Celebrating 40 years of Business

Executive Summary

DST Consulting Engineers Inc. (DST) was retained by Canada Lands Company CLC Limited (CLC) to conduct a Phase One Environmental Site Assessment (Phase One ESA) of the property located at Former Canadian Force Base (CFB) Rockcliffe located at 335 St. Laurent Blvd., Ottawa, Ontario (the Phase One property). A Site Location Plan is attached in Appendix A, as Figure 1.

It is DST's understanding that a Record of Site Condition will be required for the Phase One property due to rezoning of the Site, from its current commercial/industrial zoning to residential/community land use. Therefore DST has performed this Phase One ESA in accordance with the Ontario Regulation 153/04 *Records of Site Condition* (O. Reg. 153/04), as amended.

The objective of this Phase One ESA was to evaluate actual and potential environmental concerns on the Site and to assess the potential for the Site to be impacted by the current and/or historical uses and surrounding properties. Information regarding the Site and Phase One study area was compiled through a records review, site reconnaissance, and interviews. The Phase One study area, as defined by O. Reg. 153/04, is the area within 250 m of the Phase One property boundaries.

Federal, provincial, and private agencies and other databases were searched during the records review for indicators of potentially contaminating activities with regards to the Site. Responses from all agencies were received and are summarized in this report.

DST conducted the site reconnaissance on May 29, 2014 and an interview on June 6, 2014, with Ms. Krista Durie, Project Coordinator with CLC.

The former CFB Rockcliffe historically covered approximately 323 hectares and extended from the Ottawa River (including the Rockcliffe airport and Aviation and Space Museum lands) going south to the current southern boundary, and east to Blair Road (encompassing the adjacent National Research Council Lands). The western boundary remains similar to the original boundary. Currently, the phase one property encompasses approximately 125 hectares. The Department of National Defence first started occupying the phase one property in approximately the 1890s. In 1984, CFB Rockcliffe was declared surplus and the process of relocating personnel, equipment and services commenced. The last service/resident departed the phase one property in approximately 2012. The majority of the phase one property is devoid of buildings and not being used at this time.

Based on the findings of this Phase One ESA, two (2) APECs and twenty-three (23) AECs have been identified for the Phase One property. These areas are summarized in the table below.

Table A: Area of Potential Environmental Concerns (APEC)

APEC No.	Location of APEC	Potential Contamination Activity (PCA)	Location of PCA (on-site or off-site)	Potential Contaminants of Concern (PCOCs)	Media Potentially Impacted (Groundwater, soil, and/or sediment)
APEC 1	South-west corner of the Phase One property, north of Montfort Hospital.	PCA 1-4	Off-site, approximately 100 m south-west of the Phase One property. (713 Montreal Rd.)	PHCs BTEX PAHs VOCs	Groundwater
APEC 2	Eastern property boundary of the Phase One property, west of the CNRC Complex.	PCA 5 and 6	Off-site, adjacent to the eastern property boundary of the Phase One property (1200 Montreal Road)	PHCs BTEX PAHs VOCs PCBs ABNs CPs PCDDs/PCDFs OCs	Groundwater

Notes:
BTEX- Benzene, Toluene, Ethylbenzene, Xylenes
PHCs- Petroleum Hydrocarbons (F1-F4)
PAHs- Polyaromatic Hydrocarbons
VOCs- Volatile Organic Compounds
PCBs- Polychlorinated Biphenyls
ABNs- Acid Base Neutral Compounds
CPs- Chlorophenols
PCDDs/PCDFs- Dibenzo-p-Dioxins/Dibenzofurans
OCs- Organochlorine Pesticides

Table B: Areas of Environmental Concern (AECs) on the Phase One Property

AEC No.	Location of AEC	Location of AEC (on- Site or off-Site)	Contaminants of Concern (COCs)	Media Impacted (Groundwater, soil, and/or sediment)
AEC 1	Building No. 3	On-site	TPHs (Heavy Oils)	Soil Groundwater
AEC 2	Building No. 12	On-site	Lead, zinc, mercury	Soil Groundwater

AEC No.	Location of AEC	Location of AEC (on- Site or off-Site)	Contaminants of Concern (COCs)	Media Impacted (Groundwater, soil, and/or sediment)
AEC 3	Building No. 22	On-site	TPH (gas/diesel and heavy oils) & PHC (F2, F3, F4).	Soil Groundwater
AEC 4	Building No. 29	On-site	TPH (gas/diesel and heavy oils), PHC (F2, F3, F4), PAHs, barium.	Soil Groundwater
AEC 5	Building No. 43/45	On-site	TPH (heavy oils), Metals (arsenic, barium, cobalt, copper, lead, nickel, zinc).	Soil Groundwater
AEC 6	Building No. 47	On-site	TPH (gas/diesel)	Soil
AEC 7	Building No. 80	On-site	PHC (F2, F3), PAHs, Arsenic & Zinc	Soil Groundwater
AEC 8	Building No. 84	On-site	TPH (gas/diesel).	Soil Groundwater
AEC 9	Building No. 90	On-site	TPH (gas/ diesel), PHCs, BTEX, Metals & Dioxins/Furans.	Soil Groundwater
AEC 10	Building No. 97	On-site	Metals (barium, cobalt, nickel, vanadium).	Soil
AEC 11	Building No. 110	On-site	Lead	Soil
AEC 12	Building No. 126	On-site	TPH (heavy oils), PHC (F2, F3, F4) & PAHs.	Soil Groundwater
AEC 13	Building No. 137	On-site	TPH (gas/diesel and heavy oils), PHC (F2, F3) & PAHs.	Soil Groundwater

AEC No.	Location of AEC	Location of AEC (on- Site or off-Site)	Contaminants of Concern (COCs)	Media Impacted (Groundwater, soil, and/or sediment)
AEC 14	Building No. 167	On-site	Metals (Barium, Cobalt, Vanadium)	Soil
AEC 15	@ TP1	On-site	PAHs	Soil
AEC 16	@ TP15	On-site	Zinc	Soil
AEC 17	@ TP18	On-site	Lead	Soil
AEC 18	@ TP31	On-site	Zinc	Soil
AEC 19	@TP 52	On-site	PHC (F2, F3, F4) & PAHs	Soil
AEC 20	Building No. 79	On-Site	PAHs PHCs/BTEX Metals	Soil
AEC 21	Former PMQs	On-Site	PAHs Metals	Soil
AEC 22	Former Canex/Shell Site	On-Site	PHCs/BTEX	Soil Groundwater
AEC 23	Building No. 164	On-Site	PHCs/BTEX	Soil Groundwater

Notes:
BTEX- Benzene, Toluene, Ethylbenzene, Xylenes
PHCs- Petroleum Hydrocarbons (F1-F4)
PAHs- Polyaromatic Hydrocarbons
TPHs: Total Petroleum Hydrocarbon
TP: Test Pit

DST recommends completion of a Phase Two ESA program to assess all identified PCOCs pertaining to the identified APECs. In addition, DST recommends further remedial activities to remediate the COCs previously identified within the AECs on the Phase one property.

DST also recommends the decommissioning of any identified abandoned water wells located within Phase One property in accordance with O. Reg. 903.

1.0 Introduction

1.1 General

DST Consulting Engineers Inc. (DST) was retained by Canada Lands Company CLC Limited (CLC) to conduct a Phase One Environmental Site Assessment (Phase One ESA) of the Former Canadian Force Base (CFB) Rockcliffe located at 335 St. Laurent Blvd., Ottawa, Ontario (the Phase One property). CLC's mission for the Phase One property is to develop it into an innovative neighborhood and provide an appropriate mix of housing types, commercial development, and employment uses while creating strong connections among significant natural features, open spaces, and urban public spaces along with a commitment to sustainability development and long term economic viability. A Site Location Plan is attached in Appendix A, as Figure 1.

A Phase One ESA is conducted to determine the likelihood that one or more contaminants are present at the property due to activities on the property, or at nearby or up-gradient locations. For properties where the Qualified Person (QP) has determined through a phase one ESA that contaminants are not likely to be present above the applicable Site Condition Standards, then that phase one ESA may be used to support the filing of a Record of Site Condition. DST has performed this Phase One ESA in accordance with Ontario Regulation 153/04 Records of Site Condition (O. Reg. 153/04), as amended.

The objective of this Phase One ESA was to evaluate actual and potential environmental concerns on the Site and to assess the potential for the Site to be impacted by the current and/or historical uses of the Site and surrounding properties. Information regarding the Site and Phase One study area was compiled through a records review, site reconnaissance, and interviews. The Phase One study area, as defined by O. Reg. 153/04, is the area within 250 m of the Phase One property boundaries.

It is DST's understanding that a Record of Site Condition will be required for the Phase One property due to rezoning of the Site, from its current commercial/industrial zoning to residential/community land use. The Phase One ESA therefore was completed with the intention of filing a Record of Site Condition for the Site in the future.

1.2 Phase One Property Information

The Phase One property is located at 335 St. Laurent Blvd., Ottawa, Ontario. The Phase One property is currently owned by CLC and was previously known as CFB Rockcliffe which was located in the north-east end of the City of Ottawa, Ontario. It is currently vacant and undeveloped. It has an irregular shape and covers an area of 125.3 hectares (310 acres). CLC is looking to reintegrate this former Canadian Forces Base into the surrounding urban and natural context, creating a vibrant new community that blends with the existing character of Ottawa. For Site Plan refer to Figure 2 attached in Appendix A.

The Phase One property has no municipal address, but is comprised of the following two (2) parcels of land:

- Parcel identifier number (PIN): 04273-0433(LT) - Parts of Lots 21-25, Con 1 Ottawa Front, designated as Parts 1-11, Township of Gloucester, Plan 4R14475; and
- PIN: 04273-0434(LT) – Parts of Lots 21 & 22, Con 1 Ottawa Front, Township of Gloucester

CFB Rockcliffe was established in the 1930s as a military base containing various buildings. Based on historical information received from PWGSC, The Department of National Defence (DND) first started occupying the Phase One property in approximately the 1890s.

Mr. Don Schultz, Director Real Estate, Rockcliffe, is the current CLC representative for the Phase One property. Mr. Don Schultz contact information is as follows:

Name: Don Schultz

Rational: Current CLC representative (Director, Real Estate, Rockcliffe)

Phone No: (613) 998-7765

Address: 30 Metcalfe Street, Suite 601, Ottawa, ON K1P 5L4

2.0 Scope of Investigation

2.1 Scope of Investigation

DST's scope of work was to perform a Phase One ESA investigation in accordance with O. Reg. 153/04 (as amended), which included the following:

- A records review;
- A site reconnaissance;
- Interviews with knowledgeable Phase One property representatives;
- An evaluation of the information gathered from the records review, site reconnaissance and interview; and,
- The preparation and submission of a written report to the Client.

3.0 Records Review

3.1 General

Requests for information were submitted by DST to the City of Ottawa Historical Land Use Index (HLUI), the Ontario Ministry of Natural Resources (OMNR), the Ministry of Environment-Freedom of Information (MOE-FOI), Environment Canada (EC), Technical Standards and Safety Authority (TSSA) and the Ecolog Environmental Risk Information Service (ERIS) in conjunction with RMS Historical Environmental Reporting System (HEIRS). The agencies contacted, information requested, and responses received are included in Appendix E and summarized in the following sub-sections.

3.1.1 Phase One Study Area Determination

The Phase One study area encompasses a blend of residential/commercial and institutional properties wholly and partly located within 250 meters of the Phase One property boundaries.

The CFB Rockcliffe Airport and Canada Aviation and Space museum is located north-west of the Phase One property. There are approximately 38 residential dwellings south-west of the Phase One property. A Long Term Care Centre is located south-west of the Phase One property. South of the Phase One property, there are approximately 72 residential dwellings, approximately 19 apartment buildings, the East Gate Alliance Church, and approximately 2 commercial buildings. The National Research Council Canada (Institutional) building is located south-east of the Phase One property along with a mix of residential, government, and industrial/commercial land uses.

The Phase One property and adjacent properties are shown on Figure 3 attached in Appendix A

3.1.2 First Developed Use Determination

Phase One property was established as CFB Rockcliffe in 1928 as a military base containing various buildings. Based on historical information received from PWGSC during previous investigations, some of the buildings and infrastructure allegedly existed prior to the 1930s, and dated from before World War I. A review of the legal title searches indicates the original parcels of the lands were deeded as early as 1803. Up until 1928, all parcels are listed as being estates or owned by individuals, likely for residential or agricultural uses.

In 1949-1952, parts of Parcel 04273-0434(LT) transferred ownership to His Majesty The King (as represented by the Minister of Defence). In 2011, the ownership of the lands was transferred from the Department of National Defence to Her Majesty The Queen in Right of Canada (the Crown).

In 1901, part of Parcel 04273-0433(LT) transferred ownership from Mr. Bruno Robillard to the Laurentian Stone Company. In 1926, the Laurentian Stone Company transferred ownership back to Mr. Bruno Robillard, however all lands were expropriated by Department of National Defence in 1950. Parts of the ownership of the parcel was transferred to His Majesty The King (as represented by the Minister of Defence) as early as 1937.

There is no other mention of a commercial or industrial party owning the Phase One property. The lands were legally expropriated by the Canadian Department of National Defence in the early 1950's and were used as commercial lands until its recent divestment to the CLC in 2011.

The first suspected use of the lands was likely for residential or agricultural in the 1800's however, the first known use of the lands was for a military base. Part of the original land may have been developed as the base as early as 1906, however the initial indication of the Site being turned over to Federal ownership was 1937. As such the first known use of the Phase One Property was for a military base in 1937.

3.1.3 Fire Insurance Plans

EcoLog ERIS contacted Opta Environmental Services HEIRS for any records relating to the Phase One property. RMS HEIRS maintains records, including Fire Insurance Plans (FIPs) and Inspection Reports for Canadian cities which indicate past and existing structures on properties. On January 27, 2014, Opta Environmental Services HEIRS indicated that two (2) records are available for review which were pertinent to the Phase One property. These included the 1956: Ottawa Volume 2, Volume Number 1: 266 and 1956: Ottawa Volume 2, Volume Number 1: 267. The FIPs were reviewed on March 3, 2014.

- 1956: Ottawa Volume 2, Volume Number 1:266 FIP, the Quarry's Public School was identified as being located between Fairhaven Way and Codd's Road, north of Blackthorne Avenue. There were also two (2) gasoline outlets (with oiling and greasing services) on the west and east side of Codd's Road, north of Montreal Road in the 1950's. The retail gasoline outlets were located outside the Phase One study area and are not an environmental concern to the Site at this time.
- 1956: Ottawa Volume 2, Volume Number 1:267 FIP, the St. Bernadette School was located east of Ann and north of Montreal Road, and the Rockcliffe Motel was located on the corner of Montreal Road and Carsons Road. There were two (2) unlabeled tanks identified as being located between Montreal Road and an unlabeled building. The tanks were located outside of the Phase One study area, and are not an environmental concern to the Site at this time.

  A copy Opta HEIRS response is attached in Appendix D.

No information was identified on the FIPs which was of significant environmental concern to the Phase One property or the Phase One study area.

3.1.4 Chain of Title

DST retained the services of EcoLog ERIS to conduct a title search for 335 St. Laurent Blvd., Ottawa, Ontario. The Phase One property consisted of two (2) legal lots, of which were searched. Tables 3.1.4 -1 and 3.1.4 -2 below provide the Chain of Title for the Phase One property:

Table 3.1.4 -1: Summary of Chain of Title Results for the Phase One Property (Northern Part)

Lot No.	Date Acquired	Registered Owners
PIN No.: 04273-0433 LT Parts of Lots 21-25 Concession 1 Ottawa Front of Gloucester	May 17, 1802	Richard Wragg
	September 27, 1806	John Platt
	March 13, 1828	Eleanor Abrams
	August 21, 1841	John (Jean) Barreille

3.1.5 Ontario Ministry of Natural Resources

The Ontario Ministry of Natural Resources (OMNR) was contacted on January 7, 2014 for information pertaining to the Phase One property. DST requested information regarding species at risk, environmentally sensitive sites, and Areas of Natural and Scientific Interest (ANSI) associated with the Phase One study area or other related information of environmental interest. A response has been received on May 27, 2014 which is attached in Appendix E. MNR strongly recommends an ecological site assessment to determine the potential for Species At Risk (SAR) habitat and occurrences. An Ecological Site Assessment was completed by DST in October 2014 in order to assess SAR on-Site.

3.1.6 Environment Canada

Environment Canada, under the Freedom of Information Act, was contacted on March 4, 2014 for information on the Phase One property related to environmental concerns (general correspondence, occurrence reports, and abatements), orders, tanks, spills, investigations and prosecutions, waste

generators. This included certificates of approvals including air emissions, water, sewage, waste water, industrial discharge, waste systems and pesticide licenses. An initial response was received from Environment Canada requesting a time extension limit of 150 days beyond the statutory 30-day limit allowed for the request process due to the large number of records involved. A second response from Environment Canada was received on August 8, 2014, which included the "1- Canadian Forces Base Ottawa, Environmental Baseline Study, by Dillon Consulting Engineers, 12 March 1993" which summarized the Site environmental concerns. A copy of this study is attached in Appendix F.

3.1.7 Ministry of Environment – Freedom of Information (MOE – FOI)

The Ontario Ministry of Environment (MOE), under the Freedom of Information Act, was contacted for information on the Phase One property, such as past or existing environmental permits, existing environmental orders, fuel storage tanks, or any other environmentally related information. The request for information was submitted on May 14, 2014. A response has been received on June 30, 2014 confirming one Inactive Off-Site Waste Generator record for Ken Gordon Excavating Limited. The record included two (2) waste classes 213-I (Latex Waste) and 252-T (Waste crankcase oils and lubricant), both are inactive off-site waste. A copy of MOE response dated June 26 is included in Appendix F – Correspondences.

3.1.8 Technical Standards and Safety Authority (TSSA)

The TSSA Fuel Handling Division is responsible for records regarding licensing of fuel handling facilities in Ontario. Mrs. Sarah Queibell of the TSSA was contacted on January 30, 2014 for any information with respect to environmental concerns, which could include past or existing environmental spills, information on fuel tanks, or any other related environmental information. A response dated January 31, 2014 from the TSSA indicated that they had no records pertaining to the Phase One property.

3.1.9 City of Ottawa Historical Land Use Inventory (HLUI)

DST issued a request to the City of Ottawa for Historical Land Use Inventory of information regarding the Phase One property on March 5, 2014. The City of Ottawa's Historical Land Use Inventory is a database of information on the type and location of land uses which had or have the potential to cause contamination in soil, groundwater, or surface water. The database includes records documenting over 600 potentially contaminating activities (PCAs) which may impact the Phase One property. Response from HLUI was received on April 04, 2014, the search of the HLUI database revealed that there are five activities associated with Phase One property, these activities are listed in table 3.1.9 below:

Table 3.1.9: List of Activities associated with the Phase One property

Activity ID No.	Location	Name	Type	Effect on Phase One property
3909	164 Via Venus Pvt. (Within Phase One property)	Dept. of National Defence – CFSU (O)	Defence Services	Environmental impact has been previously identified. Soil remediation took a place in 2013.
9517	335 St. Laurent Blvd.	National Capital Commission	Service Industries Incidental to Air Transport	Has no impact on Phase One property.
9569	1500 Montreal Road	National Research Council	Petroleum Products, wholesale	Three (3) vertical tanks from 1984 – 1985, located beyond Phase One Study Area. Possess no impact on Phase One property.
4098	Northeast of Phase One Property.	Cyrville Gravel Pit	Sand and Gravel Pit	Has no environmentally impact on Phase One property.
2586	Northwest of Phase One property.	Canadian Forces Base (North)	Service Industries Incidental to Air Transport	It has been present since 1948 – 1985, has no impact.

3.1.10 Environmental Reports

The following environmental reports were made available for DST's review:

1. "Phase II Environmental Site Assessment, Lands Associated with Various Former Building Sites and Developed Areas at Canadian Forces Base Rockcliffe, Ottawa, Ontario", by DST Consulting Engineers Inc., dated April 2009;
2. "Remedial Action Plan, Lands Associated with Various Former Building Sites and Developed Areas at Canadian Forces Base Rockcliffe, Ottawa, Ontario", by DST Consulting Engineers Inc., dated April 2009;

3. "2010 Phase III Environmental Site Assessment (ESA) Building 164, CFB Rockcliffe, Ottawa, Ontario", by DST Consulting Engineers Inc., dated September 2010;
4. "Phase III Environmental Site Assessment (ESA) Former CANEX/Shell Site, CFB Rockcliffe, Ottawa, Ontario", by DST Consulting Engineers Inc., dated September 2010;
5. "Phase II Environmental Site Assessment Former Golf Driving Range, CFB Rockcliffe, Ottawa, Ontario", by DST Consulting Engineers Inc., dated February 2011;
6. "2010 Phase II Environmental Site Assessment Former PMQ's and Former Building Footprint Site, CFB Rockcliffe, Ottawa, Ontario", by DST Consulting Engineers Inc., dated February 2011;
7. "Hydrogeological Report, Stormwater Management Support Studies, Former Canadian Force Base Rockcliffe, Ottawa, Ontario", by DST Consulting Engineers Inc., dated October 2013; and,
8. "Soil Remediation at Former Building 164, Former Building 79 and Via Venus and Bishop Private Former CFB Rockcliffe Ottawa, Ontario", by DST Consulting Engineers Inc., dated January 2014.

The conclusions of the aforementioned reports are discussed in the following subsections:

3.1.10.1 Phase II Environmental Site Assessment, Lands Associated with Various Former Building Sites and at Canadian Forces Base Rockcliffe, Ottawa, Ontario – April 2009

DST was retained by CLC and Public Works and Government Services Canada (PWGSC) to carry out a Phase II ESA at selected areas within the former CFB Rockcliffe located in Ottawa, Ontario. The primary objective of the Phase II ESA was to evaluate the levels of environmental risk with respect to the existing site conditions at the time.

The Phase II ESA consisted of the advancement of 26 boreholes, instrumented with groundwater monitoring wells, and 73 testpits within the areas of the former buildings on site. Representative soil and groundwater samples collected from the boreholes / monitoring wells and test pits were submitted for laboratory analysis of suspected contaminants of concern, including PHCs, BTEX, metals, PAHs, and dioxins/furans. As part of the study, environmental reports previously completed by others at former building sites were reviewed by DST. Sites where environmental impacts were confirmed by previous studies were also investigated, as required, and included under the Phase II ESA program.

The results of the Phase II ESA confirmed the presence of soil and groundwater contamination above applicable provincial standards (residential/parkland land use) and/or federal guidelines (commercial land use), at various locations within the site. Contaminated soil volumes were estimated for each building location based on the findings of the Phase II ESA. The following is a summary of the nature of confirmed soil contamination at each building location:

<u>Building 3:</u>

- Building 3 was reportedly demolished in November 1993 and formerly housed an Officer's Quarters.

- Total petroleum hydrocarbon (TPH) contamination (heavy oils) in soil was confirmed.

Building 12:

- Building 12 was reportedly demolished in 1974 and formerly housed a Railway and Camera Club. It was inferred that photo finishing equipment and chemicals were historically stored within this building.
- Zinc and electrical conductivity contamination in soil was confirmed.

Building 16:

- Building 16 was reportedly constructed in 1936 and demolished in 1997. This building was formerly located within the northeast portion of the site and was reportedly occupied for use by the Space Agency/SIU, as well as living quarters. A 909 litre (L) aboveground storage tank (AST) was reportedly removed from this location in 1997.
- pH contamination in contamination was confirmed.

Building 22:

- Building 22 was formerly located within the northern portion of the site and was reportedly occupied by a postal outlet and dry cleaning facility. The building was demolished in 1993.
- TPH (gas/diesel and heavy oils), PHCs (F2, F3 and F4) and nickel contamination in soil was confirmed.

Building 29:

- Building 29 was formerly located within the northern portion of the site and was reportedly occupied by an auto hobby club. The building was demolished in 1993.
- TPH (gas/diesel and heavy oils) and PHCs (F2, F3 and F4) contamination in soil was confirmed.

Buildings 43 and 45:

- Buildings 43 and 45 were formerly located within the southeast portion of the site and were formerly used by the DND construction engineering division as storage facilities. Building 43 was demolished in 1974, while building 45 was demolished in 1993. According to a previous report reviewed by DST, a petroleum, oil, and lubricant (POL) storage area may have existed in the vicinity of these buildings.
- TPH (heavy oils), metals (arsenic, barium, total chromium, copper, lead and zinc) contamination in soil was confirmed.

Building 47:

- Building 47 was reportedly demolished in November, 1993 and formerly housed a ceramics club, “Teen Town”, Base Exchange, IGA grocery store, and council hall. According to a previous report, two 900 L ASTs may have existed in the vicinity of this building.

- TPH (gas/diesel) contamination in soil was confirmed.

Building 80:

- Building 80 formerly housed the central heating plant at CFB Rockcliffe. In 1992, two leaking 67,500 L underground storage tanks (USTs) located south of the building were removed from the site, along with 234.5 tonnes of impacted soil. This building was then decommissioned in 1993. In 1996, an additional concrete chamber was discovered and removed to 2.4 m below surface grade, along with 52 tonnes of impacted soil.
- PHCs (F2 and F3) and arsenic contamination in soil was confirmed.

Building 84:

- Building 84 was formerly located near the Codd's Road entrance to CFB Rockcliffe and was reportedly occupied as a guardhouse. The building was constructed in 1942 and demolished in 1993. Based on information gathered from previous reports, a 900 L heating oil AST was present in the basement of this building.
- TPH (gas/diesel) contamination in soil was confirmed.

Building 90:

- Building 90 was formerly located within the southeast portion of the site and was reportedly used as a barracks facility. The building was constructed in 1941 and demolished in 1994.
- TPH (gas/diesel), vanadium and dioxins/furans contamination in soil was confirmed.

Building 97:

- Building 97 was reportedly demolished in 1993 and was formerly utilized as the HMCS Bytown Stores and as a temporary dependant's school.
- Metals (nickel and chromium) contamination in soil was confirmed.

Building 110:

- Building 110 was reportedly demolished in 1993 and formerly served as headquarters and offices.
- pH contamination in soil was confirmed.

Building 126:

- Building 126 was reportedly demolished in 1968 and formerly housed a transmitter tower.
- TPH (heavy oils) and PHCs (F2, F3 and F4) contamination in soil was confirmed.

Building 137:

- Building 137 was reportedly demolished in 1997. This building was formerly an indoor pool house located within the northwest portion of the site. A 1,136 L gasoline UST was reportedly removed in 1992 and a 900 L AST was also known to be present at this location.
- TPH (gas/diesel and heavy oils) and PHCs (F1, F2 and F3) contamination in soil was confirmed.

Buildings 178 and 179:

- Buildings 178 and 179 were reportedly demolished in 1975 and 1992, respectively, and formerly used as storage areas for construction engineering.
- TPH (heavy oils) contamination in soil was confirmed.

Overall Summary

A total estimated soil volume of 16,155 m^3 (35,541 metric tonnes) was in exceedance of the applicable provincial standards, while an estimated soil volume of 18,548 m^3 (40,806 metric tonnes) was in exceedance of the applicable federal standards, for the various contaminants of concern, at the various building locations listed above.

Groundwater concentrations for petroleum hydrocarbons were confirmed at Buildings 80 and 137, and in the southwestern sector, to be greater than the established site-specific criteria (10,000 µg/L – established based on preliminary discussion held between project stakeholders and regulatory officials).

3.1.10.2 Remedial Action Plan, Lands Associated with Various Former Building Sites and Developed Areas at Canadian Forces Base Rockcliffe, Ottawa, Ontario – April 2009

DST carried out a Remedial Action Plan (RAP) and cost analysis for the remediation of impacted soils at selected areas within Former CFB Rockcliffe. Twenty-two (22) impacted locations were identified and divided into one of six (6) categories of contamination: Petroleum Hydrocarbons (PHCs) including Benzene, Toluene, Ethylbenzene and xylenes (BTEX), Polycyclic Aromatic Hydrocarbons (PAHs), Metals/Electrical Conductivity, Dioxin/Furans and pH. These six categories of contamination were selected to assist in the streaming and merging of remedial options.

The total area for the subject study area as a single site was 1,355,027 square metres (135.5 hectares). Based on the type of soil contaminants identified on site, the following were considered as potential remedial options for the management of the contaminated soil: Excavation and Off-Site Disposal; Biocell Landfarming; and Soil Washing.

DST evaluated the three remedial options to several criteria, including sustainability, timeframe, associated risks, impacted and clean soil movement, complexity, cost, etc. Costs were generated for all remedial options under three potential remediation programs consisting of remediating impacted soils to meet each of the following sets of criteria: Canadian Council of Ministers of the Environment (CCME) guidelines, Ministry of the Environment (MOE) standards, and both CCME and MOE criteria.

Using a weighted scoring system, DST determined that the remedial program consisting of the soil washing technology is considered the most sustainable green approach for the given site conditions.

