Executive Summary

BluMetric Environmental Inc. (BluMetric®) was retained by Brookfield Renewable to conduct a baseline ambient air monitoring program at the Battery Energy Storage System (BESS) facility located at 2555 Marchurst Road, Kanata, Ontario. The monitoring was conducted prior to the start of construction at the specific request of Brookfield Renewable to establish reference data for pre-established air quality parameters.

The objective of this baseline monitoring was to provide a pre-construction characterization of ambient conditions at the site, enabling future comparison of air quality following completion of construction.

The assessment was conducted by a BluMetric Occupational & Environmental Scientist and Occupational Hygienist on August 4 and 5, 2026, under the direction of the BluMetric IH/OHS Manager and Senior Occupational Hygienist.

The purpose of this assessment was to collect ambient air data-logging measurements and passive & whole air samples at BESS facility, located at 2555 Marchurst Road, Kanata, Ontario

The real-time continuous monitoring parameters measured and assessed included the following:

- Carbon Monoxide (CO) - MultiRAE Model 6228
- Nitrogen Dioxide (NO_2) - MultiRAE Model 6228
- Hydrogen Sulfide (H_2S) - MultiRAE Model 6228
- Carbon Dioxide (CO_2) - MultiRAE Model 6228
- Hydrogen Cyanide (HCN) - MultiRAE Model 6228
- Formaldehyde (CH_2O) – Aeroqual Ranger
- Particulate Matter ($PM_{2.5}$ and PM_{10}) – TSI DustTrak DRX 8533
- Ozone (O_3) – Aeroqual S500

The laboratory-analyzed parameters (Passive and Whole-Air Sampling) measured and assessed included the following:

- Volatile Organic Compounds (VOCs) and Naphthalene as a Polycyclic Aromatic Hydrocarbon (PAH) – SUMMA canisters
- Hydrofluoric Acid (HF) – Radiello passive samplers with chemiadsorbing cartridges

The baseline assessment data indicates that no relevant ambient air quality criterion limits were exceeded, where such limits exist. The baseline assessment data may be used for comparison against future air monitoring studies following completion of the Kanata BESS construction.

1. Introduction

BluMetric Environmental Inc. (BluMetric®) was retained by Brookfield Renewable to conduct a baseline ambient air monitoring program at the Battery Energy Storage System (BESS) facility at 2555 Marchurst Road, Kanata, ON, prior to the start of construction. This work was undertaken at the specific request of Brookfield Renewable to conduct sampling or monitoring for a specific list of pre-established parameters specified to BluMetric.

The objective of conducting this baseline monitoring is understood to be the establishment of reference data for desired air quality parameters (as specified to BluMetric to match similar monitoring at a second site), and in so doing, provide a pre-construction characterization of ambient conditions at the site.

This report outlines the assessment conducted at the BESS, located at 2555 Marchurst, Kanata, Ontario.

2. Scope Of Work

This air monitoring assessment at the BESS facility carried out by BluMetric included the following scope of work:

- Set up and operate two air monitoring stations at selected locations across the site to capture representative baseline conditions.
- Deploy continuous data logging instruments at each station to measure the following parameters over a 24-hour period:
    - Carbon Dioxide (CO_2)
    - Nitrogen Dioxide (NO_2)
    - Hydrogen Sulfide (H_2S)
    - Hydrogen Cyanide (HCN)
    - Formaldehyde (CH_2O)
    - Particulate Matter ($PM_{2.5}$ and PM_{10})
    - Ozone (O_3)
- Deploy SUMMA canisters at each station to collect air samples for laboratory analysis of volatile organic compounds (VOCs) and Naphthalene as a polycyclic aromatic hydrocarbon (PAH).
- Deploy Radiello passive samplers at each station to obtain time-weighted average measurements of hydrofluoric acid (HF).

- Submit all collected samples to an accredited laboratory for analysis, following standard protocols for each parameter.
- Compile and interpret all monitoring data, including real time results, VOC characterization, and passive sampling findings.
- Prepare a concise report that summarizes the baseline air quality assessment, compares results against applicable Ontario and Canadian ambient air quality criteria, and provides professional conclusions based on the data collected.

