise noted. All method blanks are reported; unless indicated otherwise, associated sample data are not blank corrected. Where applicable, unless otherwise noted, Measurement Uncertainty has not been accounted for when stating conformity to the referenced standard. All samples were analyzed within hold time unless otherwise flagged.

Bureau Veritas liability is limited to the actual cost of the requested analyses, unless otherwise agreed in writing. There is no other warranty expressed or implied. Bureau Veritas has been retained to provide analysis of samples provided by the Client using the testing methodology referenced in this report. Interpretation and use of test results are the sole responsibility of the Client and are not within the scope of services provided by Bureau Veritas, unless otherwise agreed in writing. Bureau Veritas is not responsible for the accuracy or any data impacts, that result from the information provided by the customer or their agent.

Solid sample results, except biota, are based on dry weight unless otherwise indicated. Organic analyses are not recovery corrected except for isotope dilution methods.
Results relate to samples tested. When sampling is not conducted by Bureau Veritas, results relate to the supplied samples tested.
This Certificate shall not be reproduced except in full, without the written approval of the laboratory.
Reference Method suffix “m” indicates test methods incorporate validated modifications from specific reference methods to improve performance.
* RPDs calculated using raw data. The rounding of final results may result in the apparent difference.
(1) Air sampling canisters have been cleaned in accordance with U.S. EPA Method TO15. At the end of the cleaning, evacuation, and pressurization cycles, one canister was selected and was pressurized with Zero Air. This canister was then analyzed via TO15 on a GC/MS. The canister must have been found to contain <0.2 ppbv concentration of all target analytes in order for the batch to have been considered clean. Each canister also underwent a leak check prior to shipment.

Please Note: SUMMA® canister samples will be retained by Bureau Veritas Laboratories for a period of 5 calendar days or as contractually agreed from the date of this report, after which time they will be cleaned for reuse. If you require a longer sample storage period, please contact your service representative.

Microbiology testing is conducted at 6660 Campobello Rd. Chemistry testing is conducted at 6740 Campobello Rd.

GENERAL COMMENTS

Sample RIC795 [SV21-02] : Increased DL for Propene due to Propane interference.

Increased DL for 2-Butanone due to an interference.

Sample RIC796 [SV21-03] : Increased DL for Propene due to Propane interference.

Results relate only to the items tested.

Duplicate: Paired analysis of a separate portion of the same sample. Used to evaluate the variance in the measurement.

LCS: A blank matrix sample to which a known amount of the analyte, usually from a second source, has been added. Used to evaluate method accuracy.

Method Blank: A blank matrix containing all reagents used in the analytical procedure. Used to identify laboratory contamination.

Surrogate: A pure or isotopically labeled compound whose behavior mirrors the analytes of interest. Used to evaluate extraction efficiency.

NC (Duplicate RPD): The duplicate RPD was not calculated. The concentration in the sample and/or duplicate was too low to permit a reliable RPD calculation (absolute difference <= 2x RDL).

DATA QUALITY REVIEW CHECKLIST - IMPERIAL OIL PROJECTS

Consultant: Golder Associates

Sampling Date: December 9 and 10, 2021

Location: 1660 Merivale Road, Ottawa, ON

Laboratory: Bureau Veritas Mississauga

Consultant Project Number: 20447743-1155

Sample Submission Number: C1Y6956

Are All Laboratory QC Within Acceptance Criteria (Yes, No, Not Applicable)?

	Yes	No	NA	Comments
Instrument Surrogate Recovery	X			All laboratory QC results are within
Extraction Surrogate Recovery			X	acceptance criteria.
Method Blank Concentration	X			
Matrix Duplicate RPD	X			
Matrix Spike Recovery			X	
Lab Control Sample Recovery	X			

Are All Field QC Samples Within Alert Limits (Yes, No, Not Applicable)?

	Yes	No	NA	Comments
Field Blank Concentration			X	All field QC samples are within
Trip Blank Concentration			X	alert limits.
Field Duplicate RPD	X			

Has CoA been signed off (Yes/No)?:	Yes
Has lab warranted all tests were in statistical control in CoA (Yes/No)?:	Yes
Has lab warranted all tests were analyzed following SOP's in CoA (Yes/No)?:	Yes
Were all samples analyzed within hold times (Yes/No)?:	Yes
All volatiles samples methanol extracted (if required) within 24 hours (Yes/No)?:	n/a
Is Chain of Custody completed and signed (Yes/No)?:	Yes
Were sample temperatures acceptable when they reached lab (Yes/No)?:	n/a

Is data considered to be reliable (Yes/No/Suspect)?: Yes

If answer is "No", describe and provide rationale:

Remarks:

Bureau Veritas is accredited to ISO/IEC 17025 for specific parameters on scopes of accreditation. Unless otherwise noted, procedures used by Bureau Veritas are based upon recognized Provincial, Federal or US method compendia such as CCME, MELCC, EPA, APHA.

All work recorded herein has been done in accordance with procedures and practices ordinarily exercised by professionals in Bureau Veritas' profession using accepted testing methodologies, quality assurance and quality control procedures (except where otherwise agreed by the client and Bureau Veritas in writing). All data is in statistical control and has met quality control and method performance criteria unless otherwise noted. All method blanks are reported; unless indicated otherwise, associated sample data are not blank corrected. Where applicable, unless otherwise noted, Measurement Uncertainty has not been accounted for when stating conformity to the referenced standard. All samples were analyzed within hold time unless otherwise flagged.

Bureau Veritas liability is limited to the actual cost of the requested analyses, unless otherwise agreed in writing. There is no other warranty expressed or implied. Bureau Veritas has been retained to provide analysis of samples provided by the Client using the testing methodology referenced in this report. Interpretation and use of test results are the sole responsibility of the Client and are not within the scope of services provided by Bureau Veritas, unless otherwise agreed in writing. Bureau Veritas is not responsible for the accuracy or any data impacts, that result from the information provided by the customer or their agent.

Solid sample results, except biota, are based on dry weight unless otherwise indicated. Organic analyses are not recovery corrected except for isotope dilution methods.
Results relate to samples tested. When sampling is not conducted by Bureau Veritas, results relate to the supplied samples tested.
This Certificate shall not be reproduced except in full, without the written approval of the laboratory.
Reference Method suffix “m” indicates test methods incorporate validated modifications from specific reference methods to improve performance.
* RPDs calculated using raw data. The rounding of final results may result in the apparent difference.
(1) Air sampling canisters have been cleaned in accordance with U.S. EPA Method TO15. At the end of the cleaning, evacuation, and pressurization cycles, one canister was selected and was pressurized with Zero Air. This canister was then analyzed via TO15 on a GC/MS. The canister must have been found to contain <0.2 ppbv concentration of all target analytes in order for the batch to have been considered clean. Each canister also underwent a leak check prior to shipment.

Please Note: SUMMA® canister samples will be retained by Bureau Veritas Laboratories for a period of 5 calendar days or as contractually agreed from the date of this report, after which time they will be cleaned for reuse. If you require a longer sample storage period, please contact your service representative.

LCS: A blank matrix sample to which a known amount of the analyte, usually from a second source, has been added. Used to evaluate method accuracy.

Method Blank: A blank matrix containing all reagents used in the analytical procedure. Used to identify laboratory contamination.

Surrogate: A pure or isotopically labeled compound whose behavior mirrors the analytes of interest. Used to evaluate extraction efficiency.

DATA QUALITY REVIEW CHECKLIST - IMPERIAL OIL PROJECTS

Consultant: Golder Associates

Sampling Date: December 10, 2021

Location: 1660 Merivale Road, Ottawa, ON

Laboratory: Bureau Veritas Mississauga

Consultant Project Number: 20447743-1155

Sample Submission Number: C1Y9274

Are All Laboratory QC Within Acceptance Criteria (Yes, No, Not Applicable)?

	Yes	No	NA	Comments
Instrument Surrogate Recovery	X			All laboratory QC results are within
Extraction Surrogate Recovery			X	acceptance criteria.
Method Blank Concentration	X			
Matrix Duplicate RPD			X	
Matrix Spike Recovery			X	
Lab Control Sample Recovery	X			

Are All Field QC Samples Within Alert Limits (Yes, No, Not Applicable)?

	Yes	No	NA	Comments
Field Blank Concentration	X			All field QC samples are within
Trip Blank Concentration	X			alert limits.
Field Duplicate RPD			X	

Has CoA been signed off (Yes/No)?:	Yes
Has lab warranted all tests were in statistical control in CoA (Yes/No)?:	Yes
Has lab warranted all tests were analyzed following SOP's in CoA (Yes/No)?:	Yes
Were all samples analyzed within hold times (Yes/No)?:	Yes
All volatiles samples methanol extracted (if required) within 24 hours (Yes/No)?:	n/a
Is Chain of Custody completed and signed (Yes/No)?:	Yes
Were sample temperatures acceptable when they reached lab (Yes/No)?:	n/a

Is data considered to be reliable (Yes/No/Suspect)?: Yes

If answer is "No", describe and provide rationale:

Remarks:

Bureau Veritas is accredited to ISO/IEC 17025 for specific parameters on scopes of accreditation. Unless otherwise noted, procedures used by Bureau Veritas are based upon recognized Provincial, Federal or US method compendia such as CCME, MELCC, EPA, APHA.

All work recorded herein has been done in accordance with procedures and practices ordinarily exercised by professionals in Bureau Veritas' profession using accepted testing methodologies, quality assurance and quality control procedures (except where otherwise agreed by the client and Bureau Veritas in writing). All data is in statistical control and has met quality control and method performance criteria unless otherwise noted. All method blanks are reported; unless indicated otherwise, associated sample data are not blank corrected. Where applicable, unless otherwise noted, Measurement Uncertainty has not been accounted for when stating conformity to the referenced standard. All samples were analyzed within hold time unless otherwise flagged.

Bureau Veritas liability is limited to the actual cost of the requested analyses, unless otherwise agreed in writing. There is no other warranty expressed or implied. Bureau Veritas has been retained to provide analysis of samples provided by the Client using the testing methodology referenced in this report. Interpretation and use of test results are the sole responsibility of the Client and are not within the scope of services provided by Bureau Veritas, unless otherwise agreed in writing. Bureau Veritas is not responsible for the accuracy or any data impacts, that result from the information provided by the customer or their agent.

Solid sample results, except biota, are based on dry weight unless otherwise indicated. Organic analyses are not recovery corrected except for isotope dilution methods.
Results relate to samples tested. When sampling is not conducted by Bureau Veritas, results relate to the supplied samples tested.
This Certificate shall not be reproduced except in full, without the written approval of the laboratory.
Reference Method suffix “m” indicates test methods incorporate validated modifications from specific reference methods to improve performance.
* RPDs calculated using raw data. The rounding of final results may result in the apparent difference.
(1) All CCME PHC results met required criteria unless otherwise stated in the report. The CWS PHC methods employed by Bureau Veritas conform to all prescribed elements of the reference method and performance based elements have been validated. All modifications have been validated and proven equivalent following “Alberta Environment’s Interpretation of the Reference Method for the Canada-Wide Standard for Petroleum Hydrocarbons in Soil Validation of Performance-Based Alternative Methods September 2003”. Documentation is available upon request. Modifications from Reference Method for the Canada-wide Standard for Petroleum Hydrocarbons in Soil-Tier 1 Method: F2/F3/F4 data reported using validated cold solvent extraction instead of Soxhlet extraction.

LCS: A blank matrix sample to which a known amount of the analyte, usually from a second source, has been added. Used to evaluate method accuracy.

Method Blank: A blank matrix containing all reagents used in the analytical procedure. Used to identify laboratory contamination.

Surrogate: A pure or isotopically labeled compound whose behavior mirrors the analytes of interest. Used to evaluate extraction efficiency.

Custody Tracking Form

eCOC Number
T498894

Please use this form for custody tracking when submitting the work instructions via eCOC (electronic Chain of Custody). Please ensure your form **has a barcode or a Bureau Veritas Laboratories eCOC confirmation number** in the top right hand side. This number links your electronic submission to your samples. This form should be **placed in the cooler with your samples**.

DATA QUALITY REVIEW CHECKLIST - IMPERIAL OIL PROJECTS

Consultant: Golder Associates

Sampling Date: April 13, 2022

Location: 1660 Merivale Road, Ottawa, ON

Laboratory: Bureau Veritas Mississauga

Consultant Project Number: 21506016-1155

Sample Submission Number: C2A2163

Are All Laboratory QC Within Acceptance Criteria (Yes, No, Not Applicable)?

	Yes	No	NA	Comments
Instrument Surrogate Recovery	X			All laboratory QC results are within
Extraction Surrogate Recovery	X			acceptance criteria.
Method Blank Concentration	X			
Matrix Duplicate RPD			X	
Matrix Spike Recovery			X	
Lab Control Sample Recovery	X			

Are All Field QC Samples Within Alert Limits (Yes, No, Not Applicable)?

	Yes	No	NA	Comments
Field Blank Concentration	X			All field QC samples are within
Trip Blank Concentration	X			alert limits.
Field Duplicate RPD			X	

Has CoA been signed off (Yes/No)?:	Yes
Has lab warranted all tests were in statistical control in CoA (Yes/No)?:	Yes
Has lab warranted all tests were analyzed following SOP's in CoA (Yes/No)?:	Yes
Were all samples analyzed within hold times (Yes/No)?:	Yes
All volatiles samples methanol extracted (if required) within 24 hours (Yes/No)?:	n/a
Is Chain of Custody completed and signed (Yes/No)?:	Yes
Were sample temperatures acceptable when they reached lab (Yes/No)?:	Yes

Is data considered to be reliable (Yes/No/Suspect)?: Yes

If answer is "No", describe and provide rationale:

Remarks:

Bureau Veritas is accredited to ISO/IEC 17025 for specific parameters on scopes of accreditation. Unless otherwise noted, procedures used by Bureau Veritas are based upon recognized Provincial, Federal or US method compendia such as CCME, MELCC, EPA, APHA.

All work recorded herein has been done in accordance with procedures and practices ordinarily exercised by professionals in Bureau Veritas' profession using accepted testing methodologies, quality assurance and quality control procedures (except where otherwise agreed by the client and Bureau Veritas in writing). All data is in statistical control and has met quality control and method performance criteria unless otherwise noted. All method blanks are reported; unless indicated otherwise, associated sample data are not blank corrected. Where applicable, unless otherwise noted, Measurement Uncertainty has not been accounted for when stating conformity to the referenced standard. All samples were analyzed within hold time unless otherwise flagged.

Bureau Veritas liability is limited to the actual cost of the requested analyses, unless otherwise agreed in writing. There is no other warranty expressed or implied. Bureau Veritas has been retained to provide analysis of samples provided by the Client using the testing methodology referenced in this report. Interpretation and use of test results are the sole responsibility of the Client and are not within the scope of services provided by Bureau Veritas, unless otherwise agreed in writing. Bureau Veritas is not responsible for the accuracy or any data impacts, that result from the information provided by the customer or their agent.

Solid sample results, except biota, are based on dry weight unless otherwise indicated. Organic analyses are not recovery corrected except for isotope dilution methods.
Results relate to samples tested. When sampling is not conducted by Bureau Veritas, results relate to the supplied samples tested.
This Certificate shall not be reproduced except in full, without the written approval of the laboratory.
Reference Method suffix “m” indicates test methods incorporate validated modifications from specific reference methods to improve performance.
* RPDs calculated using raw data. The rounding of final results may result in the apparent difference.
(1) All CCME PHC results met required criteria unless otherwise stated in the report. The CWS PHC methods employed by Bureau Veritas conform to all prescribed elements of the reference method and performance based elements have been validated. All modifications have been validated and proven equivalent following “Alberta Environment’s Interpretation of the Reference Method for the Canada-Wide Standard for Petroleum Hydrocarbons in Soil Validation of Performance-Based Alternative Methods September 2003”. Documentation is available upon request. Modifications from Reference Method for the Canada-wide Standard for Petroleum Hydrocarbons in Soil-Tier 1 Method: F2/F3/F4 data reported using validated cold solvent extraction instead of Soxhlet extraction.

GENERAL COMMENTS

Each temperature is the average of up to three cooler temperatures taken at receipt

Package 1	0.7°C

Sample SJU500 [MW16-01] : Metals Analysis: Due to the sample matrix, the sample required dilution. Detection limits were adjusted accordingly.

Sample SJU501 [TH11] : F1 BTEX analysis : Due to high concentration of target analytes, sample required dilution. Reporting limits were adjusted accordingly.

Sample SJU504 [TH9] : Metals Analysis: Due to the sample matrix, the sample required dilution. Detection limits were adjusted accordingly.

Sample SJU505 [DUP A] : Metals Analysis: Due to the sample matrix, the sample required dilution. Detection limits were adjusted accordingly.

Results relate only to the items tested.

			F2 (C10-C16 Hydrocarbons)	2022/04/22		101	%	60 - 130
			F3 (C16-C34 Hydrocarbons)	2022/04/22		99	%	60 - 130
			F4 (C34-C50 Hydrocarbons)	2022/04/22		102	%	60 - 130

Duplicate: Paired analysis of a separate portion of the same sample. Used to evaluate the variance in the measurement.

Matrix Spike: A sample to which a known amount of the analyte of interest has been added. Used to evaluate sample matrix interference.

LCS: A blank matrix sample to which a known amount of the analyte, usually from a second source, has been added. Used to evaluate method accuracy.

Method Blank: A blank matrix containing all reagents used in the analytical procedure. Used to identify laboratory contamination.

Surrogate: A pure or isotopically labeled compound whose behavior mirrors the analytes of interest. Used to evaluate extraction efficiency.

NC (Duplicate RPD): The duplicate RPD was not calculated. The concentration in the sample and/or duplicate was too low to permit a reliable RPD calculation (absolute difference <= 2x RDL).

DATA QUALITY REVIEW CHECKLIST - IMPERIAL OIL PROJECTS

Consultant: Golder Associates

Sampling Date: April 13 and 14, 2022

Location: 1660 Merivale Road, Ottawa, ON

Laboratory: Bureau Veritas Mississauga

Consultant Project Number: 21506016-1155

Sample Submission Number: C2A2236

Are All Laboratory QC Within Acceptance Criteria (Yes, No, Not Applicable)?

	Yes	No	NA	Comments
Instrument Surrogate Recovery	X			All laboratory QC results are within
Extraction Surrogate Recovery	X			acceptance criteria.
Method Blank Concentration	X			
Matrix Duplicate RPD	X			
Matrix Spike Recovery	X			
Lab Control Sample Recovery	X			

Are All Field QC Samples Within Alert Limits (Yes, No, Not Applicable)?

	Yes	No	NA	Comments
Field Blank Concentration			X	All field QC samples are within
Trip Blank Concentration			X	alert limits.
Field Duplicate RPD	X			

Has CoA been signed off (Yes/No)?:	Yes
Has lab warranted all tests were in statistical control in CoA (Yes/No)?:	Yes
Has lab warranted all tests were analyzed following SOP's in CoA (Yes/No)?:	Yes
Were all samples analyzed within hold times (Yes/No)?:	Yes
All volatiles samples methanol extracted (if required) within 24 hours (Yes/No)?:	Yes
Is Chain of Custody completed and signed (Yes/No)?:	Yes
Were sample temperatures acceptable when they reached lab (Yes/No)?:	Yes

Is data considered to be reliable (Yes/No/Suspect)?: Yes

If answer is "No", describe and provide rationale:

Remarks:

Bureau Veritas is accredited to ISO/IEC 17025 for specific parameters on scopes of accreditation. Unless otherwise noted, procedures used by Bureau Veritas are based upon recognized Provincial, Federal or US method compendia such as CCME, MELCC, EPA, APHA.

All work recorded herein has been done in accordance with procedures and practices ordinarily exercised by professionals in Bureau Veritas' profession using accepted testing methodologies, quality assurance and quality control procedures (except where otherwise agreed by the client and Bureau Veritas in writing). All data is in statistical control and has met quality control and method performance criteria unless otherwise noted. All method blanks are reported; unless indicated otherwise, associated sample data are not blank corrected. Where applicable, unless otherwise noted, Measurement Uncertainty has not been accounted for when stating conformity to the referenced standard. All samples were analyzed within hold time unless otherwise flagged.

Bureau Veritas liability is limited to the actual cost of the requested analyses, unless otherwise agreed in writing. There is no other warranty expressed or implied. Bureau Veritas has been retained to provide analysis of samples provided by the Client using the testing methodology referenced in this report. Interpretation and use of test results are the sole responsibility of the Client and are not within the scope of services provided by Bureau Veritas, unless otherwise agreed in writing. Bureau Veritas is not responsible for the accuracy or any data impacts, that result from the information provided by the customer or their agent.

Solid sample results, except biota, are based on dry weight unless otherwise indicated. Organic analyses are not recovery corrected except for isotope dilution methods.
Results relate to samples tested. When sampling is not conducted by Bureau Veritas, results relate to the supplied samples tested.
This Certificate shall not be reproduced except in full, without the written approval of the laboratory.
Reference Method suffix “m” indicates test methods incorporate validated modifications from specific reference methods to improve performance.
* RPDs calculated using raw data. The rounding of final results may result in the apparent difference.
(1) All CCME PHC results met required criteria unless otherwise stated in the report. The CWS PHC methods employed by Bureau Veritas conform to all prescribed elements of the reference method and performance based elements have been validated. All modifications have been validated and proven equivalent following “Alberta Environment’s Interpretation of the Reference Method for the Canada-Wide Standard for Petroleum Hydrocarbons in Soil Validation of Performance-Based Alternative Methods September 2003”. Documentation is available upon request. Modifications from Reference Method for the Canada-wide Standard for Petroleum Hydrocarbons in Soil-Tier 1 Method: F2/F3/F4 data reported using validated cold solvent extraction instead of Soxhlet extraction.

Duplicate: Paired analysis of a separate portion of the same sample. Used to evaluate the variance in the measurement.

Matrix Spike: A sample to which a known amount of the analyte of interest has been added. Used to evaluate sample matrix interference.

LCS: A blank matrix sample to which a known amount of the analyte, usually from a second source, has been added. Used to evaluate method accuracy.

Method Blank: A blank matrix containing all reagents used in the analytical procedure. Used to identify laboratory contamination.

Surrogate: A pure or isotopically labeled compound whose behavior mirrors the analytes of interest. Used to evaluate extraction efficiency.

NC (Duplicate RPD): The duplicate RPD was not calculated. The concentration in the sample and/or duplicate was too low to permit a reliable RPD calculation (absolute difference <= 2x RDL).

DATA QUALITY REVIEW CHECKLIST - IMPERIAL OIL PROJECTS

Consultant: Golder Associates

Sampling Date: March 21, 2022

Location: 1660 Merivale Road, Ottawa, ON

Laboratory: Bureau Veritas Mississauga

Consultant Project Number: 21506016-1155

Sample Submission Number: C278945

Are All Laboratory QC Within Acceptance Criteria (Yes, No, Not Applicable)?

	Yes	No	NA	Comments
Instrument Surrogate Recovery	X			All laboratory QC results are within
Extraction Surrogate Recovery	X			acceptance criteria.
Method Blank Concentration	X			
Matrix Duplicate RPD	X			
Matrix Spike Recovery	X			
Lab Control Sample Recovery	X			

Are All Field QC Samples Within Alert Limits (Yes, No, Not Applicable)?

	Yes	No	NA	Comments
Field Blank Concentration			X	All field QC samples are within
Trip Blank Concentration			X	alert limits.
Field Duplicate RPD	X			

Has CoA been signed off (Yes/No)?:	Yes
Has lab warranted all tests were in statistical control in CoA (Yes/No)?:	Yes
Has lab warranted all tests were analyzed following SOP's in CoA (Yes/No)?:	Yes
Were all samples analyzed within hold times (Yes/No)?:	Yes
All volatiles samples methanol extracted (if required) within 24 hours (Yes/No)?:	n/a
Is Chain of Custody completed and signed (Yes/No)?:	Yes
Were sample temperatures acceptable when they reached lab (Yes/No)?:	Yes

Is data considered to be reliable (Yes/No/Suspect)?: Yes

If answer is "No", describe and provide rationale:

Remarks:

Bureau Veritas is accredited to ISO/IEC 17025 for specific parameters on scopes of accreditation. Unless otherwise noted, procedures used by Bureau Veritas are based upon recognized Provincial, Federal or US method compendia such as CCME, MELCC, EPA, APHA.

All work recorded herein has been done in accordance with procedures and practices ordinarily exercised by professionals in Bureau Veritas' profession using accepted testing methodologies, quality assurance and quality control procedures (except where otherwise agreed by the client and Bureau Veritas in writing). All data is in statistical control and has met quality control and method performance criteria unless otherwise noted. All method blanks are reported; unless indicated otherwise, associated sample data are not blank corrected. Where applicable, unless otherwise noted, Measurement Uncertainty has not been accounted for when stating conformity to the referenced standard. All samples were analyzed within hold time unless otherwise flagged.

Bureau Veritas liability is limited to the actual cost of the requested analyses, unless otherwise agreed in writing. There is no other warranty expressed or implied. Bureau Veritas has been retained to provide analysis of samples provided by the Client using the testing methodology referenced in this report. Interpretation and use of test results are the sole responsibility of the Client and are not within the scope of services provided by Bureau Veritas, unless otherwise agreed in writing. Bureau Veritas is not responsible for the accuracy or any data impacts, that result from the information provided by the customer or their agent.

Solid sample results, except biota, are based on dry weight unless otherwise indicated. Organic analyses are not recovery corrected except for isotope dilution methods.
Results relate to samples tested. When sampling is not conducted by Bureau Veritas, results relate to the supplied samples tested.
This Certificate shall not be reproduced except in full, without the written approval of the laboratory.
Reference Method suffix “m” indicates test methods incorporate validated modifications from specific reference methods to improve performance.
* RPDs calculated using raw data. The rounding of final results may result in the apparent difference.
(1) All CCME PHC results met required criteria unless otherwise stated in the report. The CWS PHC methods employed by Bureau Veritas conform to all prescribed elements of the reference method and performance based elements have been validated. All modifications have been validated and proven equivalent following “Alberta Environment’s Interpretation of the Reference Method for the Canada-Wide Standard for Petroleum Hydrocarbons in Soil Validation of Performance-Based Alternative Methods September 2003”. Documentation is available upon request. Modifications from Reference Method for the Canada-wide Standard for Petroleum Hydrocarbons in Soil-Tier 1 Method: F2/F3/F4 data reported using validated cold solvent extraction instead of Soxhlet extraction.

LCS: A blank matrix sample to which a known amount of the analyte, usually from a second source, has been added. Used to evaluate method accuracy.

Method Blank: A blank matrix containing all reagents used in the analytical procedure. Used to identify laboratory contamination.

Surrogate: A pure or isotopically labeled compound whose behavior mirrors the analytes of interest. Used to evaluate extraction efficiency.

DATA QUALITY REVIEW CHECKLIST - IMPERIAL OIL PROJECTS

Consultant: Golder Associates

Sampling Date: March 22, 2022

Location: 1660 Merivale Road, Ottawa, ON

Laboratory: Bureau Veritas Mississauga

Consultant Project Number: 21506016-1155

Sample Submission Number: C278953

Are All Laboratory QC Within Acceptance Criteria (Yes, No, Not Applicable)?

	Yes	No	NA	Comments
Instrument Surrogate Recovery	X			All laboratory QC results are within
Extraction Surrogate Recovery	X			acceptance criteria.
Method Blank Concentration	X			
Matrix Duplicate RPD			X	
Matrix Spike Recovery			X	
Lab Control Sample Recovery	X			

Are All Field QC Samples Within Alert Limits (Yes, No, Not Applicable)?

	Yes	No	NA	Comments
Field Blank Concentration	X			All field QC samples are within
Trip Blank Concentration	X			alert limits.
Field Duplicate RPD			X	

Has CoA been signed off (Yes/No)?:	Yes
Has lab warranted all tests were in statistical control in CoA (Yes/No)?:	Yes
Has lab warranted all tests were analyzed following SOP's in CoA (Yes/No)?:	Yes
Were all samples analyzed within hold times (Yes/No)?:	Yes
All volatiles samples methanol extracted (if required) within 24 hours (Yes/No)?:	n/a
Is Chain of Custody completed and signed (Yes/No)?:	Yes
Were sample temperatures acceptable when they reached lab (Yes/No)?:	Yes

Is data considered to be reliable (Yes/No/Suspect)?: Yes

If answer is "No", describe and provide rationale:

Remarks:

Bureau Veritas is accredited to ISO/IEC 17025 for specific parameters on scopes of accreditation. Unless otherwise noted, procedures used by Bureau Veritas are based upon recognized Provincial, Federal or US method compendia such as CCME, MELCC, EPA, APHA.

All work recorded herein has been done in accordance with procedures and practices ordinarily exercised by professionals in Bureau Veritas' profession using accepted testing methodologies, quality assurance and quality control procedures (except where otherwise agreed by the client and Bureau Veritas in writing). All data is in statistical control and has met quality control and method performance criteria unless otherwise noted. All method blanks are reported; unless indicated otherwise, associated sample data are not blank corrected. Where applicable, unless otherwise noted, Measurement Uncertainty has not been accounted for when stating conformity to the referenced standard. All samples were analyzed within hold time unless otherwise flagged.

Bureau Veritas liability is limited to the actual cost of the requested analyses, unless otherwise agreed in writing. There is no other warranty expressed or implied. Bureau Veritas has been retained to provide analysis of samples provided by the Client using the testing methodology referenced in this report. Interpretation and use of test results are the sole responsibility of the Client and are not within the scope of services provided by Bureau Veritas, unless otherwise agreed in writing. Bureau Veritas is not responsible for the accuracy or any data impacts, that result from the information provided by the customer or their agent.

Solid sample results, except biota, are based on dry weight unless otherwise indicated. Organic analyses are not recovery corrected except for isotope dilution methods.
Results relate to samples tested. When sampling is not conducted by Bureau Veritas, results relate to the supplied samples tested.
This Certificate shall not be reproduced except in full, without the written approval of the laboratory.
Reference Method suffix “m” indicates test methods incorporate validated modifications from specific reference methods to improve performance.
* RPDs calculated using raw data. The rounding of final results may result in the apparent difference.
(1) No lab extraction date is given for F1BTEX & VOC samples that are field preserved with methanol. Extraction date is the date sampled unless otherwise stated.
(2) All CCME PHC results met required criteria unless otherwise stated in the report. The CWS PHC methods employed by Bureau Veritas conform to all prescribed elements of the reference method and performance based elements have been validated. All modifications have been validated and proven equivalent following “Alberta Environment’s Interpretation of the Reference Method for the Canada-Wide Standard for Petroleum Hydrocarbons in Soil Validation of Performance-Based Alternative Methods September 2003”. Documentation is available upon request. Modifications from Reference Method for the Canada-wide Standard for Petroleum Hydrocarbons in Soil-Tier 1 Method: F2/F3/F4 data reported using validated cold solvent extraction instead of Soxhlet extraction.

GENERAL COMMENTS

Each temperature is the average of up to three cooler temperatures taken at receipt

Package 1	4.3°C

Sample SFF364 [MW22-01-01] : F1 BTEX analysis : Soil weight exceeds the protocol specification of approximately 5g in the field preserved vial. Additional methanol was added to the vial to ensure extraction efficiency

Sample SFF366 [MW22-02-01] : F1 BTEX analysis : Soil weight exceeds the protocol specification of approximately 5g in the field preserved vial. Additional methanol was added to the vial to ensure extraction efficiency

Sample SFF367 [MW22-02-02] : F1 BTEX analysis : Soil weight exceeds the protocol specification of approximately 5g in the field preserved vial. Additional methanol was added to the vial to ensure extraction efficiency

Sample SFF368 [DUP A] : F1 BTEX analysis : Soil weight exceeds the protocol specification of approximately 5g in the field preserved vial. Additional methanol was added to the vial to ensure extraction efficiency

Results relate only to the items tested.

Duplicate: Paired analysis of a separate portion of the same sample. Used to evaluate the variance in the measurement.

LCS: A blank matrix sample to which a known amount of the analyte, usually from a second source, has been added. Used to evaluate method accuracy.

Method Blank: A blank matrix containing all reagents used in the analytical procedure. Used to identify laboratory contamination.

Surrogate: A pure or isotopically labeled compound whose behavior mirrors the analytes of interest. Used to evaluate extraction efficiency.

DATA QUALITY REVIEW CHECKLIST - IMPERIAL OIL PROJECTS

Consultant: Golder Associates

Sampling Date: mar 26 ,2022

Location: 1660 Merivale Road, Ottawa, ON

Laboratory: Bureau Veritas Mississauga

Consultant Project Number: 21506016-1155

Sample Submission Number: C281791

Are All Laboratory QC Within Acceptance Criteria (Yes, No, Not Applicable)?

	Yes	No	NA	Comments
Instrument Surrogate Recovery	X			All laboratory QC results are within
Extraction Surrogate Recovery	X			acceptance criteria.
Method Blank Concentration	X			
Matrix Duplicate RPD	X			
Matrix Spike Recovery			X	
Lab Control Sample Recovery	X			

Are All Field QC Samples Within Alert Limits (Yes, No, Not Applicable)?

	Yes	No	NA	Comments
Field Blank Concentration			X	All field QC samples are within
Trip Blank Concentration			X	alert limits.
Field Duplicate RPD	X			

Has CoA been signed off (Yes/No)?:	Yes
Has lab warranted all tests were in statistical control in CoA (Yes/No)?:	Yes
Has lab warranted all tests were analyzed following SOP's in CoA (Yes/No)?:	Yes
Were all samples analyzed within hold times (Yes/No)?:	Yes
All volatiles samples methanol extracted (if required) within 24 hours (Yes/No)?:	Yes
Is Chain of Custody completed and signed (Yes/No)?:	Yes
Were sample temperatures acceptable when they reached lab (Yes/No)?:	Yes

Is data considered to be reliable (Yes/No/Suspect)?: Yes

If answer is "No", describe and provide rationale:

Remarks:

Bureau Veritas is accredited to ISO/IEC 17025 for specific parameters on scopes of accreditation. Unless otherwise noted, procedures used by Bureau Veritas are based upon recognized Provincial, Federal or US method compendia such as CCME, MELCC, EPA, APHA.

All work recorded herein has been done in accordance with procedures and practices ordinarily exercised by professionals in Bureau Veritas' profession using accepted testing methodologies, quality assurance and quality control procedures (except where otherwise agreed by the client and Bureau Veritas in writing). All data is in statistical control and has met quality control and method performance criteria unless otherwise noted. All method blanks are reported; unless indicated otherwise, associated sample data are not blank corrected. Where applicable, unless otherwise noted, Measurement Uncertainty has not been accounted for when stating conformity to the referenced standard. All samples were analyzed within hold time unless otherwise flagged.

Bureau Veritas liability is limited to the actual cost of the requested analyses, unless otherwise agreed in writing. There is no other warranty expressed or implied. Bureau Veritas has been retained to provide analysis of samples provided by the Client using the testing methodology referenced in this report. Interpretation and use of test results are the sole responsibility of the Client and are not within the scope of services provided by Bureau Veritas, unless otherwise agreed in writing. Bureau Veritas is not responsible for the accuracy or any data impacts, that result from the information provided by the customer or their agent.

Solid sample results, except biota, are based on dry weight unless otherwise indicated. Organic analyses are not recovery corrected except for isotope dilution methods.
Results relate to samples tested. When sampling is not conducted by Bureau Veritas, results relate to the supplied samples tested.
This Certificate shall not be reproduced except in full, without the written approval of the laboratory.
Reference Method suffix “m” indicates test methods incorporate validated modifications from specific reference methods to improve performance.
* RPDs calculated using raw data. The rounding of final results may result in the apparent difference.
(1) All CCME PHC results met required criteria unless otherwise stated in the report. The CWS PHC methods employed by Bureau Veritas conform to all prescribed elements of the reference method and performance based elements have been validated. All modifications have been validated and proven equivalent following “Alberta Environment’s Interpretation of the Reference Method for the Canada-Wide Standard for Petroleum Hydrocarbons in Soil Validation of Performance-Based Alternative Methods September 2003”. Documentation is available upon request. Modifications from Reference Method for the Canada-wide Standard for Petroleum Hydrocarbons in Soil-Tier 1 Method: F2/F3/F4 data reported using validated cold solvent extraction instead of Soxhlet extraction.

Duplicate: Paired analysis of a separate portion of the same sample. Used to evaluate the variance in the measurement.

Matrix Spike: A sample to which a known amount of the analyte of interest has been added. Used to evaluate sample matrix interference.

LCS: A blank matrix sample to which a known amount of the analyte, usually from a second source, has been added. Used to evaluate method accuracy.

Method Blank: A blank matrix containing all reagents used in the analytical procedure. Used to identify laboratory contamination.

Surrogate: A pure or isotopically labeled compound whose behavior mirrors the analytes of interest. Used to evaluate extraction efficiency.

NC (Duplicate RPD): The duplicate RPD was not calculated. The concentration in the sample and/or duplicate was too low to permit a reliable RPD calculation (absolute difference <= 2x RDL).

APPENDIX E

Quality Assurance/Quality Control

QUALITY ASSURANCE/QUALITY CONTROL

In conjunction with the field investigations completed to date, a quality assurance/quality control (QA/QC) program was implemented to ensure the integrity of the soil, groundwater and soil vapour sampling and analytical testing results.

1.0 FIELD PROGRAM

All sampling activities were completed in accordance with Golder's Technical Field Procedures by trained Golder personnel. All field activities were documented in field notes and results were recorded on standard field forms. All reusable field equipment involved in the sampling and monitoring of soil and groundwater was decontaminated between sampling locations in accordance with Golder's Technical Procedures. Soil samples were collected using appropriate handling protocols and were placed in sample containers provided by Bureau Veritas Laboratories (BVL).

Soil samples were not directly contacted by hand. To help prevent cross-contamination, stainless steel sampling instruments and a new pair of clean nitrile gloves were used for the collection of each sample. Soil samples that were collected for field methanol preservation were collected using dedicated, laboratory-supplied, untampered syringes.

All soil and groundwater samples are placed in laboratory-supplied containers suitable for the analytes, and where applicable, the appropriate laboratory-supplied preservative is added to the samples, as outlined in the following table.

Analyte	Laboratory Containers	Preservative	Field Filtered
Soil Samples			
BTEX and PHC Fractions F1	2 x 40-mL clear glass vials	Methanol	n/a
PHC Fractions F2 to F4	2 x 120-mL clear glass jars	No preservative	n/a
Lead	1 x 250-mL clear glass jar	No preservative	n/a
n-Hexane	1 x 60-mL clear glass jar	No preservative	n/a
Groundwater samples			
BTEX and PHC Fraction F1	3 x 40-mL clear glass vials	Sodium bisulphate	No
PHC Fraction F2 to F4	2 x 100-mL amber glass bottles	Sodium bisulphate	No
Lead	1 x 120-mL HDPE bottle	Nitric acid	Yes

Notes: BTEX – benzene, toluene, ethylbenzene, xylenes; HDPE – high density polyethylene; mL – millilitres; n/a – not applicable; PHC – petroleum hydrocarbon

Samples were given unique identification numbers and the sampling containers were preserved in ice-filled coolers to maintain temperatures below 10 degrees Celsius (ºC). Samples were logged onto formal chain-of-custody documents and transported to BVL for chemical analysis. BVL is accredited by the Standards Council of Canada (SCC).

Blind field duplicate soil and groundwater samples were submitted for analysis. Trip and field blanks are submitted for analysis, as necessary, to evaluate the potential for cross contamination during the sampling and transportation of the samples. Submission of blind field duplicate QC samples was at a minimum rate of 10 percent (%) of total samples.

Soil Vapour

Field QA/QC for soil vapour sample collection included:

- Using new, dedicated polytetrafluoroethylene (PTFE, i.e., Teflon™) tubing for each sample to avoid cross-contamination;
- Calibrating field instruments prior to use;
- Conducting a helium leak tracer test for each probe;
- Sealing all probes when not in use;
- Storing all sampling materials away from potential sources of contamination;
- Following chain-of-custody procedures during all sampling events; and
- Monitoring of the SummaTM canister vacuums in the field before and after sampling using a pressure gauge supplied by BVL.

One field duplicate soil vapour sample was collected for the analysis of BTEX, PHC Fractions F1 and F2, and volatile organic compounds. One field blank (ambient air) sample and one trip blank were also submitted to the laboratory as part of the soil vapour program.

2.0 LABORATORY PROGRAM

The laboratory QA/QC program included adherence to laboratory sampling and analysis protocols (e.g., hold times, sample containers, preservatives, detection limits and approved methodology) and the analysis of laboratory method blanks, laboratory sample duplicates, surrogate recovery and chemical spikes.

Laboratory method blank samples are free of the target analytes and are analyzed through the same analytical method than the test samples. Method blank results are used to detect interferences or impurities introduced by the laboratory equipment, reagents, or solvents.

Laboratory control samples are fortified with a known concentration of the select target analytes and then analyzed through the same analytical method than the test samples. Laboratory control samples are used to monitor the analyte recovery and validate the calibration of the instrumentation.

For laboratory duplicate samples, a second aliquot from a randomly selected sample within an analytical batch is processed through the same analytical method. Laboratory duplicate sample results are used to evaluate the reproducibility of the analytical method.

Surrogate recovery is analyzed for organics parameters by spiking samples with known quantities of surrogate chemicals which have similar chemical properties to the parameters being analyzed. The reported recovery provides an indication of the analytical method accuracy for that sample.

Matrix spikes were conducted by adding known concentrations of the analyte of interest to a sample to evaluate the effects of the sample matrix on the analytical method.

Soil Vapour

The Summa canisters were batched certified as clean before delivery to the Site. The Summa canister vacuums measured between -29.0 and -26.0 inches Hg [vac] before sampling and were measured between -9.0 and -8.5 inches Hg [vac] after sampling.

The laboratory QA/QC included the analyses of method blanks, laboratory control samples and continuing calibration verification standards.

3.0 DATA RECEPTION

Once laboratory analytical results were received, Golder completed a review of field and laboratory quality. This included review of laboratory QC performance to confirm results are within acceptance criteria, as well as evaluation of field duplicate and blank results to confirm they were within alert limits. Upon receipt of the analytical results, relative percent difference (RPD) values between the original samples and their blind field duplicates were calculated as follows:

$$\text{RPD}\% = \frac{|\text{S} - \text{D}|}{\frac{1}{2}(\text{S} + \text{D})} \times 100$$

Where: RPD = relative percent difference
S = sample value
D = blind field duplicate or replicate value.

Since analytical error increases near the reportable detection limit (RDL), the RPD was only calculated where the concentrations of both the original and blind field duplicate samples were greater than five times the RDL. The calculated RPDs were then compared to parameter specific alert limits.

Exceedances of the QC acceptance or alert criteria were investigated with the laboratory and, if warranted, a corrective action report was requested from the laboratory.

4.0 DATA QUALITY REVIEW RESULTS

Results of the data quality review are summarized in Table E1. The RPD calculations and QC results are presented in Tables E2 to E8.

Two soil field duplicates were collected and submitted to the laboratory as part of the soil QC program.

Three groundwater field duplicates, three field blanks and three trip blanks were submitted to the laboratory as part of the groundwater QC program.

One soil vapour field duplicate, one field blank and one trip blank were also submitted to the laboratory as part of the groundwater QC program.

Based on the data quality review, no data quality issues were identified. All duplicated parameters, field blank and trip blank concentrations were within acceptable RPD alert limits. The data presented in this report are considered to be reliable.

5.0 SUMMARY OF RESULTS

Based on the review of the QA/QC results, the data presented in this report are considered to be reliable.

Table E1

Groundwater Monitoring Program – 1660 Merivale Road, Ottawa, Ontario
TSSA Service Request # 791084

Dear Ms. Sherwani,

Thank you for submitting the following groundwater monitoring and sampling reports for the above captioned property:

- *"2021 Groundwater and Soil Vapour Probe Monitoring and Sampling Report, 1660 Merivale Road, Ottawa, Ontario",* prepared by Golder Associates Ltd. (Golder), dated September 9, 2021.
- *"2022 Action Plan, 1660 Merivale Road, Ottawa, Ontario",* prepared by Golder, dated February 4, 2022.

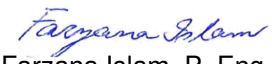
The 2021 groundwater monitoring report provides the following information:

- Seventeen (17) monitoring wells (TH1 through TH9, TH11, TH12, TH100 to TH102, MW15-01, MW15-02, MW16-01) were monitored for depth to groundwater, petroleum vapour concentrations and presence or absence of liquid petroleum hydrocarbon (LPH) on July 13-14, 2021.
- The depth to groundwater measured in the monitoring wells ranged from 2.39 metres below ground surface (mbgs) (in MW15-01) to 3.76 mbgs (in TH2). The inferred groundwater flow direction is to the south.
- The headspace vapour concentrations were not measured in the monitoring wells during this monitoring event.
- LPH was not detected in any monitoring wells except less than 1 mm LPH was observed in monitoring wells TH1 and TH4.
- Golder selected the Ontario Ministry of the Environment Conservation and Parks (MECP) Table 3 full depth generic Site Condition Standards (SCS) for all types of property use in a non-potable groundwater condition, and medium to fine textured soils as being applicable for use at this site.
- Groundwater samples were collected from fifteen (15) monitoring wells (TH2, TH3, TH5, TH6, TH7, TH8, TH9, TH11, TH12, TH100, TH101, TH102, MW15-01, MW15-02, MW16-01) during one or both the sampling events on July 13-14, 2021. The groundwater samples were submitted to Bureau Veritas Laboratories (BV Labs), an accredited laboratory by the Canadian Association for Laboratory Accreditation Inc. (CALA). Groundwater samples

were submitted for laboratory analysis of benzene, toluene, ethylbenzene, xylenes (BTEX), petroleum hydrocarbon fractions F1 to F4 (PHC F1-F4) and lead.