3.1.10.3 2010 Phase III Environmental Site Assessment (ESA) Building 164, CFB Rockcliffe, Ottawa, Ontario – September 2010

DST was retained by PWGSC, on behalf of the Department of National Defence (DND), to complete a Phase III ESA at the Building 164 Site in the CFB Rockcliffe, Ottawa, Ontario. The purpose of the Phase III ESA was to:

- Delineate previously reported petroleum hydrocarbon groundwater impacts around monitoring well MW-98-4 as well as confirm/delineate potential soil impacts in the vicinity of MW-98-4;
- Confirm bedrock groundwater quality in the vicinity of MW-98-4; and
- Resample select existing monitoring wells in the study area using low flow sampling methodology.

DST's field program included the advancement of nine test pits (164-TP1 to 164-TP9) and two boreholes (164-BH-1 and 164-BHMW1, which was instrumented with a groundwater monitoring well), as well as the collection of groundwater samples from five existing on-site monitoring wells (MW-98-4, MW 164-3, MW 164-4, MW-4 and MW-5).

The analytical results of the investigation indicated soil exceedances above the applicable federal guideline for PHC fraction F2 in soil samples 164-TP2 S1 (3.20 mbgs), 164-TP2 S2 (3.66 mbgs), 164-TP3 S1 (3.35 mbgs), 164-TP3 S2 (5.18 mbgs), 164-TP7 SS1 (3.05 mbgs) and 164-BH1 SS6 (3.66 – 4.27 mbgs). 6 cm of free product was noted within monitoring well MW-98-4. No other groundwater exceedances were reported.

Based on the findings of the Phase III ESA, Excavation and Disposal of confirmed impacted soil was assessed to be the preferred alternative for the remediation of the identified PHC soil impacts. Given the relatively small amount of contaminated soil and the potential for future redevelopment works at the site, the excavation and disposal approach was considered to be the most applicable to the site.

3.1.10.4 Phase III Environmental Site Assessment (ESA) Former CANEX/Shell Site, 2010, CFB Rockcliffe, Ottawa, Ontario – September 2010

DST completed a Phase III ESA in the vicinity of the former CANEX/Shell site located east of the intersection of Venus and Bishop Privates. Based on the results of DST's field program, three areas of environmental concern (AEC #1, AEC #2 and AEC #3) were identified.

DST's field program included the advancement of 12 test pits (TP1 to TP12) and four test trenches (TT1 - TT4). Select soil samples collected from the test pits and test trenches were submitted for laboratory analysis of PHCs and BTEX. The analytical results of the investigation indicated soil exceedances above the applicable federal and provincial guidelines/standards, as well as groundwater PHC contamination (based on visual and olfactory evidence). Based on the laboratory analytical results, DST identified the following AECs:

- AEC #1 – Contaminated soil (BTEX and PHCs F1 and F2) along the southern corridor of Via Venus Private, with an estimated volume of 1,238 m^3;

- AEC #2 – Contaminated bedding materials (BTEX and PHCs F1 and F2) along a section of the sanitary sewer pipe at Via Venus Private, southwest of the former CANEX/Shell Site, with an estimated volume of 85.5 m^3 and,
- AEC #3 – Contaminated soil (PHC F2) travelling south, along the watermain on Bishop Private, at the southeast corner of the intersection of Via Venus and Bishop Privates, with an estimated volume of 96.5 m^3.

DST recommended the remediation of the identified PHC soil impacts via the excavation and disposal of contaminated soils.

3.1.10.5 Phase II Environmental Site Assessment Former Golf Driving Range, CFB Rockcliffe, Ottawa, Ontario – February 2011

DST was retained by PWGSC on behalf of the Department of National Defence (DND) to complete a Phase II Environmental Site Assessment (ESA) at the Former Golf Driving Range Site, at CFB Rockcliffe, Ottawa, Ontario. The purpose of the Phase II ESA was: (1) to address potential environmental concerns related to previous on-site dumping; (2) to characterize and delineate any environmental concerns; and, (3) to complete an options analysis.

The field program consisted of the advancement of twenty-four (24) test pits and the collection and laboratory submittal of four (4) soil samples, including one duplicate, from two (2) of the test pits. All samples were analyzed for BTEX, PHCs, PAHs, VOCs and Metals.

Two (2) Areas of Environmental Concern (AEC #1 and AEC #2) were identified and confirmed on the property during this assessment, including PAHs and Metals soil contamination. AEC #1 consisted of Metals (boron) contamination in excess of provincial standards for residential/parkland land use. The extent of contaminated soil within AEC #1 was approximately 192 m^2, with an average thickness of impacted soil of approximately 1.5 m; thus, resulting in an estimated contaminated soil volume of approximately 288 m^3, or 576 m.t. AEC #2 consisted of PAH (Benzo[a]pyrene Total Potency Equivalents (TPE)) soil contamination in excess of the federal guideline limits for commercial/industrial land use as well as Metals (boron) contamination in excess of provincial standards for residential/parkland land use. The extent of contaminated soil within AEC #2 was approximately 180 m^2, with an average thickness of impacted soil of approximately 1.5 m, resulting in an estimated contaminated soil volume of approximately 270 m^3, or 540 m.t.

Based on the findings of the Phase II ESA, excavation and disposal was assessed to be the preferred and only viable remedial alternative at the subject property.

3.1.10.6 2010 Phase II Environmental Site Assessment Former PMQ's and Former Building Footprint Site, CFB Rockcliffe, Ottawa, Ontario – February 2011

DST was retained by PWGSC, on behalf of the DND, to complete a Phase II ESA at the Former Private Married Quarters (PMQs) and Former Building Footprint Site (also known as Former Building 79) in the CFB Rockcliffe, Ottawa, Ontario. The purpose of the Phase II ESA was to investigate previously identified geophysical anomalies in the vicinity of the intersections of Via Venus, Bishop Private, and Barker Private, and to determine / expose the source of the anomalies including the potential presence of former underground storage tanks.

The field program for the former PMQs consisted of the advancement of twelve (12) test trenches (PMQ TT1 – PMQ TT12) and six (6) test pits (PMQ TP1 - PMQ TP6), including submittal of two (2) samples for laboratory analyses of PHCs/BTEX, VOCs, Metals, and PAHs. The field program for the former building footprint consisted of the advancement of thirteen test pits (BFP TP1 – BFP TP13) and three (3) test trenches (BFP TT1a, BFP TT1b and BFP TT2), including submittal of four (4) soil samples (including a duplicate Quality Assurance/Quality Control (QA/QC) sample), for laboratory analyses of PHCs/BTEX, VOCs, Metals and PAHs.

Following completion of the above-noted field work within the former building footprint, concrete from the 50 m x 50 m floor slab of the building footprint was excavated and crushed for use as backfill for basement voids as part of a PMQ demolition project by an independent contractor, unrelated to the scope of work for this investigation. All areas of the floor slab were excavated and crushed, with the exception of a small area in the southeast corner of the building footprint. The majority of the building footings and foundation walls were left in place by the contractor due to time constraints.

Based on the results of the Phase II ESA investigation and the analytical results, the assessment confirmed the presence, and evaluated the extent, of PAH (benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, indeno(1.2,3-c,d)pyrene, phenanthrene, and B[a]P TPE) and Metals (boron, chromium (total), lead, copper and zinc) soil contamination.

Three areas of environmental concern (AEC #1, AEC #2 and AEC #3) were identified and confirmed on the site during this assessment:

- AEC #1 consisted of PAHs (B[a]P TPE) and Metals (boron) soil contamination in excess of federal and provincial guidelines/standards.
- AEC #2 consisted of Metals (boron) soil contamination in excess of provincial standards.
- AEC #3 consisted of PAHs (benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, indeno(1.2,3-c,d)pyrene, phenanthrene and B[a]P TPE) and Metals (boron, chromium (total), lead, copper and zinc) soil contamination in excess of federal and provincial guidelines.

Based on the findings of the Phase II ESA, Excavation and Disposal was assessed to be the preferred remedial alternative at the subject property. Given the relatively smaller amount of contaminated soil and the potential for future redevelopment works at the site, the excavation and disposal approach was considered to be the most applicable.

3.1.10.7 Hydrogeological Report, Stormwater Management Support Studies, Former Canadian Force Base Rockcliffe, Ottawa, Ontario – October 2013

DST completed a hydrogeological report in the support of stormwater management studies for CFB Rockcliffe property as requested by CLC. As part of the Former CFB Rockcliffe redevelopment plan, CLC intended to develop a stormwater management system. Changes to land use may result in changes to the quantity and quality of groundwater within the subject property and surrounding properties. The new stormwater management plan would include the construction of ponds, wetlands and bio-infiltration swales within the area of Former CFB Rockcliffe in Ottawa, Ontario

The objective of the hydrogeological report was to assess the existing hydrogeological conditions and determine the expected potential impacts of the proposed redevelopment on groundwater and groundwater users.

The implemented hydrogeological conceptual model assumed two hydrogeological units in the site area: these were the overburden unit and the shallow bedrock unit. Groundwater elevation contours indicated that these two units are connected. Groundwater flow direction in both units was found to be towards the north and northwest, based on groundwater elevations measured on September 16, 2013.

It was reported that, in general, the development of surface infrastructure will decrease groundwater quantity as a result of decreased infiltration of precipitation due to increased paved areas. The change in volume of groundwater recharge by infiltration will be affected differently across the property by the development due to different types of overburden materials. In the central and southern portion of the property, the silty clay overburden presently has very low infiltration rates and low hydraulic conductivity; therefore, the development of relatively impermeable surface infrastructure in this area will not significantly affect the quantity of groundwater recharge. Development in the area where the till material is found, underlying the northern portion of the property, and on the alluvial sediments underlying the western portion of the property, is generally expected to decrease infiltration and groundwater recharge. In the case where runoff from the areas covered by clay material is diverted into infiltration ponds situated in areas with surficial deposits with higher infiltration rates (glacial till and alluvial deposits), the actual groundwater recharge conditions for the area may improve and increase compared to predevelopment conditions.

It was concluded that the development of the property as a residential community is expected to have a minimal degree of impact on groundwater quality. Anthropogenic activities may introduce contaminants to water that recharges the groundwater under and down-gradient of the property. The property is also known to already have contamination from its previous use as a military base. Surface water flow measurements were completed on the Western and Eastern creeks that flow from the CFB Rockcliffe property through, adjacent properties, and to the Ottawa River. The measurements were taken after a prolonged dry period representing baseflow (groundwater discharge) conditions. Development at the property will have impacts on groundwater recharge conditions and may impact baseflow condition in both creeks. As infiltration ponds enhancing infiltration into groundwater will be built in the area, potential impact on surface water were assumed to be minor.

3.1.10.8 Soil Remediation at Former Building 164, Former Building 79 and Via Venus and Bishop Private Former CFB Rockcliffe Ottawa, Ontario – January 2014

DST was retained by Defence Construction Canada (DCC), on behalf of the DND, to complete a Soil Remediation Program at three sites within DND's former CFB Rockcliffe located in Ottawa, Ontario. The three sites included former Building 164, former Building 79, and an area located near the intersection of Via Venus and Bishop Privates (referred to as "Via Venus and Bishop Private"). The purpose of this program was to:

- Oversee the excavation and disposal of previously identified contaminated soil at all three sites;
- Conduct confirmatory soil sampling for all three remedial excavations; and

- Assess the groundwater quality at Former Building 164 following site restoration.

Remedial excavation activities at the three sites were completed between July and September 2013. Suspected non-impacted soil (through visual and olfactory observations) was stockpiled appropriately on site. Representative soil samples were collected from each stockpile and, based on field screening results, select samples were submitted for laboratory analysis of contaminants of concern (COCs) in order to determine whether or not the excavated soil could be utilized as backfill material. Excavated soil exhibiting staining and/or distinct petroleum odours was directly transported to a licensed waste disposal facility. Contaminants of concern at Former Building 164 and Via Venus and Bishop Private included PHCs and BTEX, while COCs at Former Building 79 included Metals, PAHs, PHCs, and BTEX.

Excavation interim and confirmatory sampling at the three sites was completed by DST field personnel between August and September 2013. Select samples from the excavations were submitted for laboratory analysis of COCs based on field screening results. Based on laboratory analytical results, the extents of the excavations were extended laterally and/or vertically in areas of reported exceedances above applicable CCME guidelines. Clean remedial excavation boundaries (below applicable CCME guidelines) were established at Former Building 79 and Via Venus and Bishop Private. At Former Building 164, clean remedial excavation boundaries were established at the east wall, south wall, west wall and floor of the excavation. However, a clean boundary was not fully achieved at the north wall. On September 13, 2013, during excavation of the north wall, it was observed that the petroleum hydrocarbon contamination had reached the coarse bedding material of the combined sanitary/storm sewer trench located along Via Venus Private, creating a preferential pathway for contaminant migration. Following discussions with DCC/DND, it was decided to cease further remedial advancement of the north wall and that the excavation be backfilled and reinstated.

The final areas at the grade surface of the excavations at Former Building 164, Former Building 79 and Via Venus and Bishop Private were approximately 1000 m^2, 72 m^2 and 72 m^2, respectively. The total volume of excavated soil from the three sites was estimated at 5,860 m^3 (11,720 m.t.). A total of 3,678.05 m^3 (7356.09 m.t.) of the excavated soil was disposed of at a licensed waste disposal facility.

Following the backfilling of the remedial excavations, DST completed a groundwater quality assessment at Former Building 164 consisting of the advancement of five boreholes instrumented with groundwater monitoring wells (BHMW 13-01 to BHMW 13-05). A total of seven groundwater samples were collected, including one sample from each newly installed monitoring well (BHMW13-01 to BHMW13-05), one sample from the temporary groundwater sump installed within the excavation (SUMP), and one blind field duplicate sample (DUP). All groundwater samples were submitted for laboratory analysis of PHCs and BTEX.

All seven collected groundwater samples were in compliance with the applicable MOE Table 3 standards for PHCs and BTEX. There was no visual or olfactory evidence of petroleum impacts observed in any of the collected groundwater samples; no sheen, free phase liquid petroleum hydrocarbons or odours were noted during groundwater purging and sampling activities.

Based on the results of the soil remediation program, DST recommended the completion of an additional soil investigation at Former Building 164 in order to identify the extent of soil contamination present within the sanitary/storm sewer trench located along Via Venus Private. It was recommended that the additional soil investigation should be followed by a soil remediation to remove the identified contaminated soil, as

well as to prevent further migration of contamination and the potential contamination of the imported backfill material within the Former Building 164 excavation.

3.2 Environmental Source Information

An EcoLog ERIS report for 335 St. Laurent Blvd., Ottawa, ON, and the surrounding area within a 250 m buffer of the property was obtained and reviewed by DST as part of this Phase One ESA. EcoLog ERIS searches selected databases for information pertaining to the Phase One study area and surrounding properties within a 250 m buffer, and summarizes the search results. A total of sixty-two (62) databases were searched. EcoLog ERIS located fifty-seven (57) records for the Phase One property and three hundred twenty-six (326) records within 250 meters of the Phase One property were located. One hundred nine (109) additional records were deemed unplottable. The results of the EcoLog ERIS report for the Phase One property are summarized in the following subsections.

3.2.1 Abandoned Mine Information System (AMIS)

The Abandoned Mines Information System contains data on known abandoned and inactive mines located on both Crown and privately held lands. Reported information dated from 1800 to Feb. 2013 included official mine name, status, background information, mine start/end date, primary commodity, mine features, hazards and remediation. One (1) AMIS record was found within the Phase One property. The record indicated that a former limestone quarry was located at the south end of the Site, north of Montreal Road and east of Burma Road.

Three (3) AMIS records were found for properties to the south of the Phase One property (within the Phase One study area). All three (3) records pertain to former limestone quarries within the Phase One study area. All of them have no environmental impact to the Phase One property.

3.2.2 Boreholes (BORE)

The BORE database includes borehole information such as location, stratigraphy, depth, elevation, year drilled, etc. This information was provided by geotechnical investigations, environmental site assessments, mineral exploration, or as a pilot hole for installing piers or underground utilities from many sources from 1950 to 1990 in southern Ontario. This database spans the years of 1875 – 2011. A total of one hundred fifteen (115) records were found: Twenty-four (24) records were found for boreholes within the Phase One property, while ninety-one (91) records were found for boreholes located on other properties within the Phase One study area.

Generally the soil stratigraphy within the Phase One property consisted of clay, weathered crust silty clay, till, silty sand with trace gravel with cobbles and boulders underlain by bedrock (limestone).

3.2.3 Certificates of Approval (CA) & Environmental Compliance Approval (ECA)

The Certificates of Approval (CA) database contains information on provincial approvals including air and noise, industrial sewage, municipal and private sewage, waste management systems and renewable energy resources. The database spans the years of 1985 to 2011. Three (3) CA records were registered to the Phase One property:

- One (1) CA record registered to the City of Ottawa Non Profit HSG Corporation (Lot 22 & 23) at Via Venus for municipal sewage in 1991; and,
- Two (2) CA records registered to the City of Ottawa Non Profit HSG Corporation, both for municipal sewage in 1991.

Eight (8) CA records were registered for properties within the Phase One study area:

- Two (2) CA records for Industrial Air were registered to Montfort Hospital (713 Montreal Rd.) in 2009;
- One (1) CA record for Municipal Water was registered to R.M. of Ottawa Carleton at Burma and Montreal Road intersection in 1986;
- One (1) CA record for Municipal Sewage was registered to Thomas C. Assaly Corp. Ltd. at Easement/Street #1 in 1987;
- One (1) CA record for Industrial Air (Activated Carbon Extraction System) was registered to Eastern Bldg. Cons. & Services Ltd. at 1052 Riviera Drive in 1994;
- One (1) CA record for Municipal Sewage was registered to Rockwell Investments Ltd. at Yule Lane/London Terrace in 1992; and,
- One (1) CA record for Air was registered to Ionalytics Corporation at the Canadian National Research Council (CNRC) Montreal Road Campus (1200 Montreal Rd.), obtained in 2003; and,
- One (1) CA record for Air was registered to Pratt & Whitney Canada Inc. (1200 Montreal Road) in 2003.

Three (3) ECA records were found for properties within the Phase One study area, between 2011 and 2013. Two (2) ECA records were for Municipal and Private sewage works in 2012. One (1) ECA was obtained for Air and Noise for Pratt and Whitney Canada Inc. at CNRC Montreal Road Campus (1191/1200 Montreal Rd.) in March 2013. None of these CA or ECA records indicated an environmental concern to the Phase One property.

3.2.4 Environmental Registry (EBR)

The Environmental Registry (EBR) lists proposals, decisions and exceptions regarding policies, Acts, instruments, or regulations that could significantly affect the environment. Three (3) EBR records were noted for CNRC Montreal Road Campus (1191/1200 Montreal Rd.) within the Phase One study area for instrument decisions and proposals dated May 2003 and October 2010. None of these EBR records indicated an environmental concern to the Phase One property.

3.2.5 ERIS Historical Searches (EHS)

EcoLog ERIS has compiled a database of all environmental risk reports completed since March 1999 until 2013. No records were found for the Phase One property. Eleven (11) EHS records were found for sites within 250 meters radius of the Phase One property. The reports included Fire Insurance Plans, Maps

and/or Site Plans and/or Inspection Reports; Aerials Photos and/or Topographical Maps. Reports available were dated as of 2013, 2012, 2011, 2010, 2007, 2006, 2004, 2003 and 2002.

3.2.6 List of TSSA Expired Facilities (EXP)

The list of Technical Standards and Safety Authority (TSSA) expired facilities includes facilities such as private fuel outlets, bulk plants, fuel oil tanks, gasoline stations, marinas, propane filling stations, liquid fuel tanks, piping systems, etc. These tanks have been removed and automatically fall under the expired facilities list by the TSSA. Eleven (11) records were found within the Phase One property at 77 Via Venus Street pertaining to expired liquid fuel tanks and associated piping and facilities. No information is provided regarding the nature of the tanks or their capacity.

Five (5) records were found for the property located at 916 Montreal Road. No information is provided regarding the nature of the tanks or their capacity.

3.2.7 Contaminated Sites on Federal Land (FCS)

The Contaminated Sites on Federal Land database (FCS) includes an inventory of all known contaminated sites held by Federal departments and agencies. The database spans the years of June 2000 to January 2013.

Three (3) FCS sites within the Phase One property were recorded as follows:

- One (1) FCS record for CFB Rockcliffe, Property Management Trailer Storage Compound, close to Codd's Road and Via Venus Street intersection (the area may be paved in 2006/2007). Both soil and groundwater were contaminated (slight exceedances of federal criteria for Chromium and zinc). A Screening Level Risk Assessment (SLRA) was completed in 2002/2003;
- One (1) FCS record for the National Defence Federal Activities at Former location of B164/79 and Via Venus. No additional information was provided; and
- One (1) FCS record for the National Defence and Federal Real Property at the Central Heating Plant. The record was for sampling and Final Reporting as the remediation has been started. More soil removal and monitoring was required upon completion of the remediation. The site was to be divested to the Canadian Lands Corporation. Three (3) areas of Environmental Concern (APEC) were identified on the Site. APEC-1 is hydrocarbon impacted soil exceeding CWS criteria in two tespits. APEC-2 is benzo(a)pyrene impacted soil at a depth of 4 m in one testpit. APEC-3 is PHC impacted black fill layer.

Two (2) FCS sites were found within the Phase One study area, as follows:

- One (1) FCS record was found at the CNRC Montreal Road Campus (1191/1200 Montreal Rd.). Initial environmental site investigations were conducted in newly identified areas of concern to identify if impacts exist. Detailed environmental site investigations were conducted in the areas where previous site investigations have confirmed the presence of PHCs, BTEX, PAHs, and Metals (metalloid and organometallic). The actual location of the FCS record at this site is unknown; and,

- One (1) FCS record was found at the Rockcliffe Yacht Club, for the National Capital Commission. An additional assessment at this site was completed, in order to reclassify the site using CCME National Classification System.

3.2.8 Fuel Storage Tank (FST and FSTH)

The Fuel Storage Tank (FST) database includes private and retail fuel storage tanks in Ontario. The database is dated 2010 to May 2013. No records were found for the Phase One property. However; six (6) records were located within the Phase One study area:

- CNRC Montreal Road Campus (1191/1200 Montreal Rd.) Building M-19 (NRC Administrative Services and Property Management (NRC-ASPM) –
    - Building M-9 – three (3) 13,638 L fiberglass single wall underground storage tanks (USTs) containing diesel fuel and one (1) 2,273 L fiberglass single wall UST containing gasoline;
    - Building M-19 – one (1) 9,092 L fiberglass single wall UST containing gasoline; and
    - Building M-14 – one (1) 4,546 L fiberglass single wall UST containing gasoline.

The locations of these records within the Phase One study area indicate potential environmental concerns to the Phase One property

3.2.9 Ontario Regulation 347 Waste Generators Summary (GEN)

Regulation 347 of the Ontario EPA defines a waste generation site as any site, equipment and/or operation involved in the production, collection, handling and/or storage of regulated wastes. In general, six (6) GEN records were found within the Phase One property and forty-seven (47) within the Phase One study area:

- Six (6) GEN records were found for locations within the Phase One property for the Department of National Defence or CLC. These generators were approved for Acid Waste-Heavy Metals, other inorganic Acid Wastes, Alkaline Waste-Heavy Metals, Reactive Anion Wastes, Paint/Pigment/Coating Residues, Chemical Fertilizer Wastes, Inorganic Laboratory Chemicals, Aromatic Solvents, Aliphatic Solvents, Petroleum Distillates, Light Fuels, Halogenated Pesticides, Non-halogenated Pesticides PCBs, Oil Skimming & Sludges, Waste Oils & Lubricants, Detergents/Soaps, Organic Laboratory Chemicals, pharmaceuticals, Photo-processing Wastes, Graphic Art Wastes, Pathological Wastes and Waste Compressed Gasses.

Forty-seven (47) records were found within Phase One study area and could have an environmental impact to the Site. In additional seven other properties were identified close to the Phase One property boundary and the in

- 920 Montreal Rd. – Two (2) Gen records were found for Nick Ayoub, for light fuels;
- 989 Montreal Rd. - One (1) GEN record was found for Cohen and Cohen (materials-related remediation services);

- 789 Montreal Rd. – One (1) Gen record was found for Hydro Ottawa (Polychlorinated Biphenyls [PCBs]);
- 971 Gulf Place - One (1) GEN record was found for Candor Plumbing & Heating Ltd (generator number only, no registered waste classes);
- CNRC Montreal Road Campus (1191/1200 Montreal Rd.):
    - Building M-23A NRC Institute For Research In Construction (NRC-IRC) - QBM Cell Science (Four (4) Gen records) (pathological wastes).
    - Building M-11 - Gemma Property Services Inc. (Five (5) Gen records) (waste oils/sludges (petroleum based), waste crankcase oils and lubricants, aliphatic solvents, and petroleum distillates).
    - Building M-50 NRC Industry Partnership Faculty (NRC-IPF) – Optotek - One (1) Gen record - (generator number only, no registered waste classes).
    - Iridian Spectral Technologies - Six (6) Gen records were located – aliphatic solvents and residues, other specified inorganic sludges, waste compressed gases including cylinders, inorganic laboratory chemicals, petroleum distillates, organic laboratory chemicals, misc. wastes and inorganic chemicals.
    - National Research Council 8176 - Nine (9) Gen records - (emulsified oils, detergents and soaps, misc. waste organic chemicals, Photo-processing wastes, pathological wastes, waste compressed gases including cylinders, acid solutions - containing heavy metals, other inorganic acid wastes, alkaline solutions - containing heavy metals, alkaline solutions - containing other metals and non-metals (not cyanide), wastes from the use of pigments, coatings and paints, steel making residues, other specified inorganic sludges, slurries or solids, misc. wastes and inorganic chemicals, inert organic wastes, aromatic solvents and residues, aliphatic solvents and residues, petroleum distillates, light fuels, halogenated solvents and residues, pharmaceuticals, amines, halogenated pesticides, PCBs, waste oils/sludges (petroleum based), waste crankcase oils and lubricants).
    - Government of Canada – Public Works Canada 18-182, Building M-23 NRC Institute For Microstructural Sciences (NRC-IMS) and NRC-IRC CF Photo Unit (8111) (One (1) GEN record) - (spent pickle liquor, acid waste – heavy and other metals; alkaline waste – heavy and other metals, alkaline phosphates, aliphatic solvents, petroleum distillates, wastes from the use of pigments, coatings and paints; inorganic laboratory chemicals, aliphatic solvents, halogenated solvents, emulsified oils, Photo-processing wastes, organic acids).
    - Pratt and Whitney Canada Inc. (Four (4) Gen records) Building M-11 and M-10 NRC Institute For Chemical Process and Environmental Technology (NRC-ICPET) – (alkaline wastes – heavy metals, inorganic laboratory chemicals, paint pigments & coatings, light fuels, waste oils and lubricants, emulsified oils, organic laboratory chemicals).

- 713 Montreal Rd. (Twelve (12) GEN records were found for Montfort Hospital / DND). These generators were approved for Acid Waste-Heavy Metals, other inorganic Acid Wastes, Alkaline Waste-Heavy Metals, Reactive Anion Wastes, Paint/Pigment/Coating Residues, organic/Inorganic Laboratory Chemicals, Aliphatic Solvents, Petroleum Distillates, Light Fuels, Halogenated Pesticides/herbicides, Non-halogenated Pesticides PCBs, Oil Skimming & Sludges, Waste Oils & Lubricants, Detergents/Soaps, Waste crankcase oils, pharmaceuticals, Heavy fuels, Photo-processing Wastes, Graphic Art Wastes, Pathological Wastes and Waste Compressed Gasses, and General Hospitals Wastes.
- Several Gen records were identified , however the exact location of the facilities could not be determined, the records include the following :
    - National Capital Commission 712190 - light fuels (unknown location).
    - Government of Canada National Research Council C/O Public Works Canada – not defined, approval years include: 1986, 1987, 1988, 1989, and 1990.
    - National Archives of Canada Codd's Road – approval years include: 2002, 2003, 2004, and 2011 for other specified inorganics (unknown location); and,
    - Government of Canada National Research Council C/O Public Works Canada – not defined, approval years include: 1992, 1993, and 1994.

Three (3) records were found to be outside of the Phase One study area.

The locations of the records (713 Montreal Rd. and 1200 Montreal Rd.) within the Phase One study area indicate potential environmental concerns to the Phase One property.

3.2.10 TSSA Historic Incidents (HINC)

The TSSA Historic Incidents database (HINC) covers all incidents (spills and leaks) recorded by TSSA between 2006 and June 2009. The following HNIC records were identified for the Phase One property:

- One (1) Natural Gas Pipeline Strike occurred at 3 Castor PVT in 2007. Gaseous fuel was released and the record noted that environmental impact is possible.

