Reference Information

Qualifiers for Sample Submission Listed:

Qualifier	Description
CINT	Cooling initiated. Samples were received packed with ice or ice packs and were sampled the same day as received.

Sample Parameter Qualifier key listed:

Qualifier	Description
DLDS	Detection Limit Raised: Dilution required due to high Dissolved Solids / Electrical Conductivity.
DLM	Detection Limit Adjusted due to sample matrix effects (e.g. chemical interference, colour, turbidity).
DLHC	Detection Limit Raised: Dilution required due to high concentration of test analyte(s).

Methods Listed (if applicable):

ALS Test Code	Matrix	Test Description	Method Reference***
ALK-WT	Water	Alkalinity, Total (as CaCO3)	EPA 310.2

This analysis is carried out using procedures adapted from EPA Method 310.2 "Alkalinity". Total Alkalinity is determined using the methyl orange colourimetric method.

CL-IC-N-WT	Water	Chloride by IC	EPA 300.1 (mod)

Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.

Analysis conducted in accordance with the Protocol for Analytical Methods Used in the Assessment of Properties under Part XV.1 of the Environmental Protection Act (July 1, 2011).

DOC-WT	Water	Dissolved Organic Carbon	APHA 5310B

Sample is filtered through a 0.45um filter, then injected into a heated reaction chamber which is packed with an oxidative catalyst. The water is vaporized and the organic carbon is oxidized to carbon dioxide. The carbon dioxide is transported in a carrier gas and is measured by a non-dispersive infrared detector.

EC-WT	Water	Conductivity	APHA 2510 B

Water samples can be measured directly by immersing the conductivity cell into the sample.

F-IC-N-WT	Water	Fluoride in Water by IC	EPA 300.1 (mod)

Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.

HARDNESS-CALC-WT	Water	Hardness	APHA 2340 B

Hardness (also known as Total Hardness) is calculated from the sum of Calcium and Magnesium concentrations, expressed in CaCO3 equivalents. Dissolved Calcium and Magnesium concentrations are preferentially used for the hardness calculation.

MET-D-CCMS-WT	Water	Dissolved Metals in Water by CRC ICPMS	APHA 3030B/6020A (mod)

Water samples are filtered (0.45 um), preserved with nitric acid, and analyzed by CRC ICPMS.

Method Limitation (re: Sulfur): Sulfide and volatile sulfur species may not be recovered by this method.

Analysis conducted in accordance with the Protocol for Analytical Methods Used in the Assessment of Properties under Part XV.1 of the Environmental Protection Act (July 1, 2011).

NH3-F-WT	Water	Ammonia in Water by Fluorescence	J. ENVIRON. MONIT., 2005, 7, 37-42, RSC

This analysis is carried out, on sulfuric acid preserved samples, using procedures modified from J. Environ. Monit., 2005, 7, 37 - 42, The Royal Society of Chemistry, "Flow-injection analysis with fluorescence detection for the determination of trace levels of ammonium in seawater", Roslyn J. Waston et al.

NO2-IC-WT	Water	Nitrite in Water by IC	EPA 300.1 (mod)

Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.

NO3-IC-WT	Water	Nitrate in Water by IC	EPA 300.1 (mod)

Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.

P-T-COL-WT	Water	Total P in Water by Colour	APHA 4500-P PHOSPHORUS

This analysis is carried out using procedures adapted from APHA Method 4500-P "Phosphorus". Total Phosphorus is deteremined colourimetrically after persulphate digestion of the sample.

PH-WT	Water	pH	APHA 4500 H-Electrode

Water samples are analyzed directly by a calibrated pH meter.

Analysis conducted in accordance with the Protocol for Analytical Methods Used in the Assessment of Properties under Part XV.1 of the Environmental Protection Act (July 1, 2011). Holdtime for samples under this regulation is 28 days

Reference Information

PHENOLS-4AAP-WT	Water	Phenol (4AAP)	EPA 9066

An automated method is used to distill the sample. The distillate is then buffered to pH 9.4 which reacts with 4AAP and potassium ferricyanide to form a red complex which is measured colorimetrically.

SO4-IC-N-WT	Water	Sulfate in Water by IC	EPA 300.1 (mod)

Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.

SOLIDS-TDS-WT	Water	Total Dissolved Solids	APHA 2540C

This analysis is carried out using procedures adapted from APHA Method 2540 "Solids". Solids are determined gravimetrically. Total Dissolved Solids (TDS) are determined by filtering a sample through a glass fibre filter, TDS is determined by evaporating the filtrate to dryness at 180 degrees celsius.

TKN-WT	Water	Total Kjeldahl Nitrogen	APHA 4500-Norg D

This analysis is carried out using procedures adapted from APHA Method 4500-Norg "Nitrogen (Organic)". Total Kjeldahl Nitrogen is determined by sample digestion at 380 Celsius with analysis using an automated colorimetric method.

TOC-WT	Water	Total Organic Carbon	APHA 5310B

Sample is injected into a heated reaction chamber which is packed with an oxidative catalyst. The water is vaporized and the organic cabon is oxidized to carbon dioxide. The carbon dioxide is transported in a carrier gas and is measured by a non-dispersive infrared detector.

*** ALS test methods may incorporate modifications from specified reference methods to improve performance.

Chain of Custody numbers:

The last two letters of the above test code(s) indicate the laboratory that performed analytical analysis for that test. Refer to the list below:

Laboratory Definition Code	Laboratory Location	Laboratory Definition Code	Laboratory Location
WT	ALS ENVIRONMENTAL - WATERLOO, ONTARIO, CANADA		

GLOSSARY OF REPORT TERMS

Surrogates are compounds that are similar in behaviour to target analyte(s), but that do not normally occur in environmental samples. For applicable tests, surrogates are added to samples prior to analysis as a check on recovery. In reports that display the D.L. column, laboratory objectives for surrogates are listed there.
mg/kg - milligrams per kilogram based on dry weight of sample
mg/kg wwt - milligrams per kilogram based on wet weight of sample
mg/kg lwt - milligrams per kilogram based on lipid-adjusted weight
mg/L - unit of concentration based on volume, parts per million.
< - Less than.
D.L. - The reporting limit.
N/A - Result not available. Refer to qualifier code and definition for explanation.

Test results reported relate only to the samples as received by the laboratory.
UNLESS OTHERWISE STATED, ALL SAMPLES WERE RECEIVED IN ACCEPTABLE CONDITION.
Analytical results in unsigned test reports with the DRAFT watermark are subject to change, pending final QC review.

Application of guidelines is provided "as is" without warranty of any kind, either expressed or implied, including, but not limited to, fitness for a particular purpose, or non-infringement. ALS assumes no responsibility for errors or omissions in the information. Guideline limits are not adjusted for the hardness, pH or temperature of the sample (the most conservative values are used). Measurement uncertainty is not applied to test results prior to comparison with specified criteria values.

Legend:

Limit	ALS Control Limit (Data Quality Objectives)
DUP	Duplicate
RPD	Relative Percent Difference
N/A	Not Available
LCS	Laboratory Control Sample
SRM	Standard Reference Material
MS	Matrix Spike
MSD	Matrix Spike Duplicate
ADE	Average Desorption Efficiency
MB	Method Blank
IRM	Internal Reference Material
CRM	Certified Reference Material
CCV	Continuing Calibration Verification
CVS	Calibration Verification Standard
LCSD	Laboratory Control Sample Duplicate

Sample Parameter Qualifier Definitions:

Qualifier	Description
J	Duplicate results and limits are expressed in terms of absolute difference.
MS-B	Matrix Spike recovery could not be accurately calculated due to high analyte background in sample.
RPD-NA	Relative Percent Difference Not Available due to result(s) being less than detection limit.

Hold Time Exceedances:

All test results reported with this submission were conducted within ALS recommended hold times.

ALS recommended hold times may vary by province. They are assigned to meet known provincial and/or federal government requirements. In the absence of regulatory hold times, ALS establishes recommendations based on guidelines published by the US EPA, APHA Standard Methods, or Environment Canada (where available). For more information, please contact ALS.

The ALS Quality Control Report is provided to ALS clients upon request. ALS includes comprehensive QC checks with every analysis to ensure our high standards of quality are met. Each QC result has a known or expected target value, which is compared against pre-determined data quality objectives to provide confidence in the accuracy of associated test results.

Please note that this report may contain QC results from anonymous Sample Duplicates and Matrix Spikes that do not originate from this Work Order.

Reference Information

QC Samples with Qualifiers & Comments:

QC Type Description	Parameter	Qualifier	Applies to Sample Number(s)
Matrix Spike	Aluminum (Al)-Total	MS-B	L2320919-1, -2, -3
Matrix Spike	Barium (Ba)-Total	MS-B	L2320919-1, -2, -3
Matrix Spike	Calcium (Ca)-Total	MS-B	L2320919-1, -2, -3
Matrix Spike	Iron (Fe)-Total	MS-B	L2320919-1, -2, -3
Matrix Spike	Magnesium (Mg)-Total	MS-B	L2320919-1, -2, -3
Matrix Spike	Manganese (Mn)-Total	MS-B	L2320919-1, -2, -3
Matrix Spike	Potassium (K)-Total	MS-B	L2320919-1, -2, -3
Matrix Spike	Sodium (Na)-Total	MS-B	L2320919-1, -2, -3

Sample Parameter Qualifier key listed:

Qualifier	Description
DLDS	Detection Limit Raised: Dilution required due to high Dissolved Solids / Electrical Conductivity.
DLHC	Detection Limit Raised: Dilution required due to high concentration of test analyte(s).
DLM	Detection Limit Adjusted due to sample matrix effects (e.g. chemical interference, colour, turbidity).
HTC	Hardness was calculated from Total Ca and/or Mg concentrations and may be biased high (dissolved Ca/Mg results unavailable).
MS-B	Matrix Spike recovery could not be accurately calculated due to high analyte background in sample.

Test Method References:

ALS Test Code	Matrix	Test Description	Method Reference**
ALK-WT	Water	Alkalinity, Total (as CaCO3)	EPA 310.2

This analysis is carried out using procedures adapted from EPA Method 310.2 "Alkalinity". Total Alkalinity is determined using the methyl orange colourimetric method.

CL-IC-N-WT	Water	Chloride by IC	EPA 300.1 (mod)

Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.

Analysis conducted in accordance with the Protocol for Analytical Methods Used in the Assessment of Properties under Part XV.1 of the Environmental Protection Act (July 1, 2011).

DOC-WT	Water	Dissolved Organic Carbon	APHA 5310B

Sample is filtered through a 0.45um filter, then injected into a heated reaction chamber which is packed with an oxidative catalyst. The water is vaporized and the organic carbon is oxidized to carbon dioxide. The carbon dioxide is transported in a carrier gas and is measured by a non-dispersive infrared detector.

EC-SCREEN-WT	Water	Conductivity Screen (Internal Use Only)	APHA 2510

Qualitative analysis of conductivity where required during preparation of other tests - e.g. TDS, metals, etc.

EC-WT	Water	Conductivity	APHA 2510 B

Water samples can be measured directly by immersing the conductivity cell into the sample.

F-IC-N-WT	Water	Fluoride in Water by IC	EPA 300.1 (mod)

Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.

HARDNESS-CALC-WT	Water	Hardness	APHA 2340 B

Hardness (also known as Total Hardness) is calculated from the sum of Calcium and Magnesium concentrations, expressed in CaCO3 equivalents. Dissolved Calcium and Magnesium concentrations are preferentially used for the hardness calculation.

MET-T-CCMS-WT	Water	Total Metals in Water by CRC ICPMS	EPA 200.2/6020A (mod)

Water samples are digested with nitric and hydrochloric acids, and analyzed by CRC ICPMS.

Method Limitation (re: Sulfur): Sulfide and volatile sulfur species may not be recovered by this method.

Analysis conducted in accordance with the Protocol for Analytical Methods Used in the Assessment of Properties under Part XV.1 of the Environmental Protection Act (July 1, 2011).

NH3-F-WT	Water	Ammonia in Water by Fluorescence	J. ENVIRON. MONIT., 2005, 7, 37-42, RSC

This analysis is carried out, on sulfuric acid preserved samples, using procedures modified from J. Environ. Monit., 2005, 7, 37 - 42, The Royal Society of Chemistry, "Flow-injection analysis with fluorescence detection for the determination of trace levels of ammonium in seawater", Roslyn J. Waston et al.

NO2-IC-WT	Water	Nitrite in Water by IC	EPA 300.1 (mod)

Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.

NO3-IC-WT	Water	Nitrate in Water by IC	EPA 300.1 (mod)

Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.

Reference Information

P-T-COL-WT	Water	Total P in Water by Colour	APHA 4500-P PHOSPHORUS

This analysis is carried out using procedures adapted from APHA Method 4500-P "Phosphorus". Total Phosphorus is deteremined colourimetrically after persulphate digestion of the sample.

PH-WT	Water	pH	APHA 4500 H-Electrode

Water samples are analyzed directly by a calibrated pH meter.

Analysis conducted in accordance with the Protocol for Analytical Methods Used in the Assessment of Properties under Part XV.1 of the Environmental Protection Act (July 1, 2011). Holdtime for samples under this regulation is 28 days

PHENOLS-4AAP-WT	Water	Phenol (4AAP)	EPA 9066

An automated method is used to distill the sample. The distillate is then buffered to pH 9.4 which reacts with 4AAP and potassium ferricyanide to form a red complex which is measured colorimetrically.

SO4-IC-N-WT	Water	Sulfate in Water by IC	EPA 300.1 (mod)

Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.

SOLIDS-TDS-WT	Water	Total Dissolved Solids	APHA 2540C

This analysis is carried out using procedures adapted from APHA Method 2540 "Solids". Solids are determined gravimetrically. Total Dissolved Solids (TDS) are determined by filtering a sample through a glass fibre filter, TDS is determined by evaporating the filtrate to dryness at 180 degrees celsius.

TKN-WT	Water	Total Kjeldahl Nitrogen	APHA 4500-Norg D

This analysis is carried out using procedures adapted from APHA Method 4500-Norg "Nitrogen (Organic)". Total Kjeldahl Nitrogen is determined by sample digestion at 380 Celsius with analysis using an automated colorimetric method.

TOC-WT	Water	Total Organic Carbon	APHA 5310B

Sample is injected into a heated reaction chamber which is packed with an oxidative catalyst. The water is vaporized and the organic cabon is oxidized to carbon dioxide. The carbon dioxide is transported in a carrier gas and is measured by a non-dispersive infrared detector.

** ALS test methods may incorporate modifications from specified reference methods to improve performance.

The last two letters of the above test code(s) indicate the laboratory that performed analytical analysis for that test. Refer to the list below:

Laboratory Definition Code	Laboratory Location
WT	ALS ENVIRONMENTAL - WATERLOO, ONTARIO, CANADA

Chain of Custody Numbers:

GLOSSARY OF REPORT TERMS

Surrogates are compounds that are similar in behaviour to target analyte(s), but that do not normally occur in environmental samples. For applicable tests, surrogates are added to samples prior to analysis as a check on recovery. In reports that display the D.L. column, laboratory objectives for surrogates are listed there.
mg/kg - milligrams per kilogram based on dry weight of sample
mg/kg wwt - milligrams per kilogram based on wet weight of sample
mg/kg lwt - milligrams per kilogram based on lipid weight of sample
mg/L - unit of concentration based on volume, parts per million.
< - Less than.
D.L. - The reporting limit.
N/A - Result not available. Refer to qualifier code and definition for explanation.

Test results reported relate only to the samples as received by the laboratory.
UNLESS OTHERWISE STATED, ALL SAMPLES WERE RECEIVED IN ACCEPTABLE CONDITION.
Analytical results in unsigned test reports with the DRAFT watermark are subject to change, pending final QC review.

Legend:

Limit	ALS Control Limit (Data Quality Objectives)
DUP	Duplicate
RPD	Relative Percent Difference
N/A	Not Available
LCS	Laboratory Control Sample
SRM	Standard Reference Material
MS	Matrix Spike
MSD	Matrix Spike Duplicate
ADE	Average Desorption Efficiency
MB	Method Blank
IRM	Internal Reference Material
CRM	Certified Reference Material
CCV	Continuing Calibration Verification
CVS	Calibration Verification Standard
LCSD	Laboratory Control Sample Duplicate

Sample Parameter Qualifier Definitions:

Qualifier	Description
J	Duplicate results and limits are expressed in terms of absolute difference.
MS-B	Matrix Spike recovery could not be accurately calculated due to high analyte background in sample.
RPD-NA	Relative Percent Difference Not Available due to result(s) being less than detection limit.

Hold Time Exceedances:

All test results reported with this submission were conducted within ALS recommended hold times.

ALS recommended hold times may vary by province. They are assigned to meet known provincial and/or federal government requirements. In the absence of regulatory hold times, ALS establishes recommendations based on guidelines published by the US EPA, APHA Standard Methods, or Environment Canada (where available). For more information, please contact ALS.

The ALS Quality Control Report is provided to ALS clients upon request. ALS includes comprehensive QC checks with every analysis to ensure our high standards of quality are met. Each QC result has a known or expected target value, which is compared against pre-determined data quality objectives to provide confidence in the accuracy of associated test results.

Please note that this report may contain QC results from anonymous Sample Duplicates and Matrix Spikes that do not originate from this Work Order.

Select Service Level Below - Contact your AM to confirm all E&P TATs (surcharges may apply)

Regular [R] ☑ Standard TAT if received by 3 pm - business days - no surcharges apply

PRIORITY (Business Days)		EMERGENCY	
	4 day [P4-20%] ☐		1 Business day [E - 100%] ☐
	3 day [P3-25%] ☐		Same Day, Weekend or Statutory holiday [E2 -200%] ☐
	2 day [P2-50%] ☐		(Laboratory opening fees may apply)]

Date and Time Required for all E&P TATs: dd-mmm-yy hh:mm

For tests that can not be performed according to the service level selected, you will be contacted.

Analysis Request

Indicate Filtered (F), Preserved (P) or Filtered and Preserved (F/P) below

ALS Sample # (lab use only)	Sample Identification and/or Coordinates (This description will appear on the report)	Date (dd-mmm-yy)	Time (hh:mm)	Sample Type	NUMBER OF CONTAINERS	Anions5 (Cl, F, SO4, NO2, NO3)	Alkalinity, pH	Conductivity	Total ~~Dissolved~~ Metals (Field Filter) -Select	TKN, NH3, TP, TOC, Phenols	DOC (~~Field Filter~~ Lab Filt	TDS	Hardness-Calc	Field pH	Field Temp °C					SAMPLES ON HOLD	SUSPECTED HAZARD (see Special Instructions)

RE: 2012 Groundwater/Surface Water Monitoring and Compliance Report
Orgaworld Organics Facility – SWM Pond
5123 Hawthorne Road, Lot 27, Concession 6, Geographic Township of Gloucester, City of Ottawa, Ontario
s.53, OWRA, Industrial Sewage Works Certificate of Approval (ECA)
7251-8GGKRPD

I have reviewed the noted report dated March 2013, prepared by Conestoga – Rovers & Associates (CRA) for Orgaworld Canada Limited (OCL). Additionally, I have also reviewed the previous report, "Groundwater/Surface Water Monitoring and Compliance Report", dated March 2012, which was identified to be CRA's first Annual Report prepared for OCL. The following comments are offered relative to surface water impact concerns.

Background Information

OCL, the Owner, operates a Source Separated Organics (SSO) Processing Facility (the Site) which is located at 5123 Hawthorne Road, Ottawa, Ontario. The Site is located within an industrial development area identified as the Hawthorne Industrial Park. The Site consists of an area of approximately 10 ha within the approximate 80 ha industrial park property.

The Facility is an aerobic composting operation, that is approved to receive and process organics including SSO, brush material, food wastes (solid or sludge), commercial waste (restaurant wastes, etc.) and other sludges. Following separation materials that are acceptable for the production of unrestricted use product (UUP) the materials are transported via conveyor belt to an enclosed compost curing building.

It is the reviewer's understanding that the OCL SWM Pond (s.53, OWRA, Industrial Sewage Works Certificate of Approval (ECA) 7251-8GGKRPD) became operational in 2009 and the surface water sampling program was subsequently initiated during 2010.

It is the reviewer's understanding that the collected stormwater in the on-Site SWM Pond is used for recirculation to the OCL composting operation and that the discharge of the SWM Pond water to the surface water regime would be anticipated to be minimal, if any, during normal operations of the OCL Facility.

Surface Water Regime

The OCL Site is situated within the South Nation River Basin. A series of ditches within the Site drains surface stormwater runoff to an on-Site SWM Pond. The SWM Pond effluent discharge, which is controlled by a valve, flows to a ditch that runs along the Industrial Park road (Somme Street) towards the east. The Site SWM pond discharge is conveyed by a regulated rate via local roadside ditches to the subdivision SWM facility, and which discharges to Findlay Creek (a tributary to Shields Creek), to the North Castor River, to the South Nation River.

Another ditch runs along Hawthorne Road, flowing towards and eventually along Rideau Road, connecting to Findlay Creek. The ditch does not connect to the OCL Site at Hawthorne Road or to Somme Street.

The South Nation River Basin (i.e., the river and all tributaries) is designated by the MOE as a Policy 2 surface water for Total Phosphorus. It is also the reviewer's understanding that the thermal regime of Findlay Creek has been identified by Ontario Ministry of Natural Resources (MNR) to be a cool to cold water habitat.

SWM Pond Effluent Monitoring

Surface stormwater runoff from the Site drains to an on-Site stormwater management pond (SWM pond). The contents of the SWM pond is retained for analysis and testing, and is released upon the receipt of suitable test results, in accordance with the s.53, OWRA, Industrial Sewage Works Certificate of Approval (ECA) 7251-8GGKRPD. The SWM Pond discharge outlet sluice gate valve is kept in the closed position during normal operation periods. Prior to any discharge from the SWM Pond to the natural environment, the Owner, is to collect grab samples from a designated sampling location at the SWM Pond and analyze the sample for a variety of water quality parameters (chemistry, E-coli, Oil & Grease, inorganics (metals), and field parameters (conductivity, dissolved oxygen, pH and temperature).

- Per ECA Condition 5. (1), the Owner is required to carry out an effluent monitoring program. The SWM Pond is to have grab samples collected on a monthly frequency and the samples are to be analyzed for the parameters listed in the ECA Table 1 – Effluent Monitoring SWM Pond.

As previously noted, the SWM Pond discharge outlet sluice gate valve is kept in the closed position during normal operation periods. Prior to any discharge from the SWM Pond to the natural environment, the Owner is to collect grab samples from a designated sampling location at the SWM Pond and analyze for the parameters listed in ECA Table 2 - Trigger Parameters. The Owner is to compare monitoring results for each and all grab samples with the corresponding trigger level concentration of each parameter listed in ECA Table 2 to identify any leachate contamination of stormwater before allowing any discharge from the SWM Pond.

- Per ECA Condition 6. (9), "Discharge of leachate contaminated sewage from the Works to receiving surface water is prohibited, except where it is necessary to avoid loss of life, personal injury, danger to public health or severe property damage".

Surface Water Monitoring Program

During 2012 surface water samples were collected at four locations (SW1-09 to SW4-09) on two occasions in May (spring) and November (fall). The collected surface water samples were analyzed for a comprehensive suite of general chemistry, metals, petroleum hydrocarbons (F1-F4), and the semi-volatiles PAH (anthracene, benzo(a)pyrene) parameters. Field parameters measured included conductivity, dissolved oxygen, pH, turbidity and water temperature.

Baseline Values – Surface Water Quality

As a condition to operations at the Site and as a part of the Monitoring Program, baseline conditions were developed by OCL as a basis against which to compare future groundwater and surface water quality.

In March 2012, baseline values for the groundwater/surface water monitoring program were developed by CRA using statistical methods [Ref. CRA's March 28, 2012 memorandum entitled "Development of Baseline Values for Groundwater/Surface Water Monitoring ", referenced in Appendix 'E' of CRA's first Annual Report (March 2012)].

The 75th percentile concentration of parameters of concern will be determined for defining the baseline values i.e. defining the upstream background surface water quality. As a first step for surface water quality impact assessment, the downstream parameter concentrations exceeding the upstream baseline values will be compared.

- CRA noted the baseline values for groundwater and surface water may be subject to further assessment both in magnitude of the baseline values and also in methodology / grouping, as additional groundwater and surface water data becomes available and is evaluated against existing interim / final baseline values. No changes to the baseline values were made in the 2012 monitoring / reporting year.

2012 Surface Water Sampling Results

SWM Pond (SW-4/SW4-09):

Sample station SW-4 monitors the water quality of the OCL on-Site SWM Pond. Samples were collected on May 14/12, May 23/12 (limited analysis) and November 12/12 and the water quality was characterized having CBOD5(8.3 – 14.0 mg/L), COD (72 – 86 mg/L), DOC (1.3 – 21.8 mg/L), Total Ammonia Nitrogen (0.05 – 0.171 mg/L), Un-ionized Ammonia (0.032 – 0.034 mg/L), TKN (1.66 - 2.01 mg/L), NO_3 (0.10 mg/L), NO_2 (0.10 mg/L), Phenols (1 µg/L), Total Phosphorus (0.164 – 0.319 mg/L), TSS (17.2 – 50 mg/L), field pH (7.14 – 9.09), field Conductivity (865 – 1020 µS/cm), Chloride (47.5 – 81 mg/L). The E-coli concentration ranged 60 – 156 cfu/100 mL.

- PWQO exceedance occurred for Un-ionized ammonia (0.032 – 0.034 mg/L, exceeded 0.02 mg/L), Iron (0.745 –0.830 mg/L, exceeded 0.30 mg/L) and Total Phosphorus (0.164 – 0.319 mg/L, exceeded 0.03 mg/L). It was noted that 'single' E-coli concentrations 142 – 156 cfu/100 mL exceeded the PWQO of 100 cfu/100 mL (However, it is also to be noted that the PWQO is based on a geometric mean of a minimum of five (5) samples.)

- ECA Table 2 Trigger Parameters concentrations were observed to be exceeded for TSS (17.2 – 50 mg/L, exceeded 15 mg/L), field pH (9.09, exceeded 8.5; Nov. 12/12), and E-coli (142 - 156/100 mL, exceeded 100 cfu/100 mL on May 23/12).

Findlay Creek - Downstream of OCL Site (SW-3/SW3-09):

Sample station SW-3 monitors the water quality of Findlay Creek downstream of the drainage ditch conveying the OCL SWM pond discharge. Sample station SW-3 is located approximately 1300 m (1.3 km) downstream of the OCL SWM pond outlet.

Samples were collected on May 14/12, May 23/12 (limited analysis) and November 13/12 and the water quality was characterized having CBOD5 (2 mg/L), COD (21 – 51 mg/L), DOC (7.8 – 13 mg/L), Total Ammonia Nitrogen (0.05 – 0.122 mg/L), Un-ionized Ammonia (0.00058 mg/L, Nov. 13/12), TKN (0.57–0.61 mg/L), NO_3 (0.14 – 0.49 mg/L), NO_2 (0.10 mg/L), Phenols (1 µg/L), Total Phosphorus (0.0408 – 0.0455 mg/L), TSS (19.2 – 20.8 mg/L), field pH (6.87 – 7.64), field Conductivity (999 – 7620µS/cm), Chloride (94 – 120 mg/L). The E-coli concentration ranged 11 – 77 cfu/100 mL.

- PWQO exceedance occurred for Cadmium (0.00039 mg/L, exceeded 0.0002 mg/L; May 14/12), Iron (0.471 – 0.512 mg/L, exceeded 0.30 mg/L), Molybdenum (0.117 mg/L, exceeded 0.040 mg/L; May 14/12), and Total Phosphorus (0.0408 – 0.0455 mg/L, exceeded 0.03 mg/L). There is no PWQO for chlorides, however the CCME Canadian Water Quality Guideline (CWQG) is 120 mg/L and this concentration was equalled for the Nov. 13/12 sample.

Findlay Creek - Upstream of the OCL Site (SW-2/SW2-09):

Sample station SW-2 monitors the water quality of Findlay Creek upstream of the drainage ditch conveying the OCL SWM pond discharge. Sample station SW-3 is located approximately 400 m upstream of sample station SW-3.

Samples were collected on May 14/12, May 23/12 (limited analysis) and November 13/12 and the water quality was characterized having CBOD5 (2 mg/L), COD (40 – 42 mg/L), DOC (8 – 17.6 mg/L), Total Ammonia Nitrogen (0.05 – 0.068 mg/L), Un-ionized Ammonia (0.00014 mg/L, Nov. 13/12), TKN (0.57 – 0.61 mg/L), NO_3 (0.14 – 0.49 mg/L), NO_2 (0.10 mg/L), Phenols (1 µg/L), Total Phosphorus (0.0286 – 0.0788 mg/L), TSS (4 – 26.4 mg/L), field pH (7.04 – 7.42), field Conductivity (812 – 973µS/cm), Chloride (88.2 – 121 mg/L). The E-coli concentration ranged 11 – 105 cfu/100 mL.

- PWQO exceedance occurred for Iron (0.717 mg/L, exceeded 0.30 mg/L; Nov. 13/12), and Total Phosphorus (0.0788 mg/L, exceeded 0.03 mg/L; May 14/12). It was noted that 'single' E-coli concentration 105 cfu/100 mL slightly exceeded the PWQO of 100 cfu/100 mL on May 23/12. (However, it is also to be noted that the PWQO is based on a geometric mean of a minimum of five (5) samples). There is no PWQO for chlorides, however the CCME Canadian Water Quality Guideline (CWQG) is 120 mg/L and the concentration of 121 mg/L slightly exceeded the CWQG for the Nov. 13/12 sample.

Drainage Ditch Hawthorne Road/Rideau Road Background (SW-1/SW1-09):

Sample station SW-1 monitors the water quality of the road ditch at the intersection of Hawthorne Road and Rideau Road approximately 500 m northwest of the OCL Facility. SW-1 provides background surface water quality of the drainage ditch upgradient of Findlay Creek station SW-2.

Samples were collected on May 14/12, May 23/12 (limited analysis) and November 13/12 and the water quality was characterized having CBOD5 (2 mg/L), COD (15 – 76 mg/L), DOC (32 – 42 mg/L), Total Ammonia Nitrogen (0.073 – 0.100 mg/L), Un-ionized Ammonia (0.000189 mg/L, Nov. 13/12), TKN (0.49 – 0.51 mg/L), NO_3 (0.34 – 1.1 mg/L), NO_2 (0.10 mg/L), Phenols (1 µg/L), Total Phosphorus (0.0093 – 0.0153 mg/L), TSS (56 – 116 mg/L), field pH (6.97 – 7.06), field Conductivity (1510 – 2110µS/cm), Chloride (94.2 – 164 mg/L). The E-coli concentration ranged 45 – 130 cfu/100 mL.

- PWQO exceedance occurred for Cadmium (0.00092 – 0.00113 mg/L, exceeded 0.0002 mg/L), Cobalt (0.00111 – 0.00233 mg/L, exceeded 0.0009 mg/L), and Molybdenum (0.275 – 0.556 mg/L, exceeded 0.040 mg/L). It was noted that 'single' E-coli concentration 130 cfu/100 mL slightly exceeded the PWQO of 100 cfu/100 mL on Nov. 13/12. (However, it is also to be noted that the PWQO is based on a geometric mean of a minimum of five (5) samples). There is no PWQO for

chlorides, however the CCME Canadian Water Quality Guideline (CWQG) is 120 mg/L and the concentration of 164 mg/L slightly exceeded the CWQG for the May 14/12 sample.

Contingency Plan Surface Water Trigger Mechanism

CRA developed a groundwater and surface water trigger level monitoring program for the Site that was provided in CRA's first Annual Report (March 2012). The three-tier trigger level mechanism was developed to assess groundwater and surface water quality impact at the Site. Based on the trigger level assessment, the need to implement contingency measurements will be determined.

The SWM Pond Trigger Parameters are Un-ionized Ammonia, Nitrate, CBOD5, Total Phosphorus, TSS, E-coli, pH, and Temperature and their associated trigger levels are listed in 'Table 2 - Trigger Parameters of the ECA'.

Surface water is monitored semi-annually and these monitoring events are part of the Tier 1 trigger and are considered to be an Alert Level of monitoring. At this tier, baseline values are used as trigger levels for Site- specific trigger parameters. If during two consecutive monitoring events a parameter concentration exceeds the corresponding baseline values (trigger level) for any of the trigger parameters, the Tier II Trigger – Confirmation Monitoring will be implemented. As a first step, the baseline values exceeding concentrations will be compared to the 75th percentile concentration criteria.

Notwithstanding the requisite evaluation of surface water quality impact downstream within the potentially affected surface water regime associated with the OCL Facility Site there is as a condition of the ECA for the requirement for SWM Pond sampling 'before' allowing any discharge from the SWM Pond. ECA conditions per Section 6, Operation and Maintenance, address the SWM Pond effluent monitoring Trigger Parameters and their associated Trigger Level concentrations (Table 2 Trigger Parameters). The discharge of leachate contaminated sewage from the 'Works' to receiving surface water is prohibited.

The SWM Pond water is sampled at sample station SW-4 (SW4-09) and the analytical water quality data for the 2012 operational year was presented in the 2012 Groundwater/Surface Water Monitoring and Compliance Report.

- The analytical results of the SWM Pond water quality samples collected on May 14, May 23, and November 12, 2012 were reported. Trigger parameter concentrations which exceeded Table 2 levels were identified to include TSS (17.2 – 50 mg/L, exceeded 15 mg/L; May 14 and Nov. 12, 2012), field pH (9.09, exceeded 8.5; Nov. 12/12), and E-coli (142 - 156/100 mL, exceeded 100 cfu/100 mL on May 23/12).

- CRA identified consecutive detections were observed at SW4-09 (inside the SWM Pond) for colour in May and November 2012, and CBOD5 and Phosphorus in November 2011 and May / November 2012. Single detections were observed at SW04-09 for DOC, pH (lab), pH (field) in May and Turbidity (field) in May and November.

Surface Water Quality Impact Assessment

CRA has based surface water quality impact assessment upon establishing baseline values for surface water. The monitoring results for each sampling location being compared to its interim/final baseline values to determine if a statistically significant change has occurred.

CRA noted that the baseline values for surface water may be subject to further assessment both in magnitude of the baseline values and also in methodology / grouping, as additional surface water data becomes available and is evaluated against the existing interim / final baseline values. CRA reported that no changes to the baseline values were made in the 2012 monitoring / reporting year.

- Normally, the 75th percentile is used to determine background quality and which requires a minimum 'n' (number of sample data events) of eight (8) to derive the statistic. Background determinations usually employ the entire database to determine the appropriate value for each variable assessed. Outliers in the data base may be eliminated, but justification for this must be presented. [Ref. Section 4.5, Page 19, Deriving Receiving-Water Based, Point-Source Effluent Requirements for Ontario Waters, MOE, July, 1994].

- It is appropriate to evaluate surface water quality impact relative to Provincial Water Quality Objectives (PWQO) and this has not been done by OCL. The reviewer recommends that in the future the surface water quality of the potentially affected surface water regime be evaluated relative to PWQO.

Surface Water Quality Impact Summary:

- The reviewer acknowledged CRA's conclusion that although consecutive concentrations above the current (interim) baseline trigger values for colour, CBOD5, and phosphorus and single Table 2 exceedances for the above identified trigger parameters were observed, the concentrations of the parameters at the downgradient monitoring well MW103-09 which is situated in the on-Site drainage ditch immediately adjacent the northeast corner of the SWM Pond did not indicate any adverse effects to the groundwater, and therefore these parameters did not represent a potential environmental impact concern to the downgradient surface water regime during 2012. The reviewer would note that where groundwater discharges to surface water it is appropriate to assess groundwater quality relative to

PWQO and therefore, in future, the water quality at the downgradient monitoring well MW103-09 should be compared to PWQO for impact assessment purposes.

- The reviewer is in agreement with CRA's assessment based on current surface water quality data for the 2012 operational year, that it does not appear that water from the OCL SWM Pond (SW4-09) is affecting the surface water quality of Findlay Creek downstream at sample station SW3-09. CRA suggests that the water quality of Findlay Creek at SW3-09 could be affected by the influence of upgradient off-Site surface water near sample station SW2-09.

- The reviewer would agree with CRA's assessment that the downstream Findlay Creek sample station SW3-09 would define surface water quality that is influenced by both the OCL Facility SWM Pond effluent discharge source and sources upstream of the OCL Site Facility. The surface water quality in Findlay Creek downstream of the OCL Facility at sample station SW3-09 did not show evidence of being adversely impacted during 2012.

Recommendations

- The surface water sampling component of the OCL Facility monitoring program should continue in 2013 as was conducted in 2012 and per compliance to the monitoring conditions of the s.53, OWRA, Industrial Sewage Works Certificate of Approval (ECA) 7251-8GGKRPD.

- CRA reported that upon receipt of subsequent sample results (May 2013) for the SWM Pond further interpretation will determine if the November 2012 detections of elevated parameter concentrations were an isolated incident or may be indicative of a potentially ongoing trend. It is the reviewer's understanding that monthly sampling of the SWM Pond was to be conducted by OCL, however, the 2012 Groundwater/Surface Water Monitoring and Compliance Report did not provide the historical and the current, record of the analytical data for the monthly sampling of the SWM Pond and this data should be provided in future Annual Monitoring Reports for the OCL Facility.

- It is appropriate to evaluate surface water quality impact relative to Provincial Water Quality Objectives (PWQO) and this has not been done by OCL. The reviewer recommends that in future annual monitoring reports for the OCL Site the surface water quality of the potentially affected surface water regime also be evaluated relative to PWQO where applicable.

- The reviewer would note that where groundwater discharges to surface water it is appropriate to assess groundwater quality relative to PWQO. The reviewer recommends that in future annual monitoring reports for the OCL Site the water quality at the downgradient monitoring well MW103-09 should be compared to PWQO for surface water impact assessment purposes.

- It was assumed by the reviewer there were SWM Pond effluent discharge(s) in 2012 associated with the May and November surface water sampling events. In future Annual Monitoring and Compliance Reports the reviewer recommends that OCL should clearly identify the dates(s) of the SWM Pond effluent discharge events to the receiving surface water regime.

- Sample stations SW-1, SW-2 and SW-3 were reported sampled on November 13, 2012, while the on-Site SWM pond sample station SW-4 was reported to have been sampled the day before on November 12, 2012. The reviewer recommends that in future the sampling of all surface water sampling stations SW1, SW2, SW3 and SW4 be conducted on the same day.

Response to Action Required in Inspection Report 2012.pdf

Hello Kyle:

Please find attached the procedure going forward to address the "temperature" parameter from not being analysed during the monthly pond sampling at the Orgaworld Ottawa facility. I believe it to be fairly straight-forward. If you have any questions or concerns, please let me know.

Kind regards,

Mike Rooke

Dear Ms. MacDonald:

Re: Environmental Compliance Approval Review of Facility Modifications
Orgaworld Canada Ltd. Ottawa Composting Facility

1. Introduction

Orgaworld/Renewi is currently engaged in a project (Project) to enhance the functionality and operational performance of the Ottawa Composting Facility (Facility). Facility enhancements will improve working conditions inside the building and life expectancy of the Facility and equipment. These modifications will allow Orgaworld to provide long-term organics processing services to the City of Ottawa (City), supporting municipal and provincial organic waste diversion objectives.

GHD has reviewed Environmental Compliance Approvals (ECAs) issued by the Ministry of the Environment Conservation and Parks (MECP) for the Facility. This letter outlines the proposed Facility modifications and upgrades, and applicable ECA requirements related to the proposed changes.

In order to support the City's organic diversion efforts and maintain operational standing, this project needs to be initiated as soon as possible, and that approvals and permitting through the MECP are on the critical path for project development.

2. Background

Organic material collected by the City of Ottawa is processed by Orgaworld/Renewi. Organics diversion is an important part of the City of Ottawa's long-term waste strategy. Diverting organic waste away from the landfill saves the City on landfilling costs, reduces the potential for odour and leachate issues at the landfill, reduces greenhouse gas emissions, and supports Ontario policies to increase organic waste diversion.

Bill 151, Waste Free Ontario Act, 2016: Bill 151's main objectives revolve around the implementation of a more specific version of Extended Producer Responsibility (EPR) where the producers bear full responsibility for waste materials. It can reasonably be said that Bill 151's main focus is on traditional materials such as blue box, tires, electronics and household hazardous waste. It is noted that organics do not appear per se in any component of Bill 151 itself. This act is accompanied by the Strategy for a Waste

Free Ontario: Building the Circular Economy (Strategy), 2017, in which the management of organic waste is considered.

The Strategy shows a clear intent to solicit greater volumes of source separated organics (SSO). In this respect, an increased ability to support organics diversion by the City is well-aligned with the fundamental principles. Included as part of the Strategy is the Food and Organic Waste Framework.

Ontario's Food and Organic Waste Policy Statement: in April 2018, the Province released the Food and Organic Waste Framework and Policy Statement. The Policy strives to reduce food and organic waste, recover resources from food and organic waste (e.g., biogas), support resource recovery infrastructure, and promote beneficial use of recovered resources. The Policy was issued pursuant to Section 11 of the Resource Recovery and Circular Economy Act and supports the provincial vision of a circular economy, moving towards zero waste and zero greenhouse gas emissions from the waste sector.

Note that the outcome of the recent Provincial election has effectively cancelled Cap-and-Trade regulation in Ontario but has thus far not affected Bill 151 or any components thereof.

3. Operational and Administrative Updates

The following operational and administrative updates are proposed for the Facility:

- Expansion of the Facility to increase storage area (no changes to storage capacity)
- Temporary bypass of ammonia scrubber to support replacement of the existing ammonia scrubber with new ammonia scrubbers
- Outfitting compost tunnels 7 and 8
- Outfitting biofilter 3

A review of the changes noted above as they relate to the current ECAs applicable to the Facility are described further below.

4. ECA Review

At present, the Facility operates under the following ECAs:

- Waste ECA Number 2766-7HEPSZ (September 16, 2009). This ECA prescribes the waste handling and storage elements of the facility, receiving hours, financial assurance, service area, and description of allowable incoming feedstocks and outgoing product quality.
    - Amendment Notice No. 1 (October 21, 2010). To approve a temporary operation of a mobile grinder to allow Orgaworld Canada Inc. to process and remove off-site the 10-100 Organic Waste fraction, which if stored indoors poses a fire hazard and therefore a risk to the health and safety of the environment or any person.

- Amendment Notice No. 2 (May 2, 2012). To approve extended waste receipt hours.
- Amendment Notice No. 3 (February 6, 2015). The Approval is amended to include the ERT decision for Case Nos.: 09-115/09-126, Orgaworld Canada Ltd. v. Director, Ministry of the Environment, dated November 7, 2011.
- Amendment Notice No. 4 (April 18, 2017). To approve financial assurance re-evaluation and require submission of the additional financial assurance amount.

- Air ECA Number 1631-A2ELCQ (December 10, 2015). This ECA prescribes the allowable air and noise emissions from the Facility, and is structured as a comprehensive approval with limited operational flexibility.
- Sewage Works ECA Number 2844-9YNGZC (February 1, 2017). This ECA prescribes the surface water and leachate management components of the Facility operations, as well as limits on discharge from the on-site stormwater pond. This ECA further contains a description of the groundwater monitoring program for the Facility.

4.1 ECA Review

The following review includes the above noted proposed changes and ECAs applicable to the Facility.

Expansion of the Facility to Increase Storage Area (no changes to storage capacity)

Storage area expansion is required to re-distribute existing storage capacity, achieving a more effective layout for operations and reducing the vertical depth required for stockpiling unprocessed organic waste. No increases to the storage amounts (tonnages) are proposed. Limits on organic waste storage durations have also been considered with the additional storage space to be built. The storage amounts and duration will remain within the ECA for Waste limits described in Condition 2. (4), (5), and (6), with the provision of this additional storage space.

The storage expansion building is proposed to take place in an area outside of the Processing Building shown in the as-built drawings for the Site. These drawings will be updated to include the storage expansion area and will be kept on site as required under the Waste ECA (no amendment required; simple updating of the as-built drawing information to include the storage area is sufficient under the Waste ECA). The proposed location for a new storage area north of the existing Processing building is shown on the attached Figure 1. Air collected from within the proposed storage expansion will be directed to the odour control system.

As part of Amendment number 4 to the Waste ECA, the Financial Assurance calculations were updated. The 2017 Financial Assurance calculation reported by Orgaworld is based on the following tonnages, which are within the storage capacity limits:

Materials	2017 Financial Assurance	Waste ECA Limit
Unprocessed Organic Waste	2,500 tonnes	3,000 tonnes
Leaf & Yard Waste	Included in unprocessed waste above	1,500 tonnes
Material in Composting Tunnels	3,000 tonnes	5,040 tonnes
Immature Compost	2,100 tonnes	10,000 tonnes
Residual Waste	1,000 tonnes	1,000 tonnes

The Financial Assurance calculations currently estimate that the maximum amount of material stored at the Facility is 6,500 tonnes, excluding uncured compost. No change to this calculation is required as a result of storage changes. Regardless, a re-evaluation of the amount of Financial Assurance required for the Facility is required commencing on April 30, 2020 and at intervals of three years thereafter (Waste ECA Amendment Notice No. 4). Additionally, commencing on April 30, 2018, an updated re-evaluation of the Financial Assurance is required annually and is to be kept on site.

Ammonia Scrubbers

Replacing the existing ammonia scrubber system with three new ammonia scrubbers is proposed. The new ammonia scrubbers will increase the total capacity for ammonia scrubbing, in order to accommodate potential increases in ammonia generated by a modified feedstock from the City. In particular, bagged SSO may generate ammonia during the storage and transit cycle.

Orgaworld/Renewi are proposing to install a bypass of the ammonia scrubber for use during construction staging of the new ammonia scrubbers. The bypass damper will be made inoperable following construction.

Under Schedule "A" of the Waste ECA, a letter dated January 29, 2009 is included which describes the following:

MOE[1] Comment

Response #23 - Please note that we will require the ammonia scrubber to be ran continuously. Even though you anticipate the ammonia levels to be lower than those in the London plant, we consider that there is enough uncertainty in those levels to warrant a continuous operation. If you wish to change the

[1] Ministry of the Environment, now Ministry of the Environment, Conservation and Parks

mode of the ammonia scrubber operation, you can apply for an amendment once enough monitoring data is collected during the plant operation to support such a proposal.

CRA[2] Response

It is understood that the ammonia scrubber must be run continuously until a time in which operational data can support a change in the mode of operation. At that time, a Certificate of Approval amendment will be submitted to the MOE regarding these changes.

According to this condition, the ammonia scrubber system must be operated continuously until such time as operational data can support a change in the mode of operation. A temporary variance of this condition of the Waste ECA is requested.

The most recent Emission Summary and Dispersion Modelling (ESDM) Report prepared for the Facility, dated May 31, 2018, compares ammonia emissions with and without the ammonia scrubber (Table 4 of the ESDM). The dispersion modelling results were completed under worst-case conditions and are based on stack testing data from the London composting facility. The results demonstrate that the ammonia concentration at the Facility point of impingement (POI) standard is less than 1% when the ammonia scrubber is running and 2% without an ammonia scrubber. These results demonstrate that bypass of the ammonia scrubber is supported by the air modelling for the Facility. Once bagged SSO is introduced into the Facility the ESDM Report will be updated and the ammonia concentration POI standard re- evaluated.

Outfitting Compost Tunnels

Outfitting compost tunnels 7 and 8 for use in the composting operations is proposed. The tunnels are currently being used for material storage. Outfitting the tunnels will include items such as new doors, spigot floor, seals for piping, and sensors.

According to the ECA for Waste Section 2.(3)

(c) *Organic Waste, including leaf & yard waste and biofilter medium waste, undergoing Composting in the composting tunnels shall not exceed 5,040 tonnes;*

Outfitting two tunnels for operation is expected to increase composting tunnel volume to 4,000 tonnes, which is within the 5,040 tonne composting tunnel limit. The Financial Assurance calculations currently account for six tunnels or 3,000 tonnes of waste material in the composting tunnels. The Financial Assurance calculations will be updated, as required, in April 2019.

Outfitting Biofilter

The proposed outfitting of Compost Tunnel 7 and 8 as described above will increase the maximum loading of process air (air used in the composting process) to the odour control system at a given time, as

[2] Conestoga-Rovers and Associates, now GHD

well as potentially changing the airflow rate at the stack. To support increased loading, the outfitting of a biofilter (Biofilter 3) is proposed.

Total air volumes discharged by the Facility are not limited by the Air ECA; however, the total concentrations discharged are limited through the Acceptable POI Concentrations. As such, changing the airflow is supportable under the limited operational flexibility as long as overall emissions comply with the emissions envelope.

Under Condition 3.(3.1) of the ECA for Air:

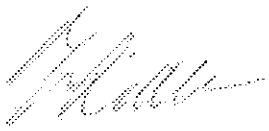
Prior to making a Modification to the Facility that satisfies Condition 2.1 (a) [within the scope of the operations of the Facility], and (b) [do not result in an increase in the Facility Production Limit of 150,000 tonnes per year of Organic Waste], the Company shall prepare a proposed update to the ESDM Report to reflect the proposed Modification.

To support the outfitting of the compost tunnels and biofilter, an updated ESDM should be prepared to reflect the proposed modifications as required by the Air ECA, due to the resulting increases in process air flow.

Design and Operations Report

There are a number of items throughout the Design and Operations Report prepared for the Waste ECA application (an included as Schedule "A" in the Waste ECA) that require updating since it was originally compiled in 2008. The Design and Operations Report will be updated to reflect changes to operations including material stream modifications.

5. Summary



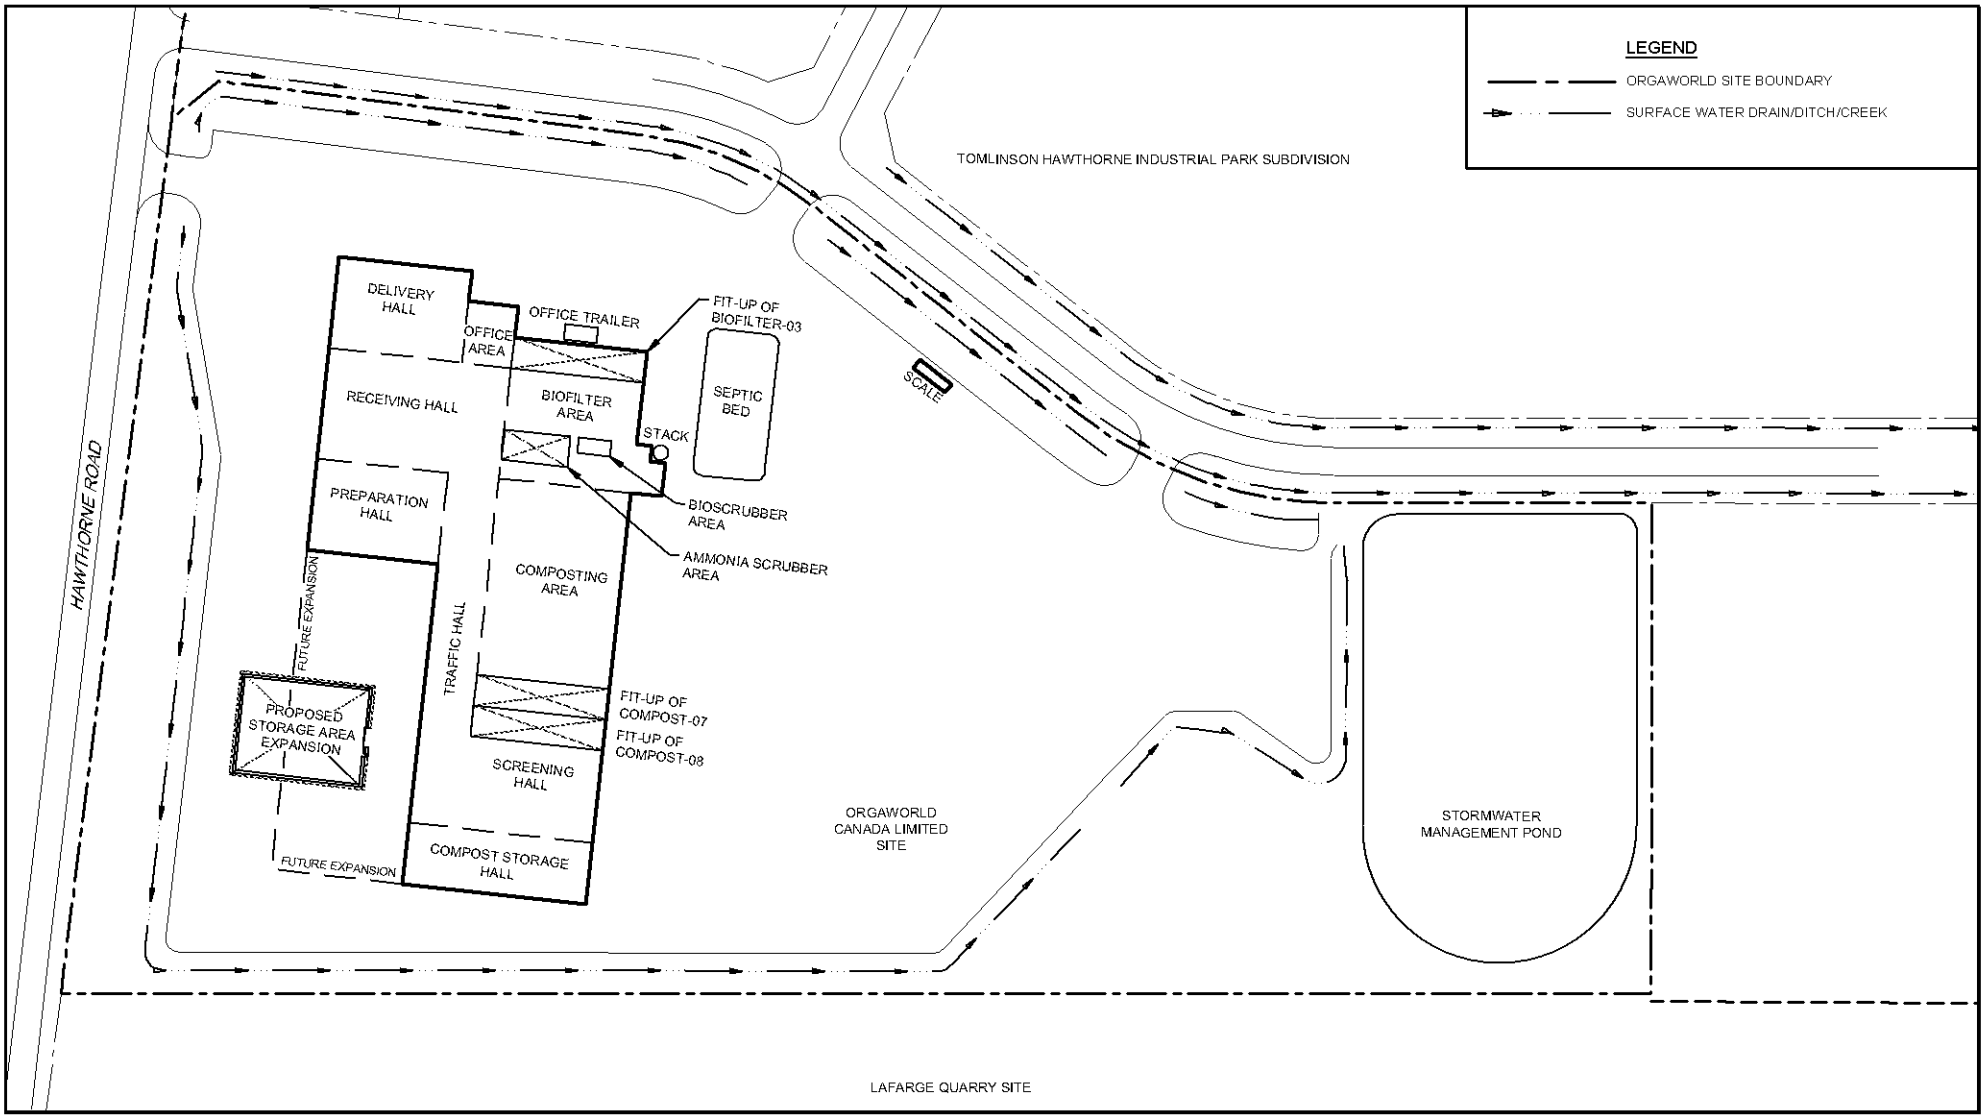
The proposed operational and administrative updates to the Facility are required to enhance the functionality and operational performance of the Facility in support of the City's organic waste collection program. Organics diversion is an important part of the City of Ottawa's long-term waste strategy. Diverting organic waste away from the landfill saves the City on landfilling costs, reduces the potential for odour and leachate issues at the landfill, reduces greenhouse gas emissions, and supports Ontario policies to increase organic waste diversion.

A review of the implications of the proposed updates to the Facility against the existing ECAs for the Facility was completed. Updates to the Financial Assurance, ESDM, and Design and Operations Report (originally drafted in 2008) will be completed. A temporary variance of the Waste ECA to allow for a temporary ammonia scrubber bypass during construction is requested and supported by air dispersion modelling for the Facility. No other technical amendments to the Facility's three ECAs (Waste, Air/Noise, and Sewage Works) are contemplated based on these capital upgrades.

Should you have any questions or concerns, please do not hesitate to contact us.

Sincerely,

GHD



Tej Gidda, Ph.D., P.Eng.

Good Morning Kyle,

Attached is a reply to your email message of May 8th requesting Orgaworld to review the sampling data provided by Tomlinson, and to determine our compliance status with the conditions within the ECA associated with the operation of the stormwater management pond at our Ottawa facility.

If you have any further questions or comments, please do not hesitate to contact me.

Best regards,

David Veinot
Compliance Officer

To: David Veinot
Subject: Discharge - Industrial Sewage Works

Hello David,

As discussed this afternoon, Orgaworld was advised that Golder Associates, on behalf of Tomlinson, collected effluent samples from the discharge point of the stormwater management pond during the April 2018 discharge period. According to the sample analysis of the effluent samples collected, the effluent exceeded Table 2 Trigger Limits for E.coli and unionized ammonia. Based on Orgaworld's samples collected, as per Condition 5(5) of Environmental Compliance Approval No. 2844-9YNGZC (ECA), the water quality was in compliance with Table 2 Trigger Limits prior to the discharge; therefore, supporting the discharge of the stormwater management pond in April 2018.

The question being asked to the ministry is whether the samples collected by Golder Associates, on behalf of Tomlinson, is an exceedance of the ECA and a reportable spill.

Based on the review of the information above, Orgaworld is to review the sample results and QA/QC provided by Tomlinson to determine compliance with the conditions within the ECA associated with the operation of the stormwater management pond. If the review determines non-compliance, then Orgaworld is to notify the ministry and comply with the additional conditions of the ECA which speak to exceedances. If the review determines there was no violation of the ECA, then Orgaworld is to provide a response to the ministry outlining the outcome and rationale for this conclusion.

If you have any questions please contact me to discuss.

Thank you,

Kyle Straberger

CONFIDENTIAL

EXECUTIVE SUMMARY

Current Water Technologies, Inc. was engaged by Renewi to perform a laboratory-based study to determine the effectiveness of the AmmEL-LC system to remove ammonia and the ESD System to remove phosphorus from ground water provided from Renewi's Ottawa site.

The laboratory AmmEL-LC system consisted of one 10 cm diameter ion-exchange column with a bed volume of 6.36 L. The ion exchange column was designed to operate as a packed bed during ammonia loading and fluidized bed during column recharge. The IX system was coupled with an electrochemical reactor for column recharge between IX runs. The laboratory system was operated at a flow rate of approximately 1 L/min. The laboratory ESD system consisted of an ESD cell containing 0.76 m^2 of active electrode surface area. The laboratory unit was operated at a flow rate of 250 ml/minute.

The laboratory testing program demonstrated that CWTI's AmmEL-LC technology is capable of reducing inlet ammonia levels in groundwater water at Renewi's Ottawa site to effluent ammonia limits below 1 mg NH_3-N/L. CWTI's ESD System is capable of reducing inlet phosphorus levels in groundwater to below the required effluent limit of 0.03 mg/L.

The conclusions of the study are:

- Laboratory testing was very successful in demonstrating that the AmmEL-LC system is a viable option to treat ammonia levels characteristic of Renewi's ground waters and to meet the desired treated water requirements.

- At maximum removal efficiency, the AmmEL reduced inlet ammonia concentrations in the various totes provided by Renewi as follows:
    - Tote MW105-13 from 17 mg/L to less than 0.1 mg/L NH_3-N representing >99% removal
    - Tote EW107-15 from 122 mg/L to less than 0.2 mg/L NH_3-N representing >99% removal
    - Tote MW5-09 from 48 mg/L to less than 0.3 mg/L NH_3-N representing >99% removal

- Laboratory testing also demonstrated that in two of the waters, the ESD System is a viable option to treat phosphorus levels characteristic of Renewi's ground waters and to meet the desired treated water requirements. Due to the high phosphorus concentrations and complex nature of the water in Tote EW107-15, additional stages of ESD treatment will be required to achieve the target concentration of 0.03 mg/L.

- After two stages of ESD treatment, the phosphorus concentration in the AmmEL treated effluent was reduced as follows:
    - Tote MW105-13 from 0.115 mg/L to 0.0219 mg/L, representing 80.9% removal
    - Tote EW107-15 from 2.27 mg/L to 0.735 mg/L, representing 67.6% removal
    - Tote MW5-09 from 0.146 mg/L to 0.011 mg/L, representing 92.5% removal

CONFIDENTIAL

Recommendation:

- Should well EW107-15 be the source of the water for ammonia removal, CWTI would like to discuss alternatives to the ESD for removal of phosphate should phosphate concentration become the limiting factor to prevent off-site water discharge.

1 INTRODUCTION

As an introduction to the AmmEL and ESD technology and to determine its efficacy in removing ammonia and phosphorus from ground water collected at Renewi's Ottawa site, CWTI conducted a preliminary laboratory-scale feasibility study.

The purpose of the project was to implement a laboratory-scale feasibility study with CWTI's AmmEL and ESD systems to treat ground waste water of the type found at Renewi's Ottawa site. The goal of the project was to reduce the ammonia-nitrogen concentration to less than 1 mg/L and phosphorus concentration to less than 0.02 mg/L. The feasibility test was performed at CWTI's facility in Guelph, Ontario using water supplied by Renewi.

The specific project goals were:

- Perform laboratory-scale feasibility testing on Renewi ground water
- Collect operational data for the duration of the test
- Provide a summary report following completion of the testing period

1.1 AmmEL System – Basic Principles

The AmmEL-LC treatment technology is a 2-stage process; the first stage (Phase 1) consists of removal of ammonia from the waste stream using an ion-exchange (IX) zeolite medium followed by the second stage (Phases 2&3), electrochemical oxidation of ammonium to nitrogen (N_2) gas in the IX regenerant solution. The Regeneration and Conversion phases occur simultaneously. The column regeneration circuit is a closed loop, i.e., the regenerant solution is reused once the ammonia is oxidized (Figure 1).

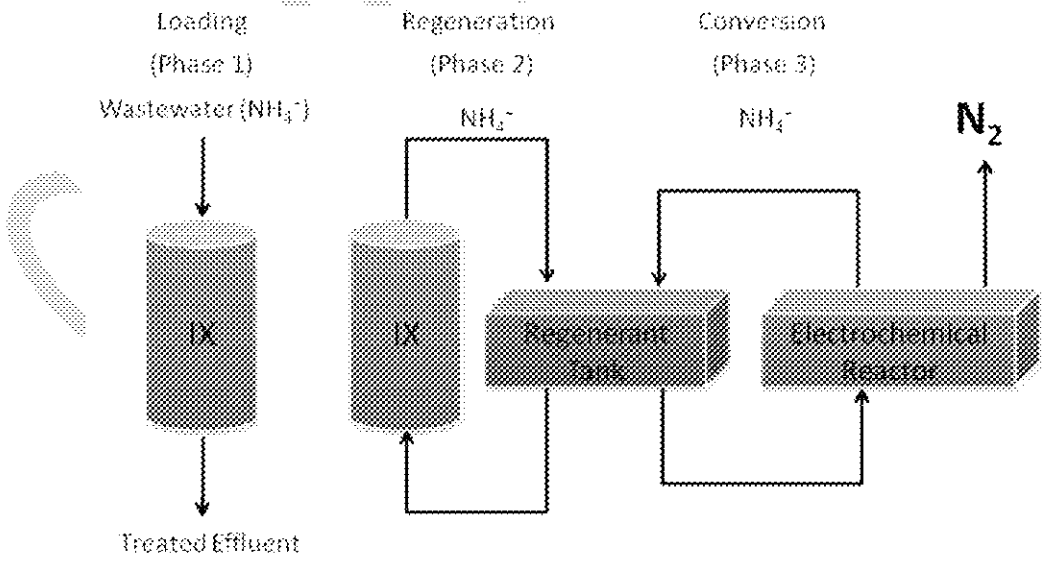

Figure 1. Schematic of AmmEL-LC Process.

Some of the advantages of the technology over conventional systems are:

- Converts ammonia to environmentally friendly nitrogen gas
- Operates independent of temperature and maintains efficiency when treating water at 0°C
- No production of nitrate
- No production of greenhouse gas nitrous oxide
- Relatively small footprint
- Rapid start-up and shut-down
- Lower capital cost than bio-based systems of similar capabilities
- Fully automated and remotely monitored

Figure 2. Mobile AmmEL Demonstration Unit

1.2 ESD System – Basic Principles

The ESD System is a state-of-the-art electrochemical technology designed to produce drinking water, gray water and/or select process waters from brackish and waste waters. The system has also proven extremely successful in producing high purity (< 1 μS/cm) water. The produced water is free of toxic levels of metals and other inorganic contaminants and is done more efficiently and economically than conventional methods. ESD has the potential to dramatically improve the treatment of municipal drinking water, industrial process water, makeup water, and municipal wastewater around the globe. For drinking water applications, the ESD system is predicted to have a lower capital cost than competitive membrane systems and lower operating costs (<$0.08/$m^3$ includes power and chemicals, excludes manpower).

CWTI's ESD system is based on the principles of Capacitive Deionization. The Capacitive deionization (CDI) process is a low-pressure on-membrane process that removes dissolved ions from a water stream in the presence of an electrical field. In general, inlet water is pumped through cells that contain the charged electrodes. The electrodes attract and retain ions on the electrode surfaces (Figure 3). As the ions build up on the surface of the electrodes the cells lose efficiency so that treated water produced at

the start of the cycle has lowest conductivity, and conductivity gradually increases until a pre-set maximum is reached. The treated water exits the system as a high volume with low total dissolved solids (TDS) content.

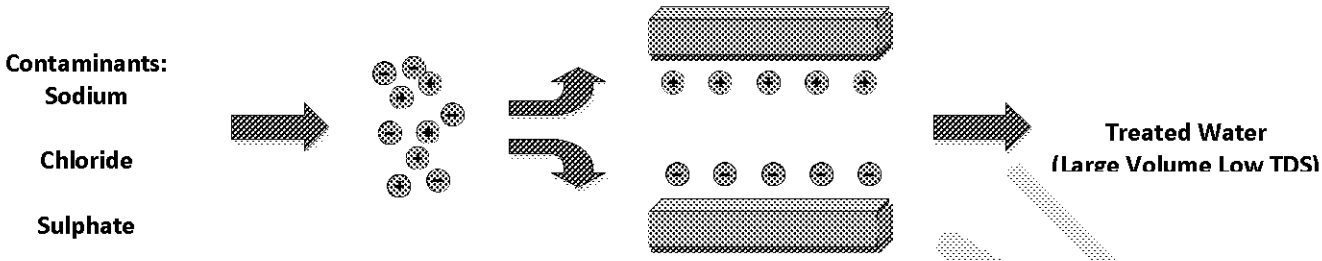

Figure 3. **Principle of CDI (during active desalination)**

The electrodes have a finite capacity for holding ions. When the maximum conductivity setting is reached the system switches to regeneration. To regenerate the electrodes, the applied potential is reversed and the ions are then repelled back into the gap between the electrodes. A small volume of rinse water then carries the ions from the cells producing a waste stream that has a much smaller volume with higher TDS concentration (Figure 4). Since the CDI process does not require high-pressure pumps, the energy consumption is expected to be low and is related mainly to the DC power consumption on the cells. Once flushing is complete the system resets and the treatment cycle begins again.

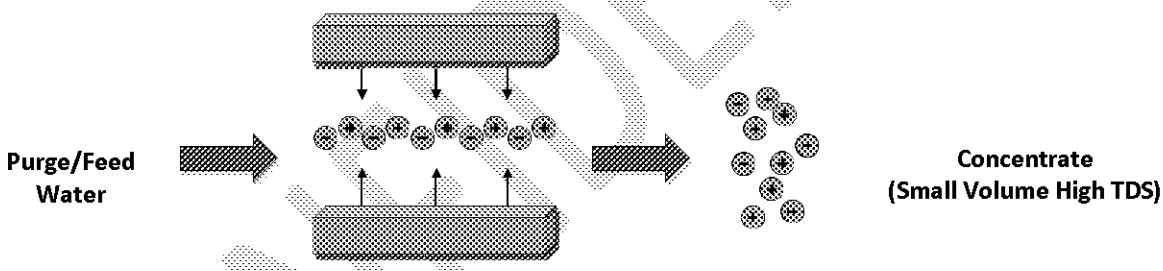

Figure 4. **Principle of CDI (During Regeneration)**

CWTI knows of no other direct, commercial competitor to the novel, electrochemical ESD System in the water treatment industry. The ESD System offers several advantages compared to conventional ion exchange, reverse osmosis and distillation systems. This patent-pending technology expends less electrical energy, produces minimal wastewater, and provides potable water more efficiently than conventional methods. ESD has proved to be capable of producing water free of toxic levels of metals and other inorganic contaminants more efficiently and economically than conventional methods and achieves water recovery rates as high as 98% combined with greater than 99% TDS removal.

2 MATERIALS AND METHODS

The AmmEL study was performed using a single 4 inch ID column containing 6.36 L of zeolite (Figure 6). The zeolite used was CWTI's proprietary modified zeolite - the same type used in the IX columns of the demonstration unit. Feed water for the laboratory study was supplied from Renewi's Ottawa site in three $1m^3$ totes. The water chemistry for the three totes is included in Appendix 1.

The zeolite column was loaded with ammonia to an outlet concentration of ~2 mg NH_3-N/L. Outlet ammonia concentrations were monitored during the loading cycle using an ammonium ion-selective electrode. Regeneration of the column was performed with 5% NaCl solution made using high purity water.

Capacitive deionization experiments were performed on CWTI's Model ESD400 Laboratory Scale Capacitive Deionization Unit (Figure 7). The unit is designed to operate at a flow rate range of 0-500 mL/min with a maximum operating pressure of 20 psi. Typical operating flow rates are in the range 250-400 mL/min. The unit is fitted with a CDI cell containing 0.76 m^2 of electrode surface area with an operating potential of 1.3 VDC and maximum peak current of 60 ADC. The unit is controlled through a combination of programmable logic controller (PLC) and a touch screen human-machine interface (HMI).

Electrical conductivity measurements were performed using an Oakton hand-held conductivity meter. Ammonia measurements were performed with a bench top Thermo Scientific millivolt meter and a Cole-Parmer ammonia ion selective electrode (ISE). The ISE was calibrated according to manufacturer's procedure prior to each experimental run, and millivolt data was collected four minutes after the ISE was inserted into the sample when a stable mV reading could be recorded from the meter.

3 RESULTS

3.1 Ambient Water Testing - AmmEL

Tote MW105-13

Ammonia removal testing was done on Tote Number MW105-13. Ammonia removal data gathered from ambient temperature runs are included in Table 1 and Figure 8. Ammonia concentrations are plotted as a function of number of ion exchange bed volumes of water treated. One bed volume is

Table 1. **Ambient Temperature Run Tote MW105-13 Ammonia Removal Data**

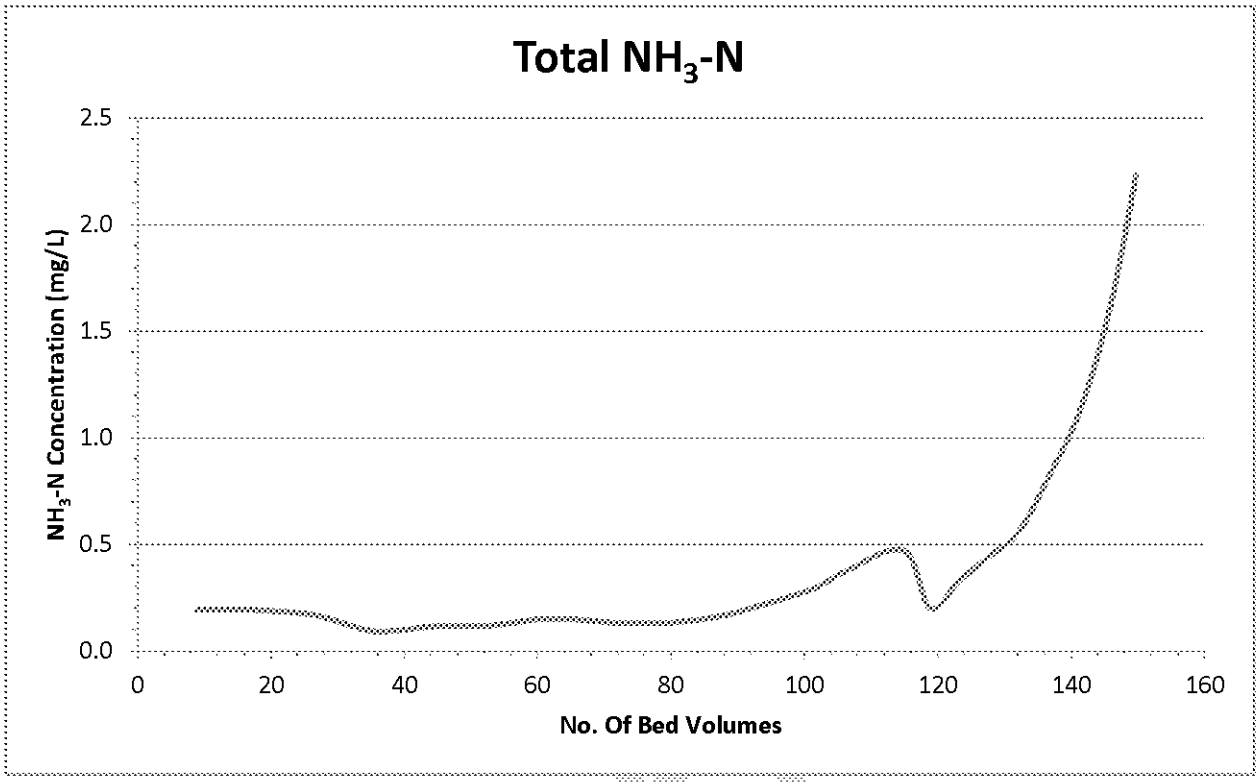

Figure 8. Ambient Temperature Ammonia Removal Data Tote MW105-13

equivalent to 6.36 L, the volume of zeolite contained in the IX column. The water provided to CWTI by Renewi was pumped through the ion exchange column without pH adjustment or pre-treatment. For Run 1 at ambient temperature, after treating 149 bed volumes of water (1015 L), the outlet ammonia-nitrogen concentration measured 2.2 mg/L.

Tote EW107-15

Ammonia removal data gathered from the ambient temperature run for Tote EW107-15 are included in Table 2 and Figure 9. The initial ammonium concentration in this tote was significantly higher (122 mg/L vs. 17 mg/L), and as a result, the zeolite became saturated with ammonia at a faster rate. As expected, this lead to a shorter loading cycle and fewer bed volumes of water treated. For Run 2 at ambient temperature, after treating 57 bed volumes of water (388 L), the outlet ammonia-nitrogen concentration measured 39 mg/L.

Table 2. **Ambient Temperature Run Tote EW107-15 Ammonia Removal Data**

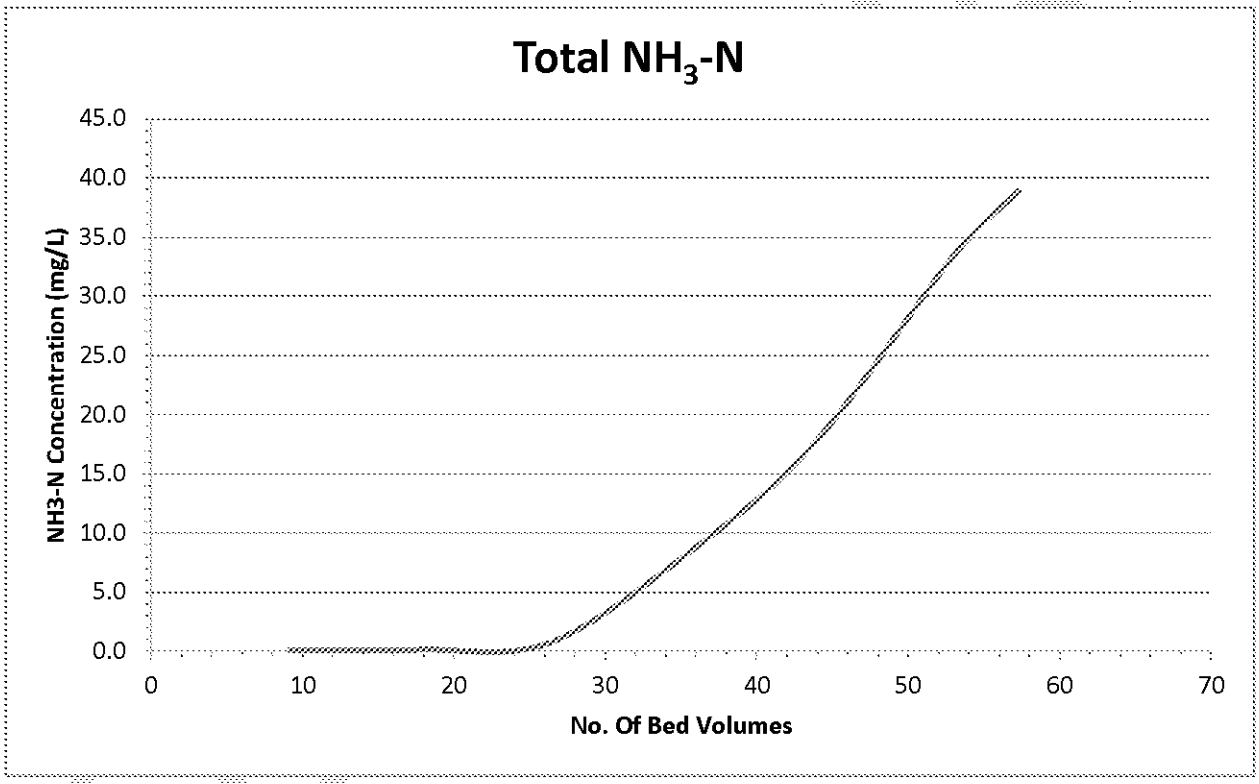

Figure 9. **Ambient Temperature Ammonia Removal Data Tote EW07-15**

Tote MW5-09

Ammonia removal data gathered from the ambient temperature run for Tote MW5-09 are included in Table 3 and Figure 10. The initial ammonium concentration in this tote was 48 mg/L, and as a result, as expected, the total number of bed volumes treated fell between totes MW105-13 and EW107-15. For Run 3 at ambient temperature, after treating 125 bed volumes of water (850 L), the outlet ammonia-nitrogen concentration measured 4.6 mg/L.

3.2 Ambient Water Testing - ESD

Tote MW105-13

Phosphorus removal testing was done on the AmmEL treated effluent. The data gathered from the ESD runs are included in Table 4. The ESD runs were performed with no pre-treatment or filtration of the AmmEL treated effluent.

Table 4. ESD Phosphorus Removal Data – Tote MW105-13

Stage 1 ESD		Stage 2 ESD	
Flow Rate	250 mL/min	Flow Rate	250 mL/min
Feed water pH	7.33	Feed water pH	7.14
Feed water Conductivity	2,053 µS/cm	Feed water Conductivity	542 µS/cm
Product water pH	7.14	Product water pH	6.93
Product water Conductivity	542 µS/cm	Product water Conductivity	315 µS/cm
Feed Phosphorus conc.	0.115 mg/L	Feed Phosphorus conc.	0.0347 mg/L
Product Phosphorus conc.	0.0347 mg/L	Product Phosphorus conc.	0.0219 mg/L
Phosphorus removal	69.8%	Phosphorus removal	36.9%
Ion removal	73.6%	Ion removal	41.9%

After two stages of ESD treatment, the phosphorus concentration in the product water is below the target concentration of 0.03 mg/L.