- The analytical results of the submitted groundwater samples were reported by Golder to be below the selected MECP Table 3 SCS for all analyzed parameters with the exceptions of the groundwater samples collected from the following monitoring wells which exceeded for concentrations of one or more of PHC F1-F4 and lead:
    - TH3 – PHC F2
    - TH5 – PHC F1-F4, lead
    - TH8 – PHC F3-F4
    - TH9 – PHC F3-F4
    - TH11 – PHC F2-F4
    - TH12 – PHC F1-F2
    - TH100 – PHC F3-F4
    - TH101 – PHC F1-F2
    - MW16-01 – PHC F3-F4

The 2022 action plan provides the following information:



- A sub-surface investigation program was completed between November 30 and December 10, 2021.
- Two monitoring wells (MW21-01 and MW21-02) were installed west of TH1 to a maximum depth of approximately 6.2 metres below ground surface (mbgs).
- Three (3) soil vapour probes (SV21-01 to SV21-03) were installed at the west east and south of site boundaries, respectively.
- Additional sub-surface investigation has been scheduled for 2022 involving installation of two monitoring wells east of TH101 and TH201 on the school property to the east. The proposed plan is pending approval by the Ottawa-Carleton District School Board.
- Off-site monitoring wells located north of the site will be re-developed using a hydro vacuum truck and sampled in 2022.
- A report summarizing the above mentioned will be submitted to the TSSA following the completion of the work.

Our review of the report indicates that the petroleum hydrocarbon (PHC) impacts have been identified in groundwater both on-site (TH1, TH5 and TH4) and off-site (TH8, TH9, MW16-01, TH11, TH12, TH100 and TH101). The identified impacts have not been completely delineated. We understand that additional sub-surface investigation program has been planned for the site to address the identified impacts. Please submit the report to the TSSA within 60 calendar days of the completion of the work.

Please note, the soil vapour intrusion assessment guidance document titled "*Draft Technical Guidance: Soil Vapour Intrusion Assessment, September 2013*" has not been finalized by the MECP. It also has not been made available to public for use and is not in effect to date. As such, TSSA cannot provide comments on the soil vapour monitoring and sampling results.

Should you have any further questions, please do not hesitate to contact me directly. For general enquiries, please contact a Customer Service Advisor at 1.877.682.TSSA (8772) or e-mail customerservices@tssa.org. When contacting TSSA regarding this file, please refer to the Service Request number provided above.

2022 ACTION PLAN
1660 MERIVALE ROAD, OTTAWA, ONTARIO

Dear Ms. Islam,

Golder Associates Ltd. (Golder) has been retained by Imperial Oil Limited (Imperial) to prepare an action plan based on the information provided during the Site review meeting with Imperial and the Technical Standards and Safety Authority (TSSA) on November 12, 2021, in regards to the service station located at 1660 Merivale Road in Ottawa, Ontario (the Site).

Delineation of Identified Impacts

An on-site subsurface program was conducted between November 30 and December 10, 2021. The scope of work included drilling and installing two monitoring wells (MW21-01 and MW21-02) west of TH1 and collecting soil samples at each borehole location. The monitoring wells were installed to a depth of approximately 6.2 metres below ground surface (mbgs) and screened across the same stratigraphic unit as TH1. Three soil vapour probes (SV21-01 to SV21-03) were installed at the west, east and south Site boundaries, respectively (Figure 1).

Contingent on an access agreement with the Ottawa-Carleton District School Board, additional subsurface work is scheduled for Q1 of 2022 which includes the drilling and installation of two monitoring wells east of TH101 and TH201on the school property to the east. Soil samples will be collected during borehole drilling and the monitoring well will be installed at a depth of approximately 6 mbgs to match the stratigraphic unit which TH101 was installed. This proposed plan is pending approval by the Ottawa-Carleton District School Board.

Monitoring Well Redevelopment and Purging

Off-site monitoring well locations north of Site which have yielded petroleum hydrocarbon (PHC) F3/F4 exceedances (TH8 and TH9, TH11, TH12, MW16-01 and TH100) will be redeveloped with the use of a hydrovacuum truck and sampled in Q1 of 2022.

Golder and the G logo are trademarks of Golder Associates Corporation

Groundwater Monitoring Program

The proposed annual monitoring and sampling program will be expedited and completed in Q1 2022 following the well cleaning and off-site well installation scopes.

The groundwater program will include eleven on-site wells (TH1 to TH7, MW15-01, MW15-02, MW21-01, and MW21-02) and ten off-site wells (TH8, TH9, TH11, TH12, TH100 to TH102, MW16-01, and proposed MW22-01 and MW22-02) as shown in Figure 1.

An annual report summarizing the results of the aforementioned scopes will be provided to the TSSA following the completion of the work.

We trust that this action plan meets your current requirements. Should you have any questions concerning this letter, or wish to further discuss our approach, please do not hesitate to contact the undersigned.

Yours truly,

Golder Associates Ltd.

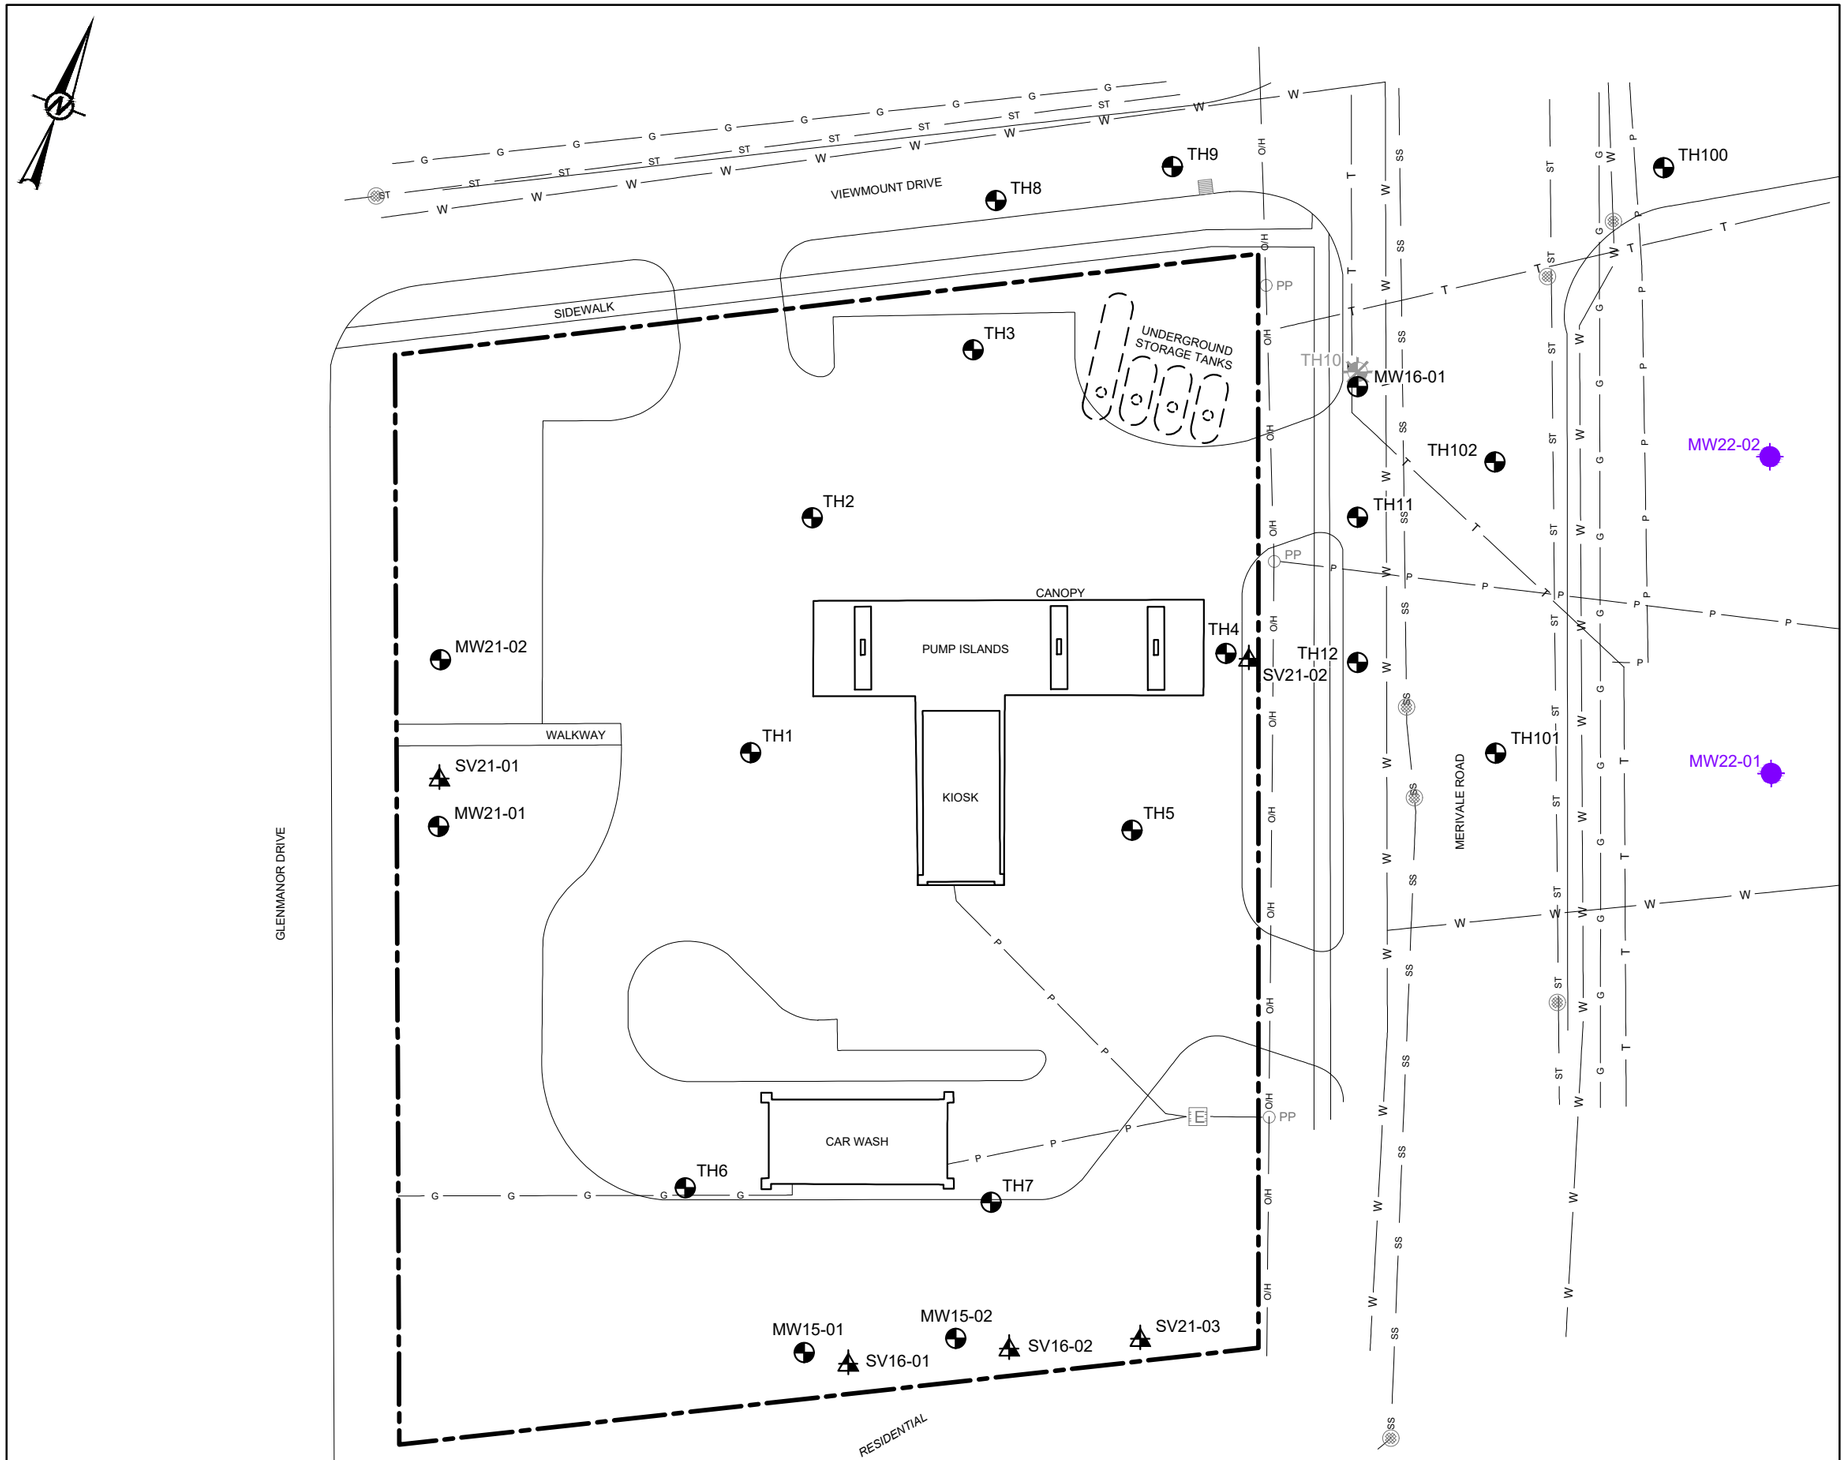
LIMITATIONS OF LIABILITY, SCOPE OF REPORT AND THIRD PARTY RELIANCE



This report has been prepared and the work referred to in this report has been undertaken by Golder Associates Ltd. for Imperial Oil Limited. It is intended for the sole and exclusive use of Imperial Oil Limited, its affiliated companies and partners and their respective insurers, agents, employees and advisors (collectively, “Imperial Oil”). Any use, reliance on or decision made by any person other than Imperial Oil based on this report is the sole responsibility of such other person. Imperial Oil and Golder Associates Ltd. make no representation or warranty to any other person with regard to this report and the work referred to in this report, and they accept no duty of care to any other person or any liability or responsibility whatsoever for any losses, expenses, damages, fines, penalties or other harm that may be suffered or incurred by any other person as a result of the use of, or reliance on, any decision made or any action taken based on this report or the work referred to in this report.

The investigation undertaken by Golder Associates Ltd. with respect to this report and any conclusions or recommendations made in this report reflect Golder Associates Ltd.’s judgement based on the site conditions observed at the time of the site inspection on the date(s) set out in this report, and on information available at the time of preparation of this report. This report has been prepared for specific application to this site and it is based, in part, upon visual observation of the site, subsurface investigation at discrete locations and depths, and specific analysis of specific chemical parameters and materials during a specific time interval, all as described in this report.

Unless otherwise stated, the findings cannot be extended to previous or future site conditions, portions of the site which were unavailable for direct investigation, subsurface locations which were not investigated directly, or chemical parameters, materials or analysis which were not addressed. Substances other than those addressed by the investigation described in this report may exist within the site, substances addressed by the investigation may exist in areas of the site not investigated and concentrations of substances addressed which are different than those reported may exist in areas other than the locations from which samples were taken.

If site conditions or applicable standards change or if any additional information becomes available at a future date, modifications to the findings, conclusions and recommendations in this report may be necessary.

Other than by Imperial Oil, copying or distribution of this report, use of or reliance on the information contained herein, in whole or in part, is not permitted without the express written permission of Golder Associates Ltd. Nothing in this report is intended to constitute or provide a legal opinion.

During the facility inspection a copy of the annual report regarding the maintenance of the natural gas appliances installed within the Car Wash mechanical room was not available for review by this Inspector. As an owner or user of an appliance, equipment or work, or any other thing employed in the handling or use of gas, you are hereby ordered to comply with section 15 of O. Reg. 212/01 and ensure that it is maintained in a safe operating condition.	OCT 18, 2021

Task Notes

TSSA Inspector David Barclay travelled to 1660 Merivale Rd; Ottawa (Canadian Tire) on September 14th, 2021 to conduct a follow up inspection regarding orders issued to the petroleum facility.

Consulted with gas attendant on site during facility inspection verifying compliance with orders issued. This Inspector has found all orders complied with except for the missing testing reports of the shear valve and leak detection sensors, and the maintenance of the natural gas appliances within the Car Wash mechanical room.

A compliance date of October 18, 2021 has been issued.

Pursuant to my Authority under Section 21(1) of the Technical Standards and Safety Act, 2000, s.o. 2000, I order you to comply with the above Orders.

2021 GROUNDWATER AND SOIL VAPOUR PROBE MONITORING AND SAMPLING REPORT
1660 MERIVALE ROAD, OTTAWA, ONTARIO
SAP 88001627

INTRODUCTION

Golder Associates Ltd. was retained by Imperial Oil Limited to conduct a groundwater and soil vapour probe monitoring and sampling program at the former retail fuel outlet and active Canadian Tire station, at 1660 Merivale Road, Ottawa, Ontario (the Site) (Figures 1 and 2). The fieldwork was conducted on January 27, July 12 to 15 and July 22, 2021.

SCOPE OF WORK

Groundwater

- Annual monitoring of nine on-site (TH1 to TH7, MW15-01 and MW15-02) and eight off-site (TH8, TH9, TH11, TH12, TH100 to TH102 and MW16-01) groundwater monitoring wells for depth to groundwater and the thickness, if present, of light non-aqueous phase liquid (LNAPL);
- Redevelop monitoring well TH1;
- Collecting annual groundwater samples from nine on-site (TH1 to TH7, MW15-01, and MW15-02) and eight off-site (TH8, TH9, TH11, TH12, TH100 to TH102, and MW16-01) monitoring wells using the low-flow sampling method for laboratory analysis of benzene, toluene, ethylbenzene, xylenes (BTEX), petroleum hydrocarbon (PHC) fractions F1 to F4 and dissolved lead;
- Comparing the groundwater analytical results to the following standards:
  - Ministry of the Environment (MOE, now Ministry of the Environment, Conservation and Parks [MECP]) Table 3 Full Depth Generic Site Condition Standards for groundwater in medium and fine textured soil in a non-potable groundwater from the document titled "Soil, Ground Water, and Sediment Standards for

Use Under Part XV.1 of the *Environmental Protection Act*," dated April 15, 2011 (hereafter referred to as the Table 3 Standards).

Soil Vapour

- Collecting winter and summer soil vapour samples from two on-site soil vapour probes (SV16-01 and SV16-02) for laboratory analysis of BTEX, PHC Fractions F1 and F2, and volatile organic compounds (VOCs);
- Comparing the soil vapour analytical results to the following guidelines:
  - Health-Based Indoor Air Criteria provided by Ministry of the Environment and Climate Change (MOECC, now MECP) Modified Generic Risk Assessment (Tier 2) Spreadsheet Model (November 1, 2016) for residential land use.
  - Soil vapour screening levels generated for residential buildings with a basement (probe depth 0 to 30 centimetres below base of the building foundation) calculated by dividing Health-Based Indoor Air Criteria by an attenuation factor of 0.02.

METHODOLOGY

Groundwater

Depth to Groundwater and LNAPL Thickness

- Depth to groundwater was measured and, if present, the thickness of LNAPL using an oil/water interface probe. If LNAPL is detected, then its presence is confirmed visually using a bailer. Prior to use in each well, the interface probe was cleaned using a phosphate-free detergent and water solution and rinsed with deionized water to minimize the potential for cross-contamination. Depth to groundwater measurements were taken from the top of casing.

Low-Flow Sampling

- Groundwater samples were collected using the low-flow sampling method. Water was pumped from each well, at a rate of 0.1 to 1 litre per minute (L/min), using high density polyethylene (HDPE) tubing connected to a peristaltic pump with a portion of silicon tubing. Routine water quality indicator parameters were measured during pumping using a multi-parameter water quality meter and flow through cell. The parameters measured included electrical conductivity (EC), pH, temperature, dissolved oxygen (DO), redox potential and turbidity. Calibration of the meter was completed as per the manufacturer's instructions. Purged water was retained on-site in barrels for future off-site disposal.
- Nineteen samples, including two duplicates, 15 groundwater samples and one field and one trip blank were collected between July 12 and 15, 2021.
- Monitoring well TH1 was blocked during development and could not be sampled. For monitoring well TH4 the groundwater sample had presence of globules of free product; therefore, the sample was not submitted.

Laboratory Analysis of Groundwater Samples

- Samples were submitted under chain-of-custody to Bureau Veritas Laboratories (BVL) in Mississauga, Ontario, a Standards Council of Canada accredited laboratory, for analysis of BTEX, PHC Fractions F1 to F4 and dissolved lead.
- Groundwater samples for BTEX and PHC Fraction F1 analysis were placed in 40-millilitre (mL) clear glass vials provided by the laboratory and preserved with sodium bisulphate as a microbial inhibitor. The groundwater samples for PHC Fractions F2 to F4 analysis were placed in 250-mL amber glass bottles and preserved with sodium bisulphate. Groundwater samples for dissolved lead analysis were placed in 120-mL high-density polyethylene bottles, field filtered and preserved with nitric acid.
- All sampling containers were placed in an ice-filled cooler immediately following sampling and transported to BVL for chemical analysis.

Soil Vapour

Weather Conditions during Sampling

- Weather conditions[1] on January 27, 2021 were clear and sunny with some clouds and snow. Outdoor air temperatures were between -8.6 and -3.6 degrees Celsius (°C), relative humidity was between 81 and 90%, and barometric pressure was measured between 99.88 and 100.81 kilopascals (kPa) (Environmental Canada 2021, internet site).
- Weather conditions[2] on July 22, 2021 were sunny with some clouds. Outdoor air temperatures were between 17 and 26 °C, relative humidity was between 69 and 77%, and barometric pressure was measured between 98.82 and 98.84 kPa (Environmental Canada 2021, internet site).

Probe Leak Testing

- The soil vapour probes (SV16-01 and SV16-02) were leak tested on January 27, 2021, to assess whether ambient air was penetrating the ground surface (e.g., along the outside of the tubing) and mixing with soil vapours during sampling.
- Prior to sample collection, three probe volumes were purged from the soil vapour probe using a sampling pump connected to the probe using dedicated Teflon tubing. Purging was conducted at a nominal flow rate between 200 and 320 millilitres per minute (mL/min). During purging, the flow rate and vacuum were measured using an inline flow calibrator and manometer.
- After purging each of the three probe volumes, a soil gas screening sample was indirectly collected into a 1-L Tedlar bag using a vacuum chamber to eliminate cross-contamination from the sampling pump. The concentrations of methane, carbon dioxide, oxygen and combustible gases in the screening sample were measured using a GEM 5000 and RKI GX-6000. The integrity of each vapour sampling probe and its connection to the sampling equipment was evaluated in January using helium leak testing. A plastic shroud was placed over the sample probe and was continuously filled with helium. The soil gas screening sample

[1] Weather information was taken from the meteorological station (*2021 Hourly Data Report. Ottawa INTL A, Ontario*) closest to the Site. Environment Canada 2021, internet site.

[2] Weather information was taken from the meteorological station (*2021 Hourly Data Report. Ottawa INTL A, Ontario*) closest to the Site. Environment Canada 2021, internet site.

was tested for helium. Sample acceptance was based upon obtaining a helium concentration in the screening sample that was less than 1% of the shroud concentration.

Soil Vapour Sampling

- Soil vapour samples were collected following procedures outlined in the United States Environmental Protection Agency Method TO-15. A flow regulator supplied by BVL was used to regulate the volumetric soil vapour flow rate into the Summa canister at a flow rate of 140 mL/min during a 10-minute sampling period during the January 2021 sampling event, and between 150 to 180 mL/min during an 8- to 9-minute sampling period during the July 2021 sampling event.
- A 1.4-L Summa canister, batch certified by BVL to be free of contaminants, was fitted with a flow regulator for sample collection. Prior to use, the initial Summa canister pressure was confirmed, with a vacuum gauge, to be less than or equal to -27 inches of mercury during the January sampling event, and -26 inches of mercury during the July sampling event, when gauged.

Laboratory Analysis of Soil Vapour Samples

- Soil vapour samples were collected and submitted to the BVL Mississauga facility, for analysis of BTEX, PHC Fractions F1 and F2, and VOCs. During the January 2021 sampling event, four samples, including one field duplicate, one field blank and two soil vapour probe samples, were submitted to BVL for analysis. During the July 2021 sampling event, five samples, including one field duplicate, one trip blank, one field blank and two soil vapour probe samples, were submitted to BVL for analysis.

RESULTS

Groundwater

LNAPL Occurrence (Date; Observations)

- July 13 and 14, 2021; not detected (Table 1).

Groundwater Monitoring (Date; Depth to Groundwater Range; Groundwater Direction)

- July 13 and 14, 2021; depth to groundwater ranged from 1.59 to 5.06 metres below ground surface (mbgs) (Table 1); inferred to the south (Figure 3, Table 1).

Groundwater Analytical Results (Date; Parameters; No. of wells)

- July 12 to 15, 2021; BTEX and PHC Fractions F1 to F4; exceedances of one or more parameters listed were identified at nine locations (Figure 4, Table 2).

Soil Vapour

Probe Leak Test Results (Date; Probe; Result expressed as % helium)

- January 27, 2021; SV16-01 and SV16-02; 0% (Table 3).

Field Organic Vapour Results (Date; Range)

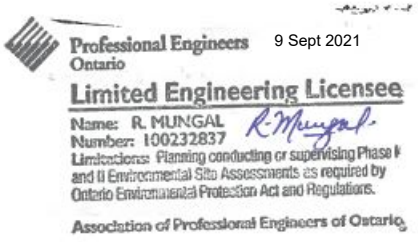
- January 27, 2021; not detected to 50 parts per billion by volume (ppbv) (Table 3).
- July 22, 2021; 57 to 344 ppbv (Table 3).

Soil Vapour Analytical Results (Date; Parameters; No. of probes)

- January 27, 2021; BTEX, PHC Fractions F1 and F2; No exceedances were identified (Figure 5, Table 4).
- January 27, 2021; VOCs; No exceedances were identified (Figure 6, Table 5).
- July 22, 2021; BTEX, PHC Fractions F1 and F2; No exceedances were identified (Figure 5, Table 4).
- July 22, 2021; VOCs; Exceedance of one parameter was identified at one location (Figure 6, Table 5).

FIELD AND LABORATORY QUALITY ASSURANCE / QUALITY CONTROL

- Copies of the associated laboratory certificates of analysis are provided in Appendix A.
- A quality assurance/quality control (QA/QC) program was followed to minimize and quantify impacts introduced during sample collection, handling, shipping, and analysis. As part of the QA/QC program, sampling protocols included minimizing sample handling, submitting field QA/QC samples, using dedicated non-contaminating sampling equipment, using sample-specific identification and labelling procedures, and using chain-of-custody records. A discussion of the QA/QC program is included in Appendix B.
- Based on the data quality review, no groundwater data quality issues were identified. Thirteen soil vapour data quality issues were identified. These issues are considered unlikely to have a material effect on the quality of the data presented in this report.



CLOSURE

We trust the information provided herein meets your requirements. If you have any questions about the contents of the letter, please contact the undersigned.

Yours truly,

Golder Associates Ltd.

Paola Ricord, OCAD

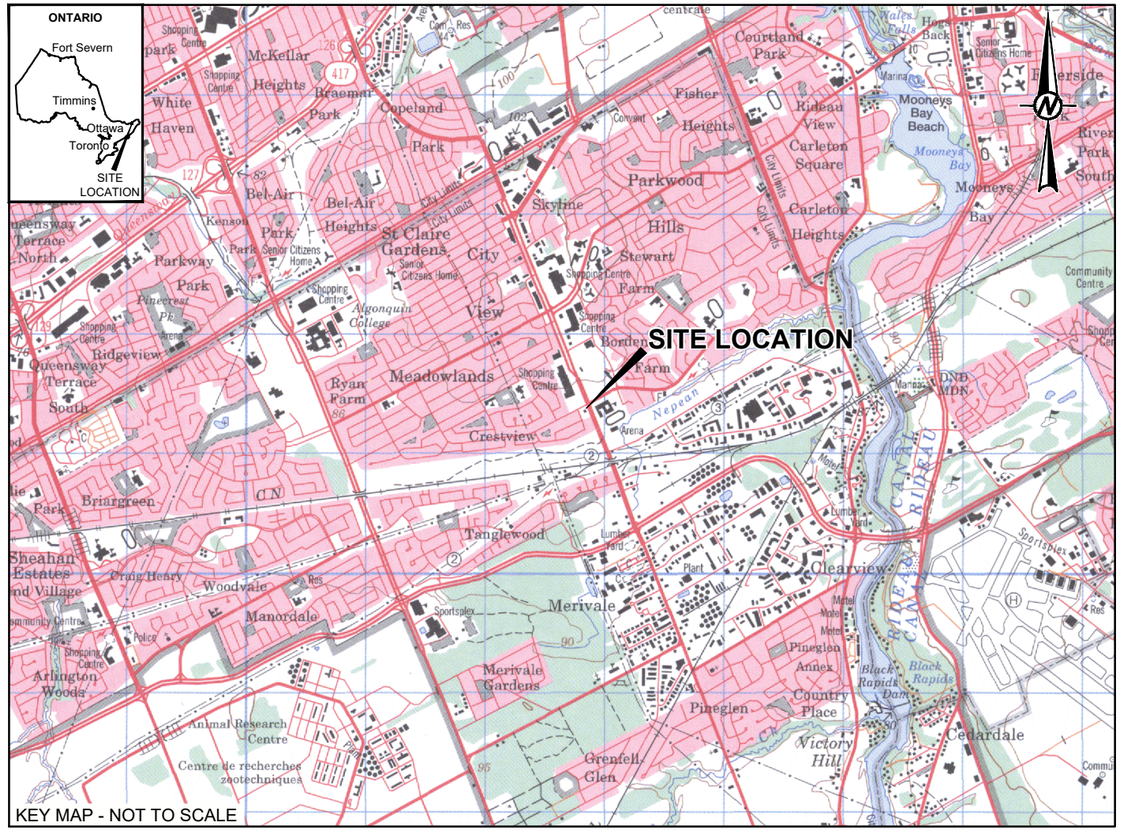
LIMITATIONS OF LIABILITY, SCOPE OF REPORT AND THIRD PARTY RELIANCE

This report has been prepared and the work referred to in this report has been undertaken by Golder Associates Ltd. for Imperial Oil Limited. It is intended for the sole and exclusive use of Imperial Oil Limited, its affiliated companies and partners and their respective insurers, agents, employees and advisors (collectively, “Imperial Oil”). Any use, reliance on or decision made by any person other than Imperial Oil based on this report is the sole responsibility of such other person. Imperial Oil and Golder Associates Ltd. make no representation or warranty to any other person with regard to this report and the work referred to in this report, and they accept no duty of care to any other person or any liability or responsibility whatsoever for any losses, expenses, damages, fines, penalties or other harm that may be suffered or incurred by any other person as a result of the use of, or reliance on, any decision made or any action taken based on this report or the work referred to in this report.



The investigation undertaken by Golder Associates Ltd. with respect to this report and any conclusions or recommendations made in this report reflect Golder Associates Ltd.’s judgement based on the site conditions observed at the time of the site inspection on the date(s) set out in this report, and on information available at the time of preparation of this report. This report has been prepared for specific application to this site and it is based, in part, upon visual observation of the site, subsurface investigation at discrete locations and depths, and specific analysis of specific chemical parameters and materials during a specific time interval, all as described in this report.

Unless otherwise stated, the findings cannot be extended to previous or future site conditions, portions of the site which were unavailable for direct investigation, subsurface locations which were not investigated directly, or chemical parameters, materials or analysis which were not addressed. Substances other than those addressed by the investigation described in this report may exist within the site, substances addressed by the investigation may exist in areas of the site not investigated and concentrations of substances addressed which are different than those reported may exist in areas other than the locations from which samples were taken.

If site conditions or applicable standards change or if any additional information becomes available at a future date, modifications to the findings, conclusions and recommendations in this report may be necessary.

Other than by Imperial Oil, copying or distribution of this report, use of or reliance on the information contained herein, in whole or in part, is not permitted without the express written permission of Golder Associates Ltd. Nothing in this report is intended to constitute or provide a legal opinion.

ORIGINAL DRAWING OBTAINED FROM BARENCO INC.; FILE No.: 11010-SITE PLAN ONSITE-JUN14; SCALE: UNKNOWN; DATE: JUNE 2014.

1:500 — 0 10 20 METRES

NOTES

1. LOCATIONS WHERE CURRENT GROUNDWATER SAMPLE MEETS APPLICABLE GUIDELINES/STANDARDS FOR ALL PARAMETERS ANALYZED SHOWN IN **GREEN**.
2. LOCATIONS WHERE CURRENT GROUNDWATER SAMPLE EXCEEDS APPLICABLE GUIDELINES/STANDARDS FOR AT LEAST ONE OF THE PARAMETERS ANALYZED SHOWN IN **RED**.
3. LOCATIONS WHERE LNAPL WAS ENCOUNTERED SHOWN IN **PURPLE**.
4. EXCEEDANCES OF APPLICABLE GUIDELINES/STANDARDS IN TEXT ARE SHOWN IN **RED**.
5. LIGHT NON-AQUEOUS PHASE LIQUID (LNAPL) THICKNESSES IN TEXT SHOWN IN **PURPLE**.
6. LOCATION WHERE NO SAMPLES WERE TAKEN IN THE CURRENT SAMPLING EVENT SHOWN IN **BLACK**.
7. LNAPL REPORTED IN METRES (m).

Notes:

[(a)] Elevations are relative to a local benchmark (centre of storm sewer catch basin approximately 5 m west of kiosk), with an assigned elevation of 100.00 m (exp. 2013).

< - less than

LEL - lower explosive limit

LNAPL - light non-aqueous phase liquid

m - metres

mbgs - metres below ground surface

mbtoc - metres below top of casing

mm - millimetres

n/a - not applicable

n/d - not detected

n/m - not measured

ppmv - parts per million by volume

Notes:

[a] O.Reg 153 (2011) Table 3 Full Depth Generic Site Condition Standards for all types of property use for groundwater in medium and fine textured soil in in a non-potable ground water condition

[b] F1 fraction does not include BTEX; however, the proponent has the choice as to whether or not to subtract BTEX from the analytical result.

Bold/Underlined - value exceeds criteria/standard

BTEX - benzene, toluene, ethylbenzene, xylenes

BVL - Bureau Veritas Laboratories

F1, F2, F3, F4 - petroleum hydrocarbon fractions 1, 2, 3 and 4

F4G - petroleum hydrocarbon 4 gravimetric

RDL - reportable detection limit

< - less than

µg/L - micrograms per litre

- not available

Table 3
Field Screening and Leak Test Measurements

Sample Matrix: Ground Water
Samples Received: 9

Analyses	Quantity	Laboratory Method	Analytical Method
Petroleum Hydro. CCME F1 & BTEX in Water	9	CAM SOP-00315	CCME PHC-CWS m
Petroleum Hydrocarbons F2-F4 in Water (1)	9	CAM SOP-00316	CCME PHC-CWS m
Dissolved Metals by ICPMS	9	CAM SOP-00447	EPA 6020B m

Remarks:

Bureau Veritas is accredited to ISO/IEC 17025 for specific parameters on scopes of accreditation. Unless otherwise noted, procedures used by Bureau Veritas are based upon recognized Provincial, Federal or US method compendia such as CCME, MELCC, EPA, APHA.

All work recorded herein has been done in accordance with procedures and practices ordinarily exercised by professionals in Bureau Veritas' profession using accepted testing methodologies, quality assurance and quality control procedures (except where otherwise agreed by the client and Bureau Veritas in writing). All data is in statistical control and has met quality control and method performance criteria unless otherwise noted. All method blanks are reported; unless indicated otherwise, associated sample data are not blank corrected. Where applicable, unless otherwise noted, Measurement Uncertainty has not been accounted for when stating conformity to the referenced standard. All samples were analyzed within hold time unless otherwise flagged.

Bureau Veritas liability is limited to the actual cost of the requested analyses, unless otherwise agreed in writing. There is no other warranty expressed or implied. Bureau Veritas has been retained to provide analysis of samples provided by the Client using the testing methodology referenced in this report. Interpretation and use of test results are the sole responsibility of the Client and are not within the scope of services provided by Bureau Veritas, unless otherwise agreed in writing. Bureau Veritas is not responsible for the accuracy or any data impacts, that result from the information provided by the customer or their agent.

Solid sample results, except biota, are based on dry weight unless otherwise indicated. Organic analyses are not recovery corrected except for isotope dilution methods.
Results relate to samples tested. When sampling is not conducted by Bureau Veritas, results relate to the supplied samples tested.
This Certificate shall not be reproduced except in full, without the written approval of the laboratory.
Reference Method suffix “m” indicates test methods incorporate validated modifications from specific reference methods to improve performance.
* RPDs calculated using raw data. The rounding of final results may result in the apparent difference.
(1) All CCME PHC results met required criteria unless otherwise stated in the report. The CWS PHC methods employed by Bureau Veritas Laboratories conform to all prescribed elements of the reference method and performance based elements have been validated. All modifications have been validated and proven equivalent following “Alberta Environment’s Interpretation of the Reference Method for the Canada-Wide Standard for Petroleum Hydrocarbons in Soil Validation of Performance-Based Alternative Methods September 2003”. Documentation is available upon request. Modifications from Reference Method for the Canada-wide Standard for Petroleum Hydrocarbons in Soil-Tier 1 Method: F2/F3/F4 data reported using validated cold solvent extraction instead of Soxhlet extraction.

GENERAL COMMENTS

Each temperature is the average of up to three cooler temperatures taken at receipt

Package 1	8.3°C

Sample QCM604 [TH12] : F1 BTEX Analysis: Due to high concentration of target analytes, sample required dilution. Reporting limits were adjusted accordingly.

Sample QCM606 [TH101] : F1 BTEX Analysis: Due to high concentration of target analytes, sample required dilution. Reporting limits were adjusted accordingly.

Sample QCM609 [DUP A] : F1 BTEX Analysis: Due to high concentration of target analytes, sample required dilution. Reporting limits were adjusted accordingly.

Results relate only to the items tested.

LCS: A blank matrix sample to which a known amount of the analyte, usually from a second source, has been added. Used to evaluate method accuracy.

Method Blank: A blank matrix containing all reagents used in the analytical procedure. Used to identify laboratory contamination.

Surrogate: A pure or isotopically labeled compound whose behavior mirrors the analytes of interest. Used to evaluate extraction efficiency.

VALIDATION SIGNATURE PAGE

The analytical data and all QC contained in this report were reviewed and validated by:

Ewa Pranjic, M.Sc., C.Chem, Scientific Specialist

BV Labs has procedures in place to guard against improper use of the electronic signature and have the required "signatories", as per ISO/IEC 17025, signing the reports.
For Service Group specific validation please refer to the Validation Signature Page.

Bureau Veritas Laboratories 6740 Campobello Road, Mississauga, Ontario, L5N 2L8 Tel: (905) 817-5700 Toll-Free: 800-563-6266 Fax: (905) 817-5777 www.bvlabs.com

Results Required By:	2021/07/22 17:00
Expected Arrival:	2021/07/15 17:00
Submitted By:	Nancy Kessler
Submitted To:	Mississauga, ON (Env. Lab)

Submission Information

# of Samples: 9

Details: SAP#: 88001627
IES#: A2601436
Bubbles may develop due to degassing. Sediment may be present due to water column.

Custody Tracking Form

offsite

~~CIJ 7368 KTN~~
KTN 2024/07/15

eCOC Number: T375820

Please use this form for custody tracking when submitting the work instructions via eCOC (electronic Chain of Custody). Please ensure your form **has a barcode or a Bureau Veritas eCOC confirmation number** in the top right hand side. This number links your electronic submission to your samples. This form should be **placed in the cooler with your samples.**

DATA QUALITY REVIEW CHECKLIST - IMPERIAL OIL PROJECTS

Consultant: Golder Associates

Sampling Date: July 14 and 15, 2021

Location: 1660 Merivale Road, Ottawa, ON

Laboratory: Bureau Veritas Mississauga

Consultant Project Number: 20447743-1155

Sample Submission Number: C1J7368

Are All Laboratory QC Within Acceptance Criteria (Yes, No, Not Applicable)?

	Yes	No	NA	Comments
Instrument Surrogate Recovery	X			All laboratory QC results are within
Extraction Surrogate Recovery	X			acceptance criteria.
Method Blank Concentration	X			
Matrix Duplicate RPD			X	
Matrix Spike Recovery			X	
Lab Control Sample Recovery	X			

Are All Field QC Samples Within Alert Limits (Yes, No, Not Applicable)?

	Yes	No	NA	Comments
Field Blank Concentration			X	All field QC samples are within
Trip Blank Concentration			X	alert limits.
Field Duplicate RPD	X			

Has CoA been signed off (Yes/No)?:	Yes
Has lab warranted all tests were in statistical control in CoA (Yes/No)?:	Yes
Has lab warranted all tests were analyzed following SOP's in CoA (Yes/No)?:	Yes
Were all samples analyzed within hold times (Yes/No)?:	Yes
All volatiles samples methanol extracted (if required) within 24 hours (Yes/No)?:	n/a
Is Chain of Custody completed and signed (Yes/No)?:	Yes
Were sample temperatures acceptable when they reached lab (Yes/No)?:	Yes

Is data considered to be reliable (Yes/No/Suspect)?: Yes

If answer is "No", describe and provide rationale:

Dissolved Metals by ICPMS	8	CAM SOP-00447	EPA 6020B m

Remarks:

Bureau Veritas is accredited to ISO/IEC 17025 for specific parameters on scopes of accreditation. Unless otherwise noted, procedures used by Bureau Veritas are based upon recognized Provincial, Federal or US method compendia such as CCME, MELCC, EPA, APHA.

All work recorded herein has been done in accordance with procedures and practices ordinarily exercised by professionals in Bureau Veritas' profession using accepted testing methodologies, quality assurance and quality control procedures (except where otherwise agreed by the client and Bureau Veritas in writing). All data is in statistical control and has met quality control and method performance criteria unless otherwise noted. All method blanks are reported; unless indicated otherwise, associated sample data are not blank corrected. Where applicable, unless otherwise noted, Measurement Uncertainty has not been accounted for when stating conformity to the referenced standard. All samples were analyzed within hold time unless otherwise flagged.

Bureau Veritas liability is limited to the actual cost of the requested analyses, unless otherwise agreed in writing. There is no other warranty expressed or implied. Bureau Veritas has been retained to provide analysis of samples provided by the Client using the testing methodology referenced in this report. Interpretation and use of test results are the sole responsibility of the Client and are not within the scope of services provided by Bureau Veritas, unless otherwise agreed in writing. Bureau Veritas is not responsible for the accuracy or any data impacts, that result from the information provided by the customer or their agent.

Solid sample results, except biota, are based on dry weight unless otherwise indicated. Organic analyses are not recovery corrected except for isotope dilution methods.
Results relate to samples tested. When sampling is not conducted by Bureau Veritas, results relate to the supplied samples tested.
This Certificate shall not be reproduced except in full, without the written approval of the laboratory.
Reference Method suffix “m” indicates test methods incorporate validated modifications from specific reference methods to improve performance.
* RPDs calculated using raw data. The rounding of final results may result in the apparent difference.
(1) All CCME PHC results met required criteria unless otherwise stated in the report. The CWS PHC methods employed by Bureau Veritas Laboratories conform to all prescribed elements of the reference method and performance based elements have been validated. All modifications have been validated and proven equivalent following “Alberta Environment’s Interpretation of the Reference Method for the Canada-Wide Standard for Petroleum Hydrocarbons in Soil Validation of Performance-Based Alternative Methods September 2003”. Documentation is available upon request. Modifications from Reference Method for the Canada-wide Standard for Petroleum Hydrocarbons in Soil-Tier 1 Method: F2/F3/F4 data reported using validated cold solvent extraction instead of Soxhlet extraction.

Duplicate: Paired analysis of a separate portion of the same sample. Used to evaluate the variance in the measurement.

Matrix Spike: A sample to which a known amount of the analyte of interest has been added. Used to evaluate sample matrix interference.

LCS: A blank matrix sample to which a known amount of the analyte, usually from a second source, has been added. Used to evaluate method accuracy.

Method Blank: A blank matrix containing all reagents used in the analytical procedure. Used to identify laboratory contamination.

Surrogate: A pure or isotopically labeled compound whose behavior mirrors the analytes of interest. Used to evaluate extraction efficiency.

Laboratory: Bureau Veritas Mississauga

Consultant Project Number: 20447743-1155

Sample Submission Number: C1J7455

Are All Laboratory QC Within Acceptance Criteria (Yes, No, Not Applicable)?

	Yes	No	NA	Comments
Instrument Surrogate Recovery	X			All laboratory QC results are within
Extraction Surrogate Recovery	X			acceptance criteria.
Method Blank Concentration	X			
Matrix Duplicate RPD	X			
Matrix Spike Recovery	X			
Lab Control Sample Recovery	X			

Are All Field QC Samples Within Alert Limits (Yes, No, Not Applicable)?

	Yes	No	NA	Comments
Field Blank Concentration			X	All field QC samples are within
Trip Blank Concentration			X	alert limits.
Field Duplicate RPD	X			

Has CoA been signed off (Yes/No)?:	Yes
Has lab warranted all tests were in statistical control in CoA (Yes/No)?:	Yes
Has lab warranted all tests were analyzed following SOP's in CoA (Yes/No)?:	Yes
Were all samples analyzed within hold times (Yes/No)?:	Yes
All volatiles samples methanol extracted (if required) within 24 hours (Yes/No)?:	n/a
Is Chain of Custody completed and signed (Yes/No)?:	Yes
Were sample temperatures acceptable when they reached lab (Yes/No)?:	Yes

Is data considered to be reliable (Yes/No/Suspect)?: Yes

If answer is "No", describe and provide rationale:

Remarks:

Bureau Veritas is accredited to ISO/IEC 17025 for specific parameters on scopes of accreditation. Unless otherwise noted, procedures used by Bureau Veritas are based upon recognized Provincial, Federal or US method compendia such as CCME, MELCC, EPA, APHA.

All work recorded herein has been done in accordance with procedures and practices ordinarily exercised by professionals in Bureau Veritas' profession using accepted testing methodologies, quality assurance and quality control procedures (except where otherwise agreed by the client and Bureau Veritas in writing). All data is in statistical control and has met quality control and method performance criteria unless otherwise noted. All method blanks are reported; unless indicated otherwise, associated sample data are not blank corrected. Where applicable, unless otherwise noted, Measurement Uncertainty has not been accounted for when stating conformity to the referenced standard. All samples were analyzed within hold time unless otherwise flagged.

Bureau Veritas liability is limited to the actual cost of the requested analyses, unless otherwise agreed in writing. There is no other warranty expressed or implied. Bureau Veritas has been retained to provide analysis of samples provided by the Client using the testing methodology referenced in this report. Interpretation and use of test results are the sole responsibility of the Client and are not within the scope of services provided by Bureau Veritas, unless otherwise agreed in writing. Bureau Veritas is not responsible for the accuracy or any data impacts, that result from the information provided by the customer or their agent.