Four (4) HINC records were identified to have occurred within the Phase One study area:

- Release of Natural gas from a private dwelling at 184 Provender Avenue on January 13, 2008, approximately 100 m south of the Phase One property;
- Liquid petroleum Spill at Montfort Hospital (713 Montreal Rd.) on February 12, 2008, approximately 50 meters to the south-west of the Phase One property;
- Liquid petroleum Spill at Montfort Hospital (713 Montreal Rd.) on January 23, 2009; approximately 50 meters to the south-west of the Phase One property; and,
- Gaseous fuel spill at 1500 Montreal Rd., unconfirmed date, (inferred to be at CNRC Montreal Road Campus (1191/1200 Montreal Rd.) approximately 30 meters to the east of the Phase One property.

With the exception of the natural gas release at 184 Provender Avenue, the locations of three (3) records (3 Castor PVT, 713 Montreal Rd., and 1500 Montreal Rd.) indicate potential environmental concerns to the Phase One property.

3.2.11 Mineral Occurrences (MNR)

A review through the Ministry of Northern Development and Mines inventory for the period since 1846 to April 2013, resulted in three (3) records being identified for the Phase One study area. One (1) MNR record was for Limestone (Chemical/Flux) south of Rockcliffe in 1991 within the Phase One property, while the remaining two (2) of the MNR records were for locations within Phase One study area. None of these records indicate a potential environmental concern to the Phase One property.

3.2.12 National PCB Inventory (NPCB)

The National PCB Inventory includes information on in-use PCB containing equipment in Canada including federal, provincial and private facilities. The database spans the years of 1988 to 2008. Two (2) records were found within the Phase One property as follows:

- 68 L (mineral oil/ultra-low) stored for disposal, inspected on January 21,1994;
- CFB Ottawa South; Uplands - Stored for disposal (Askarel- unknown concentration) 2.20 Kg, 3.00 Kg, 4.50 L, 8.80 Kg, 9 kg, 9 L, 12 Kg, 15 Kg, 15.10 Kg, 18 Kg, 26.60 Kg, 27 Kg, 28 Kg, 30 Kg, 31 Kg, 31.10 Kg, 34 Kg, 35 Kg, 37.70 Kg, 38 Kg, 40 Kg, 116 Kg, 125 Kg, 126 Kg, 159 L, 159 L, 160 Kg, 172 Kg, 173 Kg, 175 Kg, 177 Kg, 178 Kg, 180 Kg, 182 L, 184 Kg, 200 Kg, 200 L, 205 L, 202.50 L, 205 L, 205 L, 231 Kg, 240 Kg, 250 Kg, 260 Kg, 275 Kg, 308 Kg, 334 Kg, 408 Kg, 500 Kg, 800 L, 42 Kg, 46.3 Kg, 50 Kg, 53.30 Kg, 57.70 Kg, 68 Kg, 71.10 Kg, 75.50 Kg, 80.60 Kg, 91.00 L, 91.10 Kg, 100 Kg, 105 Kg, 109 L, 190 Kg, since 1991;
- PCBs were recorded as being in use in 1993, and removed from the registry in 1997.

As the Phase One property has been decommissioned and there are no disposal records available, these records indicate a potential environmental concern to the Phase One property.

Nine (9) Records were found for two (2) locations within the Phase One study area as follows:

- NPCB records were registered for the Montfort Hospital (713 Montreal Rd.) to the south-west of the Phase One property. Unknown quantities were stored in school and care facilities storage in 1994.
- The following NPCB records were registered for CNRC Montreal Road Campus (1191/1200 Montreal Rd.) as follows:
    - Stored (Askarel/Askarel) for future use at Building M-19 & M-51, inspected on May 05,1993;
    - 4.5 L of Askarel (in use) and 803 L of Inerteen (in-use), since 1993;
    - Askarel/Askarel (in use) at Building M-19, M-35, M-36 and M-55 since 1991;

- Stored Askarel for future use or disposal at Building M-26 since 1993; 40 L, 50 L, 53 L, 60 L, 65 L, 75 L, 108.6 L, 120 Kg, 132 Kg, 145 L, 200 L, 205 L, 236.08 L, 250 Kg, 252 Kg, 256.25 Kg, 282 Kg, 300 Kg, 448 Kg, 505 Kg, 512.5 Kg, 1200 L, 1.5 L, 1.88 Kg, 2 Kg, 2 L, 4.5 L, 4.5 L, 5 L, 6.6 L, 6.6 L, 7.89 L, 10 L, 18 L, 18.1 L, 20 L, and 40 L;
- Stored Askarel/Askarel (in use) and for future use at Building M19 since 1993; 6.6 L, 6.6 L, 6.6 L, 6.6 L, 6.6 L, 4.5 L, 4.5 L, 6.6 L, 6.6 L, and 4.5L were sent to Swan Hills, Alberta for disposal in 1999; and
- Stored Askarel/Askarel and Askarel/Inerteen In-Use at Building M-36 since 1993; 803 L, 4.5 L, 4.5 L, 4.5 L, 4.5 L, 4.5 L, 4.5 L, 803 L, 803 L, 803 L, 803 L, 803 L, 803 L, 803 L, 803 L, and 803 L.

The location of these records (on-site, 713 Montreal Rd., and 1200 Montreal Rd) indicate potential environmental concerns to the Phase One property.

3.2.13 National Pollutant Release Inventory (NPRI)

The National Pollutant Release Inventory includes information regarding releases to air, water or land and waste transfers for recycling. The database spans the years of 1993 to 2011. No records were found for the Phase One property. Four (4) records were registered to one (1) location found within the Phase One study area;

- CNRC Montreal Road Campus (1191/1200 Montreal Rd.):
  - The release of 58 tonnes to the air of Nitrogen oxides (expressed as NO2) and 0.47 tonnes to the air of PM2.5 in 2008;
  - The release of 47 tonnes to the air of Nitrogen oxides (expressed as NO2) and 0.35 tonnes to the air of PM2.5 in 2009;
  - The release of 61 tonnes to the air of Nitrogen oxides (expressed as NO2) and 0.43 tonnes to the air of Particulate Matter <= 2.5 Microns (PM2.5) in 2010; and
  - The release of 54 tonnes to the air of Nitrogen oxides (expressed as NO2) and 0.42 tonnes to the air of PM2.5 in 2011.

Due to the nature of the releases and their location, these records are not of environmental concern to the Phase One property.

3.2.14 Inventory of PCB Storage Sites (OPCB)

A Search through the MOE, Waste Management Branch Inventory of PCB Storage Sites (OPCB) revealed no records for the Phase One property; however, six (6) records were found for two (2) locations within Phase One study area:

- OPCB records were registered for the Montfort Hospital (713 Montreal Rd.) located to the south-west of the Phase One property. These records were registered in 1995, 1998, 1999, 2000, 2003 and 2004. The records indicated that there were three (3) transformers with 233

weight of liquid of high level PCBs (>1000ppm). All 3 transformers were registered in 1998, 1999, and 2000; and

- One (1) OPCB record was registered for the CNRC Montreal Road Campus (1191/1200 Montreal Rd.) Building M-51 in 1992.

Building M-51 of the CNRC Montreal Road Campus (1191/1200 Montreal Rd.) is located approximately 800 m south of the Phase One property and is not deemed an environmental concern. The record found for Montfort Hospital (713 Montreal Rd.) represents a potential environmental concern to the Phase One property.

3.2.15 Pesticide Register (PES)

Search through the Ontario Ministry of Environment database of all manufactures and vendors of registered pesticides revealed one (1) record for Phase One study area at 523 Lang's Road at 35 meters to the south of the Phase One property.

Cedric's Pest Control was recorded as limited vendor. This site does not represent a potential environmental concern to the Phase One property.

3.2.16 TSSA Pipeline Incidents (PINC)

TSSA pipeline incidents database was searched for any spills, strike, or leaks from recorded by the TSSA since June 2009 to March 2012. No PINC records were identified within the Phase One property. One (1) PINC record was registered within Phase One study area to 620 Hochelaga Street, approximately 300 m east of the Phase One property, on June 06, 2011.

The incident occurrence type was defined as "natural gas pipeline strike" during construction, no property damage or services interruptions were involved. Based on the distance and the location of the Phase One property to the source and the type of release (natural gas), this site does not represent a potential environmental concern to the Phase One property.

3.2.17 Private and Retail Fuel Storage Tanks (PRT)

The Private and Retail Fuel Storage Tanks database includes locations that have gasoline, oil, waste oil, natural gas and/or propane storage tanks on their property. The database spans the years of 1989 to 1996. One (1) record was identified at 77 Via Venus Street on the Phase One property. The license of the site expired in 1992. This location on the Phase One property represents a potential environmental concern.

Records were identified at CNRC Montreal Road Campus (1191/1200 Montreal Rd.) for the following NRC Buildings: M-39, M-19, M-14 which are located approximately 30 m east of the Phase One property:

- The record registered to Building M-39 was identified as a private 4500 L tank;
- The records registered to Building M-19 were identified as a private 9092 L tank, a private 90920 L tank, a retail 2273 L tank, and a private 13638 L tank;
- The record registered to Building M-14 was identified as a private 4546 L tank;

These locations within the Phase One study area represents potential environmental concerns to the Phase One property.

3.2.18 Permit to Take Water (PTTW)

One (1) permit to take water was approved for the Montfort Hospital (713 Montreal Rd.) in 2009. The Ontario's Environmental Registry Database included all permits since 1994 – July 2013. This record does not represent a potential environmental concern to the Phase One property.

3.2.19 Ontario Regulation 347 Waste Receivers Summary (REC)

The Ontario Regulation 347 Waste Receivers Summary includes information on receivers of regulated wastes and spans the years from 1986 to 2011. One (1) record was found for Lonalytics Corporation (Building M-50) at the CNRC Montreal Road Campus (1191/1200 Montreal Rd.), approximately 500 m to the south of the Phase One property.

- Site was listed as a PCB waste transfer station from 1994 -2002, 2006 -2008.

Due to the distance from the Site, this record does not represent a potential environmental concern to the Phase One property.

3.2.20 Records of Site Conditions (RSC)

The Record of Site Condition (RSC) is part of the Ministry of the Environment's Brownfields Environmental Site Registry. RSC database provides data for the time period since 1997 to June 2013. On RSC record was found for the property located at 949 Montreal Road, approximately 250 m south of the Phase One property, after a soil cleanup was performed by John D. Paterson and Assoc. Ltd. in May 2001.

This record does not represent a potential environmental concern to the Phase One property.

3.2.21 Retail Fuel Storage Tanks (RST)

This database includes an inventory of retail fuel outlet locations (including marinas) that have any gasoline, oil, waste oil, and natural gas and / or propane storage tanks in their properties since 1999 to June 2010. No records were found for the Phase One property.

Two (2) RST records were found within Phase One study area, for the property located at 916 Montreal Road (Service Stations-Gasoline, Oil & Natural Gas). Since the records are located approximately 375 m to the south of the Phase One property, they are unlikely to have an environmental impact on the Phase One property.

3.2.22 Scott's Manufacturing Directory (SCT)

Scott's Directories is a data bank containing information on over 70,000 manufacturers in Ontario. Even though Scott's listings are voluntary, it is the most comprehensive database of Ontario manufacturers available. Information concerning a company's address, plant size, and main products are included in

this database. This database begins with 1992 information and is updated annually. No record was found for the Phase One property.

The following records were found for locations within the Phase One study area for Scott's Manufacturing Directory category. Table 3.2.22 below summarizes the records found during this search:

Table 3.2.22: Scotts Manufacturing Directory Summary

Business Name	Location	Distance to Phase One Property	Description
CAJ Clothing	13 Fairhaven Way	20 m south	Women's, misses', and juniors' outerwear, not elsewhere classified - established in 1984
Printing and Promotion of Canada Inc.	928 Montreal Rd.	200 m south	Printing and Periodical Publishers - established in 1984
Optotek Limited	CNRC Montreal Road Campus (1191/1200 Montreal Rd.) Building M-50	550 m south-east	Semiconductor and Other Electronic Component Manufacturing, Computer Systems Design and Related Services, Manufacturing and Reproducing Magnetic and Optical Media - established in 1977
National Research Council of Canada	CNRC Montreal Road Campus (1191/1200 Montreal Rd.)	Adjacent to the east	Periodical Publishers, Book Publishers and all other funds and financial vehicles - established in 2001
Iridian Spectral Technologies	CNRC Montreal Road Campus (1191/1200 Montreal Rd.) Building M-50	550 m south-east	Medical Equipment and Supplies Manufacturing, Semiconductor and Other Electronic Component Manufacturing - established in 1998
Canadian Photonics Fabrication	CNRC Montreal Road Campus (1191/1200 Montreal Rd.) Building M-50	550 m south-east	All Other General-Purpose Machinery Manufacturing, Medical Equipment and Supplies Manufacturing, All Other Miscellaneous Manufacturing, All Other Miscellaneous Fabricated Metal Product Manufacturing – established in 2005

These records do not represent a potential environmental concern to the Phase One property.

3.2.23 Ontario Spills (SPL)

The Ontario Spills database includes information on location, type and quantity of contaminant, date of spill, environmental impact, nature of impact and cause. The database spans the years of 1988 to June 2013. One (1) record was found for the Phase One property due to raw sewage (un-chlorinated) spill from

a City of Ottawa manhole backup, the spill impacted the soil at 75 Bishop Private, it occurred on April 10, 2007.

The following Table 3.2.23 indicates the reported spill occurrences within the Phase One study area:

Table 3.2.23: Ontario Spills Summary for Phase One Study Area

Location	Date	Spill Summary	Receiving Medium	Environmental Impact
713 Montreal Rd.	17-July-2007	45 L of Ethylene Glycol (Antifreeze)	Sewers	Not Anticipated
	29-April-2005	Natural Gas (Methane) due to hose leak	Air	Not Anticipated
	23-Jan-2009	200 L furnace oil due to UST leak	Soil	Not Anticipated
	26-June-2008	100 L Vegetable oil	Soil	Possible
	02-Dec-2008	50 L #2 Stove oil	Soil	Not Anticipated
	05-Mar-2006	80 L of Ethylene Glycol (Antifreeze)	Land	Not Anticipated
	10-Sep-2009	82 Kg of Refrigerant gas	Air	Confirmed
	03-Mar-2005	90 L Hydraulic oil	Land	Not Anticipated
	14-April-2004	168 Kg Refrigerant Gas Suva 134A due to Cooling System Leak	Air	Possible
	19-April-2004	121 Kg Refrigerant Gas Suva 134A due to equipment failure	Air	Possible
	14-Feb-2007	250 L Diesel Fuel	Land	Not Anticipated
CNRC Montreal Road Campus (1191/1200 Montreal Rd.)	07-Aug-2012	210 Kg Refrigerant Gas	Air	Not Anticipated
	01-Jul-2008	200 L Transformer oil & 2L PCB due to pipe or hose leak	Not specified	Not Anticipated
	18-Feb-2002	UST leak	Soil	Confirmed
	29-Oct-2011	30 L Oil (petroleum base not specified)	Not specified	Not Anticipated
1500 Montreal Rd. (assumed to	13-Apr-2008	Natural Gas, compressed (Methane)	Air	Confirmed

Location	Date	Spill Summary	Receiving Medium	Environmental Impact
be CNRC Montreal Road Campus (1191/1200 Montreal Rd.))				
North of Hemlock Rd. West of Aviation Parkway	21-Nov-2000	Combined sewers collapsed	Water	Possible
402 Miranda Dr.	25-Oct-1993	2 L Gasoline poured into private catch basin	Water	Possible
278 Stone Quarry Rd.	09-Jun-1999	10 L Pesticide to the ground	Land	Possible
1050 Riviera St.	25-Jan-1994	900 L Furnace oil to basement	Land	Possible
Montreal Rd. & Blair Rd.	24-Feb-1997	450 L Jet fuel to parking lot	Land/Air	Possible
Montreal Rd. & Blair Rd.	31-Mar-2000	1 L Hydraulic oil spill to road	Land/Water	Possible

Based on the distance and the location of Phase One property to the spills and the amount and nature of the releases, there is an associated environmental risk to the Phase One property, primarily from the following locations:

- Montfort Hospital (713 Montreal Rd.) – spills may have impacted shallow groundwater at a hydraulically up-gradient location from the Phase One property;
- 1050 Rivera Street – a spill of 900 L of furnace oil to the basement of a residential property in 1994 may have impacted soil and shallow groundwater at a hydraulically cross-gradient location from the Phase One property; and
- CNRC Montreal Road Campus (1191/1200 Montreal Rd.) – spills may have impacted soil and shallow groundwater at a hydraulically cross-gradient location from the Phase One property.

3.2.24 Water Well Information System (WWIS)

The Water Well Information System database includes a list of water wells found in Ontario and spans the years from 1955 to May 2013.

Five (5) well records identified within the Phase One property:

- One (1) abandoned Test Hole constructed in 2011 at depth of 4.6 m;
- One (1) monitoring Test Hole constructed in 2011 at depth of 9.14 m;

- One (1) Test Hole, not in use, constructed in 2004 at depth of 3.7 m;
- One (1) Test Hole, not in use, constructed in 2006 at depth of 3.4 m; and,
- One (1) abandoned, commercial use well, constructed in 2004 at unknown depth.

Seventy-five (75) records were identified within Phase One study area:

- Two (2) abandoned wells, constructed during 1957 to 2008 at depths of 12.9 m and 117.7 m respectively;
- Three (3) commercial water supply wells, constructed in 1955, 1956 and 1959 at depths of 7.4 m, 75.4 m and 1.9 m respectively;
- Thirty-seven (37) domestic water supply wells, constructed since 1949 until 2008 at depths starts from 0.6 m (shallow bedrock wells) to 117.7 m (deep bedrock wells);
- One (1) livestock domestic well, constructed in 1950 at depth of 1.6 m;
- Twelve (12) observation (monitoring) wells, constructed since 1959 until 2011;
- Two public water supply wells, constructed in 1951 and 1952, at 2.9 m and 112.9 m depths respectively;
- Fifteen (15) Test Holes, constructed during the years of 2006 and 2010, at depths of 1.6 m to 9.7 m; and,
- Three (3) WWIS records found, constructed in 2008 at depths of 12.9 m, 28.7 m and 32.3 m.

Potable water to the Phase One property and surrounding area is supplied by municipal water and as such, it is unlikely that any wells are in use in the Phase One study area.

3.2.25 City Directory Reviews

3.2.25.1 Past Uses of the Phase One Property

The Phase One property is presently owned by CLC and was known as CFB Rockcliffe as far back as the 1920's. The City Directory record shows the period of time for each listing. The records were available for the years 1954 to 2010. A record search summary has been provided in Table 3.2.25-1.

Table 3.2.25-1: Summary of Vernon's Ottawa City Directory (Phase One Property)

Address	Date	Listing
335 St. Laurent Blvd	1954-2010	No listing

3.2.25.2 Past Uses of the Adjacent Properties

A review of the City Directories found the mainly residential area and some primarily light commercial properties surrounding the Phase One property. To the North is mainly forested, with the exception of the Rockcliffe Airport located approximately 395 m north-west from the Phase One property. To the West is a residential area which has been residential for more than 50 years. To the South is mainly residential and light commercial properties, with the exception of the Montfort Hospital located approx. 257 m south-west

of the Phase One property. The land use to the south has changed little since the 1960's and has always been primary residential. East of the Phase One property is light commercial, and an institutional property (National Research Council) located adjacent to the Phase One property. This site has been in operation since the 1950's or earlier.

The City Directories records shows the period of time for each listing. The following records are presented in Table 3.2.25-2 for the identified addresses within the Phase One study area:

Table 3.2.25-2: Summary of Vernon's Ottawa City Directory for Phase One Study Area

Address	Date	Listing	Distance to Phase One property
11 Aviation Parkway	2010	Compass Group Canada	Bounding the north-west corner of the Phase One property.
	2005/2004/2000/ 1999/1995/1994/ 1989/1988/1984/ 1979/1974/1969/ 1964/1959/1954	Not Listed

	1959/1954	Not Listed	

3.3 Physical Setting Sources

Aerial photographs, as well as soil, bedrock geology, and topography maps were reviewed for information pertaining to the physical setting of the Phase One study area. Results of the review are presented in the following subsections.

3.3.1 Aerial Photographs

Eight (8) aerial photographs were available for review for the Phase One property from the http://maps.ottawa.ca/geoottawa mapping website. Aerial photographs were obtained for 1965, 1976, 1991, 2002, 2005, 2008, and 2011. A 2013 image was obtained from the Google Earth™ online database. Copies of the aerial photographs are presented in Appendix B. The following was noted in the image review:

- 1965: The Phase One property was developed at that time, the residential homes, sheds were present. Montreal Road was developed and Codd's Road was partially developed. The adjacent areas (Phase One study area) had light commercial and residential dwellings around the Phase One Study area. Major infilling was observed on the south side of Montreal Road, immediately south of the Phase One property. This infilling was likely conducted to fill in former limestone quarries located in the vicinity.
- 1976: All the Phase One property features described in the 1965 aerial photo were present, in addition to a new building (National Research Council property) to the east of the Phase One property. The area was built up more than in 1965, more residential dwellings were indicated.
- 1991: All the Phase One property features described in the 1976 aerial photo were present, in addition to a new building (Montfort Hospital property) to the south-east of the Phase One property. A new triangular building was located on the CFB Rockcliffe Airport property.
- 2002: All the Phase One property features described in the 1991 aerial photo were present, in addition to the Montfort Long Term Care building which was starting to be built on the Montfort Hospital property.
- 2005: All the Phase One property features described in the 2002 aerial photo were present, in addition to the completed Montfort Long Term Care building on the Montfort Hospital property and the removal of a large building near the north-east corner of the Phase One property.

- 2008: The 2008 aerial photo shows no significant changes from the 2005 aerial photo for the Phase One property and Phase One area.
- 2011: All of the residential dwellings are no longer on the Phase One Property. There are approx. 10 buildings remaining on the Phase One property.
- 2013: This is the most recent aerial photo of the Phase One property, there are 6 buildings on the Phase One property.

3.3.2 Climate Data

The National Climate Data and Information Archive (Environment Canada, 2010) was reviewed for information on climatic conditions in and around the Phase One property which is located in Ottawa, Ontario. Ottawa is characterized by humid continental climate with four distinct seasons.

Elevation: 79.00 – 100.00 m above mean sea level (amsl)

Temperature:

- Average daily highs:
  - Highest in July, around 26.6 °C
  - Lowest in January around -14.4 °C
- Extremes:
  - 37.8 °C on July 4, 1913
  - -38.9 °C on December 29, 1933
- Precipitation:
  - Average annual precipitation: 919.5.5 mm/year
  - Mean annual rainfall: 755.5 mm/year
  - Extreme rainfall: 108.6 mm on September 9, 2004
  - Mean annual snowfall: 75.4 cm/year
  - Extreme snow depth: 97 cm on February 24, 1971

3.3.3 Topography, Hydrology, Geology

Based on a review of the Rockcliffe Ontario Base Mapping (OBM) data from Ecolog ERIS, the Phase One property and surrounding area are relatively flat with a gentle slope downwards from the south-east (110 m amsl) to the north-west (85 m amsl). At the north-west end of the Phase One property there is an escarpment which drops from 80 m amsl to 60 m amsl over a distance of approximately 100 m. The regional surface drainage appears to be to the north-west, towards the Ottawa River located approximately 650 m north of the Phase One property. The regional groundwater flow direction is inferred to be predominantly to the north to the Ottawa River in both the shallow overburden and bedrock

groundwater. Locally on the Phase One property, shallow groundwater flow may be influenced be variable bedrock topography.

The surficial materials overlying the Phase One property are Off-shore marine deposits, clay and silts. The upper parts are generally mottled or laminated reddish brown and bluish grey and may contain lenses and pockets of sand, and the clay is uniform and blue-grey (Ecolog ERIS – Surface Geology Report). The physiography of the Phase One study area consists of Limestone Plains, Clay Plains, and Sand Plains.

The Phase One property is underlain by bedrock of the Ottawa Group; Gull Lake Formation overlies the St. Martin Formation consisting of shale with minor limestone, and the Rockcliffe Formation shale (Ecolog ERIS – Bedrock Geology Report). The approximate depth to bedrock is 2.5 m below ground surface in the Phase One study area. The general stratigraphy of the overburden from ground surface to bedrock is topsoil to medium sand and gravel to limestone.

3.3.4 Fill Material

There may have been imported fill (of unknown quality) used during the site development. In addition, infilling may have occurred in areas where limestone was quarried out at through south end of the Phase One property.

3.3.5 Water Bodies and Areas of Natural Significance

Information obtained from the City of Ottawa mapping software (http://maps.ottawa.ca/geoottawa) did not identify any provincially sensitive wetlands on the Phase One property or within the Phase One study area. As noted in Section 3.3.3, the Ottawa River is located approximately 650 m north of the Phase One property.

The Area of Natural and Scientific Interest (ANSI) Report provided by Ecolog ERIS also did not identify any ANSI on the Phase One property or within the Phase One study area. One urban water way was identified on the Phase One property, namely a drainage water way which was identified in the south-west corner of the property. The ditch water originated approximately 150 m east of the intersection of Burma Road and Drayton Private and discharged into the subsurface stormwater control system approximately 400 m to the west. An existing stormwater control pond was identified immediately to the east of the Phase One property, and a lagoon was identified to the north-west of the Phase One property on the adjacent NRC (CNRC Montreal Road Campus North (1191 Montreal Rd.) Rd.) property. Relevant information from the Ontario Ministry of Natural Resources (OMNR) was requested on January 7, 2014. A response was received from the OMNR, on May 27, 2014, identifying Natural Heritage Values and Species at Risk located on site or nearby. OMNR's response is included in Appendix F.

3.3.6 Well Records

Information obtained from the MOE Water Well Online Database (http://www.ene.gov.on.ca/environment/en/mapping/wells) identified five (5) well records on the Phase One property:

- One (1) abandoned Test Hole constructed in 2011 at depth of 4.6 m;
- One (1) monitoring Test Hole constructed in 2011 at depth of 9.14 m;

- One (1) Test Hole, not in use, constructed in 2004 at depth of 3.7 m;
- One (1) Test Hole, not in use, constructed in 2006 at depth of 3.4 m; and,
- One (1) abandoned, commercial use well, constructed in 2004 at unknown depth.

Another seventy-five (75) records were identified within Phase One study area. All well records were identified to be consistent with the Ecolog ERIS database search results. Potable water to the Phase One property and surrounding area is supplied by municipal water and as such, it is unlikely that any potable water wells are in use in the Phase One study area.

Due to the age of the database, it is unknown whether other wells were completed on the Phase One property. A review of the historical reports identified many monitoring wells on the Phase One property. These wells were used to evaluate groundwater quality and were not used as potable water sources.

3.4 Site Operating Records

Since the Phase One property is an enhanced investigation property, site operation records, if available, are required. At this time, no site operation records are available or have been provided to DST for the Phase One property.

4.0 Interviews

4.1 General

DST conducted an interview on June 6, 2014, with Ms. Krista Durie, Project Coordinator with CLC. Ms. Durie was selected to be interviewed, as she has been associated with the phase one property for approximately eleven (11) years. Ms. Durie was interviewed via telephone.

The rationale for interviewing Ms. Durie was:

- She has good knowledge of current phase one property activities;
- She has good knowledge about the adjacent property activities;
- She has some knowledge of past phase one property activities; and,
- She has some knowledge of past activities at the adjacent properties.

Ms. Durie provided DST with the following information:

- The majority of the phase one property is not being used at this time. The former parade square, located on the northeast corner of Via Venus and Codds Road, is currently being utilized by the Monfort Hospital for overflow parking, and has been since approximately April 2013;
- The majority of all hydro utilities servicing the phase one property have been disconnected, with the exception of the line running along Codds/Polaris Road and the main hydro corridor for Hemlock Road (including lines along Cottage Private);
- The former CFB Rockcliffe historically covered approximately 323 hectares and extended from the Ottawa River (including the Rockcliffe airport and Aviation and Space Museum lands) going south to the current southern boundary, and east to Blair Road (encompassing the adjacent National Research Council Lands). The western boundary remains similar to the original boundary. Currently, the phase one property encompasses approximately 125 hectares;
- The Department of National Defence first started occupying the phase one property in approximately the 1890s. Development of the property spanned many years;
- The primary purposes of the CFB Rockcliffe were:
  - Aerial photography surveying;
  - Flight training;
  - Air transportation of military personnel and dignitaries;
  - Testing and experimentation of aviation equipment; and,
  - Military mixed use residential use.
- In 1984, CFB Rockcliffe was declared surplus and the process of relocating personnel, equipment and services commenced. The last service/resident departed the phase one property in approximately 2012;

- To Ms. Durie's knowledge no issues of environmental concern have occurred on the adjacent properties;
- To Ms. Durie's knowledge, no potable drinking water wells are located on the phase one property; however numerous groundwater monitoring wells are located throughout the phase one property;
- To Ms. Durie's knowledge, the Former CFB Rockcliffe was equipped with only one (1) commercial fuelling outlet, the former Canex (shell) location near Via Venus and Bishop Private. The Canex fuelling outlet was equipped with a dry cleaning depot drop off, no active dry cleaning facilities were located on the base;
- No automotive repair/maintenance facilities, manufacturing, waste disposal facilities were present on the base;
- Building 164 and Canex were the only buildings equipped with underground storage tanks;
- One (1) fire had occurred at Building 164 in November 2012. To her knowledge no other fire incidents have occurred on the phase one property; and,
- To Ms. Durie's knowledge, Building 167 (aerial photographs archives) was the only building which contained chemical storage (nitrates).