CONFIDENTIAL

Tote EW107-15

Phosphorus removal testing was done on the AmmEL treated effluent. The data gathered from the ESD runs are included in Table 5. The ESD runs were performed with no pre-treatment or filtration of the AmmEL treated effluent.

Table 5. **ESD Phosphorus Removal Data – Tote EW107-15**

Stage 1 ESD		Stage 2 ESD	
Flow Rate	250 mL/min	Flow Rate	250 mL/min
Feed water pH	8.04	Feed water pH	7.96
Feed water Conductivity	2750 µS/cm	Feed water Conductivity	1200 µS/cm
Product water pH	7.96	Product water pH	7.51
Product water Conductivity	1200 µS/cm	Product water Conductivity	417 µS/cm
Feed Phosphorus conc.	1.8 mg/L	Feed Phosphorus conc.	1.18 mg/L
Product Phosphorus conc.	1.18 mg/L	Product Phosphorus conc.	0.735 mg/L
Phosphorus removal	34.4%	Phosphorus removal	37.7%
Ion removal	57.5%	Ion removal	63.0%

Due to the high initial phosphorus concentration (2.27 mg/L), after two stages of ESD treatment the phosphorus levels are still above the target phosphorus concentration of 0.03 mg/L. Additional stages of ESD treatment are required to achieve the target phosphorus concentration

CONFIDENTIAL

Tote MW5-09

Phosphorus removal testing was done on the AmmEL treated effluent. The data gathered from the ESD runs are included in Table 6. The ESD runs were performed with no pre-treatment or filtration of the AmmEL treated effluent.

Table 6. **ESD Phosphorus Removal Data – Tote MW5-09**

Stage 1 ESD		Stage 2 ESD	
Flow Rate	250 mL/min	Flow Rate	250 mL/min
Feed water pH	8.08	Feed water pH	7.46
Feed water Conductivity	1980 µS/cm	Feed water Conductivity	564 µS/cm
Product water pH	7.46	Product water pH	6.36
Product water Conductivity	564 µS/cm	Product water Conductivity	92.8 µS/cm
Feed Phosphorus conc.	0.049 mg/L	Feed Phosphorus conc.	0.0156 mg/L
Product Phosphorus conc.	0.0156 mg/L	Product Phosphorus conc.	0.011 mg/L
Phosphorus removal	68.2%	Phosphorus removal	29.5%
Ion removal	73.7%	Ion removal	79.9%

After two stages of ESD treatment, the phosphorus concentration in the product water is below the target concentration of 0.03 mg/L.

3.3 Treated Water Chemistry

Samples of the treated water following AmmEL treatment and one and two stages of ESD treatment were collected by a representative of Renewi and submitted to a third party lab for analysis. The results of those analyses are presented in Appendix 2.

4 NEXT STEPS – RECOMMENDATIONS

The recommended next step is to use the data collected from the study to develop a plan of action to use CWTI's AmmEL and ESD Systems in an on-site groundwater remediation program.

5 SUMMARY

The laboratory testing program demonstrated that CWTI's AmmEL-LC technology is capable of reducing inlet ammonia levels in groundwater water at Renewi's Ottawa site to effluent ammonia limits below 1 mg NH_3-N/L. CWTI's ESD System is capable of reducing inlet phosphorus levels in groundwater to below the required effluent limit of 0.03 mg/L.

The conclusions of the study are:

- Laboratory testing was very successful in demonstrating that the AmmEL-LC system is a viable option to treat ammonia levels characteristic of Renewi's ground waters and to meet the desired treated water requirements.

- At maximum removal efficiency, the AmmEL reduced inlet ammonia concentrations in the various totes provided by Renewi as follows:
    - Tote MW105-13 from 17 mg/L to less than 0.1 mg/L NH_3-N representing >99% removal
    - Tote EW107-15 from 122 mg/L to less than 0.2 mg/L NH_3-N representing >99% removal
    - Tote MW5-09 from 48 mg/L to less than 0.3 mg/L NH_3-N representing >99% removal

- Laboratory testing also demonstrated that in two of the waters, the ESD System is a viable option to treat phosphorus levels characteristic of Renewi's ground waters and to meet the desired treated water requirements. Due to the high phosphorus concentrations and complex nature of the water in Tote EW107-15, additional stages of ESD treatment will be required to achieve the target concentration of 0.03 mg/L.

- After two stages of ESD treatment, the phosphorus concentration in the AmmEL treated effluent was reduced as follows:
    - Tote MW105-13 from 0.115 mg/L to 0.0219 mg/L, representing 80.9% removal
    - Tote EW107-15 from 2.27 mg/L to 0.735 mg/L, representing 67.6% removal
    - Tote MW5-09 from 0.146 mg/L to 0.011 mg/L, representing 92.5% removal

Jordan,

To ensure we have all the time and management attention we need, let's plan on meeting at Convertus Ottawa on **Wednesday afternoon at 1:30pm**. I'll be available all afternoon, or as much time as you like.

David Veinot
Environmental Compliance Manager

Hi David,

No problem. I have a meeting scheduled in the morning, if we could do 10:00- 10:15 am, that would be great.

Thanks,

Jordan

Jordan,

I found out that the Convertus Ottawa facility is hosting their annual tour with representatives from the City of Ottawa this Thursday afternoon starting at 1pm. The City likes to bring new hires and waste management reps by every year as an orientation on their green bin program.

To ensure that we can get participation of the site management representatives as needed, can we move your visit to Thursday morning instead. Say 9:00am?

Hello David,

No problem. Thank you for the explanations and confirming the monitoring tier you will be in for 2024. The pictures you attached of the underground holding tanks was a great visual.

If you could please let me know when the spring sampling does occur, that would be appreciated.

Thanks,

Jordan

CAUTION -- EXTERNAL E-MAIL - Do not click links or open attachments unless you recognize the sender.

Hello Jordan,

Sorry for the delay. I was in Manassas, Virginia last week to visit our newly acquired composting site.

1. All three manholes, or catch basins, connected to the USTs were constructed the same way. The manholes are reinforced segmented concrete sections connected with rubber gaskets.

   While six USTs were approved, only five were installed. As an aside, all of the USTs are two-piece 10,000-gallon reinforced concrete tanks with a mastic-sealed joint (not a gasket) joining the two halves.

   Only two of the five installed UST tanks are used to hold leachate. The two tanks are connected to each other via two 6" PVC pipes, effectively making one large tank. Only one of the tanks is connected to the manhole, or catchbasin, in the neighbouring Technical Hall. Please see the attached Figure to help understand the layout. Photos are also included. The first photo shows the tanks during their installation, the second shows the manholes in the Tech Hall, the third shows the PVC connections between the two process tanks. Photos four and five show the manhole's gasket.

2. GHD has confirmed that the Spring 2024 sampling event is scheduled to occur the week of May 6th. I have asked GHD to see if the sampling can be moved up to remain consistent with previous years (April, August & November).

3. The Trigger Program was set up for the purpose of identifying when additional confirmation of groundwater impacts is appropriate, and when implementation of a remedial response is appropriate. Routine monitoring is Tier I monitoring. Additional confirmation monitoring is triggered when two or more parameters exceed their respective trigger levels in a single sample from Tier I monitoring. When this is triggered, the follow up duplicate monitoring is referred to as Tier II monitoring. The purpose of Tier II monitoring is to confirm the presence of groundwater impacts.

   When Tier II monitoring (duplicate follow-up sampling) is undertaken and the impacts are confirmed, an evaluation of the impact is undertaken. This evaluation was undertaken formally as part of the Trigger Program in the past and as a result EW107-15 was commissioned in 2016 as a groundwater extraction well. Operating EW107-15 as a groundwater extraction well is a remedial response. Accordingly, the monitoring that is undertaken at the site is in Tier III (post remedial response monitoring).

   The Trigger Program evaluation included in the 2023 AMR identifies that there are multiple trigger exceedances at several shallow groundwater monitoring wells. The report describes that since remediation has already been implemented, there is no need for Tier II response monitoring at these locations during 2024. Accordingly, regular routine monitoring will continue through 2024. It should be noted that the monitoring program undertaken under Tier I or Tier III is the same.

Please let me know if you have any further questions.

David Veinot
Environmental Compliance Manager

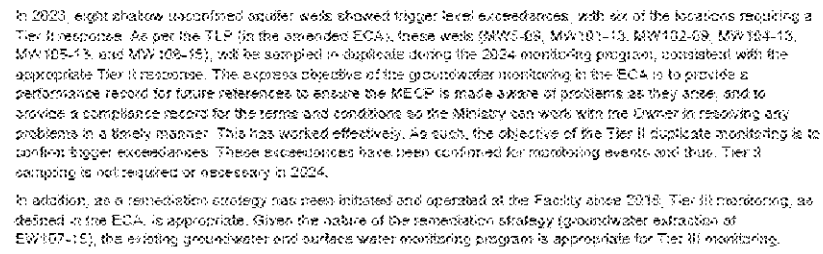
Cc: Ben Kempel <Ben.Kempel@ghd.com>
Subject: RE: Convertus' Discharge of Leachate at 5123 Hawthorn Road, Ottawa

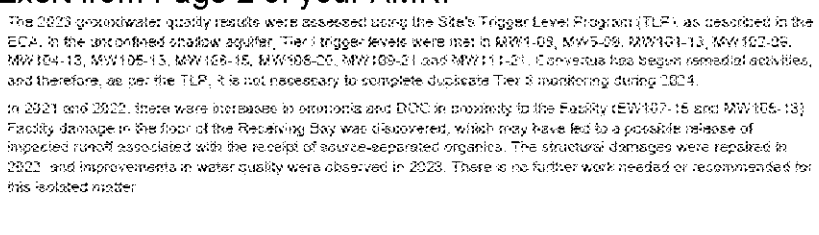


Hello David,

Thank you for providing me with further information on the event. I understand that at this time it is unknown to Convertus if any leachate actually entered any parts of the natural environment (i.e., groundwater). I am glad to hear that the gasket has been repaired and there is no current sign of groundwater entering the underground storage tanks.

I have a few additional questions:

1. There are six underground storage tanks listed in your sewage ECA, are these access manholes all constructed the same way with a rubber gasketed seal? Are only two of these tanks being used for the storage of leachate?
2. Do you have dates set to conduct the future supplemental groundwater monitoring and your remedial activities? Are you considering your "pump and treat" at EW107-15 a remedial activity and thus remaining in Tier I of the TLP? I also see reference in the AMR that Tier III of the TLP is appropriate?



Exert from Page 21 of your AMR:

In 2023, eight shallow unconfined aquifer wells showed trigger level exceedances, with six of the locations requiring a Tier II response. As per the TLP (in the amended ECA), these wells (MW5-09, MW101-13, MW102-09, MW104-13, MW105-13, and MW108-15), will be sampled in duplicate during the 2024 monitoring program, consistent with the appropriate Tier II response. The express objective of the groundwater monitoring in the ECA is to provide a performance record for future references to ensure the MECP is made aware of problems as they arise, and to provide a compliance record for the terms and conditions so the Ministry can work with the Owner in resolving any problems in a timely manner. This has worked effectively. As such, the objective of the Tier II duplicate monitoring is to confirm trigger exceedances. These exceedances have been confirmed for monitoring events and thus, Tier II sampling is not required or necessary in 2024.

In addition, as a remediation strategy has been initiated and operated at the Facility since 2018, Tier III monitoring, as defined in the ECA, is appropriate. Given the nature of the remediation strategy (groundwater extraction at EW107-15), the existing groundwater and surface water monitoring program is appropriate for Tier III monitoring.

Exert from Page 2 of your AMR:

The 2023 groundwater quality results were assessed using the Site's Trigger Level Program (TLP), as described in the ECA. In the unconfined shallow aquifer, Tier I trigger levels were met in MW1-09, MW5-09, MW101-13, MW102-09, MW104-13, MW105-13, MW106-15, MW108-20, MW109-21 and MW111-21. Convertus has begun remedial activities, and therefore, as per the TLP, it is not necessary to complete duplicate Tier II monitoring during 2024.

In 2021 and 2022, there were increases in chlorides and DOC in proximity to the Facility (EW107-15 and MW105-13). Facility damage in the floor of the Receiving Bay was discovered, which may have led to a possible release of impacted runoff associated with the receipt of source-separated organics. The structural damages were repaired in 2022, and improvements in water quality were observed in 2023. There is no further work needed or recommended for this isolated matter.

For your awareness, the MECP Technical Support Section is reviewing your 2023 Annual Monitoring Report.

Thanks,

Jordan

CAUTION -- EXTERNAL E-MAIL - Do not click links or open attachments unless you recognize the sender.

Hello Jordan,

The issue identified from the 2023 Annual Monitoring Report was not a spill. It was not a 'discharge of leachate to the natural environment', but a discharge of the natural environment into the leachate.

We were experiencing higher than expected volumes of leachate at the site during the late winter months that couldn't be accounted for by the moisture in the incoming SSO alone. We conducted an investigation of potential causes for this excess leachate, and while doing so we pumped out a manhole under the Tech Hall connected directly to the underground leachate storage tanks. Once empty, we saw an inflow of groundwater coming into the manhole through a gasketed seam (the manhole is a two-piece concrete unit connected by a rubber gasket around the circumference). What we saw was the opposite of a spill. The groundwater was flowing into the manhole, not the other way around. Our leachate volume was being increased by the incoming volume of this groundwater. We arranged for a tank maintenance company to professionally seal the leak using injected epoxy.

Now this event raised a secondary issue for us. If groundwater could flow in under certain conditions, is it possible for leachate to flow out under different conditions? Neighbouring water level measurements were reviewed to see if the water table was typically above, or below, the level of the leak (63" below grade). Because these wells were not very close to the manhole, and the water levels varied spatially, some extrapolations needed to be made. It was found that that during the past few years the groundwater level was consistently above the height of the leak, and the system experience inflow. However, there were occasions in the past when the water table may have dropped below the level of the leak and there could have been an outflow of leachate into the groundwater, IF a pathway was present. We don't know if this actually happened, as we don't know when the gasket failure actually occurred. We monitor the groundwater quality from the neighbouring extraction well on a monthly basis, and see concentrations rise and fall, but that is what you'd expect to see from an extraction well pumping intermittently. We also have level sensors in the tanks connected to the SCADA system, but the leachate levels rise and fall so frequently due to the tunnel irrigation process that a small volume loss may not have been noticed. However, we certainly did notice the rapid increase in the leachate volume within our USTs this winter that initiated the excess leachate investigation, so it is possible the leak is a recent development.

In the end, we have no hard evidence of a leachate leak to groundwater, but in the spirit of

transparency, we wanted to offer up the possibility of one intermittently occurring in the past. Despite the fact that this excess leachate investigation, and resulting corrective action, actually happened in 2024, we didn't want to wait until next year's annual report to describe it to the MECP. As stated in the report, future groundwater monitoring results will provide insight into any effect of this gasket deficiency. Along with the broken knee wall concrete in the Receiving Department described to the MECP in 2022, this may (or may not) be a source of organic-related compounds into the groundwater. We only offer them as potential sources. In both cases, the deficiency was identified and corrective action quickly taken.

Please let me know if you need anything else.

Subject: Convertus' Discharge of Leachate at 5123 Hawthorn Road, Ottawa

Good afternoon David,

It has been brought to the Ministry's attention that a discharge of leachate to the natural environment was discovered on February 8, 2024 at Convertus Canada Ltd.'s Ottawa facility located at 5123 Hawthorn Road. It's stated in Convertus Canada Ltd's 2023 Groundwater and Surface Water Monitoring Report that the leak in the underground process water (leachate) storage tank system was identified on February 8, 2024. It is also stated in the report that it is believed to be a result of a rubber gasketed-seam on a manhole and it was repaired on February 26, 2024.

Exert from the GHD produced 2023 Groundwater and Surface Water Monitoring Report for Convertus Canada Ltd.'s site in Ottawa:

GHD understands that another potential release into the shallow groundwater was discovered on February 8, 2024. A pre-cast concrete manhole, connected to the underground process water (leachate) storage tank system, was observed to have a leak along a rubber gasketed-seam. This was detected during a maintenance activity when the manhole was pumped dry. Groundwater was observed to be unexpectedly entering the manhole due to hydrostatic pressure, at a depth of 63 inches below grade. This groundwater inflow was causing excessive volumes of leachate to be generated and requiring off site disposal. The subject manhole is located on the east side of the Facility, where shallow groundwater quality impacts have been identified. Based on the elevation at the manhole, in relation to the seasonally fluctuating groundwater levels, it is possible that this gasket failure could have been an intermittent contributor for process water to enter the shallow groundwater from the Facility's leachate storage system when the groundwater level dropped below the level of the manhole. The time period over which this could have occurred is not known, nor is there any hard evidence of the process water actually leaving the manhole and going into the groundwater. Convertus had a specialized third-party contractor repair the gasket on February 26, 2024. Future groundwater monitoring results will provide insight into the effect of this repair on shallow groundwater quality near, and downgradient, of the Facility.

If you could please provide more details on this spill event via email, that would be appreciated.

Thanks,

Jordan

Good morning David,

Thank you for answering my questions and providing a maintenance update for the facility.

The complainant did not provide a lot of detail with their initial complaint. The complainant is located in the Hawthorne Industrial Park area along Rideau Road (West of Convertus). If I receive any further information related to this complaint, I will let you know.

I am acknowledging the review and actions that were taken by Convertus on May 23, 2025.

Subject: RE: Convertus Ottawa Facility Odour Complaint

CAUTION -- EXTERNAL E-MAIL - Do not click links or open attachments unless you recognize the sender.

Good afternoon Jordan,

Thank you for letting us know about the odour complaint earlier today.

Unfortunately, your email was sparse on details regarding the nature of the complaint. Your email didn't provide the complaint's address, or a description, frequency, intensity or duration of the odour (F.I.D.O.L). No specific dates or times were provided, except for today's. Its hard

to review meteorological data for prevailing wind direction if such information is missing.

Some things we do know to answer your follow-up questions. There have been no process upset conditions during the past month. However, there have been some maintenance activities conducted. In late March/early April, we did complete a new door installation on an (emptied) composting tunnel, which actually allowed better sealing of the process tunnels and lessened the load on the air system.

Since mid-April, the site has consistently been working through the weekends, but this consisted of mainly maintenance activities (primarily Screening Line upgrades), so no organic material was actually being received or moved within the plant on those days. All active composting tunnels would be closed, negative pressure throughout the plant maintained, and the odour abatement system would be working. The exterior doors would be closed as no SSO trucks would be received. No one working on-site on the weekends reported unusual odors on those days.

Our site personnel conducted an odour tour of the neighbourhood earlier today following receipt of your complaint notification. No odour associated with the facility was detected in any area visited. Odours that were observed included smoke from controlled brush fire on Blais Rd and a mild tire/asphalt smell along Rideau Rd.

Since we have no details about the historical weekend odours, I am not recording them as formal complaints. Today's investigation did not uncover any activity occurring at Convertus that should result in an unusual odour event. Therefore, I am logging today's complaint as unsubstantiated.

Condition 8.2(b) of our Air ECA requires us to notify the MECP of every odour complaint received by our facility. If we had received odour complaints in the past few months, you would have been told. We have not received any complaints from our direct phone line, email address, 24-hour community complaint line, or social media accounts. Today's complaint was the first received at Convertus Ottawa since February 2023.

Today's complaint has been electronically logged in accordance with Condition 8.2 (a) of our Air ECA and an investigation report has been completed.

Please let me know if you require anything else.

Incident Summary:

Convertus: front end loader caught fire, no spill

Initial Incident Description (as reported):

Created: Akiko Date (Spills Action Centre) - 2021/04/01 01:43:56 PM

Caller reports that a front end loader caught on fire, while it was outside on the paved parking lot to perform maintenance. The engine overheated. The FD arrived and put the fire out with water only. The firewater run off went to a catch basin that goes to their contained storm water management pond
No evidence of fuel spilled, and believed to be consumed in the fire.
Some smoke was visible at the time.

Incident Summary:
Air Facility Non-compliance

Initial Incident Description (as reported):
Created: Kyle Straberger (Ottawa District Office) - 2016/03/01 03:25:08 PM
On December 21, 2015 an Air Facility Inspection was completed at Orgaworld's Ottawa Site, located at 5123 Hawthorne Road in Ottawa, to determine compliance during the 2014 operating year under Environmental Compliance Approval Number 7021-7HQNDE and the 2015 operating year under Environmental Compliance Approval Number 1613-A2ELCQ which revoked and replaced Environmental Compliance Approval Number 7021-7HQNDE on December 10, 2015. As a result of the inspection the following non-compliance issues were identified: Condition 5 of Environmental Compliance Approval Number 7021-7HQNDE - Failure to submit the 2014 Written Summary by May 31, 2015 Condition 2 of Environmental Compliance Approval Number 7021-7HQNDE & Section 20.6 of the Environmental Protection Act by undertaking modifications outside of the Limited Operational Flexibility time period

SAC Action Class:	
Non-Standard Procedure:	No

Incident Description:
Last update: Kyle Straberger (Ottawa District Office) - 2020/04/08 02:20 PM
Since the Air Facility Inspection, additional Ministry inspections have occurred which confirmed the Facility has submitted the Annual Written Summary each year as required. No further Ministry action is required at this time. File Closed.

Incident Summary:
Large Door Open

Initial Incident Description (as reported):
Created: Tor Rustad (Ottawa District Office) - 2016/06/16 01:01:50 PM
Thursday, June 16, 2016, 12:55, telephone call from Caller: a large door at the facility is jammed open and cannot be closed. Caller is reporting this matter under a Standard Operating Procedure with the Ottawa District office.

SAC Action Class:	
Non-Standard Procedure:	No

Incident Description:
Last update: Kyle Straberger (Ottawa District Office) - 2016/09/12 04:35 PM
June 16, 2016 - EO Straberger Voicemail Message - Tor Rustad - Reports that Brian Begg, Orgaworld, contacted the Ottawa District Office to report a door of the Orgaworld Ottawa Facility is not able to close and therefore requested to speak with EO Straberger. June 17, 2016 - EO Straberger (11:05) Phone call to Brian Begg, (613)822-2056. Voice mail box full and no message could be left. Email sent to Brian Beggs, cc'd Nick Pora & Michael Rooke (all Orgaworld staff), requesting an update and actions taken to address and rectify the failed door. 11:57am - MSG - Nick Pora, Orgaworld Ottawa, stated out of the office today and inquired if follow-up could be completed Monday. If not, contact him at (613) 797-4671. 1:33pm - Received email from Brian Begg, Orgaworld Ottawa, stating that yesterday at 10:30am door #2 was stuck in the open position as a result of a broken cable on the right side. The Door Company was contacted who arrived on-site at approx. 1pm with repairs completed at 3:30pm. No issues with curbside waiting was reported. 2:00pm - Sent email to Brian Begg, Orgaworld Ottawa, thanking for the update to the event and inquiring if any complaints were reported to Orgaworld Ottawa. Confirmed receipt of Nick Pora's voicemail message indicating any remaining follow-up can be completed on Monday. No complaints were received by the Ministry of the Environment and Climate Change as a result of the malfunction of the door during 10:30am to 3:30pm. No additional follow-up was required based on repairs being completed same day with not

complaints received by the MOECC.

No further MOECC action is required at this time.

Incident Information

Incident Summary:	Source Testing Report Submission *cannot be longer than 60 characters*
Incident Description:	As required under Condition 10 of issued ECA No. 7021-7HQNDE, Orgaworld retained the services of Conestoga-Rovers & Associates to undertake a compliance source testing program at their Facility (5123 Hawthorne Road, Ottawa, On). The compliance source testing program was completed in November of 2012. On January 3, 2013, the Ottawa District Office and Standards Development Branch (SDB) received a copy of the Source Testing Report - Determination of Odour for Compliance with Certificate of Approval (Air) No. 7021-7HQNDE. The submission of the report satisfies the requirements of Condition 10.(7) which requires the company to submit the report to the Director and District Manager within two (2) months after source testing was completed. The District Office is awaiting review comments from SDB. Document & File

Incident Summary:
Adminstrative Non-compliance

Initial Incident Description (as reported):
Created: Kyle Straberger (Ottawa District Office) - 2018/03/16 01:53:08 PM
Subject Waste Generator Inspection occurred on March 15, 2018 at Orgaworld Ottawa. Manifest records review determine Copy 6 of Manifest No. RS77263 was missing. Company is will be following up with the receiver site to determine status of copy.

SAC Action Class:	
Non-Standard Procedure:	No

Incident Description:
Last update: Kyle Straberger (Ottawa District Office) - 2018/03/23 03:47 PM
March 23, 2018 - Email from David Veinot, Compliance Officer, Orgaworld Ottawa, provided copy 6 of Waste Manifest No. RS77263 dated April 4, 2017. The Carrier, OGI of Mitchell (1111971 Ontario Limited) still had the copy of the manifest in their files through a clerical error. Orgaworld is currently arranging for training for HWIN and O. Reg 347 training for both Ontario locations (Ottawa & London) to ensure this error does not occur in the future. A Subject Waste Generator Inspection was conducted at Orgaworld Ottawa to assess compliance with O. Reg 347 and HWIN generator requirements. Based on the findings the company did not have the required records to indicate proper disposal of subject waste. The company has followed up with the waste carrier and disposal site involved in the transfer of waste and received the missing manifest record. Training is being arranged for the company to ensure future events do not occur. No further action required at this time; file closed.

Incident Summary:
TSSAfsb - 10L Diesel, Broken Nozzle

Initial Incident Description (as reported):
Created: Ian Oosting (Spills Action Centre) - 2019/08/25 03:57:03 PM
Caller reports a 10L diesel spill to asphalt due to a broken nozzle. Nozzle was attached to a 30 foot hose. Nozzle has been replaced. No drains impacted. Absorbent was placed down and swept up. copy sent to TSSAfsb

SAC Action Class:	TSSA - Fuel Safety Branch - Hydrocarbon Fuel Release/Spill
Non-Standard Procedure:	No

Incident Description:
Last update: Angela Cappello (Ottawa District Office) - 2019/08/29 11:51 AM
ODO Duty Officer: small spill contained on asphalt, no off-site or water impacts and cleaned up. NFA required at this time.

Incident Summary:
Minor Administrative Non-Compliance

Initial Incident Description (as reported):
Created: Kyle Straberger (Ottawa District Office) - 2016/10/11 02:07:28 PM
As a result of an Air Facility Inspection, the Inspecting Officer noted that copies of the Emission Summary Table and Acoustic Assessment Summary Table were not available during the inspection. A request was made and copies were provided post inspection. As per Condition 5.3 of Environmental Compliance Approval No. 1631-A2ELCQ, the Company shall make the Emission Summary Table and Acoustic Assessment Summary Table available by any person, with charge, by posting it on the Internet or by making it available during regular business hours at the Facility.

SAC Action Class:	
Non-Standard Procedure:	No

Incident Description:
Last update: Kyle Straberger (Ottawa District Office) - 2016/11/14 09:06 AM
It was noted that these were not available at the Facility therefore the Inspecting Officer is requring hardcopies to be available during regular business hours at the Facility and updated as necessary. Electronic copies were provided as part of the inspection. No further MOECC action required at this time; file closed.

Incident Summary:
Odour Complaint - Orgaworld Ottawa

Initial Incident Description (as reported):
Created: Kyle Straberger (Ottawa District Office) - 2016/05/05 03:34:07 PM
Caller states that while at the intersection of Hawthorne Road and Rideau Road an odour was detected. Caller reports the odour resembled a rotting / sour milk odour. The odour was detected at 11:50am and noted the Orgaworld Facility had their doors open.

SAC Action Class:	
Non-Standard Procedure:	No

Incident Description:
Last update: Kyle Straberger (Ottawa District Office) - 2016/05/05 04:09 PM
May 5, 2016 - EO Straberger contacted Nick Pora, Ontario Operations Manager - Orgaworld, and left a voicemail message of the odour complaint reported to the ministry. (1:05pm) EO Straberger received a voicemail message from Nick Pora indicating an investigation has been completed which included a site visit to the area. Weather conditions may not support the source being Orgaworld as the wind direction was SW and the location would be north of the facility. Not discounting the complaint. Orgaworld filled out a log of the investigation and request a call back to discuss. (1:45pm) EO Straberger received email from Nick Pora providing a copy of the investigation log form completed in response to the odour complaint reported to the ministry. Field response initiated (walking referenced roads) and no odours detected. Wind direction suggests complaint is invalid. (2:15pm) EO Straberger contacted Nick Pora to discuss the investigation into the odour complaint. Reviewed investigation log which suggests the complaint may not be associated with Orgaworld operations due to wind direction at the time of the complaint. All doors are functional and are closed with the exception to allow receipt of waste. Negative pressure system functional. Will ensure doors are only open to allow trucks to access tipping floor. No further action is required at this time. Will document and file complaint and follow-up information. --- The ministry received a complaint of a odour at the intersection of Hawthorne Road and Rideau Road. Caller described the odour as rotten sour milk and further noted the doors of the Orgaworld Facility was open. Complaint details were provided to Orgaworld who completed an investigation which determined all operational systems (doors, negative pressure system) were operating properly. Field investigations was completed with no odours detected. Weather conditions were reviewed for the time period of the complaint which determine the complaint did not support Orgaworld Ottawa as being the source due to wind direction and location. Copy of the investigation log was provided to the ministry. No further MOECC action is required at this time. Recommend file closed.

Incident Summary:

Fire in Composting Tunnel

Initial Incident Description (as reported):

Created: Kyle Straberger (Ottawa District Office) - 2015/07/29 02:46:25 PM

EO Straberger received an email from Michael Rooke, Orgaworld Ottawa, stating that last night, on July 28, 2015, a small fire started in Tunnel 8 of the Ottawa Orgaworld Composting Site. The fire caused no damage, nor injuries. The material was moved outside and the fire department sprayed the water from the on-site hydrant in order to put out the hot spots and as a precaustionary measure prevent any possible re-ignition. All water applied to the material stayed on-site and will eventually flow into the approved stormwater management pond. The water will either used in the facility as per usually operations or if compliant with trigger parameters outlined in the ECA, will be discharged. The City of Ottawa has been notified and Orgaworld anticipates no other adverse effect to the site, or to service.

SAC Action Class:	
Non-Standard Procedure:	No

Incident Description:

Last update: Kyle Straberger (Ottawa District Office) - 2016/03/01 03:08 PM

July 29, 2015 - EO emailed Michael Rooke to obtain answers to the following questions:

1. Do we know the cause of the fire other than the generation of a hot spot?
2. Is this event similar to the previous fires regarding the composting of 12-20?
3. Has the material been relocated back inside the facility?

July 29, 2015 - EO received the following response from Michael Rooke in response to the above questions:
Hello Kyle:

Sorry for the delay in responding. No, the ignition source is still under investigation, but I agree with you and tend to believe it was a localized hot spot. This material is comprised of residual plastic and material greater than 15mm. It was not being composted, but was being stored in Tunnel 8, so I don't believe this event to be similar to previous fires. The material is still outside. It is our belief that it would pose unnecessary risk to health and safety to bring this material back into the facility. Our intention to dispose of the material, but first, we wish to make sure we are not transferring our problems to another facility/landfill. We are currently wetting down the material and spreading it out it ensure there are no further hotspots. We plan to ship to final disposal as fast as possible, but this may take several days. Please let me know if you have any concerns, or require further information regarding this matter. Thanks for your time Kyle.

Kind regards,

Mike Rooke
Compliance Officer

July 29, 2015 - EO Straberger emailed Michael Rooke to inquire the duration of the storage of this material in the composting tunnel as well as agree witht he approach Orgaworld is taking to prevent further fire hazards.

July 30, 2015 - EO received email from Michael Rooke stating that the material was stored in the composting tunnel for 23 days.

July 30, 2015 - EO emailed Michael Rooke and requested that the MOECC be updated when disposal of this material occurs.

July 30, 2015 - EO received an email from Michael Rooke confirming this will be completed.

EO received confirmation that the waste material was transported to BFI over a phased in approach to ensure waste was fully extinguished and to prevent anaerobic conditions that could trigger any concerns and/or complaints.

Summary: The fire located in the tunnel 8 consisting of residuals and overs was extinguished by the City of Ottawa Fire Department. Waste was transported to Progressive Waste Solutions (formerly known as BFI) for disposal. No complaints or on-going fire incidents were received nor occurred since the July 2015 event.

No further MOECC action required at this time; file closed.

Incident Summary:
Non-Compliance with Condition 9(8) of ECA Number 7251-8GKRPD

Initial Incident Description (as reported):
Created: Kyle Straberger (Ottawa District Office) - 2015/02/19 02:15:32 PM
Industrial Sewage Works Inspection was completed at Orgaworld Ottawa to assess compliance with ECA Number 7251-8GKRPD. Non-compliance with Condition 9(8) which requires Orgaworld to establish a Compliance and Trigger Level Monitoring Program based on groundwater monitoring within two years of operations. Since 2013 Orgaworld has been in discussion with the Ottawa District Office regarding contamination of groundwater as a result of operations at the site (ammonia primarily). In 2014 Orgaworld submitted a Groundwater Assessment and Work Plan to outline current and historic groundwater quality as well as provide a path forward to remediate the groundwater impacts. MOECC's TSS reviewed the report and accepted Orgaworld's proposal with an additional requirement to implement surface water sampling in the surrounding ditches immediately to determine if surface water is being impacted by shallow groundwater.

SAC Action Class:	
Non-Standard Procedure:	No

Incident Description:
Last update: Kyle Straberger (Ottawa District Office) - 2015/02/19 02:25 PM
Orgaworld has been provided the review comments by TSS and is currently in the process of installing a remediation monitoring well to extract the contaminants. The extracted water is to be used in the composting process as process water as ammonia (as well as other contaminants of lesser concentration) does not pose a risk to compost quality. Additional updates to be provided as Orgaworld proceeds with the Groundwater Assessment and Work Plan.

Incident Information

Incident Summary:	Overhead Door Malfunction *cannot be longer than 60 characters*
Incident Description:	Email Notification from Orgaworld Ottawa indicating an issue with the overhead bay doors of the SSO receiving bay. The email below outlines the actions that will be taken to ensure limited odour issues, if any, during the manual operation of the doors until repairs can be made. Condition 6.2 outlines Orgaworld's responsibility to ensure odourous emissions are contained Condition 6.2 - The Company shall keep all doors in the enclosed building of the Facilityfully closed at all times, except when used for necessary personnel or vehicle entrance and exit. Hello Kyle: Orgaworld Ottawa is currently experiencing issues with one of our overhead doors. The problem is with the main spring needing replacement. Currently the door is down, however, if we need to use this door (due to the large number of city trucks wanting to enter the facility) then we will open the door, and leave it open until all the trucks are out. This action will be taken to minimize the risk while the door opens and closes. Repairs are slated to occur tomorrow morning when we do not have so many trucks entering the facility. Obviously we will attempt not to use this door, but wanted to give you advanced warning of this issue. If you have any questions or concerns, please let me know. Kind regards, Mike Rooke Compliance Officer Email fro Tanya Minarik stating the door repairs have been completed. Incident resolved. Hi Kyle, The repair to this door was just completed. Kind regards,

	Tanya Minarik Site Supervisor Orgaworld has confirmed that the malfunction of the overhead doors for the receiving bay of the Facility has been fixed and is now operational. The ODO did not received any odour complaints for the two days when the door was operated manually. No further MOE action is required at this time; file closed.

SAC Action Class:	Pollution Incident Reports (PIRs) and "Other" calls
Non-Standard Procedure:	No

Incident Description:
Last update: Alexander J Baker (Ottawa District Office) - 2021/03/01 10:02 AM
EO BAKER followed up on the report with Convertus Ottawa to determine the accuracy of the report. Convertus Group's Environmental Compliance Manager confirmed that he toured the facility on February 25th and did not observe any of the reported odours. Additionally, the Operations Manager of the site confirmed that there has not been a reduction in the volume of acid used in the ammonia scrubbers. All three (3) scrubbers are fully operational and set to hold a pH of 4.0. Acid is automatically added to the system as needed to maintain this set pH level. Further details cannot be ascertained from the anonymous caller. The ministry will continue to monitor and address odour complaints at the site, but will not take action on this report at this time.

Incident Summary:

Rejected Load at Convertus Ottawa

Initial Incident Description (as reported):

Created: Alexander J Baker (Ottawa District Office) - 2021/03/01 11:39:28 AM

In accordance with condition 5.3 of ECA #2766-7HEPSZ, Convertus notified MECP of a rejected load.

The details of the load, and the actions taken, are as follows:

Date & Time: Thursday February 11, 2021 1:37pm
Customer: City of Ottawa
Carrier: Miller Waste
Weighbridge Ticket # 2177987
Description of Waste: Expected to be 4,090 kg of municipal organic SSO but turned out to be 3,040 kg of organic SSO mixed with 1,050 kg of contamination (primarily cardboard).
Weight of Rejected Load: 1,050 kg

SAC Action Class:	
Non-Standard Procedure:	No

Incident Description:

Last update: Adam Worth (Ottawa District Office) - 2021/03/25 02:13 PM

Since there is no way to load rejected material back into a curbside truck for disposal, Miller Waste sent out a crew and another truck a few hours later to separate the SSO from the contamination by manually sorting through the pile. They left with 1,050 kg of residual waste. The remaining 3,040 kg of SSO was accepted for composting. Convertus was told that they were disposing of the residual waste at the City of Ottawa's Trail Road Landfill 4475 Trail Road, Ottawa.

Copies of the incoming weighbridge ticket and several photos showing the pile before it was manually sorted to remove contamination, and after, are attached.

This is the first load of waste that was rejected at Convertus Ottawa in 2021.

CAUTION -- EXTERNAL E-MAIL - Do not click links or open attachments unless you recognize the sender.

Good Afternoon Tracy,

In accordance with Condition 5.3 (Rejected Waste Handling) of our ECA (Waste) #2766-7HEPSZ, I wish to notify you of a partial load of waste that rejected by our Ottawa composting facility yesterday afternoon.

The details of the load, and the actions taken, are as follows:

Date & Time: Thursday February 11, 2021 1:37pm
Customer: City of Ottawa
Carrier: Miller Waste
Weighbridge Ticket # 2177987
Description of Waste: Expected to be 4,090 kg of municipal organic SSO but turned out to be 3,040 kg of organic SSO mixed with 1,050 kg of contamination (primarily cardboard).
Weight of Rejected Load: 1,050 kg

Miller Waste offloaded SSO material at Convertus Ottawa from a curbside truck. Convertus Receiving personnel noticed the contamination right away and reported it to site management. Material was isolated from the incoming waste pile and the City of Ottawa and Miller Waste were notified.

Since there is no way to load rejected material back into a curbside truck for disposal, Miller Waste sent out a crew and another truck a few hours later to separate the SSO from the contamination by manually sorting through the pile. They left with 1,050 kg of residual waste. The remaining 3,040 kg of SSO was accepted for composting. We were told they were disposing of the residual waste at the City of Ottawa's Trail Road Landfill 4475 Trail Road, Richmond, ON.

Copies of the incoming weighbridge ticket and several photos showing the pile before it was manually sorted to remove contamination, and after, are included for your review.

This is the first load of waste that was rejected at Renewi Ottawa in 2021.

Please let me know if you have any questions.

David Veinot

Incident Information

Incident Summary:	Non-compliance with ECA *cannot be longer than 60 characters*
Incident Description:	Waste Disposal (processing) Site inspection completed on November 21, 2013 to determine compliance with ECA and applicable environmental legislation. The following non-compliance items were noted after completing the inspection: 1. Incoming Organic Waste - incoming organic waste is to be sampled and analysed for the parameters outlined in Schedule B of the ECA. The sample results provided to the Inspecting Officer did not provide sample results for the parameter polychlorinated biphenols (PCBs). 2. Finished Compost - finished compost is to be sampled and analysed for the parameters outlined in Schedule B of the ECA. The sample results provided to the Inspecting Officer did not provide sample results for the parameter PCBs. Voluntary Abatement - The Facility immediately upon receiving the inspection report, shall ensure all incoming organic waste and finished compost is analyzed for all the parameters outlined in Schedule B of the ECA. The Facility, by no later than December 12, 2013, provide sample results for the following months of March, June and October of 2013 to determine if sample results indicate a further lack of sampling for PCBs parameter. See attached letter from Waste Policy Branch (Sones) to the Canadian Compost Council outlining the rollout of the new Ontario Quality Compost Standards and how it impacts facilities (ECA conditions, sampling requirements, etc). No further action is required at this time until direction is provided clarifying the MOECC position with respects to PCBs and the letter from Waste Policy Branch. File Closed

Incident Summary:
Non-compliance-Industrial Sewage Works Environmental Compliance Approval

Initial Incident Description (as reported):
Created: Kyle Straberger (Ottawa District Office) - 2016/02/26 09:21:58 AM
On December 21, 2015 the Ministry of the Environment and Climate Change completed an Industrial Sewage Works Inspection at the Orgaworld Ottawa Composting Facility located at 5123 Hawthorne Road in the City of Ottawa. The inspection concluded that Orgaworld was non-compliant with Condition 5.1 & Condition 10.3 in 2014.

SAC Action Class:	
Non-Standard Procedure:	No

Incident Description:
Last update: Kyle Straberger (Ottawa District Office) - 2016/04/14 09:32 AM
No non-compliance was identified in the 2015 operating year that was available for review at the time of the inspection (Condition 10.3 - Annual Report - submission date of March 2016). Orgaworld must ensure the following action items are addressed to be compliant with their ECA. 1. Orgaworld must continue to ensure all field and analytical parameters are analysed as per Condition 5 of the ECA. It was observed during the completion of the inspection report that Orgaworld began to rectify the problem outlined for the 2014 operating in 2015 as compliance was attained for the 2015 operating year. 2. Orgaworld shall complete and submit the 2014 Annual Report, as outlined in Condition 10 of the ECA, to the Ottawa District Office by no later than March 31, 2016. It should be noted that during the review of the district file and information requested as part of the inspection that Orgaworld had complied with Condition 5.1 for the 2015 operating year by analysing all samples collected as per Table 1 of the ECA. No environmental complaints or impacts were reported to the ministry as a result of lack of sample analysis for the 2014 operating year. The lack of analysis will impact Orgaworld's potential for relief for a reduction in the list of parameters and monitoring frequencies specified in Condition 5.3 as it pertains to Condition 5.1. Orgaworld will be required to demonstrate compliance with this condition consecutively over a period of time before the ministry would modify the monitoring program. --- March 10, 2016 - EO received email from Mike Rooke, Orgaworld (RM), providing copy of the 2014 Annual Report as required by action item #2 of the Industrial Sewage Works Inspection Report. All actions required outlined in the Industrial Sewage Works Inspection Report have been addressed. A copy of the 2014 Annual Report was submitted as required. No further MOECC action is required at this time; file closed.

Incident Summary:
Waste Transfer / Processing Inspection - Non-compliance

Initial Incident Description (as reported):
Created: Kyle Straberger (Ottawa District Office) - 2016/03/17 03:58:04 PM
On December 21, 2015 a Waste Transfer Processing Inspection was conducted which resulted in the following actions to be taken by Orgaworld: 1. By no later than April 29, 2016, provide a response to the actions taken in regards to the Daily Inspection Checklist indicating a problem with on and off-site litter referenced in Section 2.1 of the Report. 2. By no later than April 29, 2016, complete revisions of all operational and maintenance documents and procedures to reflect the new diesel power shredder in order to ensure proper operation and maintenance. A copy shall be provided to the Ottawa District Office to remain on file. Awaiting completion of VAMA actions items.

SAC Action Class:	
Non-Standard Procedure:	No

Incident Description:
Last update: Kyle Straberger (Ottawa District Office) - 2016/04/13 03:11 PM
April 12, 2016 - EO received email from Mike Rooke, Orgaworld (MR), providing copies of the updated Operations & Maintenance Manual and Daily Site Inspection Record Sheet. April 13, 2016 - (14:20) EO contacted Mike Rooke, Orgaworld, to discuss the actions taken by Orgaworld when an "On and off-site litter" issues is deemed "not OK" as per the findings in the 2015 inspection report. MR stated that when the daily inspection noted issues with on and off-site litter the issues was either pertaining to litter (dust/sand) on the paved areas of the site resulting in a street sweeper to be retained or was small amounts of litter (plastics) in which Orgaworld Staff would clean up as part of their daily tasks. - The new daily inspection record requires that all actions are to be entered when an item is assigned a "Not OK" in the check box. EO stated the review of the O&M Manuanl will be completed with comments provided by email when completed. --- As a result of the Inspection Report completed, Orgaworld Ottawa has submitted both updated documents as requested in Section 5.0 of the report. No further action is required at this time. File Closed.

Incident Information

Incident Summary:	Non-compliance - ECA - Monitoring Program *cannot be longer than 60 characters*
Incident Description:	A ministry inspection was completed at Orgaworld Ottawa to determine compliance with issued Industrial Sewage Works Environmental Compliance Approval. The results of the inspection determined that the Site had failed to obtain and record temperature of the SWMP during the monthly sample collection as required by Condition 5 of the ECA. As a result, the Facility must ensure the following action item is completed within the provided time frame to ensure compliance: 1. Develop and implement a procedure to ensure temperature is measured and recorded during the monthly sample collection of the SWMP effluent monitoring program as required by Condition 5 of the ECA. This procedure, once reviewed by the undersigned, shall be implemented immediately to ensure compliance with the monitoring program for the upcoming 2014 operating year. --- December 27, 2013 - EO Straberger received an email from Michael Rooke of Orgaworld with an attached document updating Caduceon Laboratories to inlcude 'temperature' as a parameter for the analysis of industrial sewage work samples. The submission of this information satisfies the actions requested of Orgaworld Ottawa. Documents received attached. Email to Mike Rooke acknowledging acceptance of the updated sample submission form and requesting implementation. Email received back indicating the sample submission document to Caduceon Labs has been implemented. No further MOE action is required at this time; file closed

Odour Complaint - Renewi Ottawa

Initial Incident Description (as reported):
Created: Kyle Straberger (Ottawa District Office) - 2019/07/08 09:48:46 AM
MECP Public Information Centre received an email on July 2, 2019 pertaining to an odour complaint from Renewi Ottawa operations:

There's been an continuous odor emitting form Orgaworld at 5123 Hawthorne Rd, Gloucester, ON since June 29 , 2019. We live approximately 1.5 kms southeast and have been smelling this for over 3 days now , normally we get a whiff once in a while , but not for 3 days.

Incident Summary:

Industrial Sewage Works Non-compliance

Initial Incident Description (as reported):

Created: Kyle Straberger (Ottawa District Office) - 2018/03/29 03:40:59 PM

As a reuslt of an Industrial Sewage Works Inspection on March 15, 2018, the following non-compliance items were identified:

1. Failure to collect monthly sample for October 2017 as per ECA condition
2. Failure to collect monthly sample due to ice covered conditions

SAC Action Class:	
Non-Standard Procedure:	No

Incident Description:

Last update: Kyle Straberger (Ottawa District Office) - 2020/05/25 11:10 AM

Please see the VAMA Table for actions required.

April 24, 2018 - David Veinot sent a letter to the ministry providing responses to the action items outlined in the Industrial Sewage Works Inspection Report. See responses below:

Action Item #1: Orgaworld Canada Inc. must ensure monthly samples are collected regardless of precipitation events. Please confirm, in writing by April 27, 2018, future monthly samples are collected regardless of precipitation events.

Response: Orgaworld is committed to ensuring that water samples will be taken from the Storm Water Retention Pond on a monthly basis in accordance with Condition 4(1) of our Industrial Sewage ECA – Action Item Completed 4/24/2018.

Action Item #2: Orgaworld Canada Inc. must review the sampling protocol and sewage works system to determine an alternative solution to sample collection during periods of ice covered conditions. It is understood health and safety of staff is priority however alternative solutions are available to prevent iced cover conditions (aeration, bubblers, etc.). By December 2018 provide a response to the undersigned outlining the options explored in a proposal on how the facility plans to satisfy the requirements of the ECA.

Response: Orgaworld is exploring accessability options at our Storm Water Retention Pond which will allow for year-round water sampling while ensuring the safety of our staff. A description of the corrective action taken will be sent to the MOECC once the infrastructure has been installed and tested, but no later than December 31, 2018 – Action Item Outstanding.

December 10, 2018 - David Veinot sent a letter to the ministry providing a follow-up to the outstanding Action Item #2.

Action Item #2: Orgaworld Canada Inc. must review the sampling protocol and sewage works system to determine an alternative solution to sample collection during periods of ice covered conditions. It is understood health and safety of staff is priority however alternative solutions are available to prevent iced cover conditions (aeration, bubblers, etc.). By December 2018 provide a response to the undersigned outlining the options explored in a proposal on how the facility plans to satisfy the requirements of the ECA.

Response: Orgaworld explored a variety of accessability options at our Storm Water Retention Pond which would allow for year-round water sampling while ensuring the safety of our staff. Since your inspection, Renewi Canada has installed 6 aerators in the stormwater retention pond which will be operated year-round. The aerators are expected to prevent a build-up of ice in the areas immediately surrounding them. A pond water sample will be drawn on a monthly basis from this ice-free area, and submitted for analysis in accordance with our ECA. It is anticipated that the aerators will improve the ammonia concentrations found in the water through improved aeration - but the open water may also attract more well-fed geese. A photo of the operating aerators is provided on the next page. – Action Item Closed

July 10, 2018 - The company installed the first of six aerators in the stormwater management pond.
November 28, 2018 - The company installed the remaining five aerators.

The 2019 Annual Monitoring Report reported that the aerators worked continuously throughout the 2019 operating year with unplanned downtime as a result of units freezing. During the 2019, all months were sampled.

The company has addressed the non-compliance identified in the Industrial Sewage Works Inspection Report by installing aerators within the stormwater management pond. As a result, all monthly samples were able to be collected during the 2019 operating year.

No further MECP action required at this time; File Closed

Incident Summary:

Orgaworld: Odour complaint from nearby worker.

Initial Incident Description (as reported):

Created: Jeremy Weiss (Spills Action Centre) - 2016/09/29 03:50:27 PM

-City of Ottawa reporting they received a call from a citizen regarding an odour complaint suspected from Orgaworld.
-Caller to City of Ottawa did not leave their name, but works at Simcon Steel Ltd (3436 Rideau Road, 613.822.9494), which is reported to be near Orgaworld (Google Maps shows approx. 655m "as the crow flies").
- City of Ottawa had notified Orgaworld of the odour complaint and will provide Orgaworld with 311 File Number and IDS IR #. Upon speaking with Orgaworld, City of Ottawa was informed that they (Orgaworld) was conducting inspections around the time of the complaint and that operations were okay at the facility.
-Message left to City of Ottawa stated they work near Orgaworld and odours were horrendous, hard to work with and wanted an investigation into the odours.

Incident Description:

Last update: Kyle Straberger (Ottawa District Office) - 2016/11/14 09:27 AM

EO Straberger

September 30, 2016

- Review weather data for September 29, 2016 collected from Ottawa International Airport:

Wind Direction = North
Average Wind Speed = 22.4km/hr
Weather = Clear in the morning and cloudy in the afternoon

Distance from Orgaworld stack to Simcon Steel Ltd = 825m
Complaint Location = east north east of the Orgaworld Stack

(9:24) Phone call to Nick Pora, Orgaworld, to discuss the complaint. Nick stated that he is currently working on the complaint investigation and is reviewing the meteorological in comparison to the SCADA system for Orgaworld. Nick also conducted a site visit to complaint site and spoke with an employee to discuss the odours. Nick stated an odour was detected but was difficult to describe and was not comparable to Orgaworld however could not rule it out. Other sources were observed, Tomlinson evaporation stacks (direct plan of view) and other industrial operations in the industrial park. Nick will provide the formal complaint response report to the MOECC once complete.

(10:58) Received email from Nick Pora, Orgaworld Ottawa, providing the complaint log completed as a result of the odour complaint. The summary of the complaint is as follows:

Name of Complaint - Simco Steel
Address - 3436 Rideau Road, Ottawa
Telephone Number - (613) 822-9494
Date: September 29, 2016
Time: 3:35pm (Received at 3:50pm)
Weather Conditions: ENE, 27 gust 37 km/hr, 17.6C, partly cloudy
Detail of Complaint - Business on Rideau Road phones City's 311 line to complain about "a bad smell"
Action Taken: Nick Pora went directly to location of complaint to investifate. Spoke to complainant about this smell being different (3:55pm). Directly downwind from 2 Tomlinson staks. Drive to different location but could not detect "Orgaworld" odours
Possible Cause(s) for Complaint: Odour orginating from other source. Doors open to let in/out curbside
End Result of Investigation: Some SCADA programming work was being done but plant was functioning correctly (normally). Ensure that receiving doors are only open when trucks passing through them.

October 5, 2016 - Emailed Nick Pora outlining the requirements of Condition 8 of the ECA requiring the submission of a report to the District Manager outlining the complaint and the follow-up completed.

October 5, 2016 - Received email from Nick Pora stating that the report will be submitted tomorrow if acceptable.

October 6, 2016 - Nick Pora sent email to Steve Burns, District Manager, providing the report into the complaint and investigation completed.

October 11, 2016 - Response letter sent to Orgaworld Ottawa acknowledging compliance with notification requirements and accepting the results of the investigation into the odour complaint.

It is of the opinion of the Environmental Officer that the results from the investigation completed by Orgaworld representative that the complaint of odours was not related to compost odours. The ministry and Orgaworld will continue to follow-up with odour complaints when received by the public.

No further MOECC action is required at this time; file closed.

Incident Summary:

FA Re-Evaluation - Environmental Compliance Approval 2766-7HEPSZ

Initial Incident Description (as reported):

Created: Kyle Straberger () - 2020/05/15 01:28:15 PM

On April 30, 2020 the Ministry of the Environment, Conservation and Parks generated a Non-compliance Stub for a Financial Assurance (FA) re-evaluation for non-compliance with Condition 1(20) of Environmental Compliance Approval Number 2766-7HEPSZ.

SAC Action Class:	
Non-Standard Procedure:	No

Incident Description:

Last update: Kyle Straberger (Ottawa District Office) - 2020/05/15 03:53 PM

Condition 1.(20)
(a) Within twenty two (22) days from the date of this Approval, the Owner shall submit to the Director an additional Financial Assurance in the amount of CAD$190,226.00. This additional Financial Assurance shall be in a form acceptable to the Director.

(b) The Owner shall maintain the existing Financial Assurance in the amount of CAD$727,700.00.

(c) The new total Financial Assurance in the amount of CAD$917,926.00 shall provide sufficient funds for the transportation, Site clean-up and disposal of all quantities of waste on the Site at any one time.

(d) Commencing on April 30, 2020 and at intervals of three (3) years thereafter, the Owner shall submit to the Director, a re-evaluation of the amount of Financial Assurance to implement the actions required under Condition 1.(20)(c). The re-evaluation shall include an assessment based on any new information relating to the environmental conditions of the Site and shall include the costs of additional monitoring and/or implementation of contingency plans required by the Director upon review of the closure plan and annual reports.

(e) Commencing on April 30, 2018, the Owner shall prepare and maintain at the Site an updated re-evaluation of the amount of Financial Assurance required to implement actions required under Condition 1.(20)(c) for each of the intervening years in which a re-evaluation is not required to be submitted to the Director under Condition 1.(20)(d). The re-evaluation shall be made available to the Ministry staff, upon request.

(f) The amount of Financial Assurance is subject to review at any time by the Director and may be amended at his/her discretion. If any Financial Assurance is scheduled to expire or notice is received, indicating Financial Assurance will not be renewed, and satisfactory methods have not been made to replace the Financial assurance at least sixty (60) days before the Financial Assurance terminates, the Financial Assurance shall forthwith be replaced by cash.

May 7, 2020 - David Veinot, Convertus (formerly known as Orgaworld or Renewi), emailed EO Straberger and provided an update to the FA re-evalutation as required by Condition 1(20) of Environmental Compliance Approval Number 2766-7HEPSZ. On April 30, 2020 Convertus sumbitted, by mail, the 2020 Financial Assurance Re-Evaluation package to MECP's Client Services and Permissions Branch.

May 8, 2020 - Emailed David Veinot acknowledging receipt of the email and advised the information will be updated into the MECP's system.

The Ministry of the Environment, Conservation and Parks created a Non-Compliance Stub as a result of not receiving a FA Re-evaluation for Environmental Compliance Approval Number 2766-7HEPSZ on April 30, 2020. On May 7, 2020 Convertus advised the Ottawa District Office that on April 30, 2020 the financial re-evaluation package was submitted to the Ministry's Client Services and Permissions Branch via mail.

The Ministry's Client Services and Permissions Branch will review the information and provide a response to the company regarding the FA re-evaluation package.

No further action required by the local Ottawa District Office at this time.

File Closed.

Incident Summary:
Orgaworld Canada: Facility Fire(Smothering) tunnels 7 and 8, contained

Initial Incident Description (as reported):
Created: Aaron Richards (Spills Action Centre) - 2018/02/05 04:39:58 PM
Brian Begg, Orgaworld Canada to SAC(ar). Brian states the facility experienced a fire(smothering) today involving tunnels #7 and #8. The cause of the fire is reported to be a result of the fermentation process, producing smoke. Brian states the Ottawa FD was contacted and arrived on site shortly after 09:00 where water was applied to the waste piles. Brian does not know how much water was applied but states that the on site reservois tank with a capacity of 125,000 US gallons was emptied. Brian states that the water was contained to the concrete bunker which is surrounded by a trench that leads to on site storage tanks. Brian states that there have been no off site impacts regarding run off water or smoke. Brian states one pumper truck is remaining on site to ensure all smouldering has been put out. Brian states that the waste involved willl be stored outside the bunker until it can be determined that all smouldering has ceased. 17:01 SAC(ar) to Ottawa FD, Jennifer. Jennifer states she will aquire information regrading volume of water applied and if there was any off site runoff related to the event and provide SAC with an update. 17:16 Ottawa FD, Jennifer to SAC(ar). Jennifer provided contact information for fire chief on site, Kevin Lambert (613-913-4605). 17:18 SAC(ar) to Kevin Lambert, Ottawa FD. Kevin states that the reservoir on site (14, 000 L capacity) was drained to apply to the waste material. Kevin states there is a catchment system on site and that the water that was applied was recaptured. Kevin states there were no observations of off site impact and no concerns for residential areas. One pumper truck has remained on site to spray the waste pile to prevent re-ignition. Kevin anticipates crews to remain on site until approximately 22:00 tonight. SAC(ar) requested an update when crews leave site for the night. *** SIte not within SWPA ***

SAC Action Class:	Air Spills - Fires
Non-Standard Procedure:	No

Incident Description:
Last update: Kyle Straberger (Ottawa District Office) - 2018/02/26 02:17 PM
EO Straberger

9am - Phone call from Brian Begg (BB), Orgaworld stating a fire (smouldering of SSO) has occurred at the Orgaworld Ottawa Facility. FIre Department has been notified and just arrived on-site. Further updates will follow

---

Email to BB - Outlined requirements in the ECA to report spills to teh SAC and follow-up report to the DM.

Hi Brian,

As part of Orgaworld's ECA, Condition 11 – Emergency Situations Response and Reporting requires all spills (fires are considered a spill to air) to be reported to SAC. As part of the condition, a report is to be submitted to the District Manager (Steve Burns) within 3 calendar days following the event.

This may already be outlined in Orgaworld's Emergency Response and Contingency Plan however this email may serve as a reminder. Please let me know if you have any questions.

Thank you,

Kyle Straberger

MSG - (11:00) BB, Orgaworld - Call back (613-790-0146

11:05am - Phone call to BB, Orgaworld. The material will be pulled outside and extinguished. The Fire Department has control of the site and Orgaworld is not allowed to enter until it has been released (health & safety reasons). Material could be outside for several days. City of Ottawa trucks hauling source separated organics are arriving and wanted to unload. Orgaworld would like to request the temporary storage of approx. 6 trucks (10 tonnes) and relocated it back inside when the fire department releases the site back to Orgaworld. Orgaworld believes it will be relocated back inside int he afternoon (1/2pm).

11:20am - Phone call BB outlining the ministry is in agreement with proposal. Email sent outlining additional requirements.

Hello Brian,

I concur with your proposal to allow for the temporary outdoor storage of approx. 10 tonnes (6 truckloads) of source separated organics at the Orgaworld Ottawa Facility today only, February 5, 2018, until the Ottawa Fire Department releases the site back to Orgaworld Ottawa.

In order to temporarily store the waste outside the following conditions will need to be complied with:

- Orgaworld Ottawa shall maintain records of the total amount of waste received and stored temporarily outside

- No additional waste or materials are to be stored outside; only incoming source separated organics from the City of Ottawa

- In the event complaints are received by Orgaworld Ottawa or the Ministry of the Environment and Climate Change, the source separated waste being stored at the site shall be either moved into the building immediately (if agreed to by the Ottawa Fire Department) or disposed of at a ministry approved waste disposal site by an approved waste management system

- Orgaworld Ottawa is approved to accept waste Monday to Friday from 6am to 7pm. In the event waste will not be relocated back into the processing building by 7pm, Orgaworld Ottawa will be required to remove the waste off-site to a ministry approved waste disposal site by an approved waste management system.

If you have any questions please contact me to discuss.

Regards,

Kyle Straberger

Email from BB - Agree thank you

Email from BB - Good afternoon Kyle it is now 6:00 PM all the Sso that was stored outside while the fire department had control is now all inside receiving thank you

February 6, 2018 - (9:30am) Phone call to BB. Approx. 600-800 tonnes (8 trucks) of the residual material is stored outside while the fire department has control of the site. The residual pile is still outside and will need to remain there until it is safe to go back in. Pile was steaming this morning and Orgaworld is monitoring it. Looking to have the pile moved inside by the weekend or early next week. No run-off from the pile has occurred since it was moved outside. Update will be provided to the MOECC on Friday as to the status of the residual pile

February 7, 2018 - Site visit to Orgaworld. Met with BB. Pile of residual is smouldering as of this morning. Orgaworld will be having a loader adjust the pile and put out the smouldering spot. No water will be applied to prevent run-off and surface water impacts. Advised Orgaworld when material is relocated back into the facility the soil where the pile was located be scrapped up and disposed of. BB agreed and will have it completed. Orgaworld has 24/7 shifts this week and next therefore the pile will be monitored.

- Walked around the pile and noted no off-site impacts or run-off from the pile. Odour minimal. No concerns identified.

February 14, 2018 - Phone call from BB stating the pile was smouldering today (front portion) and as a result, Orgaworld does not want to bring it inside over the weekend for fear of another potential fire (no shifts). MOECC agreed the pile can remain outside until the following week provided the pile is routinely inspected for runn-off and off-site impacts. The inspections are to be recorded. Orgaworld agreed and will provide an update next week.

Feb. 20 - Phone call to BB, Orgaworld - Left message requesting an update to the status of the pile given the amount of rain received and projected in the upcoming days. Contact information provided.

Phone call from BB - Pile is dry (soaking in rain) and hot in some areas. Weekend inspections were completed and documented. Plan to have pile relocated into the processing plant starting Thursday and ending Friday. No run-off from pile but will contact MOECC if condition changes. Orgaworld will remediate area where the pile was located once the pile is relocated inside. Orgaworld to contact MOECC Thursday when they start moving the pile inside.

February 26, 2018 - Phone call to BB. Material was all brought into the facility on Friday and clean-up of the soil was completed. Any residual soils/rocks will be disposed of at the landfill. No run-off from the material being stored outside occurred. The ground underneath the pile remained frozen. The material is approx. half processed and will be fully processed by the weekend.

Orgaworld

Incident Description Continuation:

Incident Update:

Was there an MOE field response?	No
Were there samples collected / analyzed at any time?	No
Known or Suspected Health / Environmental Consequence at the Time of Incident	
Health / Environmental Consequence:	2 - Minor Environment

Has a Water Body been impacted?	No
Receiving Environment:	Air, Land
Incident Event:	Fire/Explosion
Incident Reason:	Natural Phenomenon
Source Type:	Waste Disposal Site

Sector Type:	Miscellaneous Industrial
MOE/Other Agencies Involved:	Municipal - Ambulance/Fire/Police, Province - MOE-District Office
Was there a discharge / emission / spill of a contaminant to the environment?	
Yes

Incident Information

Incident Summary:	Non-Hazardous Waste Transfer Processing Inspection *cannot be longer than 60 characters*
Incident Description:	Non-Hazardous Waste Transfer Processing Inspection revealed non compliance issues that are to be addressed with the following action items: 1. Review and provide an update on the methods used to monitor negative pressure inside the building. 2. Submit a detailed explanation as to how the finished compost is sampled. The explanation should include how the company handled the exceedences noted in Section 2.1 of this report. 3. Explain discrepency in tonnage amounts between the excell spreadsheet and the 2010 annual report. 4. Submit confirmation that monitoring and maintenance of the pollution control equipment is being conducted in accordance with the Odour Monitoring Program dated October 2009. Include odour system monitoring report spreadsheets for the month of June, 2011 for the ammonium scrubber, the biofilter and the bioscrubber. TH - Report of compliance received on May 31st, 2012. See file No further action

Incident Information

Incident Summary:	Industrial Sewage Works non compliance *cannot be longer than 60 characters*
Incident Description:	Orgaworld Canada Lt. operates an organic composting facility on Part Lot 27, Concession 6, Ottawa, ON. The facility operates under three certificate of approvals issued by the ministry. Waste Disposal Site CofA #2766-7HEPSZ Air CofA#7021-7HQNDE Industrial Sewage Works CofA #9465-7NVRWT These certificates of approval were issued on September 16th, 2009. The facility began receiving waste on the 27th of January 2010. In November 2009 I went through the companies certificate of approval to verify compliance with pre-operating conditions set out in the approvals. Condition 9(3) of the sewage works certificate of approval sates that within sixty (60) days of the issuance of this certificate of approval the owner shall: (a) complete an assessment of the ground-water quality for each stratrigraphic unit; (b) develop criteria in accordance with the Ministry Guideline B-7 - Incorporation of the Reasonable Use Concept into MOEE Groundwater Management Activities; and (c) submit to the District Manager for review and concurrence. Since the certificate of approval was issued on September 16th, 2009. the documents listed in this condition should have been submitted to the District Manager by November 15th, 2009. Condition 9(9) of the certificate of approval also states: The Owner shall enter into an agreement with Tomlinson Development Corporation, owner of the Hawthorne Industrial Park (or the current owner of that site), for the long-term operation and maintenance of the monitoring wells, and provide a copy of such agreement to the District manger prior to commencement of operation of the Works. Original proposed gorundwater monitoring was submitted to EAAB on June 25th, 2009. Wells TW-1, TW-2, TW-3, TW-4, TW-5, and TW-6 formed part of the proposed monitoring plan. November 17th, 2009, I sent the company an email reminding them of the condition, requesting a status on the ground-water assessment and requesting a copy of the agreement with Tomlinson Development. November 23rd - conversation with Greg Mariotti, site operations manager. Consultants were on site sampling today in order to prepare ground-water assessment. November 24th, 25th, 26th - - email exchange with Greg Mariotti. He submitted the Tomlinson Lease Agreement but after reviewing it I noted that it did not include any mention of the monitoring wells, subsequent phone conversations and email exchanges indicated that they would write up an agreement and get Tomlinson to sign it.

December 11th, received an email from Ron Cherkewski, CRA, explaining that two rounds of sampling have been done and that groundwater assessment will follow shortly.

Week of January 14th - I had a conversation with Greg, where he mentioned that they no longer have access to off site monitoring wells and that their consultants will be contacting me with regards to the issue.

January 22nd, 2010 - Teleconference with consultants and Orgaworld - detailing issues with wells off Orgaworld land. TW3 was "lost" ...it has been abandoned. TW1 gives bad results therefore they don't use it..... TW6 is in a different fracture zone
They will send a draft memo to summarise data to date and describe stratrigraphic unit. Looking to amend the problem, should send me something by Monday or Tuesday. Two offsite wells that they were relying on (TW2 and TW5 proposing to move them within the boundaries of Orgaworld. they are hoping to drill new wells in February or March.
I told them to submit to me their proposal but that it sounds like they will need to amend their certificate of approval.

February 5th 2010 - Received email technical memorandum presenting an up to date assessment of the ground-water and surface water quality at the location of the Orgaworld Source Separated Organics Processing Facility as well as proposed changes to the Monitoring Program to replace some deep bedrock wells which are no longer accessible to Orgaworld.

In March I had the chance to review the proposed monitoring plan, review the certificate of approval. I then contacted Tech support and sent them the proposed monitoring plan for their review, I also contacted Edgardo at EAAB to discuss the companies situation and potential application to amend their certificate of approval.

I then discussed the situation with Paul Kehoe, district supervisor and the decision was made to inform the company that they are required to apply to amend their certificate of approval and that we would send the file to IEB for their review.

I sent an email to Greg Mariotti on March 22nd indicating as much. He has replied that the application to amend is currently being put together, that he will send me a copy of the agreement he has with Tomlinson for the use of wells on the Orgaworlds site.

March 29th, 2010 received a copy of application to amend CofA.

April 8th, 2010, Meeting at Ottawa district office, with Greg Mariotti, Orgaworld; Tej Gidda, CRA; Paul Kehoe and myself.

We discussed the non compliance issues and agreed to use voluntary compliance measures in order to achieve compliance this time. The company has submitted an amendment to EAAB.

No further action at this time.

1.0 INTRODUCTION

The Ministry of the Environment, Conservation and Parks conducted a Non-Hazardous Waste Transfer Processing Inspection at Circular Waste Canada Ltd. (referred to herein as the "Facility"), located at 5123 Hawthorne Road, Ottawa, Ontario (referred to herein as the "Site"). The purpose of the inspection was to assess compliance with Environmental Compliance Approval No. 2766-7HEPSZ (ECA), dated September 16, 2009, as amended.

The focus of the inspection was on conditions related to the management of non-hazardous organic waste. The Site is not currently producing compost therefore conditions specifically related to composting were not applicable and assessed at this time. The Site generates Non-Agricultural Source Material (NASM) which is tested and applied to met agricultural requirements of the Nutrient Management Act and Ontario Regulation 267/03 regulated by the Ontario Ministry of Agricultural, Food and Rural Affairs and the Ministry of the Environment, Conservation and Parks.

2.0 INSPECTION OBSERVATIONS

Certificate of Approval Number(s): ● Yes ○ No
C of A Number(s):
Environmental Compliance Approval Number 2766-7HEPSZ: Waste Disposal Site
Issued: September 16, 2009

Notice #1 - Issued on October 21, 2010
Details: The amendment was issued to allow the Facility to operate a mobile shredder unit on-site.

Notice #2 - Issued on May 2, 2012
Details: The amendment was issued for a change to allow the Facility to receive and remove waste between the hours of 6am to 8pm (Monday to Fridays) and between the hours of 7am to 8pm on Saturdays - Condition 5.1

Notice #3 - Issued on February 6, 2015
Details: The amendment was issued to reflect the decision of the Environmental Review Tribunal decision for Case

No. 09-115/09-126, Orgaworld Canada Ltd. v. Director, Ministry of the Environment, dated November 7, 2011. The decision allows for Orgaworld Ottawa to receive Processed Organic Waste that includes sanitary products and human body waste, waste that is collected in plastic bags or pet waste other than waste that incidental to bedding or litter provided that reasonable notice and supporting documentation is submitted and confirmed by the ministry - Condition 2(11)

Notice #4 - Issued on April 18, 2017
Details: The amendment was to reflect the re-evaluation of financial assurance required as per Condition 1(20.)

2.1 SITE OPERATION:

Specifics:
2. SERVICE AREA, APPROVED WASTE TYPES, RATES & STORAGE

(1) The Site may only accept solid non-hazardous domestic, commercial, institutional or industrial Organic Waste from the Provinces of Ontario and Quebec, limited to the following Organic Waste:

(a) Source-separated Organic Waste limited to the following:

(i) Food wastes: fruit, vegetable and general table scraps, meat and fish products, dairy products, egg shells, confectionery products, sauces, bones, pet food, fat, bread and grains, rice, pasta, coffee grounds, filters;

(ii) Paper fibres: soiled paper towels, tissues, paper plates, soiled paper food packaging items such as boxboard, cardboard, newspaper, and other packaging materials;

(iii) Miscellaneous: houseplants and yard wastes, dryer lint and hair, pet fur, sawdust and wood shavings and litter or bedding.

(b) Organic Waste from the food processing industry and other industries that produce food wastes;
(c) Organic Waste from the commercial sector, including but not be limited to food waste from restaurants, hotels, institutions, commercial operations that collect organic wastes;
(d) Leaf & yard waste;
(e) Organic sludges, including but not be limited to starches and paper wastes, but excluding sewage sludge and biosolids.

The 2018 and 2019 Annual Reports state that the Facility is in compliance with Condition 2(1) by only accepting waste from the City of Ottawa and local Industrial, Commercial & Institutional (IC&I) sector which is within the approved service area outlined in ECA. Mass balances were provided for both the 2018 and 2019 operating years which confirmed all sources of incoming source separated organic waste to be compliant with Condition 2(1).

(2) (i)The Owner shall not accept at the Site sanitary products and human body waste.
(ii) The Owner shall not accept at the Site any waste that is collected through a waste collection program that allows use of plastic bags.
(iii) The Owner shall not accept at the Site any waste that is classified as hazardous waste or liquid industrial waste in accordance with *O. Reg. 347* .

The 2018 and 2019 Annual Reports state that the Facility is in compliance with the above referenced condition by not accepting sanitary products, human body waste, hazardous waste and liquid industrial waste as defined in Ontario Regulation 347.

In 2015 the Facility began accepting source separated organics from the industrial, commercial and institutional sector in plastic bags after receiving the ministry's issuance of Notice #3 forming part of Environmental Compliance Approval Number 2766-7HEPSZ as a result of the Environmental Review Tribunal decision.

In 2019 the Facility and the City of Ottawa sought an agreement to allow for the collection of source separated organics in plastic bags and pet waste as part of the Green bin Collection Program within the City of Ottawa. On July 2, 2019 the City of Ottawa announced pet waste and the use of plastic bags for source separate organics for collection and disposal is permitted.

No issues identified.

(3) The Owner is only approved to receive Organic Waste in quantities that are not to exceed:
(a) a maximum of 1,200 tonnes on a daily basis; and
(b) a maximum of 150,000 tonnes per year.

The 2018 and 2019 Annual Reports provided the monthly and annual tonnages for the 2018 and 2019 operating year. As part of the inspection the Inspecting Officer reviewed the mass balance for the 2018 and 2019 operating year. The data provided in the mass balance confirms the Facility is in compliance with tonnage limits outlined in ECA.

No issues identified.

(5) Waste storage at the Site is subject to the following limitations:

(a) unprocessed Organic Waste, excluding leaf & yard waste, shall be stored within the confines of the Processing Building;
(b) leaf & yard waste shall be stored within the confines of the Processing Building, or in accordance with the requirements of Condition 6.(14) of the Certificate of Approval (Industrial Sewage) for this Site;
(c) Immature Compost in various stages of curing shall be stored within the confines of the Processing Building;
(d) solid Residual Waste shall be stored in lugger bins located within the confines of the Processing Building;
(e) solid putrescible waste generated through activities not relating to the handling and processing of Organic Waste (ie. office, lunch room, etc.) may be stored in a covered bin outdoors and it shall be removed from the Site as required in accordance with *O. Reg 347* and the *EPA* .

At the time of the inspection no waste was observed to be stored outside the Processing Building. All waste and phases of the processing of organic waste were located inside the confines of the Processing Building.

No issues identified.

(11) Before the Owner accepts any new source of Organic Waste at the Site that includes:

(i) sanitary products and human body waste,
(ii) waste that is collected in plastic bags, or
(iii) pet waste other than waste that is incidental to bedding or litter,

The Owner shall provide the District Manager with reasonable notice in advance of the Owner's intent to commence acceptance of the new waste source at the Site. The Owner shall also provide the District Manager with such information as the District Manager confirm in writing is required respecting the new waste source, which may include the name and location of the source generator, the date the Owner proposes to commence accepting the waste at the Site, a description of the constituent components of the waste being accepted, confirmation whether inclusion of the waste components referenced above in (i) (ii) and (iii) are characterized as incidental or inadvertent, and information related to the storage of the waste prior to its delivery to the Site, together with any operational plans the Owner proposes for integrating the processing of waste from the new source into the waste stream then currently being processed at the Site. For purposes of this condition a new source also included any sources or Organic Waste already being accepted at the Site that will be changed to introduce, or increase the waste components referenced above in (i) (ii) and (iii). For purposes of this condition, the Director may decided the length of the advanced notice reasonably required under this condition, and provide the Owner with written notice of the Director's decision in this regard.

In 2015 the Ministry of the Environment, Conservation and Parks issued Notice #3 to the Facility to began receiving new sources of organic waste collected in plastic from the industrial, commercial and institutional sector. In order for this to occur, documentation was required to be submitted to the ministry as outlined in Condition 2(11). In February of 2015 Orgaworld Ottawa submitted the required information to satisfy the condition and allow for the receipt and processing of the new source of Organic Waste from the new sector.

In 2019 the Ministry of the Environment, Conservation and Parks was informed of the inclusion of plastic bags and

pet waste as part of the changes to the City of Ottawa Green Bin Collection Program. As required by Condition 2(11) of the ECA, the Facility was required to submit reasonable notice to the District Manager for the acceptance of the new waste type as well as supporting information about the waste and the operational modifications, if needed, to process the waste. Notification was provided to the MECP in January 2019 and on February 15, 2019 the MECP requested documentation to support the new waste acceptance. On February 26, 2019 the Facility provided the required documentation to support the new waste.

In order to ensure the Ottawa Facility would be able to manage the increase of plastic bags and the new waste source, the Facility undertook a waste trial using Toronto source separated organics which contained plastic and pet waste. A total of 552 metric tonnes of Toronto organic waste containing plastic bags and pet waste was processed through the Facility mixed with the City of Ottawa waste feedstock. Stack inspections and odour assessments were completed using an Odour Wheel indicating no change to odour characteristics. No complaints were received by the Ministry of the Environment, Conservation and Parks or the Facility during the trial. The Facility sampled the waste and confirmed the results were within the ECA and NASM limits.

The Facility constructed additional tunnels for processing/storage and installed new equipment (biofilter, screening line, ammonia scrubber) to accommodate the new waste stream. The installation of the new equipment was captured under Condition 2 of Air Environmental Compliance Approval Number 1631-A2ELCQ. No amendments were required under the waste ECA for the upgrade to the Site. The installation of the new equipment was completed in the summer of 2019 to support the change in the City of Ottawa Green Bin Program.

In March of 2020, the Facility provided the Ministry of the Environment, Conservation and Parks notice of intent to commence accepting two new waste sources at the Ottawa Facility. The new sources were outlined as City of Toronto and Region of York source separated organics. Both sources are associated with the municipal waste collection programs previously sent to the London Facility, however, planned to be diverted to the Ottawa Facility as a result of COVID-19 pandemic resulting in capacity concerns at the London Facility. Supporting documentation, previously requested as part of prior new waste sources notifications, was provided to the District Manager. Acknowledge was provided to the Facility for both new waste sources in March of 2020.

3. SIGNS

(1) Prior to receipt of waste at the Site, the Owner shall ensure that a sign is posted at the entrance to the Site. The sign shall be visible from the main road leading to the Site. The following information shall be included on the sign:

(a) name of the Owner;
(b) this Certificate number;
(c) hours during which the Site is open;
(d) waste types that are approved to be accepted at the Site;
(e) Owner's telephone number (a hotline) to which complaints may be directed;
(f) Owner's twenty-four hour emergency telephone number (if different from above);
(g) a warning against unauthorized access;
(h) a warning against dumping at the Site.

(2) The Owner shall ensure that appropriate signs are posted at the Site clearly identifying the waste and stating warnings about the nature of the waste and any possible hazards.