Solid sample results, except biota, are based on dry weight unless otherwise indicated. Organic analyses are not recovery corrected except for isotope dilution methods.
Results relate to samples tested. When sampling is not conducted by Bureau Veritas, results relate to the supplied samples tested.
This Certificate shall not be reproduced except in full, without the written approval of the laboratory.
Reference Method suffix "m" indicates test methods incorporate validated modifications from specific reference methods to improve performance.
* RPDs calculated using raw data. The rounding of final results may result in the apparent difference.
(1) All CCME PHC results met required criteria unless otherwise stated in the report. The CWS PHC methods employed by Bureau Veritas Laboratories conform to all prescribed elements of the reference method and performance based elements have been validated. All modifications have been validated and proven equivalent following "Alberta Environment's Interpretation of the Reference Method for the Canada-Wide Standard for Petroleum Hydrocarbons in Soil Validation of Performance-Based Alternative Methods September 2003". Documentation is available upon request. Modifications from Reference Method for the Canada-wide Standard for Petroleum Hydrocarbons in Soil-Tier 1 Method: F2/F3/F4 data reported using validated cold solvent extraction instead of Soxhlet extraction.

LCS: A blank matrix sample to which a known amount of the analyte, usually from a second source, has been added. Used to evaluate method accuracy.

Method Blank: A blank matrix containing all reagents used in the analytical procedure. Used to identify laboratory contamination.

Surrogate: A pure or isotopically labeled compound whose behavior mirrors the analytes of interest. Used to evaluate extraction efficiency.

Consultant: Golder Associates

Sampling Date: July 15, 2021

Location: 1660 Merivale Road, Ottawa, ON

Laboratory: Bureau Veritas Mississauga

Consultant Project Number: 20447743-1155

Sample Submission Number: C1J7459

Are All Laboratory QC Within Acceptance Criteria (Yes, No, Not Applicable)?

	Yes	No	NA	Comments
Instrument Surrogate Recovery	X			All laboratory QC results are within
Extraction Surrogate Recovery	X			acceptance criteria.
Method Blank Concentration	X			
Matrix Duplicate RPD			X	
Matrix Spike Recovery			X	
Lab Control Sample Recovery	X			

Are All Field QC Samples Within Alert Limits (Yes, No, Not Applicable)?

	Yes	No	NA	Comments
Field Blank Concentration	X			All field QC samples are within
Trip Blank Concentration	X			alert limits.
Field Duplicate RPD			X	

Has CoA been signed off (Yes/No)?:	Yes
Has lab warranted all tests were in statistical control in CoA (Yes/No)?:	Yes
Has lab warranted all tests were analyzed following SOP's in CoA (Yes/No)?:	Yes
Were all samples analyzed within hold times (Yes/No)?:	Yes
All volatiles samples methanol extracted (if required) within 24 hours (Yes/No)?:	n/a
Is Chain of Custody completed and signed (Yes/No)?:	Yes
Were sample temperatures acceptable when they reached lab (Yes/No)?:	Yes

Is data considered to be reliable (Yes/No/Suspect)?: Yes

If answer is "No", describe and provide rationale:

Remarks:

Bureau Veritas is accredited to ISO/IEC 17025 for specific parameters on scopes of accreditation. Unless otherwise noted, procedures used by Bureau Veritas are based upon recognized Provincial, Federal or US method compendia such as CCME, MELCC, EPA, APHA.

All work recorded herein has been done in accordance with procedures and practices ordinarily exercised by professionals in Bureau Veritas' profession using accepted testing methodologies, quality assurance and quality control procedures (except where otherwise agreed by the client and Bureau Veritas in writing). All data is in statistical control and has met quality control and method performance criteria unless otherwise noted. All method blanks are reported; unless indicated otherwise, associated sample data are not blank corrected. Where applicable, unless otherwise noted, Measurement Uncertainty has not been accounted for when stating conformity to the referenced standard. All samples were analyzed within hold time unless otherwise flagged.

Bureau Veritas liability is limited to the actual cost of the requested analyses, unless otherwise agreed in writing. There is no other warranty expressed or implied. Bureau Veritas has been retained to provide analysis of samples provided by the Client using the testing methodology referenced in this report. Interpretation and use of test results are the sole responsibility of the Client and are not within the scope of services provided by Bureau Veritas, unless otherwise agreed in writing. Bureau Veritas is not responsible for the accuracy or any data impacts, that result from the information provided by the customer or their agent.

Solid sample results, except biota, are based on dry weight unless otherwise indicated. Organic analyses are not recovery corrected except for isotope dilution methods.
Results relate to samples tested. When sampling is not conducted by Bureau Veritas, results relate to the supplied samples tested.
This Certificate shall not be reproduced except in full, without the written approval of the laboratory.
Reference Method suffix “m” indicates test methods incorporate validated modifications from specific reference methods to improve performance.
* RPDs calculated using raw data. The rounding of final results may result in the apparent difference.
(1) Air sampling canisters have been cleaned in accordance with U.S. EPA Method TO15. At the end of the cleaning, evacuation, and pressurization cycles, one canister was selected and was pressurized with Zero Air. This canister was then analyzed via TO15 on a GC/MS. The canister must have been found to contain <0.2 ppbv concentration of all target analytes in order for the batch to have been considered clean. Each canister also underwent a leak check prior to shipment.

Please Note: SUMMA® canister samples will be retained by Bureau Veritas Laboratories for a period of 5 calendar days or as contractually agreed from the date of this report, after which time they will be cleaned for reuse. If you require a longer sample storage period, please contact your service representative.

Duplicate: Paired analysis of a separate portion of the same sample. Used to evaluate the variance in the measurement.

LCS: A blank matrix sample to which a known amount of the analyte, usually from a second source, has been added. Used to evaluate method accuracy.

Method Blank: A blank matrix containing all reagents used in the analytical procedure. Used to identify laboratory contamination.

Surrogate: A pure or isotopically labeled compound whose behavior mirrors the analytes of interest. Used to evaluate extraction efficiency.

NC (Duplicate RPD): The duplicate RPD was not calculated. The concentration in the sample and/or duplicate was too low to permit a reliable RPD calculation (absolute difference <= 2x RDL).

(1) Recovery or RPD for this parameter is outside control limits. The overall quality control for this analysis meets acceptability criteria.

DATA QUALITY REVIEW CHECKLIST - IMPERIAL OIL PROJECTS

Consultant: Golder Associates

Sampling Date: January 27, 2021

Location: 1660 Merivale Road, Ottawa, ON

Laboratory: Bureau Veritas Mississauga

Consultant Project Number: 20447743-1155

Sample Submission Number: C123966

Are All Laboratory QC Within Acceptance Criteria (Yes, No, Not Applicable)?

	Yes	No	NA	Comments
Instrument Surrogate Recovery	X			Lab control sample recovery outside acceptance range
Extraction Surrogate Recovery			X	of 70-130% for benzyl chloride (140%) and vinyl
Method Blank Concentration	X			acetate (194%). All remaining laboratory QC results
Matrix Duplicate RPD	X			are within acceptance criteria.
Matrix Spike Recovery			X	
Lab Control Sample Recovery		X		

Are All Field QC Samples Within Alert Limits (Yes, No, Not Applicable)?

	Yes	No	NA	Comments
Field Blank Concentration			X	All field QC samples are within
Trip Blank Concentration			X	alert limits.
Field Duplicate RPD	X			

Has CoA been signed off (Yes/No)?:	Yes
Has lab warranted all tests were in statistical control in CoA (Yes/No)?:	Yes
Has lab warranted all tests were analyzed following SOP's in CoA (Yes/No)?:	Yes
Were all samples analyzed within hold times (Yes/No)?:	Yes
All volatiles samples methanol extracted (if required) within 24 hours (Yes/No)?:	n/a
Is Chain of Custody completed and signed (Yes/No)?:	Yes
Were sample temperatures acceptable when they reached lab (Yes/No)?:	n/a

Is data considered to be reliable (Yes/No/Suspect)?: Yes

If answer is "No", describe and provide rationale:

Remarks:

Bureau Veritas is accredited to ISO/IEC 17025 for specific parameters on scopes of accreditation. Unless otherwise noted, procedures used by Bureau Veritas are based upon recognized Provincial, Federal or US method compendia such as CCME, MELCC, EPA, APHA.

All work recorded herein has been done in accordance with procedures and practices ordinarily exercised by professionals in Bureau Veritas' profession using accepted testing methodologies, quality assurance and quality control procedures (except where otherwise agreed by the client and Bureau Veritas in writing). All data is in statistical control and has met quality control and method performance criteria unless otherwise noted. All method blanks are reported; unless indicated otherwise, associated sample data are not blank corrected. Where applicable, unless otherwise noted, Measurement Uncertainty has not been accounted for when stating conformity to the referenced standard. All samples were analyzed within hold time unless otherwise flagged.

Bureau Veritas liability is limited to the actual cost of the requested analyses, unless otherwise agreed in writing. There is no other warranty expressed or implied. Bureau Veritas has been retained to provide analysis of samples provided by the Client using the testing methodology referenced in this report. Interpretation and use of test results are the sole responsibility of the Client and are not within the scope of services provided by Bureau Veritas, unless otherwise agreed in writing. Bureau Veritas is not responsible for the accuracy or any data impacts, that result from the information provided by the customer or their agent.

Solid sample results, except biota, are based on dry weight unless otherwise indicated. Organic analyses are not recovery corrected except for isotope dilution methods.
Results relate to samples tested. When sampling is not conducted by Bureau Veritas, results relate to the supplied samples tested.
This Certificate shall not be reproduced except in full, without the written approval of the laboratory.
Reference Method suffix “m” indicates test methods incorporate validated modifications from specific reference methods to improve performance.
* RPDs calculated using raw data. The rounding of final results may result in the apparent difference.
(1) Air sampling canisters have been cleaned in accordance with U.S. EPA Method TO15. At the end of the cleaning, evacuation, and pressurization cycles, one canister was selected and was pressurized with Zero Air. This canister was then analyzed via TO15 on a GC/MS. The canister must have been found to contain <0.2 ppbv concentration of all target analytes in order for the batch to have been considered clean. Each canister also underwent a leak check prior to shipment.

Please Note: SUMMA® canister samples will be retained by Bureau Veritas Laboratories for a period of 5 calendar days or as contractually agreed from the date of this report, after which time they will be cleaned for reuse. If you require a longer sample storage period, please contact your service representative.

Microbiology testing is conducted at 6660 Campobello Rd. Chemistry testing is conducted at 6740 Campobello Rd.

GENERAL COMMENTS

WS# 7176542: 3 compounds exceed were outside the 70-130% recovery criteria in the reference standard. These compounds meet the %RSD criteria in the continuing calibration standard. The failure of these 3 compounds is not believed to have an effect on the integrity of the results. Vinyl Acetate exceeded 140% recovery in the reference standard. There were no positives found for this compound therefore the data should not be affected.

Results relate only to the items tested.

LCS: A blank matrix sample to which a known amount of the analyte, usually from a second source, has been added. Used to evaluate method accuracy.

Method Blank: A blank matrix containing all reagents used in the analytical procedure. Used to identify laboratory contamination.

Surrogate: A pure or isotopically labeled compound whose behavior mirrors the analytes of interest. Used to evaluate extraction efficiency.

(1) Recovery or RPD for this parameter is outside control limits. The overall quality control for this analysis meets acceptability criteria.

DATA QUALITY REVIEW CHECKLIST - IMPERIAL OIL PROJECTS

Consultant: Golder Associates

Sampling Date: January 27, 2021

Location: 1660 Merivale Road, Ottawa, ON

Laboratory: Bureau Veritas Mississauga

Consultant Project Number: 20447743-1155

Sample Submission Number: C123972

Are All Laboratory QC Within Acceptance Criteria (Yes, No, Not Applicable)?

	Yes	No	NA	Comments
Instrument Surrogate Recovery	X			Lab control sample recovery outside acceptance range
Extraction Surrogate Recovery			X	of 70-130% for ethanol (64%), benzyl chloride
Method Blank Concentration	X			(134%) and vinyl acetate (166%). All remaining
Matrix Duplicate RPD			X	laboratory QC results are within acceptance criteria.
Matrix Spike Recovery			X	
Lab Control Sample Recovery		X		

Are All Field QC Samples Within Alert Limits (Yes, No, Not Applicable)?

	Yes	No	NA	Comments
Field Blank Concentration		X		Field blank sample exceeded alert limits for F1. All
Trip Blank Concentration			X	remaining field QC samples are within alert limits.
Field Duplicate RPD			X	

Has CoA been signed off (Yes/No)?:	Yes
Has lab warranted all tests were in statistical control in CoA (Yes/No)?:	Yes
Has lab warranted all tests were analyzed following SOP's in CoA (Yes/No)?:	Yes
Were all samples analyzed within hold times (Yes/No)?:	Yes
All volatiles samples methanol extracted (if required) within 24 hours (Yes/No)?:	n/a
Is Chain of Custody completed and signed (Yes/No)?:	Yes
Were sample temperatures acceptable when they reached lab (Yes/No)?:	n/a

Is data considered to be reliable (Yes/No/Suspect)?: Suspect

If answer is "No", describe and provide rationale:

Remarks:

Bureau Veritas is accredited to ISO/IEC 17025 for specific parameters on scopes of accreditation. Unless otherwise noted, procedures used by Bureau Veritas are based upon recognized Provincial, Federal or US method compendia such as CCME, MELCC, EPA, APHA.

All work recorded herein has been done in accordance with procedures and practices ordinarily exercised by professionals in Bureau Veritas' profession using accepted testing methodologies, quality assurance and quality control procedures (except where otherwise agreed by the client and Bureau Veritas in writing). All data is in statistical control and has met quality control and method performance criteria unless otherwise noted. All method blanks are reported; unless indicated otherwise, associated sample data are not blank corrected. Where applicable, unless otherwise noted, Measurement Uncertainty has not been accounted for when stating conformity to the referenced standard. All samples were analyzed within hold time unless otherwise flagged.

Bureau Veritas liability is limited to the actual cost of the requested analyses, unless otherwise agreed in writing. There is no other warranty expressed or implied. Bureau Veritas has been retained to provide analysis of samples provided by the Client using the testing methodology referenced in this report. Interpretation and use of test results are the sole responsibility of the Client and are not within the scope of services provided by Bureau Veritas, unless otherwise agreed in writing. Bureau Veritas is not responsible for the accuracy or any data impacts, that result from the information provided by the customer or their agent.

Solid sample results, except biota, are based on dry weight unless otherwise indicated. Organic analyses are not recovery corrected except for isotope dilution methods.
Results relate to samples tested. When sampling is not conducted by Bureau Veritas, results relate to the supplied samples tested.
This Certificate shall not be reproduced except in full, without the written approval of the laboratory.
Reference Method suffix “m” indicates test methods incorporate validated modifications from specific reference methods to improve performance.
* RPDs calculated using raw data. The rounding of final results may result in the apparent difference.
(1) Air sampling canisters have been cleaned in accordance with U.S. EPA Method TO15. At the end of the cleaning, evacuation, and pressurization cycles, one canister was selected and was pressurized with Zero Air. This canister was then analyzed via TO15 on a GC/MS. The canister must have been found to contain <0.2 ppbv concentration of all target analytes in order for the batch to have been considered clean. Each canister also underwent a leak check prior to shipment.

Please Note: SUMMA® canister samples will be retained by Bureau Veritas Laboratories for a period of 5 calendar days or as contractually agreed from the date of this report, after which time they will be cleaned for reuse. If you require a longer sample storage period, please contact your service representative.

GENERAL COMMENTS

Sample QFA556 [SV16-01] : Increased DL for Chloromethane due to an interference.

Results relate only to the items tested.

QUALITY ASSURANCE REPORT

Duplicate: Paired analysis of a separate portion of the same sample. Used to evaluate the variance in the measurement.

LCS: A blank matrix sample to which a known amount of the analyte, usually from a second source, has been added. Used to evaluate method accuracy.

Method Blank: A blank matrix containing all reagents used in the analytical procedure. Used to identify laboratory contamination.

Surrogate: A pure or isotopically labeled compound whose behavior mirrors the analytes of interest. Used to evaluate extraction efficiency.

NC (Duplicate RPD): The duplicate RPD was not calculated. The concentration in the sample and/or duplicate was too low to permit a reliable RPD calculation (absolute difference <= 2x RDL).

(1) Recovery or RPD for this parameter is outside control limits. The overall quality control for this analysis meets acceptability criteria.

DATA QUALITY REVIEW CHECKLIST - IMPERIAL OIL PROJECTS

Consultant: Golder Associates

Sampling Date: July 22, 2021

Location: 1660 Merivale Road, Ottawa, ON

Laboratory: Bureau Veritas Mississauga

Consultant Project Number: 20447743-1155

Sample Submission Number: C1K9532

Are All Laboratory QC Within Acceptance Criteria (Yes, No, Not Applicable)?

	Yes	No	NA	Comments
Instrument Surrogate Recovery	X			Lab control sample recovery outside acceptance
Extraction Surrogate Recovery			X	range of 70-130% for ethanol (68%) and naphthalene
Method Blank Concentration	X			(140%). All remaining laboratory QC results are within
Matrix Duplicate RPD	X			acceptance criteria.
Matrix Spike Recovery			X	
Lab Control Sample Recovery		X		

Are All Field QC Samples Within Alert Limits (Yes, No, Not Applicable)?

	Yes	No	NA	Comments
Field Blank Concentration			X	Samples SV16-02 and DUP A exceed the alert limit for
Trip Blank Concentration			X	methyl ethyl ketone (60%). All remaining field QC
Field Duplicate RPD		X		samples are within alert limits.

Has CoA been signed off (Yes/No)?:	Yes
Has lab warranted all tests were in statistical control in CoA (Yes/No)?:	Yes
Has lab warranted all tests were analyzed following SOP's in CoA (Yes/No)?:	Yes
Were all samples analyzed within hold times (Yes/No)?:	Yes
All volatiles samples methanol extracted (if required) within 24 hours (Yes/No)?:	n/a
Is Chain of Custody completed and signed (Yes/No)?:	Yes
Were sample temperatures acceptable when they reached lab (Yes/No)?:	n/a

Is data considered to be reliable (Yes/No/Suspect)?: Yes

If answer is "No", describe and provide rationale:

Volatile Organics in Air (TO-15) (1)	2	BRL SOP-00304	EPA TO-15 m

Remarks:

Bureau Veritas is accredited to ISO/IEC 17025 for specific parameters on scopes of accreditation. Unless otherwise noted, procedures used by Bureau Veritas are based upon recognized Provincial, Federal or US method compendia such as CCME, MELCC, EPA, APHA.

All work recorded herein has been done in accordance with procedures and practices ordinarily exercised by professionals in Bureau Veritas' profession using accepted testing methodologies, quality assurance and quality control procedures (except where otherwise agreed by the client and Bureau Veritas in writing). All data is in statistical control and has met quality control and method performance criteria unless otherwise noted. All method blanks are reported; unless indicated otherwise, associated sample data are not blank corrected. Where applicable, unless otherwise noted, Measurement Uncertainty has not been accounted for when stating conformity to the referenced standard. All samples were analyzed within hold time unless otherwise flagged.

Bureau Veritas liability is limited to the actual cost of the requested analyses, unless otherwise agreed in writing. There is no other warranty expressed or implied. Bureau Veritas has been retained to provide analysis of samples provided by the Client using the testing methodology referenced in this report. Interpretation and use of test results are the sole responsibility of the Client and are not within the scope of services provided by Bureau Veritas, unless otherwise agreed in writing. Bureau Veritas is not responsible for the accuracy or any data impacts, that result from the information provided by the customer or their agent.

Solid sample results, except biota, are based on dry weight unless otherwise indicated. Organic analyses are not recovery corrected except for isotope dilution methods.
Results relate to samples tested. When sampling is not conducted by Bureau Veritas, results relate to the supplied samples tested.
This Certificate shall not be reproduced except in full, without the written approval of the laboratory.
Reference Method suffix “m” indicates test methods incorporate validated modifications from specific reference methods to improve performance.
* RPDs calculated using raw data. The rounding of final results may result in the apparent difference.
(1) Air sampling canisters have been cleaned in accordance with U.S. EPA Method TO15. At the end of the cleaning, evacuation, and pressurization cycles, one canister was selected and was pressurized with Zero Air. This canister was then analyzed via TO15 on a GC/MS. The canister must have been found to contain <0.2 ppbv concentration of all target analytes in order for the batch to have been considered clean. Each canister also underwent a leak check prior to shipment.

Please Note: SUMMA® canister samples will be retained by Bureau Veritas Laboratories for a period of 5 calendar days or as contractually agreed from the date of this report, after which time they will be cleaned for reuse. If you require a longer sample storage period, please contact your service representative.

Bureau Veritas Laboratories 6740 Campobello Road, Mississauga, Ontario, L5N 2L8 Tel: (905) 817-5700 Toll-Free: 800-563-6266 Fax: (905) 817-5777 www.bvlabs.com

Microbiology testing is conducted at 6660 Campobello Rd. Chemistry testing is conducted at 6740 Campobello Rd.

Microbiology testing is conducted at 6660 Campobello Rd. Chemistry testing is conducted at 6740 Campobello Rd.

GENERAL COMMENTS

WS# 7504841: Naphthalene and 1,2,4-Trichlorobenzene exceeded 140% recovery in the reference standard. There were no positives found for these compounds therefore the data should not be affected.

Results relate only to the items tested.

LCS: A blank matrix sample to which a known amount of the analyte, usually from a second source, has been added. Used to evaluate method accuracy.

Method Blank: A blank matrix containing all reagents used in the analytical procedure. Used to identify laboratory contamination.

Surrogate: A pure or isotopically labeled compound whose behavior mirrors the analytes of interest. Used to evaluate extraction efficiency.

(1) Recovery or RPD for this parameter is outside control limits. The overall quality control for this analysis meets acceptability criteria.

DATA QUALITY REVIEW CHECKLIST - IMPERIAL OIL PROJECTS

Consultant: Golder Associates

Sampling Date: July 22, 2021

Location: 1660 Merivale Road, Ottawa, ON

Laboratory: Bureau Veritas Mississauga

Consultant Project Number: 20447743-1155

Sample Submission Number: C1K9534

Are All Laboratory QC Within Acceptance Criteria (Yes, No, Not Applicable)?

	Yes	No	NA	Comments
Instrument Surrogate Recovery	X			Lab control sample recovery outside acceptance range
Extraction Surrogate Recovery			X	of 70-130% for 1,2,4-trichlorobenzene (143%) and
Method Blank Concentration	X			naphthalene (160%). All remaining laboratory QC
Matrix Duplicate RPD			X	results are within acceptance criteria.
Matrix Spike Recovery			X	
Lab Control Sample Recovery		X		

Are All Field QC Samples Within Alert Limits (Yes, No, Not Applicable)?

	Yes	No	NA	Comments
Field Blank Concentration		X		Field blank sample exceeded alert limits for 2-
Trip Blank Concentration	X			propanone and F2. All remaining field QC samples are
Field Duplicate RPD			X	within alert limits.

Has CoA been signed off (Yes/No)?:	Yes
Has lab warranted all tests were in statistical control in CoA (Yes/No)?:	Yes
Has lab warranted all tests were analyzed following SOP's in CoA (Yes/No)?:	Yes
Were all samples analyzed within hold times (Yes/No)?:	Yes
All volatiles samples methanol extracted (if required) within 24 hours (Yes/No)?:	n/a
Is Chain of Custody completed and signed (Yes/No)?:	Yes
Were sample temperatures acceptable when they reached lab (Yes/No)?:	n/a

Is data considered to be reliable (Yes/No/Suspect)?: Suspect

If answer is "No", describe and provide rationale: Please see QA/QC appendix.

APPENDIX B

Quality Control/Quality Assurance

QUALITY ASSURANCE/QUALITY CONTROL

In conjunction with the field investigations completed to date, a quality assurance/quality control (QA/QC) program was implemented to ensure the integrity of the groundwater sampling and analytical testing results.

1.0 FIELD PROGRAM

All sampling activities were completed in accordance with Golder's Technical Field Procedures by trained Golder personnel. All field activities were documented in field notes and results were recorded on standard field forms. All field equipment involved in the sampling and monitoring of groundwater were decontaminated in accordance with Golder's Technical Procedures. Groundwater samples were collected using appropriate handling protocols and were placed in sample containers provided by Bureau Veritas Laboratories (BVL).

All re-useable field equipment involved in collecting samples was decontaminated between each sampling location. Groundwater samples were not directly contacted by hand. To help prevent cross-contamination, a new pair of clean nitrile gloves was used for the collection of each sample.

Samples were given unique identification numbers and the sampling containers were preserved in ice-filled coolers. Samples were logged onto formal chain-of-custody documents and transported to BVL's Mississauga Environmental Laboratory for chemical analysis. BVL is accredited by the Standards Council of Canada (SCC).

Two blind field duplicate groundwater samples were submitted for analysis of benzene, toluene, ethylbenzene, xylenes (BTEX), petroleum hydrocarbon (PHC) Fractions F1 to F4 and lead. Two blind field duplicate soil vapour samples were submitted for analysis of BTEX, PHC Fractions F1 and F2, and volatile organic compounds. Trip and field blanks were submitted as necessary, to evaluate the potential for cross-contamination during the sampling and transportation of the samples.

2.0 LABORATORY PROGRAM

The laboratory QA/QC program included adherence to laboratory sampling and analysis protocols (e.g., hold times, sample containers, preservatives, detection limits and approved methodology) and the analysis of laboratory method blanks, laboratory sample duplicates, surrogate recovery and chemical spikes.

The laboratory method blank analysis results were used to detect interferences or impurities introduced by the laboratory equipment, reagents, or solvents. Surrogate recovery is analyzed by spiking samples with known quantities of surrogate chemicals which have similar chemical properties to the parameters being analyzed. The reported recovery provides an indication of the analytical method accuracy for that sample. Matrix spikes were conducted by adding known concentrations of the analyte of interest to a sample to evaluate the effects of the sample matrix on the test method. The analysis of selected samples in duplicate is used to evaluate the reproducibility of the test method.

3.0 DATA RECEPTION

Once laboratory analytical results were received, Golder completed a review of field and laboratory quality. This included review of laboratory QC performance to confirm results are within acceptance criteria, as well as evaluation of field duplicate and blank results to confirm they were within alert limits. Upon receipt of the analytical

results, relative percent difference (RPD) values between the original samples and their blind field duplicates were calculated as follows:

$$\text{RPD\%} = \frac{|S - D|}{\frac{1}{2}(S + D)} \times 100$$

Where: RPD = relative percent difference
S = sample value
D = blind field duplicate or replicate value.

Since analytical error increases near the reportable detection limit (RDL), the RPD was only calculated where the concentrations of both the original and blind field duplicate samples were greater than five times the RDL. The calculated RPDs were then compared to parameter specific alert limits.

Exceedances of the QC acceptance or alert criteria were investigated with the laboratory and, if warranted, a corrective action report was requested from the laboratory.

4.0 DATA QUALITY REVIEW RESULTS

Results of the data quality review are summarized in Table B1. The RPD calculations and blank sample results are presented in Tables B2 to B6.

Two field duplicates, one field blank and one trip blank were submitted to the laboratory as part of the groundwater QC program.

Two field duplicates, two field blanks and one trip blank were submitted to the laboratory as part of the soil vapour QC program.

Based on the data quality review, 13 data quality issues were identified. These issues are considered unlikely to have a material effect on the quality of the data presented in this report. The issues are discussed in detail in Table B1. All duplicated parameters were within acceptable RPD alert limits.

5.0 SUMMARY OF RESULTS

Based on the review of the QA/QC results, the data presented in this report are considered to be reliable.

Table B1
Summary of Quality Control Sample Results
1660 Merivale Road, Ottawa, Ontario
Imperial Oil Limited

BVL Job Number	Matrix	BVL Sample ID Affected	Test Affected	Data Quality Issue	Comments
C1J7368	Groundwater	n/a	n/a	No data quality issues were identified.	The data are considered reliable.
C1J7455	Groundwater	n/a	n/a	No data quality issues were identified.	The data are considered reliable.
C1J7459	Water	n/a	n/a	No data quality issues were identified.	The data are considered reliable.
C123966	Soil Vapour	OSE272, OSE273 and OSE274	Benzyl chloride	Lab control sample recovery (140%) outside acceptance range of 70-130% for benzyl chloride for batch 7175213.	This data quality issue may represent a potential high bias for this sample. Benzyl chloride concentrations in all of the samples and the lab/field duplicates were below the regulatory guideline and below the detection limit, indicating that there will not be a material effect on the interpretation of the results of this parameter. Under these circumstances, the benzyl chloride data reported can be considered reliable.
			Vinyl Acetate	Lab control sample recovery (194%) outside acceptance range of 70-130% for vinyl acetate for batch 7175213.	This data quality issue may represent a potential high bias for this sample. Vinyl acetate concentrations in all of the samples and the lab/field duplicates were below the regulatory guideline and below the detection limit, indicating that there will not be a material effect on the interpretation of the results of this parameter. Under these circumstances, the vinyl acetate data reported can be considered reliable.
C123972	Soil Vapour	OSE289	Ethanol (ethyl alcohol)	Lab control sample recovery (64%) outside acceptance range of 70-130% for ethanol (ethyl alcohol) for batch 7176542.	This data quality issue may represent a potential low bias for this sample. Ethanol concentrations in the field blank was below the regulatory guideline, indicating that there will not be a material effect on the interpretation of the results of this parameter. Under these circumstances, the ethanol data reported can be considered reliable.
			F1-BTEX, C6-C10 (as Toluene)	Field blank sample exceeded alert limits for F1.	The field blank sample was prepared from ambient air present on-site. Concentrations are likely present from variables associated with the Site. All samples associated with this field blank may be biased high for F1. However, following additional data review, it is inferred that the high bias does not have a material effect on the interpretation of the results of this parameter as the F1 concentrations were below the SVSL criteria. Therefore, the data can be considered reliable.
			Benzyl chloride	Lab control sample recovery (134%) outside acceptance range of 70-130% for benzyl chloride for batch 7176542.	This data quality issue may represent a potential high bias for this sample. Benzyl chloride concentrations in field blank sample was below the regulatory guideline and below the detection limit, indicating that there will not be a material effect on the interpretation of the results of this parameter. Under these circumstances, the benzyl chloride data reported can be considered reliable.
			Vinyl Acetate	Lab control sample recovery (166%) outside acceptance range of 70-130% for vinyl acetate for batch 7176542.	This data quality issue may represent a potential high bias for this sample. Vinyl acetate concentrations in field blank sample was below the regulatory guideline and below the detection limit, indicating that there will not be a material effect on the interpretation of the results of this parameter. Under these circumstances, the vinyl acetate data reported can be considered reliable.

Table B1
Summary of Quality Control Sample Results
1660 Merivale Road, Ottawa, Ontario
Imperial Oil Limited

BVL Job Number	Matrix	BVL Sample ID Affected	Test Affected	Data Quality Issue	Comments
C1K9532	Soil Vapour	QFA556, QFA557 and QFA558	Ethanol (ethyl alcohol)	Lab control sample recovery (68%) outside acceptance range of 70-130% for ethanol for batch 7507030.	This data quality issue may represent a potential low bias for these samples. Ethanol concentrations in all of the samples and the lab/field duplicates were below the regulatory guideline and/or below the detection limit, indicating that there will not be a material effect on the interpretation of the results of this parameter. Under these circumstances, the ethanol data reported can be considered reliable.
			Naphthalene	Lab control sample recovery (140%) outside acceptance range of 70-130% for naphthalene for batch 7507030.	This data quality issue may represent a potential high bias for these samples. Naphthalene concentrations in all of the samples and the lab/field duplicates were below the regulatory guideline and below the detection limit, indicating that there will not be a material effect on the interpretation of the results of this parameter. Under these circumstances, the naphthalene data reported can be considered reliable.
		QFA557	Methyl Ethyl Ketone (2-Butanone)	Field duplicate samples SV16-02 and DUP A exceed the alert limit for methyl ethyl ketone (60%).	A quality check of the data yielded similar results. Sample non-homogeneity is believed to be the root cause. Methyl ethyl ketone concentrations in both the sample and the field duplicate were below the regulatory guideline, indicating that there will not be a material effect on the interpretation of the results of this parameter. Under these circumstances, the methyl ethyl ketone data reported can be considered reliable.
C1K9534	Soil Vapour	QFA576 and QFA577	1,2,4-Trichlorobenzene	Lab control sample recovery (143%) outside acceptance range of 70-130% for 1,2,4-trichlorobenzene for batch 7504841.	This data quality issue may represent a potential high bias for this sample. 1,2,4-Trichlorobenzene concentrations in both of the samples were below the regulatory guideline and below the detection limit, indicating that there will not be a material effect on the interpretation of the results of this parameter. Under these circumstances, the 1,2,4-trichlorobenzene data reported can be considered reliable.
			Naphthalene	Lab control sample recovery (160%) outside acceptance range of 70-130% for naphthalene for batch 7504841.	This data quality issue may represent a potential high bias for this sample. Naphthalene concentrations in both of the samples were below the regulatory guideline and below the detection limit, indicating that there will not be a material effect on the interpretation of the results of this parameter. Under these circumstances, the naphthalene data reported can be considered reliable.
		QFA576	2-Propanone	Field blank sample exceeded alert limits for 2-propanone.	The field blank sample was prepared from ambient air present on-site. Concentrations are likely present from variables associated with the Site. All samples associated with this field blank may be biased high for 2-propanone. However, following additional data review, it is inferred that the high bias does not have a material effect on the interpretation of the results of this parameter as the 2-propanone concentrations were below the SVSL criteria. Therefore, the data can be considered reliable.
			F2, C10-C16 (as Decane)	Field blank sample exceeded alert limits for F2.	The field blank sample was prepared from ambient air present on-site. Concentrations are likely present from variables associated with the Site. All samples associated with this field blank may be biased high for F2. However, following additional data review, it is inferred that the high bias does not have a material effect on the interpretation of the results of this parameter as the F2 concentrations were below the SVSL criteria. Therefore, the data can be considered reliable.

Notes:

Bold/Underlined - value exceeds alert limit

BTEX - benzene, toluene, ethylbenzene, xylenes

BVL - Bureau Veritas Laboratories

F1, F2 - petroleum hydrocarbon fractions 1 and 2

n/c - not calculated

RDL - reportable detection limit

RPD - relative percent difference

> - greater than

< - less than

µg/m^3 - micrograms per cubic metre

RPD is not calculated if either the original or field duplicate sample has a result of less than 5X the RDL

Groundwater Monitoring Program – 1660 Merivale Road, Ottawa, Ontario
TSSA Service Request # 791084

Dear Ms. Sherwani,

Thank you for submitting the following groundwater monitoring and sampling report for the above captioned property:

- *"2020 Groundwater and Soil Vapour Probe Monitoring and Sampling Report, 1660 Merivale Road, Ottawa, Ontario",* prepared by Golder Associates Ltd. (Golder), dated December 18, 2020.

The 2020 groundwater monitoring report provides the following information:

- Seventeen (17) monitoring wells (TH1 through TH9, TH11, TH12, TH100 to TH102, MW15-01, MW15-02, MW16-01) were monitored for depth to groundwater, petroleum vapour concentrations and presence or absence of liquid petroleum hydrocarbon (LPH) on February 28, July 27-29, August 31 and October 13-14, 2020.
- The depth to groundwater measured in the monitoring wells ranged from 2.44 metres below ground surface (mbgs) (in MW15-01) to 4.02 mbgs (in TH7). The inferred groundwater flow direction is to the south.
- The headspace organic vapour concentrations measured in the monitoring wells ranged from non-detect to 389 parts per billion by volume (ppbv).
- LPH was not detected in any monitoring wells except 0.002 m LPH was observed in monitoring well TH4.
- Golder selected the Ontario Ministry of the Environment Conservation and Parks (MECP) Table 3 full depth generic Site Condition Standards (SCS) for all types of property use in a non-potable groundwater condition, and medium to fine textured soils as being applicable for use at this site.
- Groundwater samples were collected from sixteen (16) monitoring wells (TH1 to TH3, TH5 through TH9, TH11, TH12, TH100 to TH102, MW15-01, MW15-02, MW16-01) during one or both the sampling events on July 27-29, 2020 and October 14, 2020. The groundwater samples were submitted to Bureau Veritas Laboratories (BV Labs), an accredited laboratory by the Canadian Association for Laboratory Accreditation Inc. (CALA). Groundwater samples were submitted for laboratory analysis of benzene, toluene, ethylbenzene, xylenes (BTEX), petroleum hydrocarbon fractions F1 to F4 (PHC F1-F4) and lead.
- The analytical results of the submitted groundwater samples were reported by Golder to be below the selected MECP Table 3 SCS for all analyzed parameters with the exceptions of the groundwater samples collected from the following monitoring wells which exceeded for concentrations of one or more of benzene, PHC F1-F4 and lead during one or both the sampling events:
    - TH1 – PHC F2-F4 (July 2020)
    - TH5 – PHC F1-F3, lead (July 2020)
    - TH8 – PHC F3 (July 2020)

- TH9 – PHC F1-F4 (July, October 2020)
- TH11 – PHC F1-F4 (July, October 2020)
- TH12 – PHC F1-F2 (October 2020)
- TH100 – PHC F3-F4 (July 2020)
- TH101 – PHC F1-F2 (July 2020)

- Approximately 200 litres (L) of purged groundwater was removed from the site on August 8, 2020 and on October 15, 2020. The liquid waste was disposed of at an MECP approved facility.
- A hydro-vac truck was used to clean five off-site monitoring wells (TH8, TH9, TH11, TH12 and TH100), The liquid waste was disposed of at an MECP approved facility.

Our review of the report indicates that the petroleum hydrocarbon (PHC) impacts have been identified in groundwater both onsite (TH1, TH5 and TH4) and offsite (TH8, TH9, TH11, TH12 and TH101). The identified impacts have not been completely delineated. Based on the information provided to date, TSSA requires the following:

- The identified petroleum hydrocarbon impacts in groundwater must be completely delineated, both on-site and where practical, off-site. We note that the delineation of the identified impacts was requested via our letters dated February 28, 2018 and July 30, 2020.

- The City of Ottawa (the City) must be made aware of the identified impacts on the City's roadway allowances of Viewmount Drive and Merivale Road. TSSA must be copied and/or provided with copies of all correspondences between the City and Imperial Oil Limited.

- Following the complete delineation, TSSA requires the submission of a formal Contaminant Management Plan (CMP) if further remedial work is not carried out to remove the impacted soil and/or groundwater.

Please submit an action plan to this office by September 14, 2021 addressing the above issues.

Please note, the soil vapour intrusion assessment guidance document titled "*Draft Technical Guidance: Soil Vapour Intrusion Assessment, September 2013*" has not been finalized by the MRCP. It also has not been made available to public for use and is not in effect to date. As such, TSSA cannot provide comments on the soil vapour monitoring and sampling results.

Should you have any further questions, please do not hesitate to contact me directly. For general enquiries, please contact a Customer Service Advisor at 1.877.682.TSSA (8772) or e-mail customerservices@tssa.org. When contacting TSSA regarding this file, please refer to the Service Request number provided above.

Yours truly,

Groundwater Monitoring Program – 1660 Merivale Road, Ottawa, Ontario
TSSA Service Request # 791084

Dear Mr. Ly,

Thank you for submitting the following reports for the above captioned property:

- *"2018 Groundwater and Soil Vapour Probe Monitoring and Sampling Report, 1660 Merivale Road, Ottawa, Ontario",* prepared by Golder Associates Ltd. (Golder), dated December 14, 2018; and
- *"2019 Groundwater and Soil Vapour Probe Monitoring and Sampling Report, 1660 Merivale Road, Ottawa, Ontario",* prepared by Golder, dated January 31, 2020.

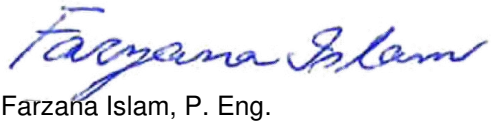
The 2018 groundwater monitoring report provides the following information:

- Seventeen (17) monitoring wells (TH1 through TH9, TH11, TH12, TH100 to TH102, MW15-01, MW15-02, MW16-01) were monitored on August 14-16, 2018 for depth to groundwater, petroleum vapour concentrations and presence or absence of liquid petroleum hydrocarbon (LPH). The monitoring well TH10 was decommissioned on August 24, 2016 and was replaced with monitoring well MW16-01.
- The depth to groundwater measured in the monitoring wells ranged from 2.44 metres below ground surface (mbgs) (in MW15-02) to 3.83 mbgs (in TH7). The inferred groundwater flow direction is to the south.
- The headspace organic vapour concentrations measured in the monitoring wells ranged from 2,537 parts per billion by volume (ppbv) to 8,102 ppbv during the July 3, 2018 monitoring event. During October 29, 2018 monitoring event, the headspace vapour readings measured in the monitoring wells ranged from 14 ppbv to 308 ppbv.
- LPH was not detected in any monitoring wells.
- Golder selected the Ontario Ministry of the Environment Conservation and Parks (MECP) Table 3 full depth generic Site Condition Standards (SCS) for all types of property use in a non-potable groundwater condition, and medium to fine textured soils as being applicable for use at this site.
- Groundwater samples were collected from seventeen (17) monitoring wells (TH1 through TH9, TH11, TH12, TH100 to TH102, MW15-01, MW15-02, MW16-01) on August 14-16, 2018. The groundwater samples were submitted to Maxxam Analytics Inc. (Maxxam), an accredited laboratory by the Canadian Association for Laboratory Accreditation Inc. (CALA). Groundwater samples were submitted for laboratory analysis of benzene, toluene, ethylbenzene, xylenes (BTEX), petroleum hydrocarbon fractions F1 to F4 (PHC F1-F4) and lead.
- The analytical results of the submitted groundwater samples were reported by Golder to be below the selected MECP Table 3 SCS for all analyzed parameters with the exceptions of the groundwater samples collected from TH4, TH5, TH9, TH12, TH101, TH102 and MW16-01, which exceeded for concentrations of one or more of benzene, PHC F1-F4 and lead.
- Golder also reports that the samples collected from two soil vapour probes (SV16-01 and SV16-02) did not exhibit any exceedances.

The 2019 groundwater monitoring report provides the following information:

- Seventeen (17) monitoring wells (TH1 through TH9, TH11, TH12, TH100 to TH102, MW15-01, MW15-02, MW16-01) were monitored on July 29-31, 2019 for depth to groundwater, petroleum vapour concentrations and presence or absence of LPH.
- The depth to groundwater measured in the monitoring wells ranged from 2.49 mbgs (in MW15-01) to 3.98 mbgs (in TH7). The inferred groundwater flow direction is to the south.
- The headspace organic vapour concentrations measured in the monitoring wells ranged from 16 ppbv to 240 ppbv during the June 21, 2019 monitoring event. During November 12, 2019 monitoring event, the headspace vapour readings measured in the monitoring wells ranged from non-detect to 10 ppbv.
- LPH was not detected in any monitoring wells.
- Golder selected the MECP Table 3 full depth generic SCS for all types of property use in a non-potable groundwater condition, and medium to fine textured soils as being applicable for use at this site.
- Groundwater samples were collected from seventeen (17) monitoring wells (TH1 through TH9, TH11, TH12, TH100 to TH102, MW15-01, MW15-02, MW16-01) on July 29-31, 2019. The groundwater samples were submitted to Bureau Veritas (BV), an accredited laboratory by the CALA. Groundwater samples were submitted for laboratory analysis of BTEX, PHC F1-F4 and lead.
- The analytical results of the submitted groundwater samples were reported by Golder to be below the selected MECP Table 3 SCS for all analyzed parameters with the exceptions of the groundwater samples collected from TH1, TH4, TH5, TH8, TH9, TH11, TH100, TH101 and TH102 and MW16-01, which exceeded for concentrations of one or more of PHC F1-F4.
- Golder also reports that the samples collected from two soil vapour probes (SV16-01 and SV16-02) did not exhibit any exceedances.

Our review of the 2018 and 2019 groundwater monitoring/sampling report indicates that the petroleum hydrocarbon (PHC) impacts were identified in groundwater both onsite (TH1, TH5 and TH4) and offsite (TH8, TH9, TH11, TH12, TH100, TH102, TH101), and the identified impacts have not been completely delineated. Based on the information provided to date, TSSA requires the following:



- The identified petroleum hydrocarbon impacts in groundwater must be completely delineated, both on-site and where practical, off-site;
- The City of Ottawa (the City) must be made aware of the identified impacts on the City's roadway allowances of Viewmount Drive and Merivale Road. TSSA must be copied and/or provided with copies of all correspondences between the City and Imperial Oil;
- Following the complete delineation, TSSA requires the submission of a formal Contaminant Management Plan (CMP) if further remedial work is not carried out to remove the impacted soil and/or groundwater;

Please submit an action plan to this office by September 14, 2020 addressing the above issues.

Please note, the soil vapour intrusion assessment guidance document titled "*Draft Technical Guidance: Soil Vapour Intrusion Assessment, September 2013*" has not been finalized by the Ministry of the Environment (MOE). It also has not been made available to public for use and is not in effect to date. As such, TSSA cannot provide comments on the soil vapour monitoring and sampling results.

Should you have any further questions, please do not hesitate to contact me directly. For general enquiries, please contact a Customer Service Advisor at 1.877.682.TSSA (8772) or e-mail customerservices@tssa.org. 911586-5	Liquid Fuels Handling Code 2017 Clause 5.2.4 - The monitor shall be dedicated to the dispensers and may also monitor the car wash, but it shall not monitor images of the store. TSSA Inspection has determined this facility does not comply with this code (video monitor displays petroleum dispensers and an image of the convenience store). You are hereby ordered to comply with clause 5.2.4 of the Liquid Fuels Handling Code 2017 and ensure the monitor dedicated to the dispensers does not also monitor images of the store.	SEP 08, 2021

Task Notes

TSSA Inspector David Barclay travelled to 1660 Merivale Rd; Ottawa (Canadian Tire) on June 9, 2021 to conduct a petroleum facility periodic inspection.

Consulted with gas attendant on site during inspection of the petroleum facility licence, emergency stop, camera system, Veederoot, testing of the intercom, spill kit, fire extinguishers, signage, vehicular protection, dispensing equipment, STP and dispenser sumps, fill and vent pipes, and discovered the following deficiencies:

*Copies of the annual report regarding the maintenance and testing of the shear valve and leak detection systems, and the maintenance of the natural gas appliances installed within the Car Wash mechanical room were not available for review by this Inspector.