5.0 Site Reconnaissance

5.1 General Requirements

The findings documented in this section are based on observations made by the Site assessors, Mr. Andrew Naoum, P.Eng., and Mr. George Thomas, P.Eng., QP_{ESA}, at the time of the site reconnaissance which took place on May 29, 2014. Conditions at the time of the Site visit were overcast with a temperature of approximately 18°C.

5.2 Interior Observations

There were no buildings present on the Phase One property, and as such, only exterior observations for the Phase One property and adjacent properties were completed by DST.

5.3 Exterior Observations

The following sections detail observations made during the site reconnaissance.

5.3.1 General

The site was flat and devoid of buildings or structures with the exception of the presence of asphalt roads and pathways, gravel roads and driveways, and concrete pads where former buildings were located. The Phase One property was cleared, and partially overgrown with vegetation. With the exception of the local infrastructure, there is no visible evidence of development on the site.

5.3.2 Observation of Neighboring Properties

Properties surrounding the Phase One property are detailed in the Table 5.3.2 below:

Table 5.3.2: Surrounding Property Use

Surrounding Property Direction	Property Use
North	Escarpment and woodlot, beyond which is Aviation Pathway and Rockcliffe Parkway, commercial and aviation land use
South	Montreal Road, residential, light commercial, and institutional land uses
East	Commercial land use including the NRC
West	Aviation Parkway and residential land uses

5.3.3 Wells

No potable water wells were identified on the Phase One property during the site reconnaissance. As previously noted, a number of monitoring wells exist on-Site, advanced during previous environmental investigations. Refer to sections 3.3.6 for additional information and detail regarding wells.

5.3.4 Sewage Disposal

The Phase One property is served by a municipal sewage system via a complete sanitary sewer network, located throughout the Phase One property.

5.3.5 Pits and Lagoons

A groundwater sump pit was observed in the former location of the basement of the building 164 on-Site. No evidence of other pits or lagoons were observed within the Phase One property during the site reconnaissance.

5.3.6 Stressed Vegetation

No evidence of stressed vegetation was observed within the Phase One property during the site reconnaissance.

5.3.7 Fill

Imported fill (of unknown quality) was used during the site development. Additionally, former remedial excavations completed on site have been backfilled with imported fill materials.

5.3.8 Waste materials and debris

Waste materials and debris were observed throughout the Phase One property due to deconstruction activities which took place on the Phase One property prior to the site reconnaissance.

5.3.9 Watercourses, Ditches or Standing Water

Two creeks were observed on the Phase One property, one in the north-west corner along Hemlock Road and one in the south-east corner north of Montreal Road. The creek crosses Hemlock Road via a pipe culvert.

5.3.10 Roads and Rights of Way

The Phase One property includes various municipal roadways throughout the property (refer to Appendix A, Figure 2).

5.3.11 Hazardous Materials

No hazardous material storage areas were noted on the Phase One property since there are no buildings or structures on the Site.

5.3.12 Storage Tanks

There were no specific storage tanks identified during the Phase One property reconnaissance.

5.3.13 Storage Containers

No liquid storage containers were noted on the Phase One property during the site reconnaissance.

5.3.14 Odours

No odours were noted on the Phase One property during the site reconnaissance.

5.3.15 Potable Water Supply

No potable water supply was noted on the Phase One property during the site reconnaissance. Municipal water is (or will be) provided for the Phase One property.

5.4 Special Attention Items

5.4.1 Polychlorinated Biphenyls (PCBs)

PCB use for the manufacturing of electrical transformers and light ballasts for fluorescent fixtures was discontinued around 1980. No PCB-containing equipment was noted on the Phase One property during the site reconnaissance. There are no buildings or structures on the Phase One property.

5.4.2 Asbestos-Containing Materials (ACMs)

ACMs in building materials were discontinued in the early 1980s. Prior to this, ACMs were used to manufacture ceiling and floor tiles, insulation, press board materials, glue, drywall, roofing materials, and other construction materials. No ACMs or equipment were noted on the Phase One property during the site reconnaissance. There are no buildings or structures on the Phase One property and it is unlikely that ACMs are present.

5.4.3 Lead

Many types of paint produced prior to 1976 could contain significant amounts of lead. Paint containing greater than 0.5% lead, or 5,000 ppm, is considered to be lead based. Lead based paints (LBPs) can still be utilized for commercial and exterior purposes. However, in 1990, the Canadian Paint and Coating Association agreed to voluntarily eliminate all added lead from their products. Lead was also commonly utilized for solder on copper piping. No lead-containing equipment or materials were noted on the Phase One property during the site reconnaissance. Lead-based paints and solder on copper water lines may be present on the Phase One property underground on abandoned piping.

5.4.4 Ozone-Depleting Substance (ODS)

Air ionization units, older air conditioners and refrigerators are common types of appliances that have the potential to contain ozone-depleting substances (ODS). No ODS-containing equipment or materials were noted on the Phase One property during the site reconnaissance.

5.4.5 Urea Formaldehyde Foam Insulation (UFFI)

UFFI was utilized as a building material up until the 1970s. No lead-containing equipment or materials were noted on the Phase One property during the site reconnaissance. No UFFIs were observed on the Phase One property since there are no buildings or structures present on the site, it is unlikely that UFFI is present.

6.0 Review and Evaluation of Information

6.1 Current and Past Uses

The Phase One property is located at 335 St. Laurent Blvd., Ottawa, Ontario. The Phase One property is currently owned by CLC and was previously known as CFB Rockcliffe which was located in the north-east end of the City of Ottawa, Ontario. It is currently vacant and undeveloped. It has an irregular shape and covers an area of 125.3 hectares. CLC is looking to reintegrate this former Canadian Forces Base into the surrounding urban and natural context, creating a vibrant new community that blends with the existing character of Ottawa.

The Phase One property has no municipal address, but is comprised of two (2) parcels of land, PINs 04273-0433(LT) and 04273-0434(LT). The two parcels were originally deeded as early as 1802. The Phase One property was established as CFB Rockcliffe in 1928 as a military base containing various buildings. Based on historical information received from PWGSC during previous investigations, some of the buildings and infrastructure allegedly existed prior to the 1930s, and dated from before World War I. A review of the legal title searches indicates the original parcels of the lands were deeded as early as 1803. Up until 1928, all parcels were listed as being estates or owned by individuals, likely for residential or agricultural uses with the exception of the northern parcel being owned by the Laurentian Stone Company. It is unknown if they ever mined the Phase One property for limestone. Parts of the ownership of the parcel was transferred to His Majesty The King (as represented by the Minister of Defence) as early as 1906.

There is no other mention of a commercial or industrial party owning the Phase One property. The lands were legally expropriated by the Canadian Department of National Defence in the early 1950's and were used as commercial lands until its recent divestment to the CLC in 2011.

The first suspected use of the lands was likely for residential or agricultural in the 1800's however, the first known use of the lands was for a military base. Part of the original land may have been developed as the base as early as 1906, however the initial indication of the Site being turned over to Federal ownership was 1937. As such the first known use of the Phase One Property was for a military base in 1937.

Table 6.1 below summarizes the land use identified on the Phase One property during the records review only.

Table 6.1: Current and Past Uses of the Phase One Property

Year	Name of Owner	Description of Property Use	Property Use	Other Observations from Aerial Photographs, Fire Insurance Plans, etc.
May 17, 1802	Richard Wragg	Unknown	Agricultural/ Residential or other (assumed)	North property
May 23, 1803	Hon. W.D. Powell	Unknown	Agricultural/ Residential or other (assumed)	South property.
May 9, 1804	John Richardson and John Forsyth	Unknown	Agricultural/ Residential or other (assumed)	South property.
September 27, 1806	John Platt	Unknown	Agricultural/ Residential or other (assumed)	North property
March 13, 1828	Eleanor Abrams	Unknown	Agricultural/ Residential or other (assumed)	North property
October 28, 1829	John Richardson	Unknown	Agricultural/ Residential or other (assumed)	South property.
January 14, 1837	John Cameron	Unknown	Agricultural/ Residential or other (assumed)	South property.
August 21, 1841	John (Jean) Barreille	Unknown	Agricultural/ Residential or other (assumed)	North property
September 11, 1841	John Carson	Unknown	Agricultural/ Residential or other (assumed)	North property
October 19, 1843	Baptiste Cote	Unknown	Agricultural/ Residential or other (assumed)	South property.

March 28, 2011	Canada Lands Company CLC Limited	CFB Rockcliffe military base.	Institutional/Other	Both Properties.

6.2 Potentially-Contaminating Activities (PCAs)

Table 6.2 below summarizes the potentially-contaminating activities (PCAs) identified within the Phase One study area during the records review only. Refer to Figure 4 attached in Appendix A for the location of each PCA.

Table 6.2: PCAs within the Phase One Study Area

PCA No.	Potentially Contaminating Activity	Location	Potential Contaminants of Concern (PCOCs)
PCA1	Twelve (12) waste generators. The wastes included: - Inorganic Acid Waste; - Heavy Metals; - Alkaline Waste-Heavy Metals; - Reactive Anion Wastes,; - Inorganic Laboratory Chemicals; - Aromatic Solvents; - Aliphatic Solvents,; - Petroleum Distillates; - Light Fuels; - Non/Halogenated Pesticides, - Oil Skimming & Sludges; - Waste Oils & Lubricants; - Detergents/Soaps; - Photo-processing Wastes; - Pathological Wastes; - Compressed Gases waste; and, - Pharmaceutical waste.	Montfort Hospital at 713 Montreal Road, south west of Phase One property.	PHCs, BTEX PAHs, VOCs, PCBs ABNs, CPs, PCDDs/PCDFs and OCs
PCA2	Several Spills: - 50 L of liquid petroleum spill (fuel oil) on 12/2/2008, underground storage tank gravel; -200 L Furnace oil due to UST leak on January 23, 2009; - 50 L of # 2 stove oil (from underground storage tank) to the gravel on December 02, 2008; - 80 L of (Ethylene Glycol-Antifreeze) to the soil on May 3, 2006; - 90 L Hydraulic oil to the land on March 03, 2005; - 250 L Diesel fuel to the land on February 14, 2007; - Liquid petroleum (liquid fuel) spill of 9000 Liter, on January 23, 2009; and, - 100 L Vegetable oil on June 26, 2008, led to soil contamination.	Montfort Hospital at 713 Montreal Road, south west of Phase One property.	PHCs BTEX PAHs VOCs

PCA3	Electricity Generation, Transformation and Power Stations. Three (3) Transformers with 233 weight of liquid of high level PCBs (>1000ppm). In- use equipment containing PCBs at unknown quantities were stored.	Montfort Hospital at 713 Montreal Road, south west of Phase One property.	PCBs
PCA4	900 L Furnace oil spill from Above Ground Tank in a basement on January 25, 1994. The spill was to the land under the tank pad which caused soil contamination.	1050 Riviera Drive, about 150 m south-west of the Phase One property.	PHCs BTEX VOCs
PCA5	Waste generators. The wastes included: - Inorganic Acid Waste; - Heavy Metals; - Alkaline Waste-Heavy Metals; - Reactive Anion Wastes,; - Inorganic Laboratory Chemicals; - Aromatic Solvents; - Petroleum Distillates; -Light Fuels; - Halogenated Pesticides, Non-halogenated Pesticides; - PCBs; - Oil Skimming & Sludges; -Waste Oils & Lubricants; -Detergents/Soaps; -Photo-processing Wastes; - Pathological Wastes; - Emulsified Oils; - Compressed Gases waste; and, - Amines.	CNRC Montreal Road Campus (1200 Montreal Road.) Adjacent to the south of Phase One property.	PHCs, BTEX PAHs, VOCs, PCBs ABNs, CPs, PCDDs/PCDFs and OCs
PCA6	Estimated 10 Ha of contaminated area. Includes six (6) records of storage tanks (refer to Section 3.2.8).	National Research Council (NRC) - Montreal Road Complex.	PHCs BTEX

Notes:
BTEX- Benzene, Toluene, Ethylbenzene, Xylenes
PHCs- Petroleum Hydrocarbons (F1-F4)
PAHs- Polyaromatic Hydrocarbons
VOCs- Volatile Organic Compounds
PCBs- Polychlorinated Biphenyls
ABNs- Acid Base Neutral Compounds
CPs- Chlorophenols
PCDDs/PCDFs- Dibenzo-p-Dioxins/Dibenzofurans
OCs- Organochlorine Pesticides

6.3 Area of Potential Environmental Concern (APEC)

Based on the findings of this Phase One ESA, two (2) areas of potential environmental concern (APECs) on the Phase one property were identified as summarized in Table 6.3 below and as shown on Figure 4 attached in Appendix A.

Table 6.3: Area of Potential Environmental Concerns (APECs)

APEC No.	Location of APEC on the Phase One Property	Potential Contamination Activity (PCA)	Location of PCA (on-site or off-site)	Potential Contaminants of Concern (PCOCs)	Media Potentially Impacted (Groundwater, soil, and/or sediment)
APEC 1	South-west corner of the Phase One property, north of Montfort Hospital.	PCA 1-4	Off-site, approximately 100 m south-west of the Phase One property. (713 Montreal Rd.)	PHCs BTEX PAHs VOCs	Groundwater
APEC 2	Eastern property boundary of the Phase One property, west of the CNRC Complex.	PCA 5 and 6	Off-site, adjacent to the eastern property boundary of the Phase One property (1200 Montreal Road)	PHCs BTEX PAHs VOCs PCBs ABNs CPs PCDDs/PCDFs OCs	Groundwater

Notes:
BTEX- Benzene, Toluene, Ethylbenzene, Xylenes
PHCs- Petroleum Hydrocarbons (F1-F4)
PAHs- Polyaromatic Hydrocarbons
VOCs- Volatile Organic Compounds
PCBs- Polychlorinated Biphenyls
ABNs- Acid Base Neutral Compounds
CPs- Chlorophenols
PCDDs/PCDFs- Dibenzo-p-Dioxins/Dibenzofurans
OCs- Organochlorine Pesticides

6.3.1 Areas of Environmental Concern (AECs) on the Phase One Property

A review of the available historical reports identified contaminated areas on the Phase One property. The areas of environmental concern (AECs) on the Phase One property are summarized below in Table 6.3.1 and are shown on Figure 4 attached in Appendix A.

Table 6.3.1: Areas of Environmental Concern (AECs) on the Phase One Property

AEC No.	Location of AEC	Location of AEC (on- Site or off-Site)	Contaminants of Concern (COCs)	Media Impacted (Groundwater, soil, and/or sediment)
AEC 1	Building No. 3	On-site	TPHs (Heavy Oils)	Soil Groundwater
AEC 2	Building No. 12	On-site	Lead, zinc, mercury	Soil Groundwater
AEC 3	Building No. 22	On-site	TPH (gas/diesel and heavy oils) & PHC (F2, F3, F4).	Soil Groundwater
AEC 4	Building No. 29	On-site	TPH (gas/diesel and heavy oils), PHC (F2, F3, F4), PAHs, barium.	Soil Groundwater
AEC 5	Building No. 43/45	On-site	TPH (heavy oils), Metals (arsenic, barium, cobalt, copper, lead, nickel, zinc).	Soil Groundwater
AEC 6	Building No. 47	On-site	TPH (gas/diesel)	Soil
AEC 7	Building No. 80	On-site	PHC (F2, F3), PAHs, Arsenic & Zinc	Soil Groundwater
AEC 8	Building No. 84	On-site	TPH (gas/diesel).	Soil Groundwater
AEC 9	Building No. 90	On-site	TPH (gas/ diesel), PHCs, BTEX, Metals & Dioxins/Furans.	Soil Groundwater
AEC 10	Building No. 97	On-site	Metals (barium, cobalt, nickel, vanadium).	Soil
AEC 11	Building No. 110	On-site	Lead	Soil
AEC 12	Building No. 126	On-site	TPH (heavy oils), PHC (F2, F3, F4) & PAHs.	Soil Groundwater

AEC No.	Location of AEC	Location of AEC (on- Site or off-Site)	Contaminants of Concern (COCs)	Media Impacted (Groundwater, soil, and/or sediment)
AEC 13	Building No. 137	On-site	TPH (gas/diesel and heavy oils), PHC (F2, F3) & PAHs.	Soil Groundwater
AEC 14	Building No. 167	On-site	Metals (Barium, Cobalt, Vanadium)	Soil
AEC 15	@ TP1	On-site	PAHs	Soil
AEC 16	@ TP15	On-site	Zinc	Soil
AEC 17	@ TP18	On-site	Lead	Soil
AEC 18	@ TP31	On-site	Zinc	Soil
AEC 19	@TP 52	On-site	PHC (F2, F3, F4) & PAHs	Soil
AEC 20	Building No. 79	On-Site	PAHs PHCs/BTEX Metals	Soil
AEC 21	Former PMQs	On-Site	PAHs Metals	Soil
AEC 22	Former Canex/Shell Site	On-Site	PHCs/BTEX	Soil Groundwater
AEC 23	Building No. 164	On-Site	PHCs/BTEX	Soil Groundwater

Notes:
BTEX- Benzene, Toluene, Ethylbenzene, Xylenes
PHCs- Petroleum Hydrocarbons (F1-F4)
PAHs- Polyaromatic Hydrocarbons
TPHs: Total Petroleum Hydrocarbon
TP: Test Pit

6.3.2 Areas of Environmental Concern (AECs) within the Phase One Study Area

A review of the available historical reports identified contaminated areas within the Phase One study area. The AECs within the Phase One study area are summarized below in Table 6.3.2:

Table 6.3.2: AECs within the Phase One Study Area

AEC No.	Location Of AEC	Contaminants of Concern (COCs)	Media Impacted (Groundwater, soil, and/or sediment)
AEC 24	Off-site, approximately 35 m north of the Phase one property (Building No. 178/179)	PHCs	Soil
AEC 25	Off-site, approximately 100 m north of the Phase one property (Former Golf Driving Range)	PAHs Metals	Soil

PHCs- Petroleum Hydrocarbons (F1-F4)
PAHs- Polyaromatic Hydrocarbons

Based on the nature of the soil contamination present in the above-noted areas (shallow and isolated), and the fact that both AECs are inferred to be downgradient of the Phase one property, these AECs are not likely to present an environmental concern to the Phase One property.

6.4 Phase One Conceptual Site Model

The Phase One Conceptual Site Model is illustrated in Figure 5 attached in Appendix A. This figure shows the following:

- The location of former building and any existing structures;
- The identification and location of water bodies;
- Roads names;
- Uses of properties adjacent to the Phase One property;
- Location of Potential Contaminating Activities (PCAs);
- Location of Areas of Potential Environmental Concerns (APECs);
- Areas of Environmental Concern (AECs); and,
- Potential Contaminants of Concerns (PCOCs) and Contaminants of Concerns (COCs) (for each of the AECs, APECs and PCAs).

7.0 Conclusions and Recommendations

Based on the findings of this Phase One ESA, two (2) APECs and twenty-three (23) AECs have been identified for the Phase One property.

DST recommends completion of a Phase Two ESA program to assess all identified PCOCs pertaining to the identified APECs. In addition, DST recommends further remedial activities to remediate the COCs previously identified within the AECs on the Phase one property.

DST also recommends the decommissioning of any identified abandoned water wells located within Phase One property in accordance with O. Reg. 903.

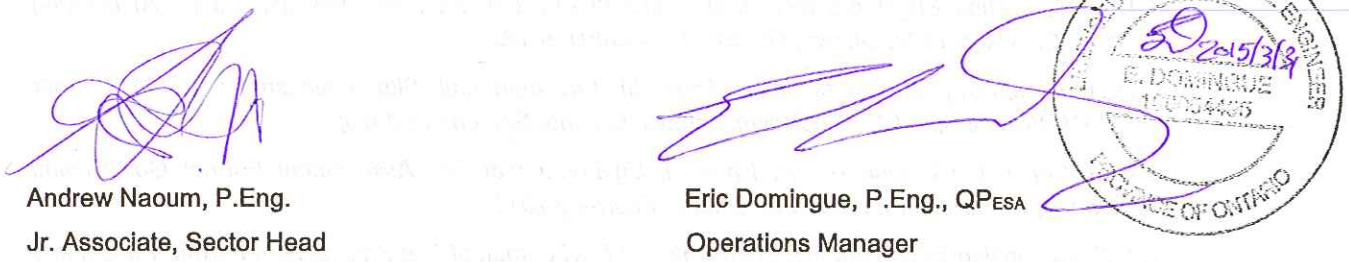

8.0 Closure

DST confirms that the carrying out of this Phase One ESA has been supervised and approved by a Qualified Person as defined by O. Reg. 153/04 (as amended), and further confirms the findings and conclusions of this report.

We trust that the above meets your present requirements; should you have any questions or concerns regarding this report, please feel free to contact the undersigned at your convenience.

Sincerely,

For **DST CONSULTING ENGINEERS INC.,**

Andrew Naoum, P.Eng.
Jr. Associate, Sector Head

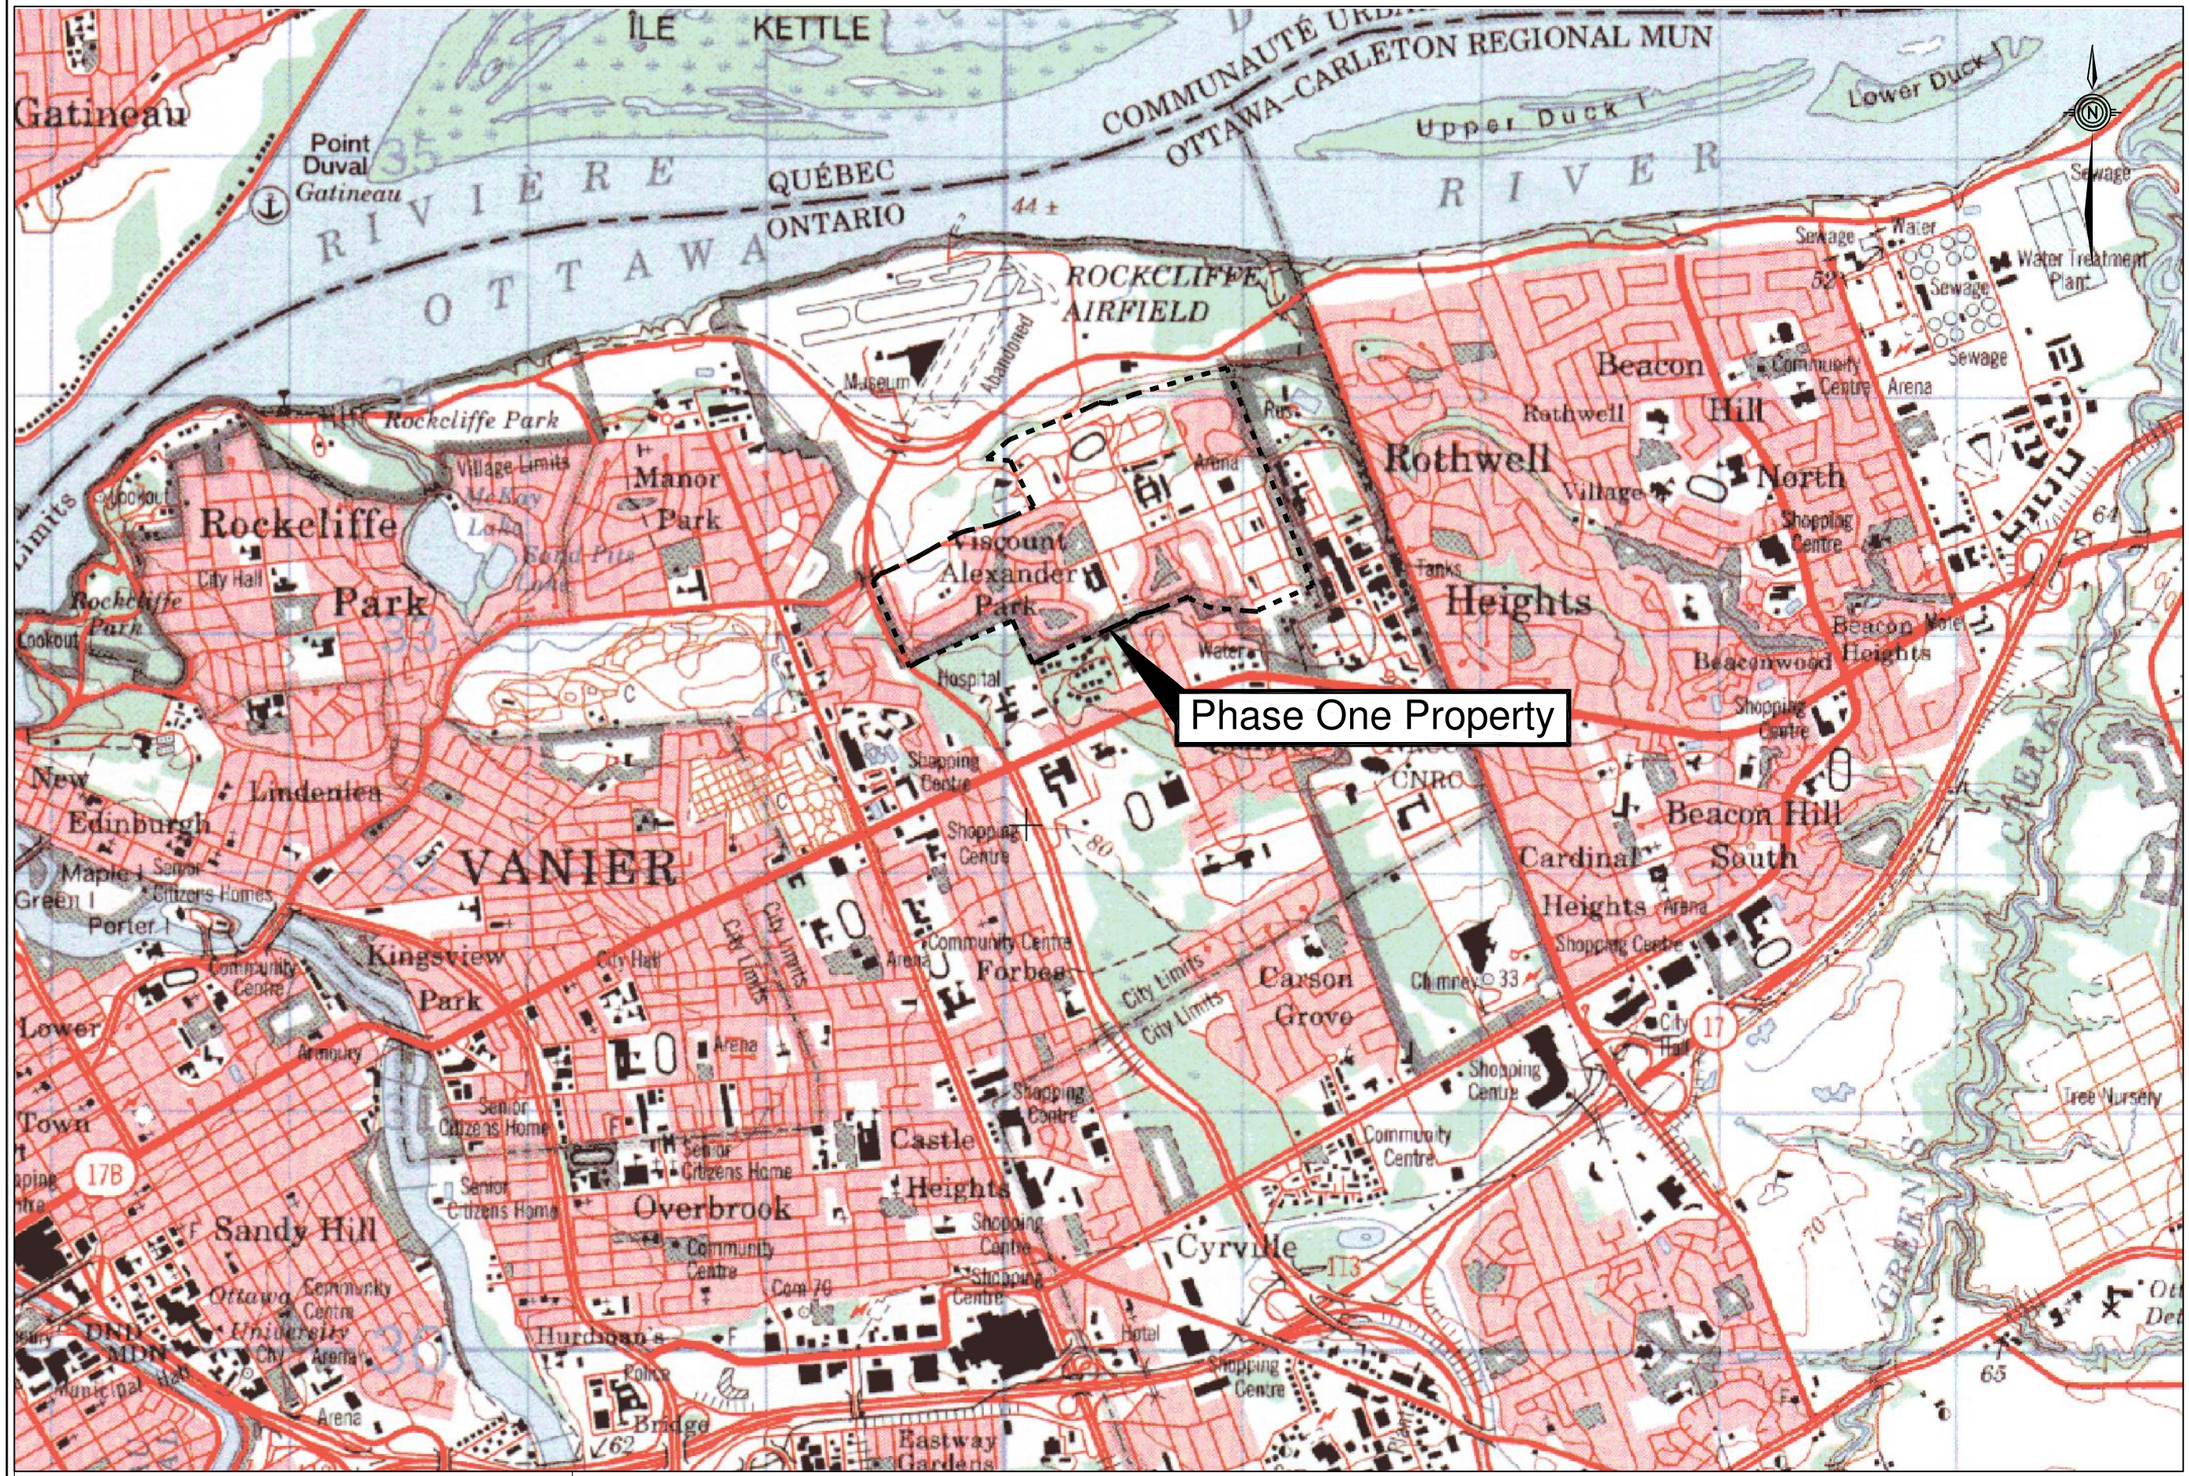

Eric Domingue, P.Eng., QP$_{ESA}$
Operations Manager

Notice: IMPORTANT LIMITATIONS and YOUR LIABILITY

Reliance on information in Report: This report DOES NOT replace a full Phase I Environmental Site Assessment but is solely intended to be used as a database review on environmental records.