At the time of the inspection it was noted that the Facility has a sign at the entrance of the Site outlining the above required information from a-h. A similar sign is also present at the exit of the Site. However, as discussed in the 2019 Annual Report a name change occurred in 2020 from Renewi to Convertus Canada Ltd. The 2019 Annual Report states the Facility will ensure all signage present at the Site is change to reflect the new name.

Verification of the change of the sign will be completed in future inspections of the Site.

4. SITE SECURITY

(1) All unloading and loading of waste and all waste processing activities at the Site shall at all times be undertaken by Trained Personnel.

(2) The Owner shall ensure that access to the Site is regulated and that all entrances are secured by lockable gates to restrict access only to authorized personnel when the Site is not open.

The Site has installed a fence with a lockable gate to restrict access to the Site. The 2018 and 2019 Annual Reports confirmed compliance with Condition 4 of the ECA. No issues were observed with site security during the inspection.

5. SITE OPERATIONS

(3) **Rejected Waste handling:**

(a) In the event that waste is not approved under this Certificate is inadvertently accepted at the Site, the Owner shall ensure that all Rejected Waste:

(i) is stored in a way that ensure that no adverse effects result from such storage;
(ii) is segregated from all other waste;
(iii) is handled and removed from the Site in accordance with *O. Reg. 347* and the *EPA* ;
(iv) is removed from the Site within three (3) days of its receipt or as acceptable to the District Manager

(b)

(i) In the event that Rejected Waste is advertently accepted at the Site, a record shall be made in the daily log book or in an electronic file of the reason why the waste was rejected and of the origin of the waste, if known.

(ii) The District Manager shall be notified in writing of the receipt of unacceptable waste within four (4) business days of its receipt. The following information shall be included in the notification to the District Manager:

- quantity and type of Rejected Waste;
- source of the Rejected Waste, if known;
- final destination of the Rejected Waste; and
- date of receipt and time and date of removal from the Site.

In 2018 four events occurred of excessive contamination being received from Metro grocery store locations at the Site. The waste consisted of styrofoam and plastic packaging. The Facility arranged for the waste to properly disposed of at a waste disposal site with notification provided to both Metro and the Ministry of the Environment, Conservation and Parks.

During the inspection it was discussed that an event of rejected waste occurred on July 25, 2019 but notification was not provided to the District Manager as required by Condition 5(3)(b)(ii). This issue was discussed at the time of the inspection and on March 4, 2020 the Facility sent a notification email to the District Manager provided information on the rejected load.

****Please see Section 5.0 of this Report****

6. EQUIPMENT AND SITE INSPECTIONS & MAINTENANCE

(1) Prior to receipt of any waste at the Site, the Owner shall prepare a comprehensive written inspection program which includes inspections of all aspects of the Site's operations including the following:

(a) loading/unloading area of the leaf & yard waste storage pad;
(b) parking lot area for evidence of run-off from the leaf & yard waste storage pad;
(c) Processing Building and the air pollution control equipment;
(d) security fence and property line;
(e) on-site roads for presence of leaks and drips from the waste delivery trucks;
(f) presence of excessive fugitive dust emissions from the on-site roads or the Compost stockpiles;
(g) on and off-site litter;
(h) presence of vector and vermin

Upon arriving to and entering the Site, no litter, presence of vector and vermin, run-off or presence of fugitive dust was observed. Security fence and property line appeared to be in good working order.

The Facility has the required documents and procedures which speak to the Facility's inspection program for the above condition. The previous inspection incorporated a review of the procedures and records associated with the

above condition with no concerns identified. No changes were made for the 2018 and 2019 operating year therefore the Inspecting Officer did not review the records as part of the inspection.

In 2019 the following documents were reviewed and updated:

- Emergency Response & Contingency Plan for Spills, Odours, Process Upsets, Fires, Power Failure, and Labour Disruptions (revised report provided to the Ministry of the Environment, Conservation and Parks)
- Spill Contingency and Pollution Prevention Plan - Stormwater Site Management System and Process Water Recirculation System
- Site Plan, Services, and Grading Plan

(4) Should outdoor storage of leaf & yard waste be undertaken, the following handling procedures must be followed:

(a) The Owner shall ensure that, if needed, the leaf & yard waste storage stockpiles are turned at a rate frequent enough to reduce the likelihood of anaerobic conditions arising within the stockpiles.

(b) Upon the receipt of the leaf & yard waste at the Site, the Owner shall inspect the received waste, separate potentially odourous components and immediately transfer these potentially odourous components into the Processing Building.

(c) Should anaerobic conditions arise in a leaf & yard waste pile, or, in a specific portion of a leaf & yard waste pile, the Owner shall ensure that this portion of leaf & yard waste is prioritized for use within the composting process within twenty four (24) hours of anaerobic conditions occurring, or, if this is not practical, the Owner shall remove of the waste from the Site within twenty four (24) hours.

At the time of the inspection no outdoor storage of leaf and yard waste was occurring. The 2018 and 2019 Annual Reports confirmed no outdoor leaf and yard waste occurred in 2018 and 2019.

(5) Residual Waste handling:

(a) The Owner shall ensure that storage of solid Residual Waste resulting from processing of Organic Waste at the Site is undertaken within the confines of the Processing Building.

At the time of the inspection all solid Residual Waste was stored inside the Processing Building.

(6) Waste Processing:

(a) The Owner shall ensure that all Organic Waste pre-processing, composting, screening and curing of Immature Compost are undertaken within the confines of the Processing Building.

At the time of the inspection all Organic Waste processing was occurring inside the Processing Building. No operations were occurring outside.

(7) Odour Control:

(a) The Owner shall maintain and monitor a negative air pressure atmosphere within the Processing Building at all times in accordance with the documents in Schedule "A". In the event that adequate negative air pressure cannot be maintained within the Processing Building, the Owner shall cease accepting additional Organic Waste waste and shall keep the loading bay doors and the air intake louvers closed until such time that negative pressure is re-established.

(b) The Owner shall ensure that the outside loading bay doors into the Small Truck and Large Truck Halls of the Processing Building are kept closed at all times except to permit the entry or exit of waste transportation vehicles.

(c) The Owner shall ensure that the loading bay doors into the Compost Curing Storage Hall of the Processing Building are kept closed at all times except to permit the entry or exit of Compost transportation equipment.

(d) The Owner shall maintain an air lock when Organic Waste is received in the Small Truck Receiving Hall of the Processing Building.

(e) The Owner shall ensure that, at all times, the air from the Processing Building is exhausted through an appropriate air pollution control equipment approved by the Ministry in the Certificate of Approval (Air/Noise).

(f) If in the opinion of the District Manager, the air emissions originating from the leaf & yard waste stockpile in the future outdoor storage area result in odour complaint(s), the Owner shall within two (2) days of the receipt of the written notification from the District Manager move the leaf & yard waste from the future outdoor storage area into the Processing Building.

(g) The Owner shall ensure that no equipment handling Organic Waste or their storage containers are kept outside, unless they have been washed to prevent odours.

The 2018 and 2019 Annual Reports confirmed the Facility operated in compliance with Condition 5(7) for the 2018 and 2019 operating years. No concerns identified during the inspection.

7. QUALITY CRITERIA , TESTING & MONITORING

(1) Cross-Contamination Prevention

(a) The Owner shall ensure that the incoming Organic Waste and the equipment used in handling of the incoming Organic Waste are kept separate and do not come in contact with the Immature Compost / the Finished Compost and the Compost except where the Immature Compost / the Finished Compost and the Compost are being fed back into the composting process.
(b) On an emergency basis, the Owner may use equipment utilized in processing of incoming Organic Waste to process the Immature Compost / the Finished Compost and the Compost provided that the equipment has been cleaned to prevent the Immature Compost / the Finished Compost and the Compost from being contaminated by the incoming Organic Waste.

The 2018 and 2019 Annual Reports state the Facility is in compliance with the above condition by keeping incoming organic waste separated from finished product. During the inspection all finished NASM product is stored within the Curing Hall, separate from any pre-processed organic waste.

(2) Quality Control Monitoring of Organic Waste at the generator site:

(a) Prior to being accepted at the Site for the first time, the incoming Organic Waste from a new source/stream shall be characterized in accordance with the Ministry's regulatory requirements for sampling and testing to ensure that the incoming Organic Waste complies with the quality criteria specified in this Certificate. The incoming Organic Waste may be considered a pre-approved waste source/stream once the incoming Organic Waste meets the required quality criteria and has been classified as such by the Company.

(b) The incoming Organic Waste shall be re-characterized following any process changes, operational issues or other factors that may affect the quality of the incoming Organic Waste from the pre-approved source/stream.

The 2018 and 2018 Annual Reports state the Facility is in compliance with the above condition and sends incoming source separated organic waste for testing to ensure compliance with the ECA conditions. No process changes, operational issues or other factors occurring in the 2018 and 2019 operating years required the re-characterization of incoming organic waste.

Finished compost quality criteria outlined in additional sections of Condition 7 of the ECA was not incorporated into the inspection as the Facility is not currently producing compost as defined by the Ontario Compost Quality Standards. The Site is currently producing Non-Agricultural Source Material (NASM) which is not defined as a type of compost in the ECA or the Ontario Compost Quality Standards.

8. NUISANCE IMPACT CONTROL & HOUSEKEEPING

(1) The Owner shall ensure that all vehicles that have delivered waste to the Site are not leaking or dripping waste when leaving the Site.

As stated in the 2018 and 2019 Annual Reports, during periods where organic waste is delivered at the Site, vehicles are inspected during and after by trained Facility staff.

(2) The Owner shall ensure that the exterior of all trucks delivering waste to the Site is cleaned prior to leaving the Site, as needed, to prevent odours. Truck washing shall occur only in the dedicated wash down area of the processing building.

At the time of the inspection no truck washing operations were occurring. As stated in the 2018 and 2019 Annual Reports, the Facility provides rakes, brooms and a pressure washer, if necessary, to ensure the exterior is clean.

(3) The Owner shall ensure that there is no queuing or parking of vehicles that are waiting to enter the Site on any roadway that is not a distinct part of the Site.

At the time of the inspection no vehicles entering the Facility were parked or queuing on roads outside the Site boundary. The 2018 and 2019 Annual Reports confirms that during the 2018 and 2019 operating years the Facility is in compliance with this condition.

(4) Should the Owner become aware that the truck(s) delivering waste to the Site have leaked wastewater on the municipal roadways, the Owner shall immediately notify the owner of the leaking vehicle(s) and the District Manager about the leak problem.

Prior to the inspection, a district file review was completed and the District Manager had not been notified of any wastewater impacts to municipal roadways. The 2018 and 2019 Annual Reports state that this was not noticed during the reporting period.

(5) The Owner shall:
(a) take all practical steps to prevent the escape of litter from the Site;
(b) pick up litter around the Site on a daily basis, or more frequently if necessary; and
(c) if necessary, erect litter fences around the areas causing a litter problem.

At the time of the inspection the Inspecting Officer walked a portion of the property and observed no litter issues. As part of the Facility's inspection program, trained staff monitor litter on a daily basis. Inspection reports are completed and retained on-site. No concerns identified.

(6) Prior to the receipt of any waste at the Site, the Owner shall:
(a) implement necessary housekeeping procedures to eliminate sources of attraction for vermin and vectors; and
(b) hire a qualified, licensed pest control professional to design and implement a pest control plan for the Site. The pest control plan shall remain in place, and be updated from time to time as necessary, until the Site has been closed and this Certificate has been revoked.

The Facility retains the services of a external qualified licensed pest control professional to implement the pest control plan. No concerns identified.

(7) The Owner shall ensure that all on-Site roads and operations/yard areas are regularly swept/washed to prevent dust impacts off-Site.

Upon arriving to the Site the roads on-site were snow covered. The Facility retains a company to conduct road sweeping and washing.

(8) (i) The Owner shall store Compost within the confines of the Processing Building, or in accordance with the requirements of Condition 6.(14) of the Certificate of Approval (Industrial Sewage) for this Site.

No compost was being stored at the time of the inspection. NASM material is stored within the confines of the Processing Building.

(ii) Notwithstanding the requirements of Condition 8.(8)(i), above, the Owner shall ensure that the Compost

stockpiles are not a source of fugitive dust emissions. If the proposed Compost storage features are deemed insufficient to control the fugitive dust emissions from the Compost stockpiles, the Owner shall provide additional covers or spray the stockpiles with water, or use any other method to minimize the fugitive dust emissions.

At the time of the inspection dust was assessed to determine if the operations and procedures currently in place are effectively controlling fugitive dust. Fugitive dust was not observed to be of concern during the inspection as the inspection was conducted during the winter season and covered in snow. However, no complaints of dust have been reported to the Ministry of the Environment, Conservation and Parks to date.

9. OPERATIONS MANUAL & STAFF TRAINING

(1) The Owner shall prepare an Operations Manual for use by the Site personnel. The Operations Manual shall contain the following:

(a) outline the responsibilities of the Site personnel;
(b) personnel training protocols;
(c) waste receiving and screening procedures;
(d) unloading, handling and storage procedures;
(e) waste processing procedures;
(f) sampling and testing procedures;
(g) Site inspections and recording procedures;
(h) the emergency response procedures;
(i) procedure for handling complaints as described in the Certificate of Approval (Air/Noise) for this Site.

In 2015 the Operations Manual was updated due to changes to operating procedures and equipment. A copy of the updated manual was provided to the Ottawa District Office. With the recent installation of equipment, the Facility will need to determine whether revisions to the Operations Manual are required.

****Please see Section 6.0 of this Report****

10. EMERGENCY RESPONSE AND CONTINGENCY PLAN

(1) Within six (6) months from the date of this Certificate, the Company shall submit to the District Manager an Emergency Response and Contingency Plan. The Emergency Response and Contingency Plan shall be prepared in consultation with the District Manager, the local Municipality and the Fire Department and as a minimum it shall include the following information:

(a) emergency response procedures to be undertaken in the event of a spill, process upset, power failure, fire or any other emergency situation, including specific clean up methods for wastes expected to be generated from the emergency situation;
(b) a list of equipment and clean up materials available for dealing with the emergency situations;
(c) notification protocol with names and telephone numbers of persons to be contacted, including persons responsible for the Site, the Ministry's District Office and Spills Action Centre, the local Fire Department, the local Municipality, the local Medical Officer of Health, and the Ministry of Labour, and the names and telephone numbers of waste management companies available for emergency response;
(d) procedures and actions to be taken should the incoming Organic Waste not meet the quality criteria specified by this Certificate;
(e) procedures and actions to be taken should the outgoing Residual Waste not meet the quality criteria required by the specified by this Certificate;
(f) procedures and actions to be taken should the composted Organic Waste fail to meet the compost quality criteria specified by the Certificate;
(g) procedures and actions to be taken should the occurrence of the complaints require the Company to suspend the waste processing activities at the Site.

Prior to completing the inspection a file review was conducted which incorporated a review of the "Contingency Plan for Odours, Spills, Fires, Power Failures and Labour Disruptions" procedure which was updated and provided to the Ministry of the Environment, Conservation and Parks in 2019. No issues identified.

11. EMERGENCY SITUATIONS RESPONSE AND REPORTING

(1) **The Company shall immediately take all necessary measures, as outlined in the Emergency Response and Contingency Plan, to handle the emergency situations occurring at the Site.**

(2) **The Company shall ensure that the equipment and materials outlined in the Emergency Response and Contingency Plan are immediately available at the Site at all times and are in a good state of repair and fully operational.**

(3) **The Company shall ensure that all Site personnel are fully trained in the use of the equipment and materials outlined in the Emergency Response and Contingency Plan, and in the procedures to be employed in the event of an emergency.**

(4) **All Spills, as defined in the *EPA* , shall be immediately reported to the Ministry's Spills Action Centre at 1-800-268-6060 and shall be recorded in the log book as to the nature and cause of the spill, and the action taken for clean-up, correction and prevention of similar future occurrences.**

(5) **Should a Spill, as defined in the *EPA* , occur at the Site, in addition to fulfilling the requirements from the *EPA* , the Company shall submit to the District Manager a written report within three (3) calendar days outlining the nature of the Spill, remedial measure taken and the measures taken to prevent future occurrences at the Site.**

In the 2018 operating year the Facility did have a spill to air requiring the activation of the Emergency Response and Contingency Plan. A fire of processed organic waste occurred on February 5, 2018 within the Processing Building. Notification and information was provided to the District Ministry as required by Condition 11. The waste material was managed by re-processing in the tunnels and disposing as NASM.

No spills occurred during the 2019 operating year.

12. RECORDS KEEPING

Annual Report

(9) **By March 31st following the end of each operating year, the Owner shall prepare and submit to the District Manager and the Public Liaison Committee (PLC), an Annual Report summarizing the operation of the Site covering the previous calendar year. This Annual Report shall include, as a minimum, the following information:**

(a) a monthly mass balance of the Organic Waste received, processed and transferred from this Site, including waste type, quantity, sources and/or disposal destinations;
(b) an annual summary mass balance of the Organic Waste received, processed and transferred from this Site, including waste type, quantity, sources and/or disposal destination;
(c) an annual summary of any deficiencies, items of non-compliance or process aberrations that occurred at this Site and any remedial/mitigative action taken to correct them;
(d) a descriptive summary of any spills, incidents or other emergency situations which have occurred at this Site, any remedial measures taken, and the measures taken to prevent future occurrences;
(e) a summary describing any Rejected Waste including quantity, waste type, reasons for rejection and origin of the Rejected Waste;
(f) any environmental and operational problems, that could negatively impact the environment, encountered during the operation of the Site or identified during the facility inspections and any mitigative actions taken;
(g) any changes to the Emergency Response and Contingency Plan, the Operations Manual or the Closure Plan that have been approved by the Director since the last Annual Report;
(h) any recommendations to minimize environmental impacts from the operation of the Site and to improve Site operations and monitoring programs in this regard;
(i) a summary of any complaints received and the responses made, as required by the Certificate of Approval (Air/Noise);
(j) an update on the amount of Financial Assurance which has been provided to the Director;
(k) update on activities of the PLC;
(l) a condition-by-condition analysis of compliance with all Conditions of this Certificate.

As part of the file review process the 2018 and 2019 Annual Reports was found to be complete as required. The 2018 Annual Report was submitted to the Ministry of the Environment, Conservation and Parks in March of 2019 and the 2019 Annual Report was submitted to the Ministry of the Environment, Conservation and Parks in March 2020.

2.2 FINANCIAL ASSURANCE:

Specifics:
Condition 1(20.) of the ECA outlines the amount of financial assurance required for the operation of a solid non-hazardous waste transfer processing Site. In April of 2017, the ministry issued Notice #4 - ECA amendment to reflect a re-evaluation of the financial assurance needed for the site. The Facility submitted the remaining amount which forms the new total of financial assurance from the previous re-evaluation. The next re-evaluation of financial assurance is scheduled for April 30, 2020 and future re-evaluations at 3 year intervals.

In 2018, the Facility updated their surety bonds to reflect the previous name change from Orgaworld Canada Ltd. to Renewi Canada Ltd. and in 2019, the Facility updated their surety bonds to reflect the name change from Renewi Canada Ltd. to Circular Waste Canada Ltd. In March 2020, the Facility updated their surety bonds to reflect the current name of Convertus Canada Ltd.

2.3 SITE SERVICE AREA:

Specifics:
The Facility is approved to operate a waste disposal site (transfer processing) serving the Provinces of Ontario and Quebec, for the temporary storage, transfer and processing (composting) of solid non-hazardous, domestic, commercial, institutional or industrial organic waste as outlined in Condition 2 of the ECA..

2.4 APPROVED SITE CAPACITY:

Specifics:
The Facility is approved to operate a waste disposal site (processing) for the temporary storage, transfer and processing (composting) of solid non-hazardous, domestic, commercial, institutional or industrial organic waste at a maximum rate of 1,200 tonnes per day and 150,000 tonnes per year of Organic Waste as outlined in Condition 2(3) of the ECA.

Below is a summary of incoming organics waste and outgoing NASM, product and residual waste for the 2018 and 2019 operating years:

2018 Operating Year (January 1, 2018 to December 31, 2018):

Incoming
City of Ottawa Green Bin Program = 76,571 tonnes
IC&I Sector = 2,191 tonnes
Total = 78,762 tonnes (97% municipal, 3% IC&I)

Outgoing
NASM = 10,861 tonnes
Bedding = 11,710 tonnes
Mids = 13,881 tonnes
Structural Mids = 3,871 tonnes
Residual = 18,911 tonnes
Total = 59,234 tonnes

2019 Operating Year (January 1, 2019 to December 31, 2019):

Incoming
City of Ottawa Green Bin Program = 80,321 tonnes
City of Toronto (trial) = 526 tonnes
IC&I Sector = 2,043 tonnes
Total = 82,860 tonnes (98% municipal, 2% IC&I)

Outgoing
NASM = 5,876 tonnes
Bedding = 15,343 tonnes

Mids = 9,186 tonnes
Residual = 12,493 tonnes
Total = 42,898 tonnes

3.0 REVIEW OF PREVIOUS NON-COMPLIANCE ISSUES

No previous non-compliance was identified prior to completed the Non-hazardous Waste Transfer Processing Inspection.

4.0 SUMMARY OF INSPECTION FINDINGS (HEALTH/ENVIRONMENTAL IMPACT)

Was there any indication of a known or anticipated human health impact during the inspection and/or review of relevant material, related to this Ministry's mandate?
No

Specifics:

Was there any indication of a known or anticipated environmental impact during the inspection and/or review of relevant material ?
No

Specifics:

Was there any indication of a known or suspected violation of a legal requirement during the inspection and/or review of relevant material which could cause a human health impact or environmental impairment ?
No

Specifics:

Was there any indication of a potential for environmental impairment during the inspection and/or the review of relevant material ?
No

Specifics:

Was there any indication of minor administrative non-compliance?
No

Specifics:

5.0 ACTION(S) REQUIRED

As a result of the inspection, the following action item is required to be reviewed and addressed by the Facility:

1. The Facility must ensure all future rejected waste events are reported to the District Manager as per Condition 5(3)(b)(ii) of Environmental Compliance Approval Number 2766-7HEPSZ

6.0 OTHER INSPECTION FINDINGS

The following recommendation is provided for the Facility to review and taken action if necessary:

1. The Facility must review the Operations Manual to determine the need for revisions to reflect the installation of new equipment.

1.0 INTRODUCTION

The Ministry of the Environment, Conservation and Parks (MECP) conducted an Air Facility Inspection at Circular Waste Canada Ltd. (referred to herein as the "Facility"), located at 5123 Hawthorne Road, Ottawa, Ontario (referred to herein as the "Site"). The purpose of the inspection is to assess compliance with Environmental Compliance Approval No. 1631-A2ELCQ, Ontario Regulation 419/05, NPC-300 and the Environmental Protection Act (EPA).

The focus of the inspection was on conditions related to the equipment associated with air treatment from emission generated by the processing of source separated organics (SSO).

1.1 FOCUS OF THE AIR INSPECTION

Is the inspection for the entire facility or is it scoped to part of the facility?

● Entire Facility ○ Part of the Facility

Specifics:

The inspection incorporated the entire operations of the Site as it relates to the air and noise emissions.

1.2 TARGET SECTOR IN ONTARIO REGULATION 419/05, AIR POLLUTION - LOCAL AIR QUALITY

Is the facility in a targeted sector identified in Schedule 4 or Schedule 5 of O. Reg. 419/05?

Yes, the facility is in a target sector identified in Schedule 5.

☐ NAICS exemption

Note that s. 1(2) of Reg. 419/05 sets out exemptions for facilities whose activities would not be captured in NAICS 221112 (Fossil-Fuel Power Generation) and NAICS 5622 (Waste Treatment and Disposal)

Specifics:

The Facility operates under North American Industry Classification System (NAICS) code 562210 - Waste Treatment & Disposal for the operation of land fill sites, incinerators, or other treatment or disposal facilities for non-hazardous or hazardous waste. Establishments that integrate the collection, treatment and disposal of waste are also included.

The Facility is currently processing SSO from the City of Ottawa's Green Bin Collection Program, parts of the City of Toronto and York Region municipal collection program and selected Industrial, Commercial & Institutional sectors for the production of Non-Agricultural Source Material (NASM). The NASM is applied to the agricultural operations as a soil conditioner under approved NASM Plans, issued by the Ontario Ministry of Agriculture and Rural Affairs, or used as an animal bedding product.

2.0 INSPECTION OBSERVATIONS

Specifics:

Condition 2 of the ECA outlines the modifications that are permitted under the Limited Operational Flexibility. In reviewing the modification log for the 2018 and 2019 operating year it was observed the following modifications occurred:

2018: No modifications were conducted during the 2018 operating year.

2019:
April 2019
- Decommission existing ammonia scrubber resulting in an increased ammonia concentration to atmosphere. ESDM updated to reflect new ammonia concentration

July 2019
- Installation of 3 new ammonia scrubbers to provide additional treatment for ammonia resulting in a reduction of ammonia concentration. ESDM updated to reflect new ammonia concentration

July 2019
- Installation of two composting tunnels (#7 & #8) resulting in negligible impact on air emissions. ESDM Report updated based on November 2019 source testing results.

August 2019
- Replacement of screening line resulting in no impact on air emissions.

September 2019
- Installation of new biofilter (#3) to reduce air emissions. ESDM Report updated resulting in a reduction of concentrations of compounds

November 2019
- Installation of 2 new storage tunnels (#9 & #10) resulting in no impact on air emissions

2.1 SITE CONDITIONS

Operating

Specifics:

At the time of the inspection the Site was processing SSO for the production of NASM and animal bedding.

Odour: During the inspection the air treatment equipment was observed. The equipment operating included the biofilters (3), ammonia scrubbers (3) and bioscrubber. The emissions from the equipment, after treatment, is discharged through the stack to the environment. The stack is equipped with a odour port to assess the odours being discharged from the Site. An assessment of the odour was conducted at the time of inspection which noted the emission to not be odourous resulting in an adverse effect.

At the time of the inspection the Facility was operating and processing organic waste. Both air treatment processes, the bioscrubber and biofilters, were operating. The Facility operates under negative pressure therefore all odours are contained within the confines of the building and discharged through the pollution control equipment. The odour sampling port connected to the discharge stack was assessed at the time of the inspection and found not to be discharging emissions that would be considered an adverse effect.

The 2019 Source Testing Report was reviewed to determine the outcome of the odour assessment. Based on the results, the Facility is well within the frequency of odour exceedances allowable at the sensitive receptors.

Noise: During the inspection the air treatment equipment was observed. The equipment operating included the biofilters (3), ammonia scrubbers (3) and bioscrubber. The noise from the equipment is audible within the Process Building. Upon walking outside of the Site, noise was audible but not at levels that the Inspecting Officer would consider excessive.

As part of the inspection, the 2019 Acoustic Assessment Summary was requested and provided. In reviewing the summary, all sensitive receptors noise levels were below the limits of 45 Leq as outlined in NPC-300.

Vibration: No vibration issues were noted during the inspection, both inside and outside the building.

2.2 AUTHORIZING, CONTROL AND REGISTRATION DOCUMENTATION FOR AIR/NOISE EMISSIONS

Does the facility have authorizing, control and/or registration documents applicable to this inspection?

● Yes ○ No

Specifics:

On December 10, 2015 the Facility was issued Environmental Compliance Approval Number 1631-A2ELCQ (ECA) with Limited Operational Flexibility until December 10, 2025.

The ECA approves the following processes and support units:

- receipt of organic materials and leaf and yard waste;
- pre-processing of the organic materials and leaf and yard waste;
- composting of the pre-processed materials in composting tunnels;
- removal of the materials from the composting tunnels at end of the composting process, and screening and curing of the finished compost inside the enclosed building;

Type of Document	Number	Date	Limit*	Notes
Environmental Compliance Approval - Comprehensive	1631-A2ELCQ	2015/12/10		

*** Limit in Document**

2.3 EQUIPMENT REQUIRING AUTHORIZING DOCUMENT

Does the facility have the required Environmental Compliance Approval(s)?

If you own, manage or operate a facility with an operation or equipment that emits one or more contaminants into the air as noted under section 9 of the Environmental Protection Act, you are required to have and operate under an Environmental Compliance Approval unless the activity is exempted from the approval process or is eligible for the Environmental Activity and Sector Registry (EASR).

The Environmental Compliance Approval (ECA) replaces the previous Certificate of Approval (Air) commencing October 31, 2011. All existing Certificates of Approval (Air) and their conditions continue to apply. Application for a new Environmental Compliance Approval is needed when you intend to make a change that requires an amendment to the approval.

☐ The facility does not have any required approval(s) for discharge of contaminants to air.
☐ The facility requires an amendment or additional approval for discharge of contaminants to air.
☐ The facility requires an amendment or additional approval for activity(s) other than for discharge of contaminants to air.
☒ The facility has the required approval (s) for discharge of contaminants to air (or is not required to obtain them).

Specifics:

Based on the inspection, the Facility has not modified or installed equipment outside of the description of the ECA requiring an amendment.

In the event changes to the operations, outside the scope of the ECA as outlined in Condition 2, the Facility will need to amend the ECA prior to making changes or modifications.

2.4 LEGISLATIVE NOTIFICATION REQUIREMENTS

Has the facility met all applicable legislative notification requirements for air emissions?

● Yes ○ No ○ Not Required

Specifics:

The Environmental Protection Act and the ECA outlines requirements for notifications to the Ministry of the Environment, Conservation and Parks. In reviewing the spills and complaints for the 2018 operating year, the Facility has met the notification requirements.

In 2019, the Facility had one (1) complaint related to odour. On July 2, 2019 the Facility received an odour complaint and on July 3, 2020 was reported to the District Manager as per Condition 8.2 of the ECA. On August 8, 2019 the Facility provided the report as per the requirements of the above referenced condition and reported the investigation concluded the odour complaint was determined to be caused by fugitive odour emissions from a temporary wall opening across from tunnels 7 & 8 as a result of construction activities to support upgrades to the Site. Following the complaint, the temporary wall was closed and other sections of the Site inspected and reinforced to ensure fugitive odour is not escaping the building envelop.

No further complaints were received by the Facility or the MECP to date.

2.5 MONITORING AND REPORTING

Has the facility met its assessment requirements?

● Yes ○ No ○ Not Required

Specifics:

Condition 11 of the ECA requires the completion of annual source testing of the emissions. In 2018 and 2019 source testing at the Site was completed by the Facility and submitted to the MECP.

Condition 2 of the ECA and Ontario 419/05 under the Environmental Protection Act requires the Facility to complete annual ESDM and Acoustic Assessment Report updates to ensure modifications and changes in standards are up to date. As part of the inspection, a copy of the 2018 & 2019 ESDM Summary Table and AAR Summary Table were requested and provided. Based on the review of the summary tables, the Site is compliant with Condition 2 and Ontario Regulation 419/05.

Is an annual ESDM report on site?

● Yes ○ No

Specifics:

Has the facility met its reporting requirements?

● Yes ○ No ○ Not Required

Specifics:

Condition 6 of the ECA requires the Facility to submit Annual Written Summary Report to the MECP. The submission of the Annual Written Summary is to be submitted no later than May 31st of each year. It was confirmed the 2018 and 2019 Annual Written Summary Reports were submitted as required.

2.6 EXCEEDANCE OF A LEGAL LIMIT AND/OR GUIDELINE

Is there information that demonstrates an exceedance of a legal limit and/or guideline for air emissions?

○ Yes ● No

Specifics:

As part of the inspections a review of the 2019 ESDM Emission Summary and Acoustic Assessment Summary was requested and received. The review concluded the Site is operating within compliance with emission standards and noise limits.

2.7 OPERATIONAL AND MAINTENANCE REQUIREMENTS

Has the facility met its operating/maintenance requirements?

● Yes ○ No ○ Not Required

Specifics:

A copy of the Operation Manual was requested and provided as required by Condition 7 of the ECA. Based on the review of the Operations Manual, the Site is in compliance with the requirements of Condition 7.

As a result of the installation of new air treatment equipment (ie. ammonia scrubber, biofilter), the Facility was informed to review the Operation Manual to ensure the document is reflective of the current equipment at the Site. This was also identified during the Non-Hazardous Waste Transfer Processing Inspection Report conducted on the same date.

2.8 RECORD KEEPING REQUIREMENTS

Has the facility met its record keeping requirements?

● Yes ○ No ○ Not Required

Specifics:

Condition 9 of the ECA outlines the record keeping requirements for the operation of the Site and other conditions within the ECA.

During the inspection records were available for review. As discussed in previous inspections, the Facility has numerous binders containing records related to process data, inspections, repair, maintenance, annual updates to ESDM and Acoustic Assessment Reports, training logs, etc. No concerns identified in the way records are managed and retained on-site.

The Facility utilizes SCADA to program, adjust, measure and monitoring the organic waste processing. The SCADA system also records the data collected during the processing process.

Copies of specific documents were requested as part of the inspection and reviewed for completeness. No concerns were identified during the review.

2.9 SPILLS PREVENTION AND CONTINGENCY PLAN

Is the facility required to have a Spill Prevention Contingency Plan (SPCP) under Ontario Regulation 224/07, Spill Prevention and Contingency Plans?

○ Yes ● No

Specifics:

The Facility is not required under Ontario Regulation 227/07 under the Environmental Protection Act to develop a Sills Prevention and Contingency Plan. The Facility

As a requirement of Environmental Compliance Approval No. 2766-7HEPSZ, the Facility is required to develop and implement an Emergency Response and Contingency Plan which includes procedures to be undertaken in the event of a spill, process upset, power failure, fire or any other emergency situation. The Emergency Response and Contingency Plan also outlines protocols with names and telephone numbers of persons to be contacted, including persons responsible for the Site, the Ministry;s District Office and the Spills Action Centre, the local Fire Department, the local Municipality, the local Medical Officer of Health, and the Ministry of Labour, and the names and telephone numbers of waste management companies available for emergency response.

At the time of the inspection the Emergency Response and Contingency Plan was observed to be on-site and updated as of February 15, 2019.

2.10 BEYOND COMPLIANCE

Are there any Beyond Compliance Projects being implemented at the facility?

○ Yes ● No

Specifics:

N/A

3.0 REVIEW OF PREVIOUS NON-COMPLIANCE ISSUES

No previous non-compliance was identified prior to completing the inspection.

4.0 SUMMARY OF INSPECTION FINDINGS (HEALTH/ENVIRONMENTAL IMPACT)

Was there any indication of a known or anticipated human health impact during the inspection and/or review of relevant material, related to this Ministry's mandate?

○ Yes ● No

Specifics:

Was there any indication of a known or anticipated environmental impact during the inspection and/or review of relevant material ?

○ Yes ● No

Specifics:

Was there any indication of a known or suspected violation of a legal requirement during the inspection and/or review of relevant material which could cause a human health impact or environmental impairment ?

○ Yes ● No

Specifics:

Was there any indication of a potential for environmental impairment during the inspection and/or the review of relevant material ?

○ Yes ● No

Specifics:

Was there any indication of minor administrative non-compliance?

○ Yes ● No

Specifics:

5.0 ACTION(S) REQUIRED

No actions are required at this time.

1.0 INTRODUCTION

The Ministry of the Environment and Climate Change conducted a Subject Waste Generator Inspection at Orgaworld Canada Inc.'s Ottawa Facility (the"Facility"), located at 5123 Hawthorne Road, Ottawa, Ontario (the "Site"), to determine compliance with regulatory requirements for the management of subject waste of Ontario Regulation 347 under the Environmental Protection Act.

No previous Subject Waste Generator Inspection had been completed by the ministry prior to the inspection.

2.0 INSPECTION OBSERVATIONS

Generator Registration Report No(s):

ON3338779

Date of last registration:

2018/01/24

2.1 REGISTERED WASTES

Has the generator properly registered?

☒ Yes. The generator has properly registered.
☐ No. The generator is exempt from generator registration.
☐ No. The generator has not registered and is not exempt.
☐ No. The generator has incorrectly classified the subject waste.
☐ No. The generator is currently registered, but not for all applicable subject wastes.
☐ No. The generator has incorrectly registered by not completing other required information on HWIN, or by mail-in registration.
☐ No. The generator has not properly registered all land disposal restriction (LDR) wastes.

The Facility has renewed their HWIN registration for the 2018 operating year. According to the Facility's HWIN account, the following waste classes are registered for generation at the Site:

113-L : Acid Waste - Other Metals
Description of Generating Process - Removal of airborne ammonia using an ammonia scrubber

147-L : Chemical Fertilizer Wastes
Description of Generating Process - Odour abatement system - ammonia scrubber

251-L : Oil Skimmings & Sludges
Description of Generating Process - Catch basin

252-L : Waste Oils & Lubricants
Description of Generating Process - Equipment

270-L - Other Specified Organics
Description of Generating Process - Organic composting (liquid leachate waste from sources separated organics)

2.2 DESCRIPTION OF PROCESS GENERATING WASTE MATERIALS

The subject waste generated at the Site is produced as a result of maintenance of equipment, on-site infrastructure (catch basins) and from the generation of leachate from the production of non-agricultural source material.

2.3 MANIFESTING

Has the generator properly released and manifested all subject waste shipped off site for disposal or reclamation?

☒ Not applicable
☐ Yes. The generator has properly released and manifested all subject waste shipped off site for disposal and/or reclamation.
☐ No. The generator has transported subject waste itself, without a proper Certificate of Approval for the waste type(s).
☐ No. The generator has released subject waste to a carrier without a proper Certificate of Approval for the waste type(s).
☒ No. The generator has not completed, or properly completed manifest(s).
☐ No. The generator has not properly notified the Ministry of the waste shipped.
☐ No. The generator has used paper manifests and has not retained the green copies for two years.

During the inspection waste manifest were reviewed for the 2017 operating year. In reviewing the manifest, only 1 manifest was found to missing Copy 6 (brown) - RS77263, dated April 4, 2017.

The Facility is currently following up with the receiver to determine the status of the missing Copy 6 manifest.

2.4 LAND DISPOSAL RESTRICTION (LDR)

Has the generator complied with the land disposal restriction requirements of Reg. 347?

☒ Not applicable

☐ Yes. The generator is in compliance with the applicable land disposal restriction requirements of Reg. 347.

☐ Yes. The generator is a small quantity generator.

☐ No. The generator is diluting wastes.

☐ No. The generator has shipped fully treated characteristic waste without providing a simple statement to the receiver.

☐ No. The generator has not notified the receiver of land disposal restriction waste shipments on or before the first shipment of the waste stream.

☐ No. The generator is mixing, blending or bulking waste not for the purposes of treating waste to land disposal restriction standards and does not have a Certificate of Approval that allows mixing, blending or bulking.

Comments:

The Facility has not registered any subject waste subject to land disposal restrictions of Ontario Regulation 347.

Is treatment required to meet land disposal restriction standards?

○ Yes ● No

2.5 ON-SITE STORAGE

Has the generator been storing all subject waste in accordance with Reg. 347 and in a secure manner as required by the Environmental Protection Act?

☐ Not applicable

☒ Yes. All subject wastes are stored in accordance with Reg. 347 and in a secure manner.

☐ No. The generator has not provided a notice to the Regional Director for subject waste stored for greater than 3 months.

☐ No. Wastes are stored in such a manner that there is a potential for fire, or explosions.

☐ No. Wastes are stored in such a manner that there is a potential for a spill that could adversely impact the natural environment.

☐ No. Wastes are not secured at the site and have been released to the natural environment.

☐ No. Wastes have been spilled from this site and have had, or are having an adverse impact on the natural environment.

☐ No. The generator has stored subject waste for a period greater than 24 months without applying for or not in accordance with a Certificate of Approval.

Subject waste is stored in low traffic areas and in a manner acceptable to the ministry.

2.6 OTHER PERTINENT CERTIFICATE(S) OF APPROVAL FOR THE SITE

The Facility operates a source separated organic composting operation under Environmental Compliance Approval No. 2766-7HEPSZ.

Does on-site disposal of subject waste(s) occur at this site?

○ Yes ● No

2.7 DISCHARGE OF WASTES TO MUNICIPAL SEWER(S)

Does the generator discharge subject waste to municipal sewers?

☒ No. Subject waste is not discharged to the municipal sewers.

☐ Yes. Subject waste is discharged to the municipal sewers, but the municipality is aware of this practise and the generator is properly registered for all hazardous waste.

☐ Yes. Subject waste is discharged to municipal sewers, but the municipality is not aware of this practise.

☐ Yes. Hazardous waste is discharged to municipal sewers, but is not registered.

The Site is not municipally serviced therefore the Facility is unable to discharge to municipal sewers.

3.0 REVIEW OF PREVIOUS NON-COMPLIANCE ISSUES

No previous Subject Waste Generator Inspection therefore no review of previous non-compliance issues were identified.

4.0 SUMMARY OF INSPECTION FINDINGS (HEALTH/ENVIRONMENTAL IMPACT)

Was there any indication of a known or anticipated human health impact during the inspection and/or review of relevant material, related to this Ministry's mandate ?

○ Yes ● No

Specifics:

Was there any indication of a known or anticipated environmental impact during the inspection and/or review of relevant material ?

○ Yes ● No

Specifics:

Was there any indication of a known or suspected violation of a legal requirement during the inspection and/or review of relevant material which could cause a human health impact or environmental impairment ?

○ Yes ● No

Specifics:

Was there any indication of a potential for environmental impairment during the inspection and/or the review of relevant material ?

○ Yes ● No

Specifics:

Was there any indication of minor administrative non-compliance?

● Yes ○ No

Specifics:

Copy 6 of Manifest No. RS77263 was not received by the generator from the receiver site

5.0 ACTION(S) REQUIRED

As a result of the inspection the following actions are required by the Facility:

1. Confirm Copy 6 of Manifest No. RS77263 was received from the receiver site

6.0 OTHER INSPECTION FINDINGS

1. It is recommended the Facility provide further information on the description of waste generation section within their

HWIN account.

1.0 INTRODUCTION

The Ministry of the Environment and Climate Change conducted a Non-Hazardous Waste Transfer Processing Inspection at Orgaworld Ottawa to assess compliance with Environmental Compliance Approval No. 2766-7HEPSZ (ECA), dated September 16, 2009, as amended.

The focus of the inspection was on conditions related to the management of non-hazardous organic waste and not compost production. The Facility is not currently producing compost therefore conditions specifically related to composting were not applicable and assessed at this time.

2.0 INSPECTION OBSERVATIONS

Certificate of Approval Number(s): ● Yes ○ No
C of A Number(s):
Environmental Compliance Approval Number 2766-7HEPSZ: Waste Disposal Site
Issued: September 16, 2009

Notice #1 - Issued on October 21, 2010
Details: The amendment was issued to allow the Facility to operate a mobile shredder unit on-site.

Notice #2 - Issued on May 2, 2012
Details: The amendment was issued for a change to allow the Facility to receive and remove waste between the hours of 6am to 8pm (M-F) and between the hours of 7am to 8pm on Saturdays - Condition 5.1

Notice #3 - Issued on February 6, 2015
Details: The amendment was issued to reflect the decision of the Environmental Review Tribunal decision for Case No. 09-115/09-126, Orgaworld Canada Ltd. v. Director, Ministry of the Environment, dated November 7, 2011. The decision allows for Orgaworld Ottawa to receive Processed Organic Waste that includes sanitary products and human body waste, waste that is collected in plastic bags or pet waste other than waste that incidental to bedding or litter provided that reasonable notice and supporting documentation is submitted and confirmed by the ministry - Condition 2(11)

Notice #4 - Issued on April 18, 2017
Details: The amendment was to reflect the re-evaluation of financial assurance required as per Condition 1(20.)

2.1 SITE OPERATION:

Specifics:
SERVICE AREA, APPROVED WASTE TYPES, RATES & STORAGE

(1) The Site may only accept solid non-hazardous domestic, commercial, institutional or industrial Organic Waste from the Provinces of Ontario and Quebec, limited to the following Organic Waste:

(a) Source-separated Organic Waste limited to the following:

(i) Food wastes: fruit, vegetable and general table scraps, meat and fish products, dairy products, egg shells, confectionery products, sauces, bones, pet food, fat, bread and grains, rice, pasta, coffee grounds, filters;

(ii) Paper fibres: soiled paper towels, tissues, paper plates, soiled paper food packaging items such as boxboard, cardboard, newspaper, and other packaging materials;

(iii) Miscellaneous: houseplants and yard wastes, dryer lint and hair, pet fur, sawdust and wood shavings and litter or bedding.

(b) Organic Waste from the food processing industry and other industries that produce food wastes;
(c) Organic Waste from the commercial sector, including but not be limited to food waste from restaurants, hotels, institutions, commercial operations that collect organic wastes;
(d) Leaf & yard waste;
(e) Organic sludges, including but not be limited to starches and paper wastes, but excluding sewage sludge and biosolids.

The 2017 Annual Report states that the Facility is in compliance with Condition 2.(1) by only accepting waste from the City of Ottawa and the Industrial, Commercial & Institutional (IC&I) sector which is within the approved service area outlined in ECA. This requirement in the approval was also confirmed by the Facility staff during the inspection.

(2) (i)The Owner shall not accept at the Site sanitary products and human body waste.
(ii) The Owner shall not accept at the Site any waste that is collected through a waste collection program that allows use of plastic bags.
(iii) The Owner shall not accept at the Site any waste that is classified as hazardous waste or liquid industrial waste in accordance with *O. Reg. 347* .

The 2017 Annual Report states that the Facility is in compliance with the above referenced condition by not accepting sanitary products, human body waste, hazardous waste and liquid industrial waste as defined in Ontario Regulation 347.

In 2015 the Facility began accepting source separated organics from the industrial, commercial and institutional sector in plastic bags after receiving the ministry's issuance of Notice #3 forming part of Environmental Compliance Approval Number 2766-7HEPSZ as a result of the Environmental Review Tribunal decision.

The Facility and the City of Ottawa is currently seeking agreement to allow for the collection of source separated organics in plastic bags and pet waste as part of the Green bin Collection Program within the City of Ottawa. If approved, the Facility will need to comply with conditions outlined in the ECA and assess whether the inclusions of

the new waste stream will require amendments to existing Environmental Compliance Approvals and other applicable approvals for the Site.

No issues identified.

(3) The Owner is only approved to receive Organic Waste in quantities that are not to exceed:
(a) a maximum of 1,200 tonnes on a daily basis; and
(b) a maximum of 150,000 tonnes per year.

The 2017 Annual Report provided the monthly and annual tonnages for the 2017 operating year As part of the inspection the Inspecting Officer reviewed the mass balance for the 2017 operating year. The data provided in the mass balance confirms the Facility is in compliance with tonnage limits outlined in ECA.

No issues identified.

(5) Waste storage at the Site is subject to the following limitations:

(a) unprocessed Organic Waste, excluding leaf & yard waste, shall be stored within the confines of the Processing Building;
(b) leaf & yard waste shall be stored within the confines of the Processing Building, or in accordance with the requirements of Condition 6.(14) of the Certificate of Approval (Industrial Sewage) for this Site;
(c) Immature Compost in various stages of curing shall be stored within the confines of the Processing Building;
(d) solid Residual Waste shall be stored in lugger bins located within the confines of the Processing Building;
(e) solid putrescible waste generated through activities not relating to the handling and processing of Organic Waste (ie. office, lunch room, etc.) may be stored in a covered bin outdoors and it shall be removed from the Site as required in accordance with *O. Reg 347* and the *EPA* .

At the time of the inspection no waste was observed to be stored outside the Processing Building. All waste and phases of the processing of organic waste were located inside the confines of the Processing Building.

No issues identified.

(9) In the event that Organic Waste cannot be processed at the Site and the Site is at its approved waste storage capacity, the Owner shall cease accepting additional Organic Waste. Receipt of additional Organic Waste may be resumed once such receipt complies with the waste storage limits approved in this Certificate.

The 2017 Annual Report stated compliance with the above reference condition. At the time of the inspection the Facility was in operation and was not exceeding the Site's approved waste storage capacity.

(11) Before the Owner accepts any new source of Organic Waste at the Site that includes:

(i) sanitary products and human body waste,
(ii) waste that is collected in plastic bags, or
(iii) pet waste other than waste that is incidental to bedding or litter,

The Owner shall provide the District Manager with reasonable notice in advance of the Owner's intent to commence acceptance of the new waste source at the Site. The Owner shall also provide the District Manager with such information as the District Manager confirm in writing is required respecting the new waste source, which may include the name and location of the source generator, the date the Owner proposes to commence accepting the waste at the Site, a description of the constituent components of the waste being accepted, confirmation whether inclusion of the waste components referenced above in (i) (ii) and (iii) are characterized as incidental or inadvertent, and information related to the storage of the waste prior to its delivery to the Site, together with any operational plans the Owner proposes for integrating the processing of waste from the new source into the waste stream then currently being processed at the Site. For purposes of this condition a new source also included any sources or Organic Waste already being accepted at the Site that will be changed to introduce, or increase the waste components referenced above in (i) (ii) and (iii). For purposes of this condition, the Director may

decided the length of the advanced notice reasonably required under this condition, and provide the Owner with written notice of the Director's decision in this regard.

In 2015 the Ministry of the Environment and Climate Change issued Notice #3 to the Facility to began receiving new sources of organic waste collected in plastic from the industrial, commercial and institutional sector. In order for this to occur, documentation was required to be submitted to the ministry as outlined in Condition 2(11). In February of 2015 Orgaworld Ottawa submitted the required information to satisfy the condition and allow for the receipt and processing of the new source of Organic Waste from the new sector.

3. SIGNS

(1) Prior to receipt of waste at the Site, the Owner shall ensure that a sign is posted at the entrance to the Site. The sign shall be visible from the main road leading to the Site. The following information shall be included on the sign:

(a) name of the Owner;
(b) this Certificate number;
(c) hours during which the Site is open;
(d) waste types that are approved to be accepted at the Site;
(e) Owner's telephone number (a hotline) to which complaints may be directed;
(f) Owner's twenty-four hour emergency telephone number (if different from above);
(g) a warning against unauthorized access;
(h) a warning against dumping at the Site.

(2) The Owner shall ensure that appropriate signs are posted at the Site clearly identifying the waste and stating warnings about the nature of the waste and any possible hazards.

At the time of the inspection it was noted that the Facility is in compliance with Condition 3 of issued ECA by posting a sign at the entrance of the Site outlining the above required information from a-h. A similar sign is also present at the exit of the Site. No issues were identified with the information displayed on the signs entering and exiting the Site.

It was discussed in the 2017 Annual Report of re-branding will take place in 2018 from Orgaworld to Renewi. The Facility is aware of the notifications requirements and physical changes required to ensure compliance with the conditions of the ECA.

4. SITE SECURITY

(1) All unloading and loading of waste and all waste processing activities at the Site shall at all times be undertaken by Trained Personnel.

(2) The Owner shall ensure that access to the Site is regulated and that all entrances are secured by lockable gates to restrict access only to authorized personnel when the Site is not open.

At the time of the inspection it was observed that training was completed as per the above referenced condition. The Site has installed a fence with a lockable gate to restrict access to the Site The Inspecting Officer confirmed with Facility staff that the Site is secured after the hours of operation.

5. SITE OPERATIONS

(3) Rejected Waste handling:

(a) In the event that waste is not approved under this Certificate is inadvertently accepted at the Site, the Owner shall ensure that all Rejected Waste:

(i) is stored in a way that ensure that no adverse effects result from such storage;
(ii) is segregated from all other waste;
(iii) is handled and removed from the Site in accordance with *O. Reg. 347* and the *EPA* ;
(iv) is removed from the Site within three (3) days of its receipt or as acceptable to the District Manager

On December 13, 2017 a total of 2.05 tonnes of waste was received from Metro and was rejected by the Facility due to contamination (Styrofoam and plastic packaging). The waste was shipped to landfill after Metro was notified of the

infraction. No rejected waste was accepted for processing or incorporated into the Facility's outgoing material.

6. EQUIPMENT AND SITE INSPECTIONS & MAINTENANCE

(1) Prior to receipt of any waste at the Site, the Owner shall prepare a comprehensive written inspection program which includes inspections of all aspects of the Site's operations including the following:

(a) loading/unloading area of the leaf & yard waste storage pad;
(b) parking lot area for evidence of run-off from the leaf & yard waste storage pad;
(c) Processing Building and the air pollution control equipment;
(d) security fence and property line;
(e) on-site roads for presence of leaks and drips from the waste delivery trucks;
(f) presence of excessive fugitive dust emissions from the on-site roads or the Compost stockpiles;
(g) on and off-site litter;
(h) presence of vector and vermin

Upon arriving to and entering the Site, no litter, presence of vector and vermin, run-off or presence of fugitive dust was observed. Security fence and property line appeared to be in good working order.

The Facility has the required documents and procedures which speak to the Facility's inspection program. The previous inspection incorporated a review of the procedures and records associated with the above conditions with no concerns identified. No changes were made for the 2017 operating year therefore the Inspecting Officer did not review the records as part of the inspection. Future inspections may include a review.

7. QUALITY CRITERIA , TESTING & MONITORING

(1) Cross-Contamination Prevention

(a) The Owner shall ensure that the incoming Organic Waste and the equipment used in handling of the incoming Organic Waste are kept separate and do not come in contact with the Immature Compost / the Finished Compost and the Compost except where the Immature Compost / the Finished Compost and the Compost are being fed back into the composting process.
(b) On an emergency basis, the Owner may use equipment utilized in processing of incoming Organic Waste to process the Immature Compost / the Finished Compost and the Compost provided that the equipment has been cleaned to prevent the Immature Compost / the Finished Compost and the Compost from being contaminated by the incoming Organic Waste.

The 2017 Annual Report states the Facility is in compliance with the above condition by keeping incoming organic waste separated from finished product. The use of a stream pressure washer is used in the event of an emergency when process equipment used for incoming organic waste needs to be used for immature or finished compost. The inspecting Officer is not aware of an emergency event where this was required for the 2017 operating year.

(2) Quality Control Monitoring of Organic Waste at the generator site:

(a) Prior to being accepted at the Site for the first time, the incoming Organic Waste from a new source/stream shall be characterized in accordance with the Ministry's regulatory requirements for sampling and testing to ensure that the incoming Organic Waste complies with the quality criteria specified in this Certificate. The incoming Organic Waste may be considered a pre-approved waste source/stream once the incoming Organic Waste meets the required quality criteria and has been classified as such by the Company.

(b) The incoming Organic Waste shall be re-characterized following any process changes, operational issues or other factors that may affect the quality of the incoming Organic Waste from the pre-approved source/stream.

The 2017 Annual Report states the Facility is in compliance with the above condition and sends incoming organic waste for testing to ensure compliance with the ECA and the Ontario Compost Quality Standards. No process changes, operational issues or other factors occurring in the 2017 operating year requiring the re-characterization of incoming organic waste.

Finished compost quality criteria outlined in additional sections of Condition 7 of the ECA was not incorporated into the inspection as the Facility is not currently producing compost. The Site is currently producing Non-Agricultural Source Material (NASM) which is not defined as a type of compost in the ECA or the Ontario Compost Quality Standards.

8. NUISANCE IMPACT CONTROL & HOUSEKEEPING

(1) The Owner shall ensure that all vehicles that have delivered waste to the Site are not leaking or dripping waste when leaving the Site.

As stated in the 2017 Annual Report, during periods where organic waste is delivered at the Site, vehicles are inspected during and after by trained Facility staff.

(2) The Owner shall ensure that the exterior of all trucks delivering waste to the Site is cleaned prior to leaving the Site, as needed, to prevent odours. Truck washing shall occur only in the dedicated wash down area of the processing building.

At the time of the inspection no truck washing operations were occurring. As stated in the 2017 Annual Report, the Facility provides rakes, brooms and a pressure washer if necessary to ensure the exterior is clean.

(3) The Owner shall ensure that there is no queuing or parking of vehicles that are waiting to enter the Site on any roadway that is not a distinct part of the Site.

At the time of the inspection no vehicles entering the Facility were parked or queuing on roads outside the Site boundary. The 2017 Annual Report confirms that during the 2017 operating year the Facility is in compliance with this condition.

(4) Should the Owner become aware that the truck(s) delivering waste to the Site have leaked wastewater on the municipal roadways, the Owner shall immediately notify the owner of the leaking vehicle(s) and the District Manager about the leak problem.

Prior to the inspection, a district file review was completed and the District Manager had not been notified of any wastewater impacts to municipal roadways. The 2017 Annual Report states that this was not noticed during the reporting period.

(5) The Owner shall:
(a) take all practical steps to prevent the escape of litter from the Site;
(b) pick up litter around the Site on a daily basis, or more frequently if necessary; and
(c) if necessary, erect litter fences around the areas causing a litter problem.

At the time of the inspection the Inspecting Officer walked a portion of the property and observed no litter issues. As part of the Facility's inspection program, trained staff monitor litter on a daily basis. Inspection reports are completed and retained on-site.

(6) Prior to the receipt of any waste at the Site, the Owner shall:
(a) implement necessary housekeeping procedures to eliminate sources of attraction for vermin and vectors; and
(b) hire a qualified, licensed pest control professional to design and implement a pest control plan for the Site. The pest control plan shall remain in place, and be updated from time to time as necessary, until the Site has been closed and this Certificate has been revoked.

The Facility retains the services of a external qualified licensed pest control professional to implement the pest control plan. No concerns identified.

(7) The Owner shall ensure that all on-Site roads and operations/yard areas are regularly swept/washed to prevent dust impacts off-Site.

Upon arriving to the Site the roads on-site did appear to be swept/washed as required. No dust was observed to be generated from vehicle traffic or wind conditions. The Facility retains a company to conduct road sweeping and washing.

(8) (i) The Owner shall store Compost within the confines of the Processing Building, or in accordance with the requirements of Condition 6.(14) of the Certificate of Approval (Industrial Sewage) for this Site.

No compost was being stored at the time of the inspection. No concerns identified.

(ii) Notwithstanding the requirements of Condition 8.(8)(i), above, the Owner shall ensure that the Compost stockpiles are not a source of fugitive dust emissions. If the proposed Compost storage features are deemed insufficient to control the fugitive dust emissions from the Compost stockpiles, the Owner shall provide additional covers or spray the stockpiles with water, or use any other method to minimize the fugitive dust emissions.

At the time of the inspection dust was assessed to determine if the operations and procedures currently in place are effectively controlling fugitive dust. Fugitive dust was not observed to be of concern during the inspection. No complaints of dust have been reported to the ministry to date.

9. OPERATIONS MANUAL & STAFF TRAINING

(1) The Owner shall prepare an Operations Manual for use by the Site personnel. The Operations Manual shall contain the following:

(a) outline the responsibilities of the Site personnel;
(b) personnel training protocols;
(c) waste receiving and screening procedures;
(d) unloading, handling and storage procedures;
(e) waste processing procedures;
(f) sampling and testing procedures;
(g) Site inspections and recording procedures;
(h) the emergency response procedures;
(i) procedure for handling complaints as described in the Certificate of Approval (Air/Noise) for this Site.

In 2016 the Operations Manual was updated due to changes to operating procedures and equipment. A copy was provided to the Ottawa District Office of the updated manual. No concerns identified.

10. EMERGENCY RESPONSE AND CONTINGENCY PLAN

(1) Within six (6) months from the date of this Certificate, the Company shall submit to the District Manager an Emergency Response and Contingency Plan. The Emergency Response and Contingency Plan shall be prepared in consultation with the District Manager, the local Municipality and the Fire Department and as a minimum it shall include the following information:

(a) emergency response procedures to be undertaken in the event of a spill, process upset, power failure, fire or any other emergency situation, including specific clean up methods for wastes expected to be generated from the emergency situation;
(b) a list of equipment and clean up materials available for dealing with the emergency situations;
(c) notification protocol with names and telephone numbers of persons to be contacted, including persons responsible for the Site, the Ministry's District Office and Spills Action Centre, the local Fire Department, the local Municipality, the local Medical Officer of Health, and the Ministry of Labour, and the names and telephone numbers of waste management companies available for emergency response;
(d) procedures and actions to be taken should the incoming Organic Waste not meet the quality criteria specified by this Certificate;
(e) procedures and actions to be taken should the outgoing Residual Waste not meet the quality criteria required by the specified by this Certificate;
(f) procedures and actions to be taken should the composted Organic Waste fail to meet the compost quality criteria specified by the Certificate;
(g) procedures and actions to be taken should the occurrence of the complaints require the Company to suspend the waste processing activities at the Site.

Prior to completing the inspection a file review was conducted which incorporated a review of the "Contingency Plan for Odours, Spills, Fires, Power Failures and Labour Disruptions" procedure. No issues identified and no revisions occurred in 2017.

11. EMERGENCY SITUATIONS RESPONSE AND REPORTING

(1) The Company shall immediately take all necessary measures, as outlined in the Emergency Response and Contingency Plan, to handle the emergency situations occurring at the Site.

(2) The Company shall ensure that the equipment and materials outlined in the Emergency Response and Contingency Plan are immediately available at the Site at all times and are in a good state of repair and fully operational.

(3) The Company shall ensure that all Site personnel are fully trained in the use of the equipment and materials outlined in the Emergency Response and Contingency Plan, and in the procedures to be employed in the event of an emergency.

(4) All Spills, as defined in the *EPA* , shall be immediately reported to the Ministry's Spills Action Centre at 1-800-268-6060 and shall be recorded in the log book as to the nature and cause of the spill, and the action taken for clean-up, correction and prevention of similar future occurrences.

(5) Should a Spill, as defined in the *EPA* , occur at the Site, in addition to fulfilling the requirements from the *EPA* , the Company shall submit to the District Manager a written report within three (3) calendar days outlining the nature of the Spill, remedial measure taken and the measures taken to prevent future occurrences at the Site.

In the 2017 operating year the Facility did not have a spill requiring the activation of the Emergency Response and Contingency Plan.

12. RECORDS KEEPING

Annual Report

(9) By March 31st following the end of each operating year, the Owner shall prepare and submit to the District Manager and the Public Liaison Committee (PLC), an Annual Report summarizing the operation of the Site covering the previous calendar year. This Annual Report shall include, as a minimum, the following information:

(a) a monthly mass balance of the Organic Waste received, processed and transferred from this Site, including waste type, quantity, sources and/or disposal destinations;
(b) an annual summary mass balance of the Organic Waste received, processed and transferred from this Site, including waste type, quantity, sources and/or disposal destination;
(c) an annual summary of any deficiencies, items of non-compliance or process aberrations that occurred at this Site and any remedial/mitigative action taken to correct them;
(d) a descriptive summary of any spills, incidents or other emergency situations which have occurred at this Site, any remedial measures taken, and the measures taken to prevent future occurrences;
(e) a summary describing any Rejected Waste including quantity, waste type, reasons for rejection and origin of the Rejected Waste;
(f) any environmental and operational problems, that could negatively impact the environment, encountered during the operation of the Site or identified during the facility inspections and any mitigative actions taken;
(g) any changes to the Emergency Response and Contingency Plan, the Operations Manual or the Closure Plan that have been approved by the Director since the last Annual Report;
(h) any recommendations to minimize environmental impacts from the operation of the Site and to improve Site operations and monitoring programs in this regard;
(i) a summary of any complaints received and the responses made, as required by the Certificate of Approval (Air/Noise);
(j) an update on the amount of Financial Assurance which has been provided to the Director;
(k) update on activities of the PLC;
(l) a condition-by-condition analysis of compliance with all Conditions of this Certificate.

As part of the file review process the 2017 Annual Report was found to be complete as required. The Annual Report was submitted to the Ottawa District Office in March of 2018.

2.2 FINANCIAL ASSURANCE:

Specifics:
Condition 1(20.) of the ECA outlines the amount of financial assurance required for the operation of a solid non-hazardous waste transfer processing Site. In April of 2017, the ministry issued Notice #4 - ECA amendment to reflect a re-evaluation of the financial assurance needed for the site. The Facility submitted the remaining amount which forms the new total of financial assurance from the previous re-evaluation. The next re-evaluation of financial assurance is scheduled for April 30, 2020 and future re-evaluations at 3 year intervals.

2.3 SITE SERVICE AREA:

Specifics:

Orgaworld Ottawa is approved to operate a waste disposal site (transfer processing) serving the Provinces of Ontario and Quebec, for the temporary storage, transfer and processing (composting) of solid non-hazardous, domestic, commercial, institutional or industrial organic waste as outlined in Condition 2 of the ECA..

2.4 APPROVED SITE CAPACITY:

Specifics:
Orgaworld Ottawa is approved to operate a waste disposal site (processing) serving the Provinces of Ontario and Quebec, for the temporary storage, transfer and processing (composting) of solid non-hazardous, domestic, commercial, institutional or industrial organic waste at a maximum rate of 1,200 tonnes per day and 150,000 tonnes per year of Organic Waste as outlined in Condition 2(3) of the ECA.

2017 Operating Year (January 1, 2017 to December 31, 2017):

Incoming
City of Ottawa Green Bin Program = 77,505 tonnes
IC&I Sector = 5,264 tonnes
Total = 82,769 tonnes

Outgoing
NASM = 18,850 tonnes
Bedding = 13,447 tonnes
Orgapower = 653 tonnes
Residual = 16,530 tonnes
Total = 49,480 tonnes

3.0 REVIEW OF PREVIOUS NON-COMPLIANCE ISSUES

No previous non-compliance issues were identified prior to completing the inspection.

4.0 SUMMARY OF INSPECTION FINDINGS (HEALTH/ENVIRONMENTAL IMPACT)

Was there any indication of a known or anticipated human health impact during the inspection and/or review of relevant material, related to this Ministry's mandate?
No

Specifics:

Was there any indication of a known or anticipated environmental impact during the inspection and/or review of relevant material ?
No

Specifics:

Was there any indication of a known or suspected violation of a legal requirement during the inspection and/or review of relevant material which could cause a human health impact or environmental impairment ?
No

Specifics:

Was there any indication of a potential for environmental impairment during the inspection and/or the review of relevant material ?
No

Specifics:

Was there any indication of minor administrative non-compliance?
No

Specifics:

5.0 ACTION(S) REQUIRED

No actions are required at this time.

6.0 OTHER INSPECTION FINDINGS

The Site is approved for the purpose of compost production and is required to comply with the compost production conditions within the ECA as well as the Ontario Compost Quality Standards. Since the implementation of the Ontario Compost Quality Standards in 2015, the Site is unable to produce compost that meet the standards. As a result, the Facility is producing NASM for land application under approved NASM Plans.

As a recommendation, the Facility should re-evaluate the equipment and processes at the Site and determine modifications that could be implemented in order to producing a compost product that meet the requirements of the ECA and the Ontario Compost Quality Standards. If the Facility wishes to continue to produce NASM then the intent of the ECA is no longer applicable and therefore should be amended to reflect the actual waste processing activities from compost to NASM.

1.0 INTRODUCTION

The Ministry of the Environment and Climate Change (MOECC) conducted an Industrial Sewage Works inspection at Orgaworld Canada Limited (the "Facility") on March 15, 2018 to assess compliance with issued Environmental Compliance Approval No. 2844-9YNGZC (ECA) issued on February 1, 2017. The Facility operates a waste organic processing site located at 5123 Hawthorne Road, Ottawa, Ontario (the "Site"). The Site receives organic waste from the City of Ottawa's Green Bin Collection Program and the Industrial, Commercial, and Institutional Sector.

The Site currently produces Non-Agricultural Source Material (NASM) for the use at agricultural operations and animal bedding.
A previous inspection occurred on September 29, 2016.

2.0 INSPECTION OBSERVATION

Facility MEWS (Works) Number:
N/A

Sector Type:
Other

Specify Other:
Organic Waste Processing

Effluent Type:
Process, Storm Water

Receiver Type:
Surface Water

Name of Receiver:
Findlay Creek

Is there a sensitive receptor on/in the receiver?
No

Certificate of Approval Number(s):
Yes
C of A Number(s):
Industrial Sewage Works Environmental Compliance Approval No. 9465-7NVRWT - issued September 16, 2009

Industrial Sewage Works Environmental Compliance Approval No. 7032-88XPRA - issued September 7, 2010

Industrial Sewage Works Environmental Compliance Approval No. 7251-8GKRPD - issued May 30, 2011

Industrial Sewage Works Environmental Compliance Approval No. 2844-9YNGZC - issued February 1, 2017

2.1 WASTEWATER TREATMENT PROCESS DESCRIPTION

General Description:

Stormwater is collected in an on-Site open ditch system leading to a stormwater management pond that discharges off-Site to the Hawthorne Industrial Park ditch system which eventually enters into Findlay Creek system.

Process water generated inside the building is stored in leachate holding tanks buried on the east-side of the building. Should the Facility need to use water in their process (wetting the composting material), the Facility uses the leachate from the storage tanks and/or water from the stormwater pond. Should the leachate tanks need to be emptied, the Facility retains the services of a ministry approved waste management system to pick up and dispose of the leachate at a ministry approved waste disposal site. The Hazardous Waste Information Network Generator Number for the Site is ON3338779, and indicates that the leachate is classified as waste class 270 L - Other specified organic sludges, slurries and solids. According to Facility representatives, the Facility operates in a water negative environment in the summer but has found that they collect leachate in the winter.

The Site was issued the ECA for the following industrial sewage works system:

existing sewage works for the collection, transmission, treatment and disposal of stormwater runoff & process / wash water from a catchment area of 10.14 hectares, to provide Normal water quality protection (Level 2) and to attenuate post-development peak flows to pre-development levels, discharging to a roadside ditch, then to a central stormwater management (SWM) facility off-Site (i.e. at the adjacent Hawthorne Industrial Park) which subsequently discharges to the Findlay Creek through a roadside ditch, for all storm events up to and including the 100 year return storm, consisting of the following:

- one (1) submersible pump capable of pumping up to 229 m^3/day of stormwater collected from the south ditch of the Site. The pumped stormwater is transferred via a sub-surface 50 mm PVC forcemain to underground storage tanks located on the east side of the Facility for integration into the process water stream or transported off-Site for final treatment.

- one (1) terrain tank located on the north side of the Facility, adjacent to the north ditch, having an approximate volume of 45 m^3. Initial stormwater run-off will drain from a portion of the asphalt pad on the north side of the Facility into the tank for assessment by Site operations staff as to disposal point (ditch/pond, into plant, or hauled off-Site). As the tank fills, tank will spill-over (after initial flush) into the north ditch and travel to the wet detention pond.

- installation of aerators in the south-east portions of the wet detention pond to be operated as required, in order to maintain the stormwater management pond water quality trigger parameters below trigger levels.

Part I Stormwater Management Works

- one (1) wet extended detention stormwater pond in U shape with approximately base dimensions as follows: 120 m long and 12 m wide, and a maximum depth of 2.0 m, to permanent pool level and 3.4 m to overflow weir elevation (emergency elevation), with 4:1 side slopes, with the following volume structure:

Stage Storage	Elevation (metre)	Storage Volume (cubic metres)
Permanent Pool	90.25 – 91.25	5,385
Extended Detention	91.25 – 91.45	1,311
Quantity	91.45 – 92.25	6,080
Emergency	92.25 – 92.65	3,532

and equipped with the following structures:

- one (1) forebay approximately 65 m long and 12 m wide in U shape, and a maximum depth of 1.0 m to permanent pool level and 3.4 m to overflow weir elevation, equipped with two inlet structures:

- inlet structure: A 12.5 m long 900 mm diameter concrete storm inlet pipe with concrete headwall, connected through the Vortechs unit before entering the sedimentation forebay at an invert elevation of 89.60 m, designed to convey up to a maximum 714 L/s;

- overflow channel: A 9.0 m wide (base), 1.5 m long and approximately 250 mm high channel connecting the open ditch system to the forebay at an invert elevation of 92.45 m, designed to convey up to a maximum 3.07 m^3/sec.

- one (1) 150 mm diameter orifice plate set at an elevation of 91.25 m for quality control. This flow restrictor is installed within a 2400 mm diameter maintenance hole (MH2) and attached at the downstream end of a 300 mm diameter PVC pipe, equipped with a cast iron sluice gate valve (Armtec series 20-10C), which will be in **closed position** during normal operation periods;

- one (1) 825 mm diameter concrete pipe and 3.8 m length for quantity control up to the 100-year post-development flow set at an elevation of 91.45 m.

- one (1) 4.0 m wide 250 mm high emergency overflow spillway set at an elevation of 92.25 m, discharging to a concrete stabilized swale and ultimately the roadside ditch draining to the Findlay Creek, a tributary to Shields Creek.

- one (1) precast concrete oil/grit separator (Vortechs Model 16000) designed to handle stormwater runoff to convey up to 714 L/s storm flows, providing a sediment storage capacity of 5.43 m^3 and having interior dimensions of 5.49 m long, 3.66 m widen and 2.13 m high, designed to provide over 80% total net annual TSS removal, discharging to a forebay of the wet pond;

- an open ditch/swale system with sufficient capacity to convey up to the 100-year storm event (estimated at 3.07 m^3/sec), with approximately 1,000 m length of a trapezoidal shaped perimeter ditch along the Site boundaries, having a top width of approximately 1.0 m wide flat bottom ditch and side slopes of 3V:1H up to 10:1 with variable widths and depths, running through three culverts of 18 to 30 m in length and 600 mm diameter concrete sewers, and discharging through a 2400 mm diameter maintenance hole (MH1) connecting to the oil/grit separator described above;

- a minor drainage system of storm sewers and appurtenances designed to capture and convey runoff during frequent storm events up to the 10-year storm event with PVC sewers ranging from 150 mm to 300 mm diameter sewers. The minor drainage system connects the organics composting facility through approximately 200 m length 300 mm diameter sewer to the MH5 for further discharge into the inlet structures.

- one (1) maintenance access road for operational, inspection and maintenance purposes, consisting of a 4 m wide gravel/grassed access lane located around the perimeter of the facility and a 70 m long gravel lane to the inlet

structures at the northwest corner of the pond to the outlet structures.

The simulated modelling estimate and drainage pattern of the Site are as follows:

Storm Events	2-year	5-year	25-year	100-year
Existing flows, pre-development (L/s)	206	351	606	848
Post-development flows (L/s)	1,118	1,651	2,410	3,067
Post-development attenuated flows (L/s)	56	89	189	283

Part II Process Water Recirculation System

- a **Process Water Recirculation System** (WRS) to provide optimum humidity levels for the composting process and for odour control system, consisting of the following:

- six (6) reinforced precast concrete underground storage tanks equipped with level control system with a capacity of 45 m^3 each;

- four (4) plastic above ground storage tanks (bioscrubber, sulphuric acid storage, tank and two ammonium sulphate storage tanks) equipped with level control system with a capacity of 180, 45, 50, and 50 m^3 respectively;

- Eight (8) pumps to recirculate collected water from composting tunnels, biofilters and bioscrubber to the composting tunnels, biofilter and bioscrubber and for washdown supply.

- piping for percolate/washdown water supply to the composting area including a sprinkling system;

- an odour control equipment consisting of a biofilters and bio scrubber to recirculate filtrate water and supply of filtered effluent to the washdown lines, and equipped with chemical addition piping for pH control; and

- piping for the supply of stormwater from the wet pond to the process tanks for composting requirements.

The above, including all other controls and appurtenances essential for the proper operation of the aforementioned Works.

No modifications, alterations, or additions were noted during the inspection which would trigger the need for an amendment to Environmental Compliance Approval No. 7251-8GKRPD. No concerns identified.

2.2 EFFLUENT SUMMARY REPORT

What are the facility's effluent limits based on?
Certificate of Approval/Permit

Does the facility comply with its limits?
Yes

Condition 5(5) of the ECA requires the Facility to analyse the stormwater management pond to the parameters listed in Table 2 - Trigger Parameters (see below) and meet the limits prior to discharging the effluent off-Site.

Table 2
Trigger Parameters

Parameter	Trigger Level (mg/L if not specified)
Ammonia (unionized)	0.05
Nitrate-N	2.93
$CBOD_5$	15
Total Phosphorus (TP)	0.4
Total Suspended Solids (TSS)	15
E-coli	100 count/100 mL
pH	6.5 to 8.5
Temperature (maximum)	23°C

In the 2017 operating year the Facility discharged effluent on three (3) occasions. As part of the inspection the Inspecting Officer requested the sample results for the effluent discharge events and were provided by the Facility. In reviewing the results and the 2017 AR, the following periods of discharge occurred:

Discharge Period	Sample Date	Pass / Fail
April 18, 2017 to May 15, 2017	April 10, 2017	Pass
July 26, 2017 to July 31, 2017	July 6, 2017	Pass
December 21, 2017 to December 31, 2017	December 14, 2017	Pass

Based on a comparison between Table 2 - Trigger Parameters and the sample results collected for the discharge events, the Facility is in compliance with Condition 5 of the ECA.

2.3 SEWAGE TREATMENT WORKS CAPACITY ASSESSMENT

Flow (m^3/day)	Year 1 2015	Year 2 2016	Year 3 2017
Average daily flow	0.00	0.00	0.00
Maximum daily flow	0.00	0.00	0.00
Capacity Design	0.00	0.00	0.00
% of capacity (based on average daily flow)	0.00	0.00	0.00

N/A

2.4 SAMPLING REQUIREMENTS

What are the facility's sampling requirements based on?

Certificate of Approval/Permit

Does the facility meet sampling requirements?

No

Condition 4 of the ECA outlines the requirements for the Facility to monitoring, on a monthly basis, the water quality of the Stormwater Management Pond.

4. SURFACE WATER MONITORING AND RECORDING

(1) The Owner shall, upon commencement of operation of the Works, carry out the following effluent monitoring program. Composite samples comprised of three (3) or more equal volumes of grab samples from different locations of the pond shall be collected from the **SWM Pond at a monthly frequency** and analyzed for the following parameters listed in Table 1:

Table 1 - Effluent Monitoring SWM Pond		
General Parameters	**Inorganic**	**Field Parameters**
BOD_5	Arsenic	Conductivity
COD	Boron	Dissolved Oxygen
DOC	Cadmium	pH
Total Ammonia Nitrogen (TAN)	Chromium	Temperature
Total Kjeldahl Nitrogen (TKN)	Cobalt	
Nitrate-N	Copper	
Nitrite-N	Lead	
Total Phenols	Mercury	
Total Phosphorus (TP)	Nickel	
Total Suspended Solids (TSS)	Zinc	
E-coli		
Oil & Grease		

pH		

In 2017 monthly samples were collected by the Facility and sent for analysis for the parameters listed in Table 1 - Effluent Monitoring SWM Pond. As part of the inspection copies of the sample results were requested and received. All monthly samples were collected with the exception of January, February and October 2017. It was explained in the 2017 Annual Report samples were unable to be collected due to frozen pond conditions for January and February. The October monthly sample was not collected as it was reported that due to heavy precipitation, an accurate reading could not be collected.

****Please see Section 5.0 of this Report****

Condition 9 of the ECA outlines the requirement for the Facility to implement the groundwater monitoring program for the unconfined shallow aquifer and deep bedrock aquifer. As part of the ECA requirements, the Facility must complete an annual report outlining the completion of the groundwater monitoring program and the findings of the program of the operating year.

On March 22, 2018 the MOECC received a copy of the 2017 Annual Groundwater and Surface Water Monitoring Report - Orgaworld Ottawa, ECA No. 2844-9YNGZC, dated March 15, 2018. The report outlines the following conclusions and recommendations with respects to the findings of the 2017 report:

Conclusions:

1. Based on the groundwater elevations gathered in June and November 2017, shallow unconfined aquifer flow occurs in an east-northeast direction and groundwater in the deep bedrock aquifer flows in a west-southwest direction, opposite to the direction of the shallow unconfined aquifer.
2. Analytical results for the hallow unconfined aquifer samples indicate that groundwater quality at the Site is being altered by Facility operations. The distribution of elevated concentrations of ammonia, DOC, iron, and manganese are consistent with a contaminant plume related to an organic contaminant source emanating from the Facility.
3. Analytical sample results obtained from the deep bedrock aquifer unit monitoring wells indicate that groundwater quality in the deep bedrock aquifer is naturally poor. Increasing trends of ammonia concentrations during previous monitoring periods have been observed downgradient of the Facility, however recent results show a reversal in these trends.
4. Surface water sample results indicate that surface water quality downstream of the Site was unaltered by Site activities during the 2017 monitoring period.
5. Surface water was discharged three times from the on-Site Stormwater Management Pond during the 2017 monitoring period (April, July, and December). In the April, July, and December samples collected from the Stormwater Management Pond all parameters were below their respective trigger levels listed in the Site ECA.