*No Smoking/Ignition Off signage posted at the dispenser #6 is faded.

*Approved container signage posted at the dispensers #4 and #6
are not visible due to other signage posted in front of the approved container signage.

*Veederoot discovered in alarm, display panel indicates "L4 high liquid alarm".

*Video monitor displays petroleum dispensers and an image of the convenience store.

*Unable to access all four STP sumps, key was utilized during removal but lids found seized in place. Have petroleum contractor provide pictures inside of these sumps.

A compliance date of September 8, 2021 has been issued.

2020 GROUNDWATER AND SOIL VAPOUR PROBE MONITORING AND SAMPLING REPORT
1660 MERIVALE ROAD, OTTAWA, ONTARIO
SAP 88001627

INTRODUCTION

Golder Associates Ltd. was retained by Imperial Oil Limited to conduct a groundwater and soil vapour probe monitoring and sampling program at the former retail fuel outlet and active Canadian Tire station, at 1660 Merivale Road, Ottawa, Ontario (the Site) (Figures 1 and 2). The fieldwork was conducted on February 28, July 27 to 29, August 31, and October 13 to 14, 2020.

SCOPE OF WORK

Groundwater

- Annual monitoring of nine on-site (TH1 to TH7, MW15-01 and MW15-02) and eight off-site (TH8, TH9, TH11, TH12, TH100 to TH102 and MW16-01) groundwater monitoring wells for depth to groundwater and the thickness, if present, of light non-aqueous phase liquid (LNAPL);
- Collecting annual groundwater samples from nine on-site (TH1 to TH7, MW15-01, and MW15-02) and eight off-site (TH8, TH9, TH11, TH12, TH100 to TH102, and MW16-01) monitoring wells using the low-flow sampling method for laboratory analysis of benzene, toluene, ethylbenzene, xylenes (BTEX), petroleum hydrocarbon (PHC) fractions F1 to F4 and dissolved lead.
- Cleaning out five off-site (TH8, TH9, TH11, TH12 and TH100) monitoring wells using a hydro-vac truck, operated by Badger Daylighting Ltd., from Ottawa, Ontario;
- Collecting groundwater samples from five off-site (TH8, TH9, TH11, TH12 and TH100) monitoring wells using the low-flow sampling method for laboratory analysis of BTEX, PHC fractions F1 to F4 and dissolved lead;
- Comparing the groundwater analytical results to the following standards:
  - Ministry of the Environment, Conservation and Parks' (MECP) Table 3 Full Depth Generic Site Condition Standards for groundwater in medium and fine textured soil in a non-potable groundwater from the

document titled “Soil, Ground Water, and Sediment Standards for Use Under Part XV.1 of the Environmental Protection Act,” dated April 15, 2011 (hereafter referred to as the Table 3 Standards).

Soil Vapour

- Collecting winter and summer soil vapour samples from two on-site soil vapour probes (SV16-01 and SV16-02) for laboratory analysis of BTEX, PHC Fractions F1 and F2, and volatile organic compounds (VOCs);
- Comparing the soil vapour analytical results to the following guidelines:
  - Health-Based Indoor Air Criteria provided by MECP Modified Generic Risk Assessment (Tier 2) Spreadsheet Model (November 1, 2016) for residential land use.
  - Soil vapour screening levels generated for residential buildings with a basement (probe depth 0 to 30 centimetres below base of the building foundation) calculated by dividing Health-Based Indoor Air Criteria by an attenuation factor of 0.02.

METHODOLOGY

Groundwater

Depth to Groundwater and LNAPL Thickness

- Depth to groundwater was measured and, if present, the thickness of LNAPL using an oil/water interface probe. If LNAPL is detected, then its presence is confirmed visually using a bailer. Prior to use in each well, the interface probe was cleaned using a phosphate-free detergent and water solution and rinsed with deionized water to minimize the potential for cross-contamination. Depth to groundwater measurements were taken from the top of casing.

Low-Flow Sampling

- Groundwater samples were collected using the low-flow sampling method. Water was pumped from each well, at a rate of 0.1 to 1 litres per minute (L/min), using low density polyethylene tubing connected to a peristaltic pump with a portion of silicon tubing. Routine water quality indicator parameters were measured during pumping using a multi-parameter water quality meter and flow through cell. The parameters measured included electrical conductivity, pH, temperature, dissolved oxygen and reduction potential. Calibration of the meter was completed as per the manufacturer’s instructions. Purged water was retained on-site in barrels for future off-site disposal.
- Thirteen samples, including two duplicates and eleven groundwater samples, were collected via the low-flow sampling method between July 27 and 29, 2020. A field blank and trip blank were also collected. Monitoring well TH12 contained debris above the water table on July 28, 2020, and no groundwater sample was collected.
- Six samples, including one duplicate and five groundwater samples, were collected via the low-flow sampling method on October 14, 2020. A field blank and trip blank were also collected.

No-Purge Sampling

- Groundwater samples were collected via the no-purge technique as a result of insufficient recharge to complete low flow sampling. Sampling was completed using disposable bailers. Refer to Table 1 for a summary of groundwater field monitoring results.
- Groundwater samples from two monitoring wells (TH1, TH100) were collected via the no-purge sampling technique between July 27 and 29, 2020, due to insufficient recharge for low-flow sampling.

Laboratory Analysis of Groundwater Samples

- Samples were submitted under chain-of-custody to Maxxam Analytics Inc. (now Bureau Veritas Laboratories [BVL]) in Mississauga, Ontario, a Standards Council of Canada accredited laboratory, for analysis of BTEX, PHC Fractions F1 to F4 and dissolved lead.
- Groundwater samples for BTEX and PHC Fraction F1 analysis were placed in 40-millilitre (mL) clear glass vials provided by the laboratory and preserved with sodium bisulphate as a microbial inhibitor. The groundwater samples for PHC Fractions F2 to F4 analysis were placed in 250-mL amber glass bottles and preserved with sodium bisulphate. Groundwater samples for dissolved lead analysis were placed in 120-mL high-density polyethylene bottles, field filtered and preserved with nitric acid.
- All sampling containers were placed in an ice-filled cooler immediately following sampling and transported to BVL for chemical analysis.

Waste Purge Water Removal

- Badger Daylighting of Ottawa, Ontario, an MECP-licensed waste hauler, was used to recover approximately 200 litres (L) of waste purged groundwater from the Site on August 8, 2020, and 15 L on October 15, 2020. The liquid was disposed of at an MECP-approved waste receiver.

Well Cleaning

- Badger Daylighting of Ottawa, Ontario, used a hydro-vac truck to clean five off-site (TH8, TH9, TH11, TH12 and TH100) monitoring wells. Screens were cleaned with pressurized potable city water and vacuumed for approximately 30 minutes each. The liquid was disposed of at an MECP-approved waste receiver.

Soil Vapour

Weather Conditions during Sampling

- Weather conditions[1] on February 28, 2020 were partly cloudy. Outdoor air temperatures were between -10.4 and -9.3 degrees Celsius (°C), relative humidity was between 69 and 77%, and barometric pressure was measured between 98.82 and 98.84 kilopascals (kPa) (Environmental Canada 2020, internet site).

[1] Weather information was taken from the meteorological station (*2020 Hourly Data Report. Ottawa INTL A, Ontario*) closest to the Site. Environment Canada 2020, internet site.

- Weather conditions[2] on August 31, 2020 were clear and sunny. Outdoor air temperatures were between 8.9 and 21.8 °C, relative humidity was between 51 to 99%, and barometric pressure was measured between 100.17 t 100.53 kPa.

Probe Leak Testing

- The soil vapour probes (SV16-01 and SV16-02) were leak tested on February 28 and August 31, 2020, to assess whether ambient air was penetrating the ground surface (e.g., along the outside of the tubing) and mixing with soil vapours during sampling.
- Prior to sample collection, three probe volumes were purged from the soil vapour probe using a sampling pump connected to the probe using dedicated Teflon tubing. Purging was conducted at a nominal flow rate of 200 millilitres per minute (mL/min). During purging, the flow rate and vacuum were measured using an inline flow calibrator and manometer.
- After purging each of the three probe volumes, a soil gas screening sample was indirectly collected into a 1-L Tedlar bag using a vacuum chamber to eliminate cross-contamination from the sampling pump. The concentrations of methane, carbon dioxide, oxygen and combustible gases in the screening sample were measured using a GEM 5000 and RKI GX-6000. The integrity of each vapour sampling probe and its connection to the sampling equipment was evaluated using helium leak testing. A plastic shroud was placed over the sample probe and was continuously filled with helium. The soil gas screening sample was tested for helium. Sample acceptance was based upon obtaining a helium concentration in the screening sample that was less than 1% of the shroud concentration.

Soil Vapour Sampling

- Soil vapour samples were collected following procedures outlined in the United States Environmental Protection Agency Method TO-15. A flow regulator supplied by BVL was used to regulate the volumetric soil vapour flow rate into the Summa canister at a flow rate of between 155 and 175 mL/min during an 8- to 9-minute sampling period during the February sampling event, and between 140 to 155 mL/min during a 9- to 10-minute sampling period during the August sampling event.
- A 1.4-L Summa canister, batch certified by BVL to be free of contaminants, was fitted with a flow regulator for sample collection. Prior to use, the initial Summa canister pressure was confirmed, with a vacuum gauge, to be less than or equal to -29 inches of mercury during the February sampling event, and -27 inches of mercury during the August sampling event, when gauged.

Laboratory Analysis of Soil Vapour Samples

- Soil vapour samples were collected and submitted to the BVL Mississauga facility, for analysis of BTEX, PHC Fractions F1 and F2, and VOCs. During the February sampling event, four samples, including one field duplicate, one field blank and two soil vapour probe samples, were submitted to BVL for analysis. During the August sampling event, four samples, including one field duplicate, one field blank and two soil vapour probe samples, were submitted to BVL for analysis.

[2] Weather information was taken from the meteorological station (*2020 Hourly Data Report. Ottawa INTL A, Ontario*) closest to the Site. Environment Canada 2020, internet site.

RESULTS

Groundwater

LNAPL Occurrence (Date; Observations)

- July 27 to 29, 2020; detected in one monitoring well (TH4); 0.002 m (Table 1).
- October 15, 2020; not detected (Table 1).

Groundwater Monitoring (Date; Depth to Groundwater Range; Groundwater Direction)

- July 27 to 29, 2020; depth to groundwater ranged from 2.44 to 4.02 metres below ground surface (mbgs) (Table 1); inferred to the south (Figure 3, Table 1).
- October 15, 2020; depth to groundwater ranged from 2.87 to 3.80 mbgs (Table 1); inferred to the south (Figure 4, Table 1).

Groundwater Analytical Results (Date; Parameters; No. of wells)

- July 27 to 29, 2020; BTEX and PHC Fractions F1 to F4; exceedances of one or more parameters listed were identified at seven locations (Figure 5, Table 2).
- July 27 to 29, 2020; dissolved lead; an exceedance was identified at one location (Figure 5, Table 2).
- October 14, 2020; BTEX and PHC Fractions F1 to G4; exceedances of one or more parameters listed were identified at three locations (Figure 6, Table 2).
- October 14, 2020; dissolved lead; No exceedance was identified (Figure 6, Table 2).

Soil Vapour

Probe Leak Test Results (Date; Probe; Result expressed as % helium)

- February 28, 2020; SV16-01 and SV16-02; 0% (Table 3).
- August 31, 2020; SV16-01 and SV16-02; 0% (Table 3).

Field Organic Vapour Results (Date; Range)

- February 28, 2020; not detected to 21 parts per billion by volume (ppbv) (Table 3).
- August 31, 2020; 161 to 389 ppbv (Table 3).

Soil Vapour Analytical Results (Date; Parameters; No. of probes)

- February 28, 2020; BTEX, PHC Fractions F1 and F2; No exceedances were identified (Figure 7, Table 4).
- February 28, 2020; VOCs; No exceedances were identified (Figure 8, Table 5).
- August 31, 2020; BTEX, PHC Fractions F1 and F2; No exceedances were identified (Figure 7, Table 4).
- August 31, 2020; VOCs; Exceedances of one or more parameters listed were identified at one location (Figure 8, Table 5).

FIELD AND LABORATORY QUALITY ASSURANCE / QUALITY CONTROL

- Copies of the associated laboratory certificates of analysis are provided in Appendix A.
- A quality assurance/quality control (QA/QC) program was followed to minimize and quantify impacts introduced during sample collection, handling, shipping, and analysis. As part of the QA/QC program, sampling protocols included minimizing sample handling, submitting field QA/QC samples, using dedicated non-contaminating sampling equipment, using sample-specific identification and labelling procedures, and using chain-of-custody records. A discussion of the QA/QC program is included in Appendix B.
- Based on the data quality review, no groundwater data quality issues were identified. Seven soil vapour data quality issues were identified. These issues are considered unlikely to have a material effect on the quality of the data presented in this report.

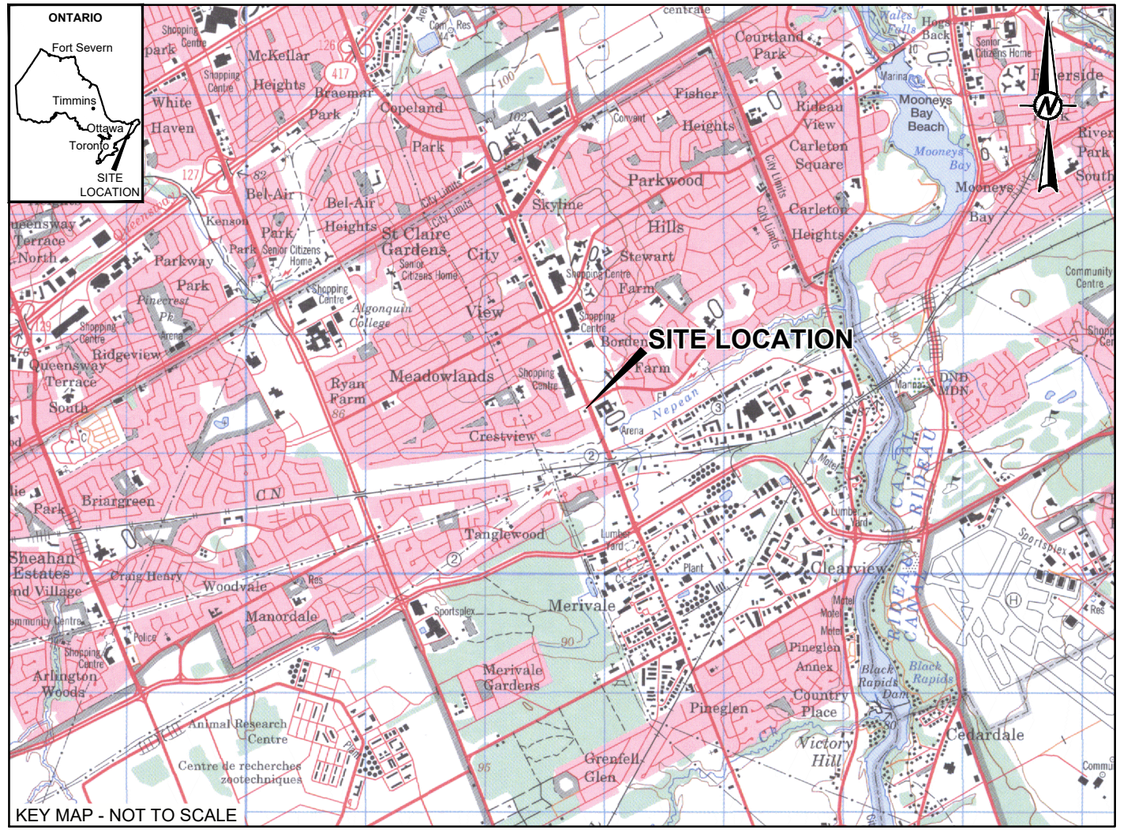
LIMITATIONS OF LIABILITY, SCOPE OF REPORT AND THIRD PARTY RELIANCE

This report has been prepared and the work referred to in this report has been undertaken by Golder Associates Ltd. for Imperial Oil Limited. It is intended for the sole and exclusive use of Imperial Oil Limited, its affiliated companies and partners and their respective insurers, agents, employees and advisors (collectively, “Imperial Oil”). Any use, reliance on or decision made by any person other than Imperial Oil based on this report is the sole responsibility of such other person. Imperial Oil and Golder Associates Ltd. make no representation or warranty to any other person with regard to this report and the work referred to in this report, and they accept no duty of care to any other person or any liability or responsibility whatsoever for any losses, expenses, damages, fines, penalties or other harm that may be suffered or incurred by any other person as a result of the use of, or reliance on, any decision made or any action taken based on this report or the work referred to in this report.



The investigation undertaken by Golder Associates Ltd. with respect to this report and any conclusions or recommendations made in this report reflect Golder Associates Ltd.’s judgement based on the site conditions observed at the time of the site inspection on the date(s) set out in this report, and on information available at the time of preparation of this report. This report has been prepared for specific application to this site and it is based, in part, upon visual observation of the site, subsurface investigation at discrete locations and depths, and specific analysis of specific chemical parameters and materials during a specific time interval, all as described in this report.

Unless otherwise stated, the findings cannot be extended to previous or future site conditions, portions of the site which were unavailable for direct investigation, subsurface locations which were not investigated directly, or chemical parameters, materials or analysis which were not addressed. Substances other than those addressed by the investigation described in this report may exist within the site, substances addressed by the investigation may exist in areas of the site not investigated and concentrations of substances addressed which are different than those reported may exist in areas other than the locations from which samples were taken.

If site conditions or applicable standards change or if any additional information becomes available at a future date, modifications to the findings, conclusions and recommendations in this report may be necessary.

Other than by Imperial Oil, copying or distribution of this report, use of or reliance on the information contained herein, in whole or in part, is not permitted without the express written permission of Golder Associates Ltd. Nothing in this report is intended to constitute or provide a legal opinion.

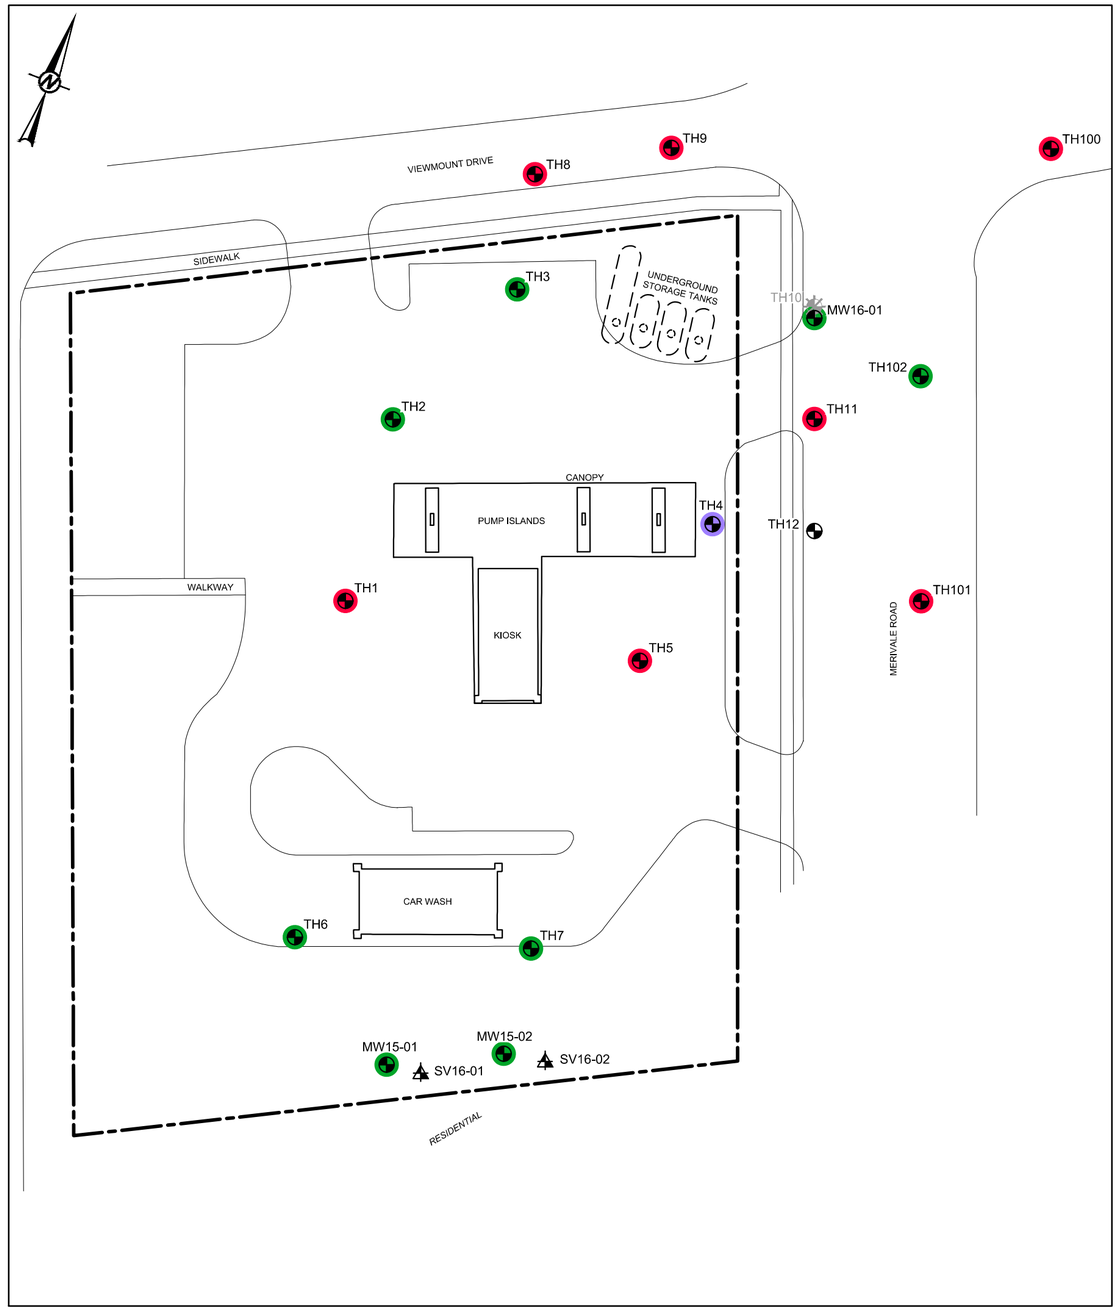
(a) O.REG 153 (MOECC 2011) TABLE 3 FULL DEPTH GENERIC SITE CONDITION STANDARDS FOR ALL TYPES OF PROPERTY USE FOR GROUNDWATER IN MEDIUM AND FINE TEXTURED SOIL IN A NON-POTABLE GROUNDWATER CONDITION.

(b) BASELINE WAS NOT REACHED AT CARBON 50. VALUE PRESENTED CORRESPONDS TO THE GREATER OF THE F4 AND F4G VALUES.



(c) F1 FRACTION DOES NOT INCLUDE BTEX; HOWEVER, THE PROPONENT HAS THE CHOICE AS TO WHETHER OR NOT TO SUBTRACT BTEX FROM THE ANALYTICAL RESULT.

LEGEND

- PROPERTY BOUNDARY
- BOREHOLE LOCATION COMPLETED AS A MONITORING WELL
- BOREHOLE LOCATION COMPLETED AS A MONITORING WELL (DECOMMISSIONED)
- SOIL VAPOUR PROBE LOCATION

LIST OF APPLICABLE ABBREVIATIONS

<	LESS THAN
µg/L	MICROGRAMS PER LITRE
B	BENZENE
T	TOLUENE
E	ETHYLBENZENE
X	XYLENES
F1	PETROLEUM HYDROCARBON FRACTION 1 (C_6-C_{10}) LESS BTEX
F2	PETROLEUM HYDROCARBON FRACTION 2 (C_{10}-C_{16})
F3	PETROLEUM HYDROCARBON FRACTION 3 (C_{16}-C_{34})
F4	PETROLEUM HYDROCARBON FRACTION 4 (C_{34}-C_{50})
F4G	PETROLEUM HYDROCARBON 4 GRAVIMETRIC
HA	n-HEXANE
LNAPL	LIGHT NON-AQUEOUS PHASE LIQUID
mbgs	METRES BELOW GROUND SURFACE
MOECC	MINISTRY OF THE ENVIRONMENT AND CLIMATE CHANGE
na	NOT ANALYZED
O.REG	ONTARIO REGULATION
Pb	DISSOLVED LEAD
RDL	REPORTABLE DETECTION LIMIT

NOTES

1. LOCATIONS WHERE CURRENT GROUNDWATER SAMPLE MEETS APPLICABLE GUIDELINES/STANDARDS FOR ALL PARAMETERS ANALYZED SHOWN IN **GREEN**.
2. LOCATIONS WHERE CURRENT GROUNDWATER SAMPLE EXCEEDS APPLICABLE GUIDELINES/STANDARDS FOR AT LEAST ONE OF THE PARAMETERS ANALYZED SHOWN IN **RED**.
3. LOCATIONS WHERE LNAPL WAS ENCOUNTERED SHOWN IN **PURPLE**.
4. EXCEEDANCES OF APPLICABLE GUIDELINES/STANDARDS IN TEXT ARE SHOWN IN **RED.**
5. LIGHT NON-AQUEOUS PHASE LIQUID (LNAPL) THICKNESSES IN TEXT SHOWN IN **PURPLE.**
6. LOCATION WHERE NO SAMPLES WERE TAKEN IN THE CURRENT SAMPLING EVENT SHOWN IN **BLACK**.
7. LNAPL REPORTED IN METRES (m).

(a) HEALTH-BASED INDOOR AIR CRITERIA PROVIDED BY MOECC MODIFIED GENERIC RISK ASSESSMENT (TIER 2) SPREADSHEET MODEL (NOVEMBER 1, 2016).

(b) SOIL VAPOUR SCREENING LEVELS (SVSL) FOR A RESIDENTIAL BUILDING WITH BASEMENT (PROBE DEPTH 0 - 0.30 m bELOW BASE OF THE BUILDING FOUNDATION) CALCULATED BY DIVIDING HEALTH-BASED INDOOR AIR CRITERIA BY AN ATTENUATION FACTOR OF 0.02.

(c) RDL GREATER THAN SVSL.

NOTES

1. LOCATIONS WHERE CURRENT SOIL VAPOUR SAMPLE MEETS APPLICABLE GUIDELINES/STANDARDS FOR ALL PARAMETERS ANALYZED SHOWN IN **GREEN**.
2. LOCATIONS WHERE CURRENT SOIL VAPOUR SAMPLE EXCEEDS APPLICABLE GUIDELINES/STANDARDS FOR AT LEAST ONE OF THE PARAMETERS ANALYZED SHOWN IN **RED**.
3. EXCEEDANCES OF APPLICABLE GUIDELINES/STANDARDS IN TEXT ARE SHOWN IN **RED.**

Notes:
[(a)] Elevations are relative to a local benchmark (centre of storm sewer catch basin approximately 5 m west of kiosk), with an assigned elevation of 100.00 m (exp. 2013).
LEL - lower explosive limit
LNAPL - light non-aqueous phase liquid
m - metres
mbgs - metres below ground surface
mbtoc - metres below top of casing
mm - millimetres
n/a - not applicable
n/d - not detected
n/m - not measured
ppmv - parts per million by volume

Notes:

[(a)] Elevations are relative to a local benchmark (centre of storm sewer catch basin approximately 5 m west of kiosk), with an assigned elevation of 100.00 m (exp. 2013).

LEL - lower explosive limit

LNAPL - light non-aqueous phase liquid

m - metres

mbgs - metres below ground surface

mbtoc - metres below top of casing

mm - millimetres

n/a - not applicable

n/d - not detected

n/m - not measured

ppmv - parts per million by volume

Notes:

[a] Health-Based Indoor Air Criteria - Residential, provided by MOECC Modified Generic Risk Assessment, Approved Model (November 1, 2016)

[b] SVSLs for a residential building with basement (probe depth 0 - 30 centimetres below base of the building foundation) calculated by dividing Health-Based Indoor Air Criteria by an attenuation factor of 0.02.

[c] RDL greater than SVSL

Bold/Underlined - value exceeds SVSL criteria

BVL - Bureau Veritas Laboratories

n/s - no standard

RDL - reportable detection limit

SVSL - soil vapour screening level

µg/m^3 - micrograms per cubic metre

< - less than

Samples Received: 8

Analyses	Quantity	Laboratory Method	Analytical Method
Petroleum Hydro. CCME F1 & BTEX in Water	8	CAM SOP-00315	CCME PHC-CWS m
Petroleum Hydrocarbons F2-F4 in Water (1)	8	CAM SOP-00316	CCME PHC-CWS m
F4G (CCME Hydrocarbons Gravimetric)	1	CAM SOP-00326	CCME PHC-CWS m
Dissolved Metals by ICPMS	8	CAM SOP-00447	EPA 6020B m

Remarks:

Bureau Veritas Laboratories are accredited to ISO/IEC 17025 for specific parameters on scopes of accreditation. Unless otherwise noted, procedures used by BV Labs are based upon recognized Provincial, Federal or US method compendia such as CCME, MELCC, EPA, APHA.

All work recorded herein has been done in accordance with procedures and practices ordinarily exercised by professionals in BV Labs profession using accepted testing methodologies, quality assurance and quality control procedures (except where otherwise agreed by the client and BV Labs in writing). All data is in statistical control and has met quality control and method performance criteria unless otherwise noted. All method blanks are reported; unless indicated otherwise, associated sample data are not blank corrected. Where applicable, unless otherwise noted, Measurement Uncertainty has not been accounted for when stating conformity to the referenced standard. All samples were analyzed within hold time unless otherwise flagged.

BV Labs liability is limited to the actual cost of the requested analyses, unless otherwise agreed in writing. There is no other warranty expressed or implied. BV Labs has been retained to provide analysis of samples provided by the Client using the testing methodology referenced in this report. Interpretation and use of test results are the sole responsibility of the Client and are not within the scope of services provided by BV Labs, unless otherwise agreed in writing. BV Labs is not responsible for the accuracy or any data impacts, that result from the information provided by the customer or their agent.

Solid sample results, except biota, are based on dry weight unless otherwise indicated. Organic analyses are not recovery corrected except for isotope dilution methods.
Results relate to samples tested. When sampling is not conducted by BV Labs, results relate to the supplied samples tested.
This Certificate shall not be reproduced except in full, without the written approval of the laboratory.
Reference Method suffix “m” indicates test methods incorporate validated modifications from specific reference methods to improve performance.

* RPDs calculated using raw data. The rounding of final results may result in the apparent difference.

(1) All CCME PHC results met required criteria unless otherwise stated in the report. The CWS PHC methods employed by Bureau Veritas Laboratories conform to all prescribed elements of the reference method and performance based elements have been validated. All modifications have been validated and proven equivalent following “Alberta Environment’s Interpretation of the Reference Method for the Canada-Wide Standard for Petroleum Hydrocarbons in Soil Validation of Performance-Based Alternative Methods September 2003”. Documentation is available upon request. Modifications from Reference Method for the Canada-wide Standard for Petroleum Hydrocarbons in Soil-Tier 1 Method: F2/F3/F4 data reported using validated cold solvent extraction instead of Soxhlet extraction.

Duplicate: Paired analysis of a separate portion of the same sample. Used to evaluate the variance in the measurement.

Matrix Spike: A sample to which a known amount of the analyte of interest has been added. Used to evaluate sample matrix interference.

LCS: A blank matrix sample to which a known amount of the analyte, usually from a second source, has been added. Used to evaluate method accuracy.

Method Blank: A blank matrix containing all reagents used in the analytical procedure. Used to identify laboratory contamination.

Surrogate: A pure or isotopically labeled compound whose behavior mirrors the analytes of interest. Used to evaluate extraction efficiency.

NC (Matrix Spike): The recovery in the matrix spike was not calculated. The relative difference between the concentration in the parent sample and the spike amount was too small to permit a reliable recovery calculation (matrix spike concentration was less than the native sample concentration)

Custody Tracking Form

eCOC Number
T208138

Please use this form for custody tracking when submitting the work instructions via eCOC (electronic Chain of Custody). Please ensure your form **has a barcode or a Bureau Veritas Laboratories eCOC confirmation number** in the top right hand side. This number links your electronic submission to your samples. This form should be **placed in the cooler with your samples**.

DATA QUALITY REVIEW CHECKLIST - IMPERIAL OIL PROJECTS

Consultant: Golder Associates

Sampling Date: July 28 and 29, 2020

Location: 1660 Merivale Road, Ottawa, ON

Laboratory: Bureau Veritas Mississauga

Consultant Project Number: 1791706-1155

Sample Submission Number: C0J3841

Are All Laboratory QC Within Acceptance Criteria (Yes, No, Not Applicable)?

	Yes	No	NA	Comments
Instrument Surrogate Recovery	X			All laboratory QC results are within
Extraction Surrogate Recovery	X			acceptance criteria.
Method Blank Concentration	X			
Matrix Duplicate RPD	X			
Matrix Spike Recovery	X			
Lab Control Sample Recovery	X			

Are All Field QC Samples Within Alert Limits (Yes, No, Not Applicable)?

	Yes	No	NA	Comments
Field Blank Concentration			X	All field QC samples are within
Trip Blank Concentration			X	alert limits.
Field Duplicate RPD	X			

Has CoA been signed off (Yes/No)?:	Yes
Has lab warranted all tests were in statistical control in CoA (Yes/No)?:	Yes
Has lab warranted all tests were analyzed following SOP's in CoA (Yes/No)?:	Yes
Were all samples analyzed within hold times (Yes/No)?:	Yes
All volatiles samples methanol extracted (if required) within 24 hours (Yes/No)?:	n/a
Is Chain of Custody completed and signed (Yes/No)?:	Yes
Were sample temperatures acceptable when they reached lab (Yes/No)?:	Yes

Is data considered to be reliable (Yes/No/Suspect)?: Yes

If answer is "No", describe and provide rationale:

Remarks:

Bureau Veritas Laboratories are accredited to ISO/IEC 17025 for specific parameters on scopes of accreditation. Unless otherwise noted, procedures used by BV Labs are based upon recognized Provincial, Federal or US method compendia such as CCME, MELCC, EPA, APHA.

All work recorded herein has been done in accordance with procedures and practices ordinarily exercised by professionals in BV Labs profession using accepted testing methodologies, quality assurance and quality control procedures (except where otherwise agreed by the client and BV Labs in writing). All data is in statistical control and has met quality control and method performance criteria unless otherwise noted. All method blanks are reported; unless indicated otherwise, associated sample data are not blank corrected. Where applicable, unless otherwise noted, Measurement Uncertainty has not been accounted for when stating conformity to the referenced standard. All samples were analyzed within hold time unless otherwise flagged.

BV Labs liability is limited to the actual cost of the requested analyses, unless otherwise agreed in writing. There is no other warranty expressed or implied. BV Labs has been retained to provide analysis of samples provided by the Client using the testing methodology referenced in this report. Interpretation and use of test results are the sole responsibility of the Client and are not within the scope of services provided by BV Labs, unless otherwise agreed in writing. BV Labs is not responsible for the accuracy or any data impacts, that result from the information provided by the customer or their agent.

Solid sample results, except biota, are based on dry weight unless otherwise indicated. Organic analyses are not recovery corrected except for isotope dilution methods.
Results relate to samples tested. When sampling is not conducted by BV Labs, results relate to the supplied samples tested.
This Certificate shall not be reproduced except in full, without the written approval of the laboratory.
Reference Method suffix "m" indicates test methods incorporate validated modifications from specific reference methods to improve performance.

* RPDs calculated using raw data. The rounding of final results may result in the apparent difference.

(1) All CCME PHC results met required criteria unless otherwise stated in the report. The CWS PHC methods employed by Bureau Veritas Laboratories conform to all prescribed elements of the reference method and performance based elements have been validated. All modifications have been validated and proven equivalent following "Alberta Environment's Interpretation of the Reference Method for the Canada-Wide Standard for Petroleum Hydrocarbons in Soil Validation of Performance-Based Alternative Methods September 2003". Documentation is available upon request. Modifications from Reference Method for the Canada-wide Standard for Petroleum Hydrocarbons in Soil-Tier 1 Method: F2/F3/F4 data reported using validated cold solvent extraction instead of Soxhlet extraction.

LCS: A blank matrix sample to which a known amount of the analyte, usually from a second source, has been added. Used to evaluate method accuracy.

Method Blank: A blank matrix containing all reagents used in the analytical procedure. Used to identify laboratory contamination.

Surrogate: A pure or isotopically labeled compound whose behavior mirrors the analytes of interest. Used to evaluate extraction efficiency.

Custody Tracking Form

eCOC Number
[redacted] T2·08133

Please use this form for custody tracking when submitting the work instructions via eCOC (electronic Chain of Custody). Please ensure your form **has a barcode or a Bureau Veritas Laboratories eCOC confirmation number** in the top right hand side. This number links your electronic submission to your samples. This form should be **placed in the cooler with your samples**.

DATA QUALITY REVIEW CHECKLIST - IMPERIAL OIL PROJECTS

Consultant: Golder Associates

Sampling Date: July 29, 2020

Location: 1660 Merivale Road, Ottawa, ON

Laboratory: Bureau Veritas Mississauga

Consultant Project Number: 1791706-1155

Sample Submission Number: C0J3843

Are All Laboratory QC Within Acceptance Criteria (Yes, No, Not Applicable)?

	Yes	No	NA	Comments
Instrument Surrogate Recovery	X			All laboratory QC results are within
Extraction Surrogate Recovery	X			acceptance criteria.
Method Blank Concentration	X			
Matrix Duplicate RPD			X	
Matrix Spike Recovery			X	
Lab Control Sample Recovery	X			

Are All Field QC Samples Within Alert Limits (Yes, No, Not Applicable)?

	Yes	No	NA	Comments
Field Blank Concentration	X			All field QC samples are within
Trip Blank Concentration	X			alert limits.
Field Duplicate RPD			X	

Has CoA been signed off (Yes/No)?:	Yes
Has lab warranted all tests were in statistical control in CoA (Yes/No)?:	Yes
Has lab warranted all tests were analyzed following SOP's in CoA (Yes/No)?:	Yes
Were all samples analyzed within hold times (Yes/No)?:	Yes
All volatiles samples methanol extracted (if required) within 24 hours (Yes/No)?:	n/a
Is Chain of Custody completed and signed (Yes/No)?:	Yes
Were sample temperatures acceptable when they reached lab (Yes/No)?:	Yes

Is data considered to be reliable (Yes/No/Suspect)?: Yes

If answer is "No", describe and provide rationale:

Remarks:

Bureau Veritas Laboratories are accredited to ISO/IEC 17025 for specific parameters on scopes of accreditation. Unless otherwise noted, procedures used by BV Labs are based upon recognized Provincial, Federal or US method compendia such as CCME, MELCC, EPA, APHA.

All work recorded herein has been done in accordance with procedures and practices ordinarily exercised by professionals in BV Labs profession using accepted testing methodologies, quality assurance and quality control procedures (except where otherwise agreed by the client and BV Labs in writing). All data is in statistical control and has met quality control and method performance criteria unless otherwise noted. All method blanks are reported; unless indicated otherwise, associated sample data are not blank corrected. Where applicable, unless otherwise noted, Measurement Uncertainty has not been accounted for when stating conformity to the referenced standard. All samples were analyzed within hold time unless otherwise flagged.

BV Labs liability is limited to the actual cost of the requested analyses, unless otherwise agreed in writing. There is no other warranty expressed or implied. BV Labs has been retained to provide analysis of samples provided by the Client using the testing methodology referenced in this report. Interpretation and use of test results are the sole responsibility of the Client and are not within the scope of services provided by BV Labs, unless otherwise agreed in writing. BV Labs is not responsible for the accuracy or any data impacts, that result from the information provided by the customer or their agent.

Solid sample results, except biota, are based on dry weight unless otherwise indicated. Organic analyses are not recovery corrected except for isotope dilution methods.
Results relate to samples tested. When sampling is not conducted by BV Labs, results relate to the supplied samples tested.
This Certificate shall not be reproduced except in full, without the written approval of the laboratory.
Reference Method suffix “m” indicates test methods incorporate validated modifications from specific reference methods to improve performance.

* RPDs calculated using raw data. The rounding of final results may result in the apparent difference.

(1) All CCME PHC results met required criteria unless otherwise stated in the report. The CWS PHC methods employed by Bureau Veritas Laboratories conform to all prescribed elements of the reference method and performance based elements have been validated. All modifications have been validated and proven equivalent following “Alberta Environment’s Interpretation of the Reference Method for the Canada-Wide Standard for Petroleum Hydrocarbons in Soil Validation of Performance-Based Alternative Methods September 2003”. Documentation is available upon request. Modifications from Reference Method for the Canada-wide Standard for Petroleum Hydrocarbons in Soil-Tier 1 Method: F2/F3/F4 data reported using validated cold solvent extraction instead of Soxhlet extraction.

GENERAL COMMENTS

Each temperature is the average of up to three cooler temperatures taken at receipt

Package 1	2.0°C

Sample NGI856 [TH5] : Metals Analysis: Due to the sample matrix, the sample required dilution. Detection limits were adjusted accordingly.

Results relate only to the items tested.

Duplicate: Paired analysis of a separate portion of the same sample. Used to evaluate the variance in the measurement.

LCS: A blank matrix sample to which a known amount of the analyte, usually from a second source, has been added. Used to evaluate method accuracy.

Method Blank: A blank matrix containing all reagents used in the analytical procedure. Used to identify laboratory contamination.

Surrogate: A pure or isotopically labeled compound whose behavior mirrors the analytes of interest. Used to evaluate extraction efficiency.

Custody Tracking Form

eCOC Number
T208135

Please use this form for custody tracking when submitting the work instructions via eCOC (electronic Chain of Custody). Please ensure your form **has a barcode or a Bureau Veritas Laboratories eCOC confirmation number** in the top right hand side. This number links your electronic submission to your samples. This form should be **placed in the cooler with your samples**.

DATA QUALITY REVIEW CHECKLIST - IMPERIAL OIL PROJECTS

Consultant: Golder Associates

Sampling Date: July 27 and 29, 2020

Location: 1660 Merivale Road, Ottawa, ON

Laboratory: Bureau Veritas Mississauga

Consultant Project Number: 1791706-1155

Sample Submission Number: C0J3875

Are All Laboratory QC Within Acceptance Criteria (Yes, No, Not Applicable)?

	Yes	No	NA	Comments
Instrument Surrogate Recovery	X			All laboratory QC results are within
Extraction Surrogate Recovery	X			acceptance criteria.
Method Blank Concentration	X			
Matrix Duplicate RPD	X			
Matrix Spike Recovery			X	
Lab Control Sample Recovery	X			

Are All Field QC Samples Within Alert Limits (Yes, No, Not Applicable)?

	Yes	No	NA	Comments
Field Blank Concentration			X	All field QC samples are within
Trip Blank Concentration			X	alert limits.
Field Duplicate RPD	X			

Has CoA been signed off (Yes/No)?:	Yes
Has lab warranted all tests were in statistical control in CoA (Yes/No)?:	Yes
Has lab warranted all tests were analyzed following SOP's in CoA (Yes/No)?:	Yes
Were all samples analyzed within hold times (Yes/No)?:	Yes
All volatiles samples methanol extracted (if required) within 24 hours (Yes/No)?:	n/a
Is Chain of Custody completed and signed (Yes/No)?:	Yes
Were sample temperatures acceptable when they reached lab (Yes/No)?:	Yes

Is data considered to be reliable (Yes/No/Suspect)?: Yes

If answer is "No", describe and provide rationale:

Analyses	Quantity	Laboratory Method	Analytical Method
Petroleum Hydro. CCME F1 & BTEX in Water	2	CAM SOP-00315	CCME PHC-CWS m
Petroleum Hydrocarbons F2-F4 in Water (1)	2	CAM SOP-00316	CCME PHC-CWS m
Dissolved Metals by ICPMS	1	CAM SOP-00447	EPA 6020B m

Remarks:

Bureau Veritas Laboratories are accredited to ISO/IEC 17025 for specific parameters on scopes of accreditation. Unless otherwise noted, procedures used by BV Labs are based upon recognized Provincial, Federal or US method compendia such as CCME, MELCC, EPA, APHA.

All work recorded herein has been done in accordance with procedures and practices ordinarily exercised by professionals in BV Labs profession using accepted testing methodologies, quality assurance and quality control procedures (except where otherwise agreed by the client and BV Labs in writing). All data is in statistical control and has met quality control and method performance criteria unless otherwise noted. All method blanks are reported; unless indicated otherwise, associated sample data are not blank corrected. Where applicable, unless otherwise noted, Measurement Uncertainty has not been accounted for when stating conformity to the referenced standard. All samples were analyzed within hold time unless otherwise flagged.

BV Labs liability is limited to the actual cost of the requested analyses, unless otherwise agreed in writing. There is no other warranty expressed or implied. BV Labs has been retained to provide analysis of samples provided by the Client using the testing methodology referenced in this report. Interpretation and use of test results are the sole responsibility of the Client and are not within the scope of services provided by BV Labs, unless otherwise agreed in writing. BV Labs is not responsible for the accuracy or any data impacts, that result from the information provided by the customer or their agent.

Solid sample results, except biota, are based on dry weight unless otherwise indicated. Organic analyses are not recovery corrected except for isotope dilution methods.
Results relate to samples tested. When sampling is not conducted by BV Labs, results relate to the supplied samples tested.
This Certificate shall not be reproduced except in full, without the written approval of the laboratory.
Reference Method suffix “m” indicates test methods incorporate validated modifications from specific reference methods to improve performance.

* RPDs calculated using raw data. The rounding of final results may result in the apparent difference.

(1) All CCME PHC results met required criteria unless otherwise stated in the report. The CWS PHC methods employed by Bureau Veritas Laboratories conform to all prescribed elements of the reference method and performance based elements have been validated. All modifications have been validated and proven equivalent following “Alberta Environment’s Interpretation of the Reference Method for the Canada-Wide Standard for Petroleum Hydrocarbons in Soil Validation of Performance-Based Alternative Methods September 2003”. Documentation is available upon request. Modifications from Reference Method for the Canada-wide Standard for Petroleum Hydrocarbons in Soil-Tier 1 Method: F2/F3/F4 data reported using validated cold solvent extraction instead of Soxhlet extraction.