License for use of information in Report: No page of this report can be used without this cover page, this notice and the project property identifier. The information in Report(s) may not be modified or re-sold.

Your Liability for misuse: Using this Service and/or its reports in a manner contrary to this Notice or your agreement will be in breach of copyright and contract and ERIS may obtain damages for such mis-use, including damages caused to third parties, and gives ERIS the right to terminate your account, rescind your license to any previous reports and to bar you from future use of the Service.

No warranty of Accuracy or Liability for ERIS: The information contained in this report has been produced by EcoLog Environmental Risk Information Services Ltd ("ERIS") using various sources of information, including information provided by Federal and Provincial government departments. The report applies only to the address and up to the date specified on the cover of this report, and any alterations or deviation from this description will require a new report. This report and the data contained herein does not purport to be and does not constitute a guarantee of the accuracy of the information contained herein and does not constitute a legal opinion nor medical advice. Although ERIS has endeavored to present you with information that is accurate, EcoLog ERIS disclaims, any and all liability for any errors, omissions, or inaccuracies in such information and data, whether attributable to inadvertence, negligence or otherwise, and for any consequences arising therefrom. Liability on the part of EcoLog ERIS is limited to the monetary value paid for this report.

Trademark and Copyright: You may not use the ERIS trademarks or attribute any work to ERIS other than as outlined above. This Service and Report(s) are protected by copyright owned by EcoLog ERIS Ltd. Copyright in data used in the Service or Report(s) (the "Data") is owned by EcoLog ERIS or its licensors. The Service, Report(s) and Data may not be copied or reproduced in whole or in any substantial part without prior written consent of EcoLog ERIS.

Ottawa ON

Site Id: 08636002
Departmental Id: S10381
Property No.: 8636
Site Name: CFSU(O) Rockcliffe PMQ Trailer Storage Compound
Location:
Municipality: Ottawa
Census Division: Ottawa
Federal Electoral District: Ottawa--Vanier
Nearest Populated Area:
Longitude: -75.6346
Latitude: 45.453
Reporting Organization: National Defence
Reason for Involvement: Federal Real Property
Est m³ Contaminated: 1360
Est Ha Contaminated:
Est Tons Contaminated:
Site Management Strategy: Care and Maintenance
Highest Step Completed: Develop Remediation/Risk Management Strategy
Action Plan: SLRA completed 02/2003. The area in question may be paved in 06/07.
Additional Info: Slight exceedances of federal criteria for Chromium and zinc on site. Source unknown, possibly a result of fill. Groundwater has elevated levels of manganese, sodium and chloride, but these are considered normal for the Ottawa area.

--- Details ---
Medium: Soil
Contaminant: Metal, metalloid, and organometallic

Incident ID:	2750096
Incident Number:	593518
SR Type:	FS-Pipeline Incident
Status Code:	Pipeline Damage Reason Est
Summary:	620 Hochelaga Street, Ottawa - 1/2" Pipeline Hit
Spills Action Centre:	
Reported By:	Armstrong, Alan - Enbridge
Affiliation:	Industry Stakeholder (Licensee/Registration/Certificate Holder, Facility Owner, etc.)
Method Details:	utility damage
Fuel Category:	Heating Fuel
Fuel Occurrence Type:	Pipeline Strike
Date of Occurrence:	5/10/2011 0:00
Occurrence Start Date:	6/6/2011 0:00
Health Impact:	No
Occurrence Desc:	linestrike no locates
Environment Impact:	No
Property Damage:	Yes
Service Interupt:	Yes
Fuel Type:	Natural Gas
Enforce Policy:	Yes
Operation Type:	Construction Site (pipeline strike)
Damage Reason:	No notification made to the one call center
Public Relation:	No
Pipeline System:	
Pipeline Type:	Service / Riser Distribution Pipeline
Depth:	22
Pipe Material:	Plastic
Regualtor Location:	Outside
PSIG:	40
Regulator Type:	Service Regulator (up to 60 psi intake)
Notes:	no locate

221 **32 of 35** **99.6** **NATIONAL RESEARCH COUNCIL** **SPL**
1200 Montreal Rd
Ottawa ON K1A 0R6

Ref No.:	8654-8N4LSD
Incident Dt:	10/29/2011
MOE Reported Dt:	10/29/2011
Contaminant Name:	OIL (PETROLEUM BASED, NOT SPECIFIED)
Contaminant Quantity:	30 L
Incident Summary:	LaCombe Waste Services - 30 L oil to grd
Incident Cause:	Overflow (Tanks Lagoons)
Incident Reason:	Error- Operator error
Nature of Impact:	
Receiving Medium:	
Environmental Impact:	Not Anticipated

---

Appendix: Database Descriptions

Ecolog Environmental Risk Information Services Ltd can search the following databases. The extent of Historical information varies with each database and current information is determined by what is publicly available to Ecolog ERIS at the time of update. ***Note:*** *Databases denoted with " * " indicates that the database will no longer be updated. See the individual database description for more information.*

Abandoned Aggregate Inventory: Sept 2002* Provincial AAGR
The MAAP Program maintains a database of all abandoned pits and quarries. Please note that the database is only referenced by lot and concession and city/town location. The database provides information regarding the location, type, size, land use, status and general comments.*

Aggregate Inventory: Up to Aug 2012 Provincial AGR
The Ontario Ministry of Natural Resources maintains a database of all active pits and quarries. Please note that the database is only referenced by lot\concession and city/town location. The database provides information regarding the registered owner/operator, location, status, licence type, and maximum tonnage.

Abandoned Mine Information System: 1800-Feb 2013 Provincial AMIS
The Abandoned Mines Information System contains data on known abandoned and inactive mines located on both Crown and privately held lands. The information was provided by the Ministry of Northern Development and Mines (MNDM), with the following disclaimer: "the database provided has been compiled from various sources, and the Ministry of Northern Development and Mines makes no representation and takes no responsibility that such information is accurate, current or complete". Reported information includes official mine name, status, background information, mine start/end date, primary commodity, mine features, hazards and remediation.

Anderson's Waste Disposal Sites: 1860s-Present Private ANDR
The information provided in this database was collected by examining various historical documents which aimed to characterize the likely position of former waste disposal sites from 1860 to present. The research initiative behind the creation of this database was to identify those sites that are missing from the Ontario MOE Waste Disposal Site Inventory, as well as to provide revisions and corrections to the positions and descriptions of sites currently listed in the MOE inventory. In addition to historic waste disposal facilities, the database also identifies certain auto wreckers and scrap yards that have been extrapolated from documentary sources. Please note that the data is not warranted to be complete, exhaustive or authoritive. The information was collected for research purposes only.

Automobile Wrecking & Supplies: 2001-Jun 2010 Private AUWR
This database provides an inventory of all known locations that are involved in the scrap metal, automobile wrecking/recycling, and automobile parts & supplies industry. Information is provided on the company name, location and business type.

Borehole: 1875-Aug 2011 Provincial BORE
A borehole is the generalized term for any narrow shaft drilled in the ground, either vertically or horizontally. The information here includes geotechnical investigations or environmental site assessments, mineral exploration, or as a pilot hole for installing piers or underground utilities. Information is from many sources such as the Ministry of Transportation (MTO) boreholes from engineering reports and projects from the 1950 to 1990's in Southern Ontario. Boreholes from the Ontario Geological Survey (OGS) including The Urban Geology Analysis Information System (UGAIS) and the York Peel Durham Toronto (YPDT) database of the Conservation Authority Moraine Coalition. This database will include fields such as location, stratigraphy, depth, elevation, year drilled, etc. For all water well data or oil and gas well data for Ontario please refer to WWIS and OOGW.

Certificates of Approval: 1985-Oct 30, 2011* Provincial CA

This database contains the following types of approvals: Air & Noise, Industrial Sewage, Municipal & Private Sewage, Waste Management Systems and Renewable Energy Approvals. The MOE in Ontario states that any facility that releases emissions to the atmosphere, discharges contaminants to ground or surface water, provides potable water supplies, or stores, transports or disposes of waste, must have a Certificate of Approval before it can operate lawfully. Fields include approval number, business name, address, approval date, approval type and status. This database will no longer be updated, as CofA's have been replaced by either Environmental Activity and Sector Registry (EASR) or Environmental Compliance Approval (ECA). Please refer to those individual databases for any information after Oct.31, 2011.

Commercial Fuel Oil Tanks: 1948-Apr 2013 Provincial CFOT

Since May 2002, Ontario developed a new act where it became mandatory for fuel oil tanks to be registered with Technical Standards & Safety Authority (TSSA). This data would include all commercial underground fuel oil tanks in Ontario with fields such as location, registration number, tank material, age of tank and tank size.

Chemical Register: 1992, 1999-Jun 2010 Private CHEM

This database includes information from both a one time study conducted in 1992 and private source and is a listing of facilities that manufacture or distribute chemicals. The production of these chemical substances may involve one or more chemical reactions and/or chemical separation processes (i.e. fractionation, solvent extraction, crystallization, etc.).

Inventory of Coal Gasification Plants and Coal Tar Sites: Apr 1987 and Nov 1988* Provincial COAL

This inventory includes both the "Inventory of Coal Gasification Plant Waste Sites in Ontario-April 1987" and the Inventory of Industrial Sites Producing or Using Coal Tar and Related Tars in Ontario-November 1988) collected by the MOE. It identifies industrial sites that produced and continue to produce or use coal tar and other related tars. Detailed information is available and includes: facility type, size, land use, information on adjoining properties, soil condition, site operators/occupants, site description, potential environmental impacts and historic maps available. This was a one-time inventory.*

Compliance and Convictions: 1989-Jun 2013 Provincial CONV

This database summarizes the fines and convictions handed down by the Ontario courts beginning in 1989. Companies and individuals named here have been found guilty of environmental offenses in Ontario courts of law.

Certificates of Property Use: 1994-Jul 2013 Provincial CPU

This is a subset taken from Ontario's Environmental Registry (EBR) database. It will include all CPU's on the registry such as (EPA s. 168.6) - Certificate of Property Use.

Drill Hole Database: 1886-Jun 2013 Provincial DRL

The Ontario Drill Hole Database contains information on more than 113,000 percussion, overburden, sonic and diamond drill holes from assessment files on record with the department of Mines and Minerals. Please note that limited data is available for southern Ontario, as it was the last area to be completed. The database was created when surveys submitted to the Ministry were converted in the Assessment File Research Image Database (AFRI) project. However, the degree of accuracy (coordinates) as to the exact location of drill holes is dependent upon the source document submitted to the MNDM. Levels of accuracy used to locate holes are: centering on the mining claim; a sketch of the mining claim; a 1:50,000 map; a detailed company map; or from submitted a "Report of Work".

Environmental Activity and Sector Registry: Oct 31, 2011-Jul 2013 Provincial EASR

On October 31, 2011, a smarter, faster environmental approvals system came into effect in Ontario. The EASR allows businesses to register certain activities with the ministry, rather than apply for an approval. The registry is available for common systems and processes, to which preset rules of operation can be applied. The EASR is currently available for: heating systems, standby power systems and automotive refinishing. Businesses whose activities aren't subject to the EASR may apply for an ECA (Environmental Compliance Approval), Please see our ECA database.

Environmental Registry: 1994-Jul 2013 Provincial EBR

The Environmental Registry lists proposals, decisions and exceptions regarding policies, Acts, instruments, or regulations that could significantly affect the environment. Through the Registry, thirteen provincial ministries notify the public of upcoming proposals and invite their comments. For example, if a local business is requesting a permit, license, or certificate of approval to release substances into the air or water; these are notified on the registry. Data includes: Approval for discharge into the natural environment other than water (i.e. Air) - EPA s. 9, Approval for sewage works - OWRA s. 53(1), and EPA s. 27 - Approval for a waste disposal site. For information regarding Permit to Take Water (PTTW), Certificate of Property Use (CPU) and (ORD) Orders please refer to those individual databases.

Environmental Compliance Approval: Oct 31, 2011-Jul 2013 Provincial ECA

On October 31, 2011, a smarter, faster environmental approvals system came into effect in Ontario. In the past, a business had to apply for multiple approvals (known as certificates of approval) for individual processes and pieces of equipment. Today, a business either registers itself, or applies for a single approval, depending on the types of activities it conducts. Businesses whose activities aren't subject to the EASR may apply for an ECA. A single ECA addresses all of a business's emissions, discharges and wastes. Separate approvals for air, noise and waste are no longer required. This database will also include Renewable Energy Approvals. For CofA's prior to Nov 1st, 2011, please refer to the CA database. For all Waste Disposal Sites please refer to the WDS database.

Environmental Effects Monitoring: 1992-2007* Federal EEM

The Environmental Effects Monitoring program assesses the effects of effluent from industrial or other sources on fish, fish habitat and human usage of fisheries resources. Since 1992, pulp and paper mills have been required to conduct EEM studies under the Pulp and Paper Effluent Regulations. This database provides information on the mill name, geographical location and sub-lethal toxicity data.

ERIS Historical Searches: 1999-Mar 2013 Private EHS

EcoLog ERIS has compiled a database of all environmental risk reports completed since March 1999. Available fields for this database include: site location, date of report, type of report, and search radius. As per all other databases, the ERIS database can be referenced on both the map and "Statistical Profile" page.

Environmental Issues Inventory System: 1992-2001* Federal EIIS

The Environmental Issues Inventory System was developed through the implementation of the Environmental Issues and Remediation Plan. This plan was established to determine the location and severity of contaminated sites on inhabited First Nation reserves, and where necessary, to remediate those that posed a risk to health and safety; and to prevent future environmental problems. The EIIS provides information on the reserve under investigation, inventory number, name of site, environmental issue, site action (Remediation, Site Assessment), and date investigation completed.

List of TSSA Expired Facilities: Current to May 2013 Provincial EXP

This is a list of all expired facilities that fall under the TSSA (TSSA Act & Safety Regulations), including the six regulations that exist under the Fuels Safety Division. It will include facilities such as private fuel outlets, bulk plants, fuel oil tanks, gasoline stations, marinas, propane filling stations, liquid fuel tanks, piping systems, etc. These tanks have been removed and automatically fall under the expired facilities inventory held by TSSA.

Federal Convictions: 1988-Jun 2007* Federal FCON

Environment Canada maintains a database referred to as the "Environmental Registry" that details prosecutions under the Canadian Environmental Protection Act (CEPA) and the Fisheries Act (FA). Information is provided on the company name, location, charge date, offence and penalty.

Contaminated Sites on Federal Land: June 2000-Jan 2013 Federal FCS

The Federal Contaminated Sites Inventory includes information on all known federal contaminated sites under the custodianship of departments, agencies and consolidated Crown corporations as well as those that are being or have been investigated to determine whether they have contamination arising from past use that could pose a risk to human health or the environment. The inventory also includes non-federal contaminated sites for which the Government of Canada has accepted some or all financial responsibility. It does not include sites where contamination has been caused by, and which are under the control of, enterprise Crown corporations, private individuals, firms or other levels of government.

Fisheries & Oceans Fuel Tanks: 1964-Sept 2003 Federal FOFT

Fisheries & Oceans Canada maintains an inventory of all aboveground & underground fuel storage tanks located on Fisheries & Oceans property or controlled by DFO. Our inventory provides information on the site name, location, tank owner, tank operator, facility type, storage tank location, tank contents & capacity, and date of tank installation.

Fuel Storage Tank: 2010-May 2013 Provincial FST

The Technical Standards & Safety Authority (TSSA), under the Technical Standards & Safety Act of 2000 maintains a database of registered private and retail fuel storage tanks in Ontario with fields such as location, tank status, license date, tank type, tank capacity, fuel type, installation year and facility type.

Fuel Storage Tank: Pre-Jan 2010* Provincial FSTH

The Technical Standards & Safety Authority (TSSA), under the Technical Standards & Safety Act of 2000 maintains a database of registered private and retail fuel storage tanks in Ontario with fields such as location, tank status, license date, tank type, tank capacity, fuel type, installation year and facility type.

Ontario Regulation 347 Waste Generators Summary: 1986-Jul 2013 Provincial GEN

Regulation 347 of the Ontario EPA defines a waste generation site as any site, equipment and/or operation involved in the production, collection, handling and/or storage of regulated wastes. A generator of regulated waste is required to register the waste generation site and each waste produced, collected, handled, or stored at the site. This database contains the registration number, company name and address of registered generators including the types of hazardous wastes generated. It includes data on waste generating facilities such as: drycleaners, waste treatment and disposal facilities, machine shops, electric power distribution etc. This information is a summary of all years from 1986 including the most currently available data. Some records may contain, within the company name, the phrase "See & Use..." followed by a series of letters and numbers. This occurs when one company is amalgamated with or taken over by another registered company. The number listed as "See & Use", refers to the new ownership and the other identification number refers to the original ownership. This phrase serves as a link between the 2 companies until operations have been fully transferred.

TSSA Historic Incidents: 2006-June 2009 Provincial HINC

This database will cover all incidences recorded by TSSA with their older system, before they moved to their new management system. TSSA's Fuels Safety Program administers the Technical Standards & Safety Act 2000, providing fuel-related safety services associated with the safe transportation, storage, handling and use of fuels such as gasoline, diesel, propane, natural gas and hydrogen. Under this Act, TSSA regulates fuel suppliers, storage facilities, transport trucks, pipelines, contractors and equipment or appliances that use fuels. The TSSA works to protect the public, the environment and property from fuel-related hazards such as spills, fires and explosions. This database will include spills and leaks from pipelines, diesel, fuel oil, gasoline, natural gas, propane and hydrogen recorded by the TSSA.

Indian & Northern Affairs Fuel Tanks: 1950-Aug 2003* Federal IAFT

The Department of Indian & Northern Affairs Canada (INAC) maintains an inventory of all aboveground & underground fuel storage tanks located on both federal and crown land. Our inventory provides information on the reserve name, location, facility type, site/facility name, tank type, material & ID number, tank contents & capacity, and date of tank installation.

TSSA Incidents: June 2009-Apr 2013 Provincial INC

TSSA's Fuels Safety Program administers the Technical Standards & Safety Act 2000, providing fuel-related safety services associated with the safe transportation, storage, handling and use of fuels such as gasoline, diesel, propane, natural gas and hydrogen. Under this Act, TSSA regulates fuel suppliers, storage facilities, transport trucks, pipelines, contractors and equipment or appliances that use fuels. Includes incidents from fuel-related hazards such as spills, fires and explosions. This database will include spills and leaks from diesel, fuel oil, gasoline, natural gas, propane and hydrogen recorded by the TSSA.

Landfill Inventory Management Ontario: 2012 Provincial LIMO

The Landfill Inventory Management Ontario (LIMO) database is updated every year, as the ministry compiles new and updated information. The inventory will include small and large landfills. Additionally, each year the ministry will request operators of the larger landfills complete a landfill data collection form that will be used to update LIMO and will include the following information from the previous operating year. This will include additional information such as estimated amount of total waste received, landfill capacity, estimated total remaining landfill capacity, fill rates, engineering designs, reporting and monitoring details, size of location, service area, approved waste types, leachate of site treatment, contaminant attenuation zone and more. The small landfills will include information such as site owner, site location and certificate of approval # and status.

Canadian Mine Locations: 1998-2009 Private MINE

This information is collected from the Canadian & American Mines Handbook. The Mines database is a national database that provides over 290 listings on mines (listed as public companies) dealing primarily with precious metals and hard rocks. Listed are mines that are currently in operation, closed, suspended, or are still being developed (advanced projects). Their locations are provided as geographic coordinates (x, y and/or longitude, latitude). As of 2002, data pertaining to Canadian smelters and refineries has been appended to this database.

Mineral Occurrences: 1846-Apr 2013 Provincial MNR

In the early 70's, the Ministry of Northern Development and Mines created an inventory of approximately 19,000 mineral occurrences in Ontario, in regard to metallic and industrial minerals, as well as some information on building stones and aggregate deposits. Please note that the "Horizontal Positional Accuracy" is approximately +/- 200 m. Many reference elements for each record were derived from field sketches using pace or chain/tape measurements against claim posts or topographic features in the area. The primary limiting factor for the level of positional accuracy is the scale of the source material. The testing of horizontal accuracy of the source materials was accomplished by comparing the planimetric (X and Y) coordinates of that point with the coordinates of the same point as defined from a source of higher accuracy.

National Analysis of Trends in Emergencies System (NATES): 1974-1994* Federal NATE

In 1974 Environment Canada established the National Analysis of Trends in Emergencies System (NATES) database, for the voluntary reporting of significant spill incidents. The data was to be used to assist in directing the work of the emergencies program. NATES ran from 1974 to 1994. Extensive information is available within this database including company names, place where the spill occurred, date of spill, cause, reason and source of spill, damage incurred, and amount, concentration, and volume of materials released.

Non-Compliance Reports: 1992(water only), 1994-2010 Provincial NCPL

The Ministry of the Environment provides information about non-compliant discharges of contaminants to air and water that exceed legal allowable limits, from regulated industrial and municipal facilities. A reported non-compliance failure may be in regard to a Control Order, Certificate of Approval, Sectoral Regulation or specific regulation/act.

National Defence & Canadian Forces Fuel Tanks: Up to May 2001* Federal NDFT

The Department of National Defence and the Canadian Forces maintains an inventory of all aboveground & underground fuel storage tanks located on DND lands. Our inventory provides information on the base name, location, tank type & capacity, tank contents, tank class, date of tank installation, date tank last used, and status of tank as of May 2001. This database will no longer be updated due to the new National Security protocols which have prohibited any release of this database.

National Defence & Canadian Forces Spills: Mar 1999-Aug 2010 Federal NDSP

The Department of National Defence and the Canadian Forces maintains an inventory of spills to land and water. All spill sites have been classified under the "Transportation of Dangerous Goods Act - 1992". Our inventory provides information on the facility name, location, spill ID #, spill date, type of spill, as well as the quantity of substance spilled & recovered.

National Defence & Canadian Forces Waste Disposal Sites: 2001-Apr 2007* Federal NDWD

The Department of National Defence and the Canadian Forces maintains an inventory of waste disposal sites located on DND lands. Where available, our inventory provides information on the base name, location, type of waste received, area of site, depth of site, year site opened/closed and status.

National Environmental Emergencies System (NEES): 1974-2003* Federal NEES

In 2000, the Emergencies program implemented NEES, a reporting system for spills of hazardous substances. For the most part, this system only captured data from the Atlantic Provinces, some from Quebec and Ontario and a portion from British Columbia. Data for Alberta, Saskatchewan, Manitoba and the Territories was not captured. However, NEES is also a repository for all previous Environment Canada spill datasets. NEES is composed of the historic datasets ' or Trends ' which dates from approximately 1974 to present. NEES Trends is a compilation of historic databases, which were merged and includes data from NATES (National Analysis of Trends in Emergencies System), ARTS (Atlantic Regional Trends System), and NEES. In 2001, the Emergencies Program determined that variations in reporting regimes and requirements between federal and provincial agencies made national spill reporting and trend analysis difficult to achieve. As a consequence, the department has focused efforts on capturing data on spills of substances which fall under its legislative authority only (CEPA and FA). As such, the NEES database will be decommissioned in December 2004.

National PCB Inventory: 1988-2008* Federal NPCB

Environment Canada's National PCB inventory includes information on in-use PCB containing equipment in Canada including federal, provincial and private facilities. All federal out-of-service PCB containing equipment and all PCB waste owned by the federal government or by federally regulated industries such as airlines, railway companies, broadcasting companies, telephone and telecommunications companies, pipeline companies, etc. are also listed. Although it is not Environment Canada's mandate to collect data on non-federal PCB waste, the National PCB inventory includes some information on provincial and private PCB waste and storage sites.

National Pollutant Release Inventory: 1993-2011 Federal NPRI

Environment Canada has defined the National Pollutant Release Inventory ("NPRI") as a federal government initiative designed to collect comprehensive national data regarding releases to air, water, or land, and waste transfers for recycling for more than 300 listed substances.

Oil and Gas Wells: 1988-Jun 2013 Private OGW

The Nickle's Energy Group (publisher of the Daily Oil Bulletin) collects information on drilling activity including operator and well statistics. The well information database includes name, location, class, status and depth. The main Nickle's database is updated on a daily basis, however, this database is updated on a monthly basis. More information is available at www.nickles.com.

Ontario Oil and Gas Wells: 1800-Jul 2013 Provincial OOGW

In 1998, the MNR handed over to the Ontario Oil, Gas and Salt Resources Corporation, the responsibility of maintaining a database of oil and gas wells drilled in Ontario. The OGSR Library has over 20,000+ wells in their database. Information available for all wells in the ERIS database include well owner/operator, location, permit issue date, well cap date, licence no., status, depth and the primary target (rock unit) of the well being drilled. All geology/stratigraphy table information, plus all water table information is also provide for each well record.

Inventory of PCB Storage Sites: 1987-Oct 2004 Provincial OPCB

The Ontario Ministry of Environment, Waste Management Branch, maintains an inventory of PCB storage sites within the province. Ontario Regulation 11/82 (Waste Management - PCB) and Regulation 347 (Generator Waste Management) under the Ontario EPA requires the registration of inactive PCB storage equipment and/or disposal sites of PCB waste with the Ontario Ministry of Environment. This database contains information on: 1) waste quantities; 2) major and minor sites storing liquid or solid waste; and 3) a waste storage inventory.

Orders: 1994-Jul 2013 Provincial ORD

This is a subset taken from Ontario's Environmental Registry (EBR) database. It will include all Orders on the registry such as (EPA s. 17) - Order for remedial work, (EPA s. 18) - Order for preventative measures, (EPA s. 43) - Order for removal of waste and restoration of site, (EPA s. 44) - Order for conformity with Act for waste disposal sites, (EPA s. 136) - Order for performance of environmental measures.

Canadian Pulp and Paper: 1999, 2002, 2004, 2005, 2009 Private PAP

This information is part of the Pulp and Paper Canada Directory. The Directory provides a comprehensive listing of the locations of pulp and paper mills and the products that they produce.

Parks Canada Fuel Storage Tanks: 1920-Jan 2005* Federal PCFT

Canadian Heritage maintains an inventory of all known fuel storage tanks operated by Parks Canada, in both National Parks and at National Historic Sites. The database details information on site name, location, tank install/removal date, capacity, fuel type, facility type, tank design and owner/operator.