Recommendations:

1. Operation of the groundwater extraction system should continue, removing as much impacted groundwater from the shallow flow system as is practical.
2. Future monitoring reports should assess the effectiveness of the extraction well and provide recommendations for continued operation or expansion, as appropriate, of the current remediation system.
3. Tier II confirmatory sampling should be completed during the spring of 2018 sampling event at MW5-09, MW102-09, MW105-13, TW-4, and TW-8.

The 2017 Annual Groundwater and Surface Water Monitoring Report - Orgaworld Ottawa, ECA No. 2844-9YNGZC, dated March 15, 2018, will be sent to the MOECC's Regional Technical Support Section's Groundwater Unit for review. Once the review is completed comments will be provided to the Facility.

2.5 REPORTING REQUIREMENTS

What are the facility's reporting requirements based on?

Certificate of Approval/Permit

Does the facility meet reporting requirements?

Yes

Condition 10 of the ECA outlines the reporting requirements for the Facility:

10. REPORTING

(1) The Owner shall, upon request, make all manuals, plans, records, data, procedures and supporting

documentation available to Ministry staff.

(2) The Owner shall prepare a performance report on an annual basis, within **ninety (90) days** following the end of the period being reported upon. The first such report shall cover the first annual period following the commencement of operation of the Works and subsequent reports shall be submitted to cover successive annual periods following thereafter. The reports shall contain, but shall not be limited to, the following information:

(a) a description of any operating problems encountered and corrective actions taken;
(b) a summary of all maintenance carried out on any major structure, equipment, apparatus, mechanism or thing forming part of the Works;
(c) a summary of all effluent monitoring results undertaken in the reporting period;
(d) a summary of the quantity of leachate contaminated sewage that was hauled to a municipal sewage treatment plant and the number of times the contents of the SWM Pond were disposed in such manner;
(e) a summary of the calibration and maintenance carried out on all effluent monitoring equipment;
(f) all analytical results and water level elevations obtained from the groundwater monitoring, pursuant to condition 9; and
(e) any other information the District Manager requires from time to time.

At the time of the inspections records were available to the ministry for review (daily inspections, analytical results).

On March 22, 2018 The Facility submitted the annual performance report for the 2017 operating year which included the 2017 Annual Groundwater and Surface Water Monitoring Report - Orgaworld Ottawa, ECA No. 2844-9YNGZC, dated March 15, 2018. The 2017 Annual Report Organics Composting Facility was reviewed as part of the inspection and found to complete to satisfy the requirements of Condition 10.

2.6 FLOW MEASUREMENT

The ECA does not require the construction and operation of flow monitoring or measurement equipment.

2.7 MINISTRY SAMPLE RESULTS

Were Ministry samples collected during the inspection?
No

Reason:
The approved works was not discharging at the time of the inspection.

2.8 FINANCIAL ASSURANCE

The Industrial Sewage Works is not subject to the requirements of Financial Assurance. It should be noted that under Environmental Compliance Approval Number 2766-7HEPSZ (Waste Disposal Site) the Facility is required to submit financial assurance in an amount sufficient to satisfy the Director.

2.9 SPILL PREVENTION AND CONTINGENCY PLANS

Is the facility required to have a Spill Prevention and Contingency Plan (SPCP) as required by Ontario Regulation 224/07?
No

Has the facility had any spills since the last inspection?
Yes

Were all the spills reported to the ministry?
Yes

Does the facility's operations or spill history suggest that a SPCP be developed?
No

Comments:
The Facility is not required under Ontario Regulation 227/07 under the Environmental Protection Act to develop a Sills Prevention and Contingency Plan. The Facility

As a requirement of Environmental Compliance Approval No. 2766-7HEPSZ and Environmental Compliance Approval 2844-9YNGZC, the Facility is required to develop and implement an Emergency Response and Contingency Plan and Spill Contingency and Pollution Prevention Plan which includes procedures to be undertaken in the event of a spill, process upset, power failure, fire or any other emergency situation. The Plans outline protocols with names and telephone numbers of persons to be contacted, including persons responsible for the Site, the Ministry's District Office and the Spills Action Centre, the local Fire Department, the local Municipality, the local Medical Officer of Health, and the Ministry of Labour, and the names and telephone numbers of waste management companies available for emergency response.

At the time of the inspection the Emergency Response and Contingency Plan and Spill Contingency and Pollution Prevention Plan was observed to be on-Site and updated to reflect current operations (updated 2016).

3.0 REVIEW OF PREVIOUS NON-COMPLIANCE ISSUES

No previous non-compliance issues were identified prior to completing the inspection.

4.0 SUMMARY OF INSPECTION FINDINGS

Was there any indication of a known or anticipated human health impact during the inspection and/or review of relevant material, related to this Ministry's mandate?
No

Specifics:

Was there any indication of a known or anticipated environmental impact during the inspection and/or review of relevant material?
No

Specifics:

Was there any indication of a known or suspected violation of a legal requirement during the inspection and/or review of relevant material which could cause a human health impact or environmental impairment?
Yes

Specifics:
1. Failure to collect monthly sample for the month of October as per the requirements of Condition 4 of the ECA

Was there any indication of a potential for environmental impairment during the inspection and/or the review of relevant material?
No

Specifics:

Was there any indication of minor administrative non-compliance?
No

Specifics:

5.0 ACTION(S) REQUIRED

The following action items are required to be addressed by the Facility as a result of the inspection findings above:

1. Orgaworld Canada Inc. must ensure monthly samples are collected regardless of precipitation events. Please confirm, in writing by April 27, 2018, future monthly samples are collected regardless of precipitation events.

2. Orgaworld Canada Inc. must review the sampling protocol and sewage works system to determine an alternative solution to sample collection during periods of ice covered conditions. It is understood health and safety of staff is priority however alternative solutions are available to prevent iced cover conditions (aeration, bubblers, etc.). By December 2018 provide a response to the undersigned outlining the options explored in a proposal on how the Facility plans to satifiy the requirements of the ECA.

6.0 OTHER INSPECTION FINDINGS

None at this time.

1.0 INTRODUCTION

The Ministry of the Environment and Climate Change conducted an Air Facility Inspection at Orgaworld's Ottawa Facility (the "Facility"), located at 5123 Hawthorne Road, Ottawa, On (the "Site"), to assess compliance with issued Environmental Compliance Approval No. 1631-A2ELCQ, Ontario Regulation 419, environmental regulations, guidelines and policies.

1.1 FOCUS OF THE AIR INSPECTION

Is the inspection for the entire facility or is it scoped to part of the facility?

○ Entire Facility ● Part of the Facility

Specifics:

The inspection focussed on the bioscrubber and biofilter air treatment process for the organic waste processing operation at the Site. The Site has one (1) bioscrubber and two (2) biofilters servicing the emission from the organic waste processing operations.

1.2 TARGET SECTOR IN ONTARIO REGULATION 419/05, AIR POLLUTION - LOCAL AIR QUALITY

Is the facility in a targeted sector identified in Schedule 4 or Schedule 5 of O. Reg. 419/05?

Yes, the facility is in a target sector identified in Schedule 5.

☐ NAICS exemption — Note that s. 1(2) of Reg. 419/05 sets out exemptions for facilities whose activities would not be captured in NAICS 221112 (Fossil-Fuel Power Generation) and NAICS 5622 (Waste Treatment and Disposal)

Specifics:

The Facility operates under North American Industry Classification System (NAICS) code 562210 - Waste Treatment & Disposal for the operation of land fill sites, incinerators, or other treatment or disposal facilities for non-hazardous or hazardous waste. Establishments that integrate the collection, treatment and disposal of waste are also included.

The Facility is currently processing source separated waste from the City of Ottawa's Green Bin Collection Program and selected Industrial, Commercial & Institutional sectors for the production of Non-Agricultural Source Material (NASM). The NASM is applied to the agricultural operations as a soil conditioner under an approved NASM Plan, issued by the Ontario Ministry of Agriculture and Rural Affairs, or used as an animal bedding product.

2.0 INSPECTION OBSERVATIONS

Specifics:

Condition 2 of the ECA outlines the modifications that are permitted under the Limited Operational Flexibility. In reviewing the modification log for the 2016 operating year it was observed the following modifications occurred:

Composting Exhaust Stack - Change in exit diameter from 2m to as-built 1.47m
Emergency Generator - Generator relocated to north side of the building
Storage Piles (leaf & yard waste) - Not stored outdoors, no longer a significant source
Building dimension changed - Building parameters change slightly (Building height 11.00m to 11.58m)

Based on the modifications listed and completed in 2016, the Facility updated the figures, tables and dispersion modelling in the Emission Summary and Dispersion Modelling Report. This information was provided in the 2016 Written Summary Form required to be submitted to the ministry annual on May 31st.

No concerns identified.

2.1 SITE CONDITIONS

Operating

Specifics:

The following observations were noted during the inspections:

Odour: At the time of the inspection the Facility was operating and processing organic waste. Both air treatment processes, the bioscrubber and biofilters, were operating. The Facility operates under negative pressure therefore all odours are contained within the confines of the building and discharged through the pollution control equipment. The odour sampling port connected to the discharge stack was assessed during the inspection and found not to be discharging emissions that would be considered an adverse effect.

Noise: Noise from the Facility was not audible to a level that would cause impacts off-site at the time of the inspection. All doors of the Facility were closed at the time of the inspection. No concerns identified.

Dust: The roads and paved areas of the Site were observed to be clean to prevent fugitive dust. Unpaved surfaces surrounding the Site were damp or snow covered given the time of the year. No concerns identified.

Vibration: Vibration was not detected during the inspection and is not anticipated to be an issue with the operations occurring on-site.

2.2 AUTHORIZING, CONTROL AND REGISTRATION DOCUMENTATION FOR AIR/NOISE EMISSIONS

Does the facility have authorizing, control and/or registration documents applicable to this inspection?

● Yes ○ No

Specifics:

On December 10, 2015, the Facility received Environmental Compliance Approval No.1631-A2ELCQ as a result of the application submitted in 2014. Environmental Compliance Approval Number 1613-A2ELCQ was approved providing for Limited Operational Flexibility for a period of 10 years from the issuance date (December 10, 2025).

Type of Document	Number	Date	Limit*	Notes
Environmental Compliance Approval - Comprehensive	1631-A2ELCQ	2015/12/10		

*** Limit in Document**

2.3 EQUIPMENT REQUIRING AUTHORIZING DOCUMENT

Does the facility have the required Environmental Compliance Approval(s)?

If you own, manage or operate a facility with an operation or equipment that emits one or more contaminants into the air as noted under section 9 of the Environmental Protection Act, you are required to have and operate under an Environmental Compliance Approval unless the activity is exempted from the approval process or is eligible for the Environmental Activity and Sector Registry (EASR).

The Environmental Compliance Approval (ECA) replaces the previous Certificate of Approval (Air) commencing October 31, 2011. All existing Certificates of Approval (Air) and their conditions continue to apply. Application for a new Environmental Compliance Approval is needed when you intend to make a change that requires an amendment to the approval.

☐ The facility does not have any required approval(s) for discharge of contaminants to air.
☐ The facility requires an amendment or additional approval for discharge of contaminants to air.
☐ The facility requires an amendment or additional approval for activity(s) other than for discharge of contaminants to air.
☒ The facility has the required approval (s) for discharge of contaminants to air (or is not required to obtain them).

Specifics:

Based on the review of the equipment approved under the ECA, the Facility and Site has the required approval for the discharge of contaminants to air.

In the event changes to the operations, outside the scope of the ECA as outlined in Condition 2 of the ECA, the Facility will need to amend the ECA prior to making changes or modifications.

2.4 LEGISLATIVE NOTIFICATION REQUIREMENTS

Has the facility met all applicable legislative notification requirements for air emissions?

● Yes ○ No ○ Not Required

Specifics:

The Environmental Protection Act and the ECA outlines requirements for notifications to the Ministry of the Environment and Climate Change. In reviewing the spills and complaints for the 2017, the Facility has met the notification requirements.

2.5 MONITORING AND REPORTING

Has the facility met its assessment requirements?

● Yes ○ No ○ Not Required

Specifics:

Condition 10 of the ECA requires the Facility to monitoring the parameters of the Air Pollution Control Equipment. As part of the inspection the process data was requested for the biofilters and bioscrubber for the dates of January 18, 2017, March 15, 2017, May 1, 2017, July 3, 2017, September 29, 2017 and November 30, 2017. Based on the review of the records indicate the parameters of the Air Pollution Control Equipment are being monitored and recorded as required.

Condition 11 of the ECA requires the Facility to conduct source testing to determine the rates of odour, hydrogen sulphide and total mercaptans from the exhaust stack from the exhaust stack for the pollution control equipment (ammonia scrubber, biofilters & bioscrubber). On December 14, 2015 the Facility requested a reduction of the source testing parameters (removal of hydrogen sulphide and total mercaptans) and frequency of testing based on previous approval and source testing results. On December 15, 2015 the ministry issued a letter approving the request for a reduction in source testing parameters and a change in frequency from 6 months to 12 months.

On December 14, 2017 source testing was conducted by GHD Limited with a completed report received at the Ottawa District Office on February 22, 2018. The report is currently under review by the ministry's Standards Development Branch with comments to be followed once complete.

Is an annual ESDM report on site?

● Yes ○ No

Specifics:

N/A

Has the facility met its reporting requirements?

● Yes ○ No ○ Not Required

Specifics:

Condition 6 of Environmental Compliance Approval Number 1631-A2ELCQ requires the Facility to provide the Director no later than May 31 of each year, a Written Summary Form to be submitted to the Ministry of the Environment and Climate Change's website that shall include the following:

a. a declaration of whether the Facility was in compliance with section 9 of the *Environmental Protection Act* , Ontario Regulation 419/05 and the conditions of Environmental Compliance Approval Number 1631-A2ELCQ
b. a summary of each Modification satisfying Condition 2.1 (a) and (b) that took place in the previous calendar year that resulted in a change in the previously calculated concentration at a Point of Impingement for any Compound of Concern or resulted in a change in the sound levels reported in the Acoustic Assessment Summary Table at any Point of Reception

The Facility submitted the Written Summary prior to May 31, 2016 for the 2016 operating year.

2.6 EXCEEDANCE OF A LEGAL LIMIT AND/OR GUIDELINE

Is there information that demonstrates an exceedance of a legal limit and/or guideline for air emissions?

○ Yes ● No

Specifics:

In reviewing the updated ESDM Report and Acoustic Assessment Report, the Facility demonstrates compliance with the ministry air emission standards and noise guidelines.

2.7 OPERATIONAL AND MAINTENANCE REQUIREMENTS

Has the facility met its operating/maintenance requirements?

● Yes ○ No ○ Not Required

Specifics:

The Facility provided a copy of 'Operating Procedures and Maintenance Program for Odour and Noise for Compliance with ECA (Air) No. 1631-A2ELCQ" dated February 2016, outlining the operating procedures and monitoring program for the pollution control equipment. A copy of 'Operations and Maintenance Manual, Version 2, dated March 2016, was provided outlining the maintenance procedures and inspections for all the equipment, support units, paved areas and monitoring equipment. The submission also included the procedure for responding and recording of environmental

complaints.

The document satisfies the requirements of Condition 7 of the ECA.

2.8 RECORD KEEPING REQUIREMENTS

Has the facility met its record keeping requirements?

● Yes ○ No ○ Not Required

Specifics:

During the inspection records were available for review and requested. The Facility had available numerous binders containing records related to process data, inspections, repair, maintenance, annual updates to ESDM and Acoustic Assessment Reports, training logs, etc. No concerns identified in the way records are managed and retained on-site.

As part of the inspection records associated with Condition 7 - Operation and Maintenance and Condition 10 - Monitoring were requested following the inspection. Records were requested for the biofilters and bioscrubber as it relates to inspection and maintenance for random selected dates provided below:

January 18, 2017	March 15, 2017	May 1, 2017
July 3, 2017	September 29	November 30, 2017

Daily Site Inspection - Observed to be completed as required.

Odour Abatement Weekly Inspection - Observed to be completed as required. It was noted in all odour abatement weekly inspections the man Door Seals need to be replaced.

Maintenance Daily Sheet - Observed to be completed outlining maintenance activities for the odour abatement equipment and process equipment.

Process Data - The Facility utilizes SCADA to program, adjust, measure and monitoring the organic waste processing. The SCADA system also records the data collected during the processing process. In reviewing the process data, the records were collected as required and indicate the biofilters and bioscrubber are being properly operated and monitored.

Training: The Inspecting Officer was provided the training records for an employee and the training matrix that provides all the training requirements per position acceptance anion (ex. ECA training, contingency and emergency response, operations manual and procedures, and wasted shipment protocols) and re-training frequency.

Original Acoustic Assessment Report, dated May 2014, was confirmed to be on-site as required.
Original Emission Summary and Dispersion Modelling Report, dated May 2014, was confirmed to be on-site as required.

2.9 SPILLS PREVENTION AND CONTINGENCY PLAN

Is the facility required to have a Spill Prevention Contingency Plan (SPCP) under Ontario Regulation 224/07, Spill Prevention and Contingency Plans?

○ Yes ● No

Specifics:

The Facility is not required under Ontario Regulation 227/07 under the Environmental Protection Act to develop a Sills Prevention and Contingency Plan. The Facility

As a requirement of Environmental Compliance Approval No. 2766-7HEPSZ, the Facility is required to develop and implement an Emergency Response and Contingency Plan which includes procedures to be undertaken in the event of a spill, process upset, power failure, fire or any other emergency situation. The Emergency Response and Contingency Plan also outlines protocols with names and telephone numbers of persons to be contacted, including persons responsible for the Site, the Ministry;s District Office and the Spills Action Centre, the local Fire Department, the local Municipality, the local Medical Officer of Health, and the Ministry of Labour, and the names and telephone

numbers of waste management companies available for emergency response.

At the time of the inspection the Emergency Response and Contingency Plan was observed to be on-site and updated to reflect current operations.

2.10 BEYOND COMPLIANCE

Are there any Beyond Compliance Projects being implemented at the facility?

○ Yes ● No

Specifics:

The Ministry of the Environment and Climate Change is not aware of any Beyond Compliance Projects for the Site.

3.0 REVIEW OF PREVIOUS NON-COMPLIANCE ISSUES

In reviewing the previous Air Facility Inspection Report, the Facility was required to ensure copies of the Emission Summary Table and Acoustic Assessment Summary Table is available to the ministry and public upon request as per Condition 5.3 of the ECA. The inspection confirmed these records are available as part of the annual update requirement in Condition 5 of the ECA.

4.0 SUMMARY OF INSPECTION FINDINGS (HEALTH/ENVIRONMENTAL IMPACT)

Was there any indication of a known or anticipated human health impact during the inspection and/or review of relevant material, related to this Ministry's mandate?

○ Yes ● No

Specifics:

Was there any indication of a known or anticipated environmental impact during the inspection and/or review of relevant material ?

○ Yes ● No

Specifics:

Was there any indication of a known or suspected violation of a legal requirement during the inspection and/or review of relevant material which could cause a human health impact or environmental impairment ?

○ Yes ● No

Specifics:

Was there any indication of a potential for environmental impairment during the inspection and/or the review of relevant material ?

○ Yes ● No

Specifics:

Was there any indication of minor administrative non-compliance?

○ Yes ● No

Specifics:

5.0 ACTION(S) REQUIRED

No actions are required by the Facility at this time.

6.0 OTHER INSPECTION FINDINGS

None at this time.

7.0 INCIDENT REPORT

1.0 INTRODUCTION

Orgaworld Canada Ltd.'s Organics Composting Facility (the "Facility") is a 10.12 hectare Waste Disposal Site (Processing) serving the Provinces of Ontario and Quebec, for the temporary storage, transfer and processing, through aerobic composting, of solid non-hazardous, domestic, commercial, institutional or industrial organic waste at a maximum rate of 1,200 tonnes per day and 150,000 per year of Organic Waste.

The purpose of the inspection is to assess compliance with the Facility's Environmental Compliance Approval Number 2766-7HEPSZ and applicable environmental legislation such as the *Environmental Protection Act* and Ontario Regulation 347 under the above referenced *Act*. The inspection consisted of a district file review, site visit and discussions with Orgaworld Canada Limited representatives.

The organic waste is brought to the site located at 5123 Hawthorne Road in the City of Ottawa (the "Site"), shredded, mixed and placed inside composting tunnels. Conditions within the tunnels are monitored and changed to ensure optimum conditions to promote aerobic composting. Once the material remains in the tunnels long enough for the temperature to reach 55 degrees Celsius for 3 consecutive days it is cooled, removed from the tunnels and placed into a screener which separates the material in size fractions. The screener separates the material into 20+ (which includes large pieces of material that have not composted), 12-20 material (which is medium sized material), incidental waste, and processed organic waste. The 20+ material is used as inoculate and mixed in with fresh material in the Mixing Hall, or further shredded and run through the screener again. The processed organic waste size material is placed in the compost curing area where it is required to cure for 21 days and subsequently tested to ensure it meets all requirements under Environmental Compliance Approval Number 2766-7HEPSZ and the Ontario Compost Quality Standards. Upon achieving the requirements of the approval and the standards, the material is deemed finished compost and removed from the site for use in accordance with the Ontario Compost Quality Standards. It

should be noted that the material sized as 12-20 is also referred to as "10-100" material as that was the original screen size.

The Facility started accepting organic material at the Site on January 28, 2010. The Site is currently receiving waste from the City of Ottawa Source Separated Organics collection program and leaf and yard waste program. The City of Ottawa is currently collecting the leaf and yard waste commingled with the source separated organic waste. It should be noted that the City of Ottawa started commingling their leaf and yard waste with the source separated organics and sending it to Orgaworld in April 2010. The Facility receives additional source separated organics from the industrial, commercial and institutional sector, in plastics, which started in February 2015. Environmental Compliance Approval Number 2766-7HEPSZ allows for the receipt of source separate organics in plastic as a result of an Environmental Review Tribunal decision which was reflected in an notice to Environmental Compliance Approval Number 2766-7HEPSZ on February 6, 2015.

It should also be noted that the Facility met an exemption in Ontario Regulation 347 which permitted the sale of 12-20 material (previous defined as a waste subject to Part V of the *Environmental Protection Act*) as long as it met a realistic market demand. This material was sold to farmers as a soil conditioner as it provided a benefit in the agricultural sector. As of January 1, 2013, the exemption in Ontario Regulation 347 was amended to exclude waste generated from organic processing facilities (i.e. composting facilities). As a result, the Facility ceased all shipments of 12-20 to their clients. An alternative solution was sought which allowed the Facility to continue providing the material as a soil conditioner under an approval process regulated by the Ontario Ministry of Agriculture and Rural Affairs entitled Non-Agricultural Source Material Plans. As of mid 2013, the Facility has worked with their clients in obtaining Non-Agricultural Source Material Plans in order to apply the 12-20 material and is operating within the requirements of Part V of the *Environmental Protection Act* for the transportation of the 12-20 material.

On July 1, 2015 the Ministry of the Environmental and Climate Change implemented the entire Ontario Compost Quality Standards for the remaining standards for foreign matter content, compost maturity and compost labelling. In 2013 the Facility implemented Phase I of the Ontario Compost Quality Standards for metals in compost, quality of feedstock and pathogens. It was known through discussion with the Facility that the implementation of Phase II Ontario Compost Quality Standards would pose challenges for the production of AA compost given the requirements of the Ontario Compost Quality Standards. The challenges included compost technology and operations at the Site, capacity for the storage and curing of processed organic waste, and duration of time needed to meet the new requirements. As a result, the Ottawa District provided the Facility an opportunity to submit a Voluntary Abatement Plan to address the challenges and provide an abatement program to demonstrate the Facility's commitment to comply with the Ontario Compost Quality Standards and a strategy to land apply processed organic waste to reduce risk to human health and the environment. The Voluntary Abatement Plan submitted provided a program in which previously deemed unrestricted compost (pre-July 2015) to be land applied to agricultural operations within the legislative framework of the *Nutrient Management Act* and Non-agricultural Source Material. The Voluntary Abatement Plan outlined the Facility would enter into an agreement with the agricultural operators to submit a Non-agricultural Source Material Plan for land application of processed organic waste generated at the Site to the Ministry of Agriculture, Food and Rural Affairs and in the meantime, submit the supporting documentation to the Ottawa District Office to allow for land application prior to receiving approval under the Non-agricultural Source Material process. In addition to the Voluntary Abatement Plan, the Facility was required to retain the services of approval waste management systems to transport processed organic waste from the point of generation to the application site. The Ministry of the Environment and Climate Change reviewed and accepted the Voluntary Abatement Plan for period of six (6) months ending on December 31, 2015. To date, no off-site or environmental impacts were reported to the ministry during the duration of the Voluntary Abatement Plan which is now expired. Any further land application of processed organic waste is subject to the approval process outlined in the *Nutrient Management Act* .

Since December 31, 2015, the Facility has not produced AA compost and has continued to produce non-agricultural source material for the Ontario agricultural sector under NASM Plans and for the Quebec agricultural sector.

The inspection consisted of a district file review, site visit and discussions with Orgaworld Ottawa representatives.

An Air Facility Inspection and an Industrial Sewage Inspection were also carried out at the site. See respective reports for details.

2.0 INSPECTION OBSERVATIONS

Certificate of Approval Number(s): ● Yes ○ No
C of A Number(s):
Environmental Compliance Approval Number 2766-7HEPSZ: Waste Disposal Site
Issued: September 16, 2009

Notice #1 - Issued on October 21, 2010
Details: The amendment was issued to allow the Facility to operate a mobile shredder unit on-site.

Notice #2 - Issued on May 2, 2012
Details: The amendment was issued for a change to allow the Facility to receive and remove waste between the hours of 6am to 8pm (M-F) and between the hours of 7am to 8pm on Saturdays - Condition 5.1

Notice #3 - Issued on February 6, 2015
Details - The amendment was issued to reflect the decision of the Environmental Review Tribunal decision for Case No. 09-115/09-126, Orgaworld Canada Ltd. v. Director, Ministry of the Environment, dated November 7, 2011. The decision allows for Orgaworld Ottawa to receive Processed Organic Waste that includes sanitary products and human body waste, waste that is collected in plastic bags or pet waste other than waste that incidental to bedding or litter provided that reasonable notice and supporting documentation is submitted and confirmed by the ministry - Condition 2(11)

2.1 SITE OPERATION:

Specifics:

SERVICE AREA, APPROVED WASTE TYPES, RATES & STORAGE

(1) The Site may only accept solid non-hazardous domestic, commercial, institutional or industrial Organic Waste from the Provinces of Ontario and Quebec, limited to the following Organic Waste:

(a) Source-separated Organic Waste limited to the following:

(i) Food wastes: fruit, vegetable and general table scraps, meat and fish products, dairy products, egg shells, confectionery products, sauces, bones, pet food, fat, bread and grains, rice, pasta, coffee grounds, filters;

(ii) Paper fibres: soiled paper towels, tissues, paper plates, soiled paper food packaging items such as boxboard, cardboard, newspaper, and other packaging materials;

(iii) Miscellaneous: houseplants and yard wastes, dryer lint and hair, pet fur, sawdust and wood shavings and litter or bedding.

(b) Organic Waste from the food processing industry and other industries that produce food wastes;
(c) Organic Waste from the commercial sector, including but not be limited to food waste from restaurants, hotels, institutions, commercial operations that collect organic wastes;
(d) Leaf & yard waste;
(e) Organic sludges, including but not be limited to starches and paper wastes, but excluding sewage sludge and biosolids.

The 2015 Annual Report states that the Facility is in compliance with Condition 2.(1) by only accepting waste from the City of Ottawa which is within the approved service area outlined in Environmental Compliance Approval Number 2766-7HEPSZ. This requirement in the approval was also confirmed by the Facility staff during the inspection.

(2) (i)The Owner shall not accept at the Site sanitary products and human body waste.
(ii) The Owner shall not accept at the Site any waste that is collected through a waste collection program that allows use of plastic bags.
(iii) The Owner shall not accept at the Site any waste that is classified as hazardous waste or liquid industrial waste in accordance with *O. Reg. 347* .

The 2015 Annual Report states that the Facility is in compliance with the above referenced condition by not accepting sanitary products, human body waste, hazardous waste and liquid industrial waste as defined in Ontario Regulation 347.

In 2015 the Facility began accepting source separated organics from the industrial, commercial and institutional

sector in plastic bags after receiving the ministry's issuance of Notice #3 forming part of Environmental Compliance Approval Number 2766-7HEPSZ as a result of the Environmental Review Tribunal decision.

No issues identified.

(3) The Owner is only approved to receive Organic Waste in quantities that are not to exceed:
(a) a maximum of 1,200 tonnes on a daily basis; and
(b) a maximum of 150,000 tonnes per year.

The 2015 Annual Report provided the monthly and annual tonnages for the 2015 operating year As part of the inspection the Inspecting Officer reviewed the mass balance for the 2015 operating year. The data provided in the mass balance confirms the Facility is in compliance with tonnage limits outlined in Environmental Compliance Approval Number 2766-7HEPSZ.

No issues identified.

(4) The Owner is approved to store the following amounts of waste at the Site:
(a) unprocessed Organic Waste stored within the Processing Building awaiting processing shall not exceed 3,000 tonnes;
(b) leaf & yard waste stored at the Site shall not exceed 1,500 tonnes;
(c) Organic Waste, including leaf & yard waste and biofilter medium waste, undergoing Composting in the composting tunnels shall not exceed 5,040 tonnes;
(d) Immature Compost in various stages of curing shall not exceed 10,000 tonnes;
(e) Residual Waste and Rejected Waste shall not exceed 1,000 tonnes.

The 2015 Annual Report states that in the 2015 operating year the Facility was in compliance with the approved waste storage amounts outlined in this condition. This requirement in Environmental Compliance Approval Number 2766-7HEPSZ was also confirmed by the Facility staff during the inspection.

No issues identified.

(5) Waste storage at the Site is subject to the following limitations:

(a) unprocessed Organic Waste, excluding leaf & yard waste, shall be stored within the confines of the Processing Building;
(b) leaf & yard waste shall be stored within the confines of the Processing Building, or in accordance with the requirements of Condition 6.(14) of the Certificate of Approval (Industrial Sewage) for this Site;
(c) Immature Compost in various stages of curing shall be stored within the confines of the Processing Building;
(d) solid Residual Waste shall be stored in lugger bins located within the confines of the Processing Building;
(e) solid putrescible waste generated through activities not relating to the handling and processing of Organic Waste (ie. office, lunch room, etc.) may be stored in a covered bin outdoors and it shall be removed from the Site as required in accordance with *O. Reg 347* and the *EPA* .

At the time of the inspection no waste was observed to be stored outside the Processing Building. All waste and phases of the composting process were located inside the confines of the Processing Building.

No issues identified.

(6)Organic Waste storage duration is limited to the following:
(a) The maximum storage duration of the leaf & yard waste shall not exceed thirty (30) days from the time of its receipt.
(b) The maximum storage duration of the purchased wood amendment materials shall not exceed ninety (90) days from the time of their receipt.

(c) The maximum storage duration of the Organic Waste within the Processing Building prior to loading into the aerated composting tunnels shall not exceed the time period that is required to accumulate enough Organic Waste to fill one (1) composting tunnel.

(d) The Owner shall not store the Residual Waste at the Site in excess of thirty (30) days from the date of

its generation, or as directed by the District Manager.

(e) If in the opinion of the District Manager, the duration of waste storage from (a) and/or (b) and/or (d), above, results in odour complaint(s), the Owner, in consultation with the District Manager shall undertake appropriate steps, including reducing waste storage duration, so that odour complaint(s) are eliminated.

The 2015 Annual Report states that the storage duration of the leaf & yard waste, purchased wood amendment materials, organic waste within the Processing Building and Residual waste did not exceed the storage duration limits as outlined by the above condition.

(8) The Company shall ensure that all waste storage is undertaken in a manner that does not cause an adverse effect or a hazard to the environment or any person.

In May of 2016 the Ottawa District Office of the Ministry of the Environment and Climate Change received a complaint from a motorist reporting Orgaworld Ottawa odours along Hawthorne Road. The complaint form was completed outlining the actions taken by the company with notification to the ministry once completed. The complaint was deemed to be invalid due to the location of the Facility in comparison to wind direction.

(9) In the event that Organic Waste cannot be processed at the Site and the Site is at its approved waste storage capacity, the Owner shall cease accepting additional Organic Waste. Receipt of additional Organic Waste may be resumed once such receipt complies with the waste storage limits approved in this Certificate.

The 2015 Annual Report stated compliance with the above reference condition. At the time of the inspection the Facility was in operation and was not exceeding its approved waste storage capacity.

(11) Before the Owner accepts any new source of Organic Waste at the Site that includes:

(i) sanitary products and human body waste,
(ii) waste that is collected in plastic bags, or
(iii) pet waste other than waste that is incidental to bedding or litter,

The Owner shall provide the District Manager with reasonable notice in advance of the Owner's intent to commence acceptance of the new waste source at the Site. The Owner shall also provide the District Manager with such information as the District Manager confirm in writing is required respecting the new waste source, which may include the name and location of the source generator, the date the Owner proposes to commence accepting the waste at the Site, a description of the constituent components of the waste being accepted, confirmation whether inclusion of the waste components referenced above in (i) (ii) and (iii) are characterized as incidental or inadvertent, and information related to the storage of the waste prior to its delivery to the Site, together with any operational plans the Owner proposes for integrating the processing of waste from the new source into the waste stream then currently being processed at the Site. For purposes of this condition a new source also included any sources or Organic Waste already being accepted at the Site that will be changed to introduce, or increase the waste components referenced above in (i) (ii) and (iii). For purposes of this condition, the Director may decided the length of the advanced notice reasonably required under this condition, and provide the Owner with written notice of the Director's decision in this regard.

In 2015 the Ministry of the Environment and Climate Change issued Notice, previously referred to as Notice #3, to the Facility to began receiving new sources of organic waste collected in plastic from the industrial, commercial and institutional sector. In order for this to occur, documentation was required to be submitted to the ministry as outlined in Condition 2(11). In February of 2015 Orgaworld Ottawa submitted the required information to satisfy the condition and allow for the receipt and processing of the new source of Organic Waste from the new sector.

3. <u>SIGNS</u>

(1) Prior to receipt of waste at the Site, the Owner shall ensure that a sign is posted at the entrance to the Site. The sign shall be visible from the main road leading to the Site. The following information shall be included on the sign:

(a) **name of the Owner;**
(b) **this Certificate number;**
(c) **hours during which the Site is open;**
(d) **waste types that are approved to be accepted at the Site;**
(e) **Owner's telephone number (a hotline) to which complaints may be directed;**
(f) **Owner's twenty-four hour emergency telephone number (if different from above);**
(g) **a warning against unauthorized access;**
(h) **a warning against dumping at the Site.**

(2) **The Owner shall ensure that appropriate signs are posted at the Site clearly identifying the waste and stating warnings about the nature of the waste and any possible hazards.**

At the time of the inspection it was noted that the Facility is in compliance with Condition 3 of issued Environmental Compliance Approval Number 2766-7HEPSZ by posting a sign at the entrance of the Site outlining the above required information from a-h. A similar sign is also present at the exit of the Site. No issues were identified with the information displayed on the signs entering and exiting the Site.

4. SITE SECURITY

(1) **All unloading and loading of waste and all waste processing activities at the Site shall at all times be undertaken by Trained Personnel.**

(2) **The Owner shall ensure that access to the Site is regulated and that all entrances are secured by lockable gates to restrict access only to authorized personnel when the Site is not open.**

At the time of the inspection it was observed that training was completed as per the above referenced condition. The Site has installed a fence with a lockable gate to restrict access to the Site The Inspecting Officer confirmed with Facility staff that the Site is secured after the hours of operation.

6. EQUIPMENT AND SITE INSPECTIONS & MAINTENANCE

(1) **Prior to receipt of any waste at the Site, the Owner shall prepare a comprehensive written inspection program which includes inspections of all aspects of the Site's operations including the following:**

(a) **loading/unloading area of the leaf & yard waste storage pad;**
(b) **parking lot area for evidence of run-off from the leaf & yard waste storage pad;**
(c) **Processing Building and the air pollution control equipment;**
(d) **security fence and property line;**
(e) **on-site roads for presence of leaks and drips from the waste delivery trucks;**
(f) **presence of excessive fugitive dust emissions from the on-site roads or the Compost stockpiles;**
(g) **on and off-site litter;**
(h) **presence of vector and vermin**

At the time of the inspection the Inspecting Officer requested documents and procedures which speaks to the Facility's inspection program. The Facility provided a copy of the inspection program during the inspection which address the above condition. The Inspecting Officer also reviewed procedures provided by the Facility located in the district file which speaks to maintenance and inspections of the pollution control devices and industrial sewage works system. The program was observed to be updated to reflect current operations.

No concerns identified.

(3) **The Owner shall develop and implement a preventative maintenance program for all on-Site equipment associated with the processing and managing of waste and control of odour and dust emissions. The preventative maintenance program shall be maintained up-to-date and shall be available for inspection by a Provincial Officer upon request.**

A copy of the preventative maintenance program was available for review at the time of the inspection. The program was observed to be updated to reflect current operations.

7. **QUALITY CRITERIA , TESTING & MONITORING**

(1) Cross-Contamination Prevention

(a) The Owner shall ensure that the incoming Organic Waste and the equipment used in handling of the incoming Organic Waste are kept separate and do not come in contact with the Immature Compost / the Finished Compost and the Compost except where the Immature Compost / the Finished Compost and the Compost are being fed back into the composting process.

The operation of the equipment and the staff present to inspection incoming organic waste is completed in a manner to prevent cross-contamination. Immature compost, finished compost and NASM are located separate from incoming organic waste. No issues identified.

(2) Quality Control Monitoring of Organic Waste at the generator site:

(a) Prior to being accepted at the Site for the first time, the incoming Organic Waste from a new source/stream shall be characterized in accordance with the Ministry's regulatory requirements for sampling and testing to ensure that the incoming Organic Waste complies with the quality criteria specified in this Certificate. The incoming Organic Waste may be considered a pre-approved waste source/stream once the incoming Organic Waste meets the required quality criteria and has been classified as such by the Company.

At the time of the inspection the Inspecting Officer inquired to determine if any new sources of incoming organic waste from a new source/stream has been received. Orgaworld staff stated that new sources/streams of incoming organic waste began in February 2015 from the Industrial, Commercial and Institutional Sector. Sample analysis documentation was provided and determined to be compliant with the Ontario Compost Quality Standards. In February of 2015 Orgaworld requested and received approval from the ministry to start accepting the new source of organic waste received in plastic bags. No issues identified.

(3) Quality Control Monitoring of the Incoming Organic Waste

(a) The Owner shall not accept for composting any individual Organic Waste source or an additive necessary for composting that exceeds the following quality parameters set out in "Schedule B" of this Certificate:

(i) trace elements;
(ii) organic chemicals.

The Facility is not currently producing compost, as defined by the Ontario Compost Quality Standards, therefore no records of analytical results were requested.

Finished Compost Quality Criteria

(4) Finished Compost is considered to be a Compost when it meets the following compost quality criteria:

(a) compost quality criteria set out in Schedule "B" of this Certificate; and
(b) curing duration of a minimum of twenty one (21) days and compliance with one (1) of the following three (3) maturity criteria:

(i) the respiration rate is less than, or equal to, 400 milligrams of oxygen per kilogram of volatile solids (or organic matter) per hour; or
(ii) the carbon dioxide evolution rate is less than, or equal to, 4 milligrams of carbon in the form of carbon dioxide per gram of organic matter per day; or
(iii) the temperature rise of the compost above ambient temperature is less than 8°C.

The Facility is not currently producing compost, as defined by the Ontario Compost Quality Standards, therefore no records of analytical results were requested

Process Monitoring

(8) The Owner shall ensure that the following process parameters are monitored:

(a) temperature of the composting Organic Waste in the composting tunnels;
(c) inlet air temperature;
(d) outlet air temperature;
(e) relative humidity in the composting tunnels;
(f) air flow into the tunnels;
(g) oxygen content in the air; and
(h) temperature of the Immature Compost in the curing piles.

At the time of the inspection the Inspecting Officer requested information on how the Facility complies with the above condition. The Inspecting Officer was informed that the Facility is equipped with a SCADA system that monitors all processes as it relates to the composting process. Inspecting Officer was able to verify this information by being provided screenshots of the SCADA system for the above process monitoring parameters during the 2015 inspection. The Inspecting Officer observed the SCADA system during the 2016 inspection which confirmed process monitoring is continuing to occur.

No issues were identified.

(10) As a minimum, the Owner shall monitor the temperature of the Immature Compost within the curing stockpiles daily. The measurements shall be taken one (1) metre inside the curing stockpile mass and at points sufficient to provide a temperature profile of the Immature Compost.

Temperature monitoring is completed by use of temperature probes located in the compost tunnels. The Facility uses the SCADA system to monitoring and record temperatures during the compost process. No concerns identified.

8. <u>NUISANCE IMPACT CONTROL & HOUSEKEEPING</u>

(1) The Owner shall ensure that all vehicles that have delivered waste to the Site are not leaking or dripping waste when leaving the Site.

As stated in the 2015 Annual Report, during periods where organic waste is delivered at the Site, vehicles are inspected during and after by trained Facility staff.

(2) The Owner shall ensure that the exterior of all trucks delivering waste to the Site is cleaned prior to leaving the Site, as needed, to prevent odours. Truck washing shall occur only in the dedicated wash down area of the processing building.

At the time of the inspection no truck washing operations were occurring. As stated in the 2015 Annual Report, the Facility provides rakes, brooms and a pressure washer if necessary to ensure the exterior is clean.

(3) The Owner shall ensure that there is no queuing or parking of vehicles that are waiting to enter the Site on any roadway that is not a distinct part of the Site.

At the time of the inspection no vehicles entering the Facility were parked or queuing on roads outside the Site boundary. The 2015 Annual Report confirms that during the 2015 operating year the Facility is in compliance with this condition.

(4) Should the Owner become aware that the truck(s) delivering waste to the Site have leaked wastewater on the municipal roadways, the Owner shall immediately notify the owner of the leaking vehicle(s) and the District Manager about the leak problem.

Prior to the inspection, a district file review was completed and the District Manager had not been notified of any wastewater impacts to municipal roadways. The 2015 Annual Report states that this was not noticed during the reporting period.

(5) The Owner shall:
(a) take all practical steps to prevent the escape of litter from the Site;
(b) pick up litter around the Site on a daily basis, or more frequently if necessary; and
(c) if necessary, erect litter fences around the areas causing a litter problem.

At the time of the inspection the Inspecting Officer walked a portion of the property and observed no litter issues. As part of the Facility's inspection program, trained staff monitor litter on a daily basis. Inspection reports are completed and retained on-site.

(6) Prior to the receipt of any waste at the Site, the Owner shall:
(a) implement necessary housekeeping procedures to eliminate sources of attraction for vermin and vectors; and
(b) hire a qualified, licensed pest control professional to design and implement a pest control plan for the Site. The pest control plan shall remain in place, and be updated from time to time as necessary, until the Site has been closed and this Certificate has been revoked.

The Facility retains the services of a external qualified licensed pest control professional to implement the pest control plan. No concerns identified.

(7) The Owner shall ensure that all on-Site roads and operations/yard areas are regularly swept/washed to prevent dust impacts off-Site.

Upon arriving to the site a water truck was on-site washing the paved areas. No dust concerns identified.

(8) (i) The Owner shall store Compost within the confines of the Processing Building, or in accordance with the requirements of Condition 6.(14) of the Certificate of Approval (Industrial Sewage) for this Site.

No compost was being stored at the time of the inspection. No concerns identified.

(ii) Notwithstanding the requirements of Condition 8.(8)(i), above, the Owner shall ensure that the Compost stockpiles are not a source of fugitive dust emissions. If the proposed Compost storage features are deemed insufficient to control the fugitive dust emissions from the Compost stockpiles, the Owner shall provide additional covers or spray the stockpiles with water, or use any other method to minimize the fugitive dust emissions.

At the time of the inspection dust was assessed to determine if the operations and procedures currently in place are effectively controlling fugitive dust. Fugitive dust was not observed to be of concern during the inspection. No complaints of dust have been reported to the ministry to date.

9. OPERATIONS MANUAL & STAFF TRAINING

(1) The Owner shall prepare an Operations Manual for use by the Site personnel. The Operations Manual shall contain the following:

(a) outline the responsibilities of the Site personnel;
(b) personnel training protocols;
(c) waste receiving and screening procedures;
(d) unloading, handling and storage procedures;
(e) waste processing procedures;
(f) sampling and testing procedures;
(g) Site inspections and recording procedures;
(h) the emergency response procedures;
(i) procedure for handling complaints as described in the Certificate of Approval (Air/Noise) for this Site.

In 2016 the Operations Manual was updated due to changes to operating procedures and equipment. A copy was provided to the Ottawa District Office of the updated manual. No concerns identified.

10. EMERGENCY RESPONSE AND CONTINGENCY PLAN

(1) Within six (6) months from the date of this Certificate, the Company shall submit to the District Manager an Emergency Response and Contingency Plan. The Emergency Response and Contingency Plan shall be prepared in consultation with the District Manager, the local Municipality and the Fire Department and as a minimum it shall include the following information:

(a) emergency response procedures to be undertaken in the event of a spill, process upset, power failure, fire or any other emergency situation, including specific clean up methods for wastes expected to be generated from the emergency situation;
(b) a list of equipment and clean up materials available for dealing with the emergency situations;
(c) notification protocol with names and telephone numbers of persons to be contacted, including persons responsible for the Site, the Ministry's District Office and Spills Action Centre, the local Fire Department, the local Municipality, the local Medical Officer of Health, and the Ministry of Labour, and the names and telephone numbers of waste management companies available for emergency response;
(d) procedures and actions to be taken should the incoming Organic Waste not meet the quality criteria specified by this Certificate;
(e) procedures and actions to be taken should the outgoing Residual Waste not meet the quality criteria required by the specified by this Certificate;
(f) procedures and actions to be taken should the composted Organic Waste fail to meet the compost quality criteria specified by the Certificate;
(g) procedures and actions to be taken should the occurrence of the complaints require the Company to suspend the waste processing activities at the Site.

Prior to completing the inspection a file review was conducted which incorporated a review of the "Contingency Plan for Odours, Spills, Fires, Power Failures and Labour Disruptions" procedure. No issues identified.

12. RECORDS KEEPING

Annual Report

(9) By March 31st following the end of each operating year, the Owner shall prepare and submit to the District Manager and the Public Liaison Committee (PLC), an Annual Report summarizing the operation of the Site covering the previous calendar year. This Annual Report shall include, as a minimum, the following information:

(a) a monthly mass balance of the Organic Waste received, processed and transferred from this Site, including waste type, quantity, sources and/or disposal destinations;
(b) an annual summary mass balance of the Organic Waste received, processed and transferred from this Site, including waste type, quantity, sources and/or disposal destination;
(c) an annual summary of any deficiencies, items of non-compliance or process aberrations that occurred at this Site and any remedial/mitigative action taken to correct them;
(d) a descriptive summary of any spills, incidents or other emergency situations which have occurred at this Site, any remedial measures taken, and the measures taken to prevent future occurrences;
(e) a summary describing any Rejected Waste including quantity, waste type, reasons for rejection and origin of the Rejected Waste;
(f) any environmental and operational problems, that could negatively impact the environment, encountered during the operation of the Site or identified during the facility inspections and any mitigative actions taken;
(g) any changes to the Emergency Response and Contingency Plan, the Operations Manual or the Closure Plan that have been approved by the Director since the last Annual Report;
(h) any recommendations to minimize environmental impacts from the operation of the Site and to improve Site operations and monitoring programs in this regard;
(i) a summary of any complaints received and the responses made, as required by the Certificate of Approval (Air/Noise);
(j) an update on the amount of Financial Assurance which has been provided to the Director;
(k) update on activities of the PLC;
(l) a condition-by-condition analysis of compliance with all Conditions of this Certificate.

As part of the file review process the 2015 Annual Report was found to be complete as required. The Annual Report was submitted to the Ottawa District Office in March of 2016.

2.2 FINANCIAL ASSURANCE:

Specifics:

Financial Assurance re-evaluation was submitted by Orgaworld Ottawa in 2015 and is currently under review by the

ministry.

2.3 SITE SERVICE AREA:

Specifics:

Orgaworld Ottawa is approved to operate a waste disposal site (processing) serving the Provinces of Ontario and Quebec, for the temporary storage, transfer and processing (composting) of solid non-hazardous, domestic, commercial, institutional or industrial organic waste.

2.4 APPROVED SITE CAPACITY:

Specifics:

Orgaworld Ottawa is approved to operate a waste disposal site (processing) serving the Provinces of Ontario and Quebec, for the temporary storage, transfer and processing (composting) of solid non-hazardous, domestic, commercial, institutional or industrial organic waste at a maximum rate of 1,200 tonnes per day and 150,000 tonnes per year of Organic Waste.

3.0 REVIEW OF PREVIOUS NON-COMPLIANCE ISSUES

No outstanding non-compliance issues were identified prior to completing the inspection.

4.0 SUMMARY OF INSPECTION FINDINGS (HEALTH/ENVIRONMENTAL IMPACT)

Was there any indication of a known or anticipated human health impact during the inspection and/or review of relevant material, related to this Ministry's mandate?
No

Specifics:

Was there any indication of a known or anticipated environmental impact during the inspection and/or review of relevant material ?
No

Specifics:

Was there any indication of a known or suspected violation of a legal requirement during the inspection and/or review of relevant material which could cause a human health impact or environmental impairment ?
No

Specifics:

Was there any indication of a potential for environmental impairment during the inspection and/or the review of relevant material ?
No

Specifics:

Was there any indication of minor administrative non-compliance?
No

Specifics:

5.0 ACTION(S) REQUIRED

No actions are required by Orgaworld Canada Limited at this time.

6.0 OTHER INSPECTION FINDINGS

It is recommended Orgaworld Canada Limited continue their efforts in implementing procedural changes, modifications, and/or technology upgrades in order to meet the Ontario Compost Quality Standards.

1.0 INTRODUCTION

Orgaworld Canada Ltd. (referred to as the "Facility"), located at 5123 Hawthorne Road in the City of Ottawa (the "Site), is an aerobic composting facility that is approved to accept solid non-hazardous organic waste as defined in their waste Environmental Compliance Approval Number 2766-7HEPSZ for the production of compost. Organic waste is brought to the Site, shredded, mixed and placed inside composting tunnels. Conditions within the tunnels are monitored and changed to ensure optimum conditions that promote aerobic composting. The compost size material gets placed in the compost curing area where it is required to cure for a minimum of 21 days, tested to ensure it meets all requirements of the waste Environmental Compliance Approval Number 2766-7HEPSZ and Ontario Compost Quality Standards and then removed from the site as finished compost or non-agricultural source material (NASM). All process air and air from the receiving hall is directed through pollution control equipment. Leachate generated as a result of the composting process is recirculated with excess kept in on-site storage tanks.

The Facility first started accepting organic material at their Site on January 28, 2010. The Site is currently receiving waste from the City of Ottawa source separated organics collection program and leaf and yard waste program. The City of Ottawa has been collecting the leaf and yard waste commingled with the source separated organic waste. In 2015 Orgaworld stated excepting industrial, commercial and institutional source separated organics in small quantities.

The Facility is approved to operate at a production limit of up to 150,000 tonnes per year of organic waste.

The following inspection report relies on information found in the district file, site observations and information requested prior to and after the completion of the Air Facility inspection. The site visit for the inspection was conducted on September 29, 2016.

The purpose of this inspection is to assess compliance with issued Industrial Sewage Works Environmental

Compliance Approval Number 7251-8GKRPD and applicable environmental legislation such as the *Ontario Water Resources Act* .

An Air Facility Inspection and Waste Disposal (Processing) Site Inspection were also carried out at the Site. See respective reports for details.

2.0 INSPECTION OBSERVATION

Facility MEWS (Works) Number:
Not Applicable

Sector Type:
Waste Disposal

Effluent Type:
Process, Storm Water

Receiver Type:
Surface Water

Name of Receiver:
Findlay Creek

Is there a sensitive receptor on/in the receiver?
No

Certificate of Approval Number(s):
Yes
C of A Number(s):

Industrial Sewage Works Environmental Compliance Approval No. 9465-7NVRWT
- issued September 16, 2009

Industrial Sewage Works Environmental Compliance Approval No. 7032-88XPRA
- issued September 7, 2010

Industrial Sewage Works Environmental Compliance Approval No. 7251-8GKRPD
- issued May 30, 2011

2.1 WASTEWATER TREATMENT PROCESS DESCRIPTION

General Description:

Stormwater is collected in an on-site open ditch system leading to a stormwater management pond that discharges off-site to the Hawthorne Industrial Park ditch system which eventually enters into Findlay Creek.

Process water generated inside the building is stored in leachate holding tanks buried on the east-side of the building. Should the Facility need to use water in their process (wetting the composting material), the Facility uses the leachate from the storage tanks and/or water from the stormwater pond. Should the leachate tanks need to be emptied, the Facility retains the services of a ministry approved waste management system to pick up and dispose of the leachate at a ministry approved waste disposal site. The Hazardous Waste Information Network Generator Number for the Site is ON3338779, and indicates that the leachate is classified as waste class 270 L - Other specified organic sludges, slurries and solids. According to Facility representatives, the Facility operates in a water negative environment in the summer but has found that they collect leachate in the winter.

Environmental Compliance Approval Number 7251-8GKRPD:

The Site has been issued Environmental Compliance Approval Number 7251-8GKRPD for the following System:

"the establishment of stormwater management *Works* for the collection, transmission, treatment and disposal of stormwater run-off and process/wash sewage from a catchment area of 10.14 hectares, to provide Normal water quality protection (Level 2) and to attenuate post-development peak flows to pre-development levels, discharging to a roadside ditch, then to a central SWM facility off site (adjacent Hawthorne Industrial Park), and subsequently discharging through a ditch to Findlay Creek, for all storm events up to and including the 100 year return storm, consisting of the following:

PROPOSED WORKS

- one (1) submersible pump capable of pumping up to 229 m^3/day of stormwater collected from the south ditch of the Site. The pumped stormwater is transferred via a sub-surface 50 mm PVC forcemain to underground storage tanks located on the east side of the Facility for integration into the process water stream or transported off-site for final treatment.

- one (1) terrain tank located on the north side of the Facility, adjacent to the north ditch, having an approximate volume of 45 m^3. Initial stormwater run-off will drain from a portion of the asphalt pad on the north side of the Facility into the tank for assessment by site operations staff as to disposal point (ditch/pond, into plant, or hauled off-site). As the tank fills, tank will spill-over (after initial flush) into the north ditch and travel to the wet detention pond.

- installation of aerators in the south-east portions of the wet detention pond to be operated as required, in order to maintain the stormwater management pond water quality trigger parameters below trigger levels.

EXISTING WORKS

Part I - Stormwater Management Works

- one (1) wet extended detention stormwater pond in U shape with approximately base dimensions as follows: 120 m long and 12 m wide, and a maximum depth of 2.0 m, to permanent pool level and 3.4 m to overflow weir elevation (emergency elevation), with 4:1 side slopes, with the following volume structure:

Stage Storage	Elevation (m)	Storage Volume (m^3)
Permanent Pool	90.25 – 91.25	5,385
Extended Detention	91.25 – 91.45	1,311
Quantity	91.45 – 92.25	6,080
Emergency	92.25 – 92.65	3,532

and equipped with the following structures:

- One (1) forebay approximately 65 m long and 12 m wide in U shape, and a maximum depth of 1.0 m to permanent pool level and 3.4 m to overflow weir elevation, equipped with two inlet structures:

  1. Inlet structure. A 12.5 m long 900 mm diameter concrete storm inlet pipe with concrete headwall, connected through the Vortechs unit before entering the sedimentation forebay at an invert elevation of 89.60 m, designed to convey up to a maximum 714 L/s;

  2. Overflow channel. A 9.0 m wide (base), 1.5 m long and approximately 250 mm high channel connecting the open ditch system to the forebay at an invert elevation of 92.45 m, designed to convey up to a maximum 3.07 m^3/sec.

- One (1) 150 mm diameter orifice plate set at an elevation of 91.25 m for quality control. This flow restrictor is installed within a 2400 mm diameter maintenance hole (MH2) and attached at the downstream end of a 300 mm diameter PVC pipe, equipped with a cast iron sluice gate valve (Armtec series 20-10C), which will be in closed position during normal operation periods;

- One (1) 825 mm diameter concrete pipe and 3.8 m length for quantity control up to the 100-year post-development flow set at an elevation of 91.45 m.

- One (1) 4.0 m wide 250 mm high emergency overflow spillway set at an elevation of 92.25 m,

discharging to a concrete stabilized swale and ultimately the roadside ditch draining to the Findlay Creek, a tributary to Shields Creek.

- One (1) precast concrete oil/grit separator (Vortechs Model 16000) designed to handle stormwater runoff to convey up to 714 L/s storm flows, providing a sediment storage capacity of 5.43 m^3 and having interior dimensions of 5.49 m long, 3.66 m widen and 2.13 m high, designed to provide over 80% total net annual TSS removal, discharging to a forebay of the wet pond;

- An open ditch/swale system with sufficient capacity to convey up to the 100-□ year storm event (estimated at 3.07 m^3/sec), with approximately 1,000 m length of a trapezoidal shaped perimeter ditch along the site boundaries, having a top width of approximately 1.0 m wide flat bottom ditch and side slopes of 3V:1H up to 10:1 with variable widths and depths, running through three culverts of 18 to 30 m in length and 600 mm diameter concrete sewers, and discharging through a 2400 mm diameter maintenance hole (MH1) connecting to the oil/grit separator described above;

- A minor drainage system of storm sewers and appurtenances designed to capture and convey runoff during frequent storm events up to the 10-year storm event with PVC sewers ranging from 150 mm to 300 mm diameter sewers. The minor drainage system connects the organics composting facility through approximately 200 m length 300 mm diameter sewer to the MH5 for further discharge into the inlet structures.

- One (1) maintenance access road for operational, inspection and maintenance purposes, consisting of a 4 m wide gravel/grassed access lane located around the perimeter of the facility and a 70 m long gravel lane to the inlet structures at the northwest corner of the pond to the outlet structures.

The simulated modelling estimate and drainage pattern of the site are as follows:

Storm Events	2 - year	5-year	25-year	100-year
1. Existing flows, pre-development (L/s)	206	351	606	848
2. Post -development flows (L/s)	1,118	1,651	2,410	3,067
3. Post-development attenuated flows (L/s)	56	89	189	283

The above, including erosion/sedimentation control measures during construction and all other controls and appurtenances essential for the proper operation of the aforementioned *Works*.

Part II - Process Water Recirculation System

- A Process Water Recirculation System (WRS) to provide optimum humidity levels for the composting process and for odour control system, consisting of the following:

- Six (6) reinforced precast concrete underground storage tanks equipped with level control system with a capacity of 45 m^3 each;

- Four (4) plastic above ground storage tanks (bioscrubber, sulphuric acid storage, tank and two ammonium sulphate storage tanks) equipped with level control system with a capacity of 180, 45, 50, and 50 m^3 respectively;

- Eight (8) pumps to recirculate collected water from composting tunnels, biofilters and bioscrubber to the composting tunnels, biofilter and bioscrubber and for washdown supply

- Piping for percolate/washdown water supply to the composting area including a sprinkling system;

- An odour control equipment consisting of a biofilters and bio scrubber to recirculate filtrate water and supply of filtered effluent to the washdown lines, and equipped with chemical addition piping for pH control; and

- Piping for the supply of stormwater from the wet pond to the process tanks for composting requirements.

No modifications, alterations, or additions were noted during the inspection which would trigger the need for an amendment to Environmental Compliance Approval No. 7251-8GKRPD. No concerns identified.

2.2 EFFLUENT SUMMARY REPORT

What are the facility's effluent limits based on?
Certificate of Approval/Permit

Does the facility comply with its limits?
Yes

Condition 6(5) of Environmental Compliance Approval Number 7251-8GKRPD outlines the requirements for the Site to compare monitoring results for each and all grab samples with the corresponding trigger level of each parameter listed Table 2 - Trigger Parameters outlined in the below table:

Table 2 - Trigger Parameters	
Parameter	Trigger Level (mg/L if not specified)
Ammonia (unionized)	0.05
Nitrate-N (NO3-N)	2.93
CBOD5	15
Total Phosphorus	0.4
Total Suspended Solids	15
E-Coli	100 count/100mL
pH	6.5 to 8.5
Temperature (maximum	23 ^{O}C

In March of 2016 the Facility discharged stormwater effluent from the sewage works in accordance with Table 2 - Trigger Parameters. A copy of the sample analysis was provided to the Inspecting Officer for review. In reviewing the results, all parameters were below their respected trigger levels. No concerns identified.

2.3 SEWAGE TREATMENT WORKS CAPACITY ASSESSMENT

Flow (m^3/day)	Year 1 2015	Year 2 2016	Year 3 2017
Average daily flow	0.00	0.00	0.00
Maximum daily flow	0.00	0.00	0.00
Capacity Design	0.00	0.00	0.00
% of capacity (based on average daily flow)	0.00	0.00	0.00

Environmental Compliance Approval Number 7251-8GKRPD does not require flow measurement nor does it list any design capacity. In accordance with condition 6(12) the Owner shall inspect the Works at least once a year and, if necessary, clean and maintain the Works to prevent the excessive build-up of sediments and/or vegetation. No issues were identified.

No changes to the operation of the Works took place in 2016 requiring amendments to Environmental Compliance Approval Number 7251-8GKRPD.

2.4 SAMPLING REQUIREMENTS

What are the facility's sampling requirements based on?
Certificate of Approval/Permit

Does the facility meet sampling requirements?
Yes

Condition 5 of Environmental Compliance Approval Number 7251-8GKRPD outlines the requirements for the Facility to monitor stormwater within the Stormwater Management Pond at a monthly frequency and compare against Table 1 - Effluent Monitoring SWM Pond provided below:

Table 1 - Effluent Monitoring SWM Pond		
General Parameters	Inorganics	Field Parameters
BOD5	Arsenic	Conductivity
COD	Boron	Dissolved Oxygen
DOC	Cadmium	pH
Total Ammonia Nitrogen	Chromium	Temperature
Total Kjeldahl Nitrogen	Cobalt	
Nitrate - N	Copper	
Nitrite - N	Lead	
Total Phenols	Mercury	
Total Phoshorus	Nickel	
Total Suspended Solids (TSS)	Zinc	
E-Coli		
Oil & Grease		
pH		

The Stormwater Management Pond monitoring program was completed in 2015 and outlined in Industrial Sewage Works Inspection Report, dated December 21, 2015. The monitoring data for the 2016 operating year will be reviewed pending the submission of the 2016 Performance Report to the ministry's Ottawa District Office.

9. GROUNDWATER MONITORING

Upon issuance of this *Certificate,* the *Owner* shall establish the following groundwater monitoring program with monitoring wells located as per Figure 1 - Shallow Unconfined Water Table Groundwater and Surface Water Monitoring Locations, dated June 30, 2009, prepared by Conestoga-Rovers Associates.

1) For the unconfined shallow groundwater aquifer, the *Owner* shall establish and maintain in accordance with O.Reg. 903, R.R.O. 1990, as amended from time to time, all existing eight (8) monitoring wells designated as: MW1-08 to MW5-08; and MW101 to MW103 and such wells that would be necessary for the appropriate monitoring of the groundwater quality.

2) For the confined deep bedrock aquifer, the *Owner* shall maintain in accordance with O.Reg. 903, R.R.O. 1990, as amended from time to time, all existing three (3) monitoring wells designated as: TW-4, TW-7, and TW-8 (within the Orgaworld Canada Ltd. site), and such wells that would be necessary for the appropriate monitoring of the groundwater quality.

4) The *Owner* shall collect groundwater samples twice per year - in May and November - from the monitoring wells listed at subsections (1) and (2), and increase the sampling frequency to four times per year - in February, May, August and November - for the three new wells MW101, MW102, and MW103.

The Facility has completed the groundwater monitoring for the 2015 operating year and was submitted to the ministry in 2016. The report was provided to the ministry Technical Support Section for groundwater comments. At the time of the inspection ministry comments were not complete but will be provided upon completion.

2.5 REPORTING REQUIREMENTS

What are the facility's reporting requirements based on?
Certificate of Approval/Permit

Does the facility meet reporting requirements?
Yes

Condition 10 of Environmental Compliance Approval Number 7251-8GKRPD outlines specific reporting requirements that must be completed by the Facility.

10. REPORTING

3) The *Owner* shall prepare a performance report on an annual basis, within **ninety (90) days** following the end of the period being reported upon. The first such report shall cover the first annual period following the commencement of operation of the *Works* and subsequent reports shall be submitted to cover successive annual periods following thereafter. The reports shall contain, but shall not be limited to, the following information:

(a) a description of any operating problems encountered and corrective actions taken;
(b) a summary of all maintenance carried out on any major structure, equipment, apparatus, mechanism or thing forming part of the *Works;*
(c) a summary of all effluent monitoring results undertaken in the reporting period;
(d) a summary of the quantity of leachate contaminated sewage that was hauled to a municipal sewage treatment plant and the number of times the contents of the SWM Pond were disposed in such manner;
(e) a summary of the calibration and maintenance carried out on all effluent monitoring equipment;
(f) all analytical results and water level elevations obtained from the groundwater monitoring, pursuant to condition 9; and
(e) any other information the *District Manager* requires from time to time.

After completing the inspection the Inspecting Officer reviewed the district file and determined the annual report required by the above condition was submitted for the 2015 operating year on March 18, 2016. The 2015 Annual Report outlined operational issues encountered during the 2015 operating year which are outlined below:

1. Blockages of the solids interceptor located west of the stormwater pond were identified and rectified.

2. The submersible pump used to pump water from the stormwater management pond to the fire suppression tanks was replaced due to age and observed effectiveness.
3. On-site trench was cleaned out by Orgaworld personnel as a result of vegetation growth and residual matter build-up.

No concerns identified.

Groundwater Monitoring:

* Please see Section 2.4 for details of the groundwater monitoring completed by the Facility*

Condition 6 & 7 - Operation and Maintenance

Environmental Compliance Approval Number 7251-8GKRPD requires the Facility to develop and implement Operation and Maintenance Manuals for the two sections of the SWMP (Part II - Stormwater Management Works & Part III - Process Water Recirculation System). At the time of the inspection and as part of the file review, the Inspecting Officer reviewed the Operation and Maintenance Manuals for the Industrial Sewage Works System.

- Operation and Maintenance Manuals for the Industrial Sewage Works System was implemented as required
- A Spill Contingency and Pollution Prevention Plan was developed, implemented, and submitted to the ministry
- The Facility has operating procedures in place for routine operation of the industrial sewage works system
- The Facility has logbooks for recording inspection findings, maintenance activities, and/or repairs
- The Facility has also developed and implemented a complaint recording and responding procedures in the event an environmental complaint is received by a member of the public (no environmental complaints were received by the ministry or Orgaworld in relation to the operation of the industrial sewage works)
- One (1) discharge event occurred in the 2016 operating year with analytical results supporting compliance with

Table 2 - Trigger Parameters

2.6 FLOW MEASUREMENT

Environmental Compliance Approval Number 7251-8GKRPD does not require the construction and operation of flow monitoring or measurement equipment.

2.7 MINISTRY SAMPLE RESULTS

Were Ministry samples collected during the inspection?

No

Reason:

The Industrial Sewage Works was not discharging effluent at the time of the inspection.

2.8 FINANCIAL ASSURANCE

The Industrial Sewage Works is not subject to the requirements of Financial Assurance. It should be noted that under Environmental Compliance Approval Number 2766-7HEPSZ (Waste Disposal Site) the Facility is required to submit financial assurance in an amount sufficient to satisfy the Director.

2.9 SPILL PREVENTION AND CONTINGENCY PLANS

Is the facility required to have a Spill Prevention and Contingency Plan (SPCP) as required by Ontario Regulation 224/07?

No

Has the facility had any spills since the last inspection?

No

Were all the spills reported to the ministry?

N/A

Does the facility's operations or spill history suggest that a SPCP be developed?

No

Comments:

The Facility is not required under Ontario Regulation 227/07 under the Environmental Protection Act to develop a Sills Prevention and Contingency Plan. The Facility

As a requirement of Environmental Compliance Approval No. 2766-7HEPSZ, the Facility is required to develop and implement an Emergency Response and Contingency Plan which includes procedures to be undertaken in the event of a spill, process upset, power failure, fire or any other emergency situation. The Emergency Response and Contingency Plan also outlines protocols with names and telephone numbers of persons to be contacted, including persons responsible for the Site, the Ministry;s District Office and the Spills Action Centre, the local Fire Department, the local Municipality, the local Medical Officer of Health, and the Ministry of Labour, and the names and telephone numbers of waste management companies available for emergency response.

At the time of the inspection the Emergency Response and Contingency Plan was observed to be on-site and updated to reflect current operations.

3.0 REVIEW OF PREVIOUS NON-COMPLIANCE ISSUES

No previous non-compliance issues were identified prior to completing the Industrial Sewage Works Inspection.

4.0 SUMMARY OF INSPECTION FINDINGS

Was there any indication of a known or anticipated human health impact during the inspection and/or review of relevant material, related to this Ministry's mandate?

No

Specifics:

Was there any indication of a known or anticipated environmental impact during the inspection and/or review of relevant material?

No

Specifics:

Was there any indication of a known or suspected violation of a legal requirement during the inspection and/or review of relevant material which could cause a human health impact or environmental impairment?

No

Specifics:

Was there any indication of a potential for environmental impairment during the inspection and/or the review of relevant material?

No

Specifics:

Was there any indication of minor administrative non-compliance?

No

Specifics:

5.0 ACTION(S) REQUIRED

No actions are required by Orgaworld Canada Limited at this time.

6.0 OTHER INSPECTION FINDINGS

None at this time.

7.0 INCIDENT REPORT

1.0 INTRODUCTION

Orgaworld Canada Ltd. (referred to as the "Facility"), located at 5123 Hawthorne Road in the City of Ottawa (the "Site), is an aerobic composting facility that is approved to accept solid non-hazardous organic waste as defined in their waste Environmental Compliance Approval Number 2766-7HEPSZ for the production of compost. Organic waste is brought to the Site, shredded, mixed and placed inside composting tunnels. Conditions within the tunnels are monitored and changed to ensure optimum conditions that promote aerobic composting. The compost size material is placed in the compost curing area where it is required to cure for a minimum of 21 days, tested to ensure it meets all requirements under the waste Environmental Compliance Approval and Ontario Compost Quality Standards and then removed from the site as finished compost or non-agricultural source material (NASM). All process air and air from the receiving hall is directed through the pollution control equipment. Leachate generated as a result of the composting process is recirculated with excess kept within on-site storage tanks.

The Facility first started accepting organic material at their Site on January 28th, 2010. The Site is currently receiving waste from the City of Ottawa source separated organics (SSO) collection program which includes leaf and yard waste. The City of Ottawa has been collecting the leaf and yard waste commingled with the SSO waste. In 2015 Orgaworld started excepting industrial, commercial and institutional SSO in small quantities.

The Facility is approved to operate at a production limit of up to 150,000 tonnes per year of organic waste.

The following inspection report relies on information found in the district file, site observations and information requested prior to and after the completion of the Air Facility inspection. The site visit for the inspection was conducted on September 29, 2016.

The purpose of this inspection is to assess compliance with Environmental Compliance Approval No.1631-A2ELCQ and applicable environmental legislation such as the *Environmental Protection Act* and Ontario Regulation 419/05. The inspection consisted of a district file review, site visit and discussions with Orgaworld Ottawa representatives.

An Industrial Sewage Works Inspection and Non-Hazardous Waste Transfer Processing Inspection were also carried out at the Site by the Ministry of the Environment and Climate Change (MOECC). See respective reports for details.

1.1 FOCUS OF THE AIR INSPECTION

Is the inspection for the entire facility or is it scoped to part of the facility?

● Entire Facility ○ Part of the Facility

Specifics:

The Air Facility Inspection focused on compliance with issued Environmental Compliance Approval Number 1631-A2ELCQ which includes all pollution control devices and related performance limits, documentation, reporting, operation/maintenance, complaints recording procedures, and record keeping requirements. The Environmental Compliance Approvals outlines the approved operations for the Site as follows:

An aerobic composting facility, consisting of the following processes and support units:

- receipt of organic materials and leaf and yard waste;
- pre-processing of the organic materials and leaf and yard waste;
- composting of the pre-processed materials in composting tunnels;
- removal of the materials from the composting tunnels at end of the composting process, and screening and curing of the finished compost inside the enclosed building;

1.2 TARGET SECTOR IN ONTARIO REGULATION 419/05, AIR POLLUTION - LOCAL AIR QUALITY

Is the facility in a targeted sector identified in Schedule 4 or Schedule 5 of O. Reg. 419/05?

No, the facility is not in a target sector identified in Schedule 4 or Schedule 5.

Specifics:

The operations approved under the current Environmental Compliance Approval are not subject to the regulatory requirements for Schedule 4 or Schedule 5 targeted facilities of Ontario Regulation 419/05 under the *Environmental Protection Act* until the year 2020 in which schedule 3 standards will apply..

2.0 INSPECTION OBSERVATIONS

Specifics:

At the time of the inspection Facility staff provided a tour of the facility incorporating an overview of the air pollution control devices for the treatment of air emission generated as a result of the composting operations. The Site has several pollution control devices in series to ensure treatment of emissions. The system is outlined below:

1.) Fans are located throughout the building, these fans draw air from the building to the pollution control equipment which creates a negative pressure environment within the building. Air from the building and the composting tunnels goes through an ammonia scrubber, one of two biofilters, a bioscrubber, prior to discharging from a 40 meter stack located at the Site.

The Facility continuously monitors the process by a SCADA system. This system is remotely accessed to allow the Facility to adjust the system as required. The system uses sensors to monitor parameters such as water content, air temperature, oxygen content, air pressure, and air flow. When the levels being monitored go outside of the preprogrammed acceptable range an alarm is triggered and a message is sent to the phones of the staff personnel who have the ability to monitor the situation off-site. The SCADA system gives details of operating parameters in each compost tunnel, the ammonia scrubber, biofilters, bioscrubber and stack.

Ammonia scrubber:

The sulphuric acid tank is located outside the building. The ammonia scrubber circulates a sulphuric acid solution over a media to scrub ammonia from the air into solution. When the ammonia scrubber gets saturated (elevated pH level) it is replaced. The waste ammonia sulfate gets transferred into one of the leachate tanks on site.

The incoming waste composition in Ottawa is dry requiring the Facility to operate in a water negative environment in the summer and as such leachate generated in the operation of the Facility is re-circulated within the process. If the Facility requires additional water the Site draws from the stormwater management pond on-site.

Biofilter:

At the time of inspection the Facility was operating two biofilters. According to the supporting documentation for the application, the biofilter media needs to be replaced every 6 months to a year. The waste media from the biofilter is introduced into the composting process of the Facility.

Bioscrubber:

This is the final step before the stack. According to staff water needs to be added to the bioscrubber every 2 to 3 days. At the bottom of the bioscrubber there should be 50-55 cm of water, an alarm goes off if the levels drop bellow 40 cm.

Stack:

The stack located at the Site is 40 meters high with a sampling port positioned outside at the bottom of the stack in order to sample air prior to entering the stack. There is an additional sampling port inside prior to the bioscrubber.

There are several odour ports throughout the Facility to monitor the process and effectiveness of the pollution control equipment.

2.1 SITE CONDITIONS

Operating

Specifics:

The following site conditions were noted during the time of the inspection:

Noise: At the time of the inspection noise was assessed to determine if the operation of the Facility is generating noise levels which could pose potential impacts off-site. It was noted that noise levels outside the Site were at a level anticipated to not pose a concern to surrounding properties. No concerns identified.

Dust: At the time of the inspection dust was assessed to determine if the operations at the Facility (truck traffic, unloading/loading of materials, etc) is causing or could result in impacts off-site. The paved areas of the Site are routinely swept to ensure dust generated from the incoming and outgoing waste disposal vehicles do not cause dust impacts. At the time of the inspection the paved areas were currently being washed. The Facility monitors the paved areas and provides dust control measures if needed. No concerns identified.

Odour: At the time of the inspection odour was assessed to determine if the operations of the Facility is causing odour impacts off-site. As part of the tour of operations at the Site, the Inspecting Officer and Facility staff exited the building to gain access to a separate area of the Site. During this time, the Facility was in operations and no odour was detected. The Facility also has a odour port located at the base of the stack which did not produce any odours that the Inspecting Officer believed were significant.

Vibration: At the time of the inspection vibration was assessed to determine if the operation of the Facility is generating vibration levels which could have adverse impacts to surrounding properties. No vibration issues were detected during the inspection. No concerns identified.

2.2 AUTHORIZING, CONTROL AND REGISTRATION DOCUMENTATION FOR AIR/NOISE EMISSIONS

Does the facility have authorizing, control and/or registration documents applicable to this inspection?

● Yes ○ No

Specifics:

On December 10, 2015, the Facility received Environmental Compliance Approval Number 1631-A2ELCQ as a result of the application submitted in 2014. Environmental Compliance Approval Number 1613-A2ELCQ was approved providing for Limited Operational Flexibility for a period of 10 years from the issuance date (December 10, 2025).

Type of Document	Number	Date	Limit*	Notes
Environmental Compliance Approval - Comprehensive	1631-A2ELCQ	2015/12/15		

*** Limit in Document**

2.3 EQUIPMENT REQUIRING AUTHORIZING DOCUMENT

Does the facility have the required Environmental Compliance Approval(s)?

If you own, manage or operate a facility with an operation or equipment that emits one or more contaminants into the air as noted under section 9 of the Environmental Protection Act, you are required to have and operate under an Environmental Compliance Approval unless the activity is exempted from the approval process or is eligible for the Environmental Activity and Sector Registry (EASR).

The Environmental Compliance Approval (ECA) replaces the previous Certificate of Approval (Air) commencing October 31, 2011. All existing Certificates of Approval (Air) and their conditions continue to apply. Application for a new Environmental Compliance Approval is needed when you intend to make a change that requires an amendment to the approval.

☐ The facility does not have any required approval(s) for discharge of contaminants to air.
☐ The facility requires an amendment or additional approval for discharge of contaminants to air.
☐ The facility requires an amendment or additional approval for activity(s) other than for discharge of contaminants to air.
☒ The facility has the required approval (s) for discharge of contaminants to air (or is not required to obtain them).

Specifics:

The Limited Operational Flexibility Environmental Compliance Approvals, previous referred to as Basic Comprehensive Environmental Compliance Approvals, allow companies to make changes to their equipment which discharge contaminants to the natural environment. As part of the approval structure, when changes are made, the Facility must model the emissions and noise to ensure compliance with applicable standards and limits outlined in the approval, Ontario Regulation 419/05 and NPC-300. Also, as part of the comprehensive approval, the Facility must submit an annual report outlining operations in the reporting operating year.

The Facility submitted an application, dated May 21, 2014, to the ministry for renewal of their Limited Operational Flexibility Environmental Compliance Approval which was approved replacing and revoking Environmental Compliance Approval Number 7021-7HQNDE issued September 16, 2009. On December 10, 2015 the ministry issued Environmental Compliance Approval Number 1631-A2ELCQ the Facility.

As a result of the inspection the Inspecting Officer did not observe any new additions, alterations or modifications to equipment that would be subject to an amendment of the issued Environmental Compliance Approval Number 1631-A2ELCQ.

No modifications permitted under Condition 2 - Limited Operational Flexibility of Environmental Compliance Approval Number 1631-A2ELCQ occurred in the 2016 operating year to date.

2.4 LEGISLATIVE NOTIFICATION REQUIREMENTS

Has the facility met all applicable legislative notification requirements for air emissions?

● Yes ○ No ○ Not Required

Specifics:

As part of the inspection process, the Inspecting Officer reviewed the district file review prior to completing the inspection. As a result of the file review no issues were identified regarding the notification requirements (legislative, approval condition, etc) for the Facility for the 2016 operating year.

2.5 MONITORING AND REPORTING

Has the facility met its assessment requirements?

● Yes ○ No ○ Not Required

Specifics:

As per Condition 10.1 of Environmental Compliance Approval Number 1631-A2ELCQ, the Facility is required to conduct source testing every six (6) months after the start-up date and every (6) months thereafter. The start-up date was January 28th, 2010.