LCS: A blank matrix sample to which a known amount of the analyte, usually from a second source, has been added. Used to evaluate method accuracy.

Method Blank: A blank matrix containing all reagents used in the analytical procedure. Used to identify laboratory contamination.

Surrogate: A pure or isotopically labeled compound whose behavior mirrors the analytes of interest. Used to evaluate extraction efficiency.

DATA QUALITY REVIEW CHECKLIST - IMPERIAL OIL PROJECTS

Consultant: Golder Associates

Sampling Date: October 14, 2020

Location: 1660 Merivale Road, Ottawa, ON

Laboratory: Bureau Veritas Mississauga

Consultant Project Number: 1791706-1155

Sample Submission Number: C0R2947

Are All Laboratory QC Within Acceptance Criteria (Yes, No, Not Applicable)?

	Yes	No	NA	Comments
Instrument Surrogate Recovery	X			All laboratory QC results are within
Extraction Surrogate Recovery	X			acceptance criteria.
Method Blank Concentration	X			
Matrix Duplicate RPD			X	
Matrix Spike Recovery			X	
Lab Control Sample Recovery	X			

Are All Field QC Samples Within Alert Limits (Yes, No, Not Applicable)?

	Yes	No	NA	Comments
Field Blank Concentration	X			All field QC samples are within
Trip Blank Concentration	X			alert limits.
Field Duplicate RPD			X	

Has CoA been signed off (Yes/No)?:	Yes
Has lab warranted all tests were in statistical control in CoA (Yes/No)?:	Yes
Has lab warranted all tests were analyzed following SOP's in CoA (Yes/No)?:	Yes
Were all samples analyzed within hold times (Yes/No)?:	Yes
All volatiles samples methanol extracted (if required) within 24 hours (Yes/No)?:	n/a
Is Chain of Custody completed and signed (Yes/No)?:	Yes
Were sample temperatures acceptable when they reached lab (Yes/No)?:	Yes

Is data considered to be reliable (Yes/No/Suspect)?: Yes

If answer is "No", describe and provide rationale:

Remarks:

Bureau Veritas Laboratories are accredited to ISO/IEC 17025 for specific parameters on scopes of accreditation. Unless otherwise noted, procedures used by BV Labs are based upon recognized Provincial, Federal or US method compendia such as CCME, MELCC, EPA, APHA.

All work recorded herein has been done in accordance with procedures and practices ordinarily exercised by professionals in BV Labs profession using accepted testing methodologies, quality assurance and quality control procedures (except where otherwise agreed by the client and BV Labs in writing). All data is in statistical control and has met quality control and method performance criteria unless otherwise noted. All method blanks are reported; unless indicated otherwise, associated sample data are not blank corrected. Where applicable, unless otherwise noted, Measurement Uncertainty has not been accounted for when stating conformity to the referenced standard. All samples were analyzed within hold time unless otherwise flagged.

BV Labs liability is limited to the actual cost of the requested analyses, unless otherwise agreed in writing. There is no other warranty expressed or implied. BV Labs has been retained to provide analysis of samples provided by the Client using the testing methodology referenced in this report. Interpretation and use of test results are the sole responsibility of the Client and are not within the scope of services provided by BV Labs, unless otherwise agreed in writing. BV Labs is not responsible for the accuracy or any data impacts, that result from the information provided by the customer or their agent.

Solid sample results, except biota, are based on dry weight unless otherwise indicated. Organic analyses are not recovery corrected except for isotope dilution methods.
Results relate to samples tested. When sampling is not conducted by BV Labs, results relate to the supplied samples tested.
This Certificate shall not be reproduced except in full, without the written approval of the laboratory.
Reference Method suffix “m” indicates test methods incorporate validated modifications from specific reference methods to improve performance.

* RPDs calculated using raw data. The rounding of final results may result in the apparent difference.

(1) All CCME PHC results met required criteria unless otherwise stated in the report. The CWS PHC methods employed by Bureau Veritas Laboratories conform to all prescribed elements of the reference method and performance based elements have been validated. All modifications have been validated and proven equivalent following “Alberta Environment’s Interpretation of the Reference Method for the Canada-Wide Standard for Petroleum Hydrocarbons in Soil Validation of Performance-Based Alternative Methods September 2003”. Documentation is available upon request. Modifications from Reference Method for the Canada-wide Standard for Petroleum Hydrocarbons in Soil-Tier 1 Method: F2/F3/F4 data reported using validated cold solvent extraction instead of Soxhlet extraction.

Duplicate: Paired analysis of a separate portion of the same sample. Used to evaluate the variance in the measurement.

Matrix Spike: A sample to which a known amount of the analyte of interest has been added. Used to evaluate sample matrix interference.

LCS: A blank matrix sample to which a known amount of the analyte, usually from a second source, has been added. Used to evaluate method accuracy.

Method Blank: A blank matrix containing all reagents used in the analytical procedure. Used to identify laboratory contamination.

Surrogate: A pure or isotopically labeled compound whose behavior mirrors the analytes of interest. Used to evaluate extraction efficiency.

NC (Duplicate RPD): The duplicate RPD was not calculated. The concentration in the sample and/or duplicate was too low to permit a reliable RPD calculation (absolute difference <= 2x RDL).

Custody Tracking Form

eCOC Number
T246779

Please use this form for custody tracking when submitting the work instructions via eCOC (electronic Chain of Custody). Please ensure your form **has a barcode or a Bureau Veritas Laboratories eCOC confirmation number** in the top right hand side. This number links your electronic submission to your samples. This form should be **placed in the cooler with your samples**.

DATA QUALITY REVIEW CHECKLIST - IMPERIAL OIL PROJECTS

Consultant: Golder Associates

Sampling Date: October 14, 2020

Location: 1660 Merivale Road, Ottawa, ON

Laboratory: Bureau Veritas Mississauga

Consultant Project Number: 1791706-1155

Sample Submission Number: C0R2950

Are All Laboratory QC Within Acceptance Criteria (Yes, No, Not Applicable)?

	Yes	No	NA	Comments
Instrument Surrogate Recovery	X			All laboratory QC results are within
Extraction Surrogate Recovery	X			acceptance criteria.
Method Blank Concentration	X			
Matrix Duplicate RPD	X			
Matrix Spike Recovery	X			
Lab Control Sample Recovery	X			

Are All Field QC Samples Within Alert Limits (Yes, No, Not Applicable)?

	Yes	No	NA	Comments
Field Blank Concentration			X	All field QC samples are within
Trip Blank Concentration			X	alert limits.
Field Duplicate RPD	X			

Has CoA been signed off (Yes/No)?:	Yes
Has lab warranted all tests were in statistical control in CoA (Yes/No)?:	Yes
Has lab warranted all tests were analyzed following SOP's in CoA (Yes/No)?:	Yes
Were all samples analyzed within hold times (Yes/No)?:	Yes
All volatiles samples methanol extracted (if required) within 24 hours (Yes/No)?:	n/a
Is Chain of Custody completed and signed (Yes/No)?:	Yes
Were sample temperatures acceptable when they reached lab (Yes/No)?:	Yes

Is data considered to be reliable (Yes/No/Suspect)?: Yes

If answer is "No", describe and provide rationale:

Remarks:

Bureau Veritas Laboratories are accredited to ISO/IEC 17025 for specific parameters on scopes of accreditation. Unless otherwise noted, procedures used by BV Labs are based upon recognized Provincial, Federal or US method compendia such as CCME, MELCC, EPA, APHA.

All work recorded herein has been done in accordance with procedures and practices ordinarily exercised by professionals in BV Labs profession using accepted testing methodologies, quality assurance and quality control procedures (except where otherwise agreed by the client and BV Labs in writing). All data is in statistical control and has met quality control and method performance criteria unless otherwise noted. All method blanks are reported; unless indicated otherwise, associated sample data are not blank corrected. Where applicable, unless otherwise noted, Measurement Uncertainty has not been accounted for when stating conformity to the referenced standard. All samples were analyzed within hold time unless otherwise flagged.

BV Labs liability is limited to the actual cost of the requested analyses, unless otherwise agreed in writing. There is no other warranty expressed or implied. BV Labs has been retained to provide analysis of samples provided by the Client using the testing methodology referenced in this report. Interpretation and use of test results are the sole responsibility of the Client and are not within the scope of services provided by BV Labs, unless otherwise agreed in writing. BV Labs is not responsible for the accuracy or any data impacts, that result from the information provided by the customer or their agent.

Solid sample results, except biota, are based on dry weight unless otherwise indicated. Organic analyses are not recovery corrected except for isotope dilution methods.
Results relate to samples tested. When sampling is not conducted by BV Labs, results relate to the supplied samples tested.
This Certificate shall not be reproduced except in full, without the written approval of the laboratory.
Reference Method suffix “m” indicates test methods incorporate validated modifications from specific reference methods to improve performance.

* RPDs calculated using raw data. The rounding of final results may result in the apparent difference.

(1) Air sampling canisters have been cleaned in accordance with U.S. EPA Method TO15. At the end of the cleaning, evacuation, and pressurization cycles, one canister was selected and was pressurized with Zero Air. This canister was then analyzed via TO15 on a GC/MS. The canister must have been found to contain <0.2 ppbv concentration of all target analytes in order for the batch to have been considered clean. Each canister also underwent a leak check prior to shipment.

Please Note: SUMMA® canister samples will be retained by Bureau Veritas Laboratories for a period of 5 calendar days or as contractually agreed from the date of this report, after which time they will be cleaned for reuse. If you require a longer sample storage period, please contact your service representative.

Microbiology testing is conducted at 6660 Campobello Rd. Chemistry testing is conducted at 6740 Campobello Rd.

GENERAL COMMENTS

WS# 6629871: Vinyl Acetate was less than 60% recovery in the reference standard. There were no positives found for Vinyl Acetate therefore there should be no effect on the data.

Results relate only to the items tested.

LCS: A blank matrix sample to which a known amount of the analyte, usually from a second source, has been added. Used to evaluate method accuracy.

Method Blank: A blank matrix containing all reagents used in the analytical procedure. Used to identify laboratory contamination.

Surrogate: A pure or isotopically labeled compound whose behavior mirrors the analytes of interest. Used to evaluate extraction efficiency.

(1) Recovery or RPD for this parameter is outside control limits. The overall quality control for this analysis meets acceptability criteria.

Instrument Surrogate Recovery	X			Lab control sample recovery (54%) outside acceptance
Extraction Surrogate Recovery			X	range of 70-130% for vinyl acetate. All remaining QC
Method Blank Concentration	X			results are within acceptance criteria.
Matrix Duplicate RPD			X	
Matrix Spike Recovery			X	
Lab Control Sample Recovery		X		

Are All Field QC Samples Within Alert Limits (Yes, No, Not Applicable)?

	Yes	No	NA	Comments
Field Blank Concentration	X			All field QC samples are within
Trip Blank Concentration			X	alert limits.
Field Duplicate RPD			X	

Has CoA been signed off (Yes/No)?:	Yes
Has lab warranted all tests were in statistical control in CoA (Yes/No)?:	Yes
Has lab warranted all tests were analyzed following SOP's in CoA (Yes/No)?:	Yes
Were all samples analyzed within hold times (Yes/No)?:	Yes
All volatiles samples methanol extracted (if required) within 24 hours (Yes/No)?:	n/a
Is Chain of Custody completed and signed (Yes/No)?:	Yes
Were sample temperatures acceptable when they reached lab (Yes/No)?:	n/a

Is data considered to be reliable (Yes/No/Suspect)?: Yes

If answer is "No", describe and provide rationale:

Remarks:

Bureau Veritas Laboratories are accredited to ISO/IEC 17025 for specific parameters on scopes of accreditation. Unless otherwise noted, procedures used by BV Labs are based upon recognized Provincial, Federal or US method compendia such as CCME, MELCC, EPA, APHA.

All work recorded herein has been done in accordance with procedures and practices ordinarily exercised by professionals in BV Labs profession using accepted testing methodologies, quality assurance and quality control procedures (except where otherwise agreed by the client and BV Labs in writing). All data is in statistical control and has met quality control and method performance criteria unless otherwise noted. All method blanks are reported; unless indicated otherwise, associated sample data are not blank corrected. Where applicable, unless otherwise noted, Measurement Uncertainty has not been accounted for when stating conformity to the referenced standard. All samples were analyzed within hold time unless otherwise flagged.

BV Labs liability is limited to the actual cost of the requested analyses, unless otherwise agreed in writing. There is no other warranty expressed or implied. BV Labs has been retained to provide analysis of samples provided by the Client using the testing methodology referenced in this report. Interpretation and use of test results are the sole responsibility of the Client and are not within the scope of services provided by BV Labs, unless otherwise agreed in writing. BV Labs is not responsible for the accuracy or any data impacts, that result from the information provided by the customer or their agent.

Solid sample results, except biota, are based on dry weight unless otherwise indicated. Organic analyses are not recovery corrected except for isotope dilution methods.
Results relate to samples tested. When sampling is not conducted by BV Labs, results relate to the supplied samples tested.
This Certificate shall not be reproduced except in full, without the written approval of the laboratory.
Reference Method suffix “m” indicates test methods incorporate validated modifications from specific reference methods to improve performance.

* RPDs calculated using raw data. The rounding of final results may result in the apparent difference.

(1) Air sampling canisters have been cleaned in accordance with U.S. EPA Method TO15. At the end of the cleaning, evacuation, and pressurization cycles, one canister was selected and was pressurized with Zero Air. This canister was then analyzed via TO15 on a GC/MS. The canister must have been found to contain <0.2 ppbv concentration of all target analytes in order for the batch to have been considered clean. Each canister also underwent a leak check prior to shipment.

Please Note: SUMMA® canister samples will be retained by Bureau Veritas Laboratories for a period of 5 calendar days or as contractually agreed from the date of this report, after which time they will be cleaned for reuse. If you require a longer sample storage period, please contact your service representative.

GENERAL COMMENTS

WS# 6629871: Vinyl Acetate was less than 60% recovery in the reference standard. There were no positives found for Vinyl Acetate therefore there should be no effect on the data.

Sample MDF612 [SV16-02] : Increased DL for propene due to propane interference.

Results relate only to the items tested.

Duplicate: Paired analysis of a separate portion of the same sample. Used to evaluate the variance in the measurement.

LCS: A blank matrix sample to which a known amount of the analyte, usually from a second source, has been added. Used to evaluate method accuracy.

Method Blank: A blank matrix containing all reagents used in the analytical procedure. Used to identify laboratory contamination.

Surrogate: A pure or isotopically labeled compound whose behavior mirrors the analytes of interest. Used to evaluate extraction efficiency.

NC (Duplicate RPD): The duplicate RPD was not calculated. The concentration in the sample and/or duplicate was too low to permit a reliable RPD calculation (absolute difference <= 2x RDL).

(1) Recovery or RPD for this parameter is outside control limits. The overall quality control for this analysis meets acceptability criteria.

DATA QUALITY REVIEW CHECKLIST - IMPERIAL OIL PROJECTS

Consultant: Golder Associates

Sampling Date: February 28, 2020

Location: 1660 Merivale Road, Ottawa, ON

Laboratory: Bureau Veritas Mississauga

Consultant Project Number: 1791706-1155

Sample Submission Number: C055481

Are All Laboratory QC Within Acceptance Criteria (Yes, No, Not Applicable)?

	Yes	No	NA	Comments
Instrument Surrogate Recovery	X			Lab control sample recovery (54%) outside acceptance
Extraction Surrogate Recovery			X	range of 70-130% for vinyl acetate. All remaining QC
Method Blank Concentration	X			results are within acceptance criteria.
Matrix Duplicate RPD	X			
Matrix Spike Recovery			X	
Lab Control Sample Recovery		X		

Are All Field QC Samples Within Alert Limits (Yes, No, Not Applicable)?

	Yes	No	NA	Comments
Field Blank Concentration			X	All field QC samples are within
Trip Blank Concentration			X	alert limits.
Field Duplicate RPD	X			

Has CoA been signed off (Yes/No)?:	Yes
Has lab warranted all tests were in statistical control in CoA (Yes/No)?:	Yes
Has lab warranted all tests were analyzed following SOP's in CoA (Yes/No)?:	Yes
Were all samples analyzed within hold times (Yes/No)?:	Yes
All volatiles samples methanol extracted (if required) within 24 hours (Yes/No)?:	n/a
Is Chain of Custody completed and signed (Yes/No)?:	Yes
Were sample temperatures acceptable when they reached lab (Yes/No)?:	n/a

Is data considered to be reliable (Yes/No/Suspect)?: Yes

If answer is "No", describe and provide rationale:

Remarks:

Bureau Veritas Laboratories are accredited to ISO/IEC 17025 for specific parameters on scopes of accreditation. Unless otherwise noted, procedures used by BV Labs are based upon recognized Provincial, Federal or US method compendia such as CCME, MELCC, EPA, APHA.

All work recorded herein has been done in accordance with procedures and practices ordinarily exercised by professionals in BV Labs profession using accepted testing methodologies, quality assurance and quality control procedures (except where otherwise agreed by the client and BV Labs in writing). All data is in statistical control and has met quality control and method performance criteria unless otherwise noted. All method blanks are reported; unless indicated otherwise, associated sample data are not blank corrected. Where applicable, unless otherwise noted, Measurement Uncertainty has not been accounted for when stating conformity to the referenced standard. All samples were analyzed within hold time unless otherwise flagged.

BV Labs liability is limited to the actual cost of the requested analyses, unless otherwise agreed in writing. There is no other warranty expressed or implied. BV Labs has been retained to provide analysis of samples provided by the Client using the testing methodology referenced in this report. Interpretation and use of test results are the sole responsibility of the Client and are not within the scope of services provided by BV Labs, unless otherwise agreed in writing. BV Labs is not responsible for the accuracy or any data impacts, that result from the information provided by the customer or their agent.

Solid sample results, except biota, are based on dry weight unless otherwise indicated. Organic analyses are not recovery corrected except for isotope dilution methods.
Results relate to samples tested. When sampling is not conducted by BV Labs, results relate to the supplied samples tested.
This Certificate shall not be reproduced except in full, without the written approval of the laboratory.
Reference Method suffix “m” indicates test methods incorporate validated modifications from specific reference methods to improve performance.

* RPDs calculated using raw data. The rounding of final results may result in the apparent difference.

(1) Air sampling canisters have been cleaned in accordance with U.S. EPA Method TO15. At the end of the cleaning, evacuation, and pressurization cycles, one canister was selected and was pressurized with Zero Air. This canister was then analyzed via TO15 on a GC/MS. The canister must have been found to contain <0.2 ppbv concentration of all target analytes in order for the batch to have been considered clean. Each canister also underwent a leak check prior to shipment.

Please Note: SUMMA® canister samples will be retained by Bureau Veritas Laboratories for a period of 5 calendar days or as contractually agreed from the date of this report, after which time they will be cleaned for reuse. If you require a longer sample storage period, please contact your service representative.

Duplicate: Paired analysis of a separate portion of the same sample. Used to evaluate the variance in the measurement.

LCS: A blank matrix sample to which a known amount of the analyte, usually from a second source, has been added. Used to evaluate method accuracy.

Method Blank: A blank matrix containing all reagents used in the analytical procedure. Used to identify laboratory contamination.

Surrogate: A pure or isotopically labeled compound whose behavior mirrors the analytes of interest. Used to evaluate extraction efficiency.

NC (Duplicate RPD): The duplicate RPD was not calculated. The concentration in the sample and/or duplicate was too low to permit a reliable RPD calculation (absolute difference <= 2x RDL).

(1) Recovery or RPD for this parameter is outside control limits. The overall quality control for this analysis meets acceptability criteria.

DATA QUALITY REVIEW CHECKLIST - IMPERIAL OIL PROJECTS

Consultant: Golder Associates

Sampling Date: August 31, 2020

Location: 1660 Merivale Road, Ottawa, ON

Laboratory: Bureau Veritas Mississauga

Consultant Project Number: 1791706-1155

Sample Submission Number: C0M4970

Are All Laboratory QC Within Acceptance Criteria (Yes, No, Not Applicable)?

	Yes	No	NA	Comments
Instrument Surrogate Recovery	X			Lab control sample recovery outside acceptance range
Extraction Surrogate Recovery			X	of 70-130% for 1,2,4-trichlorobenzene (131%) and
Method Blank Concentration	X			vinyl acetate (133%). All remaining laboratory QC
Matrix Duplicate RPD	X			results are within acceptance criteria.
Matrix Spike Recovery			X	
Lab Control Sample Recovery		X		

Are All Field QC Samples Within Alert Limits (Yes, No, Not Applicable)?

	Yes	No	NA	Comments
Field Blank Concentration			X	All field QC samples are within
Trip Blank Concentration			X	alert limits.
Field Duplicate RPD	X			

Has CoA been signed off (Yes/No)?:	Yes
Has lab warranted all tests were in statistical control in CoA (Yes/No)?:	Yes
Has lab warranted all tests were analyzed following SOP's in CoA (Yes/No)?:	Yes
Were all samples analyzed within hold times (Yes/No)?:	Yes
All volatiles samples methanol extracted (if required) within 24 hours (Yes/No)?:	n/a
Is Chain of Custody completed and signed (Yes/No)?:	Yes
Were sample temperatures acceptable when they reached lab (Yes/No)?:	n/a

Is data considered to be reliable (Yes/No/Suspect)?: Yes

If answer is "No", describe and provide rationale:

Remarks:

Bureau Veritas Laboratories are accredited to ISO/IEC 17025 for specific parameters on scopes of accreditation. Unless otherwise noted, procedures used by BV Labs are based upon recognized Provincial, Federal or US method compendia such as CCME, MELCC, EPA, APHA.

All work recorded herein has been done in accordance with procedures and practices ordinarily exercised by professionals in BV Labs profession using accepted testing methodologies, quality assurance and quality control procedures (except where otherwise agreed by the client and BV Labs in writing). All data is in statistical control and has met quality control and method performance criteria unless otherwise noted. All method blanks are reported; unless indicated otherwise, associated sample data are not blank corrected. Where applicable, unless otherwise noted, Measurement Uncertainty has not been accounted for when stating conformity to the referenced standard. All samples were analyzed within hold time unless otherwise flagged.

BV Labs liability is limited to the actual cost of the requested analyses, unless otherwise agreed in writing. There is no other warranty expressed or implied. BV Labs has been retained to provide analysis of samples provided by the Client using the testing methodology referenced in this report. Interpretation and use of test results are the sole responsibility of the Client and are not within the scope of services provided by BV Labs, unless otherwise agreed in writing. BV Labs is not responsible for the accuracy or any data impacts, that result from the information provided by the customer or their agent.

Solid sample results, except biota, are based on dry weight unless otherwise indicated. Organic analyses are not recovery corrected except for isotope dilution methods.
Results relate to samples tested. When sampling is not conducted by BV Labs, results relate to the supplied samples tested.
This Certificate shall not be reproduced except in full, without the written approval of the laboratory.
Reference Method suffix “m” indicates test methods incorporate validated modifications from specific reference methods to improve performance.

* RPDs calculated using raw data. The rounding of final results may result in the apparent difference.

(1) Air sampling canisters have been cleaned in accordance with U.S. EPA Method TO15. At the end of the cleaning, evacuation, and pressurization cycles, one canister was selected and was pressurized with Zero Air. This canister was then analyzed via TO15 on a GC/MS. The canister must have been found to contain <0.2 ppbv concentration of all target analytes in order for the batch to have been considered clean. Each canister also underwent a leak check prior to shipment.

Please Note: SUMMA® canister samples will be retained by Bureau Veritas Laboratories for a period of 5 calendar days or as contractually agreed from the date of this report, after which time they will be cleaned for reuse. If you require a longer sample storage period, please contact your service representative.

Bureau Veritas Laboratories 6740 Campobello Road, Mississauga, Ontario, L5N 2L8 Tel: (905) 817-5700 Toll-Free: 800-563-6266 Fax: (905) 817-5777 www.bvlabs.com

Microbiology testing is conducted at 6660 Campobello Rd. Chemistry testing is conducted at 6740 Campobello Rd.

GENERAL COMMENTS

3 compounds exceed 130% recovery criteria. These compounds met the %RSD criteria in the continuing calibration standard. The failure of these 3 compounds is not believed to have an effect on the integrity of the results.

Results relate only to the items tested.

LCS: A blank matrix sample to which a known amount of the analyte, usually from a second source, has been added. Used to evaluate method accuracy.

Method Blank: A blank matrix containing all reagents used in the analytical procedure. Used to identify laboratory contamination.

Surrogate: A pure or isotopically labeled compound whose behavior mirrors the analytes of interest. Used to evaluate extraction efficiency.

(1) Recovery or RPD for this parameter is outside control limits. The overall quality control for this analysis meets acceptability criteria.

DATA QUALITY REVIEW CHECKLIST - IMPERIAL OIL PROJECTS

Consultant: Golder Associates

Sampling Date: August 31, 2020

Location: 1660 Merivale Road, Ottawa, ON

Laboratory: Bureau Veritas Mississauga

Consultant Project Number: 1791706-1155

Sample Submission Number: C0M4977

Are All Laboratory QC Within Acceptance Criteria (Yes, No, Not Applicable)?

	Yes	No	NA	Comments
Instrument Surrogate Recovery	X			Lab control sample recovery outside acceptance range
Extraction Surrogate Recovery			X	of 70-130% for 1,2,4-trichlorobenzene (141%),
Method Blank Concentration	X			naphthalene (144%) and vinyl acetate (138%). All
Matrix Duplicate RPD			X	remaining laboratory QC results are within
Matrix Spike Recovery			X	acceptance criteria.
Lab Control Sample Recovery		X		

Are All Field QC Samples Within Alert Limits (Yes, No, Not Applicable)?

	Yes	No	NA	Comments
Field Blank Concentration	X			All field QC samples are within
Trip Blank Concentration			X	alert limits.
Field Duplicate RPD			X	

Has CoA been signed off (Yes/No)?:	Yes
Has lab warranted all tests were in statistical control in CoA (Yes/No)?:	Yes
Has lab warranted all tests were analyzed following SOP's in CoA (Yes/No)?:	Yes
Were all samples analyzed within hold times (Yes/No)?:	Yes
All volatiles samples methanol extracted (if required) within 24 hours (Yes/No)?:	n/a
Is Chain of Custody completed and signed (Yes/No)?:	Yes
Were sample temperatures acceptable when they reached lab (Yes/No)?:	n/a

Is data considered to be reliable (Yes/No/Suspect)?: Yes

If answer is "No", describe and provide rationale:

APPENDIX B

Quality Control/Quality Assurance

QUALITY ASSURANCE/QUALITY CONTROL

In conjunction with the field investigations completed to date, a quality assurance/quality control (QA/QC) program was implemented to ensure the integrity of the groundwater sampling and analytical testing results.

1.0 FIELD PROGRAM

All sampling activities were completed in accordance with Golder's Technical Field Procedures by trained Golder personnel. All field activities were documented in field notes and results were recorded on standard field forms. All field equipment involved in the sampling and monitoring of groundwater were decontaminated in accordance with Golder's Technical Procedures. Groundwater samples were collected using appropriate handling protocols and were placed in sample containers provided by Maxxam Analytics Inc. (now Bureau Veritas Laboratories [BVL]).

All re-useable field equipment involved in collecting samples was decontaminated between each sampling location. Groundwater samples were not directly contacted by hand. To help prevent cross-contamination, a new pair of clean nitrile gloves was used for the collection of each sample.

Samples were given unique identification numbers and the sampling containers were preserved in ice-filled coolers. Samples were logged onto formal chain-of-custody documents and transported to BVL's Mississauga Environmental Laboratory for chemical analysis. BVL is accredited by the Standards Council of Canada (SCC).

Three blind field duplicate groundwater samples were submitted for analysis of benzene, toluene, ethylbenzene, xylenes (BTEX), petroleum hydrocarbon (PHC) Fractions F1 to F4 and lead. Two blind field duplicate soil vapour samples were submitted for analysis of BTEX, PHC Fractions F1 and F2, and volatile organic compounds. Trip and field blanks were submitted as necessary, to evaluate the potential for cross-contamination during the sampling and transportation of the samples.

2.0 LABORATORY PROGRAM

The laboratory QA/QC program included adherence to laboratory sampling and analysis protocols (e.g., hold times, sample containers, preservatives, detection limits and approved methodology) and the analysis of laboratory method blanks, laboratory sample duplicates, surrogate recovery and chemical spikes.

The laboratory method blank analysis results were used to detect interferences or impurities introduced by the laboratory equipment, reagents, or solvents. Surrogate recovery is analyzed by spiking samples with known quantities of surrogate chemicals which have similar chemical properties to the parameters being analyzed. The reported recovery provides an indication of the analytical method accuracy for that sample. Matrix spikes were conducted by adding known concentrations of the analyte of interest to a sample to evaluate the effects of the sample matrix on the test method. The analysis of selected samples in duplicate is used to evaluate the reproducibility of the test method.

3.0 DATA RECEPTION

Once laboratory analytical results were received, Golder completed a review of field and laboratory quality. This included review of laboratory QC performance to confirm results are within acceptance criteria, as well as evaluation of field duplicate and blank results to confirm they were within alert limits. Upon receipt of the analytical

results, relative percent difference (RPD) values between the original samples and their blind field duplicates were calculated as follows:

$$RPD\% = \frac{|S - D|}{\frac{1}{2}(S + D)} \times 100$$

Where: RPD = relative percent difference
S = sample value
D = blind field duplicate or replicate value.

Since analytical error increases near the reportable detection limit (RDL), the RPD was only calculated where the concentrations of both the original and blind field duplicate samples were greater than five times the RDL. The calculated RPDs were then compared to parameter specific alert limits.

Exceedances of the QC acceptance or alert criteria were investigated with the laboratory and, if warranted, a corrective action report was requested from the laboratory.

4.0 DATA QUALITY REVIEW RESULTS

Results of the data quality review are summarized in Table B1. The RPD calculations and blank sample results are presented in Tables B2 to B6.

Three field duplicates, one field blank and one trip blank were submitted to the laboratory as part of the groundwater QC program.

Two field duplicates and two field blanks were submitted to the laboratory as part of the soil vapour QC program.

Based on the data quality review, seven data quality issues were identified. These issues are considered unlikely to have a material effect on the quality of the data presented in this report. The issues are discussed in detail in Table B1. All duplicated parameters were within acceptable RPD alert limits.

5.0 SUMMARY OF RESULTS

Based on the review of the QA/QC results, the data presented in this report are considered to be reliable.

Table B1
Summary of Quality Control Sample Results
1660 Merivale Road, Ottawa, Ontario
Imperial Oil Limited

BVL Job Number	Matrix	BVL Sample ID Affected	Test Affected	Data Quality Issue	Comments
C0J3841	Groundwater	n/a	n/a	No data quality issues were identified.	The data are considered reliable.
C0J3843	Water	n/a	n/a	No data quality issues were identified.	The data are considered reliable.
C0J3875	Groundwater	n/a	n/a	No data quality issues were identified.	The data are considered reliable.
C0R2947	Water	n/a	n/a	No data quality issues were identified.	The data are considered reliable.
C0R2950	Groundwater	n/a	n/a	No data quality issues were identified.	The data are considered reliable.
C055468	Soil Vapour	n/a	Vinyl Acetate	Lab control sample recovery (54%) outside acceptance range of 70-130% for vinyl acetate for batch 6629871.	This data quality issue may represent a potential low bias for this sample. Vinyl acetate concentration in the sample was below the regulatory guideline and below the detection limit, indicating that there will not be a material effect on the interpretation of the results of this parameter. Under these circumstances, the vinyl acetate data reported can be considered reliable.
C055481	Soil Vapour	n/a	Vinyl Acetate	Lab control sample recovery (54%) outside acceptance range of 70-130% for vinyl acetate for batch 6629871.	This data quality issue may represent a potential low bias for this sample. Vinyl acetate concentration in the sample was below the regulatory guideline and below the detection limit, indicating that there will not be a material effect on the interpretation of the results of this parameter. Under these circumstances, the vinyl acetate data reported can be considered reliable.
C0M4970	Soil Vapour	NNC428, NNC429 and NNC430	1,2,4-Trichlorobenzene	Lab control sample recovery (131%) outside acceptance range of 70-130% for 1,2,4-trichlorobenzene for batch 6935878.	This data quality issue may represent a potential high bias for this sample. 1,2,4-Trichlorobenzene concentrations in both the samples and the field/lab duplicates were below the regulatory guideline and below the detection limit, indicating that there will not be a material effect on the interpretation of the results of this parameter. Under these circumstances, the 1,2,4-trichlorobenzene data reported can be considered reliable.
			Vinyl Acetate	Lab control sample recovery (133%) outside acceptance range of 70-130% for vinyl acetate for batch 6935878.	This data quality issue may represent a potential high bias for this sample. Vinyl acetate concentrations in both the samples and the field/lab duplicates were below the regulatory guideline and below the detection limit, indicating that there will not be a material effect on the interpretation of the results of this parameter. Under these circumstances, the vinyl acetate data reported can be considered reliable.
C0M4977	Soil Vapour	NNC438	1,2,4-Trichlorobenzene	Lab control sample recovery (141%) outside acceptance range of 70-130% for 1,2,4-trichlorobenzene for batch 6936570.	This data quality issue may represent a potential high bias for this sample. 1,2,4-Trichlorobenzene concentrations in the sample was below the regulatory guideline and below the detection limit, indicating that there will not be a material effect on the interpretation of the results of this parameter. Under these circumstances, the 1,2,4-trichlorobenzene data reported can be considered reliable.
			Naphthalene	Lab control sample recovery (144%) outside acceptance range of 70-130% for naphthalene for batch 6936570.	This data quality issue may represent a potential high bias for this sample. Naphthalene concentrations in the sample was below the regulatory guideline and below the detection limit, indicating that there will not be a material effect on the interpretation of the results of this parameter. Under these circumstances, the naphthalene data reported can be considered reliable.
			Vinyl Acetate	Lab control sample recovery (138%) outside acceptance range of 70-130% for vinyl acetate for batch 6936570.	This data quality issue may represent a potential high bias for this sample. Vinyl acetate concentrations in the sample was below the regulatory guideline and below the detection limit, indicating that there will not be a material effect on the interpretation of the results of this parameter. Under these circumstances, the vinyl acetate data reported can be considered reliable.

Groundwater Monitoring Program – 1660 Merivale Road, Ottawa, Ontario
TSSA Service Request # 791084

Dear Mr. Ly,

Thank you for submitting the following reports for the above captioned property:

- *"2018 Groundwater and Soil Vapour Probe Monitoring and Sampling Report, 1660 Merivale Road, Ottawa, Ontario",* prepared by Golder Associates Ltd. (Golder), dated December 14, 2018; and
- *"2019 Groundwater and Soil Vapour Probe Monitoring and Sampling Report, 1660 Merivale Road, Ottawa, Ontario",* prepared by Golder, dated January 31, 2020.

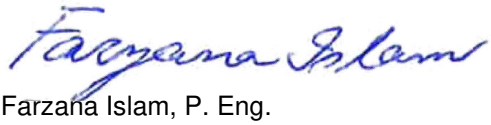
The 2018 groundwater monitoring report provides the following information:

- Seventeen (17) monitoring wells (TH1 through TH9, TH11, TH12, TH100 to TH102, MW15-01, MW15-02, MW16-01) were monitored on August 14-16, 2018 for depth to groundwater, petroleum vapour concentrations and presence or absence of liquid petroleum hydrocarbon (LPH). The monitoring well TH10 was decommissioned on August 24, 2016 and was replaced with monitoring well MW16-01.
- The depth to groundwater measured in the monitoring wells ranged from 2.44 metres below ground surface (mbgs) (in MW15-02) to 3.83 mbgs (in TH7). The inferred groundwater flow direction is to the south.
- The headspace organic vapour concentrations measured in the monitoring wells ranged from 2,537 parts per billion by volume (ppbv) to 8,102 ppbv during the July 3, 2018 monitoring event. During October 29, 2018 monitoring event, the headspace vapour readings measured in the monitoring wells ranged from 14 ppbv to 308 ppbv.
- LPH was not detected in any monitoring wells.
- Golder selected the Ontario Ministry of the Environment Conservation and Parks (MECP) Table 3 full depth generic Site Condition Standards (SCS) for all types of property use in a non-potable groundwater condition, and medium to fine textured soils as being applicable for use at this site.
- Groundwater samples were collected from seventeen (17) monitoring wells (TH1 through TH9, TH11, TH12, TH100 to TH102, MW15-01, MW15-02, MW16-01) on August 14-16, 2018. The groundwater samples were submitted to Maxxam Analytics Inc. (Maxxam), an accredited laboratory by the Canadian Association for Laboratory Accreditation Inc. (CALA). Groundwater samples were submitted for laboratory analysis of benzene, toluene, ethylbenzene, xylenes (BTEX), petroleum hydrocarbon fractions F1 to F4 (PHC F1-F4) and lead.
- The analytical results of the submitted groundwater samples were reported by Golder to be below the selected MECP Table 3 SCS for all analyzed parameters with the exceptions of the groundwater samples collected from TH4, TH5, TH9, TH12, TH101, TH102 and MW16-01, which exceeded for concentrations of one or more of benzene, PHC F1-F4 and lead.
- Golder also reports that the samples collected from two soil vapour probes (SV16-01 and SV16-02) did not exhibit any exceedances.

The 2019 groundwater monitoring report provides the following information:

- Seventeen (17) monitoring wells (TH1 through TH9, TH11, TH12, TH100 to TH102, MW15-01, MW15-02, MW16-01) were monitored on July 29-31, 2019 for depth to groundwater, petroleum vapour concentrations and presence or absence of LPH.
- The depth to groundwater measured in the monitoring wells ranged from 2.49 mbgs (in MW15-01) to 3.98 mbgs (in TH7). The inferred groundwater flow direction is to the south.
- The headspace organic vapour concentrations measured in the monitoring wells ranged from 16 ppbv to 240 ppbv during the June 21, 2019 monitoring event. During November 12, 2019 monitoring event, the headspace vapour readings measured in the monitoring wells ranged from non-detect to 10 ppbv.
- LPH was not detected in any monitoring wells.
- Golder selected the MECP Table 3 full depth generic SCS for all types of property use in a non-potable groundwater condition, and medium to fine textured soils as being applicable for use at this site.
- Groundwater samples were collected from seventeen (17) monitoring wells (TH1 through TH9, TH11, TH12, TH100 to TH102, MW15-01, MW15-02, MW16-01) on July 29-31, 2019. The groundwater samples were submitted to Bureau Veritas (BV), an accredited laboratory by the CALA. Groundwater samples were submitted for laboratory analysis of BTEX, PHC F1-F4 and lead.
- The analytical results of the submitted groundwater samples were reported by Golder to be below the selected MECP Table 3 SCS for all analyzed parameters with the exceptions of the groundwater samples collected from TH1, TH4, TH5, TH8, TH9, TH11, TH100, TH101 and TH102 and MW16-01, which exceeded for concentrations of one or more of PHC F1-F4.
- Golder also reports that the samples collected from two soil vapour probes (SV16-01 and SV16-02) did not exhibit any exceedances.

Our review of the 2018 and 2019 groundwater monitoring/sampling report indicates that the petroleum hydrocarbon (PHC) impacts were identified in groundwater both onsite (TH1, TH5 and TH4) and offsite (TH8, TH9, TH11, TH12, TH100, TH102, TH101), and the identified impacts have not been completely delineated. Based on the information provided to date, TSSA requires the following:



- The identified petroleum hydrocarbon impacts in groundwater must be completely delineated, both on-site and where practical, off-site;
- The City of Ottawa (the City) must be made aware of the identified impacts on the City's roadway allowances of Viewmount Drive and Merivale Road. TSSA must be copied and/or provided with copies of all correspondences between the City and Imperial Oil;
- Following the complete delineation, TSSA requires the submission of a formal Contaminant Management Plan (CMP) if further remedial work is not carried out to remove the impacted soil and/or groundwater;

Please submit an action plan to this office by September 14, 2020 addressing the above issues.

Please note, the soil vapour intrusion assessment guidance document titled "*Draft Technical Guidance: Soil Vapour Intrusion Assessment, September 2013*" has not been finalized by the Ministry of the Environment (MOE). It also has not been made available to public for use and is not in effect to date. As such, TSSA cannot provide comments on the soil vapour monitoring and sampling results.

Should you have any further questions, please do not hesitate to contact me directly. For general enquiries, please contact a Customer Service Advisor at 1.877.682.TSSA (8772) or e-mail customerservices@tssa.org. When contacting TSSA regarding this file, please refer to the Service Request number provided above.

2019 GROUNDWATER AND SOIL VAPOUR PROBE MONITORING AND SAMPLING REPORT
1660 MERIVALE ROAD, OTTAWA, ONTARIO
SAP 88001627

INTRODUCTION

Golder Associates Ltd. (Golder) was retained by Imperial Oil Limited (Imperial) to conduct a groundwater and soil vapour probe monitoring and sampling program at the former retail fuel outlet and active Canadian Tire station, at 1660 Merivale Road, Ottawa, Ontario (the Site) (Figures 1 and 2). The fieldwork was conducted on June 21, July 29 to August 1, and November 12, 2019.

SCOPE OF WORK

Groundwater

- Annual monitoring of nine existing on-site (TH1 to TH7, MW15-01, and MW15-02) and eight off-site (TH8, TH9, TH11, TH12, TH100 to TH102, and MW16-01) groundwater monitoring wells for depth to groundwater and the thickness, if present, of light non-aqueous phase liquid (LNAPL);
- Collecting annual groundwater samples from nine on-site (TH1 to TH7, MW15-01, and MW15-02) and eight off-site (TH8, TH9, TH11, TH12, TH100 to TH102, and MW16-01) monitoring wells using the low-flow sampling method for laboratory analysis of benzene, toluene, ethylbenzene, xylenes (BTEX), petroleum hydrocarbon (PHC) fractions F1 to F4, and dissolved lead;
- Comparing the groundwater analytical results to the following guidelines:
  - Ministry of the Environment, Conservation and Parks' (MECP) Table 3 Full Depth Generic Site Condition Standards for groundwater in medium and fine textured soil in a non-potable groundwater from the document titled "Soil, Ground Water, and Sediment Standards for Use Under Part XV.1 of the Environmental Protection Act," dated April 15, 2011 (hereafter referred to as the Table 3 Standards).

Soil Vapour

- Collecting semi-annual soil vapour samples from two on-site soil vapour probes (SV16-01 and SV16-02) for laboratory analysis of BTEX, PHC Fractions F1 and F2, and volatile organic compounds (VOCs);

- Comparing the soil vapour analytical results to the following guidelines:
  - Health-Based Indoor Air Criteria provided by MECP Modified Generic Risk Assessment (Tier 2) Spreadsheet Model (lowest risk model) (November 1, 2016) for residential land use.
  - Soil vapour screening levels (SVSL) were generated for residential buildings with a basement (probe depth 0 to 30 centimetres below base of the building foundation).

METHODOLOGY

Groundwater

Depth to Groundwater and LNAPL Thickness

- Depth to groundwater was measured and, if present, the thickness of LNAPL using an oil/water interface probe. If LNAPL is detected, then its presence is confirmed visually using a bailer. Prior to use in each well, the interface probe was cleaned using a phosphate-free detergent and water solution and rinsed with deionized water to minimize the potential for cross-contamination. Depth to groundwater measurements were taken from the top of casing.

Low-Flow Sampling

- Groundwater samples were collected using the low-flow sampling method. Water was pumped from each well, at a rate of 0.1 to 1 litres per minute (L/min), using low density polyethylene (LDPE) tubing connected to a peristaltic pump with a portion of silicon tubing. Routine water quality indicator parameters were measured during pumping using a multi-parameter water quality meter and flow through cell. The parameters measured included electrical conductivity, pH, temperature, dissolved oxygen and reduction potential. Calibration of the meter was completed as per the manufacturer's instructions. Purged water was retained on Site in barrels for future off-site disposal.
- Twenty samples, including two duplicates, one field blank, one trip blank and 16 groundwater samples, were collected between July 29 and 31, 2019.
- One monitoring well (TH12) was damaged and could not be accessed.

Laboratory Analysis of Groundwater Samples

- Samples were submitted under chain-of-custody to Bureau Veritas Laboratories (BVL) in Mississauga, Ontario, a Standards Council of Canada (SCC) accredited laboratory, for analysis of BTEX, PHC Fractions F1 to F4, and dissolved lead.
- Groundwater samples for BTEX and PHC Fraction F1 analysis were placed in 44-millilitre (mL) clear glass vials provided by the laboratory and preserved with sodium bisulphate as a microbial inhibitor. The groundwater samples for PHC Fractions F2 to F4 analysis were placed in 250-mL amber glass bottles and preserved with sodium bisulphate. Groundwater samples for dissolved lead analysis were placed in 120-mL high-density polyethylene (HDPE) bottles, field filtered, and preserved with nitric acid.
- All sampling containers were placed in an ice-filled cooler immediately following sampling and transported to BVL for chemical analysis.

Waste Purge Water Removal

- Badger Daylighting of Ottawa, Ontario, an MECP licensed waste hauler, was used to recover approximately 40 L of waste purged groundwater from the Site on August 1, 2019. The liquid was disposed of at an MECP approved waste receiver.

Soil Vapour

Weather Conditions during Sampling

- Weather conditions[1] on June 21, 2019 were clear and sunny. Outdoor air temperatures were between 21.1 and 23.7 degrees Celsius (°C), relative humidity was between 35 and 50%, and barometric pressure was measured between 99.43 and 99.47 kilopascals (kPa) (Environmental Canada 2019, internet site).
- Weather conditions[2] on November 12, 2019 were clear and sunny. Outdoor air temperatures were between -8.7 to -8.0 °C, relative humidity was between 64 to 78%, and barometric pressure was measured between 100.20 to 100.25 kPa.

Probe Leak Testing

- The soil vapour probes (SV16-01 and SV16-02) were leak tested on June 21 and November 12, 2019, to assess whether ambient air was penetrating the ground surface (e.g., along the outside of the tubing) and mixing with soil vapours during sampling.
- Prior to sample collection, the soil vapour probe was purged using a sampling pump connected to the probe using dedicated Teflon tubing. Purging was conducted at a nominal flow rate of 200 mL/min. During purging, the flow rate and vacuum were measured using an inline flow calibrator and manometer.
- After each of three probe volumes, a soil gas screening sample was indirectly collected into a 1 L Tedlar bag using a vacuum chamber to eliminate cross-contamination from the sampling pump. The concentrations of methane, carbon dioxide, oxygen and combustible gases in the screening sample were measured using a RKI Eagle 2. The integrity of each vapour sampling probe and its connection to the sampling equipment was evaluated using helium leak testing. A plastic shroud placed over the sample probe and continuously purged with helium so that leakage of the sample probe seal or its connection to the sampling equipment would result in the detection of helium in the screening sample. Sample acceptance was based upon obtaining a helium concentration in the screening sample that was less than 1% of the shroud concentration.