3. Methodology

For the purpose of continuously monitoring the parameters identified above, two air monitoring stations were deployed on site. Each station was equipped with the instruments listed below and operated continuously over a 24-hour period:

- A RAE Systems MultiRAE Model 6228 for continuous monitoring of Carbon Monoxide (CO), Nitrogen Dioxide (NO_2), Hydrogen Sulfide (H_2S), Carbon Dioxide (CO_2), and Hydrogen Cyanide (HCN),
- An Aeroqual S500 monitor for ozone,
- An Aeroqual Ranger for formaldehyde (CH_2O), and
- A TSI DustTrak DRX 8533 for real-time particulate matter (measured as $PM_{2.5}$ and PM_{10}).

In addition to the real-time instrumentation, passive and whole-air sampling methods were used to broaden the scope of the monitoring program. Stainless-steel SUMMA canisters were deployed at each monitoring location to collect air samples for laboratory analysis of volatile organic compounds (VOCs) and Naphthalene as a polycyclic aromatic hydrocarbon (PAH), providing a time-weighted average concentration over the deployment period (24 hrs) in each location.

Radiello™ passive air samplers fitted with a chemiadsorbing cartridge (RAD166 for hydrogen fluoride (HF)) were also deployed at each air monitoring station. These passive samplers provided time-weighted average hydrofluoric acid concentrations in each location over the deployment period (24 hrs.). The combined sampling approach provided coverage of real-time criteria pollutants as well as targeted trace-level organic and inorganic compounds.

The two air monitoring stations were strategically positioned within the proposed BESS project site to capture representative baseline conditions across the facility (see Photo 1 below). Station 1 was established near the office trailers at coordinates 45.396315, -76.041294, while Station 2 was located on the opposite side of the site at coordinates 45.395122, -76.043817. This spatial distribution was intended to account for potential variability in air quality across the project area.

A Davis Vantage Pro2 Weather Station was also set up near Station 1 to continuously log meteorological data, including wind speed and direction, ambient temperature, and rainfall. However, due to equipment failure, the weather station did not record data during the sampling period.

Calibration records for all monitoring equipment, as well as the laboratory certificates of analysis pertaining to the analyses conducted are provided in Appendix A.

Photo 1: Air monitoring station locations

4. Ambient Air Quality Assessment – Real Time Instrumentation Results

The following table presents a summary of the 24-hour average concentrations for all air quality parameters measured by the real-time instrumentation deployed during the monitoring period. Data were logged continuously at 60-second intervals over a continuous period of 24-hours at both monitoring stations.

Averages of the logged data were calculated to provide representative baseline concentrations associated with ambient conditions at the site. Where the averaging period specified by Ontario's Ambient Air Quality Criteria for a given measurement parameter was less than 24-hours, the results shown in Table 1 indicate the highest average peak concentration over the required averaging period measured throughout the full 24-hour measuring period.

As shown in the table, measurement results were well below the applicable criteria.

Table 1: Summary of Average Concentrations for Air Monitoring Parameters over 24 hours

Sample ID Location (Room/ Lab #)	Carbon Monoxide (CO) (ppm)	Nitrogen Dioxide (NO_2) (ppm)	Carbon Dioxide (ppm)	Hydrogen Sulfide (H_2S) (ppm)	Hydrogen Cyanide (HCN) ($\mu g/m^3$)	Ozone (O_3) (ppm)	Formaldehyde (CH_2O) ($\mu g/m^3$)	Respirable Particulate $PM_{2.5}$ ($\mu g/m^3$)	Respirable Particulate PM_{10} ($\mu g/m^3$)
Air Monitoring Station 1	0.0	0.0	324	0.0	0.0	NA*	0.0	0.014	0.022
Air Monitoring Station 2	0.0	0.0	222	0.0	0.0	0.008	0.0	0.004	0.004
Ontario's Ambient Air Quality Criteria (AAQC)	**13**	**0.10**	**NA**	**NA**	**8**	**0.080**	**65**	**27**	**50**
Averaging Time for AAQC/ CAAQC criteria	**8-hours**	**24-hours**	**NA**	**NA**	**24-hours**	**1-hour**	**24-hours**	**24-hours**	**24-hours**

Notes:

*The ozone monitor deployed at Air Monitoring Station 1 experienced operational issues and did not log real-time ozone concentrations.

NA: Not available.

CAAQC: Canadian Ambient Air Quality Criteria (adopted under the Ontario AAQC)

5. SUMMA Canister Sampling

As part of the supplementary sampling program, a stainless-steel SUMMA canister was deployed concurrently at each of Air Monitoring Stations 1 and 2 over a 24-hour time-weighted average sampling period. The collected samples were submitted for laboratory analysis to characterize volatile organic compounds (VOCs) at each location. Results for the SUMMA canister samples are summarized in the table below.