Previous source testing events were completed on:

- June & December 2010
- July & December 2011
- November 2012
- November 2013
- November 2014
- November 2015

On February 3, 2011 the Facility requested an amendment to reduce the frequency of source testing per year from every six (6) months to once a year as well as the removal of hydrogen sulfide and mercaptons from the testing parameters. On May 17, 2012 the Facility was granted permission to reduce the source testing requirements.

On December 10, 2015 the Facility was issued Environmental Compliance Approval Number1631-A2ELCQ and as a result, the Facility requested to continue the previous ministry approved reduction in the frequency of source testing and removal of hydrogen sulfide and mercaptions from the testing parameters. On December 14, 2015 the Facility was granted permission for the reduction in source testing frequency and removal of specific testing parameters. The last source test was completed in November of 2015 with copies provided to the Ministry of the Environment and Climate Change's Ottawa District Office and Standards Development Branch in January 2015.

Source testing has been scheduled for November 2016.

Has the facility met its reporting requirements?

● Yes ○ No ○ Not Required

Specifics:

Condition 6 of Environmental Compliance Approval Number 1631-A2ELCQ requires the Facility to provide the Director no later than May 31 of each year, a Written Summary Form to be submitted to the Ministry of the Environment and Climate Change's website that shall include the following:

a. a declaration of whether the Facility was in compliance with section 9 of the *Environmental Protection Act* , Ontario Regulation 419/05 and the conditions of Environmental Compliance Approval Number 1631-A2ELCQ
b. a summary of each Modification satisfying Condition 2.1 (a) and (b) that took place in the previous calendar year that resulted in a change in the previously calculated concentration at a Point of Impingement for any Compound of Concern or resulted in a change in the sound levels reported in the Acoustic Assessment Summary Table at any Point of Reception

The Facility submitted the Written Summary prior to May 31, 2016 for the 2015 operating year in which Limited Operational Flexibility conditions were in place for a portion of the year.

2.6 EXCEEDANCE OF A LEGAL LIMIT AND/OR GUIDELINE

Is there information that demonstrates an exceedance of a legal limit and/or guideline for air emissions?

○ Yes ● No

Specifics:

In reviewing the submitted updated Emission Summary Table and Acoustic Assessment Table, no exceedance of a legal limit was identified.

2.7 OPERATIONAL AND MAINTENANCE REQUIREMENTS

Has the facility met its operating/maintenance requirements?

● Yes ○ No ○ Not Required

Specifics:

Condition 7 of Environmental Compliance Approval Number 1631-A2ELCQ outlines the requirements for the development and implementation of operational and maintenance requirements for all processes with significant environmental aspects. In conducting the inspection, it was noted that not no changes were made within the inspection period requiring revisions. No concerns identified.

2.8 RECORD KEEPING REQUIREMENTS

Has the facility met its record keeping requirements?

● Yes ○ No ○ Not Required

Specifics:

Condition 9 of Environmental Compliance Approval Number 1631-A2ELCQ outlines the requirements for the Facility to conduct record keeping of specific documents and records associated with the operations under the Environmental Compliance Approval. The following records are to be provided in a timely manner:

- Original ESDM Report and each updated version
- A copy of each version of the Acoustic Assessment Report
- Supporting information used in the emission rate calculations performed in the ESDM Reports and Acoustic Assessment Reports
- Copies of each Written Summary Form provided to the Ministry under Condition 6.1 of this Approval
- Records of maintenance, repair and inspection of Equipment related to all Processes with Significant Environmental Aspects
- All reports of Source Testing
- All records generated from the monitoring of the Air Pollution Control Equipment
- All records related to environmental complaints made by the public as required by Condition 8 of this Approval

As part of the inspection, the above reports and monitoring records were discussed. A majority of the reports and data are recorded/stored electronically through monitoring and recording software and can be made available upon request.

Updated Emission Summary Table and Acoustic Summary Table was not available at the time of the inspection and therefore the Inspecting Officer requested to be submitted to the ministry post inspection. On October 6, 2016 the Inspecting Officer was provided the updated Acoustic Assessment Summary Table, dated March 23, 2016, indicating compliance with ministry noise standards. On October 6, 2016 the Inspecting Officer was provided the updated Emission Summary Table, dated April 2016, indicating compliance with ministry air standards.

****Please see Section 5.0 of this Report for actions required****

Records of completed inspection of the equipment referenced in Environmental Compliance Approval Number 1631-A2ELCQ were reviewed at the time of the inspection with no issues identified. All records are completed in paper formed and filed on-site.

One environmental complaint was received in 2016 regarding odour from a motorist detecting odours when driving past/near the Facility. The complaint form was completed by Orgaworld Ottawa outlining the actions taken by the company with notification to the ministry once completed. The complaint was deemed to be invalid due to the wind direction in reference with the location of the Facility.

No concerns identified.

2.9 SPILLS PREVENTION AND CONTINGENCY PLAN

Is the facility required to have a Spill Prevention Contingency Plan (SPCP) under Ontario Regulation 224/07, Spill Prevention and Contingency Plans?

○ Yes ● No

Specifics:

The Facility is not required under Ontario Regulation 227/07 under the Environmental Protection Act to develop a Sills Prevention and Contingency Plan. The Facility

As a requirement of Environmental Compliance Approval No. 2766-7HEPSZ, the Facility is required to develop and implement an Emergency Response and Contingency Plan which includes procedures to be undertaken in the event of a spill, process upset, power failure, fire or any other emergency situation. The Emergency Response and Contingency Plan also outlines protocols with names and telephone numbers of persons to be contacted, including persons responsible for the Site, the Ministry;s District Office and the Spills Action Centre, the local Fire Department, the local Municipality, the local Medical Officer of Health, and the Ministry of Labour, and the names and telephone numbers of waste management companies available for emergency response.

At the time of the inspection the Emergency Response and Contingency Plan was observed to be on-site and updated to reflect current operations.

2.10 BEYOND COMPLIANCE

Are there any Beyond Compliance Projects being implemented at the facility?

○ Yes ● No

Specifics:

None at this time.

3.0 REVIEW OF PREVIOUS NON-COMPLIANCE ISSUES

No ongoing non-compliance issues were identified during the file review prior to the inspection.

4.0 SUMMARY OF INSPECTION FINDINGS (HEALTH/ENVIRONMENTAL IMPACT)

Was there any indication of a known or anticipated human health impact during the inspection and/or review of relevant material, related to this Ministry's mandate?

○ Yes ● No

Specifics:

Was there any indication of a known or anticipated environmental impact during the inspection and/or review of relevant material ?

○ Yes ● No

Specifics:

Was there any indication of a known or suspected violation of a legal requirement during the inspection and/or review of relevant material which could cause a human health impact or environmental impairment ?

○ Yes ● No

Specifics:

Was there any indication of a potential for environmental impairment during the inspection and/or the review of relevant material ?

○ Yes ● No

Specifics:

Was there any indication of minor administrative non-compliance?

● Yes ○ No

Specifics:

Copy of Emission Summary Table and Acoustic Assessment Summary was not available on-site as required by Condition 5.3 of Environmental Compliance Approval No. 1631-A2ELCQ.

5.0 ACTION(S) REQUIRED

The following action item(s) are required to be addressed by Orgaworld Ottawa Facility:

1. Orgaworld Ottawa must ensure hardcopies of the Emission Summary Table and Acoustic Assessment Summary Table is available to the ministry and public upon request as per Condition 5.3 of Environmental Compliance Approval No. 1631-A2ELCQ.

6.0 OTHER INSPECTION FINDINGS

No other inspecting findings noted.

1.0 INTRODUCTION

Orgaworld Canada Ltd. (referred to as the "Facility"), located at 5123 Hawthorne Road in the City of Ottawa (the "Site), is an aerobic composting facility that is approved to accept solid non-hazardous organic waste as defined in their waste Environmental Compliance Approval Number 2766-7HEPSZ for the production of compost. Organic waste is brought to the Site, shredded, mixed and placed inside composting tunnels. Conditions within the tunnels are monitored and changed to ensure optimum conditions that promote aerobic composting. The compost size material gets placed in the compost curing area where it is required to cure for 21 days, tested to ensure it meets all requirements of the waste Environmental Compliance Approval Number 2766-7HEPSZ and Ontario Compost Quality Standards and then removed from the site as finished compost. All process air and air from the receiving hall is directed through pollution control equipment. Leachate generated as a result of the composting process gets recirculated, any excess is kept in on-site storage tanks.

The Facility first started accepting organic material at their Site on January 28, 2010. The Site is currently receiving waste from the City of Ottawa source separated organics collection program and leaf and yard waste program. The City of Ottawa has been collecting the leaf and yard waste commingled with the source separated organic waste. In 2015 Orgaworld stated excepting industrial, commercial and institutional source separated organics in small quantities.

The Facility is approved to operate at a production limit of up to 150,000 tonnes per year of organic waste.

The following inspection report relies on information found in the district file, site observations and information requested prior to and after the completion of the Industrial Sewage Works Inspection. The site visit for the inspection was conducted on December 21, 2015.

The purpose of this inspection is to assess the sites compliance with issued Industrial Sewage Works Environmental Compliance Approval Number 7251-8GKRPD and applicable environmental legislation such as the *Ontario Water Resources Act* .

An Air Facility Inspection and Waste Disposal (Processing) Site Inspection were also carried out at the Site. See respective reports for details.

2.0 INSPECTION OBSERVATION

Facility MEWS (Works) Number:
Not Applicable

Sector Type:
Waste Disposal

Effluent Type:
Process, Storm Water

Receiver Type:
Surface Water

Name of Receiver:
Findlay Creek

Is there a sensitive receptor on/in the receiver?
No

Findlay Creek is considered a local sensitive receiver (cold water habitat)

Certificate of Approval Number(s):
Yes
C of A Number(s):
Industrial Sewage Works Environmental Compliance Approval No. 9465-7NVRWT
- issued September 16, 2009

Industrial Sewage Works Environmental Compliance Approval No. 7032-88XPRA
- issued September 7, 2010

Industrial Sewage Works Environmental Compliance Approval No. 7251-8GKRPD
- issued May 30, 2011

2.1 WASTEWATER TREATMENT PROCESS DESCRIPTION

General Description:

Stormwater is collected in an on-site open ditch system leading to a stormwater management pond that discharges off site to the Hawthorne Industrial Park ditch system which eventually enters into Findlay Creek.

Process water generated inside the building gets stored in leachate holding tanks buried on the east-side of the building. Should the facility need to use water in their process (wetting the composting material) the Facility uses the leachate from the storage tanks and/or water from the stormwater pond. Should the leachate tanks need to be emptied the Facility retains the services of a ministry approved waste management system to pick up and dispose of the leachate at a ministry approved waste disposal site. The Hazardous Waste Information Network Generator Number for the Site is ON3338779, and indicates that the leachate is classified as waste class 270 L - Other specified organic sludges, slurries and solids. According to Facility representatives the Facility operates in a water negative environment in the summer but has found that they collect leachate in the winter.

Environmental Compliance Approval Number 7251-8GKRPD:

The Site has been issued Environmental Compliance Approval Number 7251-8GKRPD for the following System:

"the establishment of stormwater management *Works* for the collection, transmission, treatment and disposal of stormwater run-off and process/wash sewage from a catchment area of 10.14 hectares, to provide Normal water quality protection (Level 2) and to attenuate post-development peak flows to pre-development levels, discharging to a roadside ditch, then to a central SWM facility off site (adjacent Hawthorne Industrial Park), and subsequently discharging through a ditch to Findlay Creek, for all storm events up to and including the 100 year return storm, consisting of the following:

PROPOSED WORKS

- one (1) submersible pump capable of pumping up to 229 m^3/day of stormwater collected from the south ditch of the Site. The pumped stormwater is transferred via a sub-surface 50 mm PVC forcemain to underground storage tanks located on the east side of the Facility for integration into the process water stream or transported off-site for final treatment.

- one (1) terrain tank located on the north side of the Facility, adjacent to the north ditch, having an approximate volume of 45 m^3. Initial stormwater run-off will drain from a portion of the asphalt pad on the north side of the Facility into the tank for assessment by site operations staff as to disposal point (ditch/pond, into plant, or hauled off-site). As the tank fills, tank will spill-over (after initial flush) into the north ditch and travel to the wet detention pond.

- installation of aerators in the south-east portions of the wet detention pond to be operated as required, in order to maintain the stormwater management pond water quality trigger parameters below trigger levels.

EXISTING WORKS

Part I - Stormwater Management Works

- one (1) wet extended detention stormwater pond in U shape with approximately base dimensions as follows: 120 m long and 12 m wide, and a maximum depth of 2.0 m, to permanent pool level and 3.4 m to overflow weir elevation (emergency elevation), with 4:1 side slopes, with the following volume structure:

Stage Storage	Elevation (m)	Storage Volume (m^3)
Permanent Pool	90.25 – 91.25	5,385
Extended Detention	91.25 – 91.45	1,311
Quantity	91.45 – 92.25	6,080
Emergency	92.25 – 92.65	3,532

and equipped with the following structures:

- One (1) forebay approximately 65 m long and 12 m wide in U shape, and a maximum depth of 1.0 m to permanent pool level and 3.4 m to overflow weir elevation, equipped with two inlet structures:

  1. Inlet structure. A 12.5 m long 900 mm diameter concrete storm inlet pipe with concrete headwall, connected through the Vortechs unit before entering the sedimentation forebay at an invert elevation of 89.60 m, designed to convey up to a maximum 714 L/s;

  2. Overflow channel. A 9.0 m wide (base), 1.5 m long and approximately 250 mm high channel connecting the open ditch system to the forebay at an invert elevation of 92.45 m, designed to convey up to a maximum 3.07 m^3/sec.

- One (1) 150 mm diameter orifice plate set at an elevation of 91.25 m for quality control. This flow restrictor is installed within a 2400 mm diameter maintenance hole (MH2) and attached at the downstream end of a 300 mm diameter PVC pipe, equipped with a cast iron sluice gate valve (Armtec series 20-10C), which will be in closed position during normal operation periods;

- One (1) 825 mm diameter concrete pipe and 3.8 m length for quantity control up to the 100-year post-development flow set at an elevation of 91.45 m.

- One (1) 4.0 m wide 250 mm high emergency overflow spillway set at an elevation of 92.25 m, discharging to a concrete stabilized swale and ultimately the roadside ditch draining to the Findlay Creek, a tributary to Shields Creek.

- One (1) precast concrete oil/grit separator (Vortechs Model 16000) designed to handle stormwater runoff to convey up to 714 L/s storm flows, providing a sediment storage capacity of 5.43 m^3 and having interior dimensions of 5.49 m long, 3.66 m widen and 2.13 m high, designed to provide over 80% total net annual TSS removal, discharging to a forebay of the wet pond;

- An open ditch/swale system with sufficient capacity to convey up to the 100-□ year storm event (estimated at 3.07 m^3/sec), with approximately 1,000 m length of a trapezoidal shaped perimeter ditch along the site boundaries, having a top width of approximately 1.0 m wide flat bottom ditch and side slopes of 3V:1H up to 10:1 with variable widths and depths, running through three culverts of 18 to 30 m in length and 600 mm diameter concrete sewers, and discharging through a 2400 mm diameter maintenance hole (MH1) connecting to the oil/grit separator described above;

- A minor drainage system of storm sewers and appurtenances designed to capture and convey runoff during frequent storm events up to the 10-year storm event with PVC sewers ranging from 150 mm to 300 mm diameter sewers. The minor drainage system connects the organics composting facility through approximately 200 m length 300 mm diameter sewer to the MH5 for further discharge into the inlet structures.

- One (1) maintenance access road for operational, inspection and maintenance purposes, consisting of a 4 m wide gravel/grassed access lane located around the perimeter of the facility and a 70 m long gravel lane to the inlet structures at the northwest corner of the pond to the outlet structures.

The simulated modelling estimate and drainage pattern of the site are as follows:

Storm Events	2 - year	5-year	25-year	100-year
1. Existing flows, pre-development (L/s)	206	351	606	848
2. Post -development flows (L/s)	1,118	1,651	2,410	3,067
3. Post-development attenuated flows (L/s)	56	89	189	283

The above, including erosion/sedimentation control measures during construction and all other controls and appurtenances essential for the proper operation of the aforementioned *Works*.

Part II - Process Water Recirculation System

- A Process Water Recirculation System (WRS) to provide optimum humidity levels for the composting process and for odour control system, consisting of the following:

- Six (6) reinforced precast concrete underground storage tanks equipped with level control system with a capacity of 45 m^3 each;

- Four (4) plastic above ground storage tanks (bioscrubber, sulphuric acid storage, tank and two ammonium sulphate storage tanks) equipped with level control system with a capacity of 180, 45, 50, and 50 m^3 respectively;

- Eight (8) pumps to recirculate collected water from composting tunnels, biofilters and bioscrubber to the composting tunnels, biofilter and bioscrubber and for washdown supply

- Piping for percolate/washdown water supply to the composting area including a sprinkling system;

- An odour control equipment consisting of a biofilters and bio scrubber to recirculate filtrate water and supply of filtered effluent to the washdown lines, and equipped with chemical addition

piping for pH control; and

- Piping for the supply of stormwater from the wet pond to the process tanks for composting requirements.

2.2 EFFLUENT SUMMARY REPORT

What are the facility's effluent limits based on?
Certificate of Approval/Permit

Does the facility comply with its limits?
Yes

Condition 6(5) of Environmental Compliance Approval Number 7251-8GKRPD outlines the requirements for the Site to compare monitoring results for each and all grab samples with the corresponding trigger level of each parameter listed Table 2 - Trigger Parameters outlined in the below table:

Table 2 - Trigger Parameters	
Parameter	Trigger Level (mg/L if not specified)
Ammonia (unionized)	0.05
Nitrate-N (NO3-N)	2.93
CBOD5	15
Total Phosphorus	0.4
Total Suspended Solids	15
E-Coli	100 count/100mL
pH	6.5 to 8.5
Temperature (maximum	23 ^{O}C

The Facility indicated during the inspection that the stormwater management pond did not have a discharge event which would require the effluent to meet the Table 2 - Trigger Parameters during the 2014 and 2015 operating year.

2.3 SEWAGE TREATMENT WORKS CAPACITY ASSESSMENT

Flow (m^3/day)	Year 1 2014	Year 2 2015	Year 3 2016
Average daily flow	0.00	0.00	0.00
Maximum daily flow	0.00	0.00	0.00
Capacity Design	0.00	0.00	0.00
% of capacity (based on average daily flow)	0.00	0.00	0.00

Environmental Compliance Approval Number 7251-8GKRPD does not require flow measurement nor does it list any design capacity. In accordance with condition 6(12) the Owner shall inspect the Works at least once a year and, if necessary, clean and maintain the Works to prevent the excessive build-up of sediments and/or vegetation. No issues were identified.

No changes to the operation of the Works took place in 2014 or 2015 which would require amendments to Environmental Compliance Approval Number 7251-8GKRPD.

2.4 SAMPLING REQUIREMENTS

What are the facility's sampling requirements based on?
Certificate of Approval/Permit

Does the facility meet sampling requirements?
Yes

Condition 5 of Environmental Compliance Approval Number 7251-8GKRPD outlines the requirements for the Facility to monitor stormwater within the Stormwater Management Pond at a monthly frequency and compare against Table 1 - Effluent Monitoring SWM Pond provided below:

Table 1 - Effluent Monitoring SWM Pond		
General Parameters	Inorganics	Field Parameters
BOD5	Arsenic	Conductivity
COD	Boron	Dissolved Oxygen
DOC	Cadmium	pH
Total Ammonia Nitrogen	Chromium	Temperature
Total Kjeldahl Nitrogen	Cobalt	
Nitrate - N	Copper	
Nitrite - N	Lead	
Total Phenols	Mercury	
Total Phoshorus	Nickel	
Total Suspended Solids (TSS)	Zinc	
E-Coli		
Oil & Grease		
pH		

As part of the file review, the Inspecting Officer reviewed the sample analysis provided in the 2014 Groundwater and Surface Water Monitoring Report and requested sample analysis for the 2015 operating year. Sampling data collected during the 2014 and 2015 operating year was compared against Table 1 - Effluent Monitoring SMW Pond of Environmental Compliance Approval Number 7251-8GKRPD.

In reviewing the data the following observations were noted:

2014 SWMP:

- Samples were not collected during the months of January, February, March and December (may be a result of frozen conditions or health and safety reasons - **See Section 6.0 of this Report**)
- **September** - Inorganic metals were not tested due to a lab error at ALS Laboratory (outlined in the 2014 Annual Report)
- **November** - Oil & grease was not analysed as per Condition 5 of Environmental Compliance Approval Number 7251-8GKRPD

2015 SWMP:

- Samples were not collected during the months of January, February and March (may be a result of frozen conditions or health and safety reasons - **See Section 6.0 of this Report**)
- All parameters were sampled and analysed as per Condition 5 of Environmental Compliance Approval Number 7251-8GKRPD

****Please see Section 5.0 of this Report****

9. GROUNDWATER MONITORING

Upon issuance of this *Certificate,* the *Owner* shall establish the following groundwater monitoring program with monitoring wells located as per Figure 1 - Shallow Unconfined Water Table Groundwater and Surface Water Monitoring Locations, dated June 30, 2009, prepared by Conestoga-Rovers Associates.

1) For the unconfined shallow groundwater aquifer, the *Owner* shall establish and maintain in

accordance with O.Reg. 903, R.R.O. 1990, as amended from time to time, all existing eight (8) monitoring wells designated as: MW1-08 to MW5-08; and MW101 to MW103 and such wells that would be necessary for the appropriate monitoring of the groundwater quality.

2) For the confined deep bedrock aquifer, the *Owner* shall maintain in accordance with O.Reg. 903, R.R.O. 1990, as amended from time to time, all existing three (3) monitoring wells designated as: TW-4, TW-7, and TW-8 (within the Orgaworld Canada Ltd. site), and such wells that would be necessary for the appropriate monitoring of the groundwater quality.

4) The *Owner* shall collect groundwater samples twice per year - in May and November - from the monitoring wells listed at subsections (1) and (2), and increase the sampling frequency to four times per year - in February, May, August and November - for the three new wells MW101, MW102, and MW103.

The Facility has completed the groundwater monitoring for the 2014 operating year which was submitted to the in 2015. The report was provided to the ministry Technical Support Section for groundwater and surface water comments. At the time of the inspection ministry comments were not complete but will be provided upon completion.

2.5 REPORTING REQUIREMENTS

What are the facility's reporting requirements based on?
Certificate of Approval/Permit

Does the facility meet reporting requirements?
Yes

Condition 10 of Environmental Compliance Approval Number 7251-8GKRPD outlines specific reporting requirements that must be completed by the Facility.

10. REPORTING

3) The *Owner* shall prepare a performance report on an annual basis, within **ninety (90) days** following the end of the period being reported upon. The first such report shall cover the first annual period following the commencement of operation of the *Works* and subsequent reports shall be submitted to cover successive annual periods following thereafter. The reports shall contain, but shall not be limited to, the following information:

(a) a description of any operating problems encountered and corrective actions taken;
(b) a summary of all maintenance carried out on any major structure, equipment, apparatus, mechanism or thing forming part of the *Works;*
(c) a summary of all effluent monitoring results undertaken in the reporting period;
(d) a summary of the quantity of leachate contaminated sewage that was hauled to a municipal sewage treatment plant and the number of times the contents of the SWM Pond were disposed in such manner;
(e) a summary of the calibration and maintenance carried out on all effluent monitoring equipment;
(f) all analytical results and water level elevations obtained from the groundwater monitoring, pursuant to condition 9; and
(e) any other information the *District Manager* requires from time to time.

After completing the inspection the Inspecting Officer reviewed the district file and determined the annual report required by the above condition was not submitted for the 2014 operating year on March 31, 2015. The Inspecting Officer informed the Facility of the non-compliance event and on March 10, 2016 the Inspecting Officer received a copy of the 2014 Annual Report. The 2014 Annual Report outlined not operational issues were encountered during the 2014 operating year and inspections of the works were completed indicating no maintenance work required. No effluent was discharged from the sewage works.

The 2015 annual report is not required to be submitted until March of 2016 and did not form part of the inspection. Additional information was requested after the inspection report to confirm compliance with the above subsection of the condition which is outlined below:

(a) a description of any operating problems encountered and corrective actions taken

(b) a summary of all maintenance carried out on any major structure, equipment, apparatus, mechanism or thing forming part of the Works;

(c) a summary of all effluent monitoring results undertaken in the reporting period;

(d) a summary of the quantity of leachate contaminated sewage that was hauled to a municipal sewage treatment plant and the number of times the contents of the SWM Pond were disposed in such manner;

(e) a summary of the calibration and maintenance carried out on all effluent monitoring equipment;

(f) all analytical results and water level elevations obtained from the groundwater monitoring, pursuant to condition 9; and

- All analytical results and water level elevations obtained from the groundwater monitoring, pursuant to condition 9, was submitted in a separate report for the 2014 operating year. The analytical results and water elevation data is currently under review by the ministry's Technical Support Section Groundwater and Surface Water Units.

(e) any other information the District Manager requires from time to time.

- No information was required to be submitted to the District Manager for the 2014 operating year

****Please see Section 5.0 of the Report****

Groundwater Monitoring:

* Please see Section 2.4 for details of the groundwater monitoring completed by the Facility*

Condition 6 & 7 - Operation and Maintenance

Environmental Compliance Approval Number 7251-8GKRPD requires the Facility to develop and implement Operation and Maintenance Manuals for the two sections of the SWMP (Part II - Stormwater Management Works & Part III - Process Water Recirculation System). At the time of the inspection and as part of the file review, the Inspecting Officer reviewed the Operation and Maintenance Manuals for the Industrial Sewage Works System.

- Operation and Maintenance Manuals for the Industrial Sewage Works System was implemented as required
- A Spill Contingency and Pollution Prevention Plan was developed, implemented, and submitted to the ministry
- The Facility has operating procedures in place for routine operation of the industrial sewage works system
- The Facility has logbooks for recording inspection findings, maintenance activities, and/or repairs
- The Facility has also developed and implemented a complaint recording and responding procedures in the event an environmental complaint is received by a member of the public (no environmental complaints were received by the ministry or Orgaworld in 2014 or 2015)
- No discharge events occurred at the SWMP in the 2014 or 2015 operating year

2.6 FLOW MEASUREMENT

Environmental Compliance Approval Number 7251-8GKRPD does not require the construction and operation of flow monitoring or measurement equipment.

2.7 MINISTRY SAMPLE RESULTS

Were Ministry samples collected during the inspection?
No

Reason:
The Industrial Sewage Works was not discharging effluent at the time of the inspection.

2.8 FINANCIAL ASSURANCE

The Industrial Sewage Works is not subject to the requirements of Financial Assurance. It should be noted that under Environmental Compliance Approval Number 2766-7HEPSZ (Waste Disposal Site) the Facility is required to submit financial assurance in an amount sufficient to satisfy the Director.

2.9 SPILL PREVENTION AND CONTINGENCY PLANS

Is the facility required to have a Spill Prevention and Contingency Plan (SPCP) as required by Ontario Regulation 224/07?
No

Has the facility had any spills since the last inspection?
No

Were all the spills reported to the ministry?
No

Does the facility's operations or spill history suggest that a SPCP be developed?
No

Comments:
As referenced in Section 2.5 of this Report, the Facility has developed, implemented and provided a copy of the Site's Spill Contingency and Pollution Prevention Plan. No spills were reported to the ministry's Ottawa District Office and the Spills Action Centre. The Inspecting Officer confirmed this information as part of the inspection.

3.0 REVIEW OF PREVIOUS NON-COMPLIANCE ISSUES

No outstanding non-compliance issues or actions were identified prior to completing the inspection. As referenced in the previous inspection report, dated January 29, 2015, the Facility has submitted the required documentation in the form of an application to amend the existing Environmental Compliance Approval Number 7251-8GKRPD to include a groundwater compliance and trigger level program and monitoring program to satisfy condition 9(8) of the approval. The application is currently under review by the Ministry of the Environment and Climate Change's Environmental Approvals Branch.

4.0 SUMMARY OF INSPECTION FINDINGS

Was there any indication of a known or anticipated human health impact during the inspection and/or review of relevant material, related to this Ministry's mandate?
No

Specifics:

Was there any indication of a known or anticipated environmental impact during the inspection and/or review of relevant material?
No

Specifics:

Was there any indication of a known or suspected violation of a legal requirement during the inspection and/or review of relevant material which could cause a human health impact or environmental impairment?
Yes

Specifics:

1.) Non-compliance - Condition 5(1) of Environmental Compliance Approval No. 7251-8GKRPD by failing to analyse monthly samples per the parameters outlined in Table 1 - Effluent Monitoring SWM Pond for the 2014 operating year.

2.) Non-compliance - Condition 10(3) of Environmental Compliance Approval No. 7251-8GKRPD by failing to prepare and submit a performance report for the 2014 operating year by March 31, 2015.

Was there any indication of a potential for environmental impairment during the inspection and/or the review of relevant material?
No

Specifics:

Was there any indication of minor administrative non-compliance?
No

Specifics:

5.0 ACTION(S) REQUIRED

As a result of the Industrial Sewage Works Inspection completed at the Site, the following action items require attention by Orgaworld:

1. 1. Orgaworld must continue to ensure all parameters are analysed as per Condition 5 of the ECA.
2. 2. Orgaworld shall ensure Annual Reports, as outlined in Condition 10 of the ECA, are completed and submitted to the Ottawa District Office by no later than March 31 annually.

6.0 OTHER INSPECTION FINDINGS

As noted in Section 2.4 of this Report, sample collection was not completed during certain operating months in 2014 and 2015. In past years, outlined in annual reports and inspection reports, samples were not collected during these months due to ice-covered conditions with risk to human health if sampling was to occur. It is recommended that Orgaworld revisit the monitoring program and determine if amendments or modifications a required to ensure compliance with Environmental Compliance Approval No. 7251-8GKRPD is obtained moving forward.

1.0 INTRODUCTION

Orgaworld Canada Ltd. (referred to as the "Facility"), located at 5123 Hawthorne Road in the City of Ottawa (the "Site), is an aerobic composting facility that is approved to accept solid non-hazardous organic waste as defined in their waste Environmental Compliance Approval Number 2766-7HEPSZ for the production of compost. Organic waste is brought to the Site, shredded, mixed and placed inside composting tunnels. Conditions within the tunnels are monitored and changed to ensure optimum conditions that promote aerobic composting. The compost size material gets placed in the compost curing area where it is required to cure for 21 days, tested to ensure it meets all requirements under the waste Environmental Compliance Approval and Ontario Compost Quality Standards and then removed from the site as finished compost. All process air and air from the receiving hall is directed through pollution control equipment. Leachate generated as a result of the composting process gets recirculated, any excess is kept in on-site storage tanks.

The Facility first started accepting organic material at their Site on January 28th, 2010. The Site is currently receiving waste from the City of Ottawa source separated organics (SSO) collection program and leaf and yard waste program. The City of Ottawa has been collecting the leaf and yard waste commingled with the SSO waste. In 2015 Orgaworld stated excepting industrial, commercial and institutional SSO in small quantities.

The Facility is approved to operate at a production limit of up to 150,000 tonnes per year of organic waste.

The following inspection report relies on information found in the district file, site observations and information requested prior to and after the completion of the Air Facility inspection. The site visit for the inspection was conducted on December 21th, 2015.

The purpose of this inspection is to assess compliance with the Site's Air Facility Environmental Compliance Approval No.1631-A2ELCQ and applicable environmental legislation such as the *Environmental Protection Act* and Ontario Regulation 419/05. The inspection consisted of a district file review, site visit and discussions with Michael Rooke, Compliance Officer and Nick Pora, Plant Manager.

An Industrial Sewage Works Inspection and Non-Hazardous Waste Transfer Processing Inspection were also carried out at the Site by the Ministry of the Environment and Climate Change (MOECC). See respective reports for details.

1.1 FOCUS OF THE AIR INSPECTION

Is the inspection for the entire facility or is it scoped to part of the facility?

● Entire Facility ○ Part of the Facility

Specifics:

The Air Facility Inspection focused on compliance with issued Environmental Compliance Approval Number 7021-7HQNDE from the period of January 2014 to December 9, 2015 and with issued Environmental Compliance Approval Number 1631-A2ELCQ for the period of December 10, 2015 to December 31, 2015 which includes all pollution control devices and related performance limits, documentation, reporting, operation/maintenance, complaints recording procedures, and record keeping requirements. The Environmental Compliance Approvals outline the approved operations for the Site:

An aerobic composting facility, consisting of the following processes and support units:

- receipt of organic materials and leaf and yard waste;
- pre-processing of the organic materials and leaf and yard waste;
- composting of the pre-processed materials in composting tunnels;
- removal of the materials from the composting tunnels at end of the composting process, and screening and curing of the finished compost inside the enclosed building;

1.2 TARGET SECTOR IN ONTARIO REGULATION 419/05, AIR POLLUTION - LOCAL AIR QUALITY

Is the facility in a targeted sector identified in Schedule 4 or Schedule 5 of O. Reg. 419/05?

No, the facility is not in a target sector identified in Schedule 4 or Schedule 5.

Specifics:

The operations approved under the current Environmental Compliance Approval are not subject to the regulatory requirements for Schedule 4 or Schedule 5 targeted facilities of Ontario Regulation 419/05 under the *Environmental Protection Act* under the year 2020.

2.0 INSPECTION OBSERVATIONS

Specifics:

At the time of the inspection Facility staff provided a tour of the facility incorporating an overview of the air pollution control devices for the treatment of air emission generated as a result of the composting operations. The Site has several pollution control devices in series to ensure treatment of emissions. The system is outlined below:

1.) Fans are located throughout the building, these fans draw air from the building to the pollution control equipment which creates a negative pressure environment within the building. Air from the building and the composting tunnels goes through an ammonia scrubber, one of two biofilters, a bioscrubber, prior to discharging from a 40 meter stack located at the Site.

The Facility continuously monitors the process by a SCADA system. This system is remotely accessed to allow the Facility to adjust the system as required. The system uses sensors to monitor parameters such as water content, air

temperature, oxygen content, air pressure, and air flow. When the levels being monitored go outside of the preprogrammed acceptable range an alarm is triggered and a message is sent to the phones of the staff personnel who have the ability to monitor the situation off-site. The SCADA system gives details of operating parameters in each compost tunnel, the ammonia scrubber, biofilters, bioscrubber and stack.

Ammonia scrubber:

The sulphuric acid tank is located outside the building. The ammonia scrubber circulates a sulphuric acid solution over a media to scrub ammonia from the air into solution. When the ammonia scrubber gets saturated (elevated pH level) it is replaced. The waste ammonia sulfate gets transferred into one of the leachate tanks on site.

The incoming waste composition in Ottawa is dry requiring the Facility to operate in a water negative environment in the summer and as such leachate generated in the operation of the Facility is re-circulated within the process. If the Facility requires additional water the Site draws from the stormwater management pond on-site.

Biofilter:

At the time of inspection the Facility was operating two biofilters. According to the supporting documentation for the application, the biofilter media needs to be replaced every 6 months to a year. The waste media from the biofilter is introduced into the composting process of the Facility.

Bioscrubber:

This is the final step before the stack. According to staff water needs to be added to the bioscrubber every 2 to 3 days. At the bottom of the bioscrubber there should be 50-55 cm of water, an alarm goes off if the levels drop bellow 40 cm.
Stack:

The stack located at the Site is 40 meters high with a sampling port positioned outside at the bottom of the stack in order to sample air prior to entering the stack. There is an additional sampling port inside prior to the bioscrubber.

There are several odour ports throughout the Facility to monitor the process and effectiveness of the pollution control equipment.

2.1 SITE CONDITIONS

Operating
Specifics:

The following site conditions were noted during the time of the inspection:

Noise: At the time of the inspection noise was assessed to determine if the operation of the Facility is generating noise levels which could have potential impacts off-site. It was noted that noise levels outside the Site were at a level which would not pose a concern to surrounding properties. No concerns identified.

Dust: At the time of the inspection dust was assessed to determine if the operations at the Facility (truck traffic, unloading/loading of materials, etc) is causing or could result in impacts off-site. The paved areas of the Site are routinely swept to ensure dust generated from the incoming and outgoing waste disposal vehicles do not cause dust impacts. At the time of the inspection the paved area appear cleaned and the trucks on-site were not generating dust. The Facility monitors the paved areas and provides dust control measures if needed. No concerns identified.

Odour: At the time of the inspection odour was assessed to determine if the operations of the Facility is causing odour impacts off-site. As part of the tour of operations at the Site, the Inspecting Officer and Facility staff exiting the building to gain access to a separate area of the Site. During this time, the Facility was in operations and no odour was detected. The ministry nor the Facility has received any odour complaints during the 2014 and 2015 operating year. No concerns identified.

Vibration: At the time of the inspection vibration was assessed to determine if the operation of the Facility is generating vibration levels which could have adverse impacts to surrounding properties. No vibration issues were detected during the inspection nor experienced when completing odour surveys in the surround area. No concerns identified.

2.2 AUTHORIZING, CONTROL AND REGISTRATION DOCUMENTATION FOR AIR/NOISE EMISSIONS

Does the facility have authorizing, control and/or registration documents applicable to this inspection?

● Yes ○ No

Specifics:

On September 16, 2009 the Facility received Environmental Compliance Approval Number 7021-7HQNDE for the operation and pollution control equipment to manage and treat air emissions. The approval issued provided conditions that allowed for Limited Operational Flexibility which would allow modifications to be completed provided that the modifications were within the scope of the approval and Section 20.6 (1) of the Environmental Protection Act. The Limited Operational Flexibility conditions expiry after 5 years of the issuance date which after the expiry date no longer apply until an application is submitted and approved for renewal.

In May of 2014 the Facility submitted an application to the ministry's Environmental Approvals Branch to renew the Limited Operational Flexibility conditions as these conditions were set to expire on September 16, 2014.

On December 10, 2015, the Facility received Environmental Compliance Approval Number 1631-A2ELCQ as a result of the application submitted in 2014. Environmental Compliance Approval Number 1613-A2ELCQ was approved providing for Limited Operational Flexibility for a period of 10 years from the issuance date (December 10, 2025).

Type of Document	Number	Date	Limit*	Notes
Environmental Compliance Approval - Comprehensive	7021-7HQNDE	2009/09/16		
Environmental Compliance Approval - Comprehensive	1631-A2ELCQ	2015/12/10		

*** Limit in Document**

2.3 EQUIPMENT REQUIRING AUTHORIZING DOCUMENT

Does the facility have the required Environmental Compliance Approval(s)?

If you own, manage or operate a facility with an operation or equipment that emits one or more contaminants into the air as noted under section 9 of the Environmental Protection Act, you are required to have and operate under an Environmental Compliance Approval unless the activity is exempted from the approval process or is eligible for the Environmental Activity and Sector Registry (EASR).

The Environmental Compliance Approval (ECA) replaces the previous Certificate of Approval (Air) commencing October 31, 2011. All existing Certificates of Approval (Air) and their conditions continue to apply. Application for a new Environmental Compliance Approval is needed when you intend to make a change that requires an amendment to the approval.

☐ The facility does not have any required approval(s) for discharge of contaminants to air.
☐ The facility requires an amendment or additional approval for discharge of contaminants to air.
☒ The facility requires an amendment or additional approval for activity(s) other than for discharge of contaminants to air.
☒ The facility has the required approval (s) for discharge of contaminants to air (or is not required to obtain them).

Specifics:

The Limited Operational Flexibility Environmental Compliance Approvals, previous referred to as Basic Comprehensive Environmental Compliance Approvals, allow companies to make changes to their equipment which discharge contaminants to the natural environment. As part of the approval structure, when changes are made, the Facility must model the emissions to ensure compliance with applicable standards and limits outlined in the approval and Ontario Regulation 419/05. Also, as part of the comprehensive approval, the Facility must submit an annual report outlining operations in the reporting operating year.

The Facility submitted an application, dated May 21, 2014, to the ministry for renewal of their Limited Operational Flexibility Environmental Compliance Approval which was approved replacing and revoking Environmental Compliance Approval Number 7021-7HQNDE issued September 16, 2009. On December 10, 2015 the ministry issued

Environmental Compliance Approval Number 1631-A2ELCQ the Facility.

As a result of the inspection the Inspecting Officer did not observe any changes or equipment implemented that would be subject to an amendment of the issued Environmental Compliance Approval Number 1631-A2ELCQ. The Facility was not required to submit a 2014 Written Summary as the condition that permits modifications had expired resulting in no modifications completed in 2014 therefore not requiring a submission. The 2015 Written Summary is not required to be submitted until May 31, 2016. The Inspecting Officer reviewed the modification logs provided by the Facility for 2015.

2015: The Facility completed one (1) modification to the operations / equipment at the Site during the 2015 operating year.

- Replace electrical shredder with diesel shredder - Updated ESDM Report and Acoustic Assessment Report - Changes reflected in 2015 ESDM Report

As previously mentions, the condition in Environmental Compliance Approval Number 7021-7HQNDE permitting modifications to be completed under Limited Operational Flexibility expired as of September 16, 2014 restricting the ability for modifications to be completed until an amendment is approved by the ministry. In May 2014 the Facility submitted an amendment to renew their Limited Operational Flexibility and did not receive an approval until December 2015. The Facility completed a modification in September 2015 resulting in a contravention of Section 20.6(1) and Condition 2.1 of ECA No. 7021-7HQNDE.

Please see Section 5.0 of this Report

2.4 LEGISLATIVE NOTIFICATION REQUIREMENTS

Has the facility met all applicable legislative notification requirements for air emissions?

● Yes ○ No ○ Not Required

Specifics:

As part of the inspection process, the Inspecting Officer reviewed the district file review prior to completing the inspection. As a result of the file review no issues were identified regarding the notification requirements (legislative, approval condition, etc) for the Facility for the 2014 and 2015 operating year.

2.5 MONITORING AND REPORTING

Has the facility met its assessment requirements?

● Yes ○ No ○ Not Required

Specifics:

As per Condition 10.1, the Facility is required to conduct source testing every six (6) months after the start-up date and every (6) months thereafter. The start-up date was January 28th, 2010.

Previous source testing events were completed on:

- June & December 2010
- July & December 2011
- November 2012
- November 2013
- November 2014
- November 2015

On February 3, 2011 the Facility requested an amendment to reduce the frequency of source testing per year from every six (6) months to once a year as well as the removal of hydrogen sulfide and mercaptons from the testing parameters. On May 17, 2012 the Facility was granted permission to reduce the source testing requirements.

On December 10, 2015 the Facility was issued Environmental Compliance Approval Number1631-A2ELCQ and as a result, the Facility requested to continue the previous ministry approved reduction in the frequency of source testing and removal of hydrogen sulfide and mercaptions from the testing parameters. On December 14, 2015 the Facility was granted permission for the reduction in source testing frequency and removal of specific testing parameters. The

last source test was completed in November of 2015 with copies provided to the Ministry of the Environment and Climate Change's Ottawa District Office and Standards Development Branch in January 2015. Upon completion of the ministry's review, comments will be provided to the Facility.

The next source testing is scheduled for November 2016.

Has the facility met its reporting requirements?

● Yes ○ No ○ Not Required

Specifics:

Condition 6 of Environmental Compliance Approval Number 1631-A2ELCQ requires the Facility to provide the Director no later than May 31 of each year, a Written Summary Form to be submitted to the Ministry of the Environment and Climate Change's website that shall include the following:

a. a declaration of whether the Facility was in compliance with section 9 of the *Environmental Protection Act* , Ontario Regulation 419/05 and the conditions of Environmental Compliance Approval Number 1631-A2ELCQ
b. a summary of each Modification satisfying Condition 2.1 (a) and (b) that took place in the previous calendar year that resulted in a change in the previously calculated concentration at a Point of Impingement for any Compound of Concern or resulted in a change in the sound levels reported in the Acoustic Assessment Summary Table at any Point of Reception

The Facility is not required to comply with the above conditions until May 31, 2016 for the 2015 operating year in which Limited Operational Flexibility conditions were in place.

In 2014 the Facility was required to submit a similar Written Summary under Condition 5 of Environmental Compliance Approval Number 7021-7HQNDE requiring the following information and documentation:

a. a signed statement that the *Facility* was in compliance with the *Performance Limits;*
b. a summary of each *Modification* that took place in the previous calendar year and resulted in a change in the previously calculated concentration at the *Point of Impingement* for any *Compound of Concern* or resulted in a change in the sound levels reported in the *Acoustic Assessment Summary Table* at any *Point of Reception;*
c. a list of each *Compound of Concern* submitted to the *Air Standards Manager* for review in the previous calendar year;
d. a review of any changes to a *Ministry Point of Impingement Limit* undertaken in the previous calendar year that affect a *Compound of Concern* emitted from the *Facility;*
e. a tabulated summary of the changes in the emission rate of any *Compound of Concern* and the resultant increase or decrease in the *Point of Impingement* concentration reported in the *ESDM Report* over the previous calendar year; and
f. the *Emission Summary Table* and *Acoustic Assessment Summary Table* for the *Facility* as of December 31 from the previous calendar year.

In reviewing the district file the 2014 Written Summary was not submitted to the District Manager of the Ottawa District Office as required by Condition 5.

****Please see Section 5.0 of this Report****

2.6 EXCEEDANCE OF A LEGAL LIMIT AND/OR GUIDELINE

Is there information that demonstrates an exceedance of a legal limit and/or guideline for air emissions?

○ Yes ● No

Specifics:

In reviewing the most updated Emission Summary & Dispersion Modelling Report (May 2014), no exceedance of a ministry limit was observed. The review of the Emission Summary & Dispersion Modelling Report was completed by the ministry's Environmental Approvals Branch which accompanied the Facility's application to renew their Limited Operational Flexibility condition.

2.7 OPERATIONAL AND MAINTENANCE REQUIREMENTS

Has the facility met its operating/maintenance requirements?

● Yes ○ No ○ Not Required

Specifics:

As part of the inspection process, the Inspecting Officer requested the Operational & Maintenance Manuals as required by the issued ECA.

The following documents were available at the time of the inspection:

- Contingency Plan for Odours, Spills, Fires, Power Failures and Labour Disruptions *(Orgaworld Ltd. - January 2010 - Conestoga-Rovers & Associates)*
- Site Inspection and Monitoring Program *(Orgaworld Ltd. - January 2010 - Conestoga-Rovers & Associates)*
- Operations Manual *(Orgaworld Ltd. - October 2009 - Conestoga-Rovers & Associates)*
- Odour Monitoring Program *(Orgaworld Ltd. - October 2009 - Conestoga Rovers & Associates)*

The Inspecting Officer was informed that the above referenced documents are current and no changes have been made requiring revisions with the exception to the *Site Inspection and Monitoring Program* and *Operations Manual* for the modification that includes the replacement of an electric shredder to a diesel shredder. Provided the recent issuance of Environmental Compliance Approval Number 1631-A2ELCQ, Condition 7.1 requires an updated operations and maintenance manual to be completed by March 10, 2016.

No issues identified.

2.8 RECORD KEEPING REQUIREMENTS

Has the facility met its record keeping requirements?

● Yes ○ No ○ Not Required

Specifics:

Condition 9 of Environmental Compliance Approval Number 1631-A2ELCQ (formerly Condition 8 of Environmental Compliance Approval Number 7021-7HQNDE) outlines the requirements for the Facility to conduct record keeping of specific documents and records associated with the operations under the Environmental Compliance Approval. The following records are to be on-site:

- Original ESDM Report and each updated version
- a copy of each version of the Acoustic Assessment Report
- supporting information used in the emission rate calculations performed in the ESDM Reports and Acoustic Assessment Reports
- copies of each Written Summary Form provided to the Ministry under Condition 6.1 of this Approval
- records of maintenance, repair and inspection of Equipment related to all Processes with Significant Environmental Aspects
- all reports of Source Testing
- all records generated from the monitoring of the Air Pollution Control Equipment
- all records related to environmental complaints made by the public as required by Condition 8 of this Approval

As part of the inspection the Inspecting Officer reviewed the district file, requested confirmation, and was provided documents to confirm compliance with the above condition. Upon reviewing the information, the Inspecting Officer noted the above documentation was available with the exception of the 2014 Written Summary.

Please see Section 5.0 of this Report

The Ottawa District Office and the Facility did not receive any environmental complaints for the 2014 operating year. In July 2015, the ministry was made aware of an incident involving a small fire located in Tunnel 8 of the building. The Ottawa Fire Department responded to the incident and the material was extinguished. No complaints or concerns were reported to the Ministry of the Environment and Climate Change nor to the Facility as a result of the fire. No fires have been reported since July 2015.

2.9 SPILLS PREVENTION AND CONTINGENCY PLAN

Is the facility required to have a Spill Prevention Contingency Plan (SPCP) under Ontario Regulation 224/07, Spill Prevention and Contingency Plans?

○ Yes ● No

Specifics:

The Facility has developed and implemented a procedure entitled "Contingency Plans for Odours, Spills, Fires, Power Failures and Labour Disruptions". The procedure has been provided to the ministry and was deemed acceptable.

No spills were reported to the ministry for the 2014 and 2015 operating year.

2.10 BEYOND COMPLIANCE

Are there any Beyond Compliance Projects being implemented at the facility?

○ Yes ● No

Specifics:

None at this time

3.0 REVIEW OF PREVIOUS NON-COMPLIANCE ISSUES

4.0 SUMMARY OF INSPECTION FINDINGS (HEALTH/ENVIRONMENTAL IMPACT)

Was there any indication of a known or anticipated human health impact during the inspection and/or review of relevant material, related to this Ministry's mandate?

○ Yes ● No

Specifics:

No

Was there any indication of a known or anticipated environmental impact during the inspection and/or review of relevant material ?

○ Yes ● No

Specifics:

No

Was there any indication of a known or suspected violation of a legal requirement during the inspection and/or review of relevant material which could cause a human health impact or environmental impairment ?

● Yes ○ No

Specifics:

1. Modifications were completed in September 2015 after the expire date associated with Section 20.6 (1) of the Environmental Protection Act and Condition 2.1 of Environmental Compliance Approval Number 7021-7HQNDE and prior to receiving the new Environmental Compliance Approval Number 1631-A2ELCQ, revoking and replacing Environmental Compliance Approval Number 7021-7HQNDE, renewing the Limited Operational Flexibility conditions.

2. The 2014 Written Summary was not provided to the District Manager by May 31, 2015 as required by Condition 5 of Environmental Compliance Approval Number 7021-7HQNDE.

Was there any indication of a potential for environmental impairment during the inspection and/or the review of relevant material ?

○ Yes ● No

Specifics:

Was there any indication of minor administrative non-compliance?

○ Yes ● No

Specifics:

5.0 ACTION(S) REQUIRED

As a result of the Air Facility Inspection the following actions are required to be addressed:

1. The Facility must ensure all modifications are completed pursuant to Section 20.6 (1) of the Environmental Protection Act and Condition 2 of Environmental Compliance Approval Number 7021-7HQNDE.

2. By May 31, 2016, the Facility must submit the 2014 Written Summary to the undersigned Inspecting Officer

1. 1. The Facility must ensure all modifications are completed pursuant to Section 20.6 (1) of the Environmental Protection Act and Condition 2 of Environmental Compliance Approval Number 7021-7HQNDE.
2. 2. By May 31, 2016, the Facility must submit the 2014 Written Summary to the undersigned Inspecting Officer

1.0 INTRODUCTION

Orgaworld Canada Ltd.'s Organics Composting Facility (the "Facility") is a 10.12 hectare Waste Disposal Site (Processing) serving the Provinces of Ontario and Quebec, for the temporary storage, transfer and processing, through aerobic composting, of solid non-hazardous, domestic, commercial, institutional or industrial organic waste at a maximum rate of 1,200 tonnes per day and 150,000 per year of Organic Waste.

The purpose of the inspection is to assess compliance with the Facility's Environmental Compliance Approval Number 2766-7HEPSZ and applicable environmental legislation such as the *Environmental Protection Act* and Ontario Regulation 347 under the above referenced *Act*. The inspection consisted of a district file review, site visit and discussions with Michael Rooke, Compliance Officer and Nick Pora, Plant Manager.

The organic waste is brought to the site located at 5123 Hawthorne Road in the City of Ottawa (the "Site"), shredded, mixed and placed inside composting tunnels. Conditions within the tunnels are monitored and changed to ensure optimum conditions to promote aerobic composting. Once the material remains in the tunnels long enough for the temperature to reach 55 degrees Celsius for 3 consecutive days it is cooled, removed from the tunnels and placed into a screener which separates the material in size fractions. The screener separates the material into 20+ (which includes large pieces of material that have not composted), 12-20 material (which is medium sized material), incidental waste, and processed organic waste. The 20+ material is used as inoculate and mixed in with fresh material in the Mixing Hall, or further shredded and run through the screener again. The processed organic waste size material is placed in the compost curing area where it is required to cure for 21 days and subsequently tested to ensure it meets all requirements under Environmental Compliance Approval Number 2766-7HEPSZ and the Ontario Compost Quality Standards. Upon achieving the requirements of the approval and the standards, the material is deemed

finished compost and removed from the site for use in accordance with the Ontario Compost Quality Standards. It should be noted that the material sized as 12-20 is also referred to as "10-100" material as that was the original screen size.

The Facility started accepting organic material at the Site on January 28, 2010. The Site is currently receiving waste from the City of Ottawa Source Separated Organics collection program and leaf and yard waste program. The City of Ottawa is currently collecting the leaf and yard waste commingled with the source separated organic waste. It should be noted that the City of Ottawa started commingling their leaf and yard waste with the source separated organics and sending it to Orgaworld in April 2010. The Facility receives additional source separated organics from the industrial, commercial and institutional sector, in plastics, which started in February 2015. Environmental Compliance Approval Number 2766-7HEPSZ allows for the receipt of source separate organics in plastic as a result of an Environmental Review Tribunal decision which was reflected in an notice to Environmental Compliance Approval Number 2766-7HEPSZ on February 6, 2015.

It should be noted that the Facility met an exemption in Ontario Regulation 347 which permitted the sale of 12-20 material (previous defined as a waste subject to Part V of the *Environmental Protection Act*) as long as it met a realistic market demand. This material was sold to farmers as a soil conditioner as it provided a benefit in the agricultural sector. As of January 1, 2013, the exemption in Ontario Regulation 347 was amended to exclude waste generated from organic processing facilities (i.e. composting facilities). As a result, the Facility ceased all shipments of 12-20 to their clients. An alternative solution was sought which allowed the Facility to continue providing the material as a soil conditioner under an approval process regulated by the Ontario Ministry of Agriculture and Rural Affairs entitled Non-Agricultural Source Material Plans. As of mid 2013, the Facility has worked with their clients in obtaining Non-Agricultural Source Material Plans in order to apply the 12-20 material and is operating within the requirements of Part V of the *Environmental Protection Act* for the transportation of the 12-20 material.

On July 1, 2015 the Ministry of the Environmental and Climate Change implemented the entire Ontario Compost Quality Standards for the remaining standards for foreign matter content, compost maturity and compost labelling. In 2013 the Facility implemented Phase I of the Ontario Compost Quality Standards for metals in compost, quality of feedstock and pathogens. It was known through discussion with the Facility that the implementation of Phase II Ontario Compost Quality Standards would pose challenges for the production of AA compost given the requirements of the Ontario Compost Quality Standards. The challenges included compost technology and operations at the Site, capacity for the storage and curing of processed organic waste, and duration of time needed to meet the new requirements. As a result, the Ottawa District provided the Facility an opportunity to submit a Voluntary Abatement Plan to address the challenges and provide an abatement program to demonstrate the Facility's commitment to comply with the Ontario Compost Quality Standards and a strategy to land apply processed organic waste to reduce risk to human health and the environment. The Voluntary Abatement Plan submitted provided a program in which previously deemed unrestricted compost (pre-July 2015) to be land applied to agricultural operations within the legislative framework of the *Nutrient Management Act* and Non-agricultural Source Material. The Voluntary Abatement Plan outlined the Facility would enter into an agreement with the agricultural operators to submit a Non-agricultural Source Material Plan for land application of processed organic waste generated at the Site to the Ministry of Agriculture, Food and Rural Affairs and in the meantime, submit the supporting documentation to the Ottawa District Office to allow for land application prior to receiving approval under the Non-agricultural Source Material process. In addition to the Voluntary Abatement Plan, the Facility was required to retain the services of approval waste management systems to transport processed organic waste from the point of generation to the application site. The Ministry of the Environment and Climate Change reviewed and accepted the Voluntary Abatement Plan for period of six (6) months ending on December 31, 2015. To date, no off-site or environmental impacts were reported to the ministry during the duration of the Voluntary Abatement Plan which is now expired. Any further land application of processed organic waste is subject to the approval process outlined in the *Nutrient Management Act* .

The following inspection report relies on information found in the district file, site observations and information gathered from conversations with Facility staff throughout the year and during the inspections.

An Air Facility Inspection and an Industrial Sewage Inspection were also carried out at the site. See respective reports for details.

2.0 INSPECTION OBSERVATIONS

Certificate of Approval Number(s): ● Yes ○ No
C of A Number(s):

Environmental Compliance Approval Number 2766-7HEPSZ: Waste Disposal Site
Issued: September 16, 2009

Notice 1 - Issued on October 21, 2010
Details: The amendment was issued to allow the Facility to operate a mobile shredder unit on-site.

Notice 2 - Issued on May 2, 2012
Details: The amendment was issued for a change to allow the Facility to receive and remove waste between the hours of 6am to 8pm (M-F) and between the hours of 7am to 8pm on Saturdays - Condition 5.1

Notice 3 - Issued on February 6, 2015
Details - The amendment was issued to reflect the decision of the Environmental Review Tribunal descision for Case No. 09-115/09-126, Orgaworld Canada Ltd. v. Director, Ministry of the Environment, dated November 7, 2011. The descision allows for Orgaworld Ottawa to receive Processed Organic Waste that includes sanitary products and human body waste, waste that is collected in plastic bags or pet waste other than waste that incidental to bedding or litter provided that reasonable notice and supporting documentation is submitted and confirmed by the ministry - Condition 2(11)

2.1 SITE OPERATION:

Specifics:

SERVICE AREA, APPROVED WASTE TYPES, RATES & STORAGE

(1) The Site may only accept solid non-hazardous domestic, commercial, institutional or industrial Organic Waste from the Provinces of Ontario and Quebec, limited to the following Organic Waste:

(a) Source-separated Organic Waste limited to the following:

(i) Food wastes: fruit, vegetable and general table scraps, meat and fish products, dairy products, egg shells, confectionery products, sauces, bones, pet food, fat, bread and grains, rice, pasta, coffee grounds, filters;

(ii) Paper fibres: soiled paper towels, tissues, paper plates, soiled paper food packaging items such as boxboard, cardboard, newspaper, and other packaging materials;

(iii) Miscellaneous: houseplants and yard wastes, dryer lint and hair, pet fur, sawdust and wood shavings and litter or bedding.

(b) Organic Waste from the food processing industry and other industries that produce food wastes;
(c) Organic Waste from the commercial sector, including but not be limited to food waste from restaurants, hotels, institutions, commercial operations that collect organic wastes;
(d) Leaf & yard waste;
(e) Organic sludges, including but not be limited to starches and paper wastes, but excluding sewage sludge and biosolids.

The 2014 Annual Report states that the Facility is in compliance with Condition 2.(1) by only accepting waste from the City of Ottawa which is within the approved service area outlined in Environmental Compliance Approval Number 2766-7HEPSZ. This requirement in the approval was also confirmed by the Facility staff during the inspection.

(2) (i)The Owner shall not accept at the Site sanitary products and human body waste.
(ii) The Owner shall not accept at the Site any waste that is collected through a waste collection program that allows use of plastic bags.
(iii) The Owner shall not accept at the Site any waste that is classified as hazardous waste or liquid industrial waste in accordance with *O. Reg. 347* .

The 2014 Annual Report states that the Facility is in compliance with the above referenced condition by not accepting sanitary products, human body waste, plastic bags, hazardous waste and liquid industrial waste as defined in Ontario Regulation 347.

In 2015 the Facility began accepting source separated organics from the industrial, commercial and institutional

sector after receiving the ministry's issuance of Notice #3 forming part of Environmental Compliance Approval Number 2766-7HEPSZ as a result of the Environmental Review Tribunal decision.

No issues identified.

(3) The Owner is only approved to receive Organic Waste in quantities that are not to exceed:
(a) a maximum of 1,200 tonnes on a daily basis; and
(b) a maximum of 150,000 tonnes per year.

The 2014 Annual Report provided the monthly and annual tonnages for the 2014 operating year As part of the inspection the Inspecting Officer requested the mass balance for the 2015 operating year to further determine compliance with conditions outlined in Environmental Compliance Approval Number 2766-7HEPSZ which included the above referenced condition. The data provided in the report confirms the Facility is in compliance with tonnage limits outlined in Environmental Compliance Approval Number 2766-7HEPSZ.

No issues identified.

(4) The Owner is approved to store the following amounts of waste at the Site:
(a) unprocessed Organic Waste stored within the Processing Building awaiting processing shall not exceed 3,000 tonnes;
(b) leaf & yard waste stored at the Site shall not exceed 1,500 tonnes;
(c) Organic Waste, including leaf & yard waste and biofilter medium waste, undergoing Composting in the composting tunnels shall not exceed 5,040 tonnes;
(d) Immature Compost in various stages of curing shall not exceed 10,000 tonnes;
(e) Residual Waste and Rejected Waste shall not exceed 1,000 tonnes.

The 2014 Annual Report states that in the 2014 operating year the Facility was in compliance with the approved waste storage amounts outlined in this condition. This requirement in Environmental Compliance Approval Number 2766-7HEPSZ was also confirmed by the Facility staff during the inspection.

No issues identified.

(5) Waste storage at the Site is subject to the following limitations:

(a) unprocessed Organic Waste, excluding leaf & yard waste, shall be stored within the confines of the Processing Building;
(b) leaf & yard waste shall be stored within the confines of the Processing Building, or in accordance with the requirements of Condition 6.(14) of the Certificate of Approval (Industrial Sewage) for this Site;
(c) Immature Compost in various stages of curing shall be stored within the confines of the Processing Building;
(d) solid Residual Waste shall be stored in lugger bins located within the confines of the Processing Building;
(e) solid putrescible waste generated through activities not relating to the handling and processing of Organic Waste (ie. office, lunch room, etc.) may be stored in a covered bin outdoors and it shall be removed from the Site as required in accordance with *O. Reg 347* and the *EPA* .

At the time of the inspection no waste was observed to be stored outside the Processing Building. All waste and phases of the composting process were located inside the confines of the Processing Building.

No issues identified.

(6) Organic Waste storage duration is limited to the following:
(a) The maximum storage duration of the leaf & yard waste shall not exceed thirty (30) days from the time of its receipt.
(b) The maximum storage duration of the purchased wood amendment materials shall not exceed ninety (90) days from the time of their receipt.

(c) The maximum storage duration of the Organic Waste within the Processing Building prior to loading into the aerated composting tunnels shall not exceed the time period that is required to accumulate enough Organic Waste to fill one (1) composting tunnel.

(d) The Owner shall not store the Residual Waste at the Site in excess of thirty (30) days from the date of its generation, or as directed by the District Manager.

(e) If in the opinion of the District Manager, the duration of waste storage from (a) and/or (b) and/or (d), above, results in odour complaint(s), the Owner, in consultation with the District Manager shall undertake appropriate steps, including reducing waste storage duration, so that odour complaint(s) are eliminated.

The 2014 Annual Report states that the storage duration of the leaf & yard waste, purchased wood amendment materials, organic waste within the Processing Building and Residual waste did not exceed the storage duration limits as outlined by the above condition.

(7) No outside waste storage other than that described in Condition (5), above, is approved under this Certificate.

At the time of the inspection it was noted that waste was not being stored outside other than that described in Condition (5).

(8) The Company shall ensure that all waste storage is undertaken in a manner that does not cause an adverse effect or a hazard to the environment or any person.

At the time of the inspection the Inspecting Officer was informed that no environmental impacts or complaints were received as result of the composting operation at the Site. It should also be noted that the Ministry of the Environment and Climate Change did not receive environmental complaints regarding the storage of waste at the Site. During the inspection no hazards to the environment or any persons were observed.

(9) In the event that Organic Waste cannot be processed at the Site and the Site is at its approved waste storage capacity, the Owner shall cease accepting additional Organic Waste. Receipt of additional Organic Waste may be resumed once such receipt complies with the waste storage limits approved in this Certificate.

The 2014 Annual Report stated compliance with the above reference condition. At the time of the inspection the Facility was in operation and was not exceeding its approved waste storage capacity.

(11) Before the Owner accepts any new source of Organic Waste at the Site that includes:

(i) sanitary products and human body waste,
(ii) waste that is collected in plastic bags, or
(iii) pet waste other than waste that is incidental to bedding or litter,

The Owner shall provide the District Manager with reasonable notice in advance of the Owner's intent to commence acceptance of the new waste source at the Site. The Owner shall also provide the District Manager with such information as the District Manager confirm in writing is required respecting the new waste source, which may include the name and location of the source generator, the date the Owner proposes to commence accepting the waste at the Site, a description of the constituent components of the waste being accepted, confirmation whether inclusion of the waste components referenced above in (i) (ii) and (iii) are characterized as incidental or inadvertent, and information related to the storage of the waste prior to its delivery to the Site, together with any operational plans the Owner proposes for integrating the processing of waste from the new source into the waste stream then currently being processed at the Site. For purposes of this condition a new source also included any sources or Organic Waste already being accepted at the Site that will be changed to introduce, or increase the waste components referenced above in (i) (ii) and (iii). For purposes of this condition, the Director may decided the length of the advanced notice reasonably required under this condition, and provide the Owner with written notice of the Director's decision in this regard.

In 2015 the Ministry of the Environment and Climate Change issued Notice, previously referred to as Notice #3, to the Facility to began receiving new sources of organic waste collected in plastic from the industrial, commercial and institutional sector. In order for this to occur, documentation was required to be submitted to the ministry as outlined in Condition 2(11). In February of 2015 Orgaworld Ottawa submitted the required information to satisfy the condition and allow for the receipt and processing of the new source of Organic Waste from the new sector. Since the inclusion of the new source of organic waste no complaints or issues were reported to the ministry. The Inspecting Officer reviewed the sample analysis for the new source of organic waste which was deemed compliant with the

Ontario Compost Quality Standards for quality of feedstock.

3. SIGNS

(1) **Prior to receipt of waste at the Site, the Owner shall ensure that a sign is posted at the entrance to the Site. The sign shall be visible from the main road leading to the Site. The following information shall be included on the sign:**

(a) **name of the Owner;**
(b) **this Certificate number;**
(c) **hours during which the Site is open;**
(d) **waste types that are approved to be accepted at the Site;**
(e) **Owner's telephone number (a hotline) to which complaints may be directed;**
(f) **Owner's twenty-four hour emergency telephone number (if different from above);**
(g) **a warning against unauthorized access;**
(h) **a warning against dumping at the Site.**

(2) **The Owner shall ensure that appropriate signs are posted at the Site clearly identifying the waste and stating warnings about the nature of the waste and any possible hazards.**

At the time of the inspection it was noted that the Facility is in compliance with Condition 3 of issued Environmental Compliance Approval Number 2766-7HEPSZ by posting a sign at the entrance of the Site outlining the above required information from a-h. A similar sign is also present at the exit of the Site. No issues were identified with the information displayed on the signs entering and exiting the Site.

4. SITE SECURITY

(1) **All unloading and loading of waste and all waste processing activities at the Site shall at all times be undertaken by Trained Personnel.**

(2) **The Owner shall ensure that access to the Site is regulated and that all entrances are secured by lockable gates to restrict access only to authorized personnel when the Site is not open.**

At the time of the inspection it was observed that training was completed as per the above referenced condition. The Site has installed a fence with a lockable gate to restrict access to the Site The Inspecting Officer confirmed with Facility staff that the Site is secured after the hours of operation.

6. EQUIPMENT AND SITE INSPECTIONS & MAINTENANCE

(1) **Prior to receipt of any waste at the Site, the Owner shall prepare a comprehensive written inspection program which includes inspections of all aspects of the Site's operations including the following:**

(a) **loading/unloading area of the leaf & yard waste storage pad;**
(b) **parking lot area for evidence of run-off from the leaf & yard waste storage pad;**
(c) **Processing Building and the air pollution control equipment;**
(d) **security fence and property line;**
(e) **on-site roads for presence of leaks and drips from the waste delivery trucks;**
(f) **presence of excessive fugitive dust emissions from the on-site roads or the Compost stockpiles;**
(g) **on and off-site litter;**
(h) **presence of vector and vermin.**

At the time of the inspection the Inspecting Officer requested documents and procedures which speaks to the Facility's inspection program. The Facility provided a copy of the inspection program during the inspection which address the above condition. The Inspecting Officer also reviewed procedures provided by the Facility located in the district file which speaks to maintenance and inspections of the pollution control devices and industrial sewage works system. The Facility must ensure that the equipment and site inspections & maintenance requirements are updated promptly to reflect the inclusion of new equipment associated with the processing of organic waste. It was noted during the inspection that the Site acquired a new diesel powered shredder to replace the existing electrical shredder. The Facility must ensure the equipment and site inspections & maintenance requirements of Condition 6 of Environmental Compliance Approval Number 2766-7HEPSZ is updated to reflect this new equipment.

** Please see Section 5.0 of this Report**

(3) The Owner shall develop and implement a preventative maintenance program for all on-Site equipment associated with the processing and managing of waste and control of odour and dust emissions. The preventative maintenance program shall be maintained up-to-date and shall be available for inspection by a Provincial Officer upon request.

A copy of the preventative maintenance program was provided to the Ottawa District Office and was reviewed during the district file review prior to completing the inspection. The documentation required by this condition was also requested during the inspection and was provided to the Inspecting Officer for review. No issues identified during the review of the document except to note the requirements to keep updated to reflect the inclusion of new equipment associated with waste processing and new sources of organic waste (i.e. diesel powered shredder).

Please see Section 5.0 of this Report

7. **QUALITY CRITERIA , TESTING & MONITORING**

(1) Cross-Contamination Prevention

(a) The Owner shall ensure that the incoming Organic Waste and the equipment used in handling of the incoming Organic Waste are kept separate and do not come in contact with the Immature Compost / the Finished Compost and the Compost except where the Immature Compost / the Finished Compost and the Compost are being fed back into the composting process.

The operation of the equipment and the staff present to inspection incoming organic waste is completed in a manner to prevent cross-contamination. Immature compost & finished compost are located separate from incoming organic waste. No issues identified.

(2) Quality Control Monitoring of Organic Waste at the generator site:

(a) Prior to being accepted at the Site for the first time, the incoming Organic Waste from a new source/stream shall be characterized in accordance with the Ministry's regulatory requirements for sampling and testing to ensure that the incoming Organic Waste complies with the quality criteria specified in this Certificate. The incoming Organic Waste may be considered a pre-approved waste source/stream once the incoming Organic Waste meets the required quality criteria and has been classified as such by the Company.

At the time of the inspection the Inspecting Officer inquired to determine if any new sources of incoming organic waste from a new source/stream has been received. Orgaworld staff stated that new sources/streams of incoming organic waste began in February 2015 from the Industrial, Commercial and Institutional Sector. Sample analysis documentation was provided and determined to be compliant with the Ontario Compost Quality Standards. In February of 2015 Orgaworld requested and received approval from the ministry to start accepting the new source of organic waste received in plastic bags. No issues identified.

(3) Quality Control Monitoring of the Incoming Organic Waste

(a) The Owner shall not accept for composting any individual Organic Waste source or an additive necessary for composting that exceeds the following quality parameters set out in "Schedule B" of this Certificate:

(i) trace elements;
(ii) organic chemicals.

At the time of the inspection the Inspecting Officer requested copies of the sample results from the analysis of incoming organic waste as required by this condition. The Inspecting Officer confirmed incoming feedstock complied with the Ontario Compost Quality Standards through information requested following the inspection.
No issues identified.

Finished Compost Quality Criteria

(4) Finished Compost is considered to be a Compost when it meets the following compost quality criteria:

(a) compost quality criteria set out in Schedule "B" of this Certificate; and
(b) curing duration of a minimum of twenty one (21) days and compliance with one (1) of the following three (3) maturity criteria:

(i) the respiration rate is less than, or equal to, 400 milligrams of oxygen per kilogram of volatile solids (or organic matter) per hour; or
(ii) the carbon dioxide evolution rate is less than, or equal to, 4 milligrams of carbon in the form of carbon dioxide per gram of organic matter per day; or
(iii) the temperature rise of the compost above ambient temperature is less than 8°C.

At the time of the inspection the Inspecting Officer requested information regarding the sample collection and analysis of the finished compost to ensure compliance with Schedule B of Environmental Compliance Approval Number 2766-7HEPSZ *and the Ontario Compost Quality Standards. The Inspecting Officer was provided sample analysis for the finished compost. Observations made during the review are as follows:*

- *Finished compost was sampled and collected as per the frequency outlined in* Environmental Compliance Approval Number 2766-7HEPSZ
- *Finished compost was tested at the frequency and for the parameters outlined in the Ontario Compost Quality Standards and in accordance with Schedule B of* Environmental Compliance Approval Number 2766-7HEPSZ

Process Monitoring

(8) The Owner shall ensure that the following process parameters are monitored:

(a) temperature of the composting Organic Waste in the composting tunnels;
(c) inlet air temperature;
(d) outlet air temperature;
(e) relative humidity in the composting tunnels;
(f) air flow into the tunnels;
(g) oxygen content in the air; and
(h) temperature of the Immature Compost in the curing piles.

At the time of the inspection the Inspecting Officer requested information on how the Facility complies with the above condition. The Inspecting Officer was informed that the Facility is equipped with a SCADA system that monitors all processes as it relates to the composting process. Inspecting Officer was able to verify this information by being provided screenshots of the SCADA system for the above process monitoring parameters.

No issues were identified.

(10) As a minimum, the Owner shall monitor the temperature of the Immature Compost within the curing stockpiles daily. The measurements shall be taken one (1) metre inside the curing stockpile mass and at points sufficient to provide a temperature profile of the Immature Compost.

As part of the inspection process, the Facility provided documentation to ensure temperature monitoring is completed daily. No issues were noted during the review of this information.

8. <u>NUISANCE IMPACT CONTROL & HOUSEKEEPING</u>

(1) The Owner shall ensure that all vehicles that have delivered waste to the Site are not leaking or dripping waste when leaving the Site.

As stated in the 2014 Annual Report, during periods where organic waste is delivered at the Site, vehicles are inspected during and after by trained Facility staff.

(2) The Owner shall ensure that the exterior of all trucks delivering waste to the Site is cleaned prior to leaving the Site, as needed, to prevent odours. Truck washing shall occur only in the dedicated wash down area of the processing building.

At the time of the inspection no truck washing operations were occurring. As stated in the 2014 Annual Report, the

Facility provides rakes, brooms and a pressure washer if necessary to ensure the exterior is clean.

(3) The Owner shall ensure that there is no queuing or parking of vehicles that are waiting to enter the Site on any roadway that is not a distinct part of the Site.

At the time of the inspection no vehicles entering the Facility were parked or queuing on roads outside the Site boundary. The 2014 Annual Report confirms that during the 2014 operating year the Facility is in compliance with this condition.

(4) Should the Owner become aware that the truck(s) delivering waste to the Site have leaked wastewater on the municipal roadways, the Owner shall immediately notify the owner of the leaking vehicle(s) and the District Manager about the leak problem.

Prior to the inspection, a district file review was completed and the District Manager had not been notified of any wastewater impacts to municipal roadways. The 2014 Annual Report states that this was not noticed during the reporting period.

(5) The Owner shall:
(a) take all practical steps to prevent the escape of litter from the Site;
(b) pick up litter around the Site on a daily basis, or more frequently if necessary; and
(c) if necessary, erect litter fences around the areas causing a litter problem.

At the time of the inspection the Inspecting Officer walked a portion of the property and observed no litter issues. As part of the Facility's inspection program, trained staff monitor litter on a daily basis. It was noted in the review of the Site Inspections that on and off-site litter was deemed "Not OK" and follow-up action is to be taken as indicated on the form which was not indicated to be complete on the daily inspection checklist.

- 2015 - April 1st, 7th, 9th & 15ths
- 2015 - November 11th, 25,th, 27th & 30th

Please see Section 5.0 of this Report*

(6) Prior to the receipt of any waste at the Site, the Owner shall:
(a) implement necessary housekeeping procedures to eliminate sources of attraction for vermin and vectors; and
(b) hire a qualified, licensed pest control professional to design and implement a pest control plan for the Site. The pest control plan shall remain in place, and be updated from time to time as necessary, until the Site has been closed and this Certificate has been revoked.

The Facility retains the services of a external qualified licensed pest control professional to implement the pest control plan. No concerns identified.

(7) The Owner shall ensure that all on-Site roads and operations/yard areas are regularly swept/washed to prevent dust impacts off-Site.

At the time of the inspection the entrance, roads on-site, and exit were clear with no signs of dust impacts (inspection occurred in the winter therefore dust was not an issue. Inspecting Officer attends quarterly meetings at the Site and has not observed dust to be an issued on-site. The Facility retains a company to clean of the asphalt parking and on-site road areas if and when it is required. The Facility further provided

(8) (i) The Owner shall store Compost within the confines of the Processing Building, or in accordance with the requirements of Condition 6.(14) of the Certificate of Approval (Industrial Sewage) for this Site.

At the time of the inspection the Inspecting Officer observed compost to be stored within the confines of the Processing Building. No outside storage of compost was observed. The Inspecting Officer confirmed the storage requirements of compost with Facility staff at the time of the inspection.

(ii) Notwithstanding the requirements of Condition 8.(8)(i), above, the Owner shall ensure that the Compost stockpiles are not a source of fugitive dust emissions. If the proposed Compost storage features are deemed insufficient to control the fugitive dust emissions from the Compost stockpiles, the Owner shall provide additional covers or spray the stockpiles with water, or use any other method to minimize the

fugitive dust emissions.

At the time of the inspection dust was assessed to determine if the operations and procedures currently in place are effectively controlling fugitive dust. It was noted that fugitive dust was being significantly control as no dust was observed.

9. OPERATIONS MANUAL & STAFF TRAINING

(1) **The Owner shall prepare an Operations Manual for use by the Site personnel. The Operations Manual shall contain the following:**

(a) **outline the responsibilities of the Site personnel;**
(b) **personnel training protocols;**
(c) **waste receiving and screening procedures;**
(d) **unloading, handling and storage procedures;**
(e) **waste processing procedures;**
(f) **sampling and testing procedures;**
(g) **Site inspections and recording procedures;**
(h) **the emergency response procedures;**
(i) **procedure for handling complaints as described in the Certificate of Approval (Air/Noise) for this Site.**

At the time of the inspection the Inspecting Officer requested procedures and manuals as required by the above referenced condition. The Operations Manual developed by the Facility outlines the all the requirements of this condition with the exception of the inclusion of the diesel powered shredder that was installed as a replacement to the electric powered shredder.

See Section 5.0 of this Report*

(2) **A copy of this Operations Manual shall be kept at the Site, must be accessible to personnel at all times and must be updated, as required.**

10. EMERGENCY RESPONSE AND CONTINGENCY PLAN

(1) **Within six (6) months from the date of this Certificate, the Company shall submit to the District Manager an Emergency Response and Contingency Plan. The Emergency Response and Contingency Plan shall be prepared in consultation with the District Manager, the local Municipality and the Fire Department and as a minimum it shall include the following information:**

(a) emergency response procedures to be undertaken in the event of a spill, process upset, power failure, fire or any other emergency situation, including specific clean up methods for wastes expected to be generated from the emergency situation;
(b) a list of equipment and clean up materials available for dealing with the emergency situations;
(c) notification protocol with names and telephone numbers of persons to be contacted, including persons responsible for the Site, the Ministry's District Office and Spills Action Centre, the local Fire Department, the local Municipality, the local Medical Officer of Health, and the Ministry of Labour, and the names and telephone numbers of waste management companies available for emergency response;
(d) procedures and actions to be taken should the incoming Organic Waste not meet the quality criteria specified by this Certificate;
(e) procedures and actions to be taken should the outgoing Residual Waste not meet the quality criteria required by the specified by this Certificate;
(f) procedures and actions to be taken should the composted Organic Waste fail to meet the compost quality criteria specified by the Certificate;
(g) procedures and actions to be taken should the occurrence of the complaints require the Company to suspend the waste processing activities at the Site.