Soil Vapour Sampling

- Soil vapour samples were collected following procedures outlined in the United States Environmental Protection Agency (US EPA) Method TO-15. A flow regulator supplied by BVL was used to regulate the volumetric soil vapour flow rate into the Summa canister at a flow rate of 70 mL/min during a 20-minute sampling period, or 140 mL/min during a 10-minute sampling period.
- A 1.4 L Summa canister, batch certified by BVL to be free of contaminants, was fitted with a flow regulator for sample collection. Prior to use, the initial Summa canister pressure was confirmed, with a vacuum gauge,

[1] Weather information was taken from the meteorological station (*2019 Hourly Data Report. Ottawa INTL A, Ontario*) located closest to the Site. Environment Canada 2019, internet site.

to be less than or equal to -27 inches of mercury during the July sampling event, and -27 inches of mercury during the November sampling event, when gauged.

Laboratory Analysis of Soil Vapour Samples

- Soil vapour samples were collected and submitted to the BVL Mississauga facility, for analysis of BTEX, PHC Fractions F1 and F2, and VOCs. During the June sampling event, four samples, including one field duplicate, one field blank and two soil vapour probe samples were submitted to BVL for analysis. During the November sampling event, four samples, including one field duplicate, one field blank and two soil vapour probe samples were submitted to BVL for analysis.

RESULTS

Groundwater

LNAPL Occurrence (Date; Observations)

- July 29 to July 31, 2019; not detected in any monitoring wells (Table 1).

Groundwater Monitoring (Date; Depth to Groundwater Range; Groundwater Direction)

- July 29 to July 31, 2019; depth to groundwater ranged from 2.49 to 3.98 metres below ground surface (mbgs) (Table 1); inferred to the south-southwest (Figure 3).

Groundwater Analytical Results (Date; Parameters; No. of wells)

- July 29 to July 31, 2019; BTEX and PHC Fractions F1 to F4; Exceedances of one or more parameters listed were identified at nine locations (Figure 4, Table 2).
- July 29 to July 31, 2019; Dissolved lead; No exceedances were identified (Figure 4, Table 2).

Soil Vapour

Probe Leak Test Results (Date; Probe; Result expressed as % helium)

- June 21, 2019; SV16-01 and SV16-02; 0% (Table 3).
- November 12, 2019; SV16-01 and SV16-02; 0% (Table 3).

Field Organic Vapour Results (Date; Range)

- June 21, 2019; 16 parts per billion by volume (ppbv) to 240 ppbv (Table 3).
- November 12, 2019; not-detected to 10 ppbv (Table 3).

Soil Vapour Analytical Results (Date; Parameters; No. of probes)

- June 21, 2019; BTEX, PHC Fractions F1 and F2; No exceedances were identified (Figure 5, Table 4).
- June 21, 2019; VOCs; No exceedances were identified (Figure 6, Table 5).
- November 12, 2019; BTEX, PHC Fractions F1 and F2; No exceedances were identified (Figure 5, Table 4).
- November 12, 2019; VOCs; No exceedances were identified (Figure 6, Table 5).

FIELD AND LABORATORY QUALITY ASSURANCE / QUALITY CONTROL

- Copies of the associated laboratory certificates of analysis are provided in Appendix A.
- A quality assurance/quality control (QA/QC) program was followed to minimize and quantify impacts introduced during sample collection, handling, shipping and analysis. As part of the QA/QC program, sampling protocols included minimizing sample handling, submitting field QA/QC samples, using dedicated non-contaminating sampling equipment, using sample-specific identification and labelling procedures, and using chain-of-custody records. A discussion of the QA/QC program is included in Appendix B.
- Based on the data quality review, no groundwater data quality issues were identified. There were 12 soil vapour data quality issues identified. Eleven of the data quality issues are considered unlikely to have any material effect on the quality of the data. Two of the data quality issues are for one of the ambient air samples. Elevated concentrations were likely due to variables associated with the Site. The data from one of the ambient air samples is considered suspect. All other data is considered reliable.

CLOSURE

We trust the information provided herein meets your requirements. If you have any questions about the contents of the letter, please contact the undersigned.

(a) HEALTH-BASED INDOOR AIR CRITERIA PROVIDED BY MOECC MODIFIED GENERIC RISK ASSESSMENT (TIER 2) SPREADSHEET MODEL (NOVEMBER 1, 2016).

(b) SOIL VAPOUR SCREENING LEVELS (SVSL) FOR A RESIDENTIAL BUILDING WITH BASEMENT (PROBE DEPTH 0 - 30 CENTIMETRES BELOW BASE OF THE BUILDING FOUNDATION) CALCULATED BY DIVIDING HEALTH-BASED INDOOR AIR CRITERIA BY AN ATTENUATION FACTOR OF 0.02.

(c) RDL GREATER THAN SVSL.

Notes:

[(a)] Elevations are relative to a local benchmark (centre of storm sewer catch basin located approximately 5 m west of kiosk), with an assigned elevation of 100.00 m (exp. 2013).

LEL - lower explosive limit

mbgs - metres below ground surface

mbtoc - metres below top of casing

mm - millimetres

n/a - not applicable

n/d - not detected

n/m - not measured

ppmv - parts per million by volume

Notes:
[(a)] Elevations are relative to a local benchmark (centre of storm sewer catch basin located approximately 5 m west of kiosk), with an assigned elevation of 100.00 m (exp. 2013).
LEL - Lower explosive limit
mbgs - metres below ground surface
mbtoc - metres below top of casing
mm - millimetres
n/a - not applicable
n/d - not detected
n/m - not measured
ppmv - parts per million by volume

Notes:

[a] O.Reg 153 (2011) Table 3 Full Depth Generic Site Condition Standards for all types of property use for groundwater in medium and fine textured soil in a non-potable ground water condition

[b] Baseline was not reached at Carbon 50. Value presented corresponds to the greater of the F4 and F4G values.

[c] F1 fraction does not include BTEX; however, the proponent has the choice as to whether or not to subtract BTEX from the analytical result.

Bold/Underlined - value exceeds criteria/standard

BTEX - benzene, toluene, ethylbenzene, xylenes

BVL - Bureau Veritas Laboratories

F1, F2, F3, F4 - petroleum hydrocarbon fractions 1, 2, 3 and 4

F4G - petroleum hydrocarbon fraction 4 gravimetric

RDL - reportable detection limit

µg/L - micrograms per litre

< - less than

CERTIFICATE OF ANALYSIS

BV LABS JOB #: B9H4030
Received: 2019/06/25, 10:04

Sample Matrix: Air
Samples Received: 3

Analyses	Quantity	Laboratory Method	Primary Reference
BTEX and CCME Compounds in Air(TO-15mod)	3	BRL SOP-00304	EPA TO-15 m
Canister Pressure (TO-15)	3	BRL SOP-00304	EPA TO-15 m
Volatile Organics in Air (ug/m3)	3	BRL SOP-00304	EPA TO-15 m
Volatile Organics in Air (TO-15) (1)	3	BRL SOP-00304	EPA TO-15 m

Remarks:

Bureau Veritas Laboratories are accredited to ISO/IEC 17025 for specific parameters on scopes of accreditation. Unless otherwise noted, procedures used by BV Labs are based upon recognized Provincial, Federal or US method compendia such as CCME, MDDELCC, EPA, APHA.

All work recorded herein has been done in accordance with procedures and practices ordinarily exercised by professionals in BV Labs profession using accepted testing methodologies, quality assurance and quality control procedures (except where otherwise agreed by the client and BV Labs in writing). All data is in statistical control and has met quality control and method performance criteria unless otherwise noted. All method blanks are reported; unless indicated otherwise, associated sample data are not blank corrected. Where applicable, unless otherwise noted, Measurement Uncertainty has not been accounted for when stating conformity to the referenced standard. All samples were analyzed within hold time unless otherwise flagged.

BV Labs liability is limited to the actual cost of the requested analyses, unless otherwise agreed in writing. There is no other warranty expressed or implied. BV Labs has been retained to provide analysis of samples provided by the Client using the testing methodology referenced in this report. Interpretation and use of test results are the sole responsibility of the Client and are not within the scope of services provided by BV Labs, unless otherwise agreed in writing. BV Labs is not responsible for the accuracy or any data impacts, that result from the information provided by the customer or their agent.

Solid sample results, except biota, are based on dry weight unless otherwise indicated. Organic analyses are not recovery corrected except for isotope dilution methods.
Results relate to samples tested. When sampling is not conducted by BV Labs, results relate to the supplied samples tested.
This Certificate shall not be reproduced except in full, without the written approval of the laboratory.
Reference Method suffix “m” indicates test methods incorporate validated modifications from specific reference methods to improve performance.
* RPDs calculated using raw data. The rounding of final results may result in the apparent difference.
(1) Air sampling canisters have been cleaned in accordance with U.S. EPA Method TO15. At the end of the cleaning, evacuation, and pressurization cycles, one canister was selected and was pressurized with Zero Air. This canister was then analyzed via TO15 on a GC/MS. The canister must have been found to contain <0.2 ppbv concentration of all target analytes in order for the batch to have been considered clean. Each canister also underwent a leak check prior to shipment.

Please Note: SUMMA® canister samples will be retained by Bureau Veritas Laboratories for a period of 5 calendar days or as contractually agreed from the date of this report, after which time they will be cleaned for reuse. If you require a longer sample storage period, please contact your service representative.

GENERAL COMMENTS

WS#6206012: Vinyl Acetate was less than 60% recovery in the reference standard. There were no positives found for this compound therefore the data should not be affected.

Sample KCI078 [SV16-01] : Increased DL for propene due to propane interference.

Sample KCI079 [DUPA] : Increased DL for propene due to propane interference.

Results relate only to the items tested.

LCS: A blank matrix sample to which a known amount of the analyte, usually from a second source, has been added. Used to evaluate method accuracy.

Method Blank: A blank matrix containing all reagents used in the analytical procedure. Used to identify laboratory contamination.

Surrogate: A pure or isotopically labeled compound whose behavior mirrors the analytes of interest. Used to evaluate extraction efficiency.

(1) Recovery or RPD for this parameter is outside control limits. The overall quality control for this analysis meets acceptability criteria.

DATA QUALITY REVIEW CHECKLIST - IMPERIAL OIL PROJECTS

Consultant: Golder Associates

Sampling Date: June 21, 2019

Location: 1660 Merivale Road, Ottawa, ON

Laboratory: Bureau Veritas Mississauga

Consultant Project Number: 1791706-1155

Sample Submission Number: B9H4030

Are All Laboratory QC Within Acceptance Criteria (Yes, No, Not Applicable)?

	Yes	No	NA	Comments
Instrument Surrogate Recovery	X			Lab control sample recovery (56%) outside acceptance
Extraction Surrogate Recovery			X	range of 70-130% for vinyl acetate. All remaining
Method Blank Concentration	X			laboratory QC results are within acceptance criteria.
Matrix Duplicate RPD			X	
Matrix Spike Recovery			X	
Lab Control Sample Recovery		X		

Are All Field QC Samples Within Alert Limits (Yes, No, Not Applicable)?

	Yes	No	NA	Comments
Field Blank Concentration			X	Samples SV16-01 and DUP A exceed the alert limit for
Trip Blank Concentration			X	methyl ethyl ketone (2-butanone) (52%) and F2,
Field Duplicate RPD		X		C10-C16 (as decane) (121%). All remaining field QC samples are within alert limits.

Has CoA been signed off (Yes/No)?:	Yes
Has lab warranted all tests were in statistical control in CoA (Yes/No)?:	Yes
Has lab warranted all tests were analyzed following SOP's in CoA (Yes/No)?:	Yes
Were all samples analyzed within hold times (Yes/No)?:	Yes
All volatiles samples methanol extracted (if required) within 24 hours (Yes/No)?:	n/a
Is Chain of Custody completed and signed (Yes/No)?:	Yes
Were sample temperatures acceptable when they reached lab (Yes/No)?:	n/a

Is data considered to be reliable (Yes/No/Suspect)?: Yes

If answer is "No", describe and provide rationale:

Remarks:

Bureau Veritas Laboratories are accredited to ISO/IEC 17025 for specific parameters on scopes of accreditation. Unless otherwise noted, procedures used by BV Labs are based upon recognized Provincial, Federal or US method compendia such as CCME, MDDELCC, EPA, APHA.

All work recorded herein has been done in accordance with procedures and practices ordinarily exercised by professionals in BV Labs profession using accepted testing methodologies, quality assurance and quality control procedures (except where otherwise agreed by the client and BV Labs in writing). All data is in statistical control and has met quality control and method performance criteria unless otherwise noted. All method blanks are reported; unless indicated otherwise, associated sample data are not blank corrected. Where applicable, unless otherwise noted, Measurement Uncertainty has not been accounted for when stating conformity to the referenced standard. All samples were analyzed within hold time unless otherwise flagged.

BV Labs liability is limited to the actual cost of the requested analyses, unless otherwise agreed in writing. There is no other warranty expressed or implied. BV Labs has been retained to provide analysis of samples provided by the Client using the testing methodology referenced in this report. Interpretation and use of test results are the sole responsibility of the Client and are not within the scope of services provided by BV Labs, unless otherwise agreed in writing. BV Labs is not responsible for the accuracy or any data impacts, that result from the information provided by the customer or their agent.

Solid sample results, except biota, are based on dry weight unless otherwise indicated. Organic analyses are not recovery corrected except for isotope dilution methods.
Results relate to samples tested. When sampling is not conducted by BV Labs, results relate to the supplied samples tested.
This Certificate shall not be reproduced except in full, without the written approval of the laboratory.
Reference Method suffix “m” indicates test methods incorporate validated modifications from specific reference methods to improve performance.
* RPDs calculated using raw data. The rounding of final results may result in the apparent difference.
(1) Air sampling canisters have been cleaned in accordance with U.S. EPA Method TO15. At the end of the cleaning, evacuation, and pressurization cycles, one canister was selected and was pressurized with Zero Air. This canister was then analyzed via TO15 on a GC/MS. The canister must have been found to contain <0.2 ppbv concentration of all target analytes in order for the batch to have been considered clean. Each canister also underwent a leak check prior to shipment.

Please Note: SUMMA® canister samples will be retained by Bureau Veritas Laboratories for a period of 5 calendar days or as contractually agreed from the date of this report, after which time they will be cleaned for reuse. If you require a longer sample storage period, please contact your service representative.

GENERAL COMMENTS

Vinyl acetate was less than 60% recovery in the reference standard. There were no positives found for this compound therefore the data should not be affected.

Results relate only to the items tested.

LCS: A blank matrix sample to which a known amount of the analyte, usually from a second source, has been added. Used to evaluate method accuracy.

Method Blank: A blank matrix containing all reagents used in the analytical procedure. Used to identify laboratory contamination.

Surrogate: A pure or isotopically labeled compound whose behavior mirrors the analytes of interest. Used to evaluate extraction efficiency.

(1) Recovery or RPD for this parameter is outside control limits. The overall quality control for this analysis meets acceptability criteria.

DATA QUALITY REVIEW CHECKLIST - IMPERIAL OIL PROJECTS

Consultant: Golder Associates

Sampling Date: June 21, 2019

Location: 1660 Merivale Road, Ottawa, ON

Laboratory: Bureau Veritas Mississauga

Consultant Project Number: 1791706-1155

Sample Submission Number: B9H4037

Are All Laboratory QC Within Acceptance Criteria (Yes, No, Not Applicable)?

	Yes	No	NA	Comments
Instrument Surrogate Recovery	X			All laboratory QC results are within
Extraction Surrogate Recovery			X	acceptance criteria.
Method Blank Concentration	X			
Matrix Duplicate RPD			X	
Matrix Spike Recovery			X	
Lab Control Sample Recovery	X			

Are All Field QC Samples Within Alert Limits (Yes, No, Not Applicable)?

	Yes	No	NA	Comments
Field Blank Concentration		X		Field blank sample exceeded alert limits for 2-propanone.
Trip Blank Concentration			X	All field QC samples are within alert limits.
Field Duplicate RPD			X	

Has CoA been signed off (Yes/No)?:	Yes
Has lab warranted all tests were in statistical control in CoA (Yes/No)?:	Yes
Has lab warranted all tests were analyzed following SOP's in CoA (Yes/No)?:	Yes
Were all samples analyzed within hold times (Yes/No)?:	Yes
All volatiles samples methanol extracted (if required) within 24 hours (Yes/No)?:	n/a
Is Chain of Custody completed and signed (Yes/No)?:	Yes
Were sample temperatures acceptable when they reached lab (Yes/No)?:	n/a

Is data considered to be reliable (Yes/No/Suspect)?: Suspect

If answer is "No", describe and provide rationale:

Remarks:

Bureau Veritas Laboratories are accredited to ISO/IEC 17025 for specific parameters on scopes of accreditation. Unless otherwise noted, procedures used by BV Labs are based upon recognized Provincial, Federal or US method compendia such as CCME, MELCC, EPA, APHA.

All work recorded herein has been done in accordance with procedures and practices ordinarily exercised by professionals in BV Labs profession using accepted testing methodologies, quality assurance and quality control procedures (except where otherwise agreed by the client and BV Labs in writing). All data is in statistical control and has met quality control and method performance criteria unless otherwise noted. All method blanks are reported; unless indicated otherwise, associated sample data are not blank corrected. Where applicable, unless otherwise noted, Measurement Uncertainty has not been accounted for when stating conformity to the referenced standard. All samples were analyzed within hold time unless otherwise flagged.

BV Labs liability is limited to the actual cost of the requested analyses, unless otherwise agreed in writing. There is no other warranty expressed or implied. BV Labs has been retained to provide analysis of samples provided by the Client using the testing methodology referenced in this report. Interpretation and use of test results are the sole responsibility of the Client and are not within the scope of services provided by BV Labs, unless otherwise agreed in writing. BV Labs is not responsible for the accuracy or any data impacts, that result from the information provided by the customer or their agent.

Solid sample results, except biota, are based on dry weight unless otherwise indicated. Organic analyses are not recovery corrected except for isotope dilution methods.
Results relate to samples tested. When sampling is not conducted by BV Labs, results relate to the supplied samples tested.
This Certificate shall not be reproduced except in full, without the written approval of the laboratory.
Reference Method suffix “m” indicates test methods incorporate validated modifications from specific reference methods to improve performance.
* RPDs calculated using raw data. The rounding of final results may result in the apparent difference.
(1) All CCME PHC results met required criteria unless otherwise stated in the report. The CWS PHC methods employed by Bureau Veritas Laboratories conform to all prescribed elements of the reference method and performance based elements have been validated. All modifications have been validated and proven equivalent following “Alberta Environment’s Interpretation of the Reference Method for the Canada-Wide Standard for Petroleum Hydrocarbons in Soil Validation of Performance-Based Alternative Methods September 2003”. Documentation is available upon request. Modifications from Reference Method for the Canada-wide Standard for Petroleum Hydrocarbons in Soil-Tier 1 Method: F2/F3/F4 data reported using validated cold solvent extraction instead of Soxhlet extraction.

GENERAL COMMENTS

Each temperature is the average of up to three cooler temperatures taken at receipt

Package 1	0.7°C

F4 Gravimetric analysis included for samples TH11, TH100, TH8, TH9 and DUP A.

Results relate only to the items tested.

Duplicate: Paired analysis of a separate portion of the same sample. Used to evaluate the variance in the measurement.

LCS: A blank matrix sample to which a known amount of the analyte, usually from a second source, has been added. Used to evaluate method accuracy.

Method Blank: A blank matrix containing all reagents used in the analytical procedure. Used to identify laboratory contamination.

Surrogate: A pure or isotopically labeled compound whose behavior mirrors the analytes of interest. Used to evaluate extraction efficiency.

DATA QUALITY REVIEW CHECKLIST - IMPERIAL OIL PROJECTS

Consultant: Golder Associates

Sampling Date: July 30 and 31, 2019

Location: 1660 Merivale Road, Ottawa, ON

Laboratory: Bureau Veritas Mississauga

Consultant Project Number: 1791706-1155

Sample Submission Number: B9L2439

Are All Laboratory QC Within Acceptance Criteria (Yes, No, Not Applicable)?

	Yes	No	NA	Comments
Instrument Surrogate Recovery	X			All laboratory QC results are within
Extraction Surrogate Recovery	X			acceptance criteria.
Method Blank Concentration	X			
Matrix Duplicate RPD	X			
Matrix Spike Recovery			X	
Lab Control Sample Recovery	X			

Are All Field QC Samples Within Alert Limits (Yes, No, Not Applicable)?

	Yes	No	NA	Comments
Field Blank Concentration			X	All field QC samples are within
Trip Blank Concentration			X	alert limits.
Field Duplicate RPD	X			

Has CoA been signed off (Yes/No)?:	Yes
Has lab warranted all tests were in statistical control in CoA (Yes/No)?:	Yes
Has lab warranted all tests were analyzed following SOP's in CoA (Yes/No)?:	Yes
Were all samples analyzed within hold times (Yes/No)?:	Yes
All volatiles samples methanol extracted (if required) within 24 hours (Yes/No)?:	n/a
Is Chain of Custody completed and signed (Yes/No)?:	Yes
Were sample temperatures acceptable when they reached lab (Yes/No)?:	Yes

Is data considered to be reliable (Yes/No/Suspect)?: Yes

If answer is "No", describe and provide rationale:

Remarks:

Bureau Veritas Laboratories are accredited to ISO/IEC 17025 for specific parameters on scopes of accreditation. Unless otherwise noted, procedures used by BV Labs are based upon recognized Provincial, Federal or US method compendia such as CCME, MELCC, EPA, APHA.

All work recorded herein has been done in accordance with procedures and practices ordinarily exercised by professionals in BV Labs profession using accepted testing methodologies, quality assurance and quality control procedures (except where otherwise agreed by the client and BV Labs in writing). All data is in statistical control and has met quality control and method performance criteria unless otherwise noted. All method blanks are reported; unless indicated otherwise, associated sample data are not blank corrected. Where applicable, unless otherwise noted, Measurement Uncertainty has not been accounted for when stating conformity to the referenced standard. All samples were analyzed within hold time unless otherwise flagged.

BV Labs liability is limited to the actual cost of the requested analyses, unless otherwise agreed in writing. There is no other warranty expressed or implied. BV Labs has been retained to provide analysis of samples provided by the Client using the testing methodology referenced in this report. Interpretation and use of test results are the sole responsibility of the Client and are not within the scope of services provided by BV Labs, unless otherwise agreed in writing. BV Labs is not responsible for the accuracy or any data impacts, that result from the information provided by the customer or their agent.

Solid sample results, except biota, are based on dry weight unless otherwise indicated. Organic analyses are not recovery corrected except for isotope dilution methods.
Results relate to samples tested. When sampling is not conducted by BV Labs, results relate to the supplied samples tested.
This Certificate shall not be reproduced except in full, without the written approval of the laboratory.
Reference Method suffix “m” indicates test methods incorporate validated modifications from specific reference methods to improve performance.
* RPDs calculated using raw data. The rounding of final results may result in the apparent difference.
(1) All CCME PHC results met required criteria unless otherwise stated in the report. The CWS PHC methods employed by Bureau Veritas Laboratories conform to all prescribed elements of the reference method and performance based elements have been validated. All modifications have been validated and proven equivalent following “Alberta Environment’s Interpretation of the Reference Method for the Canada-Wide Standard for Petroleum Hydrocarbons in Soil Validation of Performance-Based Alternative Methods September 2003”. Documentation is available upon request. Modifications from Reference Method for the Canada-wide Standard for Petroleum Hydrocarbons in Soil-Tier 1 Method: F2/F3/F4 data reported using validated cold solvent extraction instead of Soxhlet extraction.

Duplicate: Paired analysis of a separate portion of the same sample. Used to evaluate the variance in the measurement.

Matrix Spike: A sample to which a known amount of the analyte of interest has been added. Used to evaluate sample matrix interference.

LCS: A blank matrix sample to which a known amount of the analyte, usually from a second source, has been added. Used to evaluate method accuracy.

Method Blank: A blank matrix containing all reagents used in the analytical procedure. Used to identify laboratory contamination.

Surrogate: A pure or isotopically labeled compound whose behavior mirrors the analytes of interest. Used to evaluate extraction efficiency.

NC (Duplicate RPD): The duplicate RPD was not calculated. The concentration in the sample and/or duplicate was too low to permit a reliable RPD calculation (absolute difference <= 2x RDL).

DATA QUALITY REVIEW CHECKLIST - IMPERIAL OIL PROJECTS

Consultant: Golder Associates

Sampling Date: July 29 and 30, 2019

Location: 1660 Merivale Road, Ottawa, ON

Laboratory: Bureau Veritas Mississauga

Consultant Project Number: 1791706-1555

Sample Submission Number: B9L2700

Are All Laboratory QC Within Acceptance Criteria (Yes, No, Not Applicable)?

	Yes	No	NA	Comments
Instrument Surrogate Recovery	X			All laboratory QC results are within
Extraction Surrogate Recovery	X			acceptance criteria.
Method Blank Concentration	X			
Matrix Duplicate RPD	X			
Matrix Spike Recovery	X			
Lab Control Sample Recovery	X			

Are All Field QC Samples Within Alert Limits (Yes, No, Not Applicable)?

	Yes	No	NA	Comments
Field Blank Concentration			X	No field QC samples were collected.
Trip Blank Concentration			X	
Field Duplicate RPD			X	

Has CoA been signed off (Yes/No)?:	Yes
Has lab warranted all tests were in statistical control in CoA (Yes/No)?:	Yes
Has lab warranted all tests were analyzed following SOP's in CoA (Yes/No)?:	Yes
Were all samples analyzed within hold times (Yes/No)?:	Yes
All volatiles samples methanol extracted (if required) within 24 hours (Yes/No)?:	n/a
Is Chain of Custody completed and signed (Yes/No)?:	Yes
Were sample temperatures acceptable when they reached lab (Yes/No)?:	Yes

Is data considered to be reliable (Yes/No/Suspect)?: Yes

If answer is "No", describe and provide rationale:

Petroleum Hydro. CCME F1 & BTEX in Water	2	CAM SOP-00315	CCME PHC-CWS m
Petroleum Hydrocarbons F2-F4 in Water (1)	1	CAM SOP-00316	CCME PHC-CWS m
Dissolved Metals by ICPMS	2	CAM SOP-00447	EPA 6020B m

Remarks:

Bureau Veritas Laboratories are accredited to ISO/IEC 17025 for specific parameters on scopes of accreditation. Unless otherwise noted, procedures used by BV Labs are based upon recognized Provincial, Federal or US method compendia such as CCME, MELCC, EPA, APHA.

All work recorded herein has been done in accordance with procedures and practices ordinarily exercised by professionals in BV Labs profession using accepted testing methodologies, quality assurance and quality control procedures (except where otherwise agreed by the client and BV Labs in writing). All data is in statistical control and has met quality control and method performance criteria unless otherwise noted. All method blanks are reported; unless indicated otherwise, associated sample data are not blank corrected. Where applicable, unless otherwise noted, Measurement Uncertainty has not been accounted for when stating conformity to the referenced standard. All samples were analyzed within hold time unless otherwise flagged.

BV Labs liability is limited to the actual cost of the requested analyses, unless otherwise agreed in writing. There is no other warranty expressed or implied. BV Labs has been retained to provide analysis of samples provided by the Client using the testing methodology referenced in this report. Interpretation and use of test results are the sole responsibility of the Client and are not within the scope of services provided by BV Labs, unless otherwise agreed in writing. BV Labs is not responsible for the accuracy or any data impacts, that result from the information provided by the customer or their agent.

Solid sample results, except biota, are based on dry weight unless otherwise indicated. Organic analyses are not recovery corrected except for isotope dilution methods.
Results relate to samples tested. When sampling is not conducted by BV Labs, results relate to the supplied samples tested.
This Certificate shall not be reproduced except in full, without the written approval of the laboratory.
Reference Method suffix “m” indicates test methods incorporate validated modifications from specific reference methods to improve performance.

* RPDs calculated using raw data. The rounding of final results may result in the apparent difference.

(1) All CCME PHC results met required criteria unless otherwise stated in the report. The CWS PHC methods employed by Bureau Veritas Laboratories conform to all prescribed elements of the reference method and performance based elements have been validated. All modifications have been validated and proven equivalent following “Alberta Environment’s Interpretation of the Reference Method for the Canada-Wide Standard for Petroleum Hydrocarbons in Soil Validation of Performance-Based Alternative Methods September 2003”. Documentation is available upon request. Modifications from Reference Method for the Canada-wide Standard for Petroleum Hydrocarbons in Soil-Tier 1 Method: F2/F3/F4 data reported using validated cold solvent extraction instead of Soxhlet extraction.

GENERAL COMMENTS

Each temperature is the average of up to three cooler temperatures taken at receipt

Package 1	1.7°C

Note: Analysis requirements unclear/absent. F2-F4 analysis requested on the COC for Trip Blank sample but the appropriate bottle was not received. Unable to complete the F2-F4 analysis on the trip blank.

Results relate only to the items tested.

LCS: A blank matrix sample to which a known amount of the analyte, usually from a second source, has been added. Used to evaluate method accuracy.

Method Blank: A blank matrix containing all reagents used in the analytical procedure. Used to identify laboratory contamination.

Surrogate: A pure or isotopically labeled compound whose behavior mirrors the analytes of interest. Used to evaluate extraction efficiency.

(1) Elevated RDL due to background contamination.

DATA QUALITY REVIEW CHECKLIST - IMPERIAL OIL PROJECTS

Consultant: Golder Associates

Sampling Date: July 31, 2019

Location: 1660 Merivale Road, Ottawa, ON

Laboratory: Bureau Veritas Mississauga

Consultant Project Number: 1791706-1155

Sample Submission Number: B9L4405

Are All Laboratory QC Within Acceptance Criteria (Yes, No, Not Applicable)?

	Yes	No	NA	Comments
Instrument Surrogate Recovery	X			All laboratory QC results are within
Extraction Surrogate Recovery	X			acceptance criteria.
Method Blank Concentration	X			
Matrix Duplicate RPD			X	
Matrix Spike Recovery			X	
Lab Control Sample Recovery	X			

Are All Field QC Samples Within Alert Limits (Yes, No, Not Applicable)?

	Yes	No	NA	Comments
Field Blank Concentration	X			All field QC samples are within
Trip Blank Concentration	X			alert limits.
Field Duplicate RPD			X	

Has CoA been signed off (Yes/No)?:	Yes
Has lab warranted all tests were in statistical control in CoA (Yes/No)?:	Yes
Has lab warranted all tests were analyzed following SOP's in CoA (Yes/No)?:	Yes
Were all samples analyzed within hold times (Yes/No)?:	Yes
All volatiles samples methanol extracted (if required) within 24 hours (Yes/No)?:	n/a
Is Chain of Custody completed and signed (Yes/No)?:	Yes
Were sample temperatures acceptable when they reached lab (Yes/No)?:	Yes

Is data considered to be reliable (Yes/No/Suspect)?: Yes

If answer is "No", describe and provide rationale:

Remarks:

Bureau Veritas Laboratories are accredited to ISO/IEC 17025 for specific parameters on scopes of accreditation. Unless otherwise noted, procedures used by BV Labs are based upon recognized Provincial, Federal or US method compendia such as CCME, MELCC, EPA, APHA.

All work recorded herein has been done in accordance with procedures and practices ordinarily exercised by professionals in BV Labs profession using accepted testing methodologies, quality assurance and quality control procedures (except where otherwise agreed by the client and BV Labs in writing). All data is in statistical control and has met quality control and method performance criteria unless otherwise noted. All method blanks are reported; unless indicated otherwise, associated sample data are not blank corrected. Where applicable, unless otherwise noted, Measurement Uncertainty has not been accounted for when stating conformity to the referenced standard. All samples were analyzed within hold time unless otherwise flagged.

BV Labs liability is limited to the actual cost of the requested analyses, unless otherwise agreed in writing. There is no other warranty expressed or implied. BV Labs has been retained to provide analysis of samples provided by the Client using the testing methodology referenced in this report. Interpretation and use of test results are the sole responsibility of the Client and are not within the scope of services provided by BV Labs, unless otherwise agreed in writing. BV Labs is not responsible for the accuracy or any data impacts, that result from the information provided by the customer or their agent.

Solid sample results, except biota, are based on dry weight unless otherwise indicated. Organic analyses are not recovery corrected except for isotope dilution methods.
Results relate to samples tested. When sampling is not conducted by BV Labs, results relate to the supplied samples tested.
This Certificate shall not be reproduced except in full, without the written approval of the laboratory.
Reference Method suffix “m” indicates test methods incorporate validated modifications from specific reference methods to improve performance.
* RPDs calculated using raw data. The rounding of final results may result in the apparent difference.
(1) All CCME PHC results met required criteria unless otherwise stated in the report. The CWS PHC methods employed by Bureau Veritas Laboratories conform to all prescribed elements of the reference method and performance based elements have been validated. All modifications have been validated and proven equivalent following “Alberta Environment’s Interpretation of the Reference Method for the Canada-Wide Standard for Petroleum Hydrocarbons in Soil Validation of Performance-Based Alternative Methods September 2003”. Documentation is available upon request. Modifications from Reference Method for the Canada-wide Standard for Petroleum Hydrocarbons in Soil-Tier 1 Method: F2/F3/F4 data reported using validated cold solvent extraction instead of Soxhlet extraction.

LCS: A blank matrix sample to which a known amount of the analyte, usually from a second source, has been added. Used to evaluate method accuracy.

Method Blank: A blank matrix containing all reagents used in the analytical procedure. Used to identify laboratory contamination.

Surrogate: A pure or isotopically labeled compound whose behavior mirrors the analytes of interest. Used to evaluate extraction efficiency.

DATA QUALITY REVIEW CHECKLIST - IMPERIAL OIL PROJECTS

Consultant: Golder Associates

Sampling Date: July 31, 2019

Location: 1660 Merivale Road, Ottawa, ON

Laboratory: Bureau Veritas Mississauga

Consultant Project Number: 1791706-1155

Sample Submission Number: B9L4415

Are All Laboratory QC Within Acceptance Criteria (Yes, No, Not Applicable)?

	Yes	No	NA	Comments
Instrument Surrogate Recovery	X			All laboratory QC results are within
Extraction Surrogate Recovery	X			acceptance criteria.
Method Blank Concentration	X			
Matrix Duplicate RPD			X	
Matrix Spike Recovery			X	
Lab Control Sample Recovery	X			

Are All Field QC Samples Within Alert Limits (Yes, No, Not Applicable)?

	Yes	No	NA	Comments
Field Blank Concentration			X	All field QC samples are within
Trip Blank Concentration			X	alert limits.
Field Duplicate RPD	X			

Has CoA been signed off (Yes/No)?:	Yes
Has lab warranted all tests were in statistical control in CoA (Yes/No)?:	Yes
Has lab warranted all tests were analyzed following SOP's in CoA (Yes/No)?:	Yes
Were all samples analyzed within hold times (Yes/No)?:	Yes
All volatiles samples methanol extracted (if required) within 24 hours (Yes/No)?:	n/a
Is Chain of Custody completed and signed (Yes/No)?:	Yes
Were sample temperatures acceptable when they reached lab (Yes/No)?:	Yes

Is data considered to be reliable (Yes/No/Suspect)?: Yes

If answer is "No", describe and provide rationale:

Remarks:

Bureau Veritas Laboratories are accredited to ISO/IEC 17025 for specific parameters on scopes of accreditation. Unless otherwise noted, procedures used by BV Labs are based upon recognized Provincial, Federal or US method compendia such as CCME, MELCC, EPA, APHA.

All work recorded herein has been done in accordance with procedures and practices ordinarily exercised by professionals in BV Labs profession using accepted testing methodologies, quality assurance and quality control procedures (except where otherwise agreed by the client and BV Labs in writing). All data is in statistical control and has met quality control and method performance criteria unless otherwise noted. All method blanks are reported; unless indicated otherwise, associated sample data are not blank corrected. Where applicable, unless otherwise noted, Measurement Uncertainty has not been accounted for when stating conformity to the referenced standard. All samples were analyzed within hold time unless otherwise flagged.

BV Labs liability is limited to the actual cost of the requested analyses, unless otherwise agreed in writing. There is no other warranty expressed or implied. BV Labs has been retained to provide analysis of samples provided by the Client using the testing methodology referenced in this report. Interpretation and use of test results are the sole responsibility of the Client and are not within the scope of services provided by BV Labs, unless otherwise agreed in writing. BV Labs is not responsible for the accuracy or any data impacts, that result from the information provided by the customer or their agent.

Solid sample results, except biota, are based on dry weight unless otherwise indicated. Organic analyses are not recovery corrected except for isotope dilution methods.
Results relate to samples tested. When sampling is not conducted by BV Labs, results relate to the supplied samples tested.
This Certificate shall not be reproduced except in full, without the written approval of the laboratory.
Reference Method suffix “m” indicates test methods incorporate validated modifications from specific reference methods to improve performance.
* RPDs calculated using raw data. The rounding of final results may result in the apparent difference.
(1) Air sampling canisters have been cleaned in accordance with U.S. EPA Method TO15. At the end of the cleaning, evacuation, and pressurization cycles, one canister was selected and was pressurized with Zero Air. This canister was then analyzed via TO15 on a GC/MS. The canister must have been found to contain <0.2 ppbv concentration of all target analytes in order for the batch to have been considered clean. Each canister also underwent a leak check prior to shipment.

Please Note: SUMMA® canister samples will be retained by Bureau Veritas Laboratories for a period of 5 calendar days or as contractually agreed from the date of this report, after which time they will be cleaned for reuse. If you require a longer sample storage period, please contact your service representative.

BTEX and CCME Compounds in Air(TO-15mod)	GC/MS	6458420	N/A	2019/11/22	Dany Marqass
Canister Pressure (TO-15)	PRES	6457319	N/A	2019/11/22	Dany Marqass
Volatile Organics in Air (ug/m3)	GC/MS	6441779	N/A	2019/11/25	Maureen Smith
Volatile Organics in Air (TO-15)	GC/MS	6457320	N/A	2019/11/22	Dany Marqass

BV Labs Job #: B9V9715
Report Date: 2019/11/25

Golder Associates Ltd
Task Order#: 1791706-1155-7777
Site#: N/A
Site Location: N/A;1660 MERIVALE ROAD, OTTAWA, ON
Project #: 1791706-1155-1923B

GENERAL COMMENTS

1 compound exceed the 130% recovery criteria in the reference standard and 2 compounds were below the 70% recovery criteria in the reference standard. These compounds meet the %RSD criteria in the continuing calibration standard. The failure of these 3 compounds is not believed to have an effect on the integrity of the results.

WS# 6457320: Ethanol exceeded 140% recovery in the reference standard. The continuing calibration standard was acceptable therefore there should be no effect on the data. Vinyl Acetate was less than 60% recovery in the reference standard. There were no positives found for Vinyl Acetate therefore there should be no effect on the data.

Results relate only to the items tested.

Bureau Veritas Laboratories 6740 Campobello Road, Mississauga, Ontario, L5N 2L8 Tel: (905) 817-5700 Toll-Free: 800-563-6266 Fax: (905) 817-5777 www.bvlabs.com

Microbiology testing is conducted at 6660 Campobello Rd. Chemistry testing is conducted at 6740 Campobello Rd.

Duplicate: Paired analysis of a separate portion of the same sample. Used to evaluate the variance in the measurement.

LCS: A blank matrix sample to which a known amount of the analyte, usually from a second source, has been added. Used to evaluate method accuracy.

Method Blank: A blank matrix containing all reagents used in the analytical procedure. Used to identify laboratory contamination.

Surrogate: A pure or isotopically labeled compound whose behavior mirrors the analytes of interest. Used to evaluate extraction efficiency.

NC (Duplicate RPD): The duplicate RPD was not calculated. The concentration in the sample and/or duplicate was too low to permit a reliable RPD calculation (absolute difference <= 2x RDL).

(1) Recovery or RPD for this parameter is outside control limits. The overall quality control for this analysis meets acceptability criteria.

DATA QUALITY REVIEW CHECKLIST - IMPERIAL OIL PROJECTS

Consultant: Golder Associates

Sampling Date: November 12, 2019

Location: 1660 Merivale Road, Ottawa, ON

Laboratory: Bureau Veritas Mississauga

Consultant Project Number: 1791706-1155

Sample Submission Number: B9V9715

Are All Laboratory QC Within Acceptance Criteria (Yes, No, Not Applicable)?

	Yes	No	NA	Comments
Instrument Surrogate Recovery	X			Lab control sample recovery (131 and 140%) outside
Extraction Surrogate Recovery			X	acceptance range of 70-130% for ethanol. Lab control
Method Blank Concentration	X			sample recovery (67%) outside acceptance range of 70-
Matrix Duplicate RPD	X			130% for 2-propanol. Lab control sample recovery (52
Matrix Spike Recovery			X	and 56%) outside acceptance range of 70-130% for
Lab Control Sample Recovery		X		vinyl acetateAll remaining laboratory QC results are within acceptance criteria.

Are All Field QC Samples Within Alert Limits (Yes, No, Not Applicable)?

	Yes	No	NA	Comments
Field Blank Concentration			X	All field QC samples are within
Trip Blank Concentration			X	alert limits.
Field Duplicate RPD	X			

Has CoA been signed off (Yes/No)?:	Yes
Has lab warranted all tests were in statistical control in CoA (Yes/No)?:	Yes
Has lab warranted all tests were analyzed following SOP's in CoA (Yes/No)?:	Yes
Were all samples analyzed within hold times (Yes/No)?:	Yes
All volatiles samples methanol extracted (if required) within 24 hours (Yes/No)?:	n/a
Is Chain of Custody completed and signed (Yes/No)?:	Yes
Were sample temperatures acceptable when they reached lab (Yes/No)?:	n/a

Is data considered to be reliable (Yes/No/Suspect)?: Yes

If answer is "No", describe and provide rationale:

Volatile Organics in Air (TO-15) (1)	1	BRL SOP-00304	EPA TO-15 m

Remarks:

Bureau Veritas Laboratories are accredited to ISO/IEC 17025 for specific parameters on scopes of accreditation. Unless otherwise noted, procedures used by BV Labs are based upon recognized Provincial, Federal or US method compendia such as CCME, MELCC, EPA, APHA.

All work recorded herein has been done in accordance with procedures and practices ordinarily exercised by professionals in BV Labs profession using accepted testing methodologies, quality assurance and quality control procedures (except where otherwise agreed by the client and BV Labs in writing). All data is in statistical control and has met quality control and method performance criteria unless otherwise noted. All method blanks are reported; unless indicated otherwise, associated sample data are not blank corrected. Where applicable, unless otherwise noted, Measurement Uncertainty has not been accounted for when stating conformity to the referenced standard. All samples were analyzed within hold time unless otherwise flagged.

BV Labs liability is limited to the actual cost of the requested analyses, unless otherwise agreed in writing. There is no other warranty expressed or implied. BV Labs has been retained to provide analysis of samples provided by the Client using the testing methodology referenced in this report. Interpretation and use of test results are the sole responsibility of the Client and are not within the scope of services provided by BV Labs, unless otherwise agreed in writing. BV Labs is not responsible for the accuracy or any data impacts, that result from the information provided by the customer or their agent.

Solid sample results, except biota, are based on dry weight unless otherwise indicated. Organic analyses are not recovery corrected except for isotope dilution methods.
Results relate to samples tested. When sampling is not conducted by BV Labs, results relate to the supplied samples tested.
This Certificate shall not be reproduced except in full, without the written approval of the laboratory.
Reference Method suffix “m” indicates test methods incorporate validated modifications from specific reference methods to improve performance.
* RPDs calculated using raw data. The rounding of final results may result in the apparent difference.
(1) Air sampling canisters have been cleaned in accordance with U.S. EPA Method TO15. At the end of the cleaning, evacuation, and pressurization cycles, one canister was selected and was pressurized with Zero Air. This canister was then analyzed via TO15 on a GC/MS. The canister must have been found to contain <0.2 ppbv concentration of all target analytes in order for the batch to have been considered clean. Each canister also underwent a leak check prior to shipment.

Please Note: SUMMA® canister samples will be retained by Bureau Veritas Laboratories for a period of 5 calendar days or as contractually agreed from the date of this report, after which time they will be cleaned for reuse. If you require a longer sample storage period, please contact your service representative.

Bureau Veritas Laboratories 6740 Campobello Road, Mississauga, Ontario, L5N 2L8 Tel: (905) 817-5700 Toll-Free: 800-563-6266 Fax: (905) 817-5777 www.bvlabs.com

Microbiology testing is conducted at 6660 Campobello Rd. Chemistry testing is conducted at 6740 Campobello Rd.

GENERAL COMMENTS

WS# 6449646: Vinyl Acetate was less than 60% recovery in the reference standard. There were no positives found for Vinyl Acetate therefore there should be no effect on the data.

Results relate only to the items tested.

QUALITY ASSURANCE REPORT

QA/QC Batch	Init	QC Type	Parameter	Date Analyzed	Value	Recovery	UNITS	QC Limits

LCS: A blank matrix sample to which a known amount of the analyte, usually from a second source, has been added. Used to evaluate method accuracy.

Method Blank: A blank matrix containing all reagents used in the analytical procedure. Used to identify laboratory contamination.

Surrogate: A pure or isotopically labeled compound whose behavior mirrors the analytes of interest. Used to evaluate extraction efficiency.

(1) Recovery or RPD for this parameter is outside control limits. The overall quality control for this analysis meets acceptability criteria.

APPENDIX B

Quality Control/Quality Assurance

QUALITY ASSURANCE/QUALITY CONTROL

In conjunction with the field investigations completed to date, a Quality Assurance/Quality Control (QA/QC) program was implemented to ensure the integrity of the groundwater sampling and soil vapour sampling and analytical testing results.

1.0 FIELD PROGRAM

All sampling activities were completed in accordance with Golder's Technical Field Procedures by trained Golder personnel. All field activities were documented in field notes and results were recorded on standard field forms. All field equipment involved in the sampling and monitoring of groundwater and soil vapour were decontaminated in accordance with Golder's Technical Procedures. Groundwater and soil vapour samples were collected using appropriate handling protocols and were placed in sample containers provided by Bureau Veritas Laboratories (BVL).