Pesticide Register: 1988-Jun 2013 Provincial PES

The Ontario Ministry of Environment maintains a database of all manufacturers and vendors of registered pesticides.

TSSA Pipeline Incidents: June 2009-Mar 2012 Provincial PINC

TSSA's Fuels Safety Program administers the Technical Standards & Safety Act 2000, providing fuel-related safety services associated with the safe transportation, storage, handling and use of fuels such as gasoline, diesel, propane, natural gas and hydrogen. Under this Act, TSSA regulates fuel suppliers, storage facilities, transport trucks, pipelines, contractors and equipment or appliances that use fuels. This database will include spills, strike and leaks from recorded by the TSSA.

Private and Retail Fuel Storage Tanks: 1989-1996* Provincial PRT

The Fuels Safety Branch of the Ontario Ministry of Consumer and Commercial Relations maintained a database of all registered private fuel storage tanks and licensed retail fuel outlets. This database includes an inventory of locations that have gasoline, oil, waste oil, natural gas and/or propane storage tanks on their property. The MCCR no longer collects this information. This information is now collected by the Technical Standards and Safety Authority (TSSA).

Permit to Take Water: 1994-Jul 2013 Provincial PTTW

This is a subset taken from Ontario's Environmental Registry (EBR) database. It will include all PTTW's on the registry such as OWRA s. 34 - Permit to take water.

Ontario Regulation 347 Waste Receivers Summary: 1986-2011 Provincial REC

Part V of the Ontario Environmental Protection Act ("EPA") regulates the disposal of regulated waste through an operating waste management system or a waste disposal site operated or used pursuant to the terms and conditions of a Certificate of Approval or a Provisional Certificate of Approval. Regulation 347 of the Ontario EPA defines a waste receiving site as any site or facility to which waste is transferred by a waste carrier. A receiver of regulated waste is required to register the waste receiving facility. This database represents registered receivers of regulated wastes, identified by registration number, company name and address, and includes receivers of waste such as: landfills, incinerators, transfer stations, PCB storage sites, sludge farms and water pollution control plants. This information is a summary of all years from 1986 including the most currently available data.

Record of Site Condition: 1997-Sept 2001, Oct 2004-Jun 2013 Provincial RSC

The Record of Site Condition (RSC) is part of the Ministry of the Environment's Brownfields Environmental Site Registry. Protection from environmental cleanup orders for property owners is contingent upon documentation known as a record of site condition (RSC) being filed in the Environmental Site Registry. In order to file an RSC, the property must have been properly assessed and shown to meet the soil, sediment and groundwater standards appropriate for the use (such as residential) proposed to take place on the property. The Record of Site Condition Regulation (O. Reg. 153/04) details requirements related to site assessment and clean up.
RSCs filed after July 1, 2011 will also be included as part of the new (O.Reg. 511/09).

Retail Fuel Storage Tanks: 1999-Jun 2010 Private RST

This database includes an inventory of retail fuel outlet locations (including marinas) that have on their property gasoline, oil, waste oil, natural gas and / or propane storage tanks.

Scott's Manufacturing Directory: 1992-Mar 2011 Private SCT

Scott's Directories is a data bank containing information on over 200,000 manufacturers across Canada. Even though Scott's listings are voluntary, it is the most comprehensive database of Canadian manufacturers available. Information concerning a company's address, plant size, and main products are included in this database.

Ontario Spills: 1988-Jun 2013 Provincial SPL

This database identifies information such as location (approximate), type and quantity of contaminant, date of spill, environmental impact, cause, nature of impact, etc. Information from 1988-2002 was part of the ORIS (Occurrence Reporting Information System). The SAC (Spills Action Centre) handles all spills reported in Ontario. Regulations for spills in Ontario are part of the MOE's Environmental Protection Act, Part X.

Wastewater Discharger Registration Database: 1990-2011 Provincial SRDS

Information under this heading is combination of the following 2 programs. The Municipal/Industrial Strategy for Abatement (MISA) division of the Ontario Ministry of Environment maintained a database of all direct dischargers of toxic pollutants within nine sectors including: Electric Power Generation; Mining; Petroleum Refining; Organic Chemicals; Inorganic Chemicals; Pulp & Paper; Metal Casting; Iron & Steel; and Quarries. All sampling information is now collected and stored within the Sample Result Data Store (SRDS).

Anderson's Storage Tanks: 1915-1953* Private TANK

The information provided in this database was collected by examining various historical documents, which identified the location of former storage tanks, containing substances such as fuel, water, gas, oil, and other various types of miscellaneous products. Information is available in regard to business operating at tank site, tank location, permit year, permit & installation type, no. of tanks installed & configuration and tank capacity. Data contained within this database pertains only to the city of Toronto and is not warranted to be complete, exhaustive or authoritative. The information was collected for research purposes only.

Transport Canada Fuel Storage Tanks: 1970-Mar 2007 Federal TCFT

With the provinces of BC, MB, NB, NF, ON, PE, and QC; Transport Canada currently owns and operates 90 fuel storage tanks. Our inventory provides information on the site name, location, tank age, capacity and fuel type.

TSSA Variances for Abandonment of Underground Storage Tanks: Current to Jun 2013 Provincial VAR

The TSSA, Under the Liquid Fuels Handling Code and the Fuel Oil Code, all underground storage tanks must be removed within two years of disuse. If removal of a tank is not feasible, you may apply to seek a variance from this code requirement. This is a list of all variances granted for abandoned tanks.

Waste Disposal Sites - MOE CA Inventory: 1970-Jul 2013 Provincial WDS

The Ontario Ministry of Environment, Waste Management Branch, maintains an inventory of known open (active or inactive) and closed disposal sites in the Province of Ontario. Active sites maintain a Certificate of Approval, are approved to receive and are receiving waste. Inactive sites maintain Certificate(s) of Approval but are not receiving waste. Closed sites are not receiving waste. The data contained within this database was compiled from the MOE's Certificate of Approval database. Locations of these sites may be cross-referenced to the Anderson database described under ERIS's Private Source Database section, by the CA number. All new Environmental Compliance Approvals handed out after Oct 31, 2011 for Waste Disposal Sites will still be found in this database.

Waste Disposal Sites - MOE 1991 Historical Approval Inventory: Up to Oct 1990* Provincial WDSH

In June 1991, the Ontario Ministry of Environment, Waste Management Branch, published the "June 1991 Waste Disposal Site Inventory", of all known active and closed waste disposal sites as of October 30st, 1990. For each "active" site as of October 31st 1990, information is provided on site location, site/CA number, waste type, site status and site classification. For each "closed" site as of October 31st 1990, information is provided on site location, site/CA number, closure date and site classification. Locations of these sites may be cross-referenced to the Anderson database described under ERIS's Private Source Database section, by the CA number.

Water Well Information System: 1955-May 2013 Provincial WWIS

This database describes locations and characteristics of water wells found within Ontario in accordance with Regulation 903. It includes such information as coordinates, construction date, well depth, primary and secondary use, pump rate, static water level, well status, etc. Also included are detailed stratigraphy information, approximate depth to bedrock and the approximate depth to the water table.

Definitions

Database Descriptions: This section provides a detailed explanation for each database including: source, information available, time coverage, and acronyms used. They are listed in alphabetic order.

Detail Report: This is the section of the report which provides the most detail for each individual record. Records are summarized by location, starting with the project property followed by records in closest proximity.

Distance: The distance value is the distance between plotted points, not necessarily the distance between the sites' boundaries". All values are an approximation.

Direction: The direction value is the compass direction of the site in respect to the project property and/or center point of the report.

Elevation: The elevation value is taken from the location at which the records for the site address have been plotted. All values are an approximation. Source: Google Elevation API.

Executive Summary: This portion of the report is divided into 3 sections:

'Report Summary'- Displays a chart indicating how many records fall on the project property and, within the report search radii.

'Site Report Summary'-Project Property'- This section lists all the records which fall on the project property. For more details, see the 'Detail Report' section.

'Site Report Summary-Surrounding Properties'- This section summarizes all records on adjacent properties, listing them in order of proximity from the project property. For more details, see the 'Detail Report' section.

Map Key: The map key number is assigned according to closest proximity from the project property. Map Key numbers always start at #1. The project property will always have a map key of '1' if records are available. If there is a number in brackets beside the main number, this will indicate the number of records on that specific property. If there is no number in brackets, there is only one record for that property.

The symbol and colour used indicates 'elevation': the red inverted triangle will dictate 'ERIS Sites with Lower Elevation', the yellow triangle will dictate 'ERIS Sites with Higher Elevation' and the orange square will dictate 'ERIS Sites with Same Elevation.'

Unplottables: These are records that could not be mapped due to various reasons, including limited geographic information. These records may or may not be in your study area, and were included as reference.

Toronto, Ontario. M3B 2S9

Dear Eleanor,

Re: **Your Site Address** **Codd's Road, Ottawa, Ontario**
Your Project No.: **20131223029**

As requested, we have searched our records regarding the above site and the following information was found:

Information	Date(s)	Comment	Cost
Research Fee per street address		$50.00 flat fee per street address.	$50.00
Fire Insurance Plans	1958	$100.00 for each Fire Insurance Plan. Please see attached to verify if this FIP is valuable to you.	$100.00
Reports: All Risk/Multi-Risk: Inspection: COPE: Other:	No Record Found	$55.00 for each Inspection/Survey report	
Site Plan(s)	No Record Found	$70.00 for each Site plan	
		Subtotal	**$150.00**
		Minimum order fee of $155.00	**Applicable**
		2 (two)/4 (four) Day Rush Service	**N/A**
		Total	**$150.00**

NRF: No Records Found. NO: Not Ordered.

The total cost for this report is $150.00 plus courier charges (if applicable) and HST. Please see the Terms and Conditions for our search on page two of this report.

Thank you for employing the services of Opta Information Intelligence.

Report

The documents (hereinafter referred to as the "Documents") to be released as part of the report (hereinafter referred to as the "Report") to be delivered to the purchaser as set out above are documents in Opta's records relating to the described property (hereinafter referred to as the "Property"). Opta makes no representations or warranties respecting the Documents whatsoever, including, without limitation, with respect to the completeness, accuracy or usefulness of the Documents, and does not represent or warrant that these are the only plans and reports prepared in association with the Property. The Documents are current as of the date(s) indicated on them. Interpretation of the Documents, if any, is by inference based upon the information which is apparent and obvious on the face of the Documents only. Opta does not represent, warrant or guarantee that interpretations other than those referred to do not exist from other sources. The Report will be prepared for use by the purchaser of the services as shown above hereof only.

Disclaimer

Opta disclaims responsibility for any losses or damages of any kind whatsoever, whether consequential or other, however caused, incurred or suffered, arising directly or indirectly as a result of the services (which services include, but are not limited to, the preparation of the Report provided hereunder), including but not limited to, any losses or damages arising directly or indirectly from any breach of contract, fundamental or otherwise, from reliance on Opta Reports or from any tortious acts or omissions of Opta's agents, employees or representatives.

Entire Agreement

The parties hereto acknowledge and agree to be bound by the terms and conditions hereof. The request form constitutes the entire agreement between the parties pertaining to the subject matter hereof and supersedes all prior and contemporaneous agreements, negotiations and discussions, whether oral or written, and there are no representations or warranties, or other agreements between the parties in connection with the subject matter hereof except as specifically set forth herein. No supplement, modification, waiver, or termination of the request shall be binding, unless confirmed in writing by the parties hereto.

Governing Document

In the event of any conflicts or inconsistencies between the provisions hereof and the Reports, the rights and obligations of the parties shall be deemed to be governed by the request form, which shall be the paramount document.

Law

This agreement shall be governed by and construed in accordance with the laws of the Province of Ontario and the laws of Canada applicable therein.

Terms and Conditions

Report

The documents (hereinafter referred to as the "Documents") to be released as part of the report (hereinafter referred to as the "Report") to be delivered to the purchaser as set out above are documents in Opta's records relating to the described property (hereinafter referred to as the "Property"). Opta makes no representations or warranties respecting the Documents whatsoever, including, without limitation, with respect to the completeness, accuracy or usefulness of the Documents, and does not represent or warrant that these are the only plans and reports prepared in association with the Property or in Opta's possession at the time of Report delivery to the purchaser. The Documents are current as of the date(s) indicated on them. Interpretation of the Documents, if any, is by inference based upon the information which is apparent and obvious on the face of the Documents only. Opta does not represent, warrant or guarantee that interpretations other than those referred to do not exist from other sources. The Report will be prepared for use by the purchaser of the services as shown above hereof only.

Use

The Reports are for sole use of the customer. Reports are not to be disassembled, decompiled, copied, reproduced, transmitted, displayed, performed, distributed, rented, sub-licensed, altered, or otherwise used in a manner contrary to the intent of Opta's web delivery service.

Disclaimer

Opta disclaims responsibility for any losses or damages of any kind whatsoever, whether consequential or other, however caused, incurred or suffered, arising directly or indirectly as a result of the services (which services include, but are not limited to, the preparation of the Report provided hereunder), including but not limited to, any losses or damages arising directly or indirectly from any breach of contract, fundamental or otherwise, from reliance on Opta Reports or from any tortious acts or omissions of Opta's agents, employees or representatives.

Entire Agreement

The parties hereto acknowledge and agree to be bound by the terms and conditions hereof. The request form constitutes the entire agreement between the parties pertaining to the subject matter hereof and supersedes all prior and contemporaneous agreements, negotiations and discussions, whether oral or written, and there are no representations or warranties, or other agreements between the parties in connection with the subject matter hereof except as specifically set forth herein. No supplement, modification, waiver, or termination of the request shall be binding, unless confirmed in writing by the parties hereto.

Governing Document

In the event of any conflicts or inconsistencies between the provisions hereof and the Reports, the rights and obligations of the parties shall be deemed to be governed by the request form, which shall be the paramount document.

Law

This agreement shall be governed by and construed in accordance with the laws of the Province of Ontario and the laws of Canada applicable therein.

Bedrock Geology Report Metadata

Ontario Geological Survey 2011. 1:250 000 scale bedrock geology of Ontario; Ontario Geological Survey, Miscellaneous Release-Data 126 Revision1

ONTARIO MINISTRY OF NORTHERN DEVELOPMENT, MINES AND FORESTRY

ID - Unit ID **Unit Name** - Generalized geological unit classification

Type (All) - The geological unit number(s) or code(s) for all rock types present in an individual polygon.

Type (Primary) - The primary geological unit number or code for the primary rock type in an individual polygon

Type (Secondary) - The secondary geological unit number or code for the secondary rock type, if present, in an individual polygon

Type (Tertiary) - The tertiary geological unit number or code for the tertiary rock type, if present, in an individual polygon

Rock Type (Primary) - Rock type or sub-unit description

Status (Primary) - The Stratigraphic unit. Divided into:

```
Supergroup (two or more groups and lone formations)
Group (two or more formations)
Formation (primary unit of lithostratigraphy)
Member (named lithologic subdivision of a formation)
Bed (named distinctive layer in a member or formation)
```

Super Eon (Primary) - A name given to the largest defined unit of geological time, divided into Eons. Unique values which this field may contain (Domains) are:

```
PRECAMBRIAN (0.542 Ga to <3.85 Ga)
```

Eon (Primary) - A name given to a defined unit of geological time, divided into Eras. Unique values which this field may contain (Domains) are:

```
ARCHEAN (2.5 Ga to <3.85 Ga)
PROTEROZOIC (0.542 Ga to 2.50 Ga)
PHANEROZOIC (Present to 542.0 Ma)
```

Era (Primary) - A name given to a defined unit of geological time, divided into Periods. Each era on the scale is separated from the next by a major event or change. Unique values which this field may contain (Domains) are:

```
MESOARCHEAN (2.8 Ga to 3.2 Ga)
NEO-TO MESOARCHEAN (2.5 Ga to 3.2 Ga)
NEOARCHEAN (2.5 Ga to 2.8 Ga)
PALEOPROTEROZOIC (1.6 Ga to 2.5 Ga)
MESO-TO PALEOPROTEROZOIC (1.0 Ga to 2.5 Ga)
MESOPROTEROZOIC (1.0 Ga to 1.6 Ga)
EARLY PALEOZOIC TO NEOPROTEROZOIC (443.7 Ma to 1.0 Ga)
NEO-TO MESOPROTEROZOIC (0.542 Ga to 1.6 Ga)
PALEOZOIC (251.0 Ma to 542.0 Ma)
MESOZOIC (65.5 Ma to 251.0 Ma)
```

Period (Primary) - A name given to a defined unit of geological time, divided into Epochs. Unique values which this field may contain (Domains) are:

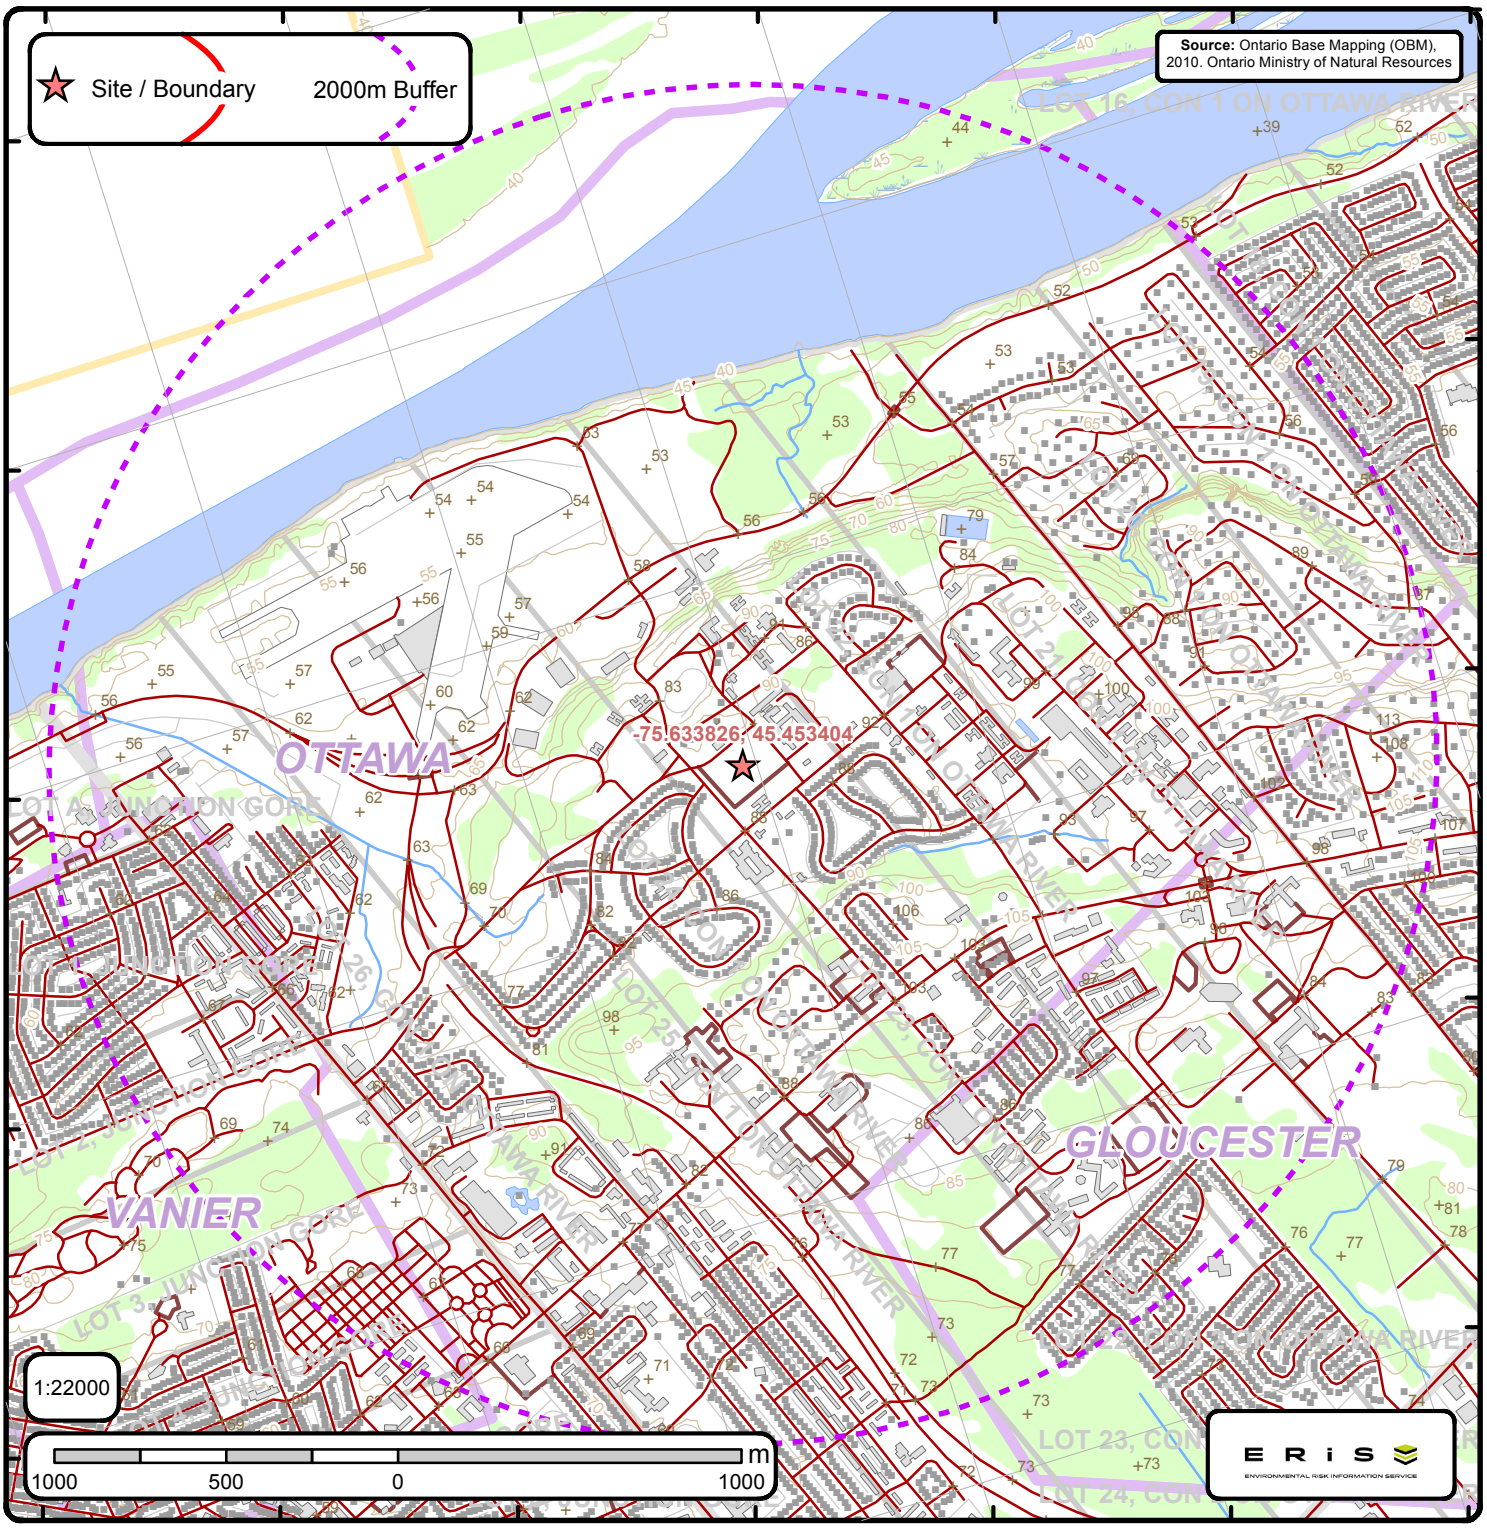

```
CAMBRIAN (488.3 Ma to 542.0 Ma)
ORDOVICIAN (443.7 Ma to 488.3 Ma)
SILURIAN (416.0 Ma to 443.7 Ma)
DEVONIAN (359.2 Ma to 416.0 Ma)
MISSISSIPPIAN TO DEVONIAN (318.1 Ma to 416.0 Ma)
JURASSIC (145.5 Ma to 199.6 Ma)
CRETACEOUS AND JURASSIC (65.5 Ma to 199.6 Ma)
```

Epoch (Primary) - A name given to a defined unit of geological time. Unique values which this field may contain (Domains) are:

```
LOWER ORDOVICIAN
MIDDLE ORDOVICIAN
UPPER ORDOVICIAN
MIDDLE AND LOWER SILURIAN
UPPER SILURIAN TO LOWER DEVONIAN
UPPER SILURIAN
LOWER DEVONIAN
MIDDLE DEVONIAN
UPPER DEVONIAN
LOWER CRETACEOUS AND MIDDLE JURASSIC
```

Province (Primary) - The Geological Province the geological unit is in. Unique values which this field may contain (Domains) are:

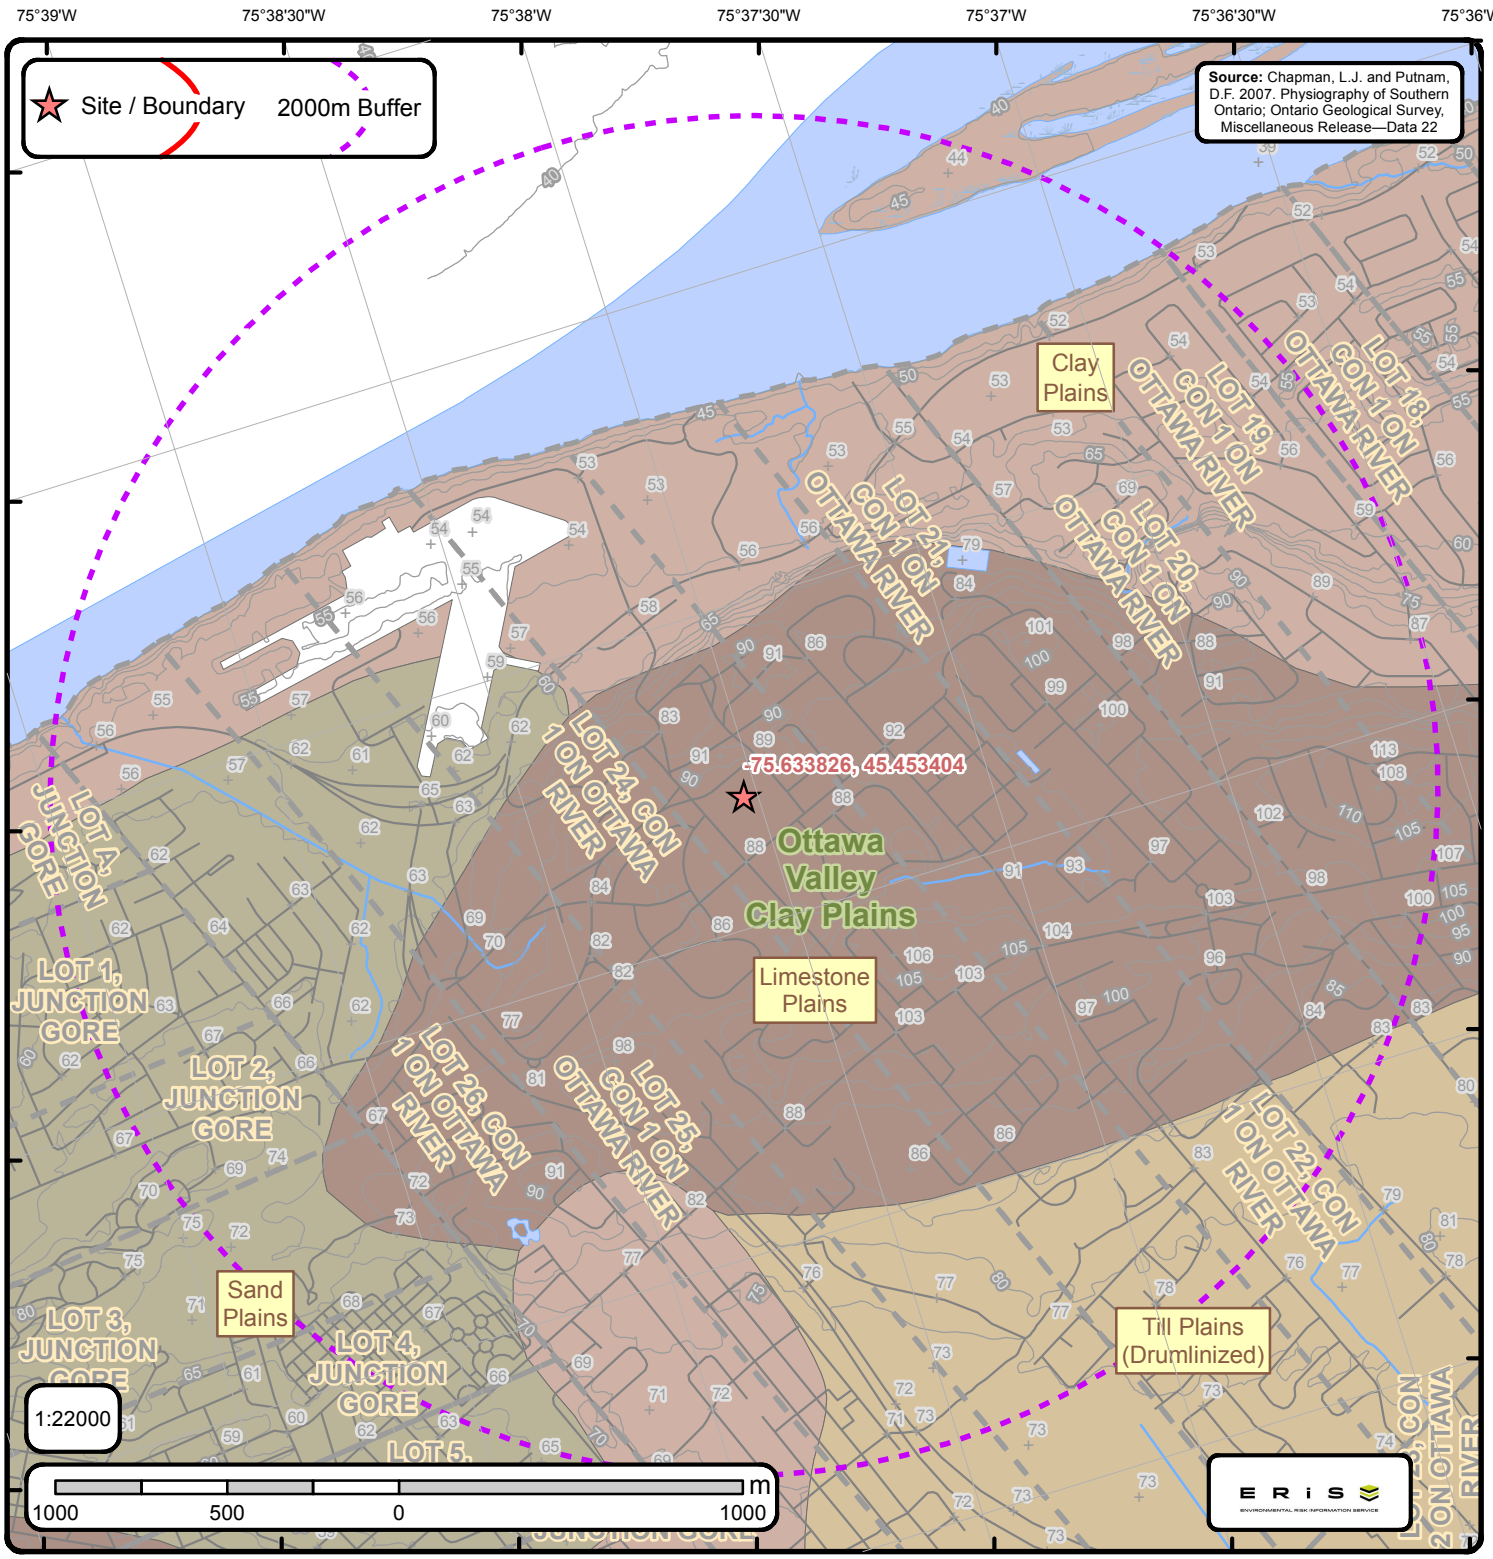

```
SUPERIOR
SOUTHERN
SUPERIOR
GRENVILLE
```

Soils Report Metadata

Soil Survey Complex (ON Soils)

ONTARIO MINISTRY OF AGRICULTURE AND FOOD
MINISTRY OF NATURAL RESOURCES
1945-2009

Map Unit - The SOIL MAPUNIT is the basic element of an applied soil classification resulting from detailed soil surveys. Soil Map unit is comprised of one or more soil survey polygons. The MAPUNIT field was generated for each polygon by appending the PROVINCE and NSDB-ID codes with the MAP UNIT symbol that identified that polygon on the original printed soil map. The MAPUNIT usually encodes meaningful information about the soil type and topography; the same information which is found in the Component table. Within any one survey, a group of polygons with similar properties may be coded with the same MAPUNIT.