The results provide a comparative baseline of VOC concentrations across the two monitoring stations that could be used as a baseline reference for future operational-phase assessments. For each organic compound that had an applicable Ontario Ambient Air Quality Criteria (AAQC), the results were below the AAQC comparison criteria, consistent with expectations for the rural location in which the measurements were collected and the prevailing site conditions.

Table 2: TVOC and Naphthalene (PAH) characterization

Collection Date	04-Aug-2026 to 05–Aug-2026		
Volatile Organic Compounds and Naphthalene (PAH)	Sample ID: S-01 (µg/m^3) - Air Monitoring Station 1	Sample ID: S-02 (µg/m^3) - Air Monitoring Station 2	Ontario's Ambient Air Quality Criteria (AAQC) - µg/m^3

6. Radiello Passive Sampling Results – Hydrofluoric Acid (HF)

The table below summarizes the passive sampling results for hydrofluoric acid (HF) collected over a 24-hour period at the two air monitoring stations. Radiello passive samplers fitted with chemiadsorbing cartridge were installed near Stations 1 and 2 and deployed for the full sampling interval to obtain time-weighted average HF concentrations.

Table 3: Hydrofluoric Acid Results (24-hour Average)

Collection Date	04-Aug-2026
Passive Sampling	Hydrofluoric acid (HF)
Sample ID: R-01 (µg/m^3) - Air Monitoring Station 1	<0.0045
Sample ID: R-02 (µg/m^3) - Air Monitoring Station 2	<0.0045
Ontario's Ambient Air Quality Criteria (AAQC) - µg/m^3	NA

Notes:
NA: Not available.

7. Weather Station Monitoring Data

Due to unforeseen technical malfunctions, the Davis Vantage Pro2 Weather Station did not record meteorological data during the monitoring period. Accordingly, weather parameters and Station 1 ozone concentrations are not available for the baseline assessment.

8. Conclusions

The baseline assessment data indicates that no relevant ambient air quality criterion limits were exceeded, where such limits exist. The baseline assessment data may be used for comparison against future air monitoring studies following completion of the Kanata BESS construction.

9. Closing Statement

The conclusions presented in this report represent our professional opinion and are based on the conditions observed on the dates set out in the report, the information available at time this report was prepared, the scope of work, and any limiting conditions noted herein.

The findings presented in this letter report represent the baseline air quality characterization carried out by BluMetric for Brookfield Renewable at the Kanata BESS site. This work was undertaken at the specific request of Brookfield Renewable to conduct sampling or monitoring for a specific list of pre-established parameters specified to BluMetric.

BluMetric provides no assurances regarding changes to conditions subsequent to the time of the assessment. BluMetric makes no warranty as to the accuracy or completeness of the information provided by others or of the conclusions and recommendations predicated on the accuracy of that information.

This report has been prepared for Brookfield Renewable. Any use a third party makes of this report, any reliance on the report, or decisions based upon the report, are the responsibility of those third parties unless authorization is received from BluMetric in writing.

Respectfully submitted,
BluMetric Environmental Inc.

TSI Incorporated does hereby certify that all materials, components, and workmanship used in the manufacture of this equipment are in strict accordance with the applicable specifications agreed upon by TSI and the customer and with all published specifications. All performance and acceptance tests required under this contract were successfully conducted according to required specifications. There is no NIST standard for optical mass measurements. Calibration of this instrument performed by TSI has been done using emery oil and has been nominally adjusted to respirable mass per standard ISO 12103-1, A1 test dust (Arizona dust). Our calibration ratio is greater than 1.2:1.

Calibration Certificate No. 82514

Calibration Date: 17 Feb 2026 15:23

Model: Ozone Low 0-0.5 ppm

Serial No: OZLC2509201-114

Environmental Conditions

Temperature 30.2 °C

Relative Humidity 43.9 %

Measurements

Calibration Standard /ppm	0.001	0.098	0.448	0.000
AQL Sensor(Mean) /ppm	0.000	0.092	0.479	0.000
AQL Sensor(Std. Dev) /ppm	0.000	0.001	0.001	0.000

*The Mean and Standard Deviation are calculated from three consecutive readings.

Calibration Standard

The Aeroqual ozone sensors are calibrated in a controlled environment against a NATA certified ozone UV photometer whose traceability is maintained with international standards organisations. *NATA is Australia's national body for accreditation of producers of certified reference materials.