All re-useable field equipment involved in collecting samples was decontaminated between each sampling location. Groundwater and soil vapour samples were not directly contacted by hand. To help prevent cross-contamination, a new pair of clean nitrile gloves was used for the collection of each sample.

Samples were given unique identification numbers and the sampling containers were preserved in ice-filled coolers. Samples were logged onto formal chain-of-custody documents and transported to BVL's Mississauga Environmental Laboratory for chemical analysis. BVL is accredited by the Standards Council of Canada (SCC).

Two blind field duplicate groundwater sample were submitted for analysis of benzene, toluene, ethylbenzene, xylenes (BTEX), petroleum hydrocarbon (PHC) Fractions F1 to F4 and dissolved lead. Trip and field blanks were submitted for analysis, to evaluate the potential for cross-contamination during the sampling and transportation of the samples.

Soil Vapour

Field QA/QC for soil vapour sample collection included:

- using new, dedicated high density polyethylene (HDPE) tubing for each sample to avoid cross contamination;
- calibrating field instruments prior to use;
- conducting a helium leak tracer test for each probe;
- sealing all probes when not in use;
- storing all sampling materials away from potential sources of contamination;
- following chain-of-custody procedures during all sampling events; and
- monitoring of the Summa canister vacuums in the field before and after sampling using a pressure gauge supplied by BVL.

For each sampling event, one field duplicate soil vapour sample and one ambient air sample were submitted to the laboratory for the analysis of BTEX, PHC Fractions F1 and F2 and volatile organic compounds (VOCs) as part of the soil vapour program.

2.0 LABORATORY PROGRAM

The laboratory QA/QC program included adherence to laboratory sampling and analysis protocols (e.g., hold times, sample containers, preservatives, detection limits and approved methodology) and the analysis of laboratory method blanks, laboratory sample duplicates, surrogate recovery and chemical spikes.

The laboratory method blank analysis results were used to detect interferences or impurities introduced by the laboratory equipment, reagents, or solvents. Surrogate recovery is analyzed by spiking samples with known quantities of surrogate chemicals which have similar chemical properties to the parameters being analyzed. The reported recovery provides an indication of the analytical method accuracy for that sample. Matrix spikes were conducted by adding known concentrations of the analyte of interest to a sample to evaluate the effects of the sample matrix on the test method. The analysis of selected samples in duplicate is used to evaluate the reproducibility of the test method.

Soil Vapour

The Summa canisters were batch certified as clean before delivery to the Site. The Summa canister vacuums measured in June, were between -27.0 to -29.0 inches Hg [vac] before sampling and were measured between 0.0 and -5.0 inches Hg [vac] after sampling. The Summa canister vacuums measured in November, were between -27.0 and -28.0 inches Hg [vac] before sampling and were measured to be -5.0 inches Hg [vac] after sampling.

The laboratory QA/QC included the analyses of method blanks, laboratory control samples and continuing calibration verification standards.

3.0 DATA RECEPTION

Once laboratory analytical results were received, Golder completed a review of field and laboratory quality. This included review of laboratory QC performance to confirm results are within acceptance criteria, as well as evaluation of field duplicate and blank results to confirm they were within alert limits. Upon receipt of the analytical results, Relative Percent Difference (RPD) values between the original samples and their blind field duplicates were calculated as follows:

$$\text{RPD\%} = \frac{|S - D|}{\frac{1}{2}(S + D)} \times 100$$

Where: RPD = relative percent difference
S = sample value
D = blind field duplicate or replicate value.

Since analytical error increases near the Reportable Detection Limit (RDL), the RPD was only calculated where the concentrations of both the original and blind field duplicate samples were greater than five times the RDL. The calculated RPDs were then compared to parameter specific alert limits.

Exceedances of the QC acceptance or alert criteria were investigated with the laboratory and, if warranted, a corrective action report was requested from the laboratory.

4.0 DATA QUALITY REVIEW RESULTS

Results of the data quality review are summarized in Table B1. The RPD calculations and QC results are presented in Tables B2 to B6.

Two field duplicates, one field blank and one trip blank were submitted to the laboratory as part of the groundwater QC program.

For each sampling event, one field duplicate, and one ambient air sample were submitted to the laboratory as part of the soil vapour QC program.

Based on the data quality review, no data quality issues were identified as part of the groundwater QC program.

Based on the data quality review, 12 data quality issues were identified as part of the soil vapour QC program.

Eleven of the data quality issues are considered unlikely to have any material effect on the quality of the data. Two of the data quality issues are for one of the ambient air samples. Elevated concentrations were likely due to variables associated with the Site. This data is considered suspect. All of the data quality issues are discussed in Table B1.

5.0 SUMMARY OF RESULTS

Based on the review of the QA/QC results, the data from one of the ambient air samples is considered suspect. All other data is considered reliable.

Table B1
Summary of Quality Control Sample Results
1660 Merivale Road, Ottawa, Ontario
Imperial Oil Limited

BVL Job Number	Matrix	BVL Sample ID Affected	Test Affected	Data Quality Issue	Comments
B9H4030	Soil Vapour	KCI078 KCI079 KCI080	Vinyl Acetate	Lab control sample recovery (56%) outside acceptance range of 70-130% for vinyl acetate for batch 6206012.	This data quality issue may represent a potential low bias for this sample. As the recovery for this parameter (vinyl acetate) is outside the control limits, upon review BVL indicated that the overall quality control for this analysis meets laboratory acceptability criteria. Under these circumstances, the vinyl acetate data reported can be considered reliable.
		KCI078 KCI079	Methyl Ethyl Ketone (2-Butanone)	Field duplicate samples SV16-01 and DUP A exceed the alert limit for methyl ethyl ketone (2-butanone) (52%).	A quality check of the data yielded similar results. Sample non-homogeneity is believed to be the root cause. Methyl ethyl ketone (2-butanone) concentrations in both the sample and the field duplicate were below the regulatory guideline, indicating that there will likely not be a material effect on the interpretation of the results of this parameter. Under these circumstances, the methyl ethyl ketone (2-butanone) data reported can be considered reliable.
		KCI078 KCI079	F2, C10-C16 (as Decane)	Field duplicate samples SV16-01 and DUP A exceed the alert limit for F2, C10-C16 (as decane) (121%).	A quality check of the data yielded similar results. Sample non-homogeneity is believed to be the root cause. F2 concentrations in both the sample and the field duplicate were below the regulatory guideline, indicating that there will likely not be a material effect on the interpretation of the results of this parameter. Under these circumstances, the F2 data reported can be considered reliable.
B9H4037	Ambient Air	KCI089	Vinyl Acetate	Lab control sample recovery (56%) outside acceptance range of 70-130% for vinyl acetate for batch 6206012.	This data quality issue may represent a potential low bias for this sample. As the recovery for this parameter (vinyl acetate) is outside the control limits, upon review BVL indicated that the overall quality control for this analysis meets laboratory acceptability criteria. Under these circumstances, the vinyl acetate data reported can be considered reliable.
		KCI089	2-Propanone	Field blank sample exceeded alert limits for 2-propanone.	The field blank sample was prepared from ambient air present on site. Therefore, the concentrations are likely present from variables associated with the site. All samples associated with with this field blank may be biased high for 2-propanone. Thus, this 2-propanone data associated should be considered suspect.
B9L2439	Groundwater	n/a	n/a	No data quality issues were identified.	The data are considered reliable.
B9L2700	Groundwater	n/a	n/a	No data quality issues were identified.	The data are considered reliable.
B9L4405	Water	n/a	n/a	No data quality issues were identified.	The data are considered reliable.
B9L4415	Groundwater	n/a	n/a	No data quality issues were identified.	The data are considered reliable.

Table B1
Summary of Quality Control Sample Results
1660 Merivale Road, Ottawa, Ontario
Imperial Oil Limited

BVL Job Number	Matrix	BVL Sample ID Affected	Test Affected	Data Quality Issue	Comments
B9V9715	Soil Vapour	LHI693 and LHI694	Ethanol (ethyl alcohol)	Lab control sample recovery (131%) outside acceptance range of 70-130% for ethanol for batch 6452470.	This data quality issue may represent a potential high bias for this sample. Ethanol (ethyl alcohol) concentrations in the samples and the lab duplicate were below the regulatory guideline, indicating that there will likely not be a material effect on the interpretation of the results of this parameter. Under these circumstances, the ethanol (ethyl alcohol) data reported can be considered reliable.
		LHI695	Ethanol (ethyl alcohol)	Lab control sample recovery (140%) outside acceptance range of 70-130% for ethanol for batch 6457320.	This data quality issue may represent a potential high bias for this sample. Ethanol (ethyl alcohol) concentrations in the field duplicate was below the regulatory guideline, indicating that there will likely not be a material effect on the interpretation of the results of this parameter. Under these circumstances, the ethanol (ethyl alcohol) data reported can be considered reliable.
		LHI693 LHI694	2-Propanol	Lab control sample recovery (67%) outside acceptance range of 70-130% for 2-propanol for batch 6452470.	This data quality issue may represent a potential low bias for this sample. As the recovery for this parameter (2-propanol) is outside the control limits, upon review BVL indicated that the overall quality control for this analysis meets laboratory acceptability criteria. Under these circumstances, the 2-propanol data reported can be considered reliable.
		LHI695	Vinyl Acetate	Lab control sample recovery (52%) outside acceptance range of 70-130% for vinyl acetate for batch 6457320.	This data quality issue may represent a potential low bias for this sample. As the recovery for this parameter (vinyl acetate) is outside the control limits, upon review BVL indicated that the overall quality control for this analysis meets laboratory acceptability criteria. Under these circumstances, the vinyl acetate data reported can be considered reliable.
		LHI693 LHI694	Vinyl Acetate	Lab control sample recovery (56%) outside acceptance range of 70-130% for vinyl acetate for batch 6452470.	This data quality issue may represent a potential low bias for this sample. As the recovery for this parameter (vinyl acetate) is outside the control limits, upon review BVL indicated that the overall quality control for this analysis meets laboratory acceptability criteria. Under these circumstances, the vinyl acetate data reported can be considered reliable.
B9V9727	Ambient Air	LHI888	Naphthalene	Lab control sample recovery (134%) outside acceptance range of 70-130% for naphthalene for batch 6449646.	This data quality issue may represent a potential high bias for this sample. Naphthalene concentration in the field blank was below the regulatory guideline and below the detection limit, indicating that there will likely not be a material effect on the interpretation of the results of this parameter. Under these circumstances, the naphthalene data reported can be considered reliable.
		LHI888	Vinyl Acetate	Lab control sample recovery (49%) outside acceptance range of 70-130% for vinyl acetate for batch 6449646.	This data quality issue may represent a potential low bias for this sample. As the recovery for this parameter (vinyl acetate) is outside the control limits, upon review BVL indicated that the overall quality control for this analysis meets laboratory acceptability criteria. Under these circumstances, the vinyl acetate data reported can be considered reliable.

2018 GROUNDWATER AND SOIL VAPOUR PROBE MONITORING AND SAMPLING REPORT
1660 MERIVALE ROAD, OTTAWA, ONTARIO
SAP 88001627

INTRODUCTION

Golder Associates Ltd. (Golder) was retained by Imperial Oil Limited (Imperial) to conduct a groundwater and soil vapour probe monitoring and sampling program at the former retail fuel outlet at 1660 Merivale Road, Ottawa, Ontario (the Site) (Figure 1 and 2). The fieldwork was conducted on July 2, August 14 to 16, and October 29, 2018.

SCOPE OF WORK

Groundwater

- Annual monitoring of 17 existing on- and off-Site groundwater monitoring wells for vapour concentrations, depth to groundwater and the thickness, if present, of light non-aqueous phase liquid (LNAPL);
- Collecting annual groundwater samples from nine on-Site (TH1 to TH7, MW15-01, and MW15-02) and eight off-Site (TH8, TH9, TH11, TH12, TH100 to TH102, and MW16-01) monitoring wells using the low-flow sampling method for laboratory analysis of benzene, toluene, ethylbenzene, xylenes (BTEX), petroleum hydrocarbon (PHC) fractions F1 to F4, and dissolved lead;
- Comparing the groundwater analytical results to the following guidelines:
  - Ministry of the Environment, Conservation and Parks' (MECP) Table 3 Full Depth Generic Site Condition Standards for groundwater in medium and fine textured soil in a non-potable groundwater from the document titled "Soil, Ground Water, and Sediment Standards for Use Under Part XV.1 of the Environmental Protection Act," dated April 15, 2011 (hereafter referred to as the Table 3 Standards).

Soil vapour

- Collecting semi-annual soil vapour samples from two on-Site soil vapour probes (SV16-01 and SV16-02) for laboratory analysis of BTEX, PHC fractions F1 and F2, and volatile organic compounds (VOCs);

- Comparing the soil vapour analytical results to the following guidelines:
  - Health-Based Indoor Air Criteria provided by MECP Modified Generic Risk Assessment (Tier 2) Spreadsheet Model (lowest risk model) (November 1, 2016) for residential land use.
  - Soil vapour screening levels (SVSL) were generated for residential buildings with a basement (probe depth 0 to 30 centimetres below base of the building foundation).

METHODOLOGY

Groundwater

Combustible Gas Headspace Concentrations

- Headspace vapour concentrations were measured using an RKI Eagle 2® Combustible Organic Vapour Monitor (OVM) with methane elimination. The OVM was bump tested daily to 400 parts per million by volume (ppmv) using a hexane standard. If the bump test differed more than 10% from the known concentration, the OVM was adjusted to match the exact concentration of the calibration gas. Calibrations were logged at the start of each day.
- Vapour concentrations were taken from inside of each well casing by placing the OVM nozzle about 15 to 30 centimetres (cm) below the top of casing (TOC). The OVM reading was taken immediately after the cap had been removed from the top of the monitoring well casing, to minimize the loss of volatiles from within the casing. The peak OVM reading was recorded.

Depth to Groundwater and LNAPL Thickness

- Depth to groundwater was measured and, if present, the thickness of LNAPL using an oil/water interface probe. If LNAPL is detected, then its presence is confirmed visually using a bailer. Prior to use in each well, the interface probe was cleaned using a phosphate-free detergent and water solution and rinsed with deionized water to minimize the potential for cross-contamination. Depth to groundwater measurements were taken from the TOC.

Low Flow Sampling

- Groundwater samples were collected using the low-flow sampling method. Water was pumped from each well, at a rate of 0.1 to 1 L/min, using low density polyethylene (LDPE) tubing connected to a peristaltic pump with a portion of silicon tubing. Routine water quality indicator parameters were measured during pumping using a multi-parameter water quality meter and flow through cell. The parameters measured included electrical conductivity (EC), pH, temperature, dissolved oxygen and reduction potential. Calibration of the meter was completed as per the manufacturer's instructions. Purged water was retained on-site in a 20-litre (L) pails for future off-site disposal.
- Eighteen samples, including two duplicates, one field blank, one trip blank and fourteen groundwater samples, were collected between August 14 and 16, 2018.
- Monitoring wells TH11, TH12, and TH102 were not monitored or sampled during this sampling event. Monitoring well TH11 was inaccessible as it was covered over with asphalt, TH12 was damaged, and TH102's cover was seized and could not be accessed.

Laboratory Analysis of Groundwater Samples

- Samples were submitted under chain-of-custody to Maxxam Analytics Inc. (Maxxam) in Mississauga, Ontario, a Standards Council of Canada (SCC) accredited laboratory, for analysis of BTEX, PHC Fractions F1 to F4, and dissolved lead.
- Groundwater samples for BTEX and PHC Fraction F1 analysis were placed in 44-millilitre (mL) clear glass vials provided by the laboratory and preserved with sodium bisulphate as a microbial inhibitor. The groundwater samples for PHC Fractions F2 to F4 analysis were placed in 250-mL amber glass bottles and preserved with sodium bisulphate.
- Groundwater samples for dissolved lead analysis were placed in 120-mL high-density polyethylene (HDPE) bottles, field filtered, and preserved with nitric acid.
- All sampling containers were placed in an ice-filled cooler immediately following sampling and transported to Maxxam for chemical analysis.

Waste Purge Water Removal

- Badger Daylighting of Ottawa, Ontario, a MECP licensed waste hauler, was used to recover approximately 50 L of waste purged groundwater from the Site on September 14, 2018. The liquid was disposed of at an MECP approved waste receiver.

Soil Vapour

Weather Conditions during Sampling

- Weather conditions[1] on July 3, 2018 were clear and sunny. Outdoor air temperatures were between 17.2 to 33.5 degrees Celsius (°C), relative humidity was between 28 to 89 percent (%), and barometric pressure was measured between 100.39 to 101.07 kilopascals (kPa) (Environmental Canada 2018, internet site).
- Weather conditions[2] on October 29, 2018 were clear and sunny. Outdoor air temperatures were between 0.9 to 4.3 °C, relative humidity was between 79 to 98%, and barometric pressure was measured between 99.05 to 99.84 kPa (Environmental Canada 2018, internet site).

Probe Leak Testing

- The soil vapour probes (SV16-01 and SV16-02) were leak tested on July 3 and October 29, 2018, to assess whether ambient air was penetrating the ground surface (e.g., along the outside of the tubing) and mixing with soil vapours during sampling.
- A plastic shroud was placed over the probe and the sampling equipment. The high-density polyethylene (HDPE) tubing leading from the probe connected to the sample train and exited through a hole on the top of the shroud. The shroud was then filled with helium from a cylinder. The helium concentration inside the shroud was measured using a helium detector. Once helium concentrations inside the shroud reached at least 6.4 percent helium by volume during the July sampling event, and 29.3 percent helium by volume

[1] Weather information was taken from the meteorological station (*2018 Hourly Data Report. Ottawa INTL A, Ontario*) located closest to the Site.

[2] Weather information was taken from the meteorological station (*2018 Hourly Data Report. Ottawa INTL A, Ontario*) located closest to the Site.

during the October sampling event, the helium flow was turned off. Soil vapour was monitored in a Tedlar sample bag, and the sample was collected until the Tedlar sample bag was full. The Tedlar bag was disconnected from the sample train, and the helium detector was connected to the Tedlar sample bag where maximum helium concentrations were recorded.

Soil Vapour Sampling

- Prior to sample collection, at least three probe volumes of soil gas were purged from the probes. An organic vapour detection system was used to measure organic vapour concentrations in the soil vapour collected in Tedlar bags.
- Soil vapour samples were collected following procedures outlined in the United States Environmental Protection Agency (USEPA) Method TO-15. A flow regulator supplied by Maxxam, was used to regulate the volumetric soil vapour flow rate into the Summa canister at a flow rate of 70 millilitres per minute (mL/min) during a 20-minute sampling period, or 140 mL/min during a 10-minute sampling period.
- A 1.4 litre (L) Summa canister, batch certified by Maxxam to be free of contaminants, was fitted with a flow regulator for sample collection. Prior to use, the initial Summa canister pressure was confirmed, with a vacuum gauge, to be less than or equal to -28 inches of mercury during the July sampling event, and -25 inches of mercury during the October sampling event, when gauged.

Laboratory Analysis of Soil Vapour Samples

- Soil vapour samples were collected and submitted to the Mississauga facility of Maxxam, a Standards Council of Canada (SCC) accredited laboratory, for analysis of BTEX, PHC Fractions F1 and F2, and VOCs. During the July 2018 sampling event, four samples, including one field duplicate, one field blank and two soil vapour probe samples were submitted to Maxxam for analysis. During the October 2018 sampling event, four samples, including one field duplicate, one field blank and two soil vapour probe samples were submitted to Maxxam for analysis.

RESULTS

Groundwater

Monitoring Well Headspace Vapour (Date; Range)

- August 14 to 16, 2018; not detected to 100% LEL (Table 1)

LNAPL Occurrence (Date; Observations)

- August 14 to 16, 2018; not detected in any monitoring wells (Table 1)

Groundwater Monitoring (Date; Depth to Groundwater Range; Groundwater Direction)

- August 14 to 16, 2018; depth to groundwater ranged from 2.44 to 3.83 metres below ground surface (mbgs) (Table 1); inferred to the southwest (Figure 3)

Groundwater Analytical Results (Date; Parameters; No. of wells)

- August 14 to 16, 2018; benzene, PHC F1, F2 and F4 and dissolved lead parameters; exceedances were detected in four sampling locations (Table 2 and Figure 4)

Probe Leak Test Results (Date; Probe; Result expressed as % helium)

- July 3, 2018; SV16-01 and SV16-02; 0% (Table 3)
- October 29, 2018; SV16-01 and SV16-02; 0% (Table 3)

Field Organic Vapour Results (Date; Range)

- July 3, 2018; 2,537 parts per billion by volume (ppbv) to 8,102 ppbv (Table 3)
- October 29, 2018; 14 ppbv to 308 ppbv (Table 3)

Soil Vapour Analytical Results (Date; Parameters; No. of probes)

- July 3, 2018; not applicable; no exceedances (Table 4 and Figure 5)
- October 29, 2018; not Applicable; no exceedances (Table 4 and Figure 5)

FIELD AND LABORATORY QUALITY ASSURANCE / QUALITY CONTROL

- Copies of the associated laboratory certificates of analysis are provided in Appendix A.
- No data quality issues were identified with groundwater samples. The data presented in this report are considered to be reliable
- The analytical results of the soil vapour data produced four data quality issues. The 2-propanone, F1-BTEX and C6-C10 (as toluene), F2 and C10-C16 (as decane), and hexane soil vapour data are considered suspect during the July 2018 sampling event. All samples associated with this field blank may be biased high, and should be considered suspect. Although the QA/QC data were biased high for these compounds, the sample data were well below the Soil Vapour Screening Levels, and therefore there will not be a material effect on the interpretation of the results. All other data, field duplicate, and field blank concentrations were within acceptable RPD alert limits. Data presented in this report are considered to be reliable.

CLOSURE

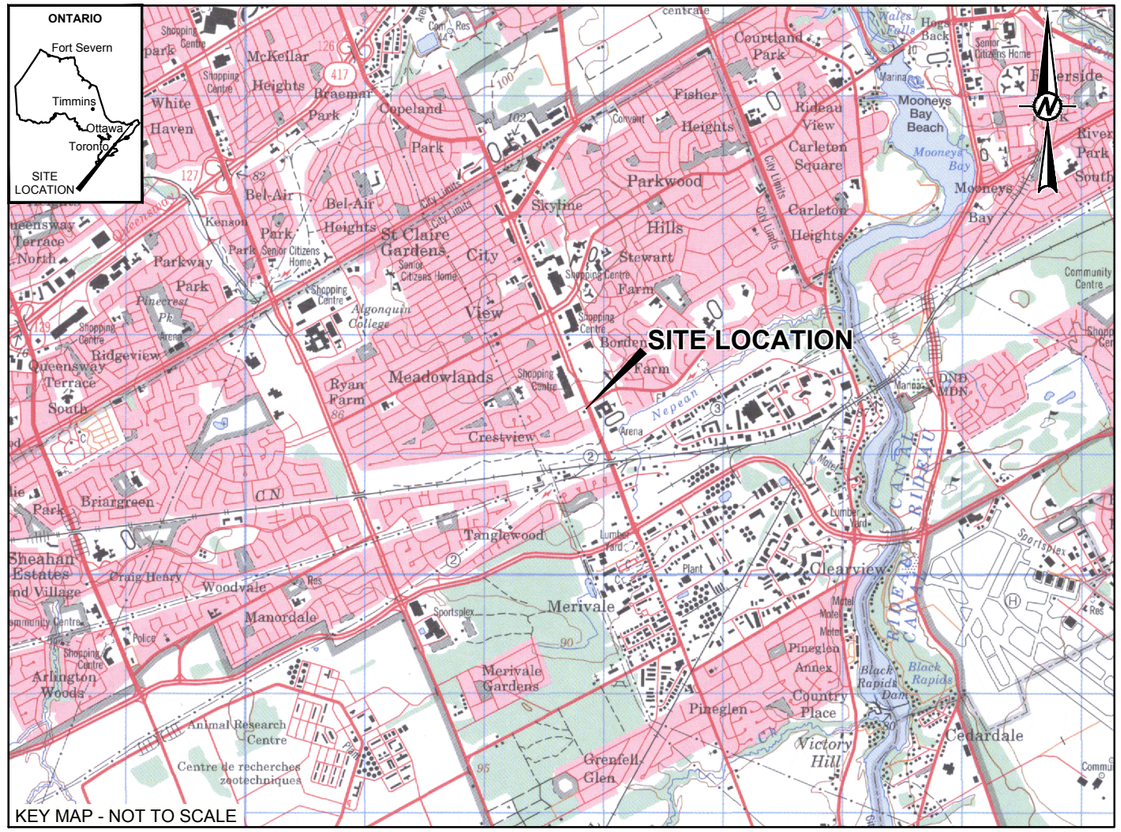
LIMITATION OF LIABILITY, SCOPE OF REPORT AND THIRD PARTY RELIANCE



This report has been prepared and the work referred to in this report has been undertaken by Golder Associates Ltd. for Imperial Oil Limited. It is intended for the sole and exclusive use of Imperial Oil Limited, its affiliated companies and partners and their respective insurers, agents, employees and advisors (collectively, Imperial Oil). Any use, reliance on or decision made by any person other than Imperial Oil based on this report is the sole responsibility of such other person. Imperial Oil and Golder Associates Ltd. make no representation or warranty to any other person with regard to this report and the work referred to in this report and they accept no duty of care to any other person or any liability or responsibility whatsoever for any losses, expenses, damages, fines, penalties or other harm that may be suffered or incurred by any other person as a result of the use of, reliance on, any decision made or any action taken based on this report or the work referred to in this report.

The investigation undertaken by Golder Associates Ltd. with respect to this report and any conclusions or recommendations made in this report reflect Golder Associates Ltd.'s judgement based on the site conditions observed at the time of the site inspection on the date(s) set out in this report and on information available at the time of preparation of this report. This report has been prepared for specific application to this site and it is based, in part, upon visual observation of the site, subsurface investigation at discrete locations and depths, and specific analysis of specific chemical parameters and materials during a specific time interval, all as described in this report. Unless otherwise stated, the findings cannot be extended to previous or future site conditions, portions of the site which were unavailable for direct investigation, subsurface locations which were not investigated directly, or chemical parameters, materials or analysis which were not addressed. Substances other than those addressed by the investigation described in this report may exist within the site, substances addressed by the investigation may exist in areas of the site not investigated and concentrations of substances addressed which are different than those reported may exist in areas other than the locations from which samples were taken.

If site conditions or applicable standards change or if any additional information becomes available at a future date, modifications to the findings, conclusions and recommendations in this report may be necessary.

Other than by Imperial Oil, copying or distribution of this report or use of or reliance on the information contained herein, in whole or in part, is not permitted without the express written permission of Golder Associates Ltd. Nothing in this report is intended to constitute or provide a legal opinion.

Notes:

[(a)] TH1 to TH5 and TH7 elevations are relative to local benchmark (centre of storm sewer catch basin located approximately 5 metres west of kiosk).

[(b)] MW15-01 , MW15-02 and TH6 elevations are relative to local benchmark (ground surface at TH7).

[(c)] Well was not monitored due to bentonite in the casing prohibiting interface probe to descend

D - well was destroyed

LEL - Lower explosive limit

masl - metres above sea level

mbgs - metres below ground surface

mbtoc - metres below top of casing

mm - millimetres

NA - not available

n/d - not detected

n/m - not measured

ppmv - parts per million by volume

[c] F1 fraction does not include BTEX; however, the proponent has the choice as to whether or not to subtract BTEX from the analytical result.

Bold/Underlined - value exceeds criteria/standard
BTEX - benzene, toluene, ethylbenzene, xylenes
F1, F2, F3, F4 - petroleum hydrocarbon fractions 1, 2, 3 and 4
RDL - reportable detection limit
µg/L - micrograms per litre
< - less than

Remarks:

Maxxam Analytics' laboratories are accredited to ISO/IEC 17025:2005 for specific parameters on scopes of accreditation. Unless otherwise noted, procedures used by Maxxam are based upon recognized Provincial, Federal or US method compendia such as CCME, MDDELCC, EPA, APHA.

All work recorded herein has been done in accordance with procedures and practices ordinarily exercised by professionals in Maxxam's profession using accepted testing methodologies, quality assurance and quality control procedures (except where otherwise agreed by the client and Maxxam in writing). All data is in statistical control and has met quality control and method performance criteria unless otherwise noted. All method blanks are reported; unless indicated otherwise, associated sample data are not blank corrected. All samples were analyzed within hold time unless otherwise flagged.

Maxxam Analytics' liability is limited to the actual cost of the requested analyses, unless otherwise agreed in writing. There is no other warranty expressed or implied. Maxxam has been retained to provide analysis of samples provided by the Client using the testing methodology referenced in this report. Interpretation and use of test results are the sole responsibility of the Client and are not within the scope of services provided by Maxxam, unless otherwise agreed in writing.

Solid sample results, except biota, are based on dry weight unless otherwise indicated. Organic analyses are not recovery corrected except for isotope dilution methods.
Results relate to samples tested.
This Certificate shall not be reproduced except in full, without the written approval of the laboratory.

Reference Method suffix "m" indicates test methods incorporate validated modifications from specific reference methods to improve performance.

* RPDs calculated using raw data. The rounding of final results may result in the apparent difference.

(1) Air sampling canisters have been cleaned in accordance with U.S. EPA Method TO15. At the end of the cleaning, evacuation, and pressurization cycles, one canister was selected and was pressurized with Zero Air. This canister was then analyzed via TO15 on a GC/MS. The canister must have been found to contain <0.2 ppbv concentration of all target analytes in order for the batch to have been considered clean. Each canister also underwent a leak check prior to shipment.

Please Note: SUMMA® canister samples will be retained by Maxxam for a period of 5 calendar days or as contractually agreed from the date of this report, after which time they will be cleaned for reuse. If you require a longer sample storage period, please contact your service representative.

LCS: A blank matrix sample to which a known amount of the analyte, usually from a second source, has been added. Used to evaluate method accuracy.

Method Blank: A blank matrix containing all reagents used in the analytical procedure. Used to identify laboratory contamination.

Surrogate: A pure or isotopically labeled compound whose behavior mirrors the analytes of interest. Used to evaluate extraction efficiency.

(1) Recovery or RPD for this parameter is outside control limits. The overall quality control for this analysis meets acceptability criteria.

Field Duplicate RPD	X			

Has CoA been signed off (Yes/No)?:	Yes
Has lab warranted all tests were in statistical control in CoA (Yes/No)?:	Yes
Has lab warranted all tests were analyzed following SOP's in CoA (Yes/No)?:	Yes
Were all samples analyzed within hold times (Yes/No)?:	Yes
All volatiles samples methanol extracted (if required) within 24 hours (Yes/No)?:	n/a
Is Chain of Custody completed and signed (Yes/No)?:	Yes
Were sample temperatures acceptable when they reached lab (Yes/No)?:	n/a

Is data considered to be reliable (Yes/No/Suspect)?: Yes

If answer is "No", describe and provide rationale:

Volatile Organics in Air (TO-15) (1)	1	BRL SOP-00304	EPA TO-15 m

Remarks:

Maxxam Analytics' laboratories are accredited to ISO/IEC 17025:2005 for specific parameters on scopes of accreditation. Unless otherwise noted, procedures used by Maxxam are based upon recognized Provincial, Federal or US method compendia such as CCME, MDDELCC, EPA, APHA.

All work recorded herein has been done in accordance with procedures and practices ordinarily exercised by professionals in Maxxam's profession using accepted testing methodologies, quality assurance and quality control procedures (except where otherwise agreed by the client and Maxxam in writing). All data is in statistical control and has met quality control and method performance criteria unless otherwise noted. All method blanks are reported; unless indicated otherwise, associated sample data are not blank corrected. All samples were analyzed within hold time unless otherwise flagged.

Maxxam Analytics' liability is limited to the actual cost of the requested analyses, unless otherwise agreed in writing. There is no other warranty expressed or implied. Maxxam has been retained to provide analysis of samples provided by the Client using the testing methodology referenced in this report. Interpretation and use of test results are the sole responsibility of the Client and are not within the scope of services provided by Maxxam, unless otherwise agreed in writing.

Solid sample results, except biota, are based on dry weight unless otherwise indicated. Organic analyses are not recovery corrected except for isotope dilution methods.
Results relate to samples tested.
This Certificate shall not be reproduced except in full, without the written approval of the laboratory.

Reference Method suffix "m" indicates test methods incorporate validated modifications from specific reference methods to improve performance.

* RPDs calculated using raw data. The rounding of final results may result in the apparent difference.

(1) Air sampling canisters have been cleaned in accordance with U.S. EPA Method TO15. At the end of the cleaning, evacuation, and pressurization cycles, one canister was selected and was pressurized with Zero Air. This canister was then analyzed via TO15 on a GC/MS. The canister must have been found to contain <0.2 ppbv concentration of all target analytes in order for the batch to have been considered clean. Each canister also underwent a leak check prior to shipment.

Please Note: SUMMA® canister samples will be retained by Maxxam for a period of 5 calendar days or as contractually agreed from the date of this report, after which time they will be cleaned for reuse. If you require a longer sample storage period, please contact your service representative.

LCS: A blank matrix sample to which a known amount of the analyte, usually from a second source, has been added. Used to evaluate method accuracy.

Method Blank: A blank matrix containing all reagents used in the analytical procedure. Used to identify laboratory contamination.

Surrogate: A pure or isotopically labeled compound whose behavior mirrors the analytes of interest. Used to evaluate extraction efficiency.

(1) Recovery or RPD for this parameter is outside control limits. The overall quality control for this analysis meets acceptability criteria.

Are All Laboratory QC Within Acceptance Criteria (Yes, No, Not Applicable)?

	Yes	No	NA	Comments
Instrument Surrogate Recovery	X			All laboratory QC results are within
Extraction Surrogate Recovery			X	acceptance criteria.
Method Blank Concentration	X			
Matrix Duplicate RPD			X	
Matrix Spike Recovery			X	
Lab Control Sample Recovery	X			

Are All Field QC Samples Within Alert Limits (Yes, No, Not Applicable)?

	Yes	No	NA	Comments
Field Blank Concentration		X		Field blank sample exceeded alert limits for
Trip Blank Concentration			X	2-propanone, hexane, F1 and F2. All remaining field
Field Duplicate RPD			X	QC samples are within alert limits.

Has CoA been signed off (Yes/No)?:	Yes
Has lab warranted all tests were in statistical control in CoA (Yes/No)?:	Yes
Has lab warranted all tests were analyzed following SOP's in CoA (Yes/No)?:	Yes
Were all samples analyzed within hold times (Yes/No)?:	Yes
All volatiles samples methanol extracted (if required) within 24 hours (Yes/No)?:	n/a
Is Chain of Custody completed and signed (Yes/No)?:	Yes
Were sample temperatures acceptable when they reached lab (Yes/No)?:	n/a

Is data considered to be reliable (Yes/No/Suspect)?: Suspect

If answer is "No", describe and provide rationale: Please see QA/QC appendix.

Remarks:

Maxxam Analytics' laboratories are accredited to ISO/IEC 17025:2005 for specific parameters on scopes of accreditation. Unless otherwise noted, procedures used by Maxxam are based upon recognized Provincial, Federal or US method compendia such as CCME, MDDELCC, EPA, APHA.

All work recorded herein has been done in accordance with procedures and practices ordinarily exercised by professionals in Maxxam's profession using accepted testing methodologies, quality assurance and quality control procedures (except where otherwise agreed by the client and Maxxam in writing). All data is in statistical control and has met quality control and method performance criteria unless otherwise noted. All method blanks are reported; unless indicated otherwise, associated sample data are not blank corrected. Where applicable, unless otherwise noted, Measurement Uncertainty has not been accounted for when stating conformity to the referenced standard. All samples were analyzed within hold time unless otherwise flagged.

Maxxam Analytics' liability is limited to the actual cost of the requested analyses, unless otherwise agreed in writing. There is no other warranty expressed or implied. Maxxam has been retained to provide analysis of samples provided by the Client using the testing methodology referenced in this report. Interpretation and use of test results are the sole responsibility of the Client and are not within the scope of services provided by Maxxam, unless otherwise agreed in writing. Maxxam is not responsible for the accuracy or any data impacts, that result from the information provided by the customer or their agent.

Solid sample results, except biota, are based on dry weight unless otherwise indicated. Organic analyses are not recovery corrected except for isotope dilution methods.
Results relate to samples tested. When sampling is not conducted by Maxxam, results relate to the supplied samples tested.
This Certificate shall not be reproduced except in full, without the written approval of the laboratory.

Reference Method suffix "m" indicates test methods incorporate validated modifications from specific reference methods to improve performance.

* RPDs calculated using raw data. The rounding of final results may result in the apparent difference.

(1) All CCME PHC results met required criteria unless otherwise stated in the report. The CWS PHC methods employed by Maxxam conform to all prescribed elements of the reference method and performance based elements have been validated. All modifications have been validated and proven equivalent following "Alberta Environment's Interpretation of the Reference Method for the Canada-Wide Standard for Petroleum Hydrocarbons in Soil Validation of Performance-Based Alternative Methods September 2003". Documentation is available upon request. Modifications from Reference Method for the Canada-wide Standard for Petroleum Hydrocarbons in Soil-Tier 1 Method: F2/F3/F4 data reported using validated cold solvent extraction instead of Soxhlet extraction.

Duplicate: Paired analysis of a separate portion of the same sample. Used to evaluate the variance in the measurement.

Matrix Spike: A sample to which a known amount of the analyte of interest has been added. Used to evaluate sample matrix interference.

LCS: A blank matrix sample to which a known amount of the analyte, usually from a second source, has been added. Used to evaluate method accuracy.

Method Blank: A blank matrix containing all reagents used in the analytical procedure. Used to identify laboratory contamination.

Surrogate: A pure or isotopically labeled compound whose behavior mirrors the analytes of interest. Used to evaluate extraction efficiency.

DATA QUALITY REVIEW CHECKLIST - IMPERIAL OIL PROJECTS

Consultant: Golder Associates

Sampling Date: August 15 and 16, 2018

Location: 1660 Merivale Road, Ottawa, ON

Laboratory: Maxxam Analytics Mississauga

Consultant Project Number: 1791706-1155

Sample Submission Number: B8L1946

Are All Laboratory QC Within Acceptance Criteria (Yes, No, Not Applicable)?

	Yes	No	NA	Comments
Instrument Surrogate Recovery	X			All laboratory QC results are within
Extraction Surrogate Recovery	X			acceptance criteria.
Method Blank Concentration	X			
Matrix Duplicate RPD	X			
Matrix Spike Recovery	X			
Lab Control Sample Recovery	X			

Are All Field QC Samples Within Alert Limits (Yes, No, Not Applicable)?

	Yes	No	NA	Comments
Field Blank Concentration			X	No field QC samples were collected.
Trip Blank Concentration			X	
Field Duplicate RPD			X	

Has CoA been signed off (Yes/No)?:	Yes
Has lab warranted all tests were in statistical control in CoA (Yes/No)?:	Yes
Has lab warranted all tests were analyzed following SOP's in CoA (Yes/No)?:	Yes
Were all samples analyzed within hold times (Yes/No)?:	Yes
All volatiles samples methanol extracted (if required) within 24 hours (Yes/No)?:	n/a
Is Chain of Custody completed and signed (Yes/No)?:	Yes
Were sample temperatures acceptable when they reached lab (Yes/No)?:	Yes

Is data considered to be reliable (Yes/No/Suspect)?: Yes

If answer is "No", describe and provide rationale:

Analyses	Quantity	Laboratory Method	Primary Reference
Petroleum Hydro. CCME F1 & BTEX in Water	2	CAM SOP-00315	CCME PHC-CWS m
Petroleum Hydrocarbons F2-F4 in Water (1)	2	CAM SOP-00316	CCME PHC-CWS m

Remarks:

Maxxam Analytics' laboratories are accredited to ISO/IEC 17025:2005 for specific parameters on scopes of accreditation. Unless otherwise noted, procedures used by Maxxam are based upon recognized Provincial, Federal or US method compendia such as CCME, MDDELCC, EPA, APHA.

All work recorded herein has been done in accordance with procedures and practices ordinarily exercised by professionals in Maxxam's profession using accepted testing methodologies, quality assurance and quality control procedures (except where otherwise agreed by the client and Maxxam in writing). All data is in statistical control and has met quality control and method performance criteria unless otherwise noted. All method blanks are reported; unless indicated otherwise, associated sample data are not blank corrected. Where applicable, unless otherwise noted, Measurement Uncertainty has not been accounted for when stating conformity to the referenced standard. All samples were analyzed within hold time unless otherwise flagged.

Maxxam Analytics' liability is limited to the actual cost of the requested analyses, unless otherwise agreed in writing. There is no other warranty expressed or implied. Maxxam has been retained to provide analysis of samples provided by the Client using the testing methodology referenced in this report. Interpretation and use of test results are the sole responsibility of the Client and are not within the scope of services provided by Maxxam, unless otherwise agreed in writing. Maxxam is not responsible for the accuracy or any data impacts, that result from the information provided by the customer or their agent.

Solid sample results, except biota, are based on dry weight unless otherwise indicated. Organic analyses are not recovery corrected except for isotope dilution methods.
Results relate to samples tested. When sampling is not conducted by Maxxam, results relate to the supplied samples tested.
This Certificate shall not be reproduced except in full, without the written approval of the laboratory.

Reference Method suffix "m" indicates test methods incorporate validated modifications from specific reference methods to improve performance.

* RPDs calculated using raw data. The rounding of final results may result in the apparent difference.

(1) All CCME PHC results met required criteria unless otherwise stated in the report. The CWS PHC methods employed by Maxxam conform to all prescribed elements of the reference method and performance based elements have been validated. All modifications have been validated and proven equivalent following "Alberta Environment's Interpretation of the Reference Method for the Canada-Wide Standard for Petroleum Hydrocarbons in Soil Validation of Performance-Based Alternative Methods September 2003". Documentation is available upon request. Modifications from Reference Method for the Canada-wide Standard for Petroleum Hydrocarbons in Soil-Tier 1 Method: F2/F3/F4 data reported using validated cold solvent extraction instead of Soxhlet extraction.

GENERAL COMMENTS

Each temperature is the average of up to three cooler temperatures taken at receipt

Package 1	1.0°C

Note: Bottles received but not listed on the COC. For sample Trip Blank we received 3 containers but the COC said 4.

Results relate only to the items tested.

LCS: A blank matrix sample to which a known amount of the analyte, usually from a second source, has been added. Used to evaluate method accuracy.

Method Blank: A blank matrix containing all reagents used in the analytical procedure. Used to identify laboratory contamination.

Surrogate: A pure or isotopically labeled compound whose behavior mirrors the analytes of interest. Used to evaluate extraction efficiency.

DATA QUALITY REVIEW CHECKLIST - IMPERIAL OIL PROJECTS

Consultant: Golder Associates

Sampling Date: August 16, 2018

Location: 1660 Merivale Road, Ottawa, ON

Laboratory: Maxxam Analytics Mississauga

Consultant Project Number: 1791706-1155

Sample Submission Number: B8L1962

Are All Laboratory QC Within Acceptance Criteria (Yes, No, Not Applicable)?

	Yes	No	NA	Comments
Instrument Surrogate Recovery	X			All laboratory QC results are within
Extraction Surrogate Recovery	X			acceptance criteria.
Method Blank Concentration	X			
Matrix Duplicate RPD			X	
Matrix Spike Recovery			X	
Lab Control Sample Recovery	X			

Are All Field QC Samples Within Alert Limits (Yes, No, Not Applicable)?

	Yes	No	NA	Comments
Field Blank Concentration	X			All field QC samples are within
Trip Blank Concentration	X			alert limits.
Field Duplicate RPD			X	

Has CoA been signed off (Yes/No)?:	Yes
Has lab warranted all tests were in statistical control in CoA (Yes/No)?:	Yes
Has lab warranted all tests were analyzed following SOP's in CoA (Yes/No)?:	Yes
Were all samples analyzed within hold times (Yes/No)?:	Yes
All volatiles samples methanol extracted (if required) within 24 hours (Yes/No)?:	n/a
Is Chain of Custody completed and signed (Yes/No)?:	Yes
Were sample temperatures acceptable when they reached lab (Yes/No)?:	Yes

Is data considered to be reliable (Yes/No/Suspect)?: Yes

If answer is "No", describe and provide rationale:

Analyses	Quantity	Laboratory Method	Primary Reference
Petroleum Hydro. CCME F1 & BTEX in Water	5	CAM SOP-00315	CCME PHC-CWS m
Petroleum Hydrocarbons F2-F4 in Water (1)	5	CAM SOP-00316	CCME PHC-CWS m
Dissolved Metals by ICPMS	5	CAM SOP-00447	EPA 6020B m

Remarks:

Maxxam Analytics' laboratories are accredited to ISO/IEC 17025:2005 for specific parameters on scopes of accreditation. Unless otherwise noted, procedures used by Maxxam are based upon recognized Provincial, Federal or US method compendia such as CCME, MDDELCC, EPA, APHA.

All work recorded herein has been done in accordance with procedures and practices ordinarily exercised by professionals in Maxxam's profession using accepted testing methodologies, quality assurance and quality control procedures (except where otherwise agreed by the client and Maxxam in writing). All data is in statistical control and has met quality control and method performance criteria unless otherwise noted. All method blanks are reported; unless indicated otherwise, associated sample data are not blank corrected. Where applicable, unless otherwise noted, Measurement Uncertainty has not been accounted for when stating conformity to the referenced standard. All samples were analyzed within hold time unless otherwise flagged.

Maxxam Analytics' liability is limited to the actual cost of the requested analyses, unless otherwise agreed in writing. There is no other warranty expressed or implied. Maxxam has been retained to provide analysis of samples provided by the Client using the testing methodology referenced in this report. Interpretation and use of test results are the sole responsibility of the Client and are not within the scope of services provided by Maxxam, unless otherwise agreed in writing. Maxxam is not responsible for the accuracy or any data impacts, that result from the information provided by the customer or their agent.

Solid sample results, except biota, are based on dry weight unless otherwise indicated. Organic analyses are not recovery corrected except for isotope dilution methods.
Results relate to samples tested. When sampling is not conducted by Maxxam, results relate to the supplied samples tested.
This Certificate shall not be reproduced except in full, without the written approval of the laboratory.