Prior to completing the inspection a file review was conducted which incorporated a review of the "Contingency Plan for Odours, Spills, Fires, Power Failures and Labour Disruptions" procedure. As part of the inspection the Inspecting Officer requested a copy. A revised copy (January 2016) of the document was provided and reviewed. No issues identified.

12. RECORDS KEEPING

Annual Report

(9) By March 31st following the end of each operating year, the Owner shall prepare and submit to the District Manager and the Public Liaison Committee (PLC), an Annual Report summarizing the operation of the Site covering the previous calendar year. This Annual Report shall include, as a minimum, the following information:

(a) a monthly mass balance of the Organic Waste received, processed and transferred from this Site, including waste type, quantity, sources and/or disposal destinations;
(b) an annual summary mass balance of the Organic Waste received, processed and transferred from this Site, including waste type, quantity, sources and/or disposal destination;
(c) an annual summary of any deficiencies, items of non-compliance or process aberrations that occurred at this Site and any remedial/mitigative action taken to correct them;
(d) a descriptive summary of any spills, incidents or other emergency situations which have occurred at this Site, any remedial measures taken, and the measures taken to prevent future occurrences;
(e) a summary describing any Rejected Waste including quantity, waste type, reasons for rejection and origin of the Rejected Waste;
(f) any environmental and operational problems, that could negatively impact the environment, encountered during the operation of the Site or identified during the facility inspections and any mitigative actions taken;
(g) any changes to the Emergency Response and Contingency Plan, the Operations Manual or the Closure Plan that have been approved by the Director since the last Annual Report;
(h) any recommendations to minimize environmental impacts from the operation of the Site and to improve Site operations and monitoring programs in this regard;
(i) a summary of any complaints received and the responses made, as required by the Certificate of Approval (Air/Noise);
(j) an update on the amount of Financial Assurance which has been provided to the Director;
(k) update on activities of the PLC;
(l) a condition-by-condition analysis of compliance with all Conditions of this Certificate.

As part of the file review process the 2014 Annual Report was found to be complete as required. The Annual Report was submitted to the Ottawa District Office in March of 2014.

2.2 FINANCIAL ASSURANCE:

Specifics:

At the time of the inspection a file review was completed which determined that Orgaworld Ottawa has submitted an adequate amount of financial assurance in an appropriate form accepted by the Ministry of the Environment and is located on file with the ministry. The last submission and ministry review of financial assurance was completed in 2015.

2.3 SITE SERVICE AREA:

Specifics:

Orgaworld Ottawa is approved to operate a waste disposal site (processing) serving the Provinces of Ontario and Quebec, for the temporary storage, transfer and processing (composting) of solid non-hazardous, domestic, commercial, institutional or industrial organic waste.

2.4 APPROVED SITE CAPACITY:

Specifics:

Orgaworld Ottawa is approved to operate a waste disposal site (processing) serving the Provinces of Ontario and Quebec, for the temporary storage, transfer and processing (composting) of solid non-hazardous, domestic, commercial, institutional or industrial organic waste at a maximum rate of 1,200 tonnes per day and 150,000 tonnes per year of Organic Waste.

3.0 REVIEW OF PREVIOUS NON-COMPLIANCE ISSUES

4.0 SUMMARY OF INSPECTION FINDINGS (HEALTH/ENVIRONMENTAL IMPACT)

Was there any indication of a known or anticipated human health impact during the inspection and/or review of relevant material, related to this Ministry's mandate?
No

Specifics:

Was there any indication of a known or anticipated environmental impact during the inspection and/or review of relevant material ?
No

Specifics:

Was there any indication of a known or suspected violation of a legal requirement during the inspection and/or review of relevant material which could cause a human health impact or environmental impairment ?
No

Specifics:

Was there any indication of a potential for environmental impairment during the inspection and/or the review of relevant material ?
No

Specifics:

Was there any indication of minor administrative non-compliance?
Yes

Specifics:
1. Daily Inspection Checklist reviewed indicated issues with on and off-site litter with no indication of corrective actions taken.

2. Revisions not completed for Operation & Maintenance Manual and Preventative Maintenance Inspection Program for the inclusion of the new diesel powered shredder.

5.0 ACTION(S) REQUIRED

The following actions are to be taken by Orgaworld Canada Ltd. to address observations noted in the above inspection report:

1. By no later than April 29, 2016, provide a response to the actions taken in regards to the Daily Inspection Checklist indicating a problem with on and off-site litter referenced in Section 2.1 of the Report.

2. By no later than April 29, 2016, complete revisions of all operational and maintenance documents and procedures to reflect the new diesel power shredder in order to ensure proper operation and maintenance. A copy shall be provided to the Ottawa District Office to remain on file.

6.0 OTHER INSPECTION FINDINGS

None at this time.

1.0 INTRODUCTION

Orgaworld Canada Ltd. (referred to as the "Facility"), located at 5123 Hawthorne Road in the City of Ottawa (the "Site), is an aerobic composting facility that is approved to accept solid non-hazardous organic waste as defined in their waste Environmental Compliance Approval for the production of compost. Organic waste is brought to the facility, shredded, mixed and placed inside composting tunnels. Conditions within the tunnels are monitored and changed to ensure optimum conditions that promote aerobic composting. The compost size material gets placed in the compost curing area where it is required to cure for 21 days, tested to ensure it meets all requirements under the waste certificate of approval and then removed from the site as finished compost. All process air and air from the receiving hall is directed through pollution control equipment. Leachate generated as a result of the composting process gets recirculated, any excess is kept in on-site storage tanks.

Orgaworld Canada Ltd. first started accepting organic material at their site on January 28th, 2010. The Site is currently only receiving waste from the City of Ottawa source separated organics (SSO) collection program and leaf and yard waste program. The City of Ottawa has been collecting the leaf and yard waste commingled with the SSO waste.

The Facility is approved to operate at a production limit of up to 150,000 tonnes per year of organic waste.

The following inspection report relies on information found in the district file, site observations and

information gathered from conversations with Orgaworld staff. The site visit for the inspection was conducted on January 29th, 2015.

The purpose of this inspection is to assess compliance with the Site's Air Facility Environmental Compliance Approval # 7021-7HQNDE ("ECA") and applicable environmental legislation such as the Environmental Protection Act ("EPA") and Ontario Regulation 419/05. The inspection consisted of a district file review, site visit and discussions with Michael Rooke, Compliance and Tanya Minarik, Site Supervisor.

An Industrial Sewage Works Inspection and Waste Disposal (Processing) Inspection were also carried out at the site by the Ministry of the Environment and Climate Change (MOECC). See respective reports for details.

1.1 FOCUS OF THE AIR INSPECTION

Is the inspection for the entire facility or is it scoped to part of the facility?

● Entire Facility ○ Part of the Facility

Specifics:

The Air Facility Inspection focused on compliance with the issued ECA which includes all pollution control devices and related performance limits, documentation, reporting, operation/maintenance, complaints recording procedures, and record keeping requirements.

The Facility was issued a Limited Flexibility Environmental Compliance Approval (ECA # 7021-7HQNDE) on September 16, 2009. The inspection is focused on information and data collected during the 2013 operating year.

1.2 TARGET SECTOR IN ONTARIO REGULATION 419/05, AIR POLLUTION - LOCAL AIR QUALITY

Is the facility in a targeted sector identified in Schedule 4 or Schedule 5 of O. Reg. 419/05?

No, the facility is not in a target sector identified in Schedule 4 or Schedule 5.

Specifics:

2.0 INSPECTION OBSERVATIONS

Specifics:

At the time of the inspection Orgaworld staff provided a tour to the IO which incorporated a detailed overview of the air pollution control devices that treat the emission generated as a result of the composting operations. The Site has several pollution control devices in series to ensure proper treatment of emissions. The system is described below:

1.) Fans are located throughout the building, these fans suck air from the building to the pollution control equipment which creates a negative pressure environment within the building. Air from the building and air from the composting tunnels goes through an ammonia scrubber, then one of two biofilters, then a bioscrubber, then the 40 meter stack.

The Facility continuously monitors the process by a SCADA system. This system is remotely accessed to allow the Facility to adjust the system as required. The system uses sensors to monitor parameters such as water content, air temperature, oxygen content, air pressure, and air flow. When the levels being monitored go outside of the preprogrammed acceptable range then an alarm is triggered and a message is sent to the phones of the staff personnel who have the ability to monitor the situation off-site. The SCADA system gives details of operating parameters in each compost tunnel, in the ammonia scrubber, biofilters, bioscrubber and

stack.

Ammonia scrubber:

The sulphuric acid tank is located outside the building. The ammonia scrubber circulates a sulphuric acid solution over a media to scrub ammonia from the air into solution. When the ammonia scrubber gets saturated (pH gets too high) it is replaced. The waste ammonia sulfate gets transferred into one of the leachate tanks on site.

The incoming waste composition in Ottawa is such that the material has been very dry, the Facility operates in a water negative environment in the summer and as such leachate generated in the operation of the Facility gets re-circulated within the process. If the Facility needs to bring in extra water they take it from the stormwater management pond on-site.

There are several odour ports throughout the Facility.

Biofilter:

At the time of inspection the Facility was operating two biofilters. According to the supporting documentation for the application, the biofilter media needs to be replaced every 6 months to a year. The media was last replaced September of 201. The waste media from the biofilter is introduced into the composting process of the Facility.

Bioscrubber:

This is the final step before the stack. According to staff water needs to be added to the bioscrubber every 2 to 3 days. At the bottom of the bioscrubber there should be 50-55 cm of water, an alarm goes off if the levels drop bellow 40 cm.

Stack:

The stack is 40 meters high, there is a sampling port placed outside at the bottom of the stack in order to sample air right before it goes into the stack. There is also a sampling port inside just after the bioscrubber.

2.1 SITE CONDITIONS

Operating
Specifics:

The following site conditions were noted during the time of the inspection:

Noise: At the time of the inspection noise was assessed to determine if the operation of the Facility is generating noise levels which could have potential impacts off-site. It was noted that noise levels outside the Site were at a level which would not pose a concern to surrounding properties. No concerns detected.

Dust: At the time of the inspection dust was assessed to determine if the operations at the Facility (truck traffic, unloading/loading of materials, etc) is causing impacts off-site. The paved areas of the Site are routinely swept to ensure dust generated from the incoming and outgoing waste disposal vehicles do not cause dust impacts. At the time of the inspection the paved area appear recently cleaned and the trucks on-site were not generating dust. No concerns observed.

Odour: Prior to arriving at the Site to conduct the inspection, the IO observed the stack and wind direction to determine if emission from the stack (odours) could be detected downwind of the Facility. After completing the inspection the IO completed a second odour survey downwind of the Facility. No odours were detected during both separate odour surveys. Wind direction was from the SE and odour survey

locations were located on Somme Street & Sappers Ridge.

Vibration: At the time of the inspection vibration was assessed to determine if the operation of the Facility is generating vibration levels which could have adverse impacts to surrounding properties. No vibration issues were detected during the inspection nor experienced when completing odour surveys in the surround area.

2.2 AUTHORIZING, CONTROL AND REGISTRATION DOCUMENTATION FOR AIR/NOISE EMISSIONS

Does the facility have authorizing, control and/or registration documents applicable to this inspection?

● Yes ○ No

Specifics:

Type of Document	Number	Date	Limit*	Notes
Environmental Compliance Approval - Comprehensive	7021-7HQNDE	2009/09/16		

*** Limit in Document**

2.3 EQUIPMENT REQUIRING AUTHORIZING DOCUMENT

Does the facility have the required Environmental Compliance Approval(s)?

If you own, manage or operate a facility with an operation or equipment that emits one or more contaminants into the air as noted under section 9 of the Environmental Protection Act, you are required to have and operate under an Environmental Compliance Approval unless the activity is exempted from the approval process or is eligible for the Environmental Activity and Sector Registry (EASR).

The Environmental Compliance Approval (ECA) replaces the previous Certificate of Approval (Air) commencing October 31, 2011. All existing Certificates of Approval (Air) and their conditions continue to apply. Application for a new Environmental Compliance Approval is needed when you intend to make a change that requires an amendment to the approval.

☐ The facility does not have any required approval(s) for discharge of contaminants to air.
☐ The facility requires an amendment or additional approval for discharge of contaminants to air.
☐ The facility requires an amendment or additional approval for activity(s) other than for discharge of contaminants to air.
☒ The facility has the required approval (s) for discharge of contaminants to air (or is not required to obtain them).

Specifics:

On September 16, 2009, the Facility was issued a Comprehensive Environmental Compliance Approval No. 7021-7HQNDE for the operation of the equipment that emits contaminants into the natural environment. The equipment approved under the ECA does not meet the requirements of the Environmental Activity Sector Registry.

The comprehensive environmental compliance approvals allow companies to make changes to their equipment which discharge contaminants to the natural environment. As part of the approval structure, when changes are made, the Facility must model the emissions to ensure compliance with applicable standards and limits outlined in the approval and Ontario Regulation 419/05. Also, as part of the comprehensive approval, the Facility must submit an annual report outlining operations in the reporting operating year.

In 2014 Orgaworld submitted an application to renew the limited operational flexibility of their Environmental Compliance Approval (Basic Comprehensive) and is currently being reviewed by the ministry.

2.4 LEGISLATIVE NOTIFICATION REQUIREMENTS

Has the facility met all applicable legislative notification requirements for air emissions?

● Yes ○ No ○ Not Required

Specifics:

During the district file review prior to completing the inspection, no issues were identified regarding the notification requirements (legislative, approval condition, etc) for the Facility.

2.5 MONITORING AND REPORTING

Has the facility met its assessment requirements?

● Yes ○ No ○ Not Required

Specifics:

As per Condition 10.1, the company is required to conduct source testing every six (6) months after the start-up date and every (6) months thereafter. The start-up date was January 28th, 2010.

Previous source testing events were completed on:
June 2010
December 2010
July 2011
December 2011
November 2012
November 2013
November 2014

On February 3, 2011 the Facility requested an amendment to reduce the frequency of source testing per year from every six (6) months to once a year as well as the removal of hydrogen sulfide and mercaptons from the testing parameters. On May 17, 2012 the Facility was granted permission to reduce the source testing requirements. The last source test was completed in November of 2014.

A report on the outcome of the source testing was provided to the ministry in January of 2015 and will be reviewed by the ministry's Standards Development Branch. Comments will be provided to the Facility once complete.

The next source testing is scheduled for November 2015.

Has the facility met its reporting requirements?

● Yes ○ No ○ Not Required

Specifics:

Annual Report:

Condition 5 of the ECA requires the Facility to submit a Written Summary Report of activities undertaken in the previous calendar year by May 31 of each year. On April 28, 2014 the Written Summary Report for the 2013 operating year was submitted to the ministry. The following observations were made during the review of the report:

- No modifications were made during the 2013 operating year that would change the previously calculated concentrations at the Point of Impingement (POI) for any Compounds of Concerns (COC) or resulted in a change in the sound levels reported in the Acoustic Assessment Summary Table at any Point of Reception (POR)
- The Facility was not required to submit a Maximum Concentration Level Assessment to the MOECC during the 2013 operating year
- No changes were made to the MOECC's POI limits that impacted the Facility
- No changes in emission rates in 2013

- Emission Summary Table illustrates contaminants were below the MOECC POIs
- Acoustic Summary Table illustrates noise levels were below the performance limits
- The Facility provided a signed statement acknowledging compliance with the ECA for the 2013 operating year

No issues were identified in the review of the 2013 Written Summary Report.

2.6 EXCEEDANCE OF A LEGAL LIMIT AND/OR GUIDELINE

Is there information that demonstrates an exceedance of a legal limit and/or guideline for air emissions?

○ Yes ● No

Specifics:

The ESDM Report does not show an exceedance of a MOECC standards, guidelines, upper risk thresholds, or limit in the ECA.

2.7 OPERATIONAL AND MAINTENANCE REQUIREMENTS

Has the facility met its operating/maintenance requirements?

● Yes ○ No ○ Not Required

Specifics:

As part of the inspection process, the Inspecting Officer (IO) requested the Operational & Maintenance Manuals as required by the issued ECA.

The following documents were available at the time of the inspection:

- Contingency Plan for Odours, Spills, Fires, Power Failures and Labour Disruptions *(Orgaworld Ltd. - January 2010 - Conestoga-Rovers & Associates)*
- Site Inspection and Monitoring Program *(Orgaworld Ltd. - January 2010 - Conestoga-Rovers & Associates)*
- Operations Manual *(Orgaworld Ltd. - October 2009 - Conestoga-Rovers & Associates)*
- Odour Monitoring Program *(Orgaworld Ltd. - October 2009 - Conestoga Rovers & Associates)*

The IO was informed that the above referenced documents are current and no changes have been made requiring revisions.

2.8 RECORD KEEPING REQUIREMENTS

Has the facility met its record keeping requirements?

● Yes ○ No ○ Not Required

Specifics:

Maintenance:

A maintenance schedule and inventory list is kept on site. Maintenance work orders are generated as needed and inspection log sheets are filled out by staff. All paperwork is kept in binders on site and overviewed by the site manager.

Environmental Complaints:

The Facility has developed a document to address any complaint received as a result of the Site's operation. The document outlines the keystone information needed to record details of the complaint as well as follow-up actions taken to address the problem. The Facility records these complaints in a binder located at the Site. A copy of the procedure for recording environmental complaints was provided to the IO at the time of the inspection.

The Facility has not received a complaint as a result of the operations at the Site for the 2013 operating year,

2.9 SPILLS PREVENTION AND CONTINGENCY PLAN

Is the facility required to have a Spill Prevention Contingency Plan (SPCP) under Ontario Regulation 224/07, Spill Prevention and Contingency Plans?

○ Yes ● No

Specifics:

The Facility has developed and implemented a procedure entitled "Contingency Plans for Odours, Spills, Fires, Power Failures and Labour Disruptions". The procedure has been provided to the ministry and was reviewed during the inspection process.

No spills were reported to the ministry for the 2013 operating year.

2.10 BEYOND COMPLIANCE

Are there any Beyond Compliance Projects being implemented at the facility?

○ Yes ● No

Specifics:

None at this time.

3.0 REVIEW OF PREVIOUS NON-COMPLIANCE ISSUES

No previous non-compliance was identified prior to completing the Air Facility Inspection.

4.0 SUMMARY OF INSPECTION FINDINGS (HEALTH/ENVIRONMENTAL IMPACT)

Was there any indication of a known or anticipated human health impact during the inspection and/or review of relevant material, related to this Ministry's mandate?

○ Yes ● No

Specifics:

Was there any indication of a known or anticipated environmental impact during the inspection and/or review of relevant material ?

○ Yes ● No

Specifics:

Was there any indication of a known or suspected violation of a legal requirement during the inspection and/or review of relevant material which could cause a human health impact or environmental impairment ?

○ Yes ● No

Specifics:

Was there any indication of a potential for environmental impairment during the inspection and/or the review of relevant material ?

○ Yes ● No

Specifics:

Was there any indication of minor administrative non-compliance?

○ Yes ● No

Specifics:

5.0 ACTION(S) REQUIRED

No actions are required by Orgaworld at this time.

1.0 INTRODUCTION

Orgaworld Canada Ltd. (referred to as the "Facility"), located at 5123 Hawthorne Road in the City of Ottawa (the "Site"), is an aerobic composting facility that is approved to accept solid non-hazardous organic waste as defined in their waste Environmental Compliance Approval ("ECA") for the production of compost. Organic waste is brought to the facility, shredded, mixed and placed inside composting tunnels. Conditions within the tunnels are monitored and changed to ensure optimum conditions that promote aerobic composting. The compost size material gets placed in the compost curing area where it is required to cure for 21 days, tested to ensure it meets all requirements under the waste certificate of approval and then removed from the site as finished compost. All process air and air from the receiving hall is directed through pollution control equipment. Leachate generated as a result of the composting process gets recirculated, any excess is kept in on-site storage tanks.

Orgaworld Canada Ltd. first started accepting organic material at their site on January 28th, 2010. The Site is currently only receiving waste from the City of Ottawa source separated organics (SSO) collection program and leaf and yard waste program. The City of Ottawa has been collecting the leaf and yard waste commingled with the SSO waste.

The Facility is approved to operate at a production limit of up to 150,000 tonnes per year of organic waste.

The following inspection report relies on information found in the district file, site observations and information gathered from conversations with Orgaworld staff. The site visit for the inspection was conducted on January 29, 2015 which incorporated paper work review and a tour of the operations at the

Facility.

The purpose of this inspection is to assess the sites compliance with their Industrial Sewage Works (ISW) Environmental Compliance Approval (ECA) and applicable environmental legislation such as the Ontario Water Resources Act (OWRA).

An Air Facility Inspection and Waste Disposal (Processing) Site Inspection were also carried out at the Site. See respective reports for details.

2.0 INSPECTION OBSERVATION

Facility MEWS (Works) Number:

Sector Type:
Waste Disposal

Effluent Type:
Process, Storm Water

Receiver Type:
Surface Water

Name of Receiver:
Findlay Creek

Is there a sensitive receptor on/in the receiver?
No

Findlay Creek is considered a local sensitive receiver (cold water habitat)

Certificate of Approval Number(s):
Yes
C of A Number(s):
Industrial Sewage Works Environmental Compliance Approval No. 9465-7NVRWT
- issued September 16, 2009

Industrial Sewage Works Environmental Compliance Approval No. 7032-88XPRA
- issued September 7, 2010

Industrial Sewage Works Environmental Compliance Approval No. 7251-8GKRPD
- issued May 30, 2011

2.1 WASTEWATER TREATMENT PROCESS DESCRIPTION

General Description:

Stormwater is collected in an on-site open ditch system leading to a stormwater management pond that discharges off site to the Hawthorne Industrial Park ditch system which eventually leads to Findlay Creek.

Process water generated inside the building gets stored in leachate holding tanks buried on the East side of the building. Should the facility need to use water in their process (wetting the composting material) they use the leachate from the storage tanks and/or water from the stormwater pond. Should the leachate tanks need to be emptied the company has previously been retaining the services of Lacombe Environmental Services to pick up and dispose of the leachate. The HWIN generator number for the site is ON3338779, and indicates that the leachate is classified as waste class 270L. According to company officials the Facility operates in a water negative environment in the summer but has found that they collect excess leachate in the winter.

Environmental Compliance Approval Number 7251-8GKRPD:

The Site has been issued **Environmental Compliance Approval Number 7251-8GKRPD** (ECA) for the following System:

"the establishment of stormwater management *Works* for the collection, transmission, treatment and disposal of stormwater run-off and process/wash sewage from a catchment area of 10.14 hectares, to provide Normal water quality protection (Level 2) and to attenuate post-development peak flows to pre-development levels, discharging to a roadside ditch, then to a central SWM facility off site (adjacent Hawthorne Industrial Park), and subsequently discharging through a ditch to Findlay Creek, for all storm events up to and including the 100 year return storm, consisting of the following:

PROPOSED WORKS

- one (1) submersible pump capable of pumping up to 229 m3/day of stormwater collected from the south ditch of the Site. The pumped stormwater is transferred via a sub-surface 50 mm PVC forcemain to underground storage tanks located on the east side of the Facility for integration into the process water stream or transported off-site for final treatment.

- one (1) terrain tank located on the north side of the Facility, adjacent to the north ditch, having an approximate volume of 45 m3. Initial stormwater run-off will drain from a portion of the asphalt pad on the north side of the Facility into the tank for assessment by site operations staff as to disposal point (ditch/pond, into plant, or hauled off-site). As the tank fills, tank will spill-over (after initial flush) into the north ditch and travel to the wet detention pond.

- installation of aerators in the south-east portions of the wet detention pond to be operated as required, in order to maintain the stormwater management pond water quality trigger parameters below trigger levels.

EXISTING WORKS

Part I - Stormwater Management Works

- one (1) wet extended detention stormwater pond in U shape with approximately base dimensions as follows: 120 m long and 12 m wide, and a maximum depth of 2.0 m, to permanent pool level and 3.4 m to overflow weir elevation (emergency elevation), with 4:1 side slopes, with the following volume structure:

Stage Storage	Elevation (m)	Storage Volume (m^3)
Permanent Pool	90.25 – 91.25	5,385
Extended Detention	91.25 – 91.45	1,311
Quantity	91.45 – 92.25	6,080
Emergency	92.25 – 92.65	3,532

and equipped with the following structures:

- One (1) forebay approximately 65 m long and 12 m wide in U shape, and a maximum depth of 1.0 m to permanent pool level and 3.4 m to overflow weir elevation, equipped with two inlet structures:

1. Inlet structure. A 12.5 m long 900 mm diameter concrete storm inlet pipe with concrete headwall, connected through the Vortechs unit before entering the sedimentation forebay at an invert elevation of 89.60 m, designed to convey up to a maximum 714 L/s;

2. Overflow channel. A 9.0 m wide (base), 1.5 m long and approximately 250 mm high channel connecting the open ditch system to the forebay at an invert elevation of 92.45 m, designed to convey up to a maximum 3.07 m³/sec.

- One (1) 150 mm diameter orifice plate set at an elevation of 91.25 m for quality control. This flow restrictor is installed within a 2400 mm diameter maintenance hole (MH2) and attached at the downstream end of a 300 mm diameter PVC pipe, equipped with a cast iron sluice gate valve (Armtec series 20-10C), which will be in **closed position** during normal operation periods;

- One (1) 825 mm diameter concrete pipe and 3.8 m length for quantity control up to the 100-year post-development flow set at an elevation of 91.45 m.

- One (1) 4.0 m wide 250 mm high emergency overflow spillway set at an elevation of 92.25 m, discharging to a concrete stabilized swale and ultimately the roadside ditch draining to the Findlay Creek, a tributary to Shields Creek.

- One (1) precast concrete oil/grit separator (Vortechs Model 16000) designed to handle stormwater runoff to convey up to 714 L/s storm flows, providing a sediment storage capacity of 5.43 m³ and having interior dimensions of 5.49 m long, 3.66 m widen and 2.13 m high, designed to provide over 80% total net annual TSS removal, discharging to a forebay of the wet pond;

- An open ditch/swale system with sufficient capacity to convey up to the 100-□ year storm event (estimated at 3.07 m³/sec), with approximately 1,000 m length of a trapezoidal shaped perimeter ditch along the site boundaries, having a top width of approximately 1.0 m wide flat bottom ditch and side slopes of 3V:1H up to 10:1 with variable widths and depths, running through three culverts of 18 to 30 m in length and 600 mm diameter concrete sewers, and discharging through a 2400 mm diameter maintenance hole (MH1) connecting to the oil/grit separator described above;

- A minor drainage system of storm sewers and appurtenances designed to capture and convey runoff during frequent storm events up to the 10-year storm event with PVC sewers ranging from 150 mm to 300 mm diameter sewers. The minor drainage system connects the organics composting facility through approximately 200 m length 300 mm diameter sewer to the MH5 for further discharge into the inlet structures.

- One (1) maintenance access road for operational, inspection and maintenance purposes, consisting of a 4 m wide gravel/grassed access lane located around the perimeter of the facility and a 70 m long gravel lane to the inlet structures at the northwest corner of the pond to the outlet structures.

The simulated modelling estimate and drainage pattern of the site are as follows:

Storm Events	**2-year**	**5-year**	**25-year**	**100-year**
1. Existing flows, pre-development (L/s)	206	351	606	848
2. Post-development flows (L/s)	1,118	1,651	2,410	3,067
3. Post-development attenuated flows (L/s)	56	89	189	283

The above, including erosion/sedimentation control measures during construction and all other controls and appurtenances essential for the proper operation of the aforementioned *Works*.

Part II - Process Water Recirculation System

- A Process Water Recirculation System (WRS) to provide optimum humidity levels for the composting process and for odour control system, consisting of the following:
- Six (6) reinforced precast concrete underground storage tanks equipped with level control system with a capacity of 45 m³ each;
- Four (4) plastic above ground storage tanks (bioscrubber, sulphuric acid storage, tank and two ammonium sulphate storage tanks) equipped with level control system with a capacity of 180, 45, 50, and 50 m³ respectively;
- Eight (8) pumps to recirculate collected water from composting tunnels, biofilters and bioscrubber to the composting tunnels, biofilter and bioscrubber and for washdown supply
- Piping for percolate/washdown water supply to the composting area including a sprinkling system;
- An odour control equipment consisting of a biofilters and bio scrubber to recirculate filtrate water and supply of filtered effluent to the washdown lines, and equipped with chemical addition piping for pH control; and
- Piping for the supply of stormwater from the wet pond to the process tanks for composting requirements.

2.2 EFFLUENT SUMMARY REPORT

What are the facility's effluent limits based on?
Certificate of Approval/Permit

Does the facility comply with its limits?
Yes

Condition 6 (5) speaks to the requirements for the Site to compare monitoring results for each and all grab samples with the corresponding trigger level of each parameter listed Table 2 - Trigger Parameters outlined in the below table:

Table 2 - Trigger Parameters	
Parameter	Trigger Level (mg/L if not specified)
Ammonia (unionized)	0.05
Nitrate-N (NO3-N)	2.93
CBOD5	15
Total Phosphorus	0.4
Total Suspended Solids	15
E-Coli	100 count/100mL
pH	6.5 to 8.5
Temperature (maximum	23 ^{O}C

As part of the inspection process the IO reviewed the information provided in the 2013 Annual Report (AR) which outlines the
sampling program completed for the 2013 operating year (date, parameters, analysis). The AR stated that the stormwater
management pond did not have a discharge event which would require the effluent to meet the Table 2 -

Trigger Parameters.

2.3 SEWAGE TREATMENT WORKS CAPACITY ASSESSMENT

Flow (m^3/day)	Year 1 2013	Year 2 2014	Year 3 2015
Average daily flow	0.00	0.00	0.00
Maximum daily flow	0.00	0.00	0.00
Capacity Design	0.00	0.00	0.00
% of capacity (based on average daily flow)	0.00	0.00	0.00

The ECA does not require flow measurement nor does it list any design capacity. In accordance with condition 6(12) the Owner shall inspect the Works at least once a year and, if necessary, clean and maintain the Works to prevent the excessive build-up of sediments and/or vegetation. The owner is also required to maintain a log book to record the results of these inspections.

The IO requested the records regarding the annual inspection of the SWM Pond for the 2013 operating year. The review noted that the SWMP was inspected and the associated records were available for review during the inspection period.

2.4 SAMPLING REQUIREMENTS

What are the facility's sampling requirements based on?
Certificate of Approval/Permit

Does the facility meet sampling requirements?
Yes

5. SURFACE WATER MONITORING AND RECORDING

(1) The *Owner* shall, upon commencement of operation of the *Works,* carry out the following effluent monitoring program. Composite samples comprised of three (3) or more equal volumes of grab samples from different locations of the pond shall be collected from the **SWM Pond at a monthly frequency** and analysed for the following parameters listed in Table 1:

Table 1 - Effluent Monitoring SWM Pond		
General Parameters	Inorganics	Field Parameters
BOD5	Arsenic	Conductivity
COD	Boron	Dissolved Oxygen
DOC	Cadmium	pH
Total Ammonia Nitrogen	Chromium	Temperature
Total Kjeldahl Nitrogen	Cobalt	
Nitrate - N	Copper	
Nitrite - N	Lead	
Total Phenols	Mercury	
Total Phoshorus	Nickel	
Total Suspended Solids (TSS)	Zinc	
E-Coli		
Oil & Grease		
pH		

Condition 5 of the ECA speaks to the requirements for monthly sampling of the SWMP. As part of the file review, the IO reviewed the 2013 Annual Report. Sampling data collected during the 2013 operating year was compared against Table 1 - Effluent Monitoring SMW Pond. The results of the comparison comply with Table 1 outlined above. Please note, Orgaworld was directed during a previous ministry inspection that the monthly sampling of the SWMP was not required during months where ice cover occurs due to health & safety reasons. Sampling events did not occur during December, January, February and March of 2013. As part of the previous inspection Orgaworld was also to include temperature as it was not completed in 2012. The IO confirmed that the field parameter temperature was collecting in the 2013 operating year.

9. GROUNDWATER MONITORING

Upon issuance of this *Certificate*, the *Owner* shall establish the following groundwater monitoring program with monitoring wells located as per Figure 1 - Shallow Unconfined Water Table Groundwater and Surface Water Monitoring Locations, dated June 30, 2009, prepared by Conestoga-Rovers Associates.

1) For the unconfined shallow groundwater aquifer, the *Owner* shall establish and maintain in accordance with O.Reg. 903, R.R.O. 1990, as amended from time to time, all existing eight (8) monitoring wells designated as: MW1-08 to MW5-08; and MW101 to MW103 and such wells that would be necessary for the appropriate monitoring of the groundwater quality.

2) For the confined deep bedrock aquifer, the *Owner* shall maintain in accordance with O.Reg. 903, R.R.O. 1990, as amended from time to time, all existing three (3) monitoring wells designated as: TW-4, TW-7, and TW-8 (within the Orgaworld Canada Ltd. site), and such wells that would be necessary for the appropriate monitoring of the groundwater quality.

4) The *Owner* shall collect groundwater samples twice per year - in May and November - from the monitoring wells listed at subsections (1) and (2), and increase the sampling frequency to four times per year - in February, May, August and November - for the three new wells MW101, MW102, and MW103.

Summary: The Facility has completed the groundwater monitoring for the 2013 operating year. A copy of both the 2013 report and Groundwater Assessment and Work Plan was provided to the Ottawa District Office in March of 2014 and was reviewed by the ministry's Technical Support Section. Groundwater and surface water comments were provided to the Facility and the Facility is currently implementing the actions identified in the Groundwater Assessment and Work Plan as well as ministry recommendations.

- In July of 2014 Orgaworld submitted a Groundwater Assessment and Work Plan to address elevated levels of contaminants (ammonia, iron, manganese, dissolved organic carbon, sulfate, total dissolved solids) and to continue working towards compliance with Condition 9(8) of ECA Number 7251-8GKRPD which requires Orgaworld to establish a comprehensive Compliance and Trigger Level Monitoring Program based on groundwater monitoring within two years of operations. The Compliance and Trigger Monitoring Program is to be submitted to the MOECC along with an application to amend the ECA. Currently, Orgaworld has not applied to amend the ECA, as the monitoring data gathered since 2010 to define baseline conditions for the site has been influenced by historic conditions, off-site operations and conditions relating to composting operations. The scope of the report is to provide results of the pre & post monitoring data and to outline a path forward to address the groundwater quality concerns.
- Groundwater and Surface Water reviews were completed and submitted to Orgaworld in 2014. Both Technical Support Review Memorandums support the Groundwater Assessment and Work Plan proposed by Orgaworld with the addition of recommendations to immediately begin surface water quality monitoring to be collected at upgradient and downgradient locations for specific parameters outlined in the memorandum.
- Orgaworld has reviewed the TSS memorandums and is in the process of implementing the items outlined in the Groundwater Assessment and Work Plan.
- At the time of the inspection Orgaworld Staff informed the IO the company is in the process of retaining qualified licensed well drillers to install the monitoring well.

2.5 REPORTING REQUIREMENTS

What are the facility's reporting requirements based on?
Certificate of Approval/Permit

Does the facility meet reporting requirements?
Yes

Condition 10 of the said ECA -ISW outlines specific reporting requirements that must be completed by the Facility.

10. REPORTING

3) The *Owner* shall prepare a performance report on an annual basis, within **ninety (90) days** following the end of the period being reported upon. The first such report shall cover the first annual period following the commencement of operation of the *Works* and subsequent reports shall be submitted to cover successive annual periods following thereafter. The reports shall contain, but shall not be limited to, the following information:

(a) a description of any operating problems encountered and corrective actions taken;
(b) a summary of all maintenance carried out on any major structure, equipment, apparatus, mechanism or thing forming part of the *Works;*
(c) a summary of all effluent monitoring results undertaken in the reporting period;
(d) a summary of the quantity of leachate contaminated sewage that was hauled to a municipal sewage treatment plant and the number of times the contents of the SWM Pond were disposed in such manner;
(e) a summary of the calibration and maintenance carried out on all effluent monitoring equipment;
(f) all analytical results and water level elevations obtained from the groundwater monitoring, pursuant to condition 9; and
(e) any other information the *District Manager* requires from time to time.

In March 2014, the Company submitted the 2013 Annual Report as per the requirement under Condition 10 (3). As part of the inspection process, the 2013 Annual Report (Report) was reviewed for completeness and compliance with the above referenced condition.

Findings:

- Remediation works were completed on the berm (spring of 2011) as stated in previous reports. No addition operating problems were encountered requiring corrective actions to be taken. Berm inspections were completed in 2013 which did not note any additional remediation work required.

- Orgaworld did not encounter any operating issues or problems during the 2013 year.
- No maintenance was carried out on any major structure, equipment, apparatus, mechanics, or think forming part of the Works.
- No leachate contaminated sewage was hauled to a municipal sewage treatment plant during the 2013 operating year.
- No calibration or maintenance of effluent monitoring equipment was completed in the 2013 operating year as the pond level reading device does not require calibration.
- The groundwater/surface water monitoring and compliance report, prepared by Conestoga-Rovers & Associates (CRA), was submitted in March of 2013. IO submitted the report to the ministry's Technical Support Section for surface water and groundwater review.
- Surface water and Groundwater comments were received and provided to the Facility on September 13, 2013 via email. IO was informed during the inspection that the review comments were provided to their consultant (CRA) and will implement the recommendations outlined in the review.

Groundwater Monitoring:

* Please see Section 2.4 for details of the groundwater monitoring completed by the Facility*

Condition 6 & 7 - Operation and Maintenance

The ECA requires the Facility to develop and implement Operation and Maintenance Manuals for the two sections of the SWMP (Part II - Stormwater Management Works & Part III - Process Water Recirculation System). At the time of the inspection and as part of the file review, the IO requested to review the Operation and Maintenance Manuals for the Industrial Sewage Works System.

- Operation and Maintenance Manuals for the Industrial Sewage Works System was implemented as required
- A Spill Contingency and Pollution Prevention Plan was developed, implemented, and submitted to the ministry
- The Facility has operating procedures in place for routine operation of the industrial sewage works system
- The Facility has logbooks for recording inspection findings, maintenance activities, and/or repairs
- The Facility has also developed and implemented a complaint recording and responding procedures in the event an environmental complaint is received by a member of the public (no environmental complaints were received by the ministry or the Facility)
- No discharge events occurred at the SWMP in the 2013 operating year

2.6 FLOW MEASUREMENT

Flow measurements are not required in the ECA.

2.7 MINISTRY SAMPLE RESULTS

Were Ministry samples collected during the inspection?
No

Reason:
No effluent discharge at the time of the inspection

2.8 FINANCIAL ASSURANCE

The Facility is not required to submit financial assurance for the operation of the approved industrial sewage works.

2.9 SPILL PREVENTION AND CONTINGENCY PLANS

Is the facility required to have a Spill Prevention and Contingency Plan (SPCP) as required by Ontario Regulation 224/07?
No

Has the facility had any spills since the last inspection?

No

Were all the spills reported to the ministry?
N/A

Does the facility's operations or spill history suggest that a SPCP be developed?
No

Comments:

As referenced in Section of this Report, the Facility has developed, implemented and provided a copy of the Site's Spill Contingency and Pollution Prevention Plan. No spills were reported to the ministry's Ottawa District Office and the Spills Action Centre. The IO confirmed this information during the inspection.

3.0 REVIEW OF PREVIOUS NON-COMPLIANCE ISSUES

Previous non-compliance issues have been addressed. The Company is currently in the process of addressing groundwater and surface water impacts.

4.0 SUMMARY OF INSPECTION FINDINGS

Was there any indication of a known or anticipated human health impact during the inspection and/or review of relevant material, related to this Ministry's mandate?
No

Specifics:

Was there any indication of a known or anticipated environmental impact during the inspection and/or review of relevant material?
No

Specifics:

Was there any indication of a known or suspected violation of a legal requirement during the inspection and/or review of relevant material which could cause a human health impact or environmental impairment?
Yes

Specifics:
Non-Compliance with Condition 9(8) of ECA Number 7251-8GKRPD which requires Orgaworld to establish a comprehensive Compliance and Trigger Level Monitoring Program based on groundwater monitoring within two years of operations.
- The Company is currently in the process of addressing groundwater and surface water impacts. Additional information pertaining to the Groundwater Monitoring Program is outlined in Section 2.4 of this Report.

Was there any indication of a potential for environmental impairment during the inspection and/or the review of relevant material?
No

Specifics:

Was there any indication of minor administrative non-compliance?
No

Specifics:

5.0 ACTION(S) REQUIRED

The following action is required to be addressed by Orgaworld as a result of the above completed Industrial Sewage Works Inspection:

Condition 9(8) - Upon issuance of this *Certificate,* the *Owner* shall establish the following groundwater monitoring program with monitoring wells located as per Figure 1 - Shallow Unconfined Water Table Groundwater and Surface Water Monitoring Locations, dated June 30, 2009, prepared by Conestoga-Rovers Associates.
(8) After **two (2) years** of operation of the *Works,* the *Owner* shall establish a comprehensive Compliance and Trigger Level Monitoring Program based on the groundwater monitoring, and submit it along with an application to amend this *Certificate* to the *Director* and the *District Manager*.

1. Environmental Compliance Approval No. 7251-8GKRPD Condition 9(8) - As a result of the Groundwater Assessment and Work Plan submitted to the ministry, Orgaworld is required to implement the Work Plan as described in the report as well as implement the recommendations provided by the ministry's Technical Support Section (Groundwater & Surface Water Memorandums). It has been reported that Orgaworld is in the process of implementing the Groundwater Assessment and Work Plan as well as the recommendations provided by the ministry.

1. Implement Work Plan as outlined in the report "Groundwater Assessment and Work Plan", dated July 16, 2014, and implement the recommendations provided by the ministry's Technical Support Section for both the Groundwater Memorandum, dated September 17, 2014, and Surface Water Memorandum, dated October 8, 2014.

6.0 OTHER INSPECTION FINDINGS

There are no other inspection findings to report at this time.

1.0 INTRODUCTION

Orgaworld Canada Ltd.'s Organics Composting Facility (referred to Orgaworld Ottawa) is a 10.12 hectare Waste Disposal Site (Processing) serving the Provinces of Ontario and Quebec, for the temporary storage, transfer and processing (aerobic composting) of solid non-hazardous, domestic, commercial, institutional or industrial organic waste at a maximum rate of 1,200 tonnes per day and 150,000 per year of Organic Waste.

The organic waste is brought to the site located at 5123 Hawthorne Road in the City of Ottawa (the "Site"), shredded, mixed and placed inside composting tunnels. Conditions within the tunnels are monitored and changed to ensure optimum conditions that promote aerobic composting. Once the material remains in the tunnels long enough for the temperature to reach 55 degrees Celsius for 3 consecutive days it is cooled down, removed from the tunnels and placed into a screener which separates the material in size fractions. The screener separates the material into 20+ (which includes large pieces of material that have not composted), 12-20 material (which is medium sized material), incidental waste, and compost. The 20+ material is used as inoculate and mixed in with fresh material in the Mixing Hall, or further shredded and run through the screener again. The compost size material gets placed in the compost curing area where it is required to cure for 21 days, tested to ensure it meets all requirements under the certificate of approval and then removed from the site as finished compost. It should be noted that the material sized as 12-20 is also referred to as "10-100" material as that was the original screen size.

It should be noted that Orgaworld Ottawa met an exemption in Ontario Regulation 347 which permitted the sale of 12-20 material (previous defined as a waste subject to Part V of the Environmental Protection Act) as long as it met a realistic market demand. This material was sold to farmers as a soil conditioner as it provided a benefit in the agricultural sector. As of January 1, 2013, the exemption in Ontario Regulation 347 was amended to exclude waste

generated from organic processing facilities (i.e. composting facilities). As a result, Orgaworld Ottawa ceased all shipments of 12-20 to their clients. An alternative solution was sought which allowed Orgaworld Ottawa to continue providing the material as a soil conditioner under an approval process regulated by the Ontario Ministry of Agriculture and Rural Affairs entitled Non-agricultural Source Material (NASM) Plans. As of mid 2013, Orgaworld Ottawa has worked with their clients in obtaining NASM Plans in order to apply the 12-20 material and is operating within the requirements of Part V of the Environmental Protection Act for the transportation of the 12-20 material.

Orgaworld Ottawa first started accepting organic material at their Site on January 28th, 2010. The Site is currently only receiving waste from the City of Ottawa Source Separated Organics (SSO) collection program and leaf and yard waste program. The City of Ottawa is currently collecting the leaf and yard waste commingled with the SSO waste. It should be noted that the City of Ottawa started commingling their leaf and yard waste with the SSO organics and sending it to Orgaworld in April 2010.

The purpose of the inspection is to assess the Site's compliance with their waste ECA and applicable environmental legislation such as the Environmental Protection Act (EPA) and Ontario Regulation 347 under that same act. The inspection consisted of a district file review, site visit and discussions with Michael Rooke, Compliance Officer and Tanya Minarik, Supervisor.

The following inspection report relies on information found in the district file, site observations and information gathered from conversations with Orgaworld Ottawa staff throughout the year and during the inspections.

An Air Facility Inspection and an Industrial Sewage Inspection were also carried out at the site. See respective reports for details.

2.0 INSPECTION OBSERVATIONS

Certificate of Approval Number(s): ● Yes ○ No
C of A Number(s):

Environmental Compliance Approval Number 2766-7HEPSZ: Waste Disposal Site
Issued: September 16, 2009

Notice 1 - Issued on October 21, 2010
Details: The amendment was issued to allow the Facility to operate a mobile shredder unit on-site.

Notice 2 - Issued on May 2, 2012
Details: The amendment was issued for a change to allow the Facility to receive and remove waste between the hours of 6am to 8pm (M-F) and between the hours of 7am to 8pm on Saturdays - Condition 5.1

2.1 SITE OPERATION:

Specifics:

2. <u>SERVICE AREA, APPROVED WASTE TYPES, RATES & STORAGE</u>

(1) The Site may only accept solid non-hazardous domestic, commercial, institutional or industrial Organic Waste from the Provinces of Ontario and Quebec, limited to the following Organic Waste:

(a) Source-separated Organic Waste limited to the following:

(i) Food wastes: fruit, vegetable and general table scraps, meat and fish products, dairy products, egg shells, confectionery products, sauces, bones, pet food, fat, bread and grains, rice, pasta, coffee grounds, filters;

(ii) Paper fibres: soiled paper towels, tissues, paper plates, soiled paper food packaging items such as boxboard, cardboard, newspaper, and other packaging materials;

(iii) Miscellaneous: houseplants and yard wastes, dryer lint and hair, pet fur, sawdust and wood shavings and litter or bedding.

(b) Organic Waste from the food processing industry and other industries that produce food wastes;
(c) Organic Waste from the commercial sector, including but not be limited to food waste from restaurants, hotels, institutions, commercial operations that collect organic wastes;
(d) Leaf & yard waste;
(e) Organic sludges, including but not be limited to starches and paper wastes, but excluding sewage sludge and biosolids.

The 2013 Annual Report (2013 AR) states that the Facility is in compliance with Condition 2.(1) by only accepting waste from the City of Ottawa which is within the approved service area outlined the ECA. This requirement in the ECA was also confirmed by Orgaworld staff during the inspection.

Note: Orgaworld Ottawa is currently in discussions with the Ministry of the Environment and Climate Change for the acceptance of a new source of Organic Waste collected in plastic from the IC&I Sector.

(2) (i)The Owner shall not accept at the Site sanitary products and human body waste.
(ii) The Owner shall not accept at the Site any waste that is collected through a waste collection program that allows use of plastic bags.
(iii) The Owner shall not accept at the Site any waste that is classified as hazardous waste or liquid industrial waste in accordance with *O. Reg. 347* .

The 2013 AR states that the Facility is in compliance with the above referenced condition by not accepting sanitary products, human body waste, plastic bags, hazardous waste and liquid industrial waste as defined in Ontario Regulation 347.

(3) The Owner is only approved to receive Organic Waste in quantities that are not to exceed:
(a) a maximum of 1,200 tonnes on a daily basis; and
(b) a maximum of 150,000 tonnes per year.

The 2013 AR provided the monthly and annual tonnages for the 2013 operating year. The data provided in the report confirms the Facility is in compliance with tonnage limits outlined in the ECA. This requirement in the ECA was also confirmed by Orgaworld staff during the inspection.

(4) The Owner is approved to store the following amounts of waste at the Site:
(a) unprocessed Organic Waste stored within the Processing Building awaiting processing shall not exceed 3,000 tonnes;
(b) leaf & yard waste stored at the Site shall not exceed 1,500 tonnes;
(c) Organic Waste, including leaf & yard waste and biofilter medium waste, undergoing Composting in the composting tunnels shall not exceed 5,040 tonnes;
(d) Immature Compost in various stages of curing shall not exceed 10,000 tonnes;
(e) Residual Waste and Rejected Waste shall not exceed 1,000 tonnes.

The 2013 AR states that in the 2013 operating year the Facility was in compliance with the approved waste storage amounts outlined in this condition. This requirement in the ECA was also confirmed by Orgaworld staff during the inspection.

(5) Waste storage at the Site is subject to the following limitations:

(a) unprocessed Organic Waste, excluding leaf & yard waste, shall be stored within the confines of the Processing Building;
(b) leaf & yard waste shall be stored within the confines of the Processing Building, or in accordance with the requirements of Condition 6.(14) of the Certificate of Approval (Industrial Sewage) for this Site;
(c) Immature Compost in various stages of curing shall be stored within the confines of the Processing Building;
(d) solid Residual Waste shall be stored in lugger bins located within the confines of the Processing Building;
(e) solid putrescible waste generated through activities not relating to the handling and processing of Organic Waste (ie. office, lunch room, etc.) may be stored in a covered bin outdoors and it shall be removed from the Site as required in accordance with *O. Reg 347* and the *EPA* .

At the time of the inspection no waste was observed to be stored outside the Processing Building. All waste and

phases of compost were located inside the confines of the Processing Building.

(6) Organic Waste storage duration is limited to the following:

(a) The maximum storage duration of the leaf & yard waste shall not exceed thirty (30) days from the time of its receipt.

(b) The maximum storage duration of the purchased wood amendment materials shall not exceed ninety (90) days from the time of their receipt.

(c) The maximum storage duration of the Organic Waste within the Processing Building prior to loading into the aerated composting tunnels shall not exceed the time period that is required to accumulate enough Organic Waste to fill one (1) composting tunnel.

(d) The Owner shall not store the Residual Waste at the Site in excess of thirty (30) days from the date of its generation, or as directed by the District Manager.

(e) If in the opinion of the District Manager, the duration of waste storage from (a) and/or (b) and/or (d), above, results in odour complaint(s), the Owner, in consultation with the District Manager shall undertake appropriate steps, including reducing waste storage duration, so that odour complaint(s) are eliminated.

The 2013 AR states that the storage duration of the leaf & yard waste, purchased wood amendment materials, organic waste within the Processing Building and Residual waste did not exceed the storage duration limits as outlined by the above condition.

(7) No outside waste storage other than that described in Condition (5), above, is approved under this Certificate.

At the time of the inspection it was noted that waste was not being stored outside other than that described in Condition (5).

(8) The Company shall ensure that all waste storage is undertaken in a manner that does not cause an adverse effect or a hazard to the environment or any person.

At the time of the inspection the IO was informed that no environmental impacts or complaints were received as result of the composting operation at the Site. It should also be noted that the Ministry of the Environment did not receive environmental complaints regarding the storage of waste at the Site. During the inspection no hazards to the environment or any persons were observed.

(9) In the event that Organic Waste cannot be processed at the Site and the Site is at its approved waste storage capacity, the Owner shall cease accepting additional Organic Waste. Receipt of additional Organic Waste may be resumed once such receipt complies with the waste storage limits approved in this Certificate.

The 2013 AR stated compliance with the above reference condition. At the time of the inspection the Facility was in operation and was not exceeding its approved waste storage capacity.

3. <u>SIGNS</u>

(1) Prior to receipt of waste at the Site, the Owner shall ensure that a sign is posted at the entrance to the Site. The sign shall be visible from the main road leading to the Site. The following information shall be included on the sign:

(a) name of the Owner;
(b) this Certificate number;
(c) hours during which the Site is open;
(d) waste types that are approved to be accepted at the Site;
(e) Owner's telephone number (a hotline) to which complaints may be directed;
(f) Owner's twenty-four hour emergency telephone number (if different from above);
(g) a warning against unauthorized access;
(h) a warning against dumping at the Site.

(2) The Owner shall ensure that appropriate signs are posted at the Site clearly identifying the waste and stating warnings about the nature of the waste and any possible hazards.

At the time of the inspection it was noted that the Facility is in compliance with Condition 3 of the issued ECA by posting a sign at the entrance of the Site outlining the above required information from a-h. A similar sign is also present at the exit of the Site. No issues were identified with the information displayed on the signs entering and exiting the Site.

4. SITE SECURITY

(1) All unloading and loading of waste and all waste processing activities at the Site shall at all times be undertaken by Trained Personnel.

At the time of the inspection the IO requested training logs for the staff that work at the Facility. Training logs were provided to the IO. As part of the training program, the Facility to train staff on conditions outlined in the environmental compliance approvals for the Site. Of the training records reviewed, no issues were identified.

(2) The Owner shall ensure that access to the Site is regulated and that all entrances are secured by lockable gates to restrict access only to authorized personnel when the Site is not open.

At the time of the inspection it was observed that the Site has installed a fence with a lockable gate to restrict access to the Site The IO confirmed with Orgaworld staff that the Site is secured after the hours of operation.

6. EQUIPMENT AND SITE INSPECTIONS & MAINTENANCE

(1) Prior to receipt of any waste at the Site, the Owner shall prepare a comprehensive written inspection program which includes inspections of all aspects of the Site's operations including the following:

(a) loading/unloading area of the leaf & yard waste storage pad;
(b) parking lot area for evidence of run-off from the leaf & yard waste storage pad;
(c) Processing Building and the air pollution control equipment;
(d) security fence and property line;
(e) on-site roads for presence of leaks and drips from the waste delivery trucks;
(f) presence of excessive fugitive dust emissions from the on-site roads or the Compost stockpiles;
(g) on and off-site litter;
(h) presence of vector and vermin.

At the time of the inspection the IO requested documents and procedures which speaks to the Facility's inspection program. The Facility provided a copy of the inspection program during the inspection which address the above condition. The IO also reviewed procedures provided by Orgaworld Ottawa located in the district file which speaks to maintenance and inspections of the pollution control devices and industrial sewage works system.

(2) The inspections are to be undertaken daily by Trained Personnel in accordance with the inspection program to ensure that all equipment and facilities at the Site are maintained in good working order at all times and that no off Site impacts are occurring. Any deficiencies detected during these regular inspections must be promptly corrected.

At the time of the inspection the IO requested training logs for the staff that work at the Facility. Training logs were provided to the IO and were observed to be sufficient. The IO also requested copies of the inspection reports from the inspection program. The IO observed the inspection reports to be sufficient in determining the equipment is operating in good working order at all times and that no off Site impacts are occurring. It should also be noted that no environment complaints have been received by the company or the ministry during the inspection period for the operations at the Orgaworld Ottawa Site.

(3) The Owner shall develop and implement a preventative maintenance program for all on-Site equipment associated with the processing and managing of waste and control of odour and dust emissions. The preventative maintenance program shall be maintained up-to-date and shall be available for inspection by a Provincial Officer upon request.

A copy of the preventative maintenance program was provided to the Ottawa District Office and was reviewed during the district file review prior to completing the inspection. The documentation required by this condition was also

requested during the inspection and was provided to the IO for review. No issues identified during the review of the document. No changes were made to the preventative maintenance program.

7. **QUALITY CRITERIA , TESTING & MONITORING**

(1) Cross-Contamination Prevention

(a) The Owner shall ensure that the incoming Organic Waste and the equipment used in handling of the incoming Organic Waste are kept separate and do not come in contact with the Immature Compost / the Finished Compost and the Compost except where the Immature Compost / the Finished Compost and the Compost are being fed back into the composting process.

At the time of the inspection the IO observed incoming organic waste and the equipment used in handling of the incoming organic waste. The operation of the equipment and the staff present to inspection incoming organic waste is completed in a manner to prevent cross-contamination. Immature compost & finished compost are located separate from incoming organic waste.

(2) Quality Control Monitoring of Organic Waste at the generator site:

(a) Prior to being accepted at the Site for the first time, the incoming Organic Waste from a new source/stream shall be characterized in accordance with the Ministry's regulatory requirements for sampling and testing to ensure that the incoming Organic Waste complies with the quality criteria specified in this Certificate. The incoming Organic Waste may be considered a pre-approved waste source/stream once the incoming Organic Waste meets the required quality criteria and has been classified as such by the Company.

At the time of the inspection the IO inquired to determine if any new sources of incoming organic waste from a new source/stream has been received. Orgaworld staff stated that no new sources/streams of incoming organic waste has been accepted since operation at this time.

Note: Orgaworld Ottawa is currently in discussions with the Ministry of the Environment and Climate Change for the acceptance of a new source of Organic Waste collected in plastic from the IC&I Sector.

(3) Quality Control Monitoring of the Incoming Organic Waste

(a) The Owner shall not accept for composting any individual Organic Waste source or an additive necessary for composting that exceeds the following quality parameters set out in "Schedule B" of this Certificate:

(i) trace elements;
(ii) organic chemicals.

At the time of the inspection the IO requested copies of the sample results from the analysis of incoming organic waste as required by this condition. The IO requested a copy of the month of January, February, March, May, July, September, November & December to compare against Schedule B of the ECA. Analytical results were provided to the IO which confirmed compliance.

Finished Compost Quality Criteria

(4) Finished Compost is considered to be a Compost when it meets the following compost quality criteria:

(a) compost quality criteria set out in Schedule "B" of this Certificate; and
(b) curing duration of a minimum of twenty one (21) days and compliance with one (1) of the following three (3) maturity criteria:

(i) the respiration rate is less than, or equal to, 400 milligrams of oxygen per kilogram of volatile solids (or organic matter) per hour; or
(ii) the carbon dioxide evolution rate is less than, or equal to, 4 milligrams of carbon in the form of carbon dioxide per gram of organic matter per day; or
(iii) the temperature rise of the compost above ambient temperature is less than 8°C.

At the time of the inspection the IO requested information regarding the sample collection and analysis of the finished compost to ensure compliance with Schedule B of the ECA and the Ontario Compost Quality Standards. The IO was provided sample analysis for the finished compost. Observations made during the review are as follows:

- *Finished compost was sampled and collected as per the frequency outlined in the ECA*
- *Finished compost was tested for the parameters outlined in Schedule B of the ECA with the exception of polychlorinated biphenols (PCBs) which did not appear to be analyzed for the sample results provided during the inspection*
- *Finished compost was tested for maturity using the Dewar Method for temperature variance. The results of the Dewar Method were observed to be in compliance with maturity criteria.*

Process Monitoring

(8) The Owner shall ensure that the following process parameters are monitored:

(a) temperature of the composting Organic Waste in the composting tunnels;
(c) inlet air temperature;
(d) outlet air temperature;
(e) relative humidity in the composting tunnels;
(f) air flow into the tunnels;
(g) oxygen content in the air; and
(h) temperature of the Immature Compost in the curing piles.

At the time of the inspection the IO requested information on how Orgaworld complies with the above condition. The IO was informed that the Facility is equipped with a SCADA system that monitors all processes as it relates to the composting process. IO was able to verify this information by observing the SCADA system at the time of the inspection. The Facility provided screen shots of the SCADA system after the inspection as a request by the IO.

(10) As a minimum, the Owner shall monitor the temperature of the Immature Compost within the curing stockpiles daily. The measurements shall be taken one (1) metre inside the curing stockpile mass and at points sufficient to provide a temperature profile of the Immature Compost.

As part of the inspection process, Orgaworld Ottawa provided documentation to ensure temperature monitoring is completed daily. No issues were noted during the review of this information.

8. <u>NUISANCE IMPACT CONTROL & HOUSEKEEPING</u>

(1) The Owner shall ensure that all vehicles that have delivered waste to the Site are not leaking or dripping waste when leaving the Site.

As stated in the 2013 AR, during periods where organic waste is delivered at the Site, vehicles are inspected during and after by trained Orgaworld staff.

(2) The Owner shall ensure that the exterior of all trucks delivering waste to the Site is cleaned prior to leaving the Site, as needed, to prevent odours. Truck washing shall occur only in the dedicated wash down area of the processing building.

At the time of the inspection no truck washing operations were occurring. The City of Ottawa vehicle appear to be recently cleaned and odours could not be detected. As stated in the 2013 AR, the Facility provides rakes, brooms and a pressure washer if necessary to ensure the exterior is clean.

(3) The Owner shall ensure that there is no queuing or parking of vehicles that are waiting to enter the Site on any roadway that is not a distinct part of the Site.

At the time of the inspection no vehicles entering the Facility were parked or queuing on roads outside the Site boundary. The 2013 AR confirms that during the 2013 operating year the Facility is in compliance with this condition.

(4) Should the Owner become aware that the truck(s) delivering waste to the Site have leaked wastewater on

the municipal roadways, the Owner shall immediately notify the owner of the leaking vehicle(s) and the District Manager about the leak problem.

Prior to the inspection, a district file review was completed and the District Manager had not been notified of any wastewater impacts to municipal roadways. The 2013 AR states that this was not noticed during the reporting period.

(5) The Owner shall:
(a) take all practical steps to prevent the escape of litter from the Site;
(b) pick up litter around the Site on a daily basis, or more frequently if necessary; and
(c) if necessary, erect litter fences around the areas causing a litter problem.

At the time of the inspection the IO walked a portion of the property and observed no litter issues. As part of the Facility's inspection program, trained staff monitor litter on a daily basis.

(6) Prior to the receipt of any waste at the Site, the Owner shall:
(a) implement necessary housekeeping procedures to eliminate sources of attraction for vermin and vectors; and
(b) hire a qualified, licensed pest control professional to design and implement a pest control plan for the Site. The pest control plan shall remain in place, and be updated from time to time as necessary, until the Site has been closed and this Certificate has been revoked.

Orgaworld retains the services of a external qualified licensed pest control professional to implement the pest control plan. No concerns identified.

(7) The Owner shall ensure that all on-Site roads and operations/yard areas are regularly swept/washed to prevent dust impacts off-Site.

At the time of the inspection the entrance, roads on-site, and exit were clear with no signs of dust impacts (inspection occurred in the winter therefore dust was not an issue. IO attends quarterly meetings at Orgaworld and has not observed dust to be an issued on-site. The Facility retains a company to clean of the asphalt parking area if and when it is required.

(8) (i) The Owner shall store Compost within the confines of the Processing Building, or in accordance with the requirements of Condition 6.(14) of the Certificate of Approval (Industrial Sewage) for this Site.

At the time of the inspection the IO observed compost to be stored within the confines of the Processing Building. No outside storage of compost was observed. The IO confirmed the storage requirements of compost with Facility staff at the time of the inspection.

(ii) Notwithstanding the requirements of Condition 8.(8)(i), above, the Owner shall ensure that the Compost stockpiles are not a source of fugitive dust emissions. If the proposed Compost storage features are deemed insufficient to control the fugitive dust emissions from the Compost stockpiles, the Owner shall provide additional covers or spray the stockpiles with water, or use any other method to minimize the fugitive dust emissions.

At the time of the inspection dust was assessed to determine if the operations and procedures currently in place are effectively controlling fugitive dust. It was noted that fugitive dust was being significantly control as no dust was observed.

9. <u>OPERATIONS MANUAL & STAFF TRAINING</u>

(1) The Owner shall prepare an Operations Manual for use by the Site personnel. The Operations Manual shall contain the following:

(a) outline the responsibilities of the Site personnel;
(b) personnel training protocols;
(c) waste receiving and screening procedures;
(d) unloading, handling and storage procedures;
(e) waste processing procedures;
(f) sampling and testing procedures;

(g) Site inspections and recording procedures;
(h) the emergency response procedures;
(i) procedure for handling complaints as described in the Certificate of Approval (Air/Noise) for this Site.

At the time of the inspection the IO requested procedures and manuals as required by the above referenced condition. The Operations Manual developed by the Facility outlines the all the requirements of this condition. A copy of the manual was also available during the district file review.

(2) A copy of this Operations Manual shall be kept at the Site, must be accessible to personnel at all times and must be updated, as required.

(3) (a) All operators of the Site shall be trained with respect to the following:

(i) terms, conditions and operating requirements of this Certificate;
(ii) operation and management of the Site, or area(s) within the Site, as per the specific job requirements of each individual operator, and which may include procedures for receiving, screening and identifying waste, refusal, handling, processing and temporarily storing wastes;
(iii) an outline of the responsibilities of Site personnel including roles and responsibilities during emergency situations;
(iv) the Emergency Response and Contingency Plan including exit locations and evacuation routing, and location of relevant equipment available for emergency situations;
(v) environmental, and occupational health and safety concerns pertaining to the wastes to be handled;
(vi) emergency first-aid information;
(vii) relevant waste management legislation and regulations, including the *EPA* and *O. Reg. 347* ;
(viii) recording procedures as required by this Certificate;
(ix) equipment and site inspection procedures, as required by this Certificate;
(x) nuisance impact control & housekeeping procedures, as required by this Certificate; and
(xi) procedures for recording and responding to public complaints as required by the Certificate of Approval (Air/Noise) for this Site.

At the time of the inspection the IO reviewed a training program for one of the staff at the Facility. The training program reviewed addresses the requirements of this condition. All training programs for staff are kept electronically as well as a hard copy.

10. EMERGENCY RESPONSE AND CONTINGENCY PLAN

(1) Within six (6) months from the date of this Certificate, the Company shall submit to the District Manager an Emergency Response and Contingency Plan. The Emergency Response and Contingency Plan shall be prepared in consultation with the District Manager, the local Municipality and the Fire Department and as a minimum it shall include the following information:

(a) emergency response procedures to be undertaken in the event of a spill, process upset, power failure, fire or any other emergency situation, including specific clean up methods for wastes expected to be generated from the emergency situation;
(b) a list of equipment and clean up materials available for dealing with the emergency situations;
(c) notification protocol with names and telephone numbers of persons to be contacted, including persons responsible for the Site, the Ministry's District Office and Spills Action Centre, the local Fire Department, the local Municipality, the local Medical Officer of Health, and the Ministry of Labour, and the names and telephone numbers of waste management companies available for emergency response;
(d) procedures and actions to be taken should the incoming Organic Waste not meet the quality criteria specified by this Certificate;
(e) procedures and actions to be taken should the outgoing Residual Waste not meet the quality criteria required by the specified by this Certificate;
(f) procedures and actions to be taken should the composted Organic Waste fail to meet the compost quality criteria specified by the Certificate;
(g) procedures and actions to be taken should the occurrence of the complaints require the Company to suspend the waste processing activities at the Site.

At the time of the file review prior to the inspection, the IO reviewed the "Contingency Plan for Odours, Spills, Fires, Power Failures and Labour Disruptions" procedure. A copy of the procedure will remain on file at the

district office. A copy of the document was also available on-site at the time of the inspection.

12. RECORDS KEEPING

Annual Report

(9) By March 31st following the end of each operating year, the Owner shall prepare and submit to the District Manager and the Public Liaison Committee (PLC), an Annual Report summarizing the operation of the Site covering the previous calendar year. This Annual Report shall include, as a minimum, the following information:

(a) a monthly mass balance of the Organic Waste received, processed and transferred from this Site, including waste type, quantity, sources and/or disposal destinations;
(b) an annual summary mass balance of the Organic Waste received, processed and transferred from this Site, including waste type, quantity, sources and/or disposal destination;
(c) an annual summary of any deficiencies, items of non-compliance or process aberrations that occurred at this Site and any remedial/mitigative action taken to correct them;
(d) a descriptive summary of any spills, incidents or other emergency situations which have occurred at this Site, any remedial measures taken, and the measures taken to prevent future occurrences;
(e) a summary describing any Rejected Waste including quantity, waste type, reasons for rejection and origin of the Rejected Waste;
(f) any environmental and operational problems, that could negatively impact the environment, encountered during the operation of the Site or identified during the facility inspections and any mitigative actions taken;
(g) any changes to the Emergency Response and Contingency Plan, the Operations Manual or the Closure Plan that have been approved by the Director since the last Annual Report;
(h) any recommendations to minimize environmental impacts from the operation of the Site and to improve Site operations and monitoring programs in this regard;
(i) a summary of any complaints received and the responses made, as required by the Certificate of Approval (Air/Noise);
(j) an update on the amount of Financial Assurance which has been provided to the Director;
(k) update on activities of the PLC;
(l) a condition-by-condition analysis of compliance with all Conditions of this Certificate.

As part of the file review process the AR was found to be complete as required. The AR was submitted to the Ottawa District Office in March of 2013.

2.2 FINANCIAL ASSURANCE:

Specifics:
At the time of the inspection a file review was completed which determined that Orgaworld Ottawa has submitted an adequate amount of financial assurance in an appropriate form accepted by the Ministry of the Environment and is located on file with the ministry.

2.3 SITE SERVICE AREA:

Specifics:
Orgaworld Ottawa is approved to operate a waste disposal site (processing) serving the Provinces of Ontario and Quebec, for the temporary storage, transfer and processing (composting) of solid non-hazardous, domestic, commercial, institutional or industrial organic waste.

2.4 APPROVED SITE CAPACITY:

Specifics:
Orgaworld Ottawa is approved to operate a waste disposal site (processing) serving the Provinces of Ontario and Quebec, for the temporary storage, transfer and processing (composting) of solid non-hazardous, domestic, commercial, institutional or industrial organic waste at a maximum rate of 1,200 tonnes per day and 150,000 tonnes per year of Organic Waste.

3.0 REVIEW OF PREVIOUS NON-COMPLIANCE ISSUES

As a result of the file review completed prior to conducting the inspection at Orgaworld Ottawa, no ongoing non-compliance issues were identified.

4.0 SUMMARY OF INSPECTION FINDINGS (HEALTH/ENVIRONMENTAL IMPACT)

Was there any indication of a known or anticipated human health impact during the inspection and/or review of relevant material, related to this Ministry's mandate?
No

Specifics:

Was there any indication of a known or anticipated environmental impact during the inspection and/or review of relevant material ?
No

Specifics:

Was there any indication of a known or suspected violation of a legal requirement during the inspection and/or review of relevant material which could cause a human health impact or environmental impairment ?
No

Specifics:

Was there any indication of a potential for environmental impairment during the inspection and/or the review of relevant material ?
No

Specifics:

Was there any indication of minor administrative non-compliance?
No

Specifics:

5.0 ACTION(S) REQUIRED

No actions are required by Orgaworld at this time.

6.0 OTHER INSPECTION FINDINGS

1.0 INTRODUCTION

Orgaworld Canada Ltd. (referred to as the "Facility"), located at 5123 Hawthorne Road in the City of Ottawa (the "Site), is an aerobic composting facility that is approved to accept solid non-hazardous organic waste as defined in their waste Environmental Compliance Approval for the production of compost. Organic waste is brought to the facility, shredded, mixed and placed inside composting tunnels. Conditions within the tunnels are monitored and changed to ensure optimum conditions that promote aerobic composting. The compost size material gets placed in the compost curing area where it is required to cure for 21 days, tested to ensure it meets all requirements under the waste certificate of approval and then removed from the site as finished compost. All process air and air from the receiving hall is directed through pollution control equipment. Leachate generated as a result of the composting process gets recirculated, any excess is kept in on-site storage tanks.

Orgaworld Canada Ltd. first started accepting organic material at their site on January 28th, 2010. The Site is currently only receiving waste from the City of Ottawa source separated organics (SSO) collection program and leaf and yard waste program. The City of Ottawa has been collecting the leaf and yard waste commingled with the SSO waste.

The Facility is approved to operate at a production limit of up to 150,000 tonnes per year of organic waste.

The following inspection report relies on information found in the district file, site observations and information gathered from conversations with Orgaworld staff. The site visit for the inspection was conducted on December 19th, 2012.

The purpose of this inspection is to assess compliance with the Site's Air Facility Environmental Compliance Approval # 7021-7HQNDE ("ECA") and applicable environmental legislation such as the Environmental Protection Act ("EPA") and Ontario Regulation 419/05. The inspection consisted of a district file review, site visit and discussions with Michael Rooke, Acting Site Operations Manager and Tanya Minarik, Site Supervisor.

An Industrial Sewage Works Inspection and Waste Disposal (Processing) Inspection were also carried out at the site. See respective reports for details.

1.1 FOCUS OF THE AIR INSPECTION

Is the inspection for the entire facility or is it scoped to part of the facility?

● Entire Facility ○ Part of the Facility

Specifics:

The Air Facility Inspection focused on compliance with the issued ECA which includes all pollution control devices and related performance limits, documentation, reporting, operation/maintenance, complaints recording procedures, and record keeping requirements.

The Facility was issued a Limited Flexibility Environmental Compliance Approval (ECA # 7021-7HQNDE) on September 16, 2009. The inspection is focused on information and data collected during the 2012 operating year.

1.2 TARGET SECTOR IN ONTARIO REGULATION 419/05, AIR POLLUTION - LOCAL AIR QUALITY

Is the facility in a targeted sector identified in Schedule 4 or Schedule 5 of O. Reg. 419/05?

No, the facility is not in a target sector identified in Schedule 4 or Schedule 5.

Specifics:

2.0 INSPECTION OBSERVATIONS

Specifics:

At the time of the inspection Orgaworld staff provided a tour to the IO which incorporated a detailed overview of the air pollution control devices that treat the emission generated as a result of the composting operations. The Site has several pollution control devices in series to ensure proper treatment of emissions. The system is described below:

1.) Fans are located throughout the building, these fans suck air from the building to the pollution control equipment which creates a negative pressure environment within the building. Air from the building and air from the composting tunnels goes through an ammonia scrubber, then one of two biofilters, then a bioscrubber, then the 40 meter stack.

The Facility continuously monitors the process by a SCADA system. This system is remotely accessed to allow the Facility to adjust the system as required. The system uses sensors to monitor parameters such as water content, air temperature, oxygen content, air pressure, and air flow. When the levels being monitored go outside of the preprogrammed acceptable range then an alarm is triggered and a message is sent to the phones of the staff personnel who have the ability to monitor the situation off-site. The SCADA system gives details of operating parameters in each compost tunnel, in the ammonia scrubber, biofilters, bioscrubber and stack.

Ammonia scrubber:

The sulphuric acid tank is located outside the building. The ammonia scrubber circulates a sulphuric acid solution over a media to scrub ammonia from the air into solution. When the ammonia scrubber gets saturated (pH gets too high) it is replaced. The waste ammonia sulfate gets transferred into one of the leachate tanks on site.

The incoming waste composition in Ottawa is such that the material has been very dry, the Facility operates in a water negative environment in the summer and as such leachate generated in the operation of the Facility gets re-circulated within the process. If the Facility needs to bring in extra water they take it from the stormwater management pond on-site.

There are several odour ports throughout the Facility.

Biofilter:

At the time of inspection the Facility was operating two biofilters. According to the supporting documentation for the application, the biofilter media needs to be replaced every 6 months to a year. The media was last replaced November 25, 2012. The waste media from the biofilter is introduced into the composting process of the Facility.

Bioscrubber:

This is the final step before the stack. According to staff water needs to be added to the bioscrubber every 2 to 3 days. At the bottom of the bioscrubber there should be 50-55 cm of water, an alarm goes off if the levels drop bellow 40 cm.

Stack:

The stack is 40 meters high, there is a sampling port placed outside at the bottom of the stack in order to sample air right before it goes into the stack. There is also a sampling port inside just after the bioscrubber.

2.1 SITE CONDITIONS

Operating
Specifics:

The following site conditions were noted during the time of the inspection:

Noise: At the time of the inspection noise was assessed to determine if the operation of the Facility is generating noise levels which could have potential impacts off-site. It was noted that noise levels outside the Site were at a level which would not pose a concern to surrounding properties. No concerns detected.

Dust: At the time of the inspection dust was assessed to determine if the operations at the Facility (truck traffic, unloading/loading of materials, etc) is causing impacts off-site. The paved areas of the Site are routinely swept to ensure dust generated from the incoming and outgoing waste disposal vehicles do not cause dust impacts. At the time of the inspection the paved area appear recently cleaned and the trucks on-site were not generating dust. No concerns observed.

Odour: Prior to arriving at the Site to conduct the inspection, the IO observed the stack and wind direction to determine if emission from the stack (odours) could be detected downwind of the Facility. After completing the inspection the IO completed a second odour survey downwind of the Facility. No odours were detected during both separate odour surveys. Wind direction was from the SE and odour survey locations were located on Somme Street & Sappers Ridge.

Vibration: At the time of the inspection vibration was assessed to determine if the operation of the Facility is generating vibration levels which could have adverse impacts to surrounding properties. No vibration

issues were detected during the inspection nor experienced when completing odour surveys in the surround area.

2.2 AUTHORIZING, CONTROL AND REGISTRATION DOCUMENTATION FOR AIR/NOISE EMISSIONS

Does the facility have authorizing, control and/or registration documents applicable to this inspection?

● Yes ○ No

Specifics:

Type of Document	Number	Date	Limit*	Notes
Environmental Compliance Approval - Comprehensive	7021-7HQNDE	2009/09/16	Yes	

*** Limit in Document**

2.3 EQUIPMENT REQUIRING AUTHORIZING DOCUMENT

Does the facility have the required Environmental Compliance Approval(s)?

If you own, manage or operate a facility with an operation or equipment that emits one or more contaminants into the air as noted under section 9 of the Environmental Protection Act, you are required to have and operate under an Environmental Compliance Approval unless the activity is exempted from the approval process or is eligible for the Environmental Activity and Sector Registry (EASR).

The Environmental Compliance Approval (ECA) replaces the previous Certificate of Approval (Air) commencing October 31, 2011. All existing Certificates of Approval (Air) and their conditions continue to apply. Application for a new Environmental Compliance Approval is needed when you intend to make a change that requires an amendment to the approval.

☐ The facility does not have any required approval(s) for discharge of contaminants to air.
☐ The facility requires an amendment or additional approval for discharge of contaminants to air.
☐ The facility requires an amendment or additional approval for activity(s) other than for discharge of contaminants to air.
☒ The facility has the required approval (s) for discharge of contaminants to air (or is not required to obtain them).

Specifics:

On September 16, 2009, the Facility was issued a Comprehensive Environmental Compliance Approval No. 7021-7HQNDE for the operation of the equipment that emits contaminants into the natural environment. The equipment approved under the ECA does not meet the requirements of the Environmental Activity Sector Registry.

The comprehensive environmental compliance approvals allow companies to make changes to their equipment which discharge contaminants to the natural environment. As part of the approval structure, when changes are made, the Facility must model the emissions to ensure compliance with applicable standards and limits outlined in the approval and Ontario Regulation 419/05. Also, as part of the comprehensive approval, the Facility must submit an annual report outlining operations in the reporting operating year.

2.4 LEGISLATIVE NOTIFICATION REQUIREMENTS

Has the facility met all applicable legislative notification requirements for air emissions?

● Yes ○ No ○ Not Required

Specifics:

During the district file review prior to completing the inspection, no issues were identified regarding the notification requirements (legislative, approval condition, etc) for the Facility.

2.5 MONITORING AND REPORTING

Has the facility met its assessment requirements?

● Yes ○ No ○ Not Required

Specifics:

As per Condition 10.1, the company is required to conduct source testing every six (6) months after the start-up date and every (6) months thereafter. The start-up date was January 28th, 2010.

Previous source testing events were completed on:
June 2010
December 2010
July 2011
December 2011
November 2012
November 2013

On February 3, 2011 the Facility requested an amendment to reduce the frequency of source testing per year from every six (6) months to once a year as well as the removal of hydrogen sulfide and mercaptons from the testing parameters. On May 17, 2012 the Facility was granted permission to reduce the source testing requirements. The last source test was completed in November of 2012.

A report on the outcome of the source testing will be provided to the ministry in January of 2014 and will be reviewed by the ministry's Standards Development Branch. Comments will be provided to the Facility once complete.

The next source testing is scheduled for November 2014.

Has the facility met its reporting requirements?