QC Approval: Takao Yamasaki

No. of samples received	:	3			
No. of samples analysed	:	3			

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Surrogate Control Limits

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QC Interpretive report to assist with Quality Review and Sample Receipt Notification (SRN).

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is conducted in accordance with US FDA 21 CFR Part 11.

Signatories	*Position*	*Laboratory Department*
David Tremblett	VOC Section Supervisor	Air Quality, Waterloo, Ontario

General Comments

The analytical methods used by ALS are developed using internationally recognized reference methods (where available), such as those published by US EPA, APHA Standard Methods, ASTM, ISO, Environment Canada, BC MOE, and Ontario MOE. Refer to the ALS Quality Control Interpretive report (QCI) for applicable references and methodology summaries. Reference methods may incorporate modifications to improve performance.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Please refer to Quality Control Interpretive report (QCI) for information regarding Holding Time compliance.

Key: CAS Number: Chemical Abstracts Services number is a unique identifier assigned to discrete substances.
LOR: Limit of Reporting (detection limit).

Unit	*Description*
-	no units
Inches Hg	inches of mercury
ppbv	parts per billion (volume/volume)
µg/m³	micrograms per cubic metre

<: less than.
>: greater than.
Surrogate: An analyte that is similar in behavior to target analyte(s), but that does not occur naturally in environmental samples. For applicable tests, surrogates are added to samples prior to analysis as a check on recovery.

Test results reported relate only to the samples as received by the laboratory.
UNLESS OTHERWISE STATED on SRN or QCI Report, ALL SAMPLES WERE RECEIVED IN ACCEPTABLE CONDITION.

ALS Canada Ltd.

Quality Control Interpretive Report

Work Order	:	**WT2623081**			
Client	:	BluMetric Environmental Inc.	Laboratory	:	ALS Environmental - Waterloo
Contact	:	Véronique Maynard	Account Manager	:	Emily Smith
Address	:	1682 Woodward Dr. Ottawa ON Canada K2C 3R8	Address	:	60 Northland Road, Unit 1 Waterloo Ontario Canada N2V 2B8
Telephone	:	----	Telephone	:	+1 519 886 6910
Project	:	260415	Date Samples Received	:	05-Aug-2026 13:30
PO	:	----	Issue Date	:	10-Aug-2026 18:06
C-O-C number	:	----			
Sampler	:	Curtis Flude			
Site	:	----			
Quote number	:	Ambient Air Quality Monitoring Project			
No. of samples received	:	3			
No. of samples analysed	:	3			

This report is automatically generated by the ALS LIMS (Laboratory Information Management System) through evaluation of Quality Control (QC) results and other QA parameters associated with this submission, and is intended to facilitate rapid data validation by auditors or reviewers. The report highlights any exceptions and outliers to ALS Data Quality Objectives, provides holding time details and exceptions, summarizes QC sample frequencies, and lists applicable methodology references and summaries.

Key

Anonymous: Refers to samples which are not part of this work order, but which formed part of the QC process lot.
CAS Number: Chemical Abstracts Services number is a unique identifier assigned to discrete substances.
DQO: Data Quality Objective.
LOR: Limit of Reporting (detection limit).
RPD: Relative Percent Difference.

Workorder Comments

Holding times are displayed as "---" if no guidance exists from CCME, Canadian provinces, or broadly recognized international references.

Summary of Outliers

Outliers : Quality Control Samples

- No Method Blank value outliers occur.
- No Duplicate outliers occur.
- Laboratory Control Sample (LCS) outliers occur - please see following pages for full details.
- No Laboratory Control Sample Duplicate (LCSD) outliers occur
- No Matrix Spike outliers occur.
- No Matrix Spike Duplicate (MSD) outliers occur.
- No Test sample Surrogate recovery outliers exist.

Outliers: Reference Material (RM) Samples

- No Reference Material (RM) Sample outliers occur.

Outliers : Analysis Holding Time Compliance (Breaches)

- No Analysis Holding Time Outliers exist.

Outliers : Frequency of Quality Control Samples

- No Quality Control Sample Frequency Outliers occur.