Soil Type - Identifies a specific soil profile.

Percent - Proportion of the area of the Soil Map Unit occupied by a specific soil component, expressed as a percent. For any particular SOIL MAPUNIT, the sum of the individual. Soil Map Unit Component Area values must be equal to 100%.

Code - Three letter CANSIS code for identifying soils. **Name** - Textual identifier of the soil. **Symbol** - Soil symbol as found in the soil Mapunit.

Survey - Name describing the geographic location where the Soil Survey was completed. Typically the name denotes an administrative boundary of an Upper Tier municipality that occurred at the time of the Soil Survey.

Slope - Predominant slope of the landscape expressed as a percent (%). Slope steepness is often referred to by Class.

Class	Range (%)	Terminology
A	0.0 - 0.5	Level
B	0.5 - 2	Nearly level
C	2.0 - 5	Very gentle slopes
D	5.0 - 9	Gentle slopes
E	9.0 - 15	Moderate slopes
F	15 - 30	Strong slopes
G	30 - 45	Very strong slopes
H	45 - 70	Extreme slopes
I	70 - 100	Steep slopes
J	> 100	Very steep slopes

Stoniness - Occurrence of surface stoniness

Code	
-	Not Applicable
0	Non-stony
1	Slightly stony
2	Moderately stony
3	Very stony
4	Exceedingly stony
5	Excessively stony

Drainage - Indicates classification of how well the soil drains.

Code	
-	Not Applicable
VR	Very Rapidly
R	Rapidly
W	Well
MW	Moderately Well
I	Imperfectly
P	Poorly
VP	Very Poorly

Texture - Describes the soil texture of the A Horizon in the soil profile.

Code	
S	coarse sand and loamy sand
SL	moderately coarse sandy loam
L	medium - moderately fine loam
SIL	silt loam
CL	clay loam
SIC	silty clay
C	clay
O	organic

CLI - Classification of soil and land physical and climatic capability for the production of common field crops as part of the Canada Land Inventory (CLI).

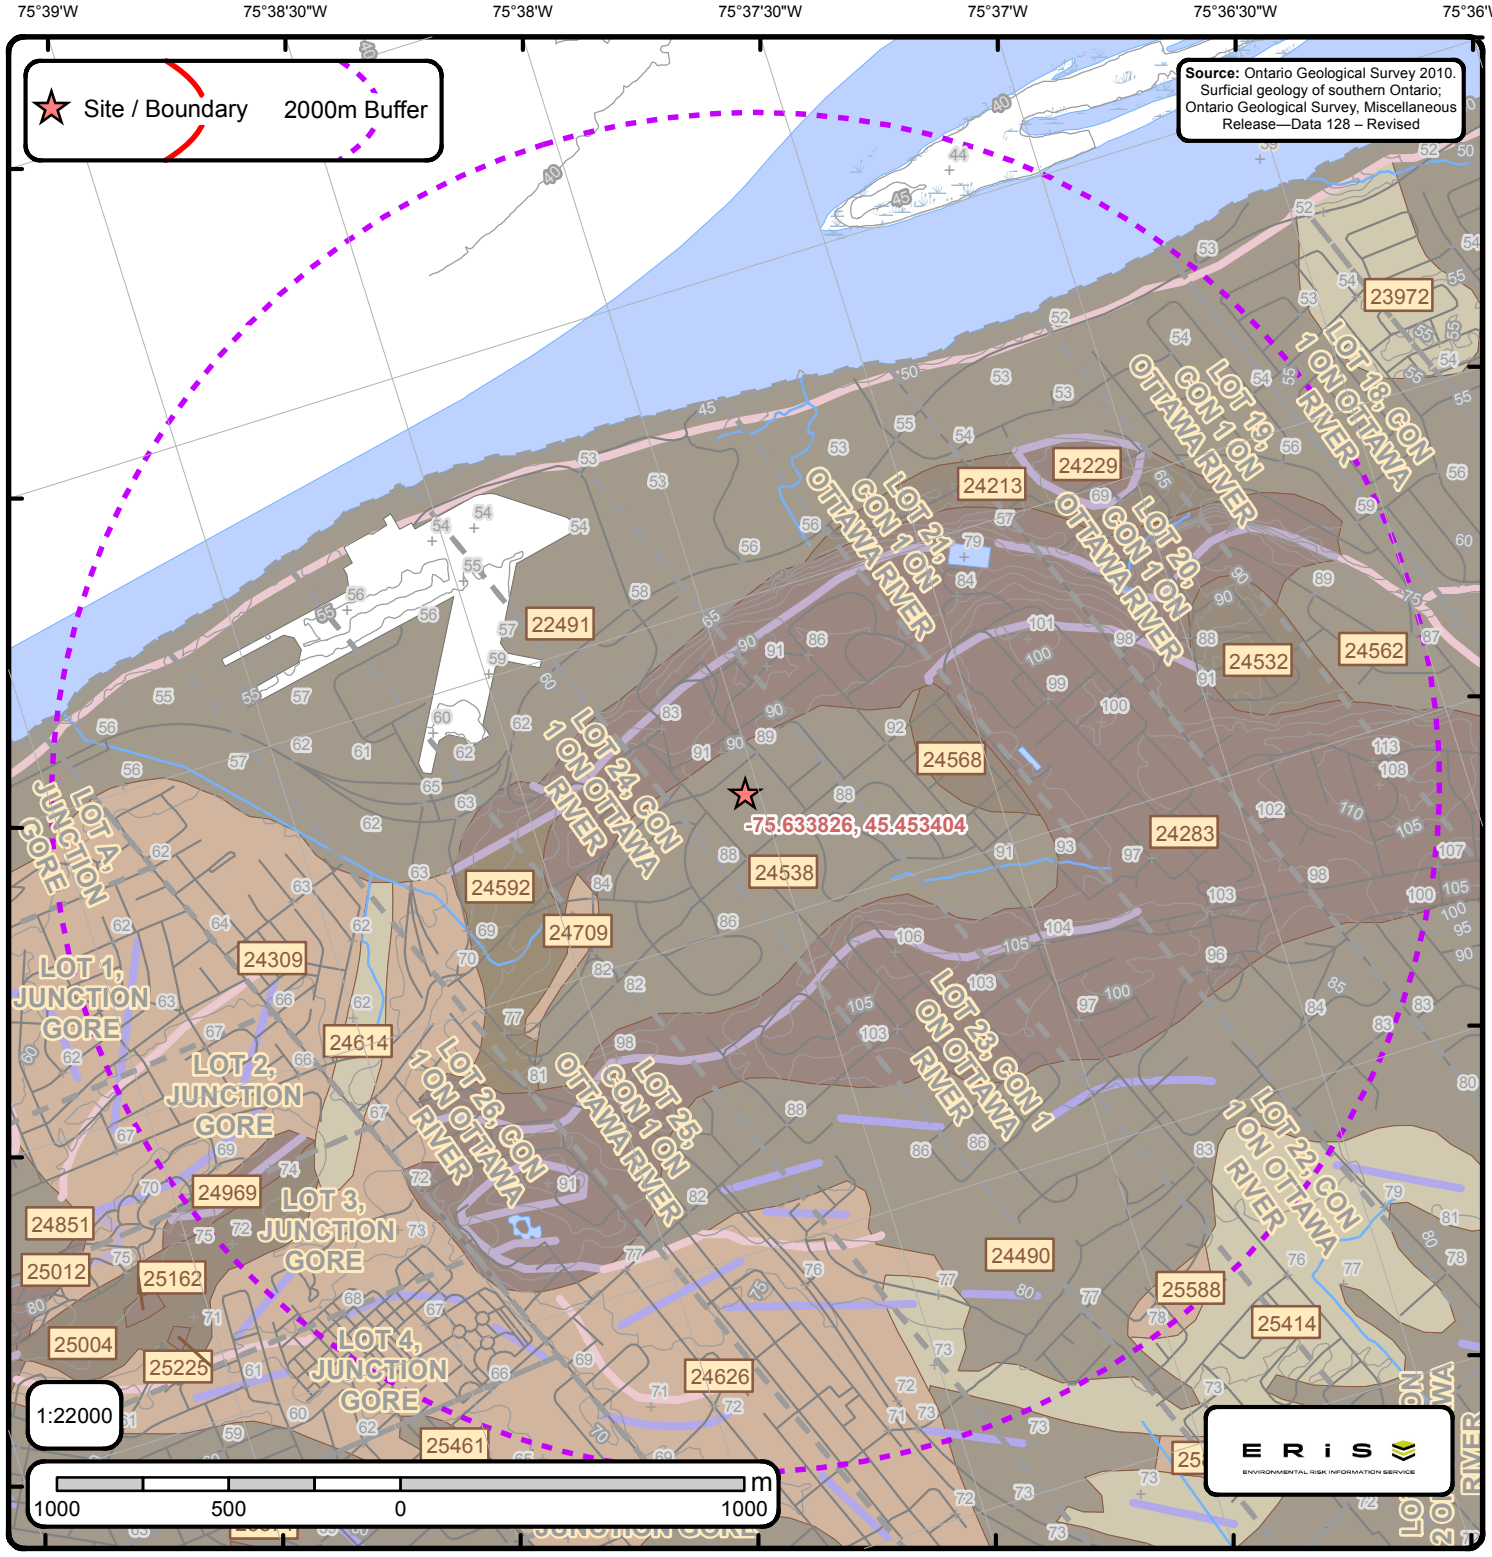

Class 1 No significant limitations in use for Crops
Class 2 moderate limitations on use for crops
Class 3 moderately severe limitations on use for crops.
Class 4 Severe limitations on use for crops.
Class 5 Very severe limitations preclude annual cultivation; improvements feasible.
Class 6 Natural grazing only; no improvements feasible.
Class 7 No capability for agriculture.

CLI1 and CLI2 - First and Second CLI (Canada Land Inventory) Limitation Subclass

Subclass C Land subject to crop heat unit regimes of under 2300 (i.e. adverse Climate)
Subclass D Adverse soil structure (i.e. Depth of rooting zone is restricted)
Subclass E Loss of soil profile from Erosion
Subclass F Low inherent soil Fertility
Subclass I Subject to occasional flooding (Inundation) from adjacent streams or waterbodies
Subclass M Low inherent Moisture holding capacity
Subclass P Presence of surface stones > 15 cm diameter.
Subclass R Presence of consolidated bedrock within one metre of the soil surface
Subclass S Presence of a combination of the Subclasses F and M, or, the presence of a combination of the Subclasses P and R (i.e. adverse soil characteristics)
Subclass T Presence of adverse Topography

Hydro – Hydrological Soil Groups classify soils into 4 groups (A,B,C,and D) according to water run-off and infiltration rates.

A Soils that have a low runoff potential and high infiltration rate, as the soils typically are sands and gravel.
B Soils with moderate infiltration rates when completely wetted. Soils are sandy loam soils with moderately fine to moderately coarse textures.
C Soils with slow infiltration rates when thoroughly wetted and these soils typically are silty-loam soils with an impeding layer or soils with moderately fine to fine texture.
D Soils have a high runoff potential and very slow infiltration rate when thoroughly wetted. Soils include clay soils with high swelling potential, soils in a permanent high water table and shallow soils over nearly impervious material.

Surface Geology Report Metadata

Ontario Geological Survey 2010. Surficial geology of southern Ontario; Ontario Geological Survey, Miscellaneous Release - Data 128 - Revised.

ONTARIO MINISTRY OF NORTHERN DEVELOPMENT, MINES AND FORESTRY

ID - ID applied to the Unit

Unit Name - Name of deposit

Deposit Type Code - The geological unit number taken from the original map legend.

Deposit Age - to show the age when the sediments were deposited, e.g., Wisconsinan, postglacial or recent.

Map Number - Original map series number, eg., 'M2402' or 'P1973'. Each sgu_point feature is tagged to its original map.

Map Name - Usually NTS area where mapping was completed, e.g., 'Golden Lake'

Source Map Scale - The scale at which the original map was captured, e.g., '1:50 000'

Primary Material - This attribute provides the user with information regarding the most prevalent material present within a given area.

Primary Material Modifier- This attribute provides the user with a more refined description of the lithological classification of the primary material.

Secondary Material - This attribute provides the user with information regarding subordinate materials present within a given area.

Primary General - This attribute provides the user with an interpretation of the depositional environment within which the primary material was deposited.

Primary General Modifier - This attribute provides the user with a refined interpretation of the primary genetic modifier.

Veneer - This attribute provides the user with information regarding the type of material that forms a thin, discontinuous veneer over the primary material.

Sub Episode - A diachronic stratigraphic unit in a lower order than Episode and the proposed sequence-stratigraphic classification, consists in descending order of Michigan, Elgin and Ontario in the eastern and northern Great Lakes area in the Wisconsin Episode (Johnson et al. 1997; Karrow et al. 2000).

Sub Episode - A diachronic stratigraphic unit in a lower order than Episode and the proposed sequence-stratigraphic classification, consists in descending order of Michigan, Elgin and Ontario in the eastern and northern Great Lakes area in the Wisconsin Episode (Johnson et al. 1997; Karrow et al. 2000).

Phase - A diachronic stratigraphic unit in a lower order than Subepisode, and the proposed sequence-stratigraphic classification is listed in the following table in the eastern and northern Great Lakes area (Karrow et al. 2000)

Stratus Modifier - This attribute provides the user information regarding the stratigraphic position of the mapped unit (i.e., whether the unit occurs primarily on the surface or in the subsurface).

Provenance - This attribute provides the user with information regarding the provenance of a particular till unit (i.e. direction or lobe from which the till is derived).

Carbon Content - This attribute provides the user with information regarding the carbonate content of till.

Formation - This attribute provides the user with information regarding the formation to which a given primary material belongs (e.g., Tavistock Till, Port Stanley Till, Scarborough Formation). This attribute is seamless and allows the user to create a map based on formation.

Permeability - This attribute provides the user with basic information about permeability of the sediments in a ranking of high, medium and low.

Material Description - Material or sediment description, e.g., 'sand and silty fine sand', 'silty sand and gravel' and 'silty till with low stone content'.

Dear Mr. D'Addario

RE: SHELL RETAIL OUTLET - 77 VIA VENUS, ROCKCLIFFE

We have now concluded our environmental investigation of subject site and enclosed please find, our consultant's report which details the findings.

Using the best available technology, the assessment consisted of an electromagnetic survey followed by the installation of 22 vapour probes and 4 monitoring boreholes. Additionally, all tanks and lines were tested using a combination of the Vacutect and/or pressure test.

The salient points are as follows:

- Testing concluded that there were no leaks in either the tanks or product lines.
- No vapours were detected in any of the residences on Via Venus.
- Two localized areas of higher residual contamination were found under the former gasoline pump islands and in a zone to the east of the existing islands.
- Off-site migration is concentrated in the fissures in the weathered clay and movement is in a southerly direction.
- The current on-site environmental status poses no further risks to health, safety or the environment.
- It has been agreed amongst Environment Canada, Department of National Defence and Shell Canada Products Limited, to install an interceptor trench along side the new sewer pipe to prevent petroleum infiltration into the sewer and to allow for product removal.

We agree with the consultant's recommendations and further suggest that the on-site remediation of the localized contamination zones be co-ordinated to coincide with future business plans such as tank/piping upgrading or upon termination of the Shell/Canex contract.

Dear Colonel C. Brando

RE: SHELL RETAIL OUTLET - 77 VIA VENUS, ROCKCLIFFE

Further to the meeting on May 28, 1992 and your letter dated June 5, 1992, please be advised that Shell Canada Products Limited will be ceasing its operations at subject site and will be remediating as follows:

a) Removal of all underground tanks and piping.

b) The weepers around the food store building which have been impacted by petroleum product will be removed and replaced.

c) Any free phase petroleum product will be removed. — lets discuss, in close proximity to residences.

d) All soils exceeding Environment Canada's Industrial/Commercial criteria will be remediated to the extent possible without undermining structures.

e) Groundwater contamination appears to be confined to the zones of heaviest soil contamination and therefore will be addressed via the remediation of the soils.

f) From our extensive site assessment data it is expected that the off-site migration of free phase petroleum was via the fractures in the clay and would not expect the soil matrix to exceed the clean-up criteria. Additionally, our interceptor trench and recovery well on the south side of Via Venus have not detected any product and the water sample found the TPH and BTEX values below the method detection limit. Accordingly, it is our view that further remediation and/or excavation is not required for these soils, ie. south of the tank farm and into Via Venus.

We do not anticipate any problem in meeting your requested completion date of August 15, 1992, provided that we are not subjected to delays from external parties.

Document Released Under the Access to Information Act / Document divulgué en vertu de la loi sur l'accès à l'information.

We trust this action plan is agreeable to you and request your written concurrence.

Yours truly

Telephone (416) 441-3800

August 13, 1992

National Defence
Canadian Forces Base Ottawa
Lieutenant Colonel G.C. Brown
Ottawa, Ontario
K1A 0K5

Dear Lieutenant Colonel Brown:

SUBJECT: SHELL RETAIL OUTLET - 77 VIA VENUS, ROCKCLIFFE

We are in receipt of your letter dated July 31, 1992 and wish to advise as follows:

Firstly, we are rather surprised that these issues are being raised at this point in time given that our clean-up proposal was submitted on June 15, 1992 and that the work is well under way to meet your designated clean-up completion date of August 15, 1992.

Notwithstanding the above, we have the following comments:

It is Shell's position that this facility was a commercial operation and that the clean-up level would therefore follow the CCME Industrial/Commercial guidelines. Although we understand that the future use of this site may be residential, the clean-up to this level is not an expense which we feel should be borne by Shell.

However, we are pleased that you are prepared to accept a less stringent standard contingent on proof of no environmental risk. Accordingly, it is our intent to excavate soils that exceed the commercial level criteria and that the remaining soils do not pose an environmental risk. Composite samples of the walls and floor of the excavation will be submitted for laboratory analysis of BTEX and TPH to verify the conditions of the soils remaining. This in conjunction with the previous assessment work will serve to provide the environmental status of the site.

It is Shell's position that ground water contamination should be viewed in relation to the risk presented to potential receptors. Accordingly, since there are no drinking water wells in the area and the predominant ground water flow is to the south where an interceptor trench has been installed and where no detectable levels of dissolved hydrocarbon have been present to date, there does not appear to be any risk from ground water contamination. Nevertheless, ground water contamination appears to be confined to the zones of heaviest soil contamination and therefore will be addressed via the removal of the contaminated soils.

D3-20: AJ

Document Released Under the Access to Information Act / Document divulgué en vertu de la Loi sur l'accès à l'information.
s.19(1)

The layer of contamination which appears to be underneath part of the building is confined to a zone of silt at approximately 13 feet deep. This zone is overlain by a layer of impermeable clay which has prevented the vapours from migrating into the building. Further excavation at this time would undermine the building and it is therefore proposed that this remaining contamination be removed at some future date when the building is demolished. All costs associated with the removal of the gasoline contaminated soils would be paid for by Shell. It is worth noting that a lab analysis of the soil in this zone determined that it met the commercial criteria.

Up until this point in time Shell has assumed full responsibility of the clean-up relative to the leaks associated with the gasoline handling system on the basis that we owned the gasoline handling system. The operation and management of the facility was at all times controlled by CANEX i.e., Shell had no involvement. Accordingly, given the relatively large area of soil contamination, we must question the operating practices of the past which may have contributed to the extent of contamination and associated clean-up costs.

Additionally, please be advised that it is possible we may encounter other contamination originating from the former waste oil and fuel oil tank. Since Shell neither owned or operated the former service bays all costs associated with this clean-up would be the responsibility of DND. Prompt notification will be given to DND in the event such contamination is encountered.

Shell will continue with the clean-up as per the above and hope that we can work together in an expedient manner to bring a satisfactory closure to this project. Please note that safety considerations will take precedent over any perceived environmental concern and that Shell will act accordingly.

If you have any questions, please contact at (until August 14, 1992, after which you may call the writer.

Yours very truly

Dear Lieutenant Colonel Brown

RE: SHELL RETAIL OUTLET - 77 VIA VENUS, ROCKCLIFFE; STOP WORD ORDER

Please be advised that we are nearing completion of our excavation at the above site, as per our August 13 letter (previously sent in draft form in response to your draft letter of July 31). We now wish to start backfilling the excavation with clean fill but have received a stop work order from your Captain Bruce Blackadder, preventing us from doing so until the issue of clean-up criteria is resolved. We have complied with this order. We wish to advise you, however, that Shell is greatly concerned about the safety hazards of leaving such a large excavation open for any length of time and that we strongly advise that backfilling be allowed to recommence. We understand your concerns regarding the resolution of the clean-up criteria, however, we feel that safety concerns should take precedence. If we are not allowed to start backfilling again within the week, we will consider that the DND accepts all liability related to safety hazards of this excavation.

In addition, we wish to advise you that we encountered significant "varsol"-like contamination in the southeast portion of the excavation on August 12, and have ceased excavation in that area. Some of this contamination may extend under the Canex building. There is still some gasoline contamination in that area, but the majority of the contamination is not related to gasoline and therefore is in no way the responsibility of Shell. Please advise us on how you wish to proceed in that area.

Based on the above we are unable to comply with your August 15 clean-up deadline and hereby request an extension. We very much want to resolve the above issues quickly in order to bring closure to this project, so we would appreciate an on-site meeting as soon as possible to address these matters.

will be back in the office on Monday August 17. Any questions arising out of this matter after today, should be addressed to him.

Yours truly

Advisor, Hydrogeology/Soils

MINUTES TO A MEETING TO ESTABLISH REMEDIATIVE MEASURES FOR THE CFB OTTAWA (N) CONTAMINATED SITE ADJACENT TO THE SHELL STATION ON VIA VENUS RD

Ottawa, Canada
Nov 1991

PRESENT

Members Present	Maj M. Circé	Regional Manager - CANEX
	Maj R.E. MacCormack	CFB Ottawa/Engineering Officer
	Mr. Victor L. Baker	National Petroleum Manager CANEX
	Mr. Larry Balzana	CFB Ottawa A/SPO
	Mr. E.C. (Ted) Banks	CFB Ottawa/Hazardous Materials Officer
	Mr. Paul Bois	CFB Ottawa/Special Projects Officer
	Mr. Frank D'Addario	Environment Canada Environmental Officer
	Mr. R.J. Moore	Senior Inspector Fuels Safety Branch Ministry of Consumer and Commercial Relations
	Mr. Ron Nobes	Environment Canada Environmental Officer
		Sr. Safety/Environmental Engineer - Shell Canada

ITEM	DISCUSSION	ACTION BY

I OPENING REMARKS

1. Maj MacCormack opened the meeting and requested that the members present identify themselves and explain their respective roles.

2. Test results on the contaminant confirmed it as gasoline. The test results obtained through FONDEX were supplied by Mr. Bois and are attached as Annex A.

3. Mr. Baker provided an overview of the relationship between Shell Canada and the Department of National Defence as well as a brief history of the site. He indicated:

a. Shell Canada is the sole provider of petroleum products the the Canadian Forces Exchange System (CANEX) and in addition provides equipment including tanks, pumping and gas dispensers and maintenance on the equipment;

b. National Defence CANEX personnel are responsible for daily dips and the notification of the proper authorities including Base authorities and the Shell supplier should there be volume deviations or associated problems;

Document Released Under the Access to Information Act / Document divulgué en vertu de la Loi sur l'accès à l'information.
s.19(1)

ITEM	DISCUSSION	ACTION BY

c. In 1987 the underground tanks at the site were relined, however, leak detection equipment or cathodic protection was not provided; and

d. some soil was removed and a recovery culvert installed in 1987.

3. Mr. Bois confirmed that he was involved in the 1987 re-construction of the CANEX facility following an explosion that rendered the previous building structurally unsound. Contamination was encountered during construction at that time and the recovery culvert was installed to remediate the problem.

3. indicated the Shell was currently assessing the CANEX records and that Shell would be pressure testing the tanks and piping for leaks in the system and results would be available within two weeks.

4. Mr. D'Addario recommended the following:

a. shallow vapour testing to determine the parameters of the contamination;

b. EMS (Electro-Magnetic Survey) for further delineation of the plume.

5. A summary of remediative measures was established by the members. This included:

a. installation of a clay barrier to prevent the contaminant from invading the excavated the sewer channel; — Mr. Bois

b. pressure testing of the tanks and piping system for current leakage;

c. a site assessment to be undertaken immediately by Shell Canada and to include:

(1) shallow vapour surveys;

(2) EMS.

d. testing of the homes across the street from the Shell station for gasoline vapours and informing the occupants of the testing activities. — EngO

Attention:

Re : Environmental Assessment
D.N.D. - Rockliff Base
Via Venus & Bishop Blvd
Ottawa, Ontario
Fondex File : No. O-8897E

Dear

Further to our conversation, I am sending you a copy of analytical test results obtained from a water sample (WS-1) and a soil sample (SS-2). The samples were obtained at the base of the excavation for the installation of sanitary sewers on the south side of Via-Venus east of Bishop Blvd. The location provided by your field staff was 40m east of manhole no.5 and a base of excavation elevation of 84.566m.