Reference Method suffix "m" indicates test methods incorporate validated modifications from specific reference methods to improve performance.

* RPDs calculated using raw data. The rounding of final results may result in the apparent difference.

(1) All CCME PHC results met required criteria unless otherwise stated in the report. The CWS PHC methods employed by Maxxam conform to all prescribed elements of the reference method and performance based elements have been validated. All modifications have been validated and proven equivalent following "Alberta Environment's Interpretation of the Reference Method for the Canada-Wide Standard for Petroleum Hydrocarbons in Soil Validation of Performance-Based Alternative Methods September 2003". Documentation is available upon request. Modifications from Reference Method for the Canada-wide Standard for Petroleum Hydrocarbons in Soil-Tier 1 Method: F2/F3/F4 data reported using validated cold solvent extraction instead of Soxhlet extraction.

QUALITY ASSURANCE REPORT(CONT'D)

QA/QC Batch	Init	QC Type	Parameter	Date Analyzed	Value	Recovery	UNITS	QC Limits
			F4 (C34-C50 Hydrocarbons)	2018/08/22		104	%	60 - 130

Duplicate: Paired analysis of a separate portion of the same sample. Used to evaluate the variance in the measurement.

Matrix Spike: A sample to which a known amount of the analyte of interest has been added. Used to evaluate sample matrix interference.

LCS: A blank matrix sample to which a known amount of the analyte, usually from a second source, has been added. Used to evaluate method accuracy.

Method Blank: A blank matrix containing all reagents used in the analytical procedure. Used to identify laboratory contamination.

Surrogate: A pure or isotopically labeled compound whose behavior mirrors the analytes of interest. Used to evaluate extraction efficiency.

NC (Duplicate RPD): The duplicate RPD was not calculated. The concentration in the sample and/or duplicate was too low to permit a reliable RPD calculation (absolute difference <= 2x RDL).

DATA QUALITY REVIEW CHECKLIST - IMPERIAL OIL PROJECTS

Consultant: Golder Associates

Sampling Date: August 15 and 16, 2018

Location: 1660 Merivale Road, Ottawa, ON

Laboratory: Maxxam Analytics Mississauga

Consultant Project Number: 1791706-1155

Sample Submission Number: B8L1982

Are All Laboratory QC Within Acceptance Criteria (Yes, No, Not Applicable)?

	Yes	No	NA	Comments
Instrument Surrogate Recovery	X			All laboratory QC results are within
Extraction Surrogate Recovery	X			acceptance criteria.
Method Blank Concentration	X			
Matrix Duplicate RPD	X			
Matrix Spike Recovery	X			
Lab Control Sample Recovery	X			

Are All Field QC Samples Within Alert Limits (Yes, No, Not Applicable)?

	Yes	No	NA	Comments
Field Blank Concentration			X	All field QC samples are within
Trip Blank Concentration			X	alert limits.
Field Duplicate RPD	X			

Has CoA been signed off (Yes/No)?:	Yes
Has lab warranted all tests were in statistical control in CoA (Yes/No)?:	Yes
Has lab warranted all tests were analyzed following SOP's in CoA (Yes/No)?:	Yes
Were all samples analyzed within hold times (Yes/No)?:	Yes
All volatiles samples methanol extracted (if required) within 24 hours (Yes/No)?:	n/a
Is Chain of Custody completed and signed (Yes/No)?:	Yes
Were sample temperatures acceptable when they reached lab (Yes/No)?:	Yes

Is data considered to be reliable (Yes/No/Suspect)?: Yes

If answer is "No", describe and provide rationale:

Remarks:

Maxxam Analytics' laboratories are accredited to ISO/IEC 17025:2005 for specific parameters on scopes of accreditation. Unless otherwise noted, procedures used by Maxxam are based upon recognized Provincial, Federal or US method compendia such as CCME, MDDELCC, EPA, APHA.

All work recorded herein has been done in accordance with procedures and practices ordinarily exercised by professionals in Maxxam's profession using accepted testing methodologies, quality assurance and quality control procedures (except where otherwise agreed by the client and Maxxam in writing). All data is in statistical control and has met quality control and method performance criteria unless otherwise noted. All method blanks are reported; unless indicated otherwise, associated sample data are not blank corrected. Where applicable, unless otherwise noted, Measurement Uncertainty has not been accounted for when stating conformity to the referenced standard. All samples were analyzed within hold time unless otherwise flagged.

Maxxam Analytics' liability is limited to the actual cost of the requested analyses, unless otherwise agreed in writing. There is no other warranty expressed or implied. Maxxam has been retained to provide analysis of samples provided by the Client using the testing methodology referenced in this report. Interpretation and use of test results are the sole responsibility of the Client and are not within the scope of services provided by Maxxam, unless otherwise agreed in writing. Maxxam is not responsible for the accuracy or any data impacts, that result from the information provided by the customer or their agent.

Solid sample results, except biota, are based on dry weight unless otherwise indicated. Organic analyses are not recovery corrected except for isotope dilution methods.
Results relate to samples tested. When sampling is not conducted by Maxxam, results relate to the supplied samples tested.
This Certificate shall not be reproduced except in full, without the written approval of the laboratory.

Reference Method suffix "m" indicates test methods incorporate validated modifications from specific reference methods to improve performance.

* RPDs calculated using raw data. The rounding of final results may result in the apparent difference.

(1) All CCME PHC results met required criteria unless otherwise stated in the report. The CWS PHC methods employed by Maxxam conform to all prescribed elements of the reference method and performance based elements have been validated. All modifications have been validated and proven equivalent following "Alberta Environment's Interpretation of the Reference Method for the Canada-Wide Standard for Petroleum Hydrocarbons in Soil Validation of Performance-Based Alternative Methods September 2003". Documentation is available upon request. Modifications from Reference Method for the Canada-wide Standard for Petroleum Hydrocarbons in Soil-Tier 1 Method: F2/F3/F4 data reported using validated cold solvent extraction instead of Soxhlet extraction.

GENERAL COMMENTS

Each temperature is the average of up to three cooler temperatures taken at receipt

Package 1	0.0°C

Sample HMW381 [TH8] : Metal Analysis:Due to the sample matrix, sample required dilution. Detection limits were adjusted accordingly.

Sample HMW382 [DUP A] : Metal Analysis:Due to the sample matrix, sample required dilution. Detection limits were adjusted accordingly.

Sample HMW384 [TH100] : Metal Analysis:Due to the sample matrix, sample required dilution. Detection limits were adjusted accordingly.

Results relate only to the items tested.

Duplicate: Paired analysis of a separate portion of the same sample. Used to evaluate the variance in the measurement.

Matrix Spike: A sample to which a known amount of the analyte of interest has been added. Used to evaluate sample matrix interference.

LCS: A blank matrix sample to which a known amount of the analyte, usually from a second source, has been added. Used to evaluate method accuracy.

Method Blank: A blank matrix containing all reagents used in the analytical procedure. Used to identify laboratory contamination.

Surrogate: A pure or isotopically labeled compound whose behavior mirrors the analytes of interest. Used to evaluate extraction efficiency.

NC (Duplicate RPD): The duplicate RPD was not calculated. The concentration in the sample and/or duplicate was too low to permit a reliable RPD calculation (absolute difference <= 2x RDL).

DATA QUALITY REVIEW CHECKLIST - IMPERIAL OIL PROJECTS

Consultant: Golder Associates

Sampling Date: August 15, 2018

Location: 1660 Merivale Road, Ottawa, ON

Laboratory: Maxxam Analytics Mississauga

Consultant Project Number: 1791706-1155

Sample Submission Number: B8L2045

Are All Laboratory QC Within Acceptance Criteria (Yes, No, Not Applicable)?

	Yes	No	NA	Comments
Instrument Surrogate Recovery	X			All laboratory QC results are within
Extraction Surrogate Recovery	X			acceptance criteria.
Method Blank Concentration	X			
Matrix Duplicate RPD	X			
Matrix Spike Recovery	X			
Lab Control Sample Recovery	X			

Are All Field QC Samples Within Alert Limits (Yes, No, Not Applicable)?

	Yes	No	NA	Comments
Field Blank Concentration			X	All field QC samples are within
Trip Blank Concentration			X	alert limits.
Field Duplicate RPD	X			

Has CoA been signed off (Yes/No)?:	Yes
Has lab warranted all tests were in statistical control in CoA (Yes/No)?:	Yes
Has lab warranted all tests were analyzed following SOP's in CoA (Yes/No)?:	Yes
Were all samples analyzed within hold times (Yes/No)?:	Yes
All volatiles samples methanol extracted (if required) within 24 hours (Yes/No)?:	n/a
Is Chain of Custody completed and signed (Yes/No)?:	Yes
Were sample temperatures acceptable when they reached lab (Yes/No)?:	Yes

Is data considered to be reliable (Yes/No/Suspect)?: Yes

If answer is "No", describe and provide rationale:

Sample Matrix: Water
Samples Received: 5

Analyses	Quantity	Laboratory Method	Primary Reference
Petroleum Hydro. CCME F1 & BTEX in Water	5	CAM SOP-00315	CCME PHC-CWS m
Petroleum Hydrocarbons F2-F4 in Water (1)	5	CAM SOP-00316	CCME PHC-CWS m
Dissolved Metals by ICPMS	5	CAM SOP-00447	EPA 6020B m

Remarks:

Maxxam Analytics' laboratories are accredited to ISO/IEC 17025:2005 for specific parameters on scopes of accreditation. Unless otherwise noted, procedures used by Maxxam are based upon recognized Provincial, Federal or US method compendia such as CCME, MDDELCC, EPA, APHA.

All work recorded herein has been done in accordance with procedures and practices ordinarily exercised by professionals in Maxxam's profession using accepted testing methodologies, quality assurance and quality control procedures (except where otherwise agreed by the client and Maxxam in writing). All data is in statistical control and has met quality control and method performance criteria unless otherwise noted. All method blanks are reported; unless indicated otherwise, associated sample data are not blank corrected. Where applicable, unless otherwise noted, Measurement Uncertainty has not been accounted for when stating conformity to the referenced standard. All samples were analyzed within hold time unless otherwise flagged.

Maxxam Analytics' liability is limited to the actual cost of the requested analyses, unless otherwise agreed in writing. There is no other warranty expressed or implied. Maxxam has been retained to provide analysis of samples provided by the Client using the testing methodology referenced in this report. Interpretation and use of test results are the sole responsibility of the Client and are not within the scope of services provided by Maxxam, unless otherwise agreed in writing. Maxxam is not responsible for the accuracy or any data impacts, that result from the information provided by the customer or their agent.

Solid sample results, except biota, are based on dry weight unless otherwise indicated. Organic analyses are not recovery corrected except for isotope dilution methods.
Results relate to samples tested. When sampling is not conducted by Maxxam, results relate to the supplied samples tested.
This Certificate shall not be reproduced except in full, without the written approval of the laboratory.

Reference Method suffix "m" indicates test methods incorporate validated modifications from specific reference methods to improve performance.

* RPDs calculated using raw data. The rounding of final results may result in the apparent difference.

(1) All CCME PHC results met required criteria unless otherwise stated in the report. The CWS PHC methods employed by Maxxam conform to all prescribed elements of the reference method and performance based elements have been validated. All modifications have been validated and proven equivalent following "Alberta Environment's Interpretation of the Reference Method for the Canada-Wide Standard for Petroleum Hydrocarbons in Soil Validation of Performance-Based Alternative Methods September 2003". Documentation is available upon request. Modifications from Reference Method for the Canada-wide Standard for Petroleum Hydrocarbons in Soil-Tier 1 Method: F2/F3/F4 data reported using validated cold solvent extraction instead of Soxhlet extraction.

LCS: A blank matrix sample to which a known amount of the analyte, usually from a second source, has been added. Used to evaluate method accuracy.

Method Blank: A blank matrix containing all reagents used in the analytical procedure. Used to identify laboratory contamination.

Surrogate: A pure or isotopically labeled compound whose behavior mirrors the analytes of interest. Used to evaluate extraction efficiency.

DATA QUALITY REVIEW CHECKLIST - IMPERIAL OIL PROJECTS

Consultant: Golder Associates

Sampling Date: August 14 and 15, 2018

Location: 1660 Merivale Road, Ottawa, ON

Laboratory: Maxxam Analytics Mississauga

Consultant Project Number: 1791706-1155

Sample Submission Number: B8L2047

Are All Laboratory QC Within Acceptance Criteria (Yes, No, Not Applicable)?

	Yes	No	NA	Comments
Instrument Surrogate Recovery	X			All laboratory QC results are within
Extraction Surrogate Recovery	X			acceptance criteria.
Method Blank Concentration	X			
Matrix Duplicate RPD			X	
Matrix Spike Recovery			X	
Lab Control Sample Recovery	X			

Are All Field QC Samples Within Alert Limits (Yes, No, Not Applicable)?

	Yes	No	NA	Comments
Field Blank Concentration			X	No field QC samples were collected.
Trip Blank Concentration			X	
Field Duplicate RPD			X	

Has CoA been signed off (Yes/No)?:	Yes
Has lab warranted all tests were in statistical control in CoA (Yes/No)?:	Yes
Has lab warranted all tests were analyzed following SOP's in CoA (Yes/No)?:	Yes
Were all samples analyzed within hold times (Yes/No)?:	Yes
All volatiles samples methanol extracted (if required) within 24 hours (Yes/No)?:	n/a
Is Chain of Custody completed and signed (Yes/No)?:	Yes
Were sample temperatures acceptable when they reached lab (Yes/No)?:	Yes

Is data considered to be reliable (Yes/No/Suspect)?: Yes

If answer is "No", describe and provide rationale:

Remarks:

Maxxam Analytics' laboratories are accredited to ISO/IEC 17025:2005 for specific parameters on scopes of accreditation. Unless otherwise noted, procedures used by Maxxam are based upon recognized Provincial, Federal or US method compendia such as CCME, MDDELCC, EPA, APHA.

All work recorded herein has been done in accordance with procedures and practices ordinarily exercised by professionals in Maxxam's profession using accepted testing methodologies, quality assurance and quality control procedures (except where otherwise agreed by the client and Maxxam in writing). All data is in statistical control and has met quality control and method performance criteria unless otherwise noted. All method blanks are reported; unless indicated otherwise, associated sample data are not blank corrected. Where applicable, unless otherwise noted, Measurement Uncertainty has not been accounted for when stating conformity to the referenced standard. All samples were analyzed within hold time unless otherwise flagged.

Maxxam Analytics' liability is limited to the actual cost of the requested analyses, unless otherwise agreed in writing. There is no other warranty expressed or implied. Maxxam has been retained to provide analysis of samples provided by the Client using the testing methodology referenced in this report. Interpretation and use of test results are the sole responsibility of the Client and are not within the scope of services provided by Maxxam, unless otherwise agreed in writing. Maxxam is not responsible for the accuracy or any data impacts, that result from the information provided by the customer or their agent.

Solid sample results, except biota, are based on dry weight unless otherwise indicated. Organic analyses are not recovery corrected except for isotope dilution methods.
Results relate to samples tested. When sampling is not conducted by Maxxam, results relate to the supplied samples tested.
This Certificate shall not be reproduced except in full, without the written approval of the laboratory.

Reference Method suffix "m" indicates test methods incorporate validated modifications from specific reference methods to improve performance.

* RPDs calculated using raw data. The rounding of final results may result in the apparent difference.

(1) Air sampling canisters have been cleaned in accordance with U.S. EPA Method TO15. At the end of the cleaning, evacuation, and pressurization cycles, one canister was selected and was pressurized with Zero Air. This canister was then analyzed via TO15 on a GC/MS. The canister must have been found to contain <0.2 ppbv concentration of all target analytes in order for the batch to have been considered clean. Each canister also underwent a leak check prior to shipment.

Please Note: SUMMA® canister samples will be retained by Maxxam for a period of 5 calendar days or as contractually agreed from the date of this report, after which time they will be cleaned for reuse. If you require a longer sample storage period, please contact your service representative.

GENERAL COMMENTS

Note: Incorrect Task Order/Contract Number. IES contract number missing from the COC.

VOLATILE ORGANICS BY GC/MS (AIR)

Volatile Organics in Air (TO-15): Carbon tetrachloride was less than 60% recovery in the reference standard. The continuing calibration standard was acceptable therefore there should be no effect on the data.

Results relate only to the items tested.

LCS: A blank matrix sample to which a known amount of the analyte, usually from a second source, has been added. Used to evaluate method accuracy.

Method Blank: A blank matrix containing all reagents used in the analytical procedure. Used to identify laboratory contamination.

Surrogate: A pure or isotopically labeled compound whose behavior mirrors the analytes of interest. Used to evaluate extraction efficiency.

(1) Recovery or RPD for this parameter is outside control limits. The overall quality control for this analysis meets acceptability criteria.

Laboratory: Maxxam Analytics Mississauga

Consultant Project Number: 1791706-1155

Sample Submission Number: B8S9743

Are All Laboratory QC Within Acceptance Criteria (Yes, No, Not Applicable)?

	Yes	No	NA	Comments
Instrument Surrogate Recovery	X			All laboratory QC results are within
Extraction Surrogate Recovery			X	acceptance criteria.
Method Blank Concentration	X			
Matrix Duplicate RPD			X	
Matrix Spike Recovery			X	
Lab Control Sample Recovery	X			

Are All Field QC Samples Within Alert Limits (Yes, No, Not Applicable)?

	Yes	No	NA	Comments
Field Blank Concentration			X	All field QC samples are within
Trip Blank Concentration			X	alert limits.
Field Duplicate RPD	X			

Has CoA been signed off (Yes/No)?:	Yes
Has lab warranted all tests were in statistical control in CoA (Yes/No)?:	Yes
Has lab warranted all tests were analyzed following SOP's in CoA (Yes/No)?:	Yes
Were all samples analyzed within hold times (Yes/No)?:	Yes
All volatiles samples methanol extracted (if required) within 24 hours (Yes/No)?:	n/a
Is Chain of Custody completed and signed (Yes/No)?:	Yes
Were sample temperatures acceptable when they reached lab (Yes/No)?:	n/a

Is data considered to be reliable (Yes/No/Suspect)?: Yes

If answer is "No", describe and provide rationale:

Remarks:

Maxxam Analytics' laboratories are accredited to ISO/IEC 17025:2005 for specific parameters on scopes of accreditation. Unless otherwise noted, procedures used by Maxxam are based upon recognized Provincial, Federal or US method compendia such as CCME, MDDELCC, EPA, APHA.

All work recorded herein has been done in accordance with procedures and practices ordinarily exercised by professionals in Maxxam's profession using accepted testing methodologies, quality assurance and quality control procedures (except where otherwise agreed by the client and Maxxam in writing). All data is in statistical control and has met quality control and method performance criteria unless otherwise noted. All method blanks are reported; unless indicated otherwise, associated sample data are not blank corrected. Where applicable, unless otherwise noted, Measurement Uncertainty has not been accounted for when stating conformity to the referenced standard. All samples were analyzed within hold time unless otherwise flagged.

Maxxam Analytics' liability is limited to the actual cost of the requested analyses, unless otherwise agreed in writing. There is no other warranty expressed or implied. Maxxam has been retained to provide analysis of samples provided by the Client using the testing methodology referenced in this report. Interpretation and use of test results are the sole responsibility of the Client and are not within the scope of services provided by Maxxam, unless otherwise agreed in writing. Maxxam is not responsible for the accuracy or any data impacts, that result from the information provided by the customer or their agent.

Solid sample results, except biota, are based on dry weight unless otherwise indicated. Organic analyses are not recovery corrected except for isotope dilution methods.
Results relate to samples tested. When sampling is not conducted by Maxxam, results relate to the supplied samples tested.
This Certificate shall not be reproduced except in full, without the written approval of the laboratory.

Reference Method suffix "m" indicates test methods incorporate validated modifications from specific reference methods to improve performance.

* RPDs calculated using raw data. The rounding of final results may result in the apparent difference.

(1) Air sampling canisters have been cleaned in accordance with U.S. EPA Method TO15. At the end of the cleaning, evacuation, and pressurization cycles, one canister was selected and was pressurized with Zero Air. This canister was then analyzed via TO15 on a GC/MS. The canister must have been found to contain <0.2 ppbv concentration of all target analytes in order for the batch to have been considered clean. Each canister also underwent a leak check prior to shipment.

Please Note: SUMMA® canister samples will be retained by Maxxam for a period of 5 calendar days or as contractually agreed from the date of this report, after which time they will be cleaned for reuse. If you require a longer sample storage period, please contact your service representative.

GENERAL COMMENTS

Note: Incorrect Task Order/Contract Number. IES contract number missing from the COC.

Sample IED346 [FIELD BLANK] : Increased DL for propene due to interference from propane.

Results relate only to the items tested.

Duplicate: Paired analysis of a separate portion of the same sample. Used to evaluate the variance in the measurement.

LCS: A blank matrix sample to which a known amount of the analyte, usually from a second source, has been added. Used to evaluate method accuracy.

Method Blank: A blank matrix containing all reagents used in the analytical procedure. Used to identify laboratory contamination.

Surrogate: A pure or isotopically labeled compound whose behavior mirrors the analytes of interest. Used to evaluate extraction efficiency.

NC (Duplicate RPD): The duplicate RPD was not calculated. The concentration in the sample and/or duplicate was too low to permit a reliable RPD calculation (absolute difference <= 2x RDL).

(1) Recovery or RPD for this parameter is outside control limits. The overall quality control for this analysis meets acceptability criteria.

DATA QUALITY REVIEW CHECKLIST - IMPERIAL OIL PROJECTS

Consultant: Golder Associates

Sampling Date: October 30, 2018

Location: 1660 Merivale Road, Ottawa, ON

Laboratory: Maxxam Analytics Mississauga

Consultant Project Number: 1791706-1155

Sample Submission Number: B8S9747

Are All Laboratory QC Within Acceptance Criteria (Yes, No, Not Applicable)?

	Yes	No	NA	Comments
Instrument Surrogate Recovery	X			Lab control sample recovery for Ethanol (ethyl
Extraction Surrogate Recovery			X	alcohol) (138%) exceeded the acceptance criteria of
Method Blank Concentration	X			(70-130%).
Matrix Duplicate RPD	X			All remaining laboratory QC results are within
Matrix Spike Recovery			X	acceptance criteria.
Lab Control Sample Recovery		X		

Are All Field QC Samples Within Alert Limits (Yes, No, Not Applicable)?

	Yes	No	NA	Comments
Field Blank Concentration	X			All field QC samples are within
Trip Blank Concentration			X	alert limits.
Field Duplicate RPD			X	

Has CoA been signed off (Yes/No)?:	Yes
Has lab warranted all tests were in statistical control in CoA (Yes/No)?:	Yes
Has lab warranted all tests were analyzed following SOP's in CoA (Yes/No)?:	Yes
Were all samples analyzed within hold times (Yes/No)?:	Yes
All volatiles samples methanol extracted (if required) within 24 hours (Yes/No)?:	n/a
Is Chain of Custody completed and signed (Yes/No)?:	Yes
Were sample temperatures acceptable when they reached lab (Yes/No)?:	n/a

Is data considered to be reliable (Yes/No/Suspect)?: Yes

If answer is "No", describe and provide rationale:

APPENDIX B

Quality Control/Quality Assurance

QUALITY ASSURANCE/QUALITY CONTROL

In conjunction with the field investigations completed to date, a Quality Assurance/Quality Control (QA/QC) program was implemented to ensure the integrity of the soil and groundwater sampling and analytical testing results.

1.0 FIELD PROGRAM

All sampling activities were completed in accordance with Golder's Technical Field Procedures by trained Golder personnel. All field activities were documented in field notes and results were recorded on standard field forms. All reusable field equipment involved in the sampling and monitoring of soil and groundwater was decontaminated between sampling locations in accordance with Golder's Technical Procedures. Soil samples were collected using appropriate handling protocols and were placed in sample containers provided by Maxxam Analytics Inc. (Maxxam).

Groundwater and soil vapour samples are placed in laboratory-supplied container suitable for the analytes and, where applicable, the appropriate laboratory-supplied preservative is added to the samples as outlined in the following table.

Analyte	Laboratory Containers	Preservative	Field Filtered
Groundwater Samples			
BTEX and PHC Fraction F1	2 x 44 mL clear glass vials	Sodium bisulphate	No
PHC Fraction F2 to F4	2 x 100 mL amber glass	Sodium bisulphate	No
Dissolved metals	125 mL HDPE	Nitric acid	Yes
Soil Vapour Samples			
BTEX and PHC Fractions F1 and F2 (aromatic and aliphatic hydrocarbons)	1.4 litre Summa Canister	No preservative	n/a

Notes: BTEX - benzene, toluene, ethylbenzene, xylenes; HDPE - high density polyethylene; PHC F1, F2, F3 and F4 – petroleum hydrocarbon fractions F1, F2, F3 and F4

Groundwater and soil vapour samples were given unique identification numbers and the sampling containers were preserved in ice-filled coolers to maintain temperatures below 10°C. Samples were logged onto formal chain-of-custody documents and transported to Maxxam for chemical analysis. Maxxam is accredited by the Canadian Association for Laboratory Accreditation Inc.

Blind field duplicate groundwater and soil vapour samples are submitted for analysis. Trip and field blanks are submitted for analysis, as necessary, to evaluate the potential for cross-contamination during the sampling and transportation of the samples. Submission of blind field duplicate QC samples was at a minimum rate of 10% of total samples.

2.0 SOIL VAPOUR

Field QA/QC for soil vapour sample collection included:

- using new, dedicated High Density Polyethylene (HDPE) tubing for each sample to avoid cross contamination;
- calibrating field instruments prior to use;

- conducting a helium leak tracer test for each probe;
- constructing bentonite seals around each soil gas probe above the filter pack and at ground surface;
- sealing all probes when not in use;
- storing all sampling materials away from potential sources of contamination;
- following chain-of-custody procedures during all sampling events; and
- monitoring of the Summa canister vacuums in the field before and after sampling using a pressure gauge supplied by Maxxam.

3.0 LABORATORY PROGRAM

The laboratory QA/QC program included adherence to laboratory sampling and analysis protocols (e.g., hold times, sample containers, preservatives, detection limits and approved methodology) and the analysis of laboratory method blanks, laboratory control sample (blank spike), laboratory sample duplicates, surrogate recovery and matrix spikes.

Laboratory method blank samples are free of the target analytes and are analyzed through the same analytical method than the test samples. Method blank results are used to detect interferences or impurities introduced by the laboratory equipment, reagents, or solvents.

Laboratory control samples are fortified with a known concentration of the select target analytes and then analyzed through the same analytical method than the test samples. Laboratory control samples are used to monitor the analyte recovery and validate the calibration of the instrumentation.

For laboratory duplicate samples, a second aliquot from a randomly selected sample within an analytical batch is processed through the same analytical method. Laboratory duplicate sample results are used to evaluate the reproducibility of the analytical method.

Surrogate recovery is analyzed for organics parameters by spiking samples with known quantities of surrogate chemicals which have similar chemical properties to the parameters being analyzed. The reported recovery provides an indication of the analytical method accuracy for that sample.

Matrix spikes were conducted by adding known concentrations of the analyte of interest to a sample to evaluate the effects of the sample matrix on the analytical method.

3.1 Soil Vapour

The Summa canisters were batch certified as clean before delivery to the Site. The Summa canister vacuums measured between -25.0 to -30 inches Hg [vac] before sampling and were measured at -5.0 to -10.0 inches Hg [vac] after sampling.

The laboratory QA/QC included the analyses of method blanks, laboratory control samples and continuing calibration verification standards.

4.0 DATA RECEPTION

Once laboratory analytical results were received, Golder completed a review of field and laboratory quality. This included review of laboratory QC performance to confirm results are within acceptance criteria, as well as evaluation of field duplicate and blank results to confirm they were within alert limits. Upon receipt of the analytical

results, Relative Percent Difference (RPD) values between the original samples and their blind field duplicates were calculated as follows:

$$RPD\% = \frac{|S - D|}{\frac{1}{2}(S + D)} \times 100$$

Where: RPD = relative percent difference
S = sample value
D = blind field duplicate or replicate value

Since analytical error increases near the Reportable Detection Limit (RDL), an RPD was only calculated where the concentrations of both the original and blind field duplicate samples were greater than five times the RDL. The calculated RPDs were then compared to parameter specific alert limits.

Exceedances of the QC acceptance or alert criteria were investigated with the laboratory and, if warranted, a corrective action report was requested from the laboratory.

5.0 DATA QUALITY REVIEW RESULTS

Results of the data quality review are summarized in Table B1. The RPD calculations and QC results are presented in Tables B2 to B5.

Two duplicates, one field blank and one trip blank were also submitted to the laboratory as part of the groundwater QC program. One duplicate and one field blank was submitted to the laboratory as part of the soil vapour program.

Based on the data quality review, four data quality issues have been identified. The field blank for the July soil vapour sampling event, exceeded the alert limit for 2-propanone, F1-BTEX and C6-C10 (as toluene), F2 and C10-C16 (as decane), and hexane, the data for this sample and associated data should be considered suspect. Concentrations are likely present from variables associated with the Site. All samples associated with this field blank may be biased high, and should be considered suspect. All other data, field duplicate, and field blank concentrations were within acceptable RPD alert limits. Data presented in this report are considered to be reliable. These issues did not have a material effect on the reliability of the data presented in this report. These issues are discussed in detail in Table B1.

6.0 SUMMARY OF RESULTS

Based on the review of the laboratory and field QA/QC results, the data presented in this report are considered to be reliable with the exception of the field blank for the July soil vapour sampling event, which exceeded the alert limit for 2-propanone, F1-BTEX and C6-C10, F2 and C10-C16, and hexane, the data for this sample are considered to be suspect. Although the QA/QC data were biased high for 2-propanone, F1-BTEX and C6-C10, F2 and C10-C16, and hexane, the sample data were well below the Soil Vapour Screening Levels, and therefore there will not be a material effect on the interpretation of the results.

Table B1
Summary of Quality Control Sample Results
1660 Merivale Road, Ottawa, Ontario
Imperial Oil Limited

Maxxam Job Number	Data Quality Waiver Issued (Yes/No)	Data Quality Waiver Number	Matrix	Maxxam Sample ID Affected	Test Affected	Data Quality Issue	Comments
B8G6788	No	n/a	Soil Vapour	n/a	n/a	No data quality issues were identified.	The data are considered reliable.
B8G6792	No	n/a	Soil Vapour	HDH368	2-Propanone	Field blank sample exceeded alert limits for 2-propanone.	The field blank sample was prepared from ambient air present on Site. Therefore, the concentrations are likely present from variables associated with the Site. All samples associated with this field blank may be biased high for 2-propanone. Thus, this 2-propanone data associated should be considered suspect.
B8G6792	No	n/a	Soil Vapour	HDH368	F1-BTEX, C6-C10 (as Toluene)	Field blank sample exceeded alert limits for F1.	The field blank sample was prepared from ambient air present on Site. Therefore, the concentrations are likely present from variables associated with the Site. All samples associated with this field blank may be biased high for F1. Thus, this F1 data associated should be considered suspect.
B8G6792	No	n/a	Soil Vapour	HDH368	F2, C10-C16 (as Decane)	Field blank sample exceeded alert limits for F2.	The field blank sample was prepared from ambient air present on Site. Therefore, the concentrations are likely present from variables associated with the Site. All samples associated with this field blank may be biased high for F2. Thus, this F2 data associated should be considered suspect.
	No	n/a	Soil Vapour	HDH368	Hexane	Field blank sample exceeded alert limits for hexane.	The field blank sample was prepared from ambient air present on Site. Therefore, the concentrations are likely present from variables associated with the Site. All samples associated with this field blank may be biased high for hexane. Thus, this hexane data associated should be considered suspect.
B8L1946	No	n/a	Groundwater	n/a	n/a	No data quality issues were identified.	The data are considered reliable.
B8L1962	No	n/a	Water	n/a	n/a	No data quality issues were identified.	The data are considered reliable.
B8L1982	No	n/a	Groundwater	n/a	n/a	No data quality issues were identified.	The data are considered reliable.
B8L2045	No	n/a	Groundwater	n/a	n/a	No data quality issues were identified.	The data are considered reliable.
B8L2047	No	n/a	Groundwater	n/a	n/a	No data quality issues were identified.	The data are considered reliable.
B8S9743	No	n/a	Soil Vapour	n/a	n/a	No data quality issues were identified.	The data are considered reliable.
B8S9747	No	n/a	Air	LCS	Ethanol (ethyl alcohol)	Lab control sample recovery for Ethanol (ethyl alcohol) (138%) exceeded the acceptance criteria of (70-130%) for batch 5827418.	This data quality issue may represent a potential high bias for this sample. Ethanol (ethyl alcohol) concentration in the sample and laboratory duplicate were below the regulatory standard, indicating that there will not be a material effect on the interpretation of the results of this parameter. Under these circumstances, the Ethanol (ethyl alcohol) data reported can be considered reliable.

Notes:
BTEX - benzene, toluene, ethylbenzene, xylenes
F1, F2, F3, F4 - petroleum hydrocarbon fractions 1, 2, 3 and 4
n/a - not applicable

Line	Reference and Order(s)	Compliance Date
834476-2	Liquid Fuels Handling Code 2017 Clause 1.3.4 Every retail outlet, marina, private outlet, bulk plant, and highway tank shall be maintained in a safe operating condition by the authorization holder and shall be operated safely. Any defective equipment or component shall be repaired or replaced. The following Order is issued Sept. 27th, 2018. TSSA Inspection has determined this facility does not comply with this code (6" whip hose at dispenser # 4 has developed cracks). Pursuant to my Authority under Section 21(1) of the Technical Standards and Safety Act, 2000, s.o. 2000, I order you to comply with the above Order and make the necessary correction by the compliance date issued.	NOV 30, 2018

Task Notes

TSSA Inspector David Barclay travelled to 1660 Merivale Rd; Ottawa (Canadian Tire) on November 1st, 2018 to conduct a follow up inspection of the petroleum facility regarding Orders issued Oct. 1st, 2018.

Consulted with Mr. Araji on site during inspection. Mr. Araji provided a copy of the report regarding the maintenance and testing of the shear valves and leak detection system. This Inspector found the Order regarding the cracked 6" whip hose at dispenser #4 had not been resolved and advised Mr. Araji. A new compliance date and follow up inspection of Nov. 30th, 2018 has been issued.

Cost recovery fees will be billed to the above named client by Authority of Section 19 of the TSSAct, 2011 and according to TSSA billing policy.

Pursuant to my Authority under Section 21(1) of the Technical Standards and Safety Act, 2000, s.o. 2000, I order you to comply with the above Order.

Task Notes

TSSA Inspector David Barclay travelled to 1660 Merivale Rd; Ottawa (Canadian Tire) on Sept. 27th, 2018 to conduct a periodic inspection of the gas station facility.

Consulted with Mr. David Araji - Manager on site during site inspection of the gas station and propane facility licenses, signage, fire extinguishers, fill and vent pipes, dispensing equipment, hoses, visual inspection of dispenser and STP sumps and leak detection sensors, testing of intercom, cameras, emergency breakaways, spill kit, vehicular protection, Veederoot system, emergency shut off, and found the following deficiencies:

* 6" whip hose on dispenser #4 has developed cracks.

*Provide a copy of your report from your petroleum contractor regarding the annual maintenance and testing of the shear valves and leak detection system to this Inspector by the compliance date issued.

RE: RESPONSE TO: TSSA SERVICE REQUEST #791084 DATED FEBRUARY 28, 2018
FORMER IMPERIAL RETAIL FUEL OUTLET
1660 MERIVALE ROAD
OTTAWA, ONTARIO

Dear Farzana Islam

Golder Associates Ltd. ("Golder") has been retained by Imperial Oil Company Limited ("Imperial") to complete groundwater monitoring and sampling at the former bulk fuel retail outlet located at 1660 Merivale Road in Ottawa, Ontario ("the Site"). The purpose of this letter is to respond to comments provided by the Technical Standards Safety Authority (TSSA) in a letter dated February 28, 2018.

TSSA Requirement 1

"The complete delineation of all identified petroleum hydrocarbon impacts, both on-site and where practical and applicable, off-site."

Golder Response: Upon review of historical on/off-Site assessments, the full extent of on/off-Site soil petroleum related impacts in the overburden soil have been delineated and no further soil assessment work will be completed.

The TSSA suggests groundwater impacts are not delineated from on-Site monitoring wells TH5 and TH7 and off-Site monitoring wells TH9, TH102 and MW16-01 (replaced TH10 in 2016). All wells were screened within the shallow bedrock approximately between 3.3 and 4.9 mbgs. Golder is in agreement that groundwater has not been delineated to the north or the east but it should be noted that groundwater flows to the south toward the Imperial property; however, a Screening Level Risk Assessment (SLRA) was carried out by Golder in 2016 to assess the risk of the existing off-Site groundwater impacts in the right of way. Considering the inferred groundwater flow direction is to the southwest, it is assumed that the preferential pathway for petroleum hydrocarbon migration was likely the underground utility corridors encountered in the Merivale Road right-of-way. The furthest up-gradient monitoring well present, TH100, has shown consistent results below the applicable standards for all petroleum hydrocarbon parameters analyzed since its installation in 2014, confirming groundwater delineation to the north-east.

As indicated above, the off-Site impacts were evaluated as part of a SLRA which concluded that the petroleum related parameters exceeding the applicable Ministry of the Environment and Climate Change (MOECC) Table 3 Standards for a commercial property use are considered to not pose risk to human receptors and pathways for ecological receptors were considered to be incomplete; therefore, no risks were identified within the right-of-way.

Golder Associates Ltd.

Tel: +1 (905) 688 8217 Fax: +1 (905) 688 4227 www.golder.com
Golder Associates: Operations in Africa, Asia, Australasia, Europe, North America and South America

Golder, Golder Associates and the GA globe design are trademarks of Golder Associates Corporation.

Based on available information, the easterly extent of the contaminant plume is unknown at this time; therefore, it is Golder's recommendation to install soil vapour probes on the east side of Merivale Road, parallel to monitoring wells TH101 and TH102, to assess the potential risk to Merivale High School. Soil vapour sampling would be completed during two different season events (e.g. spring/summer and fall/winter) and the results would be compared to residential soil vapour screening levels. Annual groundwater monitoring and sampling will continue on/off-Site with the trigger for further assessment work being any future evidence of sheen or LNAPL or soil vapour sampling exceedances.

TSSA Requirement 2

"The City must be provided with copies of reports in regard to the groundwater monitoring and sampling results for the offsite monitoring wells (TH8, TH9, TH100, MW16-01, TH102, TH101 and TH12) located on the City's properties. TSSA must be copied and/or provided with copies of all correspondences between the City and Imperial Oil;

Golder Response: Annual off-Site reports have been provided to the City of Ottawa by Imperial, future monitoring reports will continue to be submitted to the City of Ottawa and the TSSA copied on all correspondences.

TSSA Requirement 3

"Following the complete delineation, TSSA requires the submission of a formal Contaminant Management Plan (CMP) if further remedial work is not carried out to remove the impacted soil and/or groundwater"

Golder Response: An off-Site CMP is currently with the City of Ottawa for review. Discussions with the City are on-going, once the CMP is finalized a copy will be submitted to the TSSA.

TSSA Requirement 4

"Until complete delineation is achieved, please continue the groundwater monitoring and sampling program on seventeen (17) monitoring wells (TH1 through TH9, TH11, TH12, TH100 through TH102, MW15-01, MW15-02 and MW16-01) an annual basis (in spring or fall) with annual report submission to the TSSA."

Golder Response: Acknowledged.

We trust this meets your requirements at this time. If you have any further questions, please do not hesitate to contact the undersigned.

Yours truly

GOLDER ASSOCIATES LTD.

Tank Replacement Program – 1660 Merivale Road, Ottawa, Ontario
TSSA Service Request # 791084

Dear Mr. Scott,

Thank you for submitting the following reports:

- "*Phase II Environmental Assessment – 1660 Merivale Road, Ottawa, Ontario*", prepared by exp Energy Services Ltd. (EXP), dated December 5, 2013;
- "*2013 Ground Water Monitoring and Sampling Program Report, 1660 Merivale Road, Ottawa, Ontario*", prepared by EXP, dated July 22, 2013.

The December 2013 Phase II ESA report provides the following information:

- Five (5) boreholes (TH8 to TH12) were advanced to a maximum depth of approximately 5.0 metres below ground surface (mbgs) between August 28 and 33, 2012. Two boreholes (TH8 and TH9) were advanced along the road allowance of Merivale Road and three boreholes were advanced along the road allowance of Viewmount Drive. All boreholes were completed as monitoring wells.
- The boreholes were advanced in the bedrock. The boreholes were daylighted to a maximum depth of approximately 2.1 mbgs using a hydrovacuum truck.
- Six (6) soil samples (one collected from each borehole) were submitted to Maxxam Analytics Inc. (Maxxam), an accredited laboratory by the Canadian Association for Laboratory Accreditation Inc. (CALA). Soil samples were submitted for laboratory analysis of benzene, toluene, ethylbenzene, xylenes (BTEX), petroleum hydrocarbon fractions F1 to F4 (PHC F1-F4), polycyclic aromatic hydrocarbons (PAHs) and lead.
- EXP selected the Ontario Ministry of the Environment (MOE) Table 3 full depth generic Site Condition Standards (SCS) for industrial/commercial/community property use in a non-potable groundwater condition with medium to fine textured soils as being applicable for use at this site.
- The analytical results of the submitted soil samples were reported by EXP to be below the selected MOE Table 3 SCS for all analyzed parameters.
- One coring water sample (W1) was also submitted to Maxxam for laboratory analysis of BTEX, hexane and PHC F1-F4. The analytical results of the submitted water sample were reported by EXP to be below the selected MOE Table 3 SCS for all analyzed parameters.
- The newly installed monitoring wells were monitored on June 10, 2013 for depth to groundwater, petroleum vapour concentrations and presence or absence of liquid petroleum hydrocarbon (LPH).
- The depth to groundwater ranged from 2.75 mbgs (TH12) to 3.03 mbgs (TH10). The groundwater flow direction was interpreted to be southerly.
- Headspace vapour concentrations ranged from 50 parts per million (ppm) to 18% lower explosive limit of hexane (LEL). LPH was not detected in any monitoring wells.
- Groundwater samples were collected from the four (4) offsite monitoring wells (TH8, TH10, TH11 and TH12) on June 10-11, 2013. The groundwater samples were submitted to Maxxam for

laboratory analysis of BTEX and PHC F1-F4. The analytical results of the submitted groundwater samples were reported by EXP to be above the selected MOE Table 3 SCS for concentrations of PHC F1-F2 with the exception of the sample collected from TH8, which satisfied the selected MOE Table 3 SCS.

The July 2013 Onsite groundwater monitoring report provides the following information:

- Seven (7) onsite monitoring wells (TH1 through TH7) were monitored on June 12, 2013 for depth to groundwater, petroleum vapour concentrations and presence or absence of LPH.
- The depth to groundwater measured in the monitoring wells ranged from 3.49 mbgs (in TH1) to 3.06 mbgs (in TH3). The groundwater flow direction was not interpreted to be south.
- Headspace vapour concentrations ranged from non-detect to 290 ppm in TH5.
- LPH was not detected in any monitoring wells.
- EXP selected the Ontario Ministry of the Environment (MOE) Table 3 full depth generic Site Condition Standards (SCS) for all types of property use in a non-potable groundwater condition, and medium to fine textured soils as being applicable for use at this site.
- Groundwater samples were collected from the seven onsite monitoring wells (TH1 through TH7) on June 13, 2013. The groundwater samples were submitted to Maxxam for laboratory analysis of BTEX, PHC F1-F4, Hexane and lead.
- The analytical results of the submitted groundwater samples were reported by Golder to be below the selected MOE Table 3 SCS for all analyzed parameters with the exception of the samples collected from TH3, TH4, TH5 and TH7, which exceeded for concentrations of one or more of benzene, xylenes, PHC F1-F4.

Our review of the above information indicates that the petroleum hydrocarbon (PHC) impacts identified in groundwater at the locations of onsite monitoring well TH7 and at the locations of offsite monitoring wells TH10, TH11 and TH12 have not been delineated. We understand that additional investigation and further groundwater monitoring program was carried out at the site in 2014, 2015, 2016 and 2017. Our comments will be provided under a separate letter that will follow.

Should you have any further questions, please do not hesitate to contact me directly.

Yours truly,

Farzana Islam

Groundwater Monitoring Program – 1660 Merivale Road, Ottawa, Ontario
TSSA Service Request # 791084

Dear Mr. Koo,

Thank you for submitting the following reports:

- *"Supplemental Phase II Environmental Assessment – 1660 Merivale Road, Ottawa, Ontario"*, prepared by EXP, dated November 20, 2014;
- *"2014 Groundwater Monitoring and Sampling Program Report, Site Address: 1660 Merivale Road, Ottawa, Ontario"*, prepared by exp Energy Services Ltd. (EXP), dated October 8, 2014;
- "*Interim Contaminant Management Plan, 1660 Merivale Road, Ottawa, Ontario"*, prepared by EXP, dated April 2, 2015; and

The November 2014 Supplemental Phase II ESA report provides the following information:

- Three (3) boreholes (TH100 to TH102) were advanced to a maximum depth of approximately 5.0 mbgs from September 16 to 19, 2014. The boreholes were advanced along the road allowance of Merivale Road (TH102 and TH101) and along the road allowance of Viewmount Drive (TH100). The boreholes were advanced in the bedrock.
- EXP selected the MOE Table 3 SCS for industrial/commercial/community property use in a non-potable groundwater condition with medium to fine textured soils as being applicable for use at this site.
- Three (3) soil samples (one collected from each borehole) were submitted to Maxxam for laboratory analysis of BTEX, PHC F1-F4, methyl-t-butyl-ether (MTBE), hexane and lead. The analytical results of the submitted soil samples were reported by EXP to be below the selected MOE Table 3 SCS for all analyzed parameters
- The three (3) newly installed monitoring wells (TH100 to TH102) and five previously installed monitoring wells ((TH8, TH9, TH10, TH11 and TH12) were monitored on October 6, 2013 for depth to groundwater, petroleum vapour concentrations and presence or absence of LPH.
- The depth to groundwater ranged from 2.75 mbgs (TH12) to 3.60 mbgs (TH100). The groundwater flow direction was interpreted to be towards southwest.
- Headspace vapour concentrations ranged from 200 ppm (in TH100) to 100% LEL (in TH9). LPH was not detected in any monitoring wells.