● Yes ○ No ○ Not Required

Specifics:

Annual Report:

Condition 5 of the ECA requires the Facility to submit a Written Summary Report of activities undertaken in the previous calendar year by May 31 of each year. On April 28, 2013 the Written Summary Report for the 2012 operating year was submitted to the ministry. The following observations were made during the review of the report:

- No modifications were made during the 2012 operating year that would change the previously calculated concentrations at the Point of Impingement (POI) for any Compounds of Concerns (COC) or resulted in a change in the sound levels reported in the Acoustic Assessment Summary Table at any Point of Reception (POR)
- The Facility was not required to submit a Maximum Concentration Level Assessment to the MOE during the 2012 operating year
- No changes were made to the MOE's POI limits that impacted the Facility
- No changes in emission rates in 2012
- Emission Summary Table illustrates contaminants were below the MOE POIs
- Acoustic Summary Table illustrates noise levels were below the performance limits
- The Facility provided a signed statement acknowledging compliance with the ECA for the 2012 operating year

No issues were identified in the review of the 2012 Written Summary Report.

2.6 EXCEEDANCE OF A LEGAL LIMIT AND/OR GUIDELINE

Is there information that demonstrates an exceedance of a legal limit and/or guideline for air emissions?

○ Yes ● No

Specifics:

The ESDM Report does not show an exceedance of a MOE standard, guideline, upper risk threshold, or limit in the ECA.

2.7 OPERATIONAL AND MAINTENANCE REQUIREMENTS

Has the facility met its operating/maintenance requirements?

● Yes ○ No ○ Not Required

Specifics:

As part of the inspection process, the Inspecting Officer (IO) requested the Operational & Maintenance Manuals as required by the issued ECA.

The following documents were available at the time of the inspection:

- Contingency Plan for Odours, Spills, Fires, Power Failures and Labour Disruptions *(Orgaworld Ltd. - January 2010 - Conestoga-Rovers & Associates)*
- Site Inspection and Monitoring Program *(Orgaworld Ltd. - January 2010 - Conestoga-Rovers & Associates)*
- Operations Manual *(Orgaworld Ltd. - October 2009 - Conestoga-Rovers & Associates)*
- Odour Monitoring Program *(Orgaworld Ltd. - October 2009 - Conestoga Rovers & Associates)*

2.8 RECORD KEEPING REQUIREMENTS

Has the facility met its record keeping requirements?

● Yes ○ No ○ Not Required

Specifics:

Maintenance:

A maintenance schedule and inventory list is kept on site. Maintenance work orders are generated as needed and inspection log sheets are filled out by staff. All paperwork is kept in binders on site and overviewed by the site manager.

Environmental Complaints:

The Facility has developed a document to address any complaint received as a result of the Site's operation. The document outlines the keystone information needed to record details of the complaint as well as follow-up actions taken to address the problem. The Facility records these complaints in a binder located at the Site. A copy of the procedure for recording environmental complaints was provided to the IO at the time of the inspection.

The Facility has not received a complaint as a result of the operations at the Site for the 2012 operating year,.

2.9 SPILLS PREVENTION AND CONTINGENCY PLAN

Is the facility required to have a Spill Prevention Contingency Plan (SPCP) under Ontario Regulation 224/07, Spill Prevention and Contingency Plans?

○ Yes ● No

Specifics:

The Facility has developed and implemented a procedure entitled "Contingency Plans for Odours, Spills, Fires, Power Failures and Labour Disruptions". The procedure has been provided to the ministry and was reviewed during the inspection process.

No spills were reported to the ministry for the 2012 operating year.

2.10 BEYOND COMPLIANCE

Are there any Beyond Compliance Projects being implemented at the facility?

○ Yes ● No

Specifics:

None at this time.

3.0 REVIEW OF PREVIOUS NON-COMPLIANCE ISSUES

No previous or ongoing non-compliance items to address.

4.0 SUMMARY OF INSPECTION FINDINGS (HEALTH/ENVIRONMENTAL IMPACT)

Was there any indication of a known or anticipated human health impact during the inspection and/or review of relevant material, related to this Ministry's mandate?

○ Yes ● No

Specifics:

Was there any indication of a known or anticipated environmental impact during the inspection and/or review of relevant material ?

○ Yes ● No

Specifics:

Was there any indication of a known or suspected violation of a legal requirement during the inspection and/or review of relevant material which could cause a human health impact or environmental impairment ?

○ Yes ● No

Specifics:

Was there any indication of a potential for environmental impairment during the inspection and/or the review of relevant material ?

○ Yes ● No

Specifics:

Was there any indication of minor administrative non-compliance?

○ Yes ● No

Specifics:

5.0 ACTION(S) REQUIRED

6.0 OTHER INSPECTION FINDINGS

7.0 INCIDENT REPORT

1.0 INTRODUCTION

Orgaworld Canada Ltd. (referred to as the "Facility"), located at 5123 Hawthorne Road in the City of Ottawa (the "Site"), is an aerobic composting facility that is approved to accept solid non-hazardous organic waste as defined in their waste Environmental Compliance Approval ("ECA") for the production of compost. Organic waste is brought to the facility, shredded, mixed and placed inside composting tunnels. Conditions within the tunnels are monitored and changed to ensure optimum conditions that promote aerobic composting. The compost size material gets placed in the compost curing area where it is required to cure for 21 days, tested to ensure it meets all requirements under the waste certificate of approval and then removed from the site as finished compost. All process air and air from the receiving hall is directed through pollution control equipment. Leachate generated as a result of the composting process gets recirculated, any excess is kept in on-site storage tanks.

Orgaworld Canada Ltd. first started accepting organic material at their site on January 28th, 2010. The Site is currently only receiving waste from the City of Ottawa source separated organics (SSO) collection program and leaf and yard waste program. The City of Ottawa has been collecting the leaf and yard waste commingled with the SSO waste.

The Facility is approved to operate at a production limit of up to 150,000 tonnes per year of organic waste.

The following inspection report relies on information found in the district file, site observations and information gathered from conversations with Orgaworld staff. The site visit for the inspection was conducted on November 21, 2013 which incorporated paper work review and a tour of the operations at the Facility.

The purpose of this inspection is to assess the sites compliance with their Industrial Sewage Works (ISW) Environmental Compliance Approval (ECA) and applicable environmental legislation such as the Ontario Water Resources Act (OWRA).

An Air Facility Inspection and Waste Disposal (Processing) Site Inspection were also carried out at the Site. See respective reports for details.

2.0 INSPECTION OBSERVATION

Facility MEWS (Works) Number:

Sector Type:
Waste Disposal

Effluent Type:
Process, Storm Water

Receiver Type:
Surface Water

Name of Receiver:
Findlay Creek

Is there a sensitive receptor on/in the receiver?
No

Findlay Creek is considered a local sensitive receiver (cold water habitat

Certificate of Approval Number(s):
Yes
C of A Number(s):
Industrial Sewage Works Environmental Compliance Approval No. 9465-7NVRWT
- issued September 16, 2009

Industrial Sewage Works Environmental Compliance Approval No. 7032-88XPRA
- issued September 7, 2010

Industrial Sewage Works Environmental Compliance Approval No. 7251-8GKRPD
- issued May 30, 2011

2.1 WASTEWATER TREATMENT PROCESS DESCRIPTION

General Description:

Stormwater is collected in an on-site open ditch system leading to a stormwater management pond that discharges off site to the Hawthorne Industrial Park ditch system which eventually leads to Findlay Creek.

Process water generated inside the building gets stored in leachate holding tanks buried on the East side of the building. Should the facility need to use water in their process (wetting the composting material) they use the leachate from the storage tanks and/or water from the stormwater pond. Should the leachate tanks need to be emptied the company has previously been retaining the services of Lacombe Environmental Services to pick up and dispose of the leachate. The HWIN generator number for the site is ON3338779, and indicates that the leachate is classified as waste class 270L. According to company officials the Facility operates in a water negative environment in the summer but has found that they collect excess leachate in the winter.

Environmental Compliance Approval Number 7251-8GKRPD:

The Site has been issued **Environmental Compliance Approval Number 7251-8GKRPD** (ECA -ISW) for the following System:

"the establishment of stormwater management *Works* for the collection, transmission, treatment and disposal of stormwater run-off and process/wash sewage from a catchment area of 10.14 hectares, to provide Normal water quality protection (Level 2) and to attenuate post-development peak flows to pre-development levels, discharging to a roadside ditch, then to a central SWM facility off site (adjacent Hawthorne Industrial Park), and subsequently discharging through a ditch to Findlay Creek, for all storm events up to and including the 100 year return storm, consisting of the following:

PROPOSED WORKS

- one (1) submersible pump capable of pumping up to 229 m3/day of stormwater collected from the south ditch of the Site. The pumped stormwater is transferred via a sub-surface 50 mm PVC forcemain to underground storage tanks located on the east side of the Facility for integration into the process water stream or transported off-site for final treatment.

- one (1) terrain tank located on the north side of the Facility, adjacent to the north ditch, having an approximate volume of 45 m3. Initial stormwater run-off will drain from a portion of the asphalt pad on the north side of the Facility into the tank for assessment by site operations staff as to disposal point (ditch/pond, into plant, or hauled off-site). As the tank fills, tank will spill-over (after initial flush) into the north ditch and travel to the wet detention pond.

- installation of aerators in the south-east portions of the wet detention pond to be operated as required, in order to maintain the stormwater management pond water quality trigger parameters below trigger levels.

EXISTING WORKS

Part I - Stormwater Management Works

- one (1) wet extended detention stormwater pond in U shape with approximately base dimensions as follows: 120 m long and 12 m wide, and a maximum depth of 2.0 m, to permanent pool level and 3.4 m to overflow weir elevation (emergency elevation), with 4:1 side slopes, with the following volume structure:

Stage Storage	Elevation (m)	Storage Volume (m^3)
Permanent Pool	90.25 – 91.25	5,385
Extended Detention	91.25 – 91.45	1,311
Quantity	91.45 – 92.25	6,080
Emergency	92.25 – 92.65	3,532

and equipped with the following structures:

- One (1) forebay approximately 65 m long and 12 m wide in U shape, and a maximum depth of 1.0 m to permanent pool level and 3.4 m to overflow weir elevation, equipped with two inlet structures:

  1. Inlet structure. A 12.5 m long 900 mm diameter concrete storm inlet pipe with concrete headwall, connected through the Vortechs unit before entering the sedimentation forebay at an invert elevation of 89.60 m, designed to convey up to a maximum 714 L/s;

  2. Overflow channel. A 9.0 m wide (base), 1.5 m long and approximately 250 mm high

channel connecting the open ditch system to the forebay at an invert elevation of 92.45 m, designed to convey up to a maximum 3.07 m³/sec.

- One (1) 150 mm diameter orifice plate set at an elevation of 91.25 m for quality control. This flow restrictor is installed within a 2400 mm diameter maintenance hole (MH2) and attached at the downstream end of a 300 mm diameter PVC pipe, equipped with a cast iron sluice gate valve (Armtec series 20-10C), which will be in **closed position** during normal operation periods;

- One (1) 825 mm diameter concrete pipe and 3.8 m length for quantity control up to the 100-year post-development flow set at an elevation of 91.45 m.

- One (1) 4.0 m wide 250 mm high emergency overflow spillway set at an elevation of 92.25 m, discharging to a concrete stabilized swale and ultimately the roadside ditch draining to the Findlay Creek, a tributary to Shields Creek.

- One (1) precast concrete oil/grit separator (Vortechs Model 16000) designed to handle stormwater runoff to convey up to 714 L/s storm flows, providing a sediment storage capacity of 5.43 m³ and having interior dimensions of 5.49 m long, 3.66 m widen and 2.13 m high, designed to provide over 80% total net annual TSS removal, discharging to a forebay of the wet pond;

- An open ditch/swale system with sufficient capacity to convey up to the 100-□ year storm event (estimated at 3.07 m³/sec), with approximately 1,000 m length of a trapezoidal shaped perimeter ditch along the site boundaries, having a top width of approximately 1.0 m wide flat bottom ditch and side slopes of 3V:1H up to 10:1 with variable widths and depths, running through three culverts of 18 to 30 m in length and 600 mm diameter concrete sewers, and discharging through a 2400 mm diameter maintenance hole (MH1) connecting to the oil/grit separator described above;

- A minor drainage system of storm sewers and appurtenances designed to capture and convey runoff during frequent storm events up to the 10-year storm event with PVC sewers ranging from 150 mm to 300 mm diameter sewers. The minor drainage system connects the organics composting facility through approximately 200 m length 300 mm diameter sewer to the MH5 for further discharge into the inlet structures.

- One (1) maintenance access road for operational, inspection and maintenance purposes, consisting of a 4 m wide gravel/grassed access lane located around the perimeter of the facility and a 70 m long gravel lane to the inlet structures at the northwest corner of the pond to the outlet structures.

The simulated modelling estimate and drainage pattern of the site are as follows:

Storm Events	**2-year**	**5-year**	**25-year**	**100-year**
1. Existing flows, pre-development (L/s)	206	351	606	848
2. Post-development flows (L/s)	1,118	1,651	2,410	3,067
3. Post-development attenuated flows (L/s)	56	89	189	283

The above, including erosion/sedimentation control measures during construction and all other controls and appurtenances essential for the proper operation of the aforementioned *Works*.

Part II - Process Water Recirculation System

- A Process Water Recirculation System (WRS) to provide optimum humidity levels for the composting process and for odour control system, consisting of the following:
- Six (6) reinforced precast concrete underground storage tanks equipped with level control system with a capacity of 45 m³ each;
- Four (4) plastic above ground storage tanks (bioscrubber, sulphuric acid storage, tank and two ammonium sulphate storage tanks) equipped with level control system with a capacity of 180, 45, 50, and 50 m³ respectively;
- Eight (8) pumps to recirculate collected water from composting tunnels, biofilters and bioscrubber to the composting tunnels, biofilter and bioscrubber and for washdown supply
- Piping for percolate/washdown water supply to the composting area including a sprinkling system;
- An odour control equipment consisting of a biofilters and bio scrubber to recirculate filtrate water and supply of filtered effluent to the washdown lines, and equipped with chemical addition piping for pH control; and
- Piping for the supply of stormwater from the wet pond to the process tanks for composting requirements.

2.2 EFFLUENT SUMMARY REPORT

What are the facility's effluent limits based on?
Certificate of Approval/Permit

Does the facility comply with its limits?
Yes

Condition 6 (5) speaks to the requirements for the Site to compare monitoring results for each and all grab samples with the corresponding trigger level of each parameter listed Table 2 - Trigger Parameters outlined in the below table:

Table 2 - Trigger Parameters	
Parameter	Trigger Level (mg/L if not specified)
Ammonia (unionized)	0.05
Nitrate-N (NO3-N)	2.93
CBOD5	15
Total Phosphorus	0.4
Total Suspended Solids	15
E-Coli	100 count/100mL
pH	6.5 to 8.5
Temperature (maximum	23 ?C

As part of the inspection process the IO reviewed the information provided in the 2012 Annual Report (AR) which outlines the
sampling program completed for the 2012 operating year (date, parameters, analysis). The AR stated that the stormwater
management pond did not have a discharge event which would require the effluent to meet the Table 2 - Trigger Parameters.

2.3 SEWAGE TREATMENT WORKS CAPACITY ASSESSMENT

Flow (m^3/day)	Year 1 2010	Year 2 2011	Year 3 2012
Average daily flow	0.00	0.00	0.00
Maximum daily flow	0.00	0.00	0.00
Capacity Design	0.00	0.00	0.00
% of capacity (based on average daily flow)	0.00	0.00	0.00

The ECA does not require flow measurement nor does it list any design capacity. In accordance with condition 6(12) the Owner shall inspect the Works at least once a year and, if necessary, clean and maintain the Works to prevent the excessive build-up of sediments and/or vegetation. The owner is also required to maintain a log book to record the results of these inspections.

The IO requested the records regarding the annual inspection of the SWM Pond for the 2012 operating year. The review noted that the soil berm was completed as outlined in the previous Industrial Sewage Works Inspection Report and the SWMP inspections, completed by the Facility, and were recorded and available for review at the time of the inspection.

2.4 SAMPLING REQUIREMENTS

What are the facility's sampling requirements based on?
Certificate of Approval/Permit

Does the facility meet sampling requirements?
No

5. SURFACE WATER MONITORING AND RECORDING

(1) The *Owner* shall, upon commencement of operation of the *Works*, carry out the following effluent monitoring program. Composite samples comprised of three (3) or more equal volumes of grab samples from different locations of the pond shall be collected from the **SWM Pond at a monthly frequency** and analysed for the following parameters listed in Table 1:

Table 1 - Effluent Monitoring SWM Pond		
General Parameters	Inorganics	Field Parameters
BOD5	Arsenic	Conductivity
COD	Boron	Dissolved Oxygen
DOC	Cadmium	pH
Total Ammonia Nitrogen	Chromium	Temperature
Total Kjeldahl Nitrogen	Cobalt	
Nitrate - N	Copper	
Nitrite - N	Lead	
Total Phenols	Mercury	
Total Phosphorus	Nickel	
Total Suspended Solids (TSS)	Zinc	
E-Coli		
Oil & Grease		
pH		

Condition 5 of the ECA speaks to the requirements for monthly sampling of the SWMP. As part of the file review, the

IO reviewed the 2011 Annual Report. Sampling data collected during the 2011 operating year was compared against Table 1 - Effluent Monitoring SMW Pond. The results of the comparison is outlined below:

- Monthly samples were not collected for the months of January, February, and December 2012. The IO was informed that monthly samples were not collected for the above noted months due to health and safety concerns.

- The field parameter temperature did not appear to be measured during sample collection as the data provided to the IO did not include temperature. Temperature was also not measured and reported during the previous inspection.

****Please see Section 5.0 of this Report****

9. GROUNDWATER MONITORING

Upon issuance of this *Certificate*, the *Owner* shall establish the following groundwater monitoring program with monitoring wells located as per Figure 1 - Shallow Unconfined Water Table Groundwater and Surface Water Monitoring Locations, dated June 30, 2009, prepared by Conestoga-Rovers Associates.

1) For the unconfined shallow groundwater aquifer, the *Owner* shall establish and maintain in accordance with O.Reg. 903, R.R.O. 1990, as amended from time to time, all existing eight (8) monitoring wells designated as: MW1-08 to MW5-08; and MW101 to MW103 and such wells that would be necessary for the appropriate monitoring of the groundwater quality.

2) For the confined deep bedrock aquifer, the *Owner* shall maintain in accordance with O.Reg. 903, R.R.O. 1990, as amended from time to time, all existing three (3) monitoring wells designated as: TW-4, TW-7, and TW-8 (within the Orgaworld Canada Ltd. site), and such wells that would be necessary for the appropriate monitoring of the groundwater quality.

4) The *Owner* shall collect groundwater samples twice per year - in May and November - from the monitoring wells listed at subsections (1) and (2), and increase the sampling frequency to four times per year - in February, May, August and November - for the three new wells MW101, MW102, and MW103.

The Facility has completed the groundwater monitoring for the 2012 operating year. A copy of the 2012 report was provided to the Ottawa District in March 2013 and is currently under review by the ministry's Technical Support Section and comments will be provided to the Facility once complete (anticipated completion date January 2014)..

2.5 REPORTING REQUIREMENTS

What are the facility's reporting requirements based on?
Certificate of Approval/Permit

Does the facility meet reporting requirements?
Yes

Condition 10 of the said ECA -ISW outlines specific reporting requirements that must be completed by the Facility.

10. REPORTING

3) The *Owner* shall prepare a performance report on an annual basis, within **ninety (90) days** following the end of the period being reported upon. The first such report shall cover the first annual period following the commencement of operation of the *Works* and subsequent reports shall be submitted to cover successive annual periods following thereafter. The reports shall contain, but shall not be limited to, the following information:

(a) a description of any operating problems encountered and corrective actions taken;
(b) a summary of all maintenance carried out on any major structure, equipment, apparatus,

mechanism or thing forming part of the *Works;*
(c) a summary of all effluent monitoring results undertaken in the reporting period;
(d) a summary of the quantity of leachate contaminated sewage that was hauled to a municipal sewage treatment plant and the number of times the contents of the SWM Pond were disposed in such manner;
(e) a summary of the calibration and maintenance carried out on all effluent monitoring equipment;
(f) all analytical results and water level elevations obtained from the groundwater monitoring, pursuant to condition 9; and
(e) any other information the *District Manager* requires from time to time.

In March 2013, the Company submitted the 2012 Annual Report as per the requirement under Condition 10 (3). As part of the inspection process, the 2012 Annual Report (Report) was reviewed for completeness and compliance with the above referenced condition.

Findings:

- Remediation works were completed on the berm (spring of 2011) as stated in previous reports. No addition operating problems were encountered requiring corrective actions to be taken
- No maintenance was carried out on any major structure, equipment, apparatus, mechanics, or think forming part of the Works
- No leachate contaminated sewage was hauled to a municipal sewage treatment plant during the 2012 operating year
- No calibration or maintenance of effluent monitoring equipment was completed in the 2011 operating year as the pond level reading device does not require calibration
- The groundwater/surface water monitoring and compliance report, prepared by Conestoga-Rovers & Associates (CRA), was submitted in March of 2013. IO submitted the report to the ministry's Technical Support Section for surface water and groundwater review
- Surface water comments were received and provided to the Facility on September 13, 2013 via email. IO was informed during the inspection that the review comments were provided to their consultant (CRA) and will implement the recommendations outlined in the review
- Effluent Monitoring Results - Appendix 1 - the results from the effluent monitoring comparison is outlined in Section 2.4 of this Report
- Groundwater review is still ongoing and will be provided to the Facility once received

Condition 6 & 7 - Operation and Maintenance

The ECA requires the Facility to develop and implement Operation and Maintenance Manuals for the two sections of the SWMP (Part II - Stormwater Management Works & Part III - Process Water Recirculation System). At the time of the inspection and as part of the file review, the IO requested to review the Operation and Maintenance Manuals for the Industrial Sewage Works System.

- Operation and Maintenance Manuals for the Industrial Sewage Works System was implemented as required
- A Spill Contingency and Pollution Prevention Plan was developed, implemented, and submitted to the ministry
- The Facility has operating procedures in place for routine operation of the industrial sewage works system
- The Facility has logbooks for recording inspection findings, maintenance activities, and/or repairs
- The Facility has also developed and implemented a complaint recording and responding procedures in the event an environmental complaint is received by a member of the public (no environmental complaints were received by the ministry or the Facility)
- No discharge events occurred at the SWMP in the 2012 operating year

2.6 FLOW MEASUREMENT

Flow measurements are not required in the ECA.

2.7 MINISTRY SAMPLE RESULTS

Were Ministry samples collected during the inspection?
No

Reason:
No effluent discharge at the time of the inspection

N/A

2.8 FINANCIAL ASSURANCE

The Facility is not required to submit financial assurance for the operation of the approved industrial sewage works.

2.9 SPILL PREVENTION AND CONTINGENCY PLANS

Is the facility required to have a Spill Prevention and Contingency Plan (SPCP) as required by Ontario Regulation 224/07?
No

Has the facility had any spills since the last inspection?
No

Were all the spills reported to the ministry?
N/A

Does the facility's operations or spill history suggest that a SPCP be developed?
No

Comments:

As referenced in Section of this Report, the Facility has developed, implemented and provided a copy of the Site's Spill Contingency and Pollution Prevention Plan. No spills were reported to the ministry's Ottawa District Office and the Spills Action Centre. The IO confirmed this information during the inspection.

3.0 REVIEW OF PREVIOUS NON-COMPLIANCE ISSUES

No previous non-compliance issues were identified prior to completing the inspection.

4.0 SUMMARY OF INSPECTION FINDINGS

Was there any indication of a known or anticipated human health impact during the inspection and/or review of relevant material, related to this Ministry's mandate?
No

Specifics:

Was there any indication of a known or anticipated environmental impact during the inspection and/or review of relevant material?
No

Specifics:

Was there any indication of a known or suspected violation of a legal requirement during the inspection and/or review of relevant material which could cause a human health impact or environmental impairment?
Yes

Specifics:

The field Parameter temperature was not collected nor reported during the 2012 operating year. The 2012 Annual Report Appendix 1 provided analytical results which did not include temperature results. Temperature was not measured and reported during the previous inspection period.

Was there any indication of a potential for environmental impairment during the inspection and/or the review

of relevant material?
No

Specifics:

Was there any indication of minor administrative non-compliance?
No

Specifics:

5.0 ACTION(S) REQUIRED

The following action item is required to be address, **by no later than January 3, 2014**, by Orgaworld Ottawa and submitted to the undersigned:

1. Develop and implement a procedure to ensure temperature is measured and recorded during the monthly sample collection of the SWMP effluent monitoring program as required by Condition 5 of the ECA. This procedure, once reviewed by the undersigned, shall be implemented immediately to ensure compliance with the monitoring program for the upcoming 2014 operating year.

1. 1. Develop and implement a procedure to ensure temperature is measured and recorded during the monthly sample collection of the SWMP effluent monitoring program as required by Condition 5 of the ECA. This procedure, once reviewed by the undersigned, shall be implemented immediately to ensure compliance with the monitoring program for the upcoming 2014 operating year.

6.0 OTHER INSPECTION FINDINGS

In March of 2013 the Facility submitted the 2012 Annual Report which was sent to the Ministry of the Environment's Technical Support Section (Surface Water & Groundwater) for review and comment. On September 13, 2013 Surface Water comments were provided to the Facility for implementation of the recommendations made by B.W. Metcalfe, Senior Environmental Officer, Water Resources Unit, Surface Water Group. The IO was informed at the time of the inspection that the memorandum was sent to the Facility's consultant (CRA) to implement the recommendations outlined in the memorandum.

Groundwater review is anticipated to be completed in early January 2014. Once received the IO will provide the Facility with the comments and recommendations made by the Groundwater Unit, Technical Support Section of the Ministry of the Environment.

1.0 INTRODUCTION

Orgaworld Canada Ltd.'s Organics Composting Facility (referred to Orgaworld Ottawa) is a 10.12 hectare Waste Disposal Site (Processing) serving the Provinces of Ontario and Quebec, for the temporary storage, transfer and processing (aerobic composting) of solid non-hazardous, domestic, commercial, institutional or industrial organic waste at a maximum rate of 1,200 tonnes per day and 150,000 per year of Organic Waste.

The organic waste is brought to the site located at 5123 Hawthorne Road in the City of Ottawa (the "Site"), shredded, mixed and placed inside composting tunnels. Conditions within the tunnels are monitored and changed to ensure optimum conditions that promote aerobic composting. Once the material remains in the tunnels long enough for the temperature to reach 55 degrees Celsius for 3 consecutive days it is cooled down, removed from the tunnels and placed into a screener which separates the material in size fractions. The screener separates the material into 20+ (which includes large pieces of material that have not composted), 12-20 material (which is medium sized material), incidental waste, and compost. The 20+ material is used as inoculate and mixed in with fresh material in the Mixing Hall, or further shredded and run through the screener again. The compost size material gets placed in the compost curing area where it is required to cure for 21 days, tested to ensure it meets all requirements under the certificate of approval and then removed from the site as finished compost. It should be noted that the material sized as 12-20 is also referred to as "10-100" material as that was the original screen size.

It should be noted that Orgaworld Ottawa met an exemption in Ontario Regulation 347 which permitted the sale of 12-20 material (previous defined as a waste subject to Part V of the Environmental Protection Act) as long as it met a realistic market demand. This material was sold to farmers as a soil conditioner as it provided a benefit in the agricultural sector. As of January 1, 2013, the exemption in Ontario Regulation 347 was amended to exclude waste generated from organic processing facilities (i.e. composting facilities). As a result, Orgaworld Ottawa ceased all shipments of 12-20 to their clients. An alternative solution was sought which allowed Orgaworld Ottawa to continue

providing the material as a soil conditioner under an approval process regulated by the Ontario Ministry of Agriculture and Rural Affairs entitled Non-agricultural Source Material (NASM) Plans. As of mid 2013, Orgaworld Ottawa has worked with their clients in obtaining NASM Plans in order to apply the 12-20 material and is operating within the requirements of Part V of the Environmental Protection Act for the transportation of the 12-20 material.

Orgaworld Ottawa first started accepting organic material at their Site on January 28th, 2010. The Site is currently only receiving waste from the City of Ottawa source separated organics (SSO) collection program and leaf and yard waste program. The City of Ottawa is currently collecting the leaf and yard waste commingled with the SSO waste. It should be noted that the City of Ottawa started commingling their leaf and yard waste with the SSO organics and sending it to Orgaworld in April 2010.

The purpose of the inspection is to assess the Site's compliance with their waste ECA and applicable environmental legislation such as the Environmental Protection Act (EPA) and Ontario Regulation 347 under that same act. The inspection consisted of a district file review, site visit and discussions with Michael Rooke, Compliance Officer, acting Plant Manager.

The following inspection report relies on information found in the district file, site observations and information gathered from conversations with Orgaworld Ottawa staff throughout the year and during the inspections.

An Air Facility Inspection and an Industrial Sewage Inspection were also carried out at the site. See respective reports for details.

2.0 INSPECTION OBSERVATIONS

Certificate of Approval Number(s): ● Yes ○ No
C of A Number(s):

Environmental Compliance Approval No. 2766-7HEPSZ

Notice 1 - Issued on October 21, 2010
Details: The amendment was issued to allow the Facility to operate a mobile shredder unit on-site.

Notice 2 - Issued on May 2, 2012
Details: The amendment was issued for a change to allow the Facility to receive and remove waste between the hours of 6am to 8pm (M-F) and between the hours of 7am to 8pm on Saturdays - Condition 5.1

2.1 SITE OPERATION:

Specifics:

2. <u>SERVICE AREA, APPROVED WASTE TYPES, RATES & STORAGE</u>

(1) The Site may only accept solid non-hazardous domestic, commercial, institutional or industrial Organic Waste from the Provinces of Ontario and Quebec, limited to the following Organic Waste:

(a) Source-separated Organic Waste limited to the following:

(i) Food wastes: fruit, vegetable and general table scraps, meat and fish products, dairy products, egg shells, confectionery products, sauces, bones, pet food, fat, bread and grains, rice, pasta, coffee grounds, filters;

(ii) Paper fibres: soiled paper towels, tissues, paper plates, soiled paper food packaging items such as boxboard, cardboard, newspaper, and other packaging materials;

(iii) Miscellaneous: houseplants and yard wastes, dryer lint and hair, pet fur, sawdust and wood shavings and litter or bedding.

(b) Organic Waste from the food processing industry and other industries that produce food wastes;
(c) Organic Waste from the commercial sector, including but not be limited to food waste from restaurants, hotels, institutions, commercial operations that collect organic wastes;

(d) Leaf & yard waste;
(e) Organic sludges, including but not be limited to starches and paper wastes, but excluding sewage sludge and biosolids.

The 2012 Annual Report (2012 AR) states that the Facility is in compliance with Condition 2.(1) by only accepting waste from the City of Ottawa which is within the approved service area outlined the ECA. This requirement in the ECA was also confirmed by Orgaworld staff during the inspection.

(2) (i)The Owner shall not accept at the Site sanitary products and human body waste.
(ii) The Owner shall not accept at the Site any waste that is collected through a waste collection program that allows use of plastic bags.
(iii) The Owner shall not accept at the Site any waste that is classified as hazardous waste or liquid industrial waste in accordance with *O. Reg. 347* .

The 2012 AR states that the Facility is in compliance with the above referenced condition by not accepting sanitary products, human body waste, plastic bags, hazardous waste and liquid industrial waste as defined in Ontario Regulation 347. Orgaworld, required by specific conditions in the ECA, inspects incoming organic waste to ensure the above noted waste types are not accepted.

(3) The Owner is only approved to receive Organic Waste in quantities that are not to exceed:
(a) a maximum of 1,200 tonnes on a daily basis; and
(b) a maximum of 150,000 tonnes per year.

The 2012 AR provided the monthly and annual tonnages for the 2012 operating year. The data provided in the report confirms the Facility is in compliance with tonnage limits outlined in the ECA. This requirement in the ECA was also confirmed by Orgaworld staff during the inspection.

(4) The Owner is approved to store the following amounts of waste at the Site:
(a) unprocessed Organic Waste stored within the Processing Building awaiting processing shall not exceed 3,000 tonnes;
(b) leaf & yard waste stored at the Site shall not exceed 1,500 tonnes;
(c) Organic Waste, including leaf & yard waste and biofilter medium waste, undergoing Composting in the composting tunnels shall not exceed 5,040 tonnes;
(d) Immature Compost in various stages of curing shall not exceed 10,000 tonnes;
(e) Residual Waste and Rejected Waste shall not exceed 1,000 tonnes.

The 2012 AR states that in the 2012 operating year the Facility was in compliance with the approved waste storage amounts outlined in this condition. This requirement in the ECA was also confirmed by Orgaworld staff during the inspection.

(5) Waste storage at the Site is subject to the following limitations:

(a) unprocessed Organic Waste, excluding leaf & yard waste, shall be stored within the confines of the Processing Building;
(b) leaf & yard waste shall be stored within the confines of the Processing Building, or in accordance with the requirements of Condition 6.(14) of the Certificate of Approval (Industrial Sewage) for this Site;
(c) Immature Compost in various stages of curing shall be stored within the confines of the Processing Building;
(d) solid Residual Waste shall be stored in lugger bins located within the confines of the Processing Building;
(e) solid putrescible waste generated through activities not relating to the handling and processing of Organic Waste (ie. office, lunch room, etc.) may be stored in a covered bin outdoors and it shall be removed from the Site as required in accordance with *O. Reg 347* and the *EPA* .

At the time of the inspection no waste was observed to be stored outside the Processing Building. All waste and phases of compost were located inside the confines of the Processing Building.

(6)Organic Waste storage duration is limited to the following:
(a) The maximum storage duration of the leaf & yard waste shall not exceed thirty (30) days from the time of its receipt.

(b) The maximum storage duration of the purchased wood amendment materials shall not exceed ninety (90) days from the time of their receipt.

(c) The maximum storage duration of the Organic Waste within the Processing Building prior to loading into the aerated composting tunnels shall not exceed the time period that is required to accumulate enough Organic Waste to fill one (1) composting tunnel.

(d) The Owner shall not store the Residual Waste at the Site in excess of thirty (30) days from the date of its generation, or as directed by the District Manager.

(e) If in the opinion of the District Manager, the duration of waste storage from (a) and/or (b) and/or (d), above, results in odour complaint(s), the Owner, in consultation with the District Manager shall undertake appropriate steps, including reducing waste storage duration, so that odour complaint(s) are eliminated.

The 2012 AR states that the storage duration of the leaf & yard waste, purchased wood amendment materials, organic waste within the Processing Building and Residual waste did not exceed the storage duration limits as outlined by the above condition.

(7) No outside waste storage other than that described in Condition (5), above, is approved under this Certificate.

At the time of the inspection it was noted that waste was not being stored outside other than that described in Condition (5).

(8) The Company shall ensure that all waste storage is undertaken in a manner that does not cause an adverse effect or a hazard to the environment or any person.

At the time of the inspection the IO was informed that no environmental impacts or complaints were received as result of the composting operation at the Site. It should also be noted that the Ministry of the Environment did not receive environmental complaints regarding the storage of waste at the Site. During the inspection no hazards to the environment or any persons were observed.

(9) In the event that Organic Waste cannot be processed at the Site and the Site is at its approved waste storage capacity, the Owner shall cease accepting additional Organic Waste. Receipt of additional Organic Waste may be resumed once such receipt complies with the waste storage limits approved in this Certificate.

The 2012 AR stated compliance with the above reference condition. At the time of the inspection the Facility was in operation and was not exceeding its approved waste storage capacity.

3. <u>SIGNS</u>

(1) Prior to receipt of waste at the Site, the Owner shall ensure that a sign is posted at the entrance to the Site. The sign shall be visible from the main road leading to the Site. The following information shall be included on the sign:

(a) name of the Owner;
(b) this Certificate number;
(c) hours during which the Site is open;
(d) waste types that are approved to be accepted at the Site;
(e) Owner's telephone number (a hotline) to which complaints may be directed;
(f) Owner's twenty-four hour emergency telephone number (if different from above);
(g) a warning against unauthorized access;
(h) a warning against dumping at the Site.

(2) The Owner shall ensure that appropriate signs are posted at the Site clearly identifying the waste and stating warnings about the nature of the waste and any possible hazards.

At the time of the inspection it was noted that the Facility is in compliance with Condition 3 of the issued ECA by

posting a sign at the entrance of the Site outlining the above required information from a-h. A similar sign is also present at the exit of the Site. No issues were identified with the information displayed on the signs entering and exiting the Site.

4. SITE SECURITY

(1) All unloading and loading of waste and all waste processing activities at the Site shall at all times be undertaken by Trained Personnel.

At the time of the inspection the IO requested training logs for the staff that work at the Facility. Training logs were provided to the IO. As part of the training program, the Facility to train staff on conditions outlined in the environmental compliance approvals for the Site. Of the training records reviewed, no issues were identified.

(2) The Owner shall ensure that access to the Site is regulated and that all entrances are secured by lockable gates to restrict access only to authorized personnel when the Site is not open.

At the time of the inspection it was observed that the Site has installed a fence with a lockable gate to restrict access to the Site The IO confirmed with Orgaworld staff that the Site is secured after the hours of operation.

6. EQUIPMENT AND SITE INSPECTIONS & MAINTENANCE

(1) Prior to receipt of any waste at the Site, the Owner shall prepare a comprehensive written inspection program which includes inspections of all aspects of the Site's operations including the following:

(a) loading/unloading area of the leaf & yard waste storage pad;
(b) parking lot area for evidence of run-off from the leaf & yard waste storage pad;
(c) Processing Building and the air pollution control equipment;
(d) security fence and property line;
(e) on-site roads for presence of leaks and drips from the waste delivery trucks;
(f) presence of excessive fugitive dust emissions from the on-site roads or the Compost stockpiles;
(g) on and off-site litter;
(h) presence of vector and vermin.

At the time of the inspection the IO requested documents and procedures which speaks to the Facility's inspection program. The Facility provided a copy of the inspection program during the inspection which address the above condition. The IO also reviewed procedures located in the district file which speaks to maintenance and inspections of the pollution control devices and industrial sewage works system.

(2) The inspections are to be undertaken daily by Trained Personnel in accordance with the inspection program to ensure that all equipment and facilities at the Site are maintained in good working order at all times and that no off Site impacts are occurring. Any deficiencies detected during these regular inspections must be promptly corrected.

At the time of the inspection the IO requested training logs for the staff that work at the Facility. Training logs were provided to the IO and were observed to be sufficient. The IO also requested copies of the inspection reports from the inspection program. The IO observed the inspection reports to be sufficient in determining the equipment is operating in good working order at all times and that no off Site impacts are occurring. It should also be noted that no environment complaints have been received by the company or the ministry during the inspection period.

(3) The Owner shall develop and implement a preventative maintenance program for all on-Site equipment associated with the processing and managing of waste and control of odour and dust emissions. The preventative maintenance program shall be maintained up-to-date and shall be available for inspection by a Provincial Officer upon request.

A copy of the preventative maintenance program was provided to the Ottawa District Office and was reviewed during the district file review prior to completing the inspection. The documentation required by this condition was also requested during the inspection and was provided to the IO for review. No issues identified during the review of the document.

7. QUALITY CRITERIA , TESTING & MONITORING

(1) Cross-Contamination Prevention

(a) The Owner shall ensure that the incoming Organic Waste and the equipment used in handling of the incoming Organic Waste are kept separate and do not come in contact with the Immature Compost / the Finished Compost and the Compost except where the Immature Compost / the Finished Compost and the Compost are being fed back into the composting process.

At the time of the inspection the IO observed incoming organic waste and the equipment used in handling of the incoming organic waste. The operation of the equipment and the staff present to inspection incoming organic waste is completed in a manner to prevent cross-contamination. Immature compost & finished compost are located separate from incoming organic waste.

(2) Quality Control Monitoring of Organic Waste at the generator site:

(a) Prior to being accepted at the Site for the first time, the incoming Organic Waste from a new source/stream shall be characterized in accordance with the Ministry's regulatory requirements for sampling and testing to ensure that the incoming Organic Waste complies with the quality criteria specified in this Certificate. The incoming Organic Waste may be considered a pre-approved waste source/stream once the incoming Organic Waste meets the required quality criteria and has been classified as such by the Company.

At the time of the inspection the IO inquired to determine if any new sources of incoming organic waste from a new source/stream has been received. Orgaworld staff stated that no new sources/streams of incoming organic waste has been accepted since operation at this time. The Facility has been approached by a federal entity for the composting of shredded paper. The Facility has yet to accept this new waste stream however are aware of the requirements of the above condition to ensure the waste is characterized in accordance with the ministry's regulatory requirements for sampling and testing prior to accepting this new waste source.

(3) Quality Control Monitoring of the Incoming Organic Waste

(a) The Owner shall not accept for composting any individual Organic Waste source or an additive necessary for composting that exceeds the following quality parameters set out in "Schedule B" of this Certificate:

(i) trace elements;
(ii) organic chemicals.

At the time of the inspection the IO requested copies of the sample results from the analysis of incoming organic waste as required by this condition. The IO requested a copy of the month of September to compare against Schedule B of the ECA and was provide analytical results from samples collected on September 30th, 2013. The following observations were made during the review:

- *Sample collection of incoming organic waste occurred on September 30th, 2013 and was sent to Caduceon Environmental Laboratories for analysis*
- *Incoming organic waste sample was analyzed for Trace Elements and sample results were in compliance with the concentration limits in Schedule B*
- *Incoming organic waste is required to be analyzed for Organic Chemicals polychlorinated biphenols (PCBs) however sample results indicate the incoming organic waste was not analyzed for PCBs.*

****Please see section 5.0 of this Report for actions required by Orgaworld****

Finished Compost Quality Criteria

(4) Finished Compost is considered to be a Compost when it meets the following compost quality criteria:

(a) compost quality criteria set out in Schedule "B" of this Certificate; and
(b) curing duration of a minimum of twenty one (21) days and compliance with one (1) of the following three (3) maturity criteria:

(i) the respiration rate is less than, or equal to, 400 milligrams of oxygen per kilogram of volatile solids (or organic matter) per hour; or

(ii) the carbon dioxide evolution rate is less than, or equal to, 4 milligrams of carbon in the form of carbon dioxide per gram of organic matter per day; or

(iii) the temperature rise of the compost above ambient temperature is less than 8°C.

At the time of the inspection the IO requested information regarding the sample collection and analysis of the finished compost to ensure compliance with Schedule B of the ECA and the Ontario Compost Quality Standards. The IO was provided sample analysis for the finished compost. Observations made during the review are as follows:

- *Finished compost was sampled and collected as per the frequency outlined in the ECA*
- *Finished compost was tested for the parameters outlined in Schedule B of the ECA with the exception of polychlorinated biphenols (PCBs) which did not appear to be analyzed for the sample results provided during the inspection*
- *Finished compost was tested for maturity using the Dewar Method for temperature variance. The results of the Dewar Method were observed to be in compliance with maturity criteria.*

****Please see Section 5.0 of this Report for actions required by Orgaworld Ottawa****

Process Monitoring

(8) The Owner shall ensure that the following process parameters are monitored:

(a) temperature of the composting Organic Waste in the composting tunnels;
(c) inlet air temperature;
(d) outlet air temperature;
(e) relative humidity in the composting tunnels;
(f) air flow into the tunnels;
(g) oxygen content in the air; and
(h) temperature of the Immature Compost in the curing piles.

At the time of the inspection the IO requested information on how Orgaworld complies with the above condition. The IO was informed that the Facility is equipped with a SCADA system that monitors all processes as it relates to the composting process. IO was able to verify this information by observing the SCADA system at the time of the inspection. The Facility provided screen shots of the SCADA system after the inspection as a request by the IO.

(10) As a minimum, the Owner shall monitor the temperature of the Immature Compost within the curing stockpiles daily. The measurements shall be taken one (1) metre inside the curing stockpile mass and at points sufficient to provide a temperature profile of the Immature Compost.

As part of the inspection process, Orgaworld Ottawa provided documentation to ensure temperature monitoring is completed daily. No issues were noted during the review of this information.

8. <u>NUISANCE IMPACT CONTROL & HOUSEKEEPING</u>

(1) The Owner shall ensure that all vehicles that have delivered waste to the Site are not leaking or dripping waste when leaving the Site.

As stated in the 2012 AR, during periods where organic waste is delivered at the Site, vehicles are inspected during and after by trained Orgaworld staff.

(2) The Owner shall ensure that the exterior of all trucks delivering waste to the Site is cleaned prior to leaving the Site, as needed, to prevent odours. Truck washing shall occur only in the dedicated wash down area of the processing building.

At the time of the inspection no truck washing operations were occurring. The City of Ottawa vehicle appear to be recently cleaned and odours could not be detected. As stated in the 2012 AR, the Facility provides rakes, brooms and a pressure washer if necessary to ensure the exterior is clean.

(3) The Owner shall ensure that there is no queuing or parking of vehicles that are waiting to enter the Site on any roadway that is not a distinct part of the Site.

At the time of the inspection no vehicles entering the Facility were parked or queuing on roads outside the Site

boundary. The 2012 AR confirms that during the 2012 operating year the Facility is in compliance with this condition.

(4) Should the Owner become aware that the truck(s) delivering waste to the Site have leaked wastewater on the municipal roadways, the Owner shall immediately notify the owner of the leaking vehicle(s) and the District Manager about the leak problem.

Prior to the inspection, a district file review was completed and the District Manager had not been notified of any wastewater impacts to municipal roadways. The 2012 AR states that this was not noticed during the reporting period.

(5) The Owner shall:
(a) take all practical steps to prevent the escape of litter from the Site;
(b) pick up litter around the Site on a daily basis, or more frequently if necessary; and
(c) if necessary, erect litter fences around the areas causing a litter problem.

At the time of the inspection the IO walked a portion of the property and observed no litter issues. As part of the Facility's inspection program, trained staff monitor litter on a daily basis.

(6) Prior to the receipt of any waste at the Site, the Owner shall:
(a) implement necessary housekeeping procedures to eliminate sources of attraction for vermin and vectors; and
(b) hire a qualified, licensed pest control professional to design and implement a pest control plan for the Site. The pest control plan shall remain in place, and be updated from time to time as necessary, until the Site has been closed and this Certificate has been revoked.

At the time of the inspection the IO requested procedures and records of vermin and vector control. The IO was informed that the Facility retains the services of Holistech and conducts monthly site visits so the Facility can control vermin and vector.

(7) The Owner shall ensure that all on-Site roads and operations/yard areas are regularly swept/washed to prevent dust impacts off-Site.

At the time of the inspection the entrance, roads on-site, and exit were clear with no signs of dust impacts. The Facility retains a company to clean of the asphalt parking area if and when it is required.

(8) (i) The Owner shall store Compost within the confines of the Processing Building, or in accordance with the requirements of Condition 6.(14) of the Certificate of Approval (Industrial Sewage) for this Site.

At the time of the inspection the IO observed compost to be stored within the confines of the Processing Building. No outside storage of compost was observed. The IO confirmed the storage requirements of compost with Facility staff at the time of the inspection.

(ii) Notwithstanding the requirements of Condition 8.(8)(i), above, the Owner shall ensure that the Compost stockpiles are not a source of fugitive dust emissions. If the proposed Compost storage features are deemed insufficient to control the fugitive dust emissions from the Compost stockpiles, the Owner shall provide additional covers or spray the stockpiles with water, or use any other method to minimize the fugitive dust emissions.

At the time of the inspection dust was assessed to determine if the operations and procedures currently in place are effectively controlling fugitive dust. It was noted that fugitive dust was being significantly control as no dust was observed.

9. <u>OPERATIONS MANUAL & STAFF TRAINING</u>

(1) The Owner shall prepare an Operations Manual for use by the Site personnel. The Operations Manual shall contain the following:

(a) outline the responsibilities of the Site personnel;
(b) personnel training protocols;
(c) waste receiving and screening procedures;
(d) unloading, handling and storage procedures;
(e) waste processing procedures;

(f) sampling and testing procedures;
(g) Site inspections and recording procedures;
(h) the emergency response procedures;
(i) procedure for handling complaints as described in the Certificate of Approval (Air/Noise) for this Site.

At the time of the inspection the IO requested procedures and manuals as required by the above referenced condition. The Operations Manual developed by the Facility outlines the all the requirements of this condition. A copy of the manual was also available during the district file review.

(2) A copy of this Operations Manual shall be kept at the Site, must be accessible to personnel at all times and must be updated, as required.

(3) (a) All operators of the Site shall be trained with respect to the following:

(i) terms, conditions and operating requirements of this Certificate;
(ii) operation and management of the Site, or area(s) within the Site, as per the specific job requirements of each individual operator, and which may include procedures for receiving, screening and identifying waste, refusal, handling, processing and temporarily storing wastes;
(iii) an outline of the responsibilities of Site personnel including roles and responsibilities during emergency situations;
(iv) the Emergency Response and Contingency Plan including exit locations and evacuation routing, and location of relevant equipment available for emergency situations;
(v) environmental, and occupational health and safety concerns pertaining to the wastes to be handled;
(vi) emergency first-aid information;
(vii) relevant waste management legislation and regulations, including the *EPA* and *O. Reg. 347* ;
(viii) recording procedures as required by this Certificate;
(ix) equipment and site inspection procedures, as required by this Certificate;
(x) nuisance impact control & housekeeping procedures, as required by this Certificate; and
(xi) procedures for recording and responding to public complaints as required by the Certificate of Approval (Air/Noise) for this Site.

At the time of the inspection the IO reviewed a training program for one (3) of the staff at the Facility. The training program reviewed addresses the requirements of this condition. All training programs for staff are kept electronically.

10. <u>EMERGENCY RESPONSE AND CONTINGENCY PLAN</u>

(1) Within six (6) months from the date of this Certificate, the Company shall submit to the District Manager an Emergency Response and Contingency Plan. The Emergency Response and Contingency Plan shall be prepared in consultation with the District Manager, the local Municipality and the Fire Department and as a minimum it shall include the following information:

(a) emergency response procedures to be undertaken in the event of a spill, process upset, power failure, fire or any other emergency situation, including specific clean up methods for wastes expected to be generated from the emergency situation;
(b) a list of equipment and clean up materials available for dealing with the emergency situations;
(c) notification protocol with names and telephone numbers of persons to be contacted, including persons responsible for the Site, the Ministry's District Office and Spills Action Centre, the local Fire Department, the local Municipality, the local Medical Officer of Health, and the Ministry of Labour, and the names and telephone numbers of waste management companies available for emergency response;
(d) procedures and actions to be taken should the incoming Organic Waste not meet the quality criteria specified by this Certificate;
(e) procedures and actions to be taken should the outgoing Residual Waste not meet the quality criteria required by the specified by this Certificate;
(f) procedures and actions to be taken should the composted Organic Waste fail to meet the compost quality criteria specified by the Certificate;
(g) procedures and actions to be taken should the occurrence of the complaints require the Company to suspend the waste processing activities at the Site.

At the time of the file review prior to the inspection, the IO reviewed the "Contingency Plan for Odours, Spills, Fires, Power Failures and Labour Disruptions" procedure. A copy of the procedure will remain on file at the

district office. A copy of the document was also available on-site at the time of the inspection.

12. RECORDS KEEPING

Annual Report

(9) By March 31st following the end of each operating year, the Owner shall prepare and submit to the District Manager and the Public Liaison Committee (PLC), an Annual Report summarizing the operation of the Site covering the previous calendar year. This Annual Report shall include, as a minimum, the following information:

(a) a monthly mass balance of the Organic Waste received, processed and transferred from this Site, including waste type, quantity, sources and/or disposal destinations;
(b) an annual summary mass balance of the Organic Waste received, processed and transferred from this Site, including waste type, quantity, sources and/or disposal destination;
(c) an annual summary of any deficiencies, items of non-compliance or process aberrations that occurred at this Site and any remedial/mitigative action taken to correct them;
(d) a descriptive summary of any spills, incidents or other emergency situations which have occurred at this Site, any remedial measures taken, and the measures taken to prevent future occurrences;
(e) a summary describing any Rejected Waste including quantity, waste type, reasons for rejection and origin of the Rejected Waste;
(f) any environmental and operational problems, that could negatively impact the environment, encountered during the operation of the Site or identified during the facility inspections and any mitigative actions taken;
(g) any changes to the Emergency Response and Contingency Plan, the Operations Manual or the Closure Plan that have been approved by the Director since the last Annual Report;
(h) any recommendations to minimize environmental impacts from the operation of the Site and to improve Site operations and monitoring programs in this regard;
(i) a summary of any complaints received and the responses made, as required by the Certificate of Approval (Air/Noise);
(j) an update on the amount of Financial Assurance which has been provided to the Director;
(k) update on activities of the PLC;
(l) a condition-by-condition analysis of compliance with all Conditions of this Certificate.

As part of the file review process the AR was found to be complete as required. The AR was submitted to the Ottawa District Office in March of 2013.

2.2 FINANCIAL ASSURANCE:

Specifics:

At the time of the inspection a file review was completed which determined that Orgaworld Ottawa has submitted an adequate amount of financial assurance in an appropriate form accepted by the Ministry of the Environment and is located on file with the ministry.

2.3 SITE SERVICE AREA:

Specifics:

Orgaworld Ottawa is approved to operate a waste disposal site (processing) serving the Provinces of Ontario and Quebec, for the temporary storage, transfer and processing (composting) of solid non-hazardous, domestic, commercial, institutional or industrial organic waste.

2.4 APPROVED SITE CAPACITY:

Specifics:

Orgaworld Ottawa is approved to operate a waste disposal site (processing) serving the Provinces of Ontario and Quebec, for the temporary storage, transfer and processing (composting) of solid non-hazardous, domestic, commercial, institutional or industrial organic waste at a maximum rate of 1,200 tonnes per day and 150,000 tonnes

per year of Organic Waste.

3.0 REVIEW OF PREVIOUS NON-COMPLIANCE ISSUES

As a result of the file review completed prior to conducting the inspection at Orgaworld Canada, no ongoing non-compliance issues were identified.

4.0 SUMMARY OF INSPECTION FINDINGS (HEALTH/ENVIRONMENTAL IMPACT)

Was there any indication of a known or anticipated human health impact during the inspection and/or review of relevant material, related to this Ministry's mandate?
No

Specifics:

Was there any indication of a known or anticipated environmental impact during the inspection and/or review of relevant material ?
No

Specifics:

Was there any indication of a known or suspected violation of a legal requirement during the inspection and/or review of relevant material which could cause a human health impact or environmental impairment ?
Yes

Specifics:

Incoming Organic Waste & Finished Compost - Sample results indicate Orgaworld did not complete the required analysis as required by the ECA. Sample parameter polychlorinated biphenols (PCBs), as outlined in Schedule B of the ECA, were not observed to be completed in the samples results provided to the IO as part of the inspection.

Was there any indication of a potential for environmental impairment during the inspection and/or the review of relevant material ?
No

Specifics:

Was there any indication of minor administrative non-compliance?
No

Specifics:

5.0 ACTION(S) REQUIRED

The following actions are required to be completed by Orgaworld Ottawa to ensure compliance with issued Environmental Compliance Approval No. 2766-7HEPSZ:

1. Effective immediately upon receiving the inspection, ensure all incoming organic waste and finished compost samples are analyzed for parameters outlined in Schedule B of the ECA.

2. By no later than December 12, 2013, provide the IO with copies of sample results from incoming organic waste and final compost for the months of March, June and October of 2013 to determine if sample results indicate further lack of sampling for polychlorinated biphenols (PCBs) parameter.

1. 1. Incoming Organic Waste - incoming organic waste is to be sampled and analysed for the parameters outlined in Schedule B of the ECA. The sample results provided to the Inspecting Officer did not provide sample results for the parameter polychlorinated biphenols (PCBs).

2. 2. By no later than December 12, 2013, provide the IO with copies of sample results from incoming organic waste and final compost for the months of March, June and October of 2013 to determine if sample results indicate further lack of sampling for polychlorinated biphenols (PCBs) parameter

1.0 INTRODUCTION

Orgaworld Canada Ltd. (referred to as the "Facility"), located at 5123 Hawthorne Road in the City of Ottawa (the "Site"), is an aerobic composting facility that is approved to accept solid non-hazardous organic waste as defined in their waste Environmental Compliance Approval ("ECA") for the production of compost. Organic waste is brought to the facility, shredded, mixed and placed inside composting tunnels. Conditions within the tunnels are monitored and changed to ensure optimum conditions that promote aerobic composting. The compost size material gets placed in the compost curing area where it is required to cure for 21 days, tested to ensure it meets all requirements under the waste certificate of approval and then removed from the site as finished compost. All process air and air from the receiving hall is directed through pollution control equipment. Leachate generated as a result of the composting process gets recirculated, any excess is kept in on-site storage tanks.

Orgaworld Canada Ltd. first started accepting organic material at their site on January 28th, 2010. The Site is currently only receiving waste from the City of Ottawa source separated organics (SSO) collection program and leaf and yard waste program. The City of Ottawa has been collecting the leaf and yard waste commingled with the SSO waste.

The Facility is approved to operate at a production limit of up to 150,000 tonnes per year of organic waste.

The following inspection report relies on information found in the district file, site observations and information gathered from conversations with Orgaworld staff. The site visit for the inspection was conducted on December 19, 2012 which incorporated paper work review and a tour of the operations at the Facility.

The purpose of this inspection is to assess the sites compliance with their Industrial Sewage Works ECA and applicable environmental legislation such as the Ontario Water Resources Act ("OWRA").

An Air Facility Inspection and Non-Hazardous Waste Transfer Processing Inspection were also carried out at the Site. See respective reports for details.

2.0 INSPECTION OBSERVATION

Facility MEWS (Works) Number:

Sector Type:
Waste Disposal

Effluent Type:
Storm Water

Receiver Type:
Surface Water

Name of Receiver:
Findlay Creek

Is there a sensitive receptor on/in the receiver?
Yes

Select the most important type of sensitive receptor.
None of the above

cold water stream

Certificate of Approval Number(s):
Yes
C of A Number(s):
Industrial Sewage Works Environmental Compliance Approval No. 9465-7NVRWT
- issued September 16, 2009

Industrial Sewage Works Environmental Compliance Approval No. 7032-88XPRA
- issued September 7, 2010

Industrial Sewage Works Environmental Compliance Approval No. 7251-8GKRPD
- issued May 30, 2011

2.1 WASTEWATER TREATMENT PROCESS DESCRIPTION

General Description:

Stormwater is collected in an on-site open ditch system leading to a stormwater management pond that discharges off site to the Hawthorne Industrial Park ditch system which eventually leads to Findlay Creek.

Process water generated inside the building gets stored in leachate holding tanks buried on the East side of the building. Should the facility need to use water in their process (wetting the composting material) they use the leachate from the storage tanks and/or water from the stormwater pond. Should the leachate tanks need to be emptied the company has previously been retaining the services of Lacombe Environmental Services to pick up and dispose of the leachate. The HWIN generator number for the site is ON3338779, and indicates that the leachate is classified as waste class 270L. According to company officials the Facility operates in a water negative environment in the summer but has found that they collect excess leachate in the winter.

Environmental Compliance Approval Number 7251-8GKRPD:

The Site has been issued **Environmental Compliance Approval Number 7251-8GKRPD** (ECA - ISW) for the following Industrial Sewage Works System:

"the establishment of stormwater management *Works* for the collection, transmission, treatment and disposal of stormwater runoff and process/wash sewage from a catchment area of 10.14 hectares, to provide Normal water quality protection (Level 2) and to attenuate post-development peak flows to pre-development levels,
discharging to a roadside ditch, then to a central SWM facility off site (adjacent Hawthorne Industrial Park), and subsequently discharging through a ditch to Findlay Creek, for all storm events up to and including the 100 year return storm, consisting of the following:

PROPOSED WORKS

- one (1) submersible pump capable of pumping up to 229 m3/day of stormwater collected from the south ditch of the Site. The pumped stormwater is transferred via a sub-surface 50 mm PVC forcemain to underground storage tanks located on the east side of the Facility for integration into the process water stream or transported off-site for final treatment.

- one (1) terrain tank located on the north side of the Facility, adjacent to the north ditch, having an approximate volume of 45 m3. Initial stormwater run-off will drain from a portion of the asphalt pad on the north side of the Facility into the tank for assessment by site operations staff as to disposal point (ditch/pond, into plant, or hauled off-site). As the tank fills, tank will spill-over (after initial flush) into the north ditch and travel to the wet detention pond.

- installation of aerators in the south-east portions of the wet detention pond to be operated as required, in order to maintain the stormwater management pond water quality trigger parameters below trigger levels.

EXISTING WORKS

Part I - Stormwater Management Works

- one (1) wet extended detention stormwater pond in U shape with approximately base dimensions as follows: 120 m long and 12 m wide, and a maximum depth of 2.0 m, to permanent pool level and 3.4 m to overflow weir elevation (emergency elevation), with 4:1 side slopes, with the following volume structure:

Stage Storage	Elevation (m)	Storage Volume (m^3)
Permanent Pool	90.25 – 91.25	5,385
Extended Detention	91.25 – 91.45	1,311
Quantity	91.45 – 92.25	6,080
Emergency	92.25 – 92.65	3,532

and equipped with the following structures:

- One (1) forebay approximately 65 m long and 12 m wide in U shape, and a maximum depth of 1.0 m to permanent pool level and 3.4 m to overflow weir elevation, equipped with two inlet structures:

1. Inlet structure. A 12.5 m long 900 mm diameter concrete storm inlet pipe with concrete headwall, connected through the Vortechs unit before entering the sedimentation forebay

at an invert elevation of 89.60 m, designed to convey up to a maximum 714 L/s;

2. Overflow channel. A 9.0 m wide (base), 1.5 m long and approximately 250 mm high channel connecting the open ditch system to the forebay at an invert elevation of 92.45 m, designed to convey up to a maximum 3.07 m³/sec.

- One (1) 150 mm diameter orifice plate set at an elevation of 91.25 m for quality control. This flow restrictor is installed within a 2400 mm diameter maintenance hole (MH2) and attached at the downstream end of a 300 mm diameter PVC pipe, equipped with a cast iron sluice gate valve (Armtec series 20-10C), which will be in **closed position** during normal operation periods;

- One (1) 825 mm diameter concrete pipe and 3.8 m length for quantity control up to the 100-year post-development flow set at an elevation of 91.45 m.

- One (1) 4.0 m wide 250 mm high emergency overflow spillway set at an elevation of 92.25 m, discharging to a concrete stabilized swale and ultimately the roadside ditch draining to the Findlay Creek, a tributary to Shields Creek.

- One (1) precast concrete oil/grit separator (Vortechs Model 16000) designed to handle stormwater runoff to convey up to 714 L/s storm flows, providing a sediment storage capacity of 5.43 m³ and having interior dimensions of 5.49 m long, 3.66 m widen and 2.13 m high, designed to provide over 80% total net annual TSS removal, discharging to a forebay of the wet pond;

- An open ditch/swale system with sufficient capacity to convey up to the 100-□ year storm event (estimated at 3.07 m³/sec), with approximately 1,000 m length of a trapezoidal shaped perimeter ditch along the site boundaries, having a top width of approximately 1.0 m wide flat bottom ditch and side slopes of 3V:1H up to 10:1 with variable widths and depths, running through three culverts of 18 to 30 m in length and 600 mm diameter concrete sewers, and discharging through a 2400 mm diameter maintenance hole (MH1) connecting to the oil/grit separator described above;

- A minor drainage system of storm sewers and appurtenances designed to capture and convey runoff during frequent storm events up to the 10-year storm event with PVC sewers ranging from 150 mm to 300 mm diameter sewers. The minor drainage system connects the organics composting facility through approximately 200 m length 300 mm diameter sewer to the MH5 for further discharge into the inlet structures.

- One (1) maintenance access road for operational, inspection and maintenance purposes, consisting of a 4 m wide gravel/grassed access lane located around the perimeter of the facility and a 70 m long gravel lane to the inlet structures at the northwest corner of the pond to the outlet structures.

The simulated modelling estimate and drainage pattern of the site are as follows:

Storm Events	**2-year**	**5-year**	**25-year**	**100-year**
1. Existing flows, pre-development (L/s)	206	351	606	848
2. Post-development flows (L/s)	1,118	1,651	2,410	3,067
3. Post-development attenuated flows (L/s)	56	89	189	283

The above, including erosion/sedimentation control measures during construction and all other controls and

appurtenances essential for the proper operation of the aforementioned *Works*.

Part II - Process Water Recirculation System

- A Process Water Recirculation System (WRS) to provide optimum humidity levels for the composting process and for odour control system, consisting of the following:
- Six (6) reinforced precast concrete underground storage tanks equipped with level control system with a capacity of 45 m³ each;
- Four (4) plastic above ground storage tanks (bioscrubber, sulphuric acid storage, tank and two ammonium sulphate storage tanks) equipped with level control system with a capacity of 180, 45, 50, and 50 m³ respectively;
- Eight (8) pumps to recirculate collected water from composting tunnels, biofilters and bioscrubber to the composting tunnels, biofilter and bioscrubber and for washdown supply
- Piping for percolate/washdown water supply to the composting area including a sprinkling system;
- An odour control equipment consisting of a biofilters and bio scrubber to recirculate filtrate water and supply of filtered effluent to the washdown lines, and equipped with chemical addition piping for pH control; and
- Piping for the supply of stormwater from the wet pond to the process tanks for composting requirements.

2.2 EFFLUENT SUMMARY REPORT

What are the facility's effluent limits based on?
Certificate of Approval/Permit

Does the facility comply with its limits?
Yes

Condition 6 (5) speaks to the requirements for the Site to compare monitoring results for each and all grab samples with the corresponding trigger level of each parameter listed Table 2 - Trigger Parameters outlined in the below table:

Table 2 - Trigger Parameters	
Parameter	**Trigger Level (mg/L if not specified)**
Ammonia (uniozized)	0.05
Nitrate-N (NO3-N)	2.93
CBOD5	15
Total Phosphorus	0.4
Total Suspended Solids	15
E-Coli	100 count/100mL
pH	6.5 to 8.5
Temperature (maximum	23 ?C

At the time of the inspection the IO reviewed the comparison data for the 2011 operating year to ensure discharges were in compliance with Table 2 - Trigger Parameters. It was noted during the file review and inspection that the Site did not discharge the SWMP to the natural environment therefore sampling as per Table 2 - Trigger Parameters were not required.

2.3 SEWAGE TREATMENT WORKS CAPACITY ASSESSMENT

Flow (m^3/day)	Year 1	Year 2	Year 3
Average daily flow	0.00	0.00	0.00
Maximum daily flow	0.00	0.00	0.00
Capacity Design	0.00	0.00	0.00
% of capacity (based on average daily flow)	0.00	0.00	0.00

The ECA does not require flow measurement nor does it list any design capacity. In accordance with condition 6(12) the Owner shall inspect the Works at least once a year and, if necessary, clean and maintain the Works to prevent the excessive build-up of sediments and/or vegetation. The owner is also required to maintain a log book to record the results of these inspections.

The IO requested the records regarding the annual inspection of the SWM Pond for the 2011 operating year. The review noted that the soil berm was completed as outlined in the previous Industrial Sewage Works Inspection Report and the SWMP inspections, completed by the Facility, and were recorded and available for review at the time of the inspection.

2.4 SAMPLING REQUIREMENTS

What are the facility's sampling requirements based on?

Certificate of Approval/Permit

Does the facility meet sampling requirements?

No

5. SURFACE WATER MONITORING AND RECORDING

(1) The *Owner* shall, upon commencement of operation of the *Works*, carry out the following effluent monitoring program. Composite samples comprised of three (3) or more equal volumes of grab samples from different locations of the pond shall be collected from the **SWM Pond at a monthly frequency** and analysed for the following parameters listed in Table 1:

Table 1 - Effluent Monitoring SWM Pond		
General Parameters	**Inorganics**	**Field Parameters**
BOD5	Arsenic	Conductivity
COD	Boron	Dissolved Oxygen
DOC	Cadmium	pH
Total Ammonia Nitrogen	Chromium	Temperature
Total Kjeldahl Nitrogen	Cobalt	
Nitrate - N	Copper	
Nitrite - N	Lead	
Total Phenols	Mercury	
Total Phoshorus	Nickel	
Total Suspended Solids (TSS)	Zinc	
E-Coli		
Oil & Grease		
pH		

Condition 5 of the ECA speaks to the requirements for monthly sampling of the SWMP. As part of the file review, the IO reviewed the 2011 Annual Report. Sampling data collected during the 2011 operating year was compared against Table 1 - Effluent Monitoring SMW Pond. The results of the comparison is outlined below:

- Samples were not collected during the months of January and February
- Nitrites were not analysed for the month of April, May, August, September, October and December
- Nitrates were not analysed for the month of May and October
- BOD5 was not sampled for the months of November & December
- Chemical oxygen Demand was not analysed for the month of May and October
- Conductivity was not analysed for the months of March, April, May, June, July, August and October
- pH was not analysed for the months of April and May.
- Temperature was not analysed for the sampling program in 2011.
- Dissolved oxygen was not analysed for the months of March, April, May, June, July, August, September, October and November
- The parameter "Oil & Grease" was not analysed as a total but rather only for vegetable and animal products during the months of March, April, May, June, August, September, October, November and December

Please see Section 5.0 of this Report**

9. GROUNDWATER MONITORING

Upon issuance of this *Certificate,* the *Owner* shall establish the following groundwater monitoring program with monitoring wells located as per Figure 1 - Shallow Unconfined Water Table Groundwater and Surface Water Monitoring Locations, dated June 30, 2009, prepared by Conestoga-Rovers Associates.

1) For the unconfined shallow groundwater aquifer, the *Owner* shall establish and maintain in accordance with O.Reg. 903, R.R.O. 1990, as amended from time to time, all existing eight (8) monitoring wells designated as: MW1-08 to MW5-08; and MW101 to MW103 and such wells that would be necessary for the appropriate monitoring of the groundwater quality.

2) For the confined deep bedrock aquifer, the *Owner* shall maintain in accordance with O.Reg. 903, R.R.O. 1990, as amended from time to time, all existing three (3) monitoring wells designated as: TW-4, TW-7, and TW-8 (within the Orgaworld Canada Ltd. site), and such wells that would be necessary for the appropriate monitoring of the groundwater quality.

4) The *Owner* shall collect groundwater samples twice per year - in May and November - from the

monitoring wells listed at subsections (1) and (2), and increase the sampling frequency to four times per year - in February, May, August and November - for the three new wells MW101, MW102, and MW103.

The Facility has currently completed the groundwater monitoring for the 2011 & 2012 operating year. A copy of the 2012 report will be provided to the Ottawa District in March 2013 and will be reviewed by the ministry's Technical Support Section for comments.

2.5 REPORTING REQUIREMENTS

What are the facility's reporting requirements based on?
Certificate of Approval/Permit

Does the facility meet reporting requirements?
Yes

Condition 10 of the said ECA -ISW outlines specific reporting requirements that must be completed by the Facility.

10. REPORTING

3) The *Owner* shall prepare a performance report on an annual basis, within **ninety (90) days** following the end of the period being reported upon. The first such report shall cover the first annual period following the commencement of operation of the *Works* and subsequent reports shall be submitted to cover successive annual periods following thereafter. The reports shall contain, but shall not be limited to, the following information:

(a) a description of any operating problems encountered and corrective actions taken;

(b) a summary of all maintenance carried out on any major structure, equipment, apparatus, mechanism or thing forming part of the *Works;*

(c) a summary of all effluent monitoring results undertaken in the reporting period;

(d) a summary of the quantity of leachate contaminated sewage that was hauled to a municipal sewage treatment plant and the number of times the contents of the SWM Pond were disposed in such manner;

(e) a summary of the calibration and maintenance carried out on all effluent monitoring equipment;

(f) all analytical results and water level elevations obtained from the groundwater monitoring, pursuant to condition 9; and

(e) any other information the *District Manager* requires from time to time.

In March 2012, the Company submitted the 2011 Annual Report as per the requirement under Condition 10 (3). As part of the inspection process, the 2011 Annual Report (Report) was reviewed for completeness and compliance with the above referenced condition.

Findings:

- Remediation works were completed on the berm (spring of 2011). No addition operating problems were encountered requiring corrective actions to be taken.
- No maintenance was carried out on any major structure, equipment, apparatus, mechanics, or think forming part of the Works (not including the remediation of the berm)
- No leachate contaminated sewage was hauled to a municipal sewage treatment plant during the 2011 operating year.
- No calibration or maintenance of effluent monitoring equipment was completed in the 2011 operating year as the

pond level reading device does not require calibration.
- The groundwater/surface water monitoring and compliance report will be submitted in March of 2013 (being prepared by Conestoga-Rovers & Associates)
- Effluent Monitoring Results - Appendix 1 - the results from the effluent monitoring comparison is outlined in Section 2.4 of this Report

---

As part of the reporting requirements for the Facility, the Site must also comply with Condition 6 & 7 of the ECA-ISW regarding Operating and Maintenance of the industrial sewage works systems.

Condition 6 & 7 - Operation and Maintenance

The ECA requires the Facility to develop and implement Operation and Maintenance Manuals for the two sections of the SWMP (Part II - Stormwater Management Works & Part III - Process Water Recirculation System). At the time of the inspection and as part of the file review, the IO requested to review the Operation and Maintenance Manuals for the Industrial Sewage Works System.

- Operation and Maintenance Manuals for the Industrial Sewage Works System was implemented as required
- A Spill Contingency and Pollution Prevention Plan was developed, implemented, and submitted to the ministry
- The Facility has operating procedures in place for routine operation of the industrial sewage works system
- The Facility has logbooks for recording inspection findings, maintenance activities, and/or repairs
- The Facility has also developed and implemented a complaint recording and responding procedures in the event an environmental complaint is received by a member of the public.

Note: At the time of the inspection the IO requested records of any environmental complaint received as a result of the operations at the Site. Facility representative stated that no complaints were received.

2.6 FLOW MEASUREMENT

Flow measurements are not required in the ECA.

2.7 MINISTRY SAMPLE RESULTS

Were Ministry samples collected during the inspection?
No

Reason:
At the time of the inspection no Ministry of the Environment samples were collected as the industrial sewage works system was not discharging to the natural environment.

2.8 FINANCIAL ASSURANCE

The facility holds financial assurance in accordance with Waste ECA #2766-7HEPSZ.

2.9 SPILL PREVENTION AND CONTINGENCY PLANS

Is the facility required to have a Spill Prevention and Contingency Plan (SPCP) as required by Ontario Regulation 224/07?
No

Has the facility had any spills since the last inspection?
No

Were all the spills reported to the ministry?
N/A

Does the facility's operations or spill history suggest that a SPCP be developed?
No

Comments:

As referenced in Section of this Report, the Facility has developed, implemented and provided a copy of the Site's Spill Contingency and Pollution Prevention Plan. No spills were reported to the ministry's Ottawa District Office or the Spills Action Centre.

3.0 REVIEW OF PREVIOUS NON-COMPLIANCE ISSUES

No remaining non-compliance issues were identified during the file review prior to the completion of this inspection report.

4.0 SUMMARY OF INSPECTION FINDINGS

Was there any indication of a known or anticipated human health impact during the inspection and/or review of relevant material, related to this Ministry's mandate?
No

Specifics:

Was there any indication of a known or anticipated environmental impact during the inspection and/or review of relevant material?
No

Specifics:

Was there any indication of a known or suspected violation of a legal requirement during the inspection and/or review of relevant material which could cause a human health impact or environmental impairment?
Yes

Specifics:

1.) The Site has failed to ensure all parameters outlined in Table 1 - Effluent Monitoring SWM Pond were sampled for each month.

2.) The Site has failed to ensure all monthly samples were collected for the 2011 operating year.

Was there any indication of a potential for environmental impairment during the inspection and/or the review of relevant material?
No

Specifics:

Was there any indication of minor administrative non-compliance?
Yes

Specifics:

5.0 ACTION(S) REQUIRED

The following action items require addressing by the Facility and must be implemented upon receiving this Report:

1.) Ensure samples are collected on a monthly basis as required by ***Condition 5 - Surface Water Monitoring and Recording***

2.) Ensure monthly samples are analysed for the parameters outlined in ***Table 1 - Effluent Monitoring SWM Pond***

1. 1.) Ensure samples are collected on a monthly basis as required by Condition 5 - Surface Water Monitoring and Recording
2. 2.) Ensure monthly samples are analysed for the parameters outlined in Table 1 - Effluent Monitoring SWM Pond

6.0 OTHER INSPECTION FINDINGS

None at this time.

Region:	Eastern		

1.0 INTRODUCTION

The facility is an aerobic composting facility that is approved to accept solid non-hazardous organic waste, as defined in their waste certificate of approval, for the production of compost. The Organic waste is brought to the facility, shredded, mixed and placed inside composting tunnels. Conditions within the tunnels are monitored and changed to ensure optimum conditions that promote aerobic composting. Once the material remains in the tunnels long enough for the temperature to reach 55 degrees Celsius for 3 consecutive days it is cooled down, removed from the tunnels and placed into a screener which separates the material in size fractions. The screener separates the material into 100+ (which includes large pieces of material that have not composted -branches, large pieces of incidental plastic), 10-100 material (which is medium sized material), incidental waste, and compost. The 100+ material might get sent to landfill or sent back to the shredder and enter the compost stream at the front of the line. The 10-100 material is used as inoculate and mixed in with fresh material in the Mixing Hall. The compost size material gets placed in the compost curing area where it is required to cure for 21 days, tested to ensure it meets all requirements under the certificate of approval and then removed from the site as finished compost.

Orgaworld Canada Ltd. first started accepting organic material at their site on January 28th, 2010. The Site is currently only receiving waste from the City of Ottawa source separated organics (SSO) collection program and leaf and yard waste program. The City of Ottawa is currently collecting the leaf and yard waste co-mingled with the SSO waste. It should be noted that the City of Ottawa started co-mingling their leaf and yard waste with the SSO organics and sending it to Orgaworld in April 2010.

The purpose of the inspection is to assess the sites compliance with their Waste Certificate of Approval (CofA) and applicable environmental legislation such as the Environmental Protection Act (EPA) and Reg 347 under that same act. The inspection consisted of a District file review, site visit and discussions with Greg Mariotti, site operations manager.

The following inspection report relies on information found in the district file, site observations and information gathered from conversations with Orgaworld staff. Although the time of inspection is listed as September 20th, 2010, the information in this report is also based on site visits done at the facility throughout the year.

An air facility inspection and an industrial sewage inspection were also carried out at the site. See respective reports for details.

2.0 INSPECTION OBSERVATIONS

Certificate of Approval Number(s): ● Yes ○ No
C of A Number(s): 2766-7HEPSZ, issued September 16th, 2009

2.1 SITE OPERATION:

Throughout this inspection report, the names allocated to the different areas within the processing building are as described in Figure 5.1 from the document titled: "Application for a Provisional Certificate of Approval for a Waste Disposal Site" dated June 2008.

General site observations from Sept 20th, 2010 :

10-100 material was piled in the Truck Hall, there was also some "fresh" waste that had recently been dropped off. The fresh material appeared to consist mostly of leaf and yard waste, the odd plastic bag was noted. Fresh material was also seen piled in the Receiving and Sorting Hall, a small amount of 10-100 material was seen in the eastern corner of the Receiving Hall. The Mixing Hall was approximately 3/4 full of 10-100 material. Tunnel #4 was being emptied, the front end loader was taking material from tunnel 4 to the screener.

Orgaworld is currently operating 6 compost tunnels. At the time of inspection tunnel #4 was being emptied. Tunnels #7 and 8 are shells, one is being used to store 10-100 material the other is being used to store curing compost.

There are two operating biofilters at the site and a third shell of a biofilter tunnel. Orgaworld has installed doors on the biofilter tunnel shell and has connected duct work to create a negative pressure in the tunnel and plans on using this as storage for 10-100 material or curing compost. This biofilter shell is not currently being monitored by the SCADA system.

According to staff, the increase in leaf and yard waste co-mingled with SSO has caused some operational challenges for Orgaworld as the material does not break down as easily. As a result Orgaworld has been accumulating a lot more 10-100 material than was expected. Orgaworld is selling this 10-100 material to some farmers as mulch.

At the start of operations the amount of SSO received was, on average, approximately 82 tonnes per operating day. The City of Ottawa decided to collect the City's leaf and yard waste co-mingled with the SSO waste. This greatly increased the volume and tonnage of material received. As an example, the site received, on average, approximately 292 tonnes per operating day in June, 2010.