Outliers : Quality Control Samples

Duplicates, Method Blanks, Laboratory Control Samples and Matrix Spikes

Matrix :**Air**

Analyte Group	Laboratory sample ID	Client/Ref Sample ID	Analyte	CAS Number	Method	Result		Limits	Comment
Laboratory Control Sample (LCS) Recoveries									
Volatile Organic Compounds	QC-2752151--002	----	Dichlorobenzene, 1,2-	95-50-1	E621B	64.9 %	LCS-ND	70.0-130%	Recovery less than lower control limit
Volatile Organic Compounds	QC-2752151--002	----	Dichlorobenzene, 1,3-	541-73-1	E621B	69.1 %	LCS-ND	70.0-130%	Recovery less than lower control limit
Volatile Organic Compounds	QC-2752151--002	----	Trimethylbenzene , 1,2,4-	95-63-6	E621B	63.7 %	LCS-ND	70.0-130%	Recovery less than lower control limit

Result Qualifiers

Qualifier	Description
LCS-ND	*Lab Control Sample recovery was slightly outside ALS DQO. Reported non-detect results for associated samples were unaffected.*

Analysis Holding Time Compliance

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times, which are selected to meet known provincial and/or federal requirements. In the absence of regulatory hold times, ALS establishes recommendations based on guidelines published by organizations such as CCME, US EPA, APHA Standard Methods, ASTM, or Environment Canada (where available). Dates and holding times reported below represent the first dates of extraction or analysis. If subsequent tests or dilutions exceeded holding times, qualifiers are added (refer to COA).

If samples are identified below as having been analyzed or extracted outside of recommended holding times, measurement uncertainties may be increased, and this should be taken into consideration when interpreting results.

Where actual sampling date is not provided on the chain of custody, the date of receipt with time at 00:00 is used for calculation purposes.

Where only the sample date without time is provided on the chain of custody, the sampling date at 00:00 is used for calculation purposes.

Matrix: Air

Rec. HT: ALS recommended hold time (see units).

Quality Control Parameter Frequency Compliance

The following report summarizes the frequency of laboratory QC samples analyzed within the analytical batches (QC lots) in which the submitted samples were processed. The actual frequency should be greater than or equal to the expected frequency.

Matrix: Air

Evaluation: × = QC frequency outside specification; ✓ = QC frequency within specification

Quality Control Sample Type			Count		Frequency (%)		
Analytical Methods	Method / Lab	QC Lot #	QC	Regular	Actual	Expected	Evaluation
Laboratory Duplicates (DUP)							
VOCs (TO-15 List) in Air by Canister or Bag by GC-MS (ppbV)	E621B / WT	2752151	1	3	33.3	5.0	✓
VOCs (TO-15 SIM List) in Air by Canister or Bag by GC-MS (ppbV)	E621B-L / WT	2752153	1	3	33.3	5.0	✓

Methodology References and Summaries

The analytical methods used by ALS are developed using internationally recognized reference methods (where available), such as those published by US EPA, APHA Standard Methods, ASTM, ISO, Environment Canada, BC MOE, and Ontario MOE. Reference methods may incorporate modifications to improve performance (indicated by "mod").

Analytical Methods	Method / Lab	Matrix	Method Reference	Method Descriptions
Air Canister Information	EF001 ALS Environmental - Waterloo	Air	In-house	Air canister information provided by client and recorded on ALS report may affect the validity of results.

Re: **BluMetric; 260415** Work Order: **26080004**

Dear Emily,

ALS Environmental received 3 samples on 07-Aug-2026 09:57 AM for the analyses presented in the following report.

The analytical data provided relates directly to the samples received by ALS Environmental and for only the analyses requested.

QC sample results for this data met laboratory specifications. Any exceptions are noted in the Case Narrative, or noted with qualifiers in the report or QC batch information. Should this laboratory report need to be reproduced, it should be reproduced in full unless written approval has been obtained from ALS Laboratory Group. Samples will be disposed in 30 days unless storage arrangements are made.

The total number of pages in this report is 8.

If you have any questions regarding this report, please feel free to contact me.

Sincerely,

Meghan Meyers

Electronically approved by: Rob Nieman

Work Order:	26080004

Case Narrative

The sample condition upon receipt was acceptable except where noted.

Results relate only to the items tested and are not blank corrected unless indicated.

Compound identification is based upon retention time matching only. Any compound with a similar retention time will interfere.

Samples were prepared and analyzed by the analytical method and the laboratory's applicable standard operating procedure listed below:
- IH-004- "Determination of Analytes by NIOSH and OSHA Methods Using Liquid Chromatography."

All sampling information was provided by the client.