The samples were retrieved on the afternoon of October 24, 1991 and submitted directly to ARECO CANADA LTD for chemical analysis and contaminant identification. Contamination was suspected in the field as a result of strong odors and the presence of a dark, oil like substance seeping from fractures in the clay soil and floating on the surface of water puddles.

FONDEX Limitée

Document Released Under the Access to Information Act / Document divulgué en vertu de la Loi sur l'accès à l'information.

s.19(1)

The analytical test results indicate the contaminant to be typical of a weathered gasoline. The absence of PAH's suggest that the black portion of the sample is attributed to asphaltenes and not a tar based product. The site is located south of a shell Canada service station which could be a source of contamination. The presence of asphaltenes could be the results of a gasoline spill on an asphalted surface or gasoline (solvent) in contact with buried asphaltic products.

A B.T.E.X. (Benzene, Toluene, Ethylbenzene, Xylene) analysis on the water sample (WS1) indicates that all parameters were found to be present in high levels. A T.P.H. (Total Petroleum Hydrocarbons) analysis on WS1 (organic phase) indicates a concentration of 19,000 PPM. The Environment Canada criteria for groundwater is 0.200 PPM. B.T.E.X. and T.P.H. analysis on a soil sample obtained at the base of the excavation indicates all parameters to be significantly in excess of existing remediation criteria.

The problem investigated is within a service trench in a residential area. Therefore, the site should be considered as highly sensitive. With the concentrations measured immediate action should be taken to characterize the area of contamination in order to establish effective remmediation work.

Two other soil samples were obtained at higher elevations in the excavation and submitted to ARECO. We recommend that these samples also be analyzed for B.T.E.X. and T.P.H.

Sincerely
Fondex Ltd

REPORT OF ANALYSIS
ARECO CANADA INC., 28 CONCOURSE GATE, NEPEAN, ONTARIO, K2E 7T7
TELEPHONE: (613) 228 1143 FAX: (613) 228 1148

LABORATORY I.D.:	241091-9	CLIENTS JOB NUMBER:	Fondex, O-B8978
SAMPLE MATRIX:	Water	DATE SUBMITTED:	24-10-91
REPORT NUMBER:	8182310	DATE REPORTED:	25-10-91

OBSERVATIONS:

A three stage analysis was performed on sample WS-1.

1. A T.P.H analysis was performed on a hexane extract of the organic phase. The pattern was shown to compare favourably with a weathered gasoline.

2. A B.T.E.X. analysis was performed on a methanol extract of the organic phase use a GC-MS, Purge & Trap procedure. All components were found to present in high levels (i.e. ppm to %).

3. A PAH analysis was performed on a methylene chloride extract of the organic phase. No PAH's were found to be present in the sample.

CONCLUSIONS:

The majority of the product present in the sample appears to be a weathered gasoline. The black portion perhaps may be attributed to asphaltenes in the area not a tar-based product as no PAH's were detected in the extract.

RECOMMENDATIONS:

Areco Canada Inc. recommends that a TPH and BTEX analysis be performed on the three soil samples that were recieved along with the water samples for quantification purposes.

Dear

CONTAMINATION AT CFB OTTAWA NORTH
CANEX STATION

This letter is in response to a meeting held 28 May 1992 to discuss the plan for the remediation of the contaminated soils and groundwater at CFB Ottawa North Canex station.

It was made clear at the meeting that Federal policy stipulates that any known contamination, regardless of the extent, must be remediated as quickly as possible. You requested approval to delay remediation of the site for business reasons. I am concerned for the risk to the environment the current situation presents, and I am not prepared to accept this risk or any delay in remediation of the site.

You are therefore requested to take immediate remedial action to clean-up the site to the satisfaction of DND and EC officials. The clean-up is to be completed by 15 August 1992. I thank you for your co-operation in this matter.

Yours truly,

C. Brando
Colonel
Base Commander

CONTAMINATION AT CFB OTTAWA NORTH

Dear Mr. Cameron:

In response to your letter dated 12 May 1992, the following is the action being taken to remediate the hydrocarbon contamination at CFB Ottawa North.

With regards to resolving the Shell Station problem a meeting was held on 28 May 1992 between Base, Shell and Evironment Canada officials. Shell was instructed to commence remediation immediately. This instruction was followed up by a letter of which a copy was forwarded to Mr. F. D'Addario. Shell Canada has been directed to complete the remediation by 15 August 1992. I appreciate Mr. F. D'Addario's advice and assistance in this matter.

With respect to the old school building the leaking oil tank and all visibly contaminated soil, under Environment Canada supervision, was removed last summer. A preliminary consultant analysis followed to investigate the extent of possible further soil and ground water contamination around the original excavation. The investigation indicated that there was some contamination and that further detailed analysis was required to determine the scope of the contamination. This study was initially planned for early this summer with remediation to follow; however, the indication of broader problems in the area has delayed the study. I am specifically refering to the problems with the Shell station and the scope of that problem and indications of at least one other possible source of contamination in the area. With the information now available a consultant analysis will be initiated shortly to assess the contamination and determine the sources between the area bordered by the Shell station, the Married Quarters across from the Shell station and the school. The appropriate remediation will quickly follow.

Canada

Document Released Under the Access to Information Act / Document divulgué en vertu de la Loi sur l'accès à l'information.

I assure you that the situation in the immediate area of the school was not forgotten and that Environment Canada will be party in resolving the situation. I trust that this letter addresses your concerns, if not, please contact me at 998-3134. The assistance of you and your staff in the continuing process of resolving environmental issues at CFB Ottawa are appreciated.

Yours truly,

J.R. Barnes

31 July 1992

Shell Canada Products Ltd.
1500 Don Mills Road
North York, Ontario
M3B 3K4

Dear

The purpose of this letter is to confirm your telephone conversation of 30 July 1992 with Captain Blackadder regarding the remediation of the gas station at Canadian Forces Base Rockcliffe.

Before completion of this project can occur, two issues must be resolved. The first of these is the establishment of the clean-up criteria to be followed. It is the Department of National Defence's position that this site must be cleaned to residential/parkland standards as outlined by the Canadian Council of Ministers of the Environment. The nature of the gas station and its surrounding area has always been considered a residential zone, and with Rockcliffe downsizing, this residential zoning will become even more prominent. It is also appreciated that site conditions could exist where remediation to the more stringent standard could result in unnecessary expenses being incurred.

It is therefore requested that Shell submit a plan to outline its method of testing to prove its excavations have proceeded sufficiently to satisfy the Canadian Council of Ministers of the Environment residential criteria. It is to be understood that in special situations the Department of National Defence may accept a less stringent standard if Shell can prove no environmental risk is involved.

Secondly, concern has been raised as to how remediation will be carried out beneath the Canex building and in the groundwater. Shell is requested to submit a written plan on how remediation will take place in these areas describing how it will be proven that all relevant Canadian Council of Ministers of the Environment criteria for a residential/parkland area have been satisfied.

Canada

Document Released Under the Access to Information Act / Document divulgué en vertu de la Loi sur l'accès à l'information.

Your cooperation in this project is greatly appreciated. Should you require assistance or wish to coordinate further regarding this matter, please contact Captain Bruce Blackadder at 1-613-998-0989.

Dear Mr. Graham:

RE: Pumping Stations - CFS Rockliff, McKay Lake-Hawthorne

This letter is to confirm our recent conversation regarding sewer by-passes to the Ottawa River at the above locations during high rainfall events and spring freshet.

The source of the problem has been attributed to the drainage works which service the federally owned properties entering the Regional Municipality of Ottawa Carleton's pumping stations at these locations.

We request that you undertake improvements to this drainage system to eliminate the problem from reoccurring in the future. Please notify this office by September 1, 1994 as to what action you plan to take.

Please contact Mr. Gerry Bent, Superintendent Pumping Stations, Regional Municipality of Ottawa-Carleton or myself if you wish to discuss some options to resolve this problem.

Yours truly,

G.F. Montcalm
Senior Environmental Officer

Ted Banks 998-3840 CFB Ottawa

Men working on a project - digging a trench across from the Shell CANEX service station have encountered gasoline vapors and free petroleum product. Men could not work in the trench. The project has been stopped. DND are meeting to decide what action to take. I suggested they contact Shell ASAP because they appear to be the only source of fuel in the area. I also indicated that someone should check all bldgs in the area for the building of explosive vapors.

Oct 31

Meeting at CFB Uplands - Hangar 12 Frank and I, Maj. Bob McCormack, Ron Moore FSB Shell, Victor Baker CANEX, Ted Banks DND, Paul Bois / Paul Baizana DND, & Michel Circé Major CANEX.

Site visit

9 am - Contractor will block ditch to prevent of fuel along new sewer trench. The residential house basements will be tested for gasoline vapors. Tank nology will accum test all five tanks and piping. Borehole testing to define plume and g ms will be done first. If the tanks are Ok the CANEX station will continue to oper ate.

RE: SHELL SERVICE STATION - CFB OTTAWA NORTH - ROCKCLIFFE

Dear Major MacCormack:

I have recently received and reviewed the consultant's report titled "Environmental Characterization, Shell Service Station, CFB Ottawa North, Rockcliffe", my recommendations, based on this review, are as follows:

1. Further subsurface characterization to better define the level and extent of hydrocarbon contamination migrating off-site. Preliminary site assessment findings clearly indicate that the level of hydrocarbon contamination at this site exceeds the CCME Interim Environmental Quality Criteria for Contamination Sites.

2. A sampling and monitoring program be implemented to assess the level of contamination, and to minimize any health/environmental impacts that may develop.

3. A plan of action to decontaminate (cleanup) this site to an environmentally acceptable level in accordance with the CCME Remediation Criteria for Contaminated Sites.

As part of keeping the "Federal House in Order", the Green Plan initiatives, and in accordance with the objectives set out by the Office of Environmental Stewardship, I strongly suggest this matter be dealt with as soon as possible.

If you have any questions, require additional information or would like to discuss this matter further, please feel free to contact me at (613)-952-8678.

Dear Mr. Cornell,

Re: Information Request
CFB Rockcliffe (335 St. Laurent Blvd.), Ottawa, Ontario ("Subject Property")

Internal Department Circulation

The Planning and Growth Management Department has the following information in response to your request for information regarding the Subject Property:

- No information was returned on the Subject Property from Departmental circulation.

Search of Historical Land Use Inventory

This acknowledges receipt of the signed Disclaimer regarding your request for information from the City's Historical Land Use Inventory (HLUI 2005) database for the Subject Property.

A search of the HLUI database revealed the following information:

- There are five activities associated with the Subject Property: Activity Number 2586, 3909, 4098, 9517, and 9569.

The HLUI database was also searched for activity associated with properties located within 50m of the Subject Property. The search revealed the following:

City of Ottawa
Infrastructure Services and Community Sustainability Department
Planning and Growth Management Branch

110 Laurier Avenue West, 4th Floor
Ottawa, ON K1P 1J1
Tel: (613) 580-2424 ext. 14743
Fax: (613) 560-6006
www.ottawa.ca

Ville d'Ottawa
Services d'infrastructure et Viabilité des collectivités
Direction de l'approbation des demandes d'aménagement et d'infrastructure

110, avenue Laurier Ouest, 4e étage
Ottawa (Ontario) K1P 1J1
Tél.: (613) 580-2424 ext. 14743
Téléc: (613) 560-6006
www.ottawa.ca

- There are ten activities associated with properties located within 50m of the Subject Property: Activity Number 4098, 9567, 9569, , 6760, 8798, 12344, 12350, 14057, 2535, and 2586.

Please note that Activity Numbers 2535, 9569, and 6760 have a PIN Certainty of "2". This identifier acknowledges that there is some uncertainty about the exact location of the land use activity and that the activity may or may not have been located on the Subject Property or on certain properties within 50m of the Subject Property. All database entries with a PIN Certainty of "2" require independent verification as to their precise location.

A site map has been included to show the location of the Subject Property as well as the location of all the activities noted above, including the HLUI database's location of the Activity Numbers with a PIN Certainty of "2".

Additional information may be obtained by contacting:

Ontario's Environmental Registry

The Environmental Registry found at **http://www.ebr.gov.on.ca/ERS-WEB-External/** contains "public notices" about environmental matters being proposed by all government ministries covered by the Environmental Bill of Rights. The public notices may contain information about proposed new laws, regulations, policies and programs or about proposals to change or eliminate existing ones. By using keys words i.e. name of proponent/owner and the address one can ascertain if there is any information on the proponent and address under the following categories: Ministry, keywords, notice types, Notice Status, Acts, Instruments and published date (all years).

The Ontario Land Registry Office

Registration of real property is recorded in the Ontario Land Registry Office through the Land Titles Act or the Registry Act. Documents relating to title and other agreements that may affect your property are available to the public for a fee. It is recommended that a property search at the Land Registry Office be included in any investigation as to the historic use of your property. The City of Ottawa cannot comment on any documents to which it is not a party.

Court House
161 Elgin Street 4th Floor
Ottawa ON K2P 2K1
Tel: (613) 239-1230
Fax: (613) 239-1422

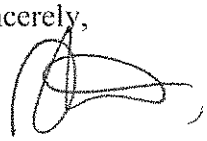

Please note, as per the HLUI Disclaimer, that the information contained in the HLUI database has been compiled from publicly available records and other sources of information. The HLUI may contain erroneous information given that the records used as sources of information may be flawed. For instance, changes in municipal addresses over time may introduce error. Accordingly, all information from the HLUI database is provided on an "as is" basis with no representation or warranty by the City with respect to the information's accuracy or exhaustiveness in responding to the request.

Furthermore, the HLUI database and the results of this search in no way confirm the presence or absence of contamination or pollution of any kind. This information is provided on the assumption that it will not be relied upon by any person for any purpose whatsoever. The City of Ottawa denies all liability to any persons attempting to rely on any information provided from the HLUI database.

Please note that in responding to your request, the City of Ottawa does not guarantee or comment on the environmental condition of the Subject Property. You may wish to contact the Ontario Ministry of Environment for additional information.

If you have any further questions or comments, please contact John Bernier at 613-580-2424 ext. 14743 or HLUI@ottawa.ca

Sincerely,

David Wise, MUP, MCIP, RPP
Program Manager
Development Review (Suburban Services) - West

Natural Heritage Values

The Ministry of Natural Resources (MNR) Kemptville District has carried out a preliminary review of the area in order to identify any potential natural resource and natural heritage values.

Natural heritage features and values contribute to the province's rich biodiversity and provide habitat for a variety of species. The following Natural Heritage values were identified:

- Lake, Lac Dollard-des-Ormeaux (Non-Sensitive)
- Spawning Area, Pumpkinseed Spawning Area (Non-Sensitive)
- Unevaluated Wetland (Not evaluated per OWES)

Municipal Official Plans contain additional information related to natural heritage features. Please see the local municipal Official Plan for more information such as specific policies and direction pertaining to activities which may impact natural heritage features. For planning advice or Official Plan interpretation, please contact the local municipality.

Where natural values and natural hazards exist (e.g., floodplains), there may be additional approvals and permitting required from the local Conservation Authority. The MNR strongly recommends contacting the local Conservation Authority for further information and approvals.

Please see the MNR Kemptville Information Guide (2012) for contact information pertaining to Conservation Authorities located within the Kemptville District area.

For additional information and online mapping tools, please see the Natural Heritage Information Centre (NHIC), where additional data and files can be downloaded in both list and digital format. In addition sensitive species information can be requested and accessed through the NHIC at NHICrequests@ontario.ca.

In addition, the following Fish species were identified: alewife, American brook lamprey, American eel, American shad, banded killifish, black crappie, blackchin shiner, bluegill, bluntnose minnow, brassy minnow, brook silverside, brook stickleback, brown bullhead, brown trout, burbot, Carps and Minnows, Catostomus sp., central mudminnow, channel catfish, cisco, common carp, common shiner, creek chub, cutlip minnow, eastern blacknose dace, eastern silvery minnow, emerald shiner, fallfish, fantail darter, fathead minnow, finescale dace, freshwater drum, golden shiner, greater redhorse, Iowa darter, johnny darter, lake sturgeon, largemouth bass, logperch, longear sunfish, longnose dace, longnose gar, longnose sucker, margined madtom, Micropterus sp., mimic shiner, mooneye, mottled sculpin, Moxostoma sp., muskellunge, ninespine stickleback, northern brook lamprey, northern pike, northern redbelly dace, pearl dace, pumpkinseed, quillback, rainbow smelt, river redhorse, rock bass, rosyface shiner, sand shiner, sauger, shorthead redhorse, silver lamprey, silver redhorse, slimy sculpin, smallmouth bass, spotfin shiner, spottail shiner, stonecat, tadpole madtom, tessellated darter, trout-perch, walleye, white crappie, white sucker, yellow bullhead, yellow perch.

As per the Natural Heritage Reference Manual (Section 13; OMNR 2010) the MNR strongly recommends that an Ecological Site Assessment be carried out to more thoroughly determine the presence of natural heritage features, and Species at Risk and their habitat located on site. The MNR can provide survey methodology for particular species at risk and their habitats. In addition, the local planning authority may have more details pertaining to the requirements of the assessment process, which will result in allow for the municipality to make planning decisions which are consistent with the Provincial Policy Statement (2005).

Species at Risk

With the new Endangered Species Act (ESA, 2007) in effect, it is important to understand which species and habitats exist in the area and the implications of the legislation. A review of the Natural Heritage Information Centre (NHIC) and internal records indicate that there is a potential for the following Threatened (THR) and/or Endangered (END) species on the site or in proximity to it:

- American Eel (END)
- Sensitive Species (END)
- Butternut (END)
- Chimney Swift (THR)
- Lake Sturgeon (THR)
- Pale-bellied Frost Lichen (END)

All Endangered and Threatened species receive individual protection under section 9 of the ESA and receive general habitat protection under Section 10 of the ESA, 2007. Thus any potential

works should consider disturbance of possible important habitat (e.g. nesting sites). Please note that as of June 30, 2013 general habitat protection applies to all Threatened and Endangered species. The habitat of these listed species is protected from damage and destruction and certain activities may require authorization(s) under the ESA. Please keep this date in mind when planning any species and habitat surveys.

If the proposed activity is known to have an impact on the species mentioned above or any other SAR, an authorization under the Endangered Species Act, 2007 (ESA) may be required. It is recommended that MNR Kemptville be contacted prior to any activities being carried out to discuss potential survey and mitigation measures to avoid contravention of the ESA.

In Addition, one or more Special Concern species has been documented to occur either on the site or nearby. Species listed as Special Concern are not protected under the ESA, 2007. However, please note that some of these species may be protected under the Fish and Wildlife Conservation Act. Species of Special Concern for consideration:

- Milksnake (SC)
- Snapping Turtle (SC)

If any of these or any other species at risk are discovered throughout the course of the work, and/or should any species at risk or their habitat be potentially impacted by on site activities, MNR should be contacted immediately and operations be modified to avoid any negative impacts to species at risk or their habitat until further direction is provided by MNR.

Please note that information regarding species at risk is based on documented occurrences only and does not include an interpretation of potential habitat within or in proximity to the site in question. Although this data represents the MNR's best current available information, it is important to note that a lack of information for a site does not mean that additional features and values are not present. i.e.: Species at Risk (SAR) or their habitat could still be present at the location or in the immediate area. It is the responsibility of the proponent to ensure that species at risk are not killed, harmed, or harassed; or their habitat is not damaged or destroyed through the activities carried out on the site. The MNR continues to strongly encourage ecological site assessments to determine the potential for SAR habitat and occurrences. When a SAR or potential habitat for a SAR does occur on a site, it is recommended that the proponent contact the MNR for technical advice and to discuss what activities can occur without contravention of the Act. If an activity is proposed that will contravene the ESA (such as Section 9 or 10), the proponent must contact the MNR to discuss the potential for a permit (Section 17). For specific questions regarding the Endangered Species Act (2007) or SAR, please contact a district Species at Risk Biologist at sar.kemptville@ontario.ca. For more information regarding the ESA (2007), please see attached ESA Information Sheet.

As of July 1, 2013, the approvals processes for a number of activities that have the potential to impact SAR or their habitat were changed in an effort to streamline approvals processes while continuing to protect and sustainably manage Ontario's natural resources. For those activities that require registration with the Ministry, businesses and individuals will be able to do so through a new online system. The online system will also include information to help guide individuals and

businesses through the new processes. For further information on which activities are authorized through this new online registration process and how to apply, please refer to the following website: http://www.mnr.gov.on.ca/en/About/2ColumnSubPage/STDPROD_104342.html. General inquiries may be directed towards Kemptville District MNR, while questions and comments involving the new online forms can be directed to the Registry Approvals Service Centre (RASC) at 1-855-613-4256 or mnr.rasc@ontario.ca.

Please note: The advice in this letter may become invalid if:

- The Committee on the Status of Species at Risk in Ontario (COSSARO) re-assesses the status of the above-named species OR adds a species to the SARO List such that the section 9 and/or 10 protection provisions apply to those species.
- Additional occurrences of species are discovered.
- Habitat protection comes into force for one of the above-mentioned species through the creation of a habitat regulation (see general habitat protection above).

This letter is valid until: Wed. May 27, 2015

MNR is streamlining and automating its approvals processes for natural resource-related activities. Some activities that may otherwise contravene the ESA may be eligible to proceed without a permit from MNR provided that regulatory conditions are met for the ongoing protection of species at risk and their habitats. There are regulatory provisions for projects that have attained a specified level of approval prior to, or shortly after, the specified species or its habitat became protected under the ESA. There requirements include registering the activity with the Ministry of Natural Resources, taking steps to immediately minimize adverse effects on species and habitat, and developing a mitigation plan. Anyone intending to use this regulatory provision is strongly advised to review Ontario Regulation 242/08 under the Endangered Species Act, 2007 for the full legal requirements.

For more information please check out the following link http://www.ontario.ca/environment-and-energy/development-and-infrastructure-projects-and-endangered-or-threatened-species

The MNR would like to advise, by way of this letter, that we continue to be circulated on information with regards to this project. If you have any questions or require clarification please do not hesitate to contact me.

Sincerely,

Lyn Garrah
District Planner

Dear Hanan Raghib:

RE: *Freedom of Information and Protection of Privacy Act* Request
Our File #: A-2014-03003, Your Reference #: OE-OT-015358

This letter is in response to your request made pursuant to the *Freedom of Information and Protection of Privacy Act* relating to 335 St. Laurent Boulevard, Ottawa (aka Lot 21 to 25, Con 1, Gloucester) (search to be done on both addresses).

After a thorough search of the Ministry's Ottawa District Office, Investigations and Enforcement Branch, Environmental Approvals Branch, Environmental Monitoring and Reporting Branch, Sector Compliance Branch and Safe Drinking Water Branch, records were located in response to your request. It is my decision to provide full access to the attached information.

In accordance with Section 57 of the *Freedom of Information and Protection of Privacy Act*, detailed below are our charges:

• Search Time 1 hour @ $30/hour	$30.00
• Copying 2 pages @ $0.20/page	$0.40
• Delivery	3.00
• **Total**	**$ 33.40**
• Deposit Received	- 30.00
• **BALANCE WAIVED (NOT REQUIRED)**	**$ 3.40**

You may request a review of my decision by contacting the Information and Privacy Commissioner/Ontario, 2 Bloor Street East, Suite 1400, Toronto, ON M4W 1A8 (800-387-0073 or 416-326-3333). Please note that there is a $25.00 fee and you only have 30 days from receipt of this letter to request a review.

If you have any questions regarding this matter, please contact Ayesha Kapadia at 416-212-8912 or ayesha.kapadia@ontario.ca.

Yours truly,

Heidi Ritscher
FOI Manager

Dear Madam:

RE: 335 St Laurent Blvd, Ottawa, Ontario – Your File No: OE-07-015358

This is with reference to your request and fee of $50.00 + HST, for information on the above location.

After a search of our files, TSSA has no record of any outstanding instructions, incident reports, fuel oil spills, or contamination records respecting the above-mentioned property.

We have no record of retail facilities or underground storage tanks licensed or registered at the above address.

TSSA cannot guarantee having information on sites that have not been licensed since 1987.

It should be noted that the Fuels Safety Division did not register private fuel underground/aboveground storage tanks prior to January of 1990 or furnace oil tanks prior to May 1, 2002. Also note that the Fuels Safety Division does not register waste oil tanks in apartments, office buildings, residences etc. or ABOVEGROUND gas or diesel tanks.

Yours truly,

Sarah Quibell
Public Information Agent

Subject: Re: Phase I Rockcliffe (335 St. Laurent Blvd.)_TSSA Information Request

Hi Hanan,

Thank you for your inquiry.

We have no record in our database of any fuel storage tanks at the subject address (addresses).

For a further search in our archives please submit your request in writing to Public Information Services via e-mail (publicinformationservices@tssa.org) or through mail along with a fee of $56.50 (including HST) per location. The fee is payable with credit card (Visa or MasterCard) or with a Cheque made payable to TSSA.

Although TSSA believes the information provided pursuant to your request is accurate, please note that TSSA does not warrant this information in any way whatsoever.

Thank you and have a great day!

Subject: Re: Phase I Rockcliffe (335 St. Laurent Blvd.)_TSSA Information Request

Hi Hanan,

Thank you for your email.

Please see our note below regarding preliminary search requests:

Please note that verbal search requests will be processed where an exact street number, street name and city name is provided up to a maximum of ten addresses per site. Requests relating to more than 10 addresses will be considered a written request. Please note a fee of $120.00+HST per hour (minimum one hour) will be charged for all written requests.

We estimate about one hour to complete your search, which totals to $135.60 (including HST).

I've attached a credit card payment form, you can fill it out and either email/fax it back to us and we will process your request as soon as possible.

Thank you Hanan!

APPENDIX G

Qualifications of Assessors

Qualifications of Assessor(s)

Eric Domingue, P.Eng., QP $_{ESA}$ (ONT): is a geological engineer with 19 years of experience in environmental field studies including all Phases for ESAs, risk assessment field work, site remediation, specifications and tender documents, site supervision, audit management/remediation environmental compliance audits and mining consulting services. He participated in the creation of guidelines for providing safe drinking water in areas of federal jurisdiction on behalf of the Interdepartmental Working Group on Drinking Water Health Canada, and authored the Drinking Water Guidelines and Implementation Framework for Canadian Diplomatic Missions on behalf of Foreign Affairs Canada. He has been involved in various projects in Canada and abroad. He has managed teams of engineers and professionals in environmental, geotechnical, civil and structural engineering. He is a designated "Qualified Person" as defined under O.Reg. 153/04.

Andrew Naoum, P.Eng., is an Intermediate Engineer with over six years of experience if the environmental industry, and is currently the Sector Head for DST's Outdoor Environment group in Ottawa. His responsibilities include project management, including budget control, staff scheduling and client liasion, as well as engineering investigations and field work. Mr. Naoum has worked and managed various types of environmental projects, including Phase I-III Environmental Site Assessments (ESAs) throughout Canada, Remediations, Risk Assessments, Storage Tank Compliance Audits and Designs, Remedial Action Plans (RAP) and Demolitions.

APPENDIX H

Limitations of Report

LIMITATIONS OF ASSESSMENT

DST Consulting Engineers Inc. (DST) has prepared this report for the exclusive use of Canada Lands Company CLC Limited. The information, conclusions and recommendations given herein are specific for this project and this Client only, for the scope of work described herein. DST will not be responsible for the use of this report by any third party, or reliance on or any decision to be made based on it without the prior written consent of DST. DST accepts no responsibility for damages, if any, suffered by any third party as a result of decisions or actions based on this report.

This report presents an overview of issues of potential environmental concern, reflecting DST's best judgment using information reasonably available at the time of DST's Site reconnaissance. The assessment was partly based on information from various sources of which the accuracy has not been verified, and because observations made during the Site reconnaissance may have been limited by existing conditions, this report does not guarantee that the subject property is free of hazardous or potentially hazardous material or conditions, or that latent or undiscovered conditions will not become evident in the future. DST has prepared this report using information understood to be factual and correct and shall not be responsible for conditions arising from information or facts that were concealed or not fully disclosed to DST at the time of the Site reconnaissance and assessment.

The conclusions regarding environmental conditions, which are presented in this report, are based on a scope of work authorized by the Client. Note, however, that virtually no scope of work, no matter how exhaustive, can identify all contaminants or all conditions above and below ground. This report therefore cannot warrant that all conditions on or off the subject property have been identified within this assessment.

Since onsite and surrounding activities are beyond DST's control, and can change at any time after the completion of this assessment, the observations, findings, and opinions can be considered valid only as of the date provided on this report.

Conclusions and recommendations contained in this assessment were developed in accordance with currently accepted engineering standards and practices. Standards, guidelines and practices related to environmental investigations may change over time. Those which were applied at the time of this investigation may be obsolete or unacceptable at a later date.

Phase One ESA v. March 2015