On my site visit of September 20th, 2010, compost was being removed for the compost Curing Hall and loaded onto a truck. The compost will be brought to Orgaworlds compost storage site located in back of 3200 Rideau Rd, Ottawa. It should be noted that, as of November 29th, 2010 there is approximately 7,600 tonnes of compost at the storage site. Orgaworld is leasing this site from Tomlinson to store finished compost until buyers are found and ready to accept the compost.

At the time of inspection, the bay doors to the Processing Building were closed with the exception of one door from the compost curing hall because compost was being removed from the hall.

There were three piles of 10-100 material located outside the facility, these piles were side by side on the eastern side of the building. The piles were outside as a result of three separate fires that occurred inside the building. There has also been a fourth fire but the material was never brought outside. The company has been instructed to remove the material once it is deemed safe. Since then the material has been removed

from the site and sold as mulch.

Observations regarding some conditions in the CofA:

Condition 2. Service area, approved waste types, rates & storage.
- It should be noted that the company has appealed Conditions 2(i) and 2(ii) of the certificate of approval to the ERT. The Tribunal has not yet made a decision.
- Tonnage records were reviewed, no non compliances were noted.
- There have been some issues with outside storage of waste on site. The company has stored material outside as a result of 4 fires that occurred during the summer. This material has since been removed and the company has submitted a detailing the events and measures taken to prevent reoccurrence.

Condition 3. Signs
- Orgaworld has posted a sign at their front gate that complies with the condition.

Condition 5 Site Operations
- According to company officials no waste has been rejected.

Condition 6 Equipment and site inspections & maintenance
- Daily site inspections are conducted and a record is produced.
- The company has not yet created and implemented a preventative maintenance program for all on -Site equipment. See Air Inspection report for further action to be undertaken.

Condition 7 Quality criteria, testing & monitoring
- Every quarter there is an audit done of incoming SSO waste with the City of Ottawa. The company also does their own sampling of incoming waste.
- Finished compost sample results were reviewed, no non compliance issues were noted.
- Monitoring of the composting material is done electronically through a SCADA system.
- The odour monitoring program was received on October 30th, 2009. Since the start up of the operation the Ministry has received 3 odour complaints for the company. While it was not possible to conclusively determine the source of the odours, it is believed that the source is the pile of finished compost being stored at the compost storage site on Rideau.

Condition 8 Nuisance impact control & housekeeping
- A pressure washer is available inside the Truck hall in the event the trucks need to get cleaned.
- The company calls in a sweeping company to clean off the asphalt parking area if and when it gets dirty.
- the company has an agreement with an extermination company to handle vermin and vector.

Condition 9 Operations manual & staff training
- The Operations manual was received October 30th, 2009.

Condition 10 Emergency response and contingency plan
- The contingency plan was received on October 30th, 2009
- The plan in kept at the front office in a cabinet and is accessible to all employees.

Condition 12 Records keeping
- The company keeps an active excel sheet detailing the movement of waste through the process.
- The first annual report is due March 31, 2011

2.2 FINANCIAL ASSURANCE:

Financial assurance has been received by the company.
According to Condition 1(20) the company is required to have Financial Assurance of $727, 700. Should the

company increase their Maximum Approved Waste Processing Capacity to 150, 000 tonnes they will need to increase their financial assurance to $1,018,000.

2.3 SITE SERVICE AREA:

In accordance with Condition 2(1) the site may only accept solid non-hazardous domestic, commercial, institutional or industrial Organic Waste for the Province of Ontario and Quebec limited to the Organic Waste listed in Condition 2 of the Approval.

Site observations:

The facility is currently only accepting organic waste and leaf and yard waste from the City of Ottawa waste collection program.

2.4 APPROVED SITE CAPACITY:

Tonnage records have been reviewed from January 28th, 2010 to September 18th, 2010. No exceedences were noted.

Weight of the waste received is measured by a scale located on site. The data is inputted in two computerized databases, one for Orgaworld and the other for the City of Ottawa.

The Site has never had to reject a load of waste.

3.0 REVIEW OF PREVIOUS NON-COMPLIANCE ISSUES

This is the first time this facility is inspected by the Ministry.

4.0 SUMMARY OF INSPECTION FINDINGS (HEALTH/ENVIRONMENTAL IMPACT)

Was there any indication of a known or anticipated human health impact during the inspection and/or review of relevant material, related to this Ministry 's mandate ?

No

Specifics:

Was there any indication of a known or anticipated environmental impact during the inspection and/or review of relevant material ?

No

Specifics:

Was there any indication of a known or suspected violation of a legal requirement during the inspection and/or review of relevant material which could cause a human health impact or environmental impairment ?

1.0 INTRODUCTION

For Clarity within this report it should be noted that the Ministry of the Environment has restructured their approvals process. As of October 31st, 2011, all Certificates of Approval will be referred to as Environmental Compliance Approvals (ECA).

The facility is an aerobic composting facility that is approved to accept solid non-hazardous organic waste as defined in their waste ECA for the production of compost. Organic waste is brought to the facility, shredded, mixed and placed inside composting tunnels. Conditions within the tunnels are monitored and changed to ensure optimum conditions that promote aerobic composting. The compost size material gets placed in the compost curing area where it is required to cure for 21 days, tested to ensure it meets all requirements under the waste certificate of approval and then removed from the site as finished compost. All process air and air from the receiving hall is directed through pollution control equipment. Leachate generated as a result of the composting process gets recirculated, any excess is kept in on-site storage tanks.

Orgaworld Canada Ltd. first started accepting organic material at their site on January 28th, 2010. The Site is currently only receiving waste from the City of Ottawa source separated organics (SSO) collection program and leaf and yard waste program. The City of Ottawa has been collecting the leaf and yard waste commingled with the SSO waste.

The facility is approved to operate at a production limit of up to 150,000 tonnes per year of organic waste.

The following inspection report relies on information found in the district file, site observations and information gathered from conversations with Orgaworld staff. The site visit for the inspection was

conducted on September 19th and a follow visit was conducted on September 30th to review paperwork requirements.

The purpose of this inspection is to assess the sites compliance with their Industrial Sewage Works ECA and applicable environmental legislation such as the Ontario Water Resources Act (OWRA). The inspection consisted of a district file review, site visit and discussions with Greg Mariotti, site operations manager.

An air facility inspection and non -hazardous waste transfer processing inspection were also carried out at the site. See respective reports for details

Yes
C of A Number(s): 7251-8GKRPD issued May 30th, 2011

The current certificate was issued to include alterations to the outdoor stormwater drainage including the addition of a submersible pump, storage tanks and aerators on the pond.

Previous ECA's:

1- # 9465-7NVRWT issued September 16th, 2009
2- # 7032-88XPRA issued September 7th, 2010 - was issued to reflect changes in the on site monitoring wells.

2.1 WASTEWATER TREATMENT PROCESS DESCRIPTION

Stormwater is collected in an on-site open ditch system leading to a stormwater management pond that discharges off site to the Hawthorne Industrial Park ditch system which eventually leads to Findlay Creek.

Process water generated inside the building gets stored in leachate holding tanks buried on the East side of the building. Should the facility need to use water in their process (wetting the

composting material) they use the leachate from the storage tanks and/or water from the stormwater pond. Should the leachate tanks need to be emptied the company has been contacting Lacombe to pick up and dispose of the leachate. The HWIN generator number for the site is ON3338779, and indicates that the leachate is classified as waste class 270L. According to company officials the facility operates in a water negative environment in the summer but has found that they collect excess leachate in the winter.

2.2 EFFLUENT SUMMARY REPORT

What are the facility's effluent limits based on?
Certificate of Approval/Permit, None

Does the facility comply with its limits?
Yes

The ECA does not refer to any exceedance limits but refers to trigger parameters. Should the stormwater exceed any of the trigger parameters it would be considered leachate contaminated stormwater and would not be allowed to be discharged from the stormwater management pond.The stormwater management pond can only be discharged when sampling shows that the water does not exceed trigger levels listed in Table 2 of the Certificate.

Table 2
Trigger Parameters

Parameter	Trigger Level (mg/L if not specified)
Ammonia (unionized)	0.05
Nitrate-N (NO3-N)	2.93
CBOD5	15
Total Phosphorus	0.4
Total Suspended Solids	15
E-Coli	100 count/100 mL
pH	6.5 to 8.5
Temperature (maximum)	23°C

Condition 5(1) of the ECA requires the company to sample the effluent on a monthly basis for the parameters listed in Table 1. Results from sampling done from March to September 2011 were submitted. The following issues were noted:

- April sampling: exceedence of Total Suspended Solids
  no pH reading
- May sampling: not tested for ammonia
  not tested for nitrates
  no pH reading
- June sampling: no pH reading
- July sampling: exceedence of Ecoli

- September sampling: exceedence of Total Suspended Solids

According to file review the pond was discharged in March and April of 2011. The Ministry was contacted prior to discharge in April as the TSS trigger parameters was exceeded by 1mg/L. At the time of inspection, Greg also indicated that he plans on discharging this fall in order to ensure adequate storage space during the following spring snow melt.
See Section 5.0 Action Items

The ECA was amended on May 30th, 2011 to include the installation of aerators in the pond. These aerators were not installed at the time of inspection.

2.3 SEWAGE TREATMENT WORKS CAPACITY ASSESSMENT

Flow (m^3/day)	Year 1	Year 2	Year 3
Average daily flow	0.00	0.00	0.00
Maximum daily flow	0.00	0.00	0.00
Capacity Design	0.00	0.00	0.00
% of capacity (based on average daily flow)	0.00	0.00	0.00

The ECA does not require flow measurement nor list any design capacity. In accordance to condition 6(12) The Owner shall inspect the Works at least once a year and, if necessary, clean and maintain the Works to prevent the excessive build-up of sediments and/or vegetation. The owner is also required to maintain a log book to record the results of these inspections.

Daily site inspection records were reviewed at the time of inspection and were found to include pond site inspection findings.

2.4 SAMPLING REQUIREMENTS

What are the facility's sampling requirements based on?
Certificate of Approval/Permit

Does the facility meet sampling requirements?
Yes

Table 1 - Effluent Monitoring SWM Pond		
General Parameters	**Inorganic**	**Field Parameters**
BOD5	Arsenic	Conductivity
COD	Boron	Dissolved Oxygen
DOC	Cadmium	pH
Total Ammonia Nitrogen	Chromium	Temperature

Total Kjeldahl Nitrogen	Cobalt	
Nitrate-N	Copper	
Nitrite-N	Lead	
Total Phenols	Mercury	
Total Phosphorus	Nickel	
Total Suspended Solids (TSS)	Zinc	
E-Coli		
Oil & Grease		
pH		

2.5 REPORTING REQUIREMENTS

What are the facility's reporting requirements based on?
Certificate of Approval/Permit

Does the facility meet reporting requirements?
Yes

As per condition 10(3) of the ECA the facility submitted a performance report for 2010.

2.6 FLOW MEASUREMENT

Flow measurements are not required in the ECA.

2.7 MINISTRY SAMPLE RESULTS

Were Ministry samples collected during the inspection?
No

Reason:
Facility was not discharging at the time of inspection

2.8 FINANCIAL ASSURANCE

The facility holds financial assurance in accordance with Waste ECA #2766-7HEPSZ.

2.9 SPILL PREVENTION AND CONTINGENCY PLANS

Is the facility required to have a Spill Prevention and Contingency Plan (SPCP) as required by Ontario Regulation 224/07?
No

Has the facility had any spills since the last inspection?
No

Were all the spills reported to the ministry?
N/A

Does the facility's operations or spill history suggest that a SPCP be developed?
No

Comments:
The facility has spill kits on site and has submitted a contingency plan for odours, spills, fires, power failures and labour disruptions.

3.0 REVIEW OF PREVIOUS NON-COMPLIANCE ISSUES

The company has received an amendment to their ECA reflecting the alterations seen during the previous inspections. The Company has also disconnected their sump pump therefore no longer potentially requiring a permit to take water.

4.0 SUMMARY OF INSPECTION FINDINGS

Was there any indication of a known or anticipated human health impact during the inspection and/or review of relevant material, related to this Ministry's mandate?

No

Specifics:

Was there any indication of a known or anticipated environmental impact during the inspection and/or review of relevant material?

No

Specifics:

Was there any indication of a known or suspected violation of a legal requirement during the inspection and/or review of relevant material which could cause a human health impact or environmental impairment?

No

Specifics:

Was there any indication of a potential for environmental impairment during the inspection and/or the review of relevant material?

No

Specifics:

Was there any indication of minor administrative non-compliance?

Yes

Specifics:

Insufficient stormwater effluent monitoring.

5.0 ACTION(S) REQUIRED

1. Submit a report on the effluent monitoring explaining why the parameters noted in Section 2.2 of this report were not sampled for.

Submit all information required above to

RE: Orgaworld Organics Facility
Groundwater Assessment and Work Plan
5123 Hawthorne Road
City of Ottawa
Hydrogeologic Assessment

I have reviewed the Conestoga Rovers & Associates memorandum of July 16, 2014 concerning the assessment of groundwater impacts and proposed work program at the Orgaworld Organics Facility in Ottawa.

This memorandum identifies contaminants of concern to be ammonia, iron, manganese, dissolved organic carbon, sulfate, and total dissolved solids. Groundwater sampling and mapping isopleth mapping of ammonia, DOC, iron and manganese confirm that a plume extend north eastward originating in and around the northeast corner of the Organic Composting Facility. Shallow groundwater has been found to have very high levels of ammonia that poses a potential threat to surface water due to unionized ammonia toxicity.

In order to further assess this threat one additional shallow groundwater monitoring well called MW106 is to be constructed along the north site boundary west of MW5-09, as shown on Figure 1, to further delineate the western edge of the plume. Four staff gauges are to be installed in the ditch that runs along the north site boundary. Hydraulic testing of well is to be conducted to better determine the hydraulic characteristics of the shallow overburden and bedrocks aquifers. A topographic survey is to be completed to assist in determining potential groundwater surface water interactions. I agree with this work program, however, **ditch water sampling should begin immediately** to begin to assess the level of impact in the ditch given the high strength of ammonia found in groundwater. The Surface Water Unit should be consulted on this matter.

I agree with the groundwater remediation program. This program proposes to collect up to 15,000 litres of groundwater by installing an extraction well next to the ammonia scrubber where groundwater has been most heavily impacted. I assume that problems with the ammonia scrubber have been fixed. More extraction wells may be needed. Recirculation of extracted groundwater into the facility is an abatement matter.

March 18, 2015

Michael Rooke
Orgaworld Canada Ltd.
5123 Hawthorne Road
Ottawa, ON K1G 3Y3

Dear Sir:

RE: Implementation of Ontario Compost Quality Standards – Maturity & Foreign Matter
Orgaworld Ottawa Facility, 5123 Hawthorne Road, Ottawa
Environmental Compliance Approval No. 2766-7HEPSZ

On July 25, 2012 the Ministry of the Environment and Climate Change (MOECC) released revised standards for aerobic composting of organic waste materials in the province of Ontario entitled *Ontario Compost Quality Standards* ("Standards"). The Standards update and replace the *Interim Guideline for the Production and Use of Aerobic Compost in Ontario*, first released in November 1991, and last updated in 2004.

The Standards outline new categories of compost (AA, A, and B) with specific requirements for metals, quality of feedstock, pathogens, foreign matter and maturity. The MOECC implemented Phase I (metals, quality of feedstock and pathogens) of the Standards on January 1, 2013 with Phase II (maturity and foreign matter) to be implemented on July 1, 2015.

In preparation of the upcoming implementation date, the MOECC would like to engage Orgaworld Canada Ltd. in how the requirements of the Standards will be met.

By **May 1, 2015**, please submit an action plan outlining how the Orgaworld Ottawa Facility will comply with the implementation of Phase II of the Standards on July 1, 2015. The action plan should include, but not necessarily be limited to, the following:

1. Process and/or operational changes to the current operations at the Orgaworld Ottawa Facility that may be necessary;
2. Environmental Compliance Approval amendments required to reflect any required process changes or modifications;
3. Options to manage processed organic waste not meeting the *Ontario Compost Quality Standards*; and
4. Timelines associated with the actions necessary for the Orgaworld Ottawa Facility to be compliant with the Phase II *Ontario Compost Quality Standards*.

Please contact me if you have any questions or concerns with the above request and the implementation of Phase II of the Standards. A meeting can be arranged in the event Orgaworld Canada Ltd. would like to discuss this subject in further detail.

Sincerely,

Kyle Straberger

Kyle Straberger
Environmental Officer

Soil Management in Ontario

Internal Questions and Answers

July 18, 2014

Key Messages:

- Creating opportunities to build or renew infrastructure and redevelop brownfields sites benefits Ontario's economy. Effective, sustainable soil management practices are important to maintaining a healthy economy and environment.
- The Ministry of the Environment and Climate Change encourages the reuse of excess soil for beneficial uses as long as it can be done in a way that protects human health and the environment.
- The ministry has finalized a best practices guide for how to manage excess soil on large-scale projects to help provide clarity to site owners, developers and contractors and promote a consistent approach.
- While municipalities and Conservation Authorities are the main permitting agencies for soil management activities, the ministry is helping by releasing a guidance document that outlines best management practices for managing excess soil.
- The ministry consulted extensively with the public and stakeholders and carefully considered the feedback received through the Environmental Bills of Rights Registry prior to finalizing the guide.
- The Best Management Practices provides essential guidance on many aspects of excess soil management. Going forward, we will be reviewing the need for further policy for managing soil in ways that ensure public health and the environment are protected.

Questions and Answers for the District/Area Offices:

Enforcement

1. How will ministry staff enforce the Management of Excess Soil – A Guide for Best Management Practices?

Currently all soil management activities brought to the ministry's attention are assessed on a. case-by-case basis, using site specific information. The applicability of the guide will also be assessed on a case-by-case basis.

If the ministry determines there is a potential environmental concern, the ministry will examine each situation to understand how the guidance was applied or how it can be applied to the specific site.

District Engineers or Regional Technical Support staff may need to be consulted to assist in determining and/or verifying (based on the information that is provided by the Qualified

Person) if there is a potential for, or a confirmed adverse effect, associated with the excess soil management activity.

If there is a confirmed or potential for an adverse effect, ministry staff will ensure the site owners take appropriate actions to mitigate the impacts using the ministry's Compliance Policy – Applying Abatement and Enforcement Tools (May 2007).

2. **What tools are available to enforce the Management of Excess Soil – A Guide for Best Management Practices?**

All current abatement tools, such as both voluntary and mandatory abatement, following the ministry's Compliance Policy and Informed Judgement Matrix are available to Environmental Officers to address non-compliance situations.

If voluntary or mandatory abatement tools, such as letters or Orders are used to follow up on, or address issues or concerns regarding excess soil management activities, Environmental Officers are encouraged to incorporate language from the guide, as appropriate.

This will ensure a consistent approach is being utilized by District/Area offices across the province.

3. **Can an Environmental Officer order someone to follow the Management of Excess Soil – A Guide for Best Management Practices, or reference the document in an Order?**

Management of Excess Soil – A Guide for Best Management Practices is a guidance document that highlights the ministry's expectations of stakeholders when they are engaging in excess soil management activities from large-scale projects. While these expectations were created to help ensure compliance with ministry legislation, the document itself is not legally enforceable.

The authority to issue an Order is still dependent upon identifying legislative contraventions based on site specific information, or the need for preventative measures. The language and concepts found in the guide can be incorporated into an Order, but only in instances where the site specific information establishes the context for incorporating the guidance into that Order.

Generally there are three legislative areas that can address concerns regarding excess soil management activities:

- Contraventions of the general prohibition clauses for the discharge or presence of contaminants in the natural environment that cause or may cause an adverse effect under the Environmental Protection Act and Ontario Water Resources Act;
- Preventative measures to ensure there is no future adverse effect (under the Environmental Protection Act); and
- Contraventions of the general waste management provisions found in O. Reg. 347, General Waste Management Regulation and the Environmental Protection Act.

District/Area Offices can consult the Central Region Program Services Unit or their

Regional Counsel for advice when taking compliance actions or referencing the guide within an Order.

4. Can the ministry order a landowner to get a Record of Site Condition if they have received soil at the site?

Records of Site Condition are only required when a property is changing to a more sensitive property use. The ministry does not order landowners to obtain a Record of Site Condition unless it is legally required under the *Environmental Protection Act*.

Managing Soil as a Waste

5. When should excess soil be managed as a waste?

The determination of whether excess soil should be managed as a waste can only be made on a case-by-case basis.

For excess soil that is being transported from a ministry-approved waste management site (such as a transfer / processing site or soil remediation facility), the Environmental Officer should refer to the site's Environmental Compliance Approval for conditions related to where the excess soil can go when it leaves the site.

If soil is found to be inappropriate for re-use at a site or the excess soil has no beneficial re-use and is destined for final disposal, the soil should be managed as a waste.

The Management of Excess Soil – A Guide for Best Management Practices provides stakeholders with the best management practices the ministry considers reasonable for managing excess soil as a resource.

If it is unclear whether a proponent is managing excess soil in accordance with the guide, your District/Area Office management team and the Central Region Program Services Unit can assist in determining if the soil from a site is being managed in an appropriate manner.

Temporary Soil Storage and Receiving Sites

6. What procedures should the District/Area Office follow related to a proponent establishing a Temporary Soil Storage Site?

Before a District/Area Office offers guidance to a proponent planning to establish a Temporary Soil Storage Site, the proponent should confirm that they have already contacted the appropriate permitting body, such as the municipality or conservation authority.

The permitting authority will advise the proponent whether the proposed site is appropriate for use as a Temporary Storage Site, and may also suggest or provide the proponent with site-specific conditions.

If the permitting authority is satisfied with the establishment of the site, the ministry should direct the proponent to follow the Management of Excess Soil – A Guide for Best

Management Practices for the operation of the site.

If appropriate, ministry staff can issue a preventative measures Order under Section 18 or 157.1 of the Environmental Protection Act to establish the conditions of the site so that they can be legally enforced. Prior to using an Order, ministry staff should consult with Regional Counsel.

7. How can the ministry establish financial assurance for Temporary Soil Storage Sites and Receiving Sites?

If the ministry determines that financial assurance is required, the District or Regional Office can issue an Order under *the Environmental Protection Act*. The Order should take into account the specific characteristics of the site to determine the amount of financial assurance required.

Risk Assessments

8. Is a risk assessment required for a proponent to assess the quality of soil being received at a site?

No, a risk assessment is not required for all sites receiving soil.

A Qualified Person is hired to make decisions for excess soil management and should be someone who can exercise professional judgment based on their experience. This is so that they can advise on appropriate reuse options for the excavated or excess soil, based on the appropriate soil analysis and characterization.

If the risk assessment is to be conducted and a Record of Site Condition is filed, the guide does not apply, and the soil management requirements highlighted under Part XII of Ontario Regulation 153/04 take precedent.

District/Area Office Training

9. Will there be any additional support and training for ministry staff related to the Excess Soil Management – A Guide for Best Management Practices?

Please contact Jonathan Fernandes, Central Region Program Services Unit at 416-326-5686 or jonathan.fernandes@ontario.ca for further assistance, clarification and interpretation of the document.

Central Region's Program Services Unit staff offer training sessions coordinated through the District/Area Office management teams. Contact your local District/Area Office for more information.

District/Area Office

1. What is included in the Excess Soil Management – A Guide for Best Management Practices?

While municipalities and Conservation Authorities are the main permitting agencies for soil

management activities, the ministry has developed a guide that highlights best practices for excess soil management activities.

The document provides guidance on how to handle excess soil generated from large-scale projects that is transported to sites where it can be reused for a beneficial purpose.

Excess soil management options in the guide include:

- direct reuse at the site where the soil was excavated
- on or offsite treatment of soil for reuse
- reusing excess soil at a construction or development site where imported soil is required for purposes such as site alteration, filing in depressions/excavations or re-grading
- managing excess soil at a ministry-approved soil recycling, processing or treatment facility
- reusing excess soil at a commercial fill site; or
- use as daily cover at a ministry-approved waste disposal site.

2. Why did the government develop the new guidance?

The guide was developed in response to concerns from stakeholders such as municipalities, conservation authorities, the construction industry, environmental consulting firms, and environmental non-governmental organizations.

While municipalities and Conservation Authorities are the main permitting agencies for soil management activities, the ministry has developed a guide that highlights best practices for excess soil management activities.

The guide will assist in establishing a consistent approach to managing excess soil for beneficial uses as well as avoid unnecessary disposal of soil in landfills.

3. What will change from what's currently being done?

The ministry provides guidance on excess soil management activities on a case-by-case basis.

The Best Management Practices guide details the ministry's expectations for those who manage excess soil to help ensure a consistent approach across the ministry.

The guide also encourages reuse for beneficial purposes to prevent excess soil from being unnecessarily disposed of in landfills.

4. Who will be affected by the proposed new soil management guidance?

Anyone engaging in excess soil management activities is responsible for ensuring excess soil is managed in an environmentally sound manner and according to all regulatory requirements. This includes municipalities, developers and owners of source and receiving sites.

5. How will the Best Management Practices help industry involved in the redevelopment of a site?

The Best Management Practices guide details the ministry's expectations for those who manage excess soil to help ensure a consistent approach across the ministry. The document can be used by site owners, developers and contractors as well as municipalities, government ministries and agencies.

The guidance document may help industry reduce trucking and disposal costs in the longer term by encouraging beneficial reuse of excess soil rather than disposal in landfill sites.

Municipalities and Conservation Authorities are encouraged to incorporate these best practices when issuing permits and approvals to assist those managing excess soil in a consistent manner.

6. Why does the Excess Soil Management – A Guide for Best Management Practices focus on large-scale projects when the majority of soil management in Ontario is related to small-scale projects?

The proposed best management practices are not intended to apply to:

- small-scale construction projects, such as small parking lots, recreational paths, and playgrounds.
- maintenance and construction activities at single-dwelling residential properties such as building a swimming pool or landscaping activities; or
- activities associated with small-scale municipal road work or sewer and water main construction such as minor or localized repairs of underground utilities.

Anyone can use the Best Management Practices concepts for construction projects that generate excess soil. Homeowners are not expected to incur the cost of retaining a Qualified Person for small-scale projects. That is why the focus is on large-scale projects.

7. Why isn't the government developing a full policy to address all soil management activities in Ontario?

The Best Management Practices guide is intended to advise municipalities and others on the types of requirements to be considered when developing provisions for managing excess soil.

This guidance can be used to inform municipal by-laws, municipal site alteration permits and contracts involving the movement of excess soil.

The ministry also will review the need for further policy for managing excess soil in ways that ensure public health and the environment are protected.

Municipalities and Conservation Authorities have the authority to develop by-laws and issue permits for soil management activities.

8. How will the ministry encourage use of the best management practices?

While drafting the best management practices, the ministry consulted a broad range of stakeholder groups including municipalities, roads associations, waste associations, the engineering community and developers.

The ministry will encourage the use of these best practices by posting of our guide on our ministry website and outreach activities with anyone who is involved in soil management. We will also coordinate an implementation plan that includes compliance information and additional guidance and support.

The ministry will provide support to stakeholders to ensure the best management practices guide along with any relevant ministry legislation is being interpreted and applied appropriately. This includes the potential for ministry staff to conduct site visits at construction sites where excess soil is being generated.

9. When will a broader policy framework for soil management be developed?

We will be reviewing the need for further policy for managing soil in ways that ensure public health and the environment are protected.

In the meantime, the ministry encourages the use of the Best Management Practices guide for anyone involved in managing excess soil.

Any future policy development will build on the best management practices, what we heard when we consulted on it, and ongoing engagement with the public, stakeholders and other ministries.

10. Who enforces soil management?

In most cases, municipalities and conservation authorities oversee soil management by issuing permits and approvals to assist those managing excess soil in a manner consistent with the rules of the jurisdiction.

They also enforce compliance with the permits and approvals they issue.

11. How will the new Best Management Practices for soil management be enforced?

The Best Management Practices document sets out the ministry's expectations for managing excess soil generated from large-scale projects.

Where environmental concerns are identified at a site, the ministry may assess all soil management activities. This includes those occurring at the excavation site, during transportation or at sites where the soil is received. The ministry may take action as required.

Anyone handling excess soil must meet all current provincial laws as they apply, as well as any applicable bylaws and permitting requirements established by local municipalities and/or conservation authorities.

These best practices are intended to complement existing approvals under

provincial legislation and municipal bylaws.

Municipalities and Conservation Authorities are encouraged to consider the concepts set out in the guide when issuing permits or licenses, or establishing soil management by-laws or policies, and to make use of them as appropriate. Municipalities and Conservation Authorities may also initiate their own compliance activities based on their jurisdictional authority.

12. Who is responsible during the planning stage of a project?

Municipalities have the authority to determine where soil can be used in their jurisdictions.

Soil conservation and management should be integrated into all aspects of the planning and development process, from the initial concept through permitting, construction, transportation and reuse of excess soil.

The ministry encourages municipalities, conservation authorities and other regulatory bodies to address soil management activities from a planning perspective to complement these best management practices.

13. Why has the ministry accepted to undertake a review of the need for additional policy related to the management of compromised soil?

The ministry has developed the Best Management Practices guide to encourage a consistent approach to the management of excess soil. The ministry will be reviewing the need for further policy for managing soil in ways that ensure public health and the environment are protected. This review will build on the Best Practices, assessing the need for additional policy to support implementation of soil management in a manner consistent with the recommendations set out in the Best Practices guide.

14. Will additional guidance be available?

The ministry is coordinating an outreach and implementation plan that will include additional support and guidance for anyone involved in or responsible for managing excess soil.

The ministry is also supporting industry as they lead the development of complementary industry codes of practice for their sector.

The ministry will also be seeking opportunities to work with stakeholders to develop and promote the best management practices.

15. Does the Best Management Practices Guide consider invasive species?

The guide highlights that considerations should be given to controlling the introduction and spread of invasive species during all excess soil management activities. Please refer to the Ontario Invasive Species Strategy Plan 2012 and the Ontario Invading Species Awareness Program developed by the Ministry of Natural Resources and Forestry for more information.

16. Does the Best Management Practices Guide include compost?

Compost does not meet the definition of soil as described in the guide and is not intended to be addressed by these best management practices. The ministry has developed Compost Quality Standards and a Guideline for the Production of Compost in Ontario that includes best management practices.

17. When will the ministry address other soil management issues, including road building, pits and quarries?

These specific issues require longer-term consultation and policy development involving other ministries and jurisdictions.

For example, the Ministry of Natural Resources regulates quarries and gravel pits in Ontario. The ministry provides input to the Ministry of Natural Resources on how these materials can be managed on a case-by-case basis. Soil management activities at road construction projects may involve both the municipalities and the Ministry of Transportation. These activities will also be reviewed by the ministry on a case-by-case basis.

18. Why isn't Ontario adopting a soil mapping and soil reuse strategy to promote soil banking like the Netherlands?

The Netherlands has a regulatory framework for soil management which provides clear rules for where excess soil can be placed. The country is divided or mapped out into "soil zones" that allow soil to be moved within its zone so that the same types of soil remain within their specified zones. The Netherlands is not comparable to Ontario with respect to size or geography or the history which lead to their comprehensive soil policy.

The ministry wants to see excess soil put to beneficial uses where possible and not end up in landfill sites. That is why we are providing the Best Management Practices guide to stakeholders.

Soil banking is considered an option for soil management. Considerations for soil mapping may be discussed as part of a broader policy review related to soil management.

19. Does the proposed Best Management Practices document provide standards for receiving soil?

The Best Management Practices provide guidance for Qualified Persons to determine whether the excess soil is suitable for reuse or disposal. This is based on a site-specific evaluation of the receiving site by the Qualified Person to determine what concentration of contaminants is appropriate.

20. How will the Best Management Practices help landowners receiving excess soil such as municipalities?

The Best Management Practices guide requires a Qualified Person to oversee excess soil management activities at the source site. This will help ensure that soil going to receiving sites is of acceptable quality and will not cause an adverse effect in the local community.

Municipalities can use the Best Management Practices for their procurement activities. This includes road building and issuing approvals or permits.

21. How is "soil" defined in this guidance? Does this apply to asphalt and concrete or other aggregate products?

Soil is defined as naturally-occurring mineral particles and material resulting from the natural breakdown of rock or organic matter. The soil particles are smaller than two millimeters, or pass the U.S. Number 10 sieve.

The guide is not intended to apply to other materials such as engineered fill products, asphalt, concrete and reused or recycled aggregate products.

22. Why doesn't the ministry just refer to the existing standards? What is the difference?

Generic brownfield standards were developed using technical assumptions in order to meet specific objectives, for the filing of a Record of Site Condition.

Ontario's brownfield standards are not intended to address overall soil management activities in Ontario. They were created using scientific models and a policy framework designed for the clean-up of brownfields. There are several factors used in the development of these standards that do not apply to the management of excess soil. These standards may not be appropriate for overall soil management and would require a site specific evaluation to determine their appropriateness.

The best practices provide guidance to Qualified Persons on the considerations that must be taken into account when applying these brownfields standards to overall soil management activities, such as assessing the acceptability of the use of the standards at sites receiving excess soil.

23. How much time/effort is needed to develop soil management standards?

Developing new standards requires clear policy objectives and principles, in addition to the time required to undertake a sound scientific process. The development of standards also requires time to consult extensively with stakeholders.

The ministry will examine options for the development of standards as part of the review for the need for further policy for managing soil in ways that ensure public health and the environment are protected.

In the meantime, the ministry has developed the best practices guide for managing excess soil on large-scale projects to promote a consistent approach by site owners, developers and contractors.

24. Why doesn't the Best Management Practices make specific reference to the

assessment of soil types at receiving sites to see if they are appropriate for reuse?

The Best Management Practices guide advises that all assessment work should be conducted by a Qualified Person.

Qualified Persons have the expertise to determine when soil brought to the property is appropriate for reuse and does cause an adverse effect. The Qualified Person's assessment would also examine the compatibility of soil types as part of their standard assessment work.

The Qualified Person may need to consult with other experts to decide on the intended beneficial reuse of soil, such as an agrologist if soil is to be used for an agricultural purpose.

25. Why doesn't the guidance in the best practices reflect Ontario's brownfields regulation?

Ontario's brownfields legislation applies to sites that are being redeveloped to a more sensitive property use, such as a former industrial site being redeveloped for a new residential subdivision.

The regulatory framework and standards under the brownfields legislation were developed to ensure the site is appropriate for the intended new property use, and was not intended to apply to overall soil management activities.

Sites that are accepting excess soil and are planning to submit a Record of Site Condition for filing under the brownfields legislation must follow the soil management provisions within that legislation.

The best management practices are not legal requirements and do not apply to anything related to the filing of a Record of Site Condition.

26. Are there areas in the ministry where placing soil should be banned (e.g. Oak Ridges Moraine)?

The ministry encourages the reuse of excess soil for beneficial uses as long as it can be done in a way that protects human health and the environment.

Placing large amounts of excess soil should be done knowing where the soil came from, the quality of that soil and whether that quality of soil is appropriate for the location at which it is being placed. There should be no adverse effect on the site where the soil is placed.

The ministry will continue to work with stakeholders to advise on managing excess soil, including near environmentally sensitive areas. Decisions on where excess soil can be reused will be made on a case-by-case basis.

27. Why doesn't the ministry stipulate where soil can go?

The placement of excess soil may be subject to a number of restrictions imposed by the

ministry, a municipality, conservation authority or as a result of contractual arrangements.

Depending on the circumstances, the province's waste management provisions or regulations for the redevelopment of brownfield sites will apply.

Municipal by-laws may further restrict where and what quality of soil is placed at a property, and Conservation Authorities further regulate site alteration within their regulated areas. It is also appropriate for the receiving property owner to understand the quality of soil received and to ensure that no adverse effect results.

The ministry encourages the reuse of excess soil in a sustainable manner. The ministry has developed a Best Management Practices guide to help those who generate or receive soil decide on how best to manage that excess soil.

28. Will the government allow there to be a certain level of contamination on clean properties as part of a soil management policy?

The Best Management Practices guide advises that assessment work should be conducted for each receiving site by a Qualified Person.

Qualified Persons have the expertise to determine that the excess soil brought to the property is appropriate for reuse and will not cause an adverse effect to the property.

The Qualified Person's assessment would include soil quality and compatibility of soil type as part of their standard assessment work.

In general, those managing excess soil should seek out sites that are of compatible land-use types. Where possible, those managing excess soil should avoid the introduction of new contaminants at the receiving site and take measures to avoid increasing the concentration of an existing contaminant at a receiving site.

29. Provinces like Quebec mandate soil treatment prior to reuse. Why doesn't Ontario do the same?

The ministry encourages soil treatment if necessary to enable excess soil to be reused. The ministry will continue to promote innovative approaches to soil treatment.

30. Why doesn't the ministry ensure that municipalities use a consistent approach?

While the ministry is not developing a model by-law, the best practices are intended to complement municipal by-laws, such as site alteration, noise and traffic by-laws.

Municipalities are encouraged to consider the concepts set out in the best practices when issuing permits or licenses, or establishing by-laws or policies for soil management, and to make use of them as appropriate.

31. What's wrong with sending soil to landfill? Can't it be used as cover?

Yes – some excess soil can be used by landfill sites as cover material. The ministry is encouraging the reuse of excess soil to keep soil that can be reused from taking up space in landfill sites.

The ministry encourages the reuse of excess soil for beneficial uses as long as it can be done in a way that protects human health and the environment.

32. What's wrong with accepting a small amount of soil on my farm property if it does not cause an adverse effect?

The ministry encourages the reuse of excess soil provided that its reuse does not cause an adverse effect or impair water quality. Placing a small amount of soil on farm property is acceptable as long as the quality is appropriate and it does not cause an adverse effect.

Property owners accepting soil should consult their local municipality to determine if a permit is required.

Property owners may also consult qualified professionals to help determine the soil quality is appropriate for their property.

33. What are the next steps?

The Best Management Practices guide is available through the ministry's website. The ministry will support the guide with an implementation plan, and will work with municipalities, developers, industry associations and Qualified Persons to provide additional guidance and oversight.

In addition, the ministry will be reviewing the need for further policy for managing excess soil in ways that ensure public health and the environment are protected.

Qualified Persons

34.What is a "Qualified Person"?

Qualified Persons are defined under the ministry's brownfields legislation and are generally professional engineers and geoscientists. They are licensed under the *Professional Engineers Act*, or are members of the Association of Professional Geoscientists of Ontario.

A Qualified Person who is hired to make decisions for excess soil management should be someone who can exercise professional judgment based on their experience. This is so that they can advise on appropriate reuse options for the excavated or excess soil, based on the appropriate soil analysis and characterization.

35. What criteria are Qualified Persons using?

Qualified Persons use their professional expertise and judgment to determine the most appropriate criteria for a site on a case-by-case basis.

36. Can a Qualified Person assess a property they own or are engaged in?

Qualified Persons should not assess properties that they or their employers have a direct or indirect interest in, as this would be a conflict of interest.

37. Will the cost of ensuring that soil is tested and Qualified Persons are involved deter proponents of development projects from building in Ontario and cost Ontario jobs?

The initial short-term costs for work done at the source site may be balanced against the longer term reduced costs for trucking and shipping excess soil to landfill, especially if the excess soil can be temporarily stored or reused for beneficial purposes.

By following the best practices guide, the development community will also avoid the risk of incurring costs to address improper soil management activities.

38. What types of soil does the Best Management Practices guide address? Who determines that?

It is the responsibility of all parties who excavate, transport, receive or store excess soil to ensure that the excess soil is being managed in an environmentally sound manner in accordance with all regulatory requirements.

The guidance sets out the ministry's expectations for all those managing excess soil to support safe and sustainable soil management and reuse while promoting consistency across the province.

Fill Sites in Ontario

39. Doesn't this guidance actually encourage contamination of commercial fill sites receiving excess soil?

Commercial fill sites are permitted through local municipalities or conservation authorities.

It is the responsibility of all parties who excavate, transport, receive or store excess soil to ensure that the excess soil is being managed in an environmentally sound manner in accordance with all regulatory requirements.

The guidance sets out the ministry's expectations for all those managing excess soil to support safe and sustainable soil management and reuse while promoting consistency across the province. This includes best practices that can be applied to a commercial fill site.

Municipalities and Conservation Authorities are encouraged to incorporate the best practices when issuing permits and approvals to assist those managing excess soil in a consistent manner.

40. Why isn't the ministry taking stronger action in regulating fill sites?

Many municipalities and conservation authorities have permitting requirements for fill

sites. Municipalities and Conservation Authorities are encouraged to incorporate the best practices when issuing permits and approvals to assist those managing excess soil in a consistent manner.

If environmental concerns are identified at a site, the ministry may assess all activities related to excess soil management, including those occurring at a fill site and may take appropriate actions when necessary under the ministry's legislative mandate. This may include issuing orders.

41. Some municipalities are including the ministry's soil standards in their fill permits, such as Table 1 and Table 2, but it's not consistent. Why doesn't the ministry just tell municipalities what standards to use?

Some municipalities refer to Table 1 and Table 2 from the ministry's brownfields standards in their fill permits. However, the brownfields standards are not intended to address overall soil management activities in Ontario.

Rather than focus solely on standards, the ministry has developed a Best Management Practices Guide. The guide details the ministry's expectations for municipalities and others who manage excess soil. This will help ensure a consistent approach to managing large-scale construction projects. It will also encourage reuse of excess soil for beneficial purposes while providing flexibility at the local level.

The ministry will also be reviewing the need for further policy for managing excess soil in ways that ensure public health and the environment are protected.

42. The Ministry of Natural Resources requires only Table 1 soils to be used to rehabilitate former pits and quarries. Why doesn't the Ministry of the Environment and Climate Change use Table 1 standards in the Best Management Practices?

Table 1 is part of the Ministry of the Environment and Climate Change's brownfields legislation. It represents the background concentrations of metals and other substances in typical Ontario soil not affected by industry or other sources of contamination. It is intended to be applied to brownfields sites planned for redevelopment.

The Ministry of Natural Resources applies this standard as part of its legislation and policies used to rehabilitate former pits and quarries. It would be best to contact the Ministry of Natural Resources for further information on their specific legislation and policies.

The ministry supports the beneficial reuse of excess soil to help prevent the unnecessary disposal of excess soil in landfills. The use of only Table 1 for all soil management activities may limit the amount of excess soil that can be reused in an environmentally sustainable way. Discussions like this will be part of the broader review of soil management policy options.

43. Will the ministry place a moratorium on fill sites while consulting on the proposed guidance?

No. We have developed the Best Management Practices to clarify the rules and

requirements related to key excess soil management activities in Ontario.

When the ministry receives information about a site that may be causing an environmental impact, the ministry will follow up to make sure the environment is protected.

44. How can residents living near fill sites be sure their drinking water is safe?

When the ministry receives information about a site that may be causing an environmental impact, it will follow up to make sure the environment is protected. If you have concerns, contact your local ministry office.

45. What is being done to ensure soil coming into a commercial fill site is free of contaminants?

The agency that grants the permit to the site operator (such as the municipality or conservation authority) can hire a Qualified Person to determine what soil is suitable for the site.

The ministry will take action as required to make sure fill operations do not have the potential to cause an adverse effect.

46. What happens to soil that exceeds the brownfields standards?

The brownfield standards are not intended to address overall soil management activities. For example, the brownfield standards are based on assumed contaminant volumes and loadings and do not account for wide variance in soil volume and contaminant loadings which may occur with general soil management.

When considering the applicability of the brownfields standards for use at a particular site, it is important to note that elevated concentrations of contaminants when compared to the standards do not necessary imply that:

- there is a risk to human health or the environment;
- remediation is required; or
- excess soil should be considered a waste.

An elevated concentration when compared to the standards may suggest that additional site-specific studies, evaluations or assessments are warranted. These additional site-specific studies, evaluations or assessments should, at a minimum, be done in accordance with the best practices.

47. What powers do municipalities have to address soil management?

Municipalities are accountable and responsible governments and have the authority to regulate fill based on local needs.

The *Municipal Act*, 2001 provides municipalities with authority to prohibit or regulate the

placing or dumping of fill, removal of topsoil, alteration of the grade of the land and to establish fees and charges for its services and activities. Municipalities are using this authority to require studies, permits and conditions.

The *Planning Act* provides the legislative framework for municipalities to regulate the uses of land, buildings and structures. The *Planning Act* also provides municipalities with the authority to require that soil management reports be included, in certain circumstances, as part of the information and material to support an application when planning approvals are sought in respect to a development proposal.

48. What is an adverse effect?

As defined in the *Environmental Protection Act,* adverse effect refers to:

- Impairment of the quality of the natural environment for any use that can be made of it;
- injury or damage to property or to plant or animal life;
- harm or material discomfort to any person;
- an adverse effect on the health of any person;
- impairment of the safety of any person;
- rendering any property or plant or animal life unfit for human use;
- loss of enjoyment of normal use of property, and
- interference with the normal conduct of business.

49. Who will provide oversight for temporary soil storage sites?

In most cases, municipalities and Conservation Authorities would oversee Temporary Soil Storage Sites by issuing permits and approvals to assist those managing excess soil in a manner consistent with the rules of the jurisdiction.

They also enforce compliance with the permits and approvals they issue.

50. Is the government considering the development of a model by-law?

While a model by-law is not being considered at this time, municipalities are encouraged to consider the concepts set out in the guide when establishing soil management by-laws where appropriate. The ministry will also provide support to any municipality seeking to develop a by-law based on the concepts found in the guide.

51. How will the ministry ensure that anyone who establishes Temporary Soil Storage Sites won't abandon these sites and leave potentially contaminated soil piles behind?

Temporary soil storage sites must have the appropriate approvals issued by the municipality or the conservation authority. This includes ensuring the site is appropriately zoned for this use.

If environmental concerns are identified at a site, the ministry may assess all activities related to soil management, including those occurring at a commercial fill site. The ministry may take appropriate action as necessary, including issuing orders.

Inspection Follow-up Email - Information Request

Straberger, Kyle (MOECC) <Kyle.Straberger@ontario.ca>

Fri 2018-03-16 2:30 PM

To: David Veinot <dveinot@orgaworld.ca>; Brian Begg <bbegg@orgaworld.ca>; Andre Boucher <aboucher@orgaworld.ca>;

Hi Andre, David and Brian,

Thank you for your time and cooperation during the ministry's inspection of the Orgaworld Ottawa Facility. As discussed during the inspection, please provide the following information as part of the inspection:

1 - Training Protocol for employees including re-training
2 - 2017 Mass Balance
3 - Sample results for the 2017 operating year including off-site discharge
4 - Operation and Maintenance Manual records:
  - 4a Copy of the Operation and Maintenance procedures for the bioscrubber and biofilters
  - 4b Inspection, repair and maintenance records for each for the following dates (date includes daily, weekly, monthly, quarterly)
    - January 18th, 2017, March 15th, May 1st, July 3rd, September 29th, November 30th
  - 4c Process data for bioscubber and biofilters for the dates outlined above
5 - Confirm copy of original ESDM report that accompanied ECA No. 1631-A2ELCQ
6 - Confirm copy of original Acoustic Assessment report that accompanied ECA No. 1631-A2ELCQ
7 - Complaint protocol for receiving and responding to complaints from the public (ECA No. 1631-A2ELCQ)
- Sampling results for the 2017 operating year, including off-site discharge, from the industrial sewage works

Let me know you if you have any questions.

Thanks,

Kyle Straberger

Environmental Officer

Ministry of the Environment and Climate Change

Please consider the environment before printing this email.

8.0 COMPLAINT RESPONSE PROTOCOL

If complaints are received in relation to the Site or Site operations, information pertaining to the complaint will be recorded and a response protocol will be initiated in three steps as per the C of A (Air) as follows:

Step 1: Record of Complaint

The information collected regarding the complaint will be:

- Contact information of the complainant
- Time, date, and location of the complaint
- Complainant's identification of the characteristics of the odour and any information indicating relative strength compared to other events
- Operational activities during the time of the complaint
- Wind direction, weather conditions, and temperature

To gather additional information regarding the characteristics of the odour source, the Site Manager will ask for permission of the complainant to send Site personnel to the location of the complaint to provide additional characterization of the odour source. This is a component of the Complaints Response Protocol developed for two reasons: to validate the odour as originating from the Facility and, if this validation is provided, to assess the likely source of the odour from the Facility. This will facilitate identification of Facility components that are potentially responsible for the odour emission. Complainants will also be invited to visit the Site to allow them to see and smell the Facility's operations and more accurately provide feedback.

When the odour issue is resolved, the Site Manager will fully investigate the situation and determine procedures to be enacted to prevent reoccurrence. All newly implemented procedures will be fully communicated to Site employees.

Step 2: Investigation and Handling of Complaint

The following outlines the procedure for notifying the MOE of odour and noise-related issues. All events in relation to odour and noise that are beyond the normal operating conditions are recorded. These records are available to the MOE upon request. The MOE District Manager will be immediately notified in case of a situation that could potentially lead to significant increases in odour and noise generated.

In case of process discrepancies, the following procedures are adhered to:

Extent of Process Aberration	*Notifying Procedure*
Aberrations which are: not influencing processing ability; and do not cause significant increase of odour and noise generated.	Event and responsive actions recorded in Site logbook or electronic file Immediately informed are: Facility Site Manager
Aberrations which may: potentially lead to significant increase of odour and noise generation	Event and responsive actions recorded in Site logbook or electronic file Immediately informed are: Facility Site Manager Senior Operations Manager MOE District Manager

Each complaint will be recorded using a computerized tracking system and will include the following information:

- Name, address, and telephone number
- Time and date of complaint
- Waste management activities undertaken at time of complaint
- Details of complaint
- Actions taken to remediate the cause of complaint
- Proposed actions to be taken to prevent reoccurrence in future

A record of all activities taken to mitigate the odour source will be recorded. All procedures developed to prevent reoccurrence will also be recorded.

The MOE Ottawa Regional Office will be notified of a complaint made by a member of the public. All appropriate steps will be taken to eliminate the cause of the complaint and to prevent reoccurrence.

As per C of A (Waste Disposal Site) requirements, a designated representative will be available to receive complaints 24 hours per day, 7 days per week. Information regarding this hotline will be displayed on signage at the entrance to the Facility. The MOE's Spill Action Centre will be notified immediately of all complaints received at the Site. Upon successful resolution of the complaint OCL will within 3 business days provide, a written

report to the District Manager identifying the source of complaint and details of what action was taken to rectify problem and prevent recurrence.

Step 3: Suspension of Operation

OCL acting on orders from the District Manager will suspend the receipt of organic wastes and/or suspend operations of the Facility in conjunction with the Emergency Response and Contingency Plan should the District Manager deem this action to be required to satisfy an occurrence of valid and substantiated odour complaints.

DAILY SITE INSPECTION RECORD

DATE : Nov. 30/17 TIME : 7:30 AM

NAME : Jessica SIGNED : Jessica Black

INSPECTION ITEM	OK	Not OK
1. Parking lot area for evidence of run-off from the facility.	✓	
2. Loading/unloading area of the leaf & yard waste storage pad.	✓	
3. Air pollution control equipment in operation.	✓	
4. Building secure with all doors closed where required.	✓	
5. Security fence and property line secure.	✓	
6. Odour detected at property line.	✓	
7. Presence of leaks and drips from waste delivery trucks outside building.	✓	
8. Presence of excessive fugitive dust emissions from the on-site roads or compost.	✓	
9. On and off-site litter.	✓	
10. Presence of vector and vermin.	✓	
11. Pond.	✓	
12. Pond drain/culvert (flow).	✓	
13. Presence of birds on-site and near/at the storm water pond. Approximate number: 0 Ducks 0 Geese	✓	

List below actions taken to correct any deficiencies.

(NOTE – an item assigned a "Not OK" check-mark above shall be entered below with an action:

ITEM #	CORRECTIVE ACTION TAKEN	DATE	TIME

Continue on other side of inspection sheet if necessary.

Emission Summary and Dispersion Modelling Report

Orgaworld Canada Ltd
Ottawa, Ontario

ORIGINAL 2014 ECDM
ON FILE AT FACILITY

Conestoga-Rovers & Associates
651 Colby Drive
Waterloo, Ontario N2V 1C2

May 2014 • 045804 • Report No. 51

Partners in Sustainability

Executive Summary

This Emission Summary and Dispersion Modelling (ESDM) Report was prepared to support an Application for Renewal of Environmental Compliance Approval (ECA) (Air). The Facility is currently operating under ECA (Air) No. 7021-7HQNDE. The ESDM Report was prepared in accordance with s.26 of O. Reg. 419/05 to support the ECA (Air) Application. Guidance in the Ministry publication "Procedure for Preparing an Emission Summary and Dispersion Modelling Report" dated March 2009 (ESDM Procedure Document) was followed as appropriate.

Orgaworld Canada Ltd. (OCL) operates a facility (Facility) at Lot 27, Concession 6, Gloucester in Ottawa, Ontario. The Facility will be located in an area zoned for industrial use. OCL is an aerobic composting operation that will process source separated organics (SSO), such as kitchen waste, and leaf and yard wastes into an unrestricted end product suitable for application on agricultural lands.

The Facility is subject to s.20 of O.Reg. 419/05, therefore the modelled impact of contaminant emissions can be assessed using the AERMOD dispersion model for each contaminant and applicable averaging period.

Odour-based dispersion modelling was performed at each of the sensitive receptors previously identified by the Ontario Ministry of the Environment (MOE), and for the 99.85th percentile as per the MOE proposed position paper "Proposed Approach for the Implementation of Odour-Based Standard and Guidelines" (June 2006).

The Facility is expected to emit Odour, Particulate, Ammonia, and Products of Diesel Combustion. Some of the sources and contaminants were considered negligible in accordance with s.8 of O. Reg. 419/05.

The maximum POI concentrations were calculated based on the operating conditions where all significant sources are operating simultaneously at their individual maximum rates of production. The maximum emission rates for each significant contaminant emitted from the significant sources were calculated in accordance with s.11 of O. Reg. 419/05 and the data quality assessment follows the process outlined in the requirements of the ESDM Procedure Document.

A POI concentration for each significant contaminant emitted from the Facility was calculated based on the calculated emission rates and the output from the approved dispersion model; the results are presented in the Emission Summary Table in accordance with s.26 of O. Reg. 419/05.

The POI concentrations listed in the Emission Summary Tables were compared against criteria listed in the Ministry publication "Summary of Standards and Guidelines to Support Ontario Regulation 419: Air Pollution – Local Air Quality" dated April 2012.

Subject: NASM Sites

Hi Dale – As discussed, I have provided the list of sites in which Orgaworld will be potentially sending processed organic waste not meeting the new Phase II Ontario Compost Quality Standards for moisture. I would like to determine whether these sites already have a NASM Plan in place. Thanks again and if you have any questions please let me know.

Re: Response to MOECC Ottawa District
IMPLEMENTATION OF ONTARIO COMPOST QUALITY STANDARDS – MATURITY AND FOREIGN MATTER

Action plan required for the following:

1. *Process and/or operational changes to the current operations at the Orgaworld Ottawa facility that may be necessary;*
2. *Environmental Compliance Approval amendments required to reflect any required process changes or modifications;*
3. *Options to manage processed organic waste not meeting the Ontario Compost Quality Standards; and*
4. *Timelines associated with the actions necessary for the Orgaworld Ottawa Facility to be compliant with Phase II Ontario Compost Quality Standards.*

Process and/or operational changes to the current operations at the Orgaworld Ottawa facility that may be necessary

1. In order to meet the moisture requirement stated in the new compost regulations, the Ottawa facility will need to look at either installing winterized water tankage, water lines and pumps, or utilizing a water truck to spray the compost. Operational changes will include using this water truck and developing procedures in order to ensure that the spraying of the compost meets the 40% moisture target throughout the entire compost pile.
2. Additional future changes may mean the addition of increased compost storage space, since once the compost piles are sprayed with water, they must be turned, or transferred to an empty storage bunker.
3. Sharps. There has yet to be a definitive definition on what is a sharp or not. The phrase "Shall contain no material of a size or shape that can reasonably cause animal or human injury" is extremely vague. Historical analytical results have demonstrated that with the current incoming wastestream into Ottawa, there should be little difficulty for the Ottawa facility to meet the foreign matter or sharp requirements.

Environmental Compliance Approval amendments required

1) The Ottawa facility will look at utilizing the water taken from the groundwater remediation well and potentially utilize it in order to bring the finished curing compost up to the specified 40% moisture level. Orgaworld has just submitted an amendment request to the MOECC for our Stormwater ECA. It is unclear at this time if we would have to submit another amendment in order to be able to utilize this water from the remediation well.
2) If this water spray equipment was added, it is presumed that this equipment would also require an amendment to the waste ECA since it would be considered a "change or alteration" to the existing facility and the existing process.
3) If deemed that additional compost storage space is required, this will also require an amendment to the existing Waste ECA.

Options to Manage Processed Organic Waste NOT meeting the Ontario Compost Quality Standards

Orgaworld Ottawa will manage the processed organic waste that does not meet the new regulations by utilizing NASM plans which would still allow the compost to go to farmers fields and be utilized in a beneficial manner. Orgaworld has already arranged transport with haulers that are licensed to transport organic waste, and have completed NASM plan agreements with farmers who wish to take our NASM product.

Timelines associated with actions necessary for compliance

It must be noted that for over a year, Orgaworld Canada and the MOECC were in continuous negotiations regarding the new compost regulations. Until recently, Orgaworld and several other compost producers were under the impression that the MOECC was seriously considering other alternatives than the complete adoption of the entire new compost regulation package. This did not occur and the decision to fully adopt the new compost regulations was made, but not communicated to Orgaworld until very recently. With this in mind, Orgaworld Canada would like to request that we would be allowed to honour all of our compost delivery contracts through the end of the 2015 season. This would allow time to discuss with all of our current compost customers:

i) the potential for accepting the NASM product
ii) The restrictions and usage requirements set out in the plan
iii) Take the necessary soil sampling and creation of the plans

If Amendments are required for the water spraying equipment, then the timeframe to submit the application to the MOECC could be at least six months. The MOECC has mentioned that they would be willing to "fast-track" the approvals process, but it is unclear exactly how long that may take. If more compost storage space is required (a multi-million dollar investment), this process, including engineering, financing, MOECC approval and construction could take at least one to two years.

If you have further questions or concerns, please do not hesitate to contact me at your convenience.

Compliance Officer

Ontario

Ministry of the Environment and Climate Change

Ministry of the Environment
5/6/2015
10 a.m. to 12 p.m.

Meeting called by: Straberger, Kyle

Attendees:

Kyle Straberger, Senior Environmental Officer, MOECC; Jena Leavoy, District Supervisor, MOECC; Steve Burns, District Manager, MOECC; Michael Rooke, Compliance Officer, Orgaworld; ~~Dale Harley, General Manager, Orgaworld~~

Location: Ottawa District Office, 2430 Don Reid Drive, Ottawa, Ontario, K1H 1E1

Ottawa Boardroom (teleconferencing is available if requested)

Purpose: The purpose of the meeting is to discuss the upcoming implementation of the Phase II Ontario Compost Quality Standards and the impacts the standards will have on the operations at Orgaworld Ottawa Facility located at 5123 Hawthorne Road in Ottawa.

Introduction (Kyle)

1. Round table introductions
2. Review agenda items

Phase II Ontario Compost Quality Standards – MOECC Letter, March 18, 2015 – Request for Action Plan (Kyle)

Maturity & Foreign Matter:

1. Process and/or operational changes
2. Environmental Compliance Approval amendments
3. Options to managed processed organic waste not meeting the Ontario Compost Quality Standards
4. Timelines associated with actions necessary to become compliant with Phase II Ontario Compost Quality Standards

Phase II Ontario Compost Quality Standards – Orgaworld Letter, April 28, 2015 – Response to MOECC Letter (Kyle)

1. Installation of water application equipment, development of procedures and potential increase of capacity. No changes to address 'sharps'
2. Amendments to Industrial Sewage Works and Waste ECAs

3. NASM Plan for non-compliant processed organic waste
4. Request for extension to operate under previous regulatory standards until end of 2015. Environmental Compliance Approvals amendments estimated at 1 to two years

Path forward

1. Revisions to the Action Plan (Kyle)

Michael Rooke
Orgaworld Canada Ltd.
5123 Hawthorne Road
Ottawa, ON K1G 3Y3

Dear Sir:

RE: Implementation of Ontario Compost Quality Standards – Maturity & Foreign Matter
Orgaworld Ottawa Facility, 5123 Hawthorne Road, Ottawa
Environmental Compliance Approval No. 2766-7HEPSZ

On July 25, 2012 the Ministry of the Environment and Climate Change (MOECC) released revised standards for aerobic composting of organic waste materials in the province of Ontario entitled *Ontario Compost Quality Standards* ("Standards"). The Standards update and replace the *Interim Guideline for the Production and Use of Aerobic Compost in Ontario*, first released in November 1991, and last updated in 2004.

The Standards outline new categories of compost (AA, A, and B) with specific requirements for metals, quality of feedstock, pathogens, foreign matter and maturity. The MOECC implemented Phase I (metals, quality of feedstock and pathogens) of the Standards on January 1, 2013 with Phase II (maturity and foreign matter) to be implemented on July 1, 2015.

In preparation of the upcoming implementation date, the MOECC would like to engage Orgaworld Canada Ltd. in how the requirements of the Standards will be met.

By **May 1, 2015**, please submit an action plan outlining how the Orgaworld Ottawa Facility will comply with the implementation of Phase II of the Standards on July 1, 2015. The action plan should include, but not necessarily be limited to, the following:

1. Process and/or operational changes to the current operations at the Orgaworld Ottawa Facility that may be necessary;
2. Environmental Compliance Approval amendments required to reflect any required process changes or modifications;
3. Options to manage processed organic waste not meeting the *Ontario Compost Quality Standards*; and
4. Timelines associated with the actions necessary for the Orgaworld Ottawa Facility to be compliant with the Phase II *Ontario Compost Quality Standards*.

Please contact me if you have any questions or concerns with the above request and the implementation of Phase II of the Standards. A meeting can be arranged in the event Orgaworld Canada Ltd. would like to discuss this subject in further detail.

Sincerely,

Kyle Straberger
Environmental Officer

The phrase "shall contain no material of a size or shape that can reasonably cause animal or human injury" is extremely vague. Historical analytical results have demonstrated that with the current incoming wastestream into Ottawa, there should be little difficulty for the Ottawa facility to meet the foreign matter or sharp requirements.

Environmental Compliance Approval amendments required

1) The Ottawa facility will look at utilizing the water taken from the groundwater remediation well and potentially utilize it in order to bring the finished curing compost up to the specified 40% moisture level. Orgaworld has just submitted an amendment request to the MOECC for our Stormwater ECA. It is unclear at this time if we would have to submit another amendment in order to be able to utilize this water from the remediation well.
2) If this water spray equipment was added, it is presumed that this equipment would also require an amendment to the waste ECA since it would be considered a "change or alteration" to the existing facility and the existing process.
3) If deemed that additional compost storage space is required, this will also require an amendment to the existing Waste ECA.

Options to Manage Processed Organic Waste NOT meeting the Ontario Compost Quality Standards

Orgaworld Ottawa will manage the processed organic waste that does not meet the new regulations by utilizing NASM plans which would still allow the compost to go to farmers fields and be utilized in a beneficial manner. Orgaworld has already arranged transport with haulers that are licensed to transport organic waste, and have completed NASM plan agreements with farmers who wish to take our NASM product.

Timelines associated with actions necessary for compliance

It must be noted that for over a year, Orgaworld Canada and the MOECC were in continuous negotiations regarding the new compost regulations. Until recently, Orgaworld and several other compost producers were under the impression that the MOECC was seriously considering other alternatives than the complete adoption of the entire new compost regulation package. This did not occur and the decision to fully adopt the new compost regulations was made, but not communicated to Orgaworld until very recently. With this in mind, Orgaworld Canada would like to request that we would be allowed to honour all of our compost delivery contracts through the end of the 2015 season. This would allow time to discuss with all of our current compost customers:

i) the potential for accepting the NASM product
ii) The restrictions and usage requirements set out in the plan
iii) Take the necessary soil sampling and creation of the plans

If Amendments are required for the water spraying equipment, then the timeframe to submit the application to the MOECC could be at least six months. The MOECC has mentioned that they would be willing to "fast-track" the approvals process, but it is unclear exactly how long that may take. If more compost storage space is required (a multi-million dollar investment), this process, including engineering, financing, MOECC approval and construction could take at least one to two years.

If you have further questions or concerns, please do not hesitate to contact me at your convenience.

Subject: 2013/2014 Operating Year Inspection - Orgaworld Ottawa - Information Request

Hi Mike,

As stated during the inspection on Thursday January 29, 2015, please find the information I requested for each inspection type completed. If you have any questions please let me know.

Industrial Sewage Works – ECA# 7251-8GKRPD

- Analytical results of the 2014 surface water monitoring program outlined in Condition 5 – Surface Water Monitoring and Recording for the month of February, May, August and November
- Analytical results of the 2014 groundwater monitoring program outlined in Condition 9 – Groundwater Monitoring for the month of February, May, August and November
- **Analytical results of Table 2 Trigger Parameters for discharge events in 2013 as per Condition 6 (5) (check annual report)**
- Copy of the Operation & Maintenance Manual (Part II & Part III)
- Logbook records for routine maintenance activities, inspection findings, and repairs completed in 2014

Air – ECA# 7021-7HQNDE

- Complaints Recording Procedure – Provide copies of the complaint records for the two complaints received in December of 2014. I understand the complaints in the Cornwall area are not related to the Orgaworld site in Ottawa however it will verify compliance that the recording procedure is being complied with.
- The last date of revision of the Emission Summary and Dispersion Modelling Report and Acoustic Assessment Report (last time modifications were made to the facility requiring modelling to ensure compliance with air & noise standards outlined in Ontario Regulation 419/05)
- Records of maintenance completed of the bio filter (media replacement)
- Screen shot of SCADA illustrating the process monitoring of the pollution control equipment

Waste Disposal Site – ECA# 2766-7HEPSZ

- Analytical results of the 2014 incoming and outgoing (including 10-100) as per Condition 7(3), Condition 7(4) and Condition 7(6)
- In 2014 has Orgaworld received results of non-compliance with Quality Compost Standards?
- Screen shot of SCADA illustrating the process monitoring of the composting operations to ensure compliance with Condition 7(8)
- Temperature monitoring records for the curing stockpiles for the following dates: January 15, 2014, February 19, 2014, March 26, 2014, April 30, 2014, May 28, 2014, June 25, 2014, July 30, 2014, August 27, 2014, September 24, 2014, October 29, 2014, November 26, 2014, December 17, 2014

I am currently working on the inspections therefore I may send another email if I require additional information.

Thanks,

Kyle Straberger

Hello David,

Please find attached copies of the inspection reports completed at Orgaworld Ottawa, dated March 15, 2018, located at 5123 Hawthorne Road, Ottawa, On. If you have any questions after the review of the reports please contact me to discuss.

Attachments:

- Air Facility Inspection Report
- Industrial Sewage Works Inspection Report
- Non-Hazardous Waste Transfer Processing Inspection Report
- Subject Waste Generator Inspection Report

The Subject Waste Generator Inspection Report outlines an action item for the confirmation of Copy 6 of Waste Manifest No. RS77263. In your email, dated March 23, 2018, the copy was provided to me therefore the action item has been addressed. The report was already completed and sent for sign-off when you provided the information therefore I couldn't make any changes at that time.

Thank you,

To: Placko, Joanne (ENE); Mills, Jeff (ENE); Hart, Tracy (ENE); Armour, Lynnette (ENE)
Cc: Shah, Bijal (ENE); Benvenuti, Lisa (ENE)
Subject: FW: Negative pressure at SSO composting sites

Good Afternoon, I am writing to you all to follow up on my previous email regarding negative pressure in SSO processing buildings. Do any of you have any monitoring data that would help us at the EAAB defend the negative pressure condition?
Lisa has sent me some information on operations at Universal in Welland and it appears that Universal maintains the negative pressure at all times, even when the doors open to let trucks in and out.
Anybody else?
Thanks, Margaret (and Bijal)

From: Wojcik, Margaret (ENE)

Subject: Negative pressure at SSO composting sites

Good morning to All,

The issue of negative pressure in the SSO receiving buildings continues to generate challenges for the EAAB reviewers dealing with the SSO composting sites. We are getting contradicting information from proponents with respect to their ability to maintain negative pressure in the SSO containing buildings especially when the doors are open. We acknowledge the fact that some of the negative pressure is lost when the doors are open, but we were under the impression that it is possible to keep the pressure on the negative side, even if it's only slightly negative.

Also, there are discrepancies regarding the maximum level of negative pressure that is physically possible to achieve. In their application, Orgaworld proposed -250 Pa to be maintained in the receiving area and the main hall. The City of Guelph said that it's physically impossible to maintain this level of negative pressure in the building without damage to the building and the doors, and instead proposed -5 to -10 Pa. That is quite a difference.

So to solve this mystery once for all, I would like to ask for the actual negative pressure monitoring data for the composting sites you are looking after. I checked the cofas and hope that the data is available:

City of Hamilton, WDS CofA #A130213, Issue Date: January 28, 2005

68. The Owner and Operator shall maintain a negative air pressure atmosphere in the unloading area at all times. In the event that negative air pressure can not be maintained, the Owner and Operator shall cease accepting additional waste and shall keep the loading bay doors closed until such time as negative pressure is re-established.

But Joanne indicated before that they do measure the magnitude.

Orgaworld Canada Ltd. (London) WDS CofA #5250-6V4HX2, Issue Date: December 20, 2006

46. The Owner shall maintain a negative air pressure atmosphere within the processing building, incompassing the receiving and traffic hall, pump room, and screening area, at all times. In the event that adequate negative air pressure can not be maintained, the Owner shall cease accepting additional waste and shall keep the loading bay doors closed until such

time that negative pressure is re-established.

Jeff, are they measuring the negative pressure?

Orgaworld Canada Ltd. (Ottawa) WDS cofa #2766-7HEPSZ, Issue Date: September 16, 2009

5.(7) Odour Control:

(a) The Owner shall maintain and monitor a negative air pressure atmosphere within the Processing Building at all times in accordance with the documents in Schedule "A". In the event that adequate negative air pressure cannot be maintained within the Processing Building, the Owner shall cease accepting additional Organic Waste and shall keep the loading bay doors and the air intake louvers closed until such time that negative pressure is re-established.

City of Guelph, WDS Cofa #A170128, Notice No. 3, Issue Date: August 11, 2010

36.(6) Odour Control:

(a) The Owner shall maintain a negative air pressure atmosphere within the Processing Building, as compared to the ambient atmospheric pressure, at all times.

Cofa AIR #1721-82YRUS, Issue Date: August 11, 2010

3. The Company shall monitor and record the following physical parameters of the Biofilter and the building, through a combination of sensors, meters and physical probes, at frequencies either as recommended by the Equipment suppliers or as determined by operational needs:

(2) Building:

(a) negative pressure

Universal Resource Recovery Inc., WDS Cofa #9855-73BJGK, Issue Date: December 9, 2010

7.(13) Processing Building Atmosphere:

(a) The Owner shall monitor the following physical parameters of the atmosphere within the Processing Building, through a combination of appropriate sensors, meters and physical probes as follows:

(i) negative pressure within the confines of the Processing Building, continuously; and

---

Thanks a lot everybody. Hope to hear from you soon.

Margaret

Subject: Orgaworld witnessing report
Attachments: 20110718-5070106-Orgaworld_Witnessing_Report.pdf

Tracy,

It was a pleasure meeting you earlier this month. As per usual I am attaching a witnessing report which outlines the portion of the testing that I witnessed. This report also documents the production information recorded during the test period.

As mentioned on-site, if this round of testing once again results in measured TRS concentrations below the method detection limit, it may be reasonable to consider relaxing the sampling requirements for these particular contaminants. Given that these are "Odour based" limits in the Regulation, future odour test results and/or odour complaints may provide an indication as to when TRS testing may be required down the road.

Obviously relaxing any source testing requirements would be to the discretion of the District and dependant on your comfort level. We can always touch base following the report submission.

The Orgaworld Canada Ltd. Ottawa facility (Orgaworld) is located at 5123 Hawthorne Road. The facility currently operates a fully enclosed composting operation which receives compost materials from the City of Ottawa's source separated organics program. The site, pictured below, operates under CofA No. 7021-7HQNDE and is limited to receiving a maximum of 150,000 tonnes per year of organic waste materials.

Currently the facility is operating at a reduced capacity based on the total tonnage of materials permitted. However due to the composition of the materials being received (mostly leaf and yard waste which has a lower density compared to household organics) the facility was near maximum storage capacity during the witnessed test period.

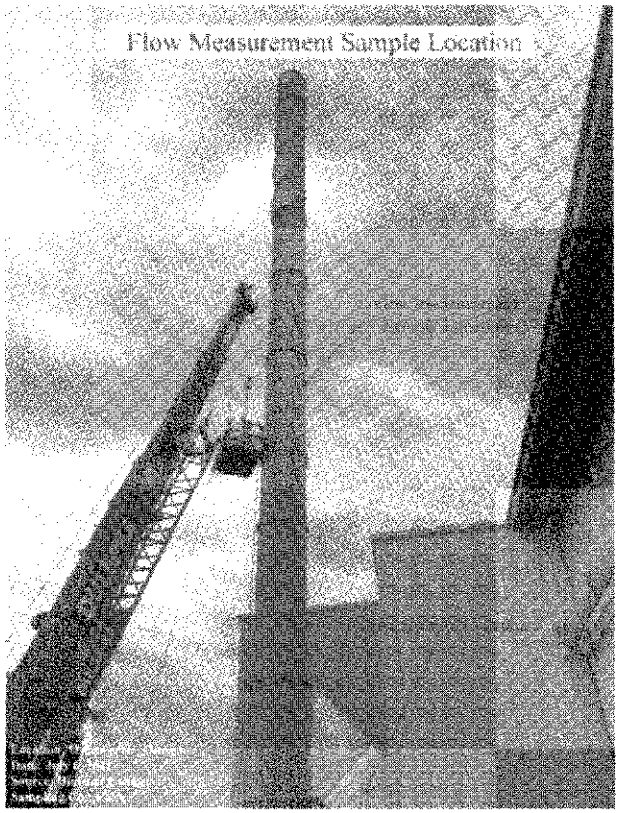
Process Description

Organic waste is transported to the Orgaworld facility via garbage collection trucks. As the trucks fill during their regular collection, they make their way to Orgaworld to unload. Trucks back into the enclosed facility and drop their loads on the tipping floor. Materials are quickly moved to a storage pad which comprises the majority of the buildings footprint. Piled waste sits on the storage / processing pad before being loaded into one of the 6 curing tunnels.

Between 300 and 600 tonnes of materials are loaded into each tunnel for the curing process. There are six (6) curing tunnels currently in operation. During the curing process air is continuously passed through the piled material. With properly maintained parameters (oxygen concentration, temperature, relative humidity and air flow) the organic material is fully composted and ready for market within 6 – 7 days.

Following the curing stage the tunnel is opened and the material is transported to the screening room via front-end loader. The front-end loader dumps the composted material into a screener where the fine and coarse material is separated. The material <10mm diameter is piled and prepared for sale while the 10 – 100 mm diameter material is recycled back through the process. Larger materials >100mm are shredded and pass through the process in the same manner as the 10-100mm material.

The temperature profile for the curing process is cyclical; for roughly the first three days of the curing cycle the tunnel temperature is maintained around 55 – 60 degrees Celsius. The remaining three or four days the tunnel is maintained at a temperature of approximately 40 degrees Celsius. The tunnel is allowed to reach ambient temperature before the tunnel doors are opens and the material is sent to the screening room. It is expected that the highest odour emission potential would be at the beginning of the cycle as the tunnel is being heated and the material is coming up to temperature.



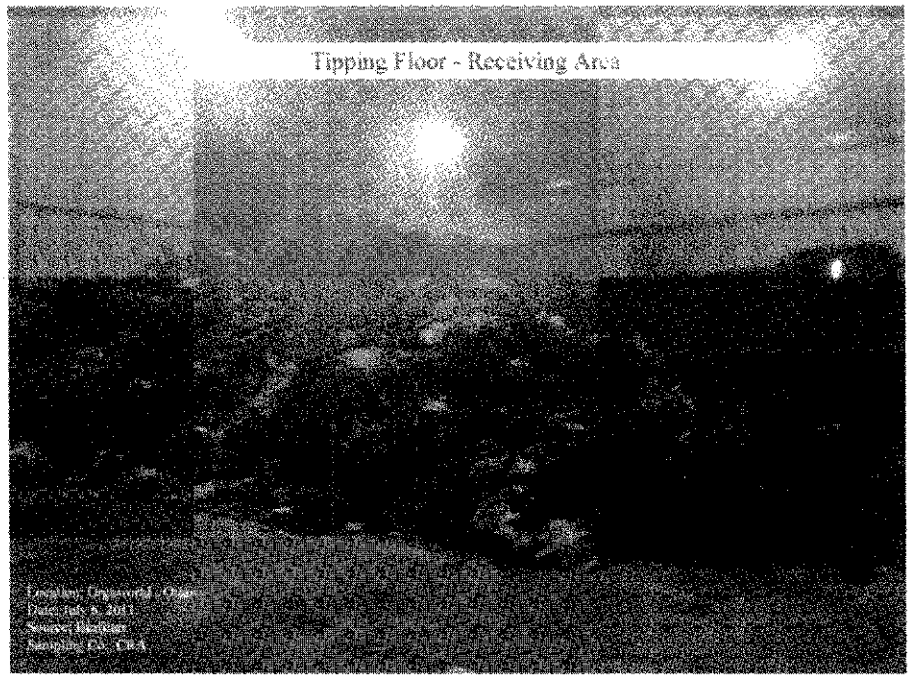
Process air is collected from the receiving area, storage pad and the curing tunnels where it is directed to the pollution control system which consists of an ammonia scrubber, two biofilters

(working in parallel) and a bioscrubber.

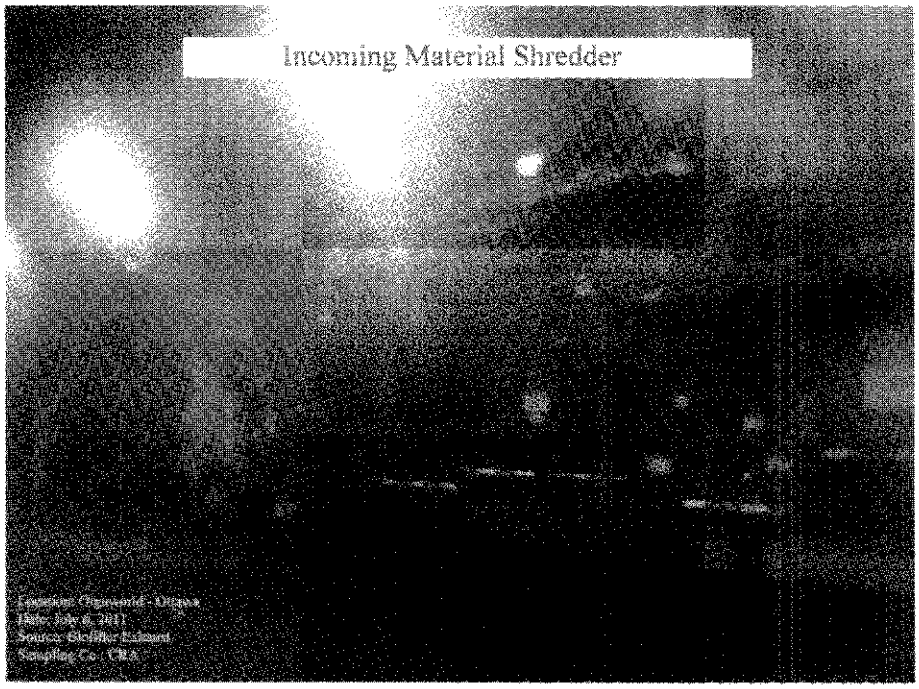
Sampling Locations

Odour sampling was conducted via sampling port installed on the breaching leading to the stack from the bioscrubber. Volumetric flow measurements were completed via two ports situated 90 degrees to one another approximately 4 diameters downstream of the breaching in a straight length of duct. This sample location was non-ideal

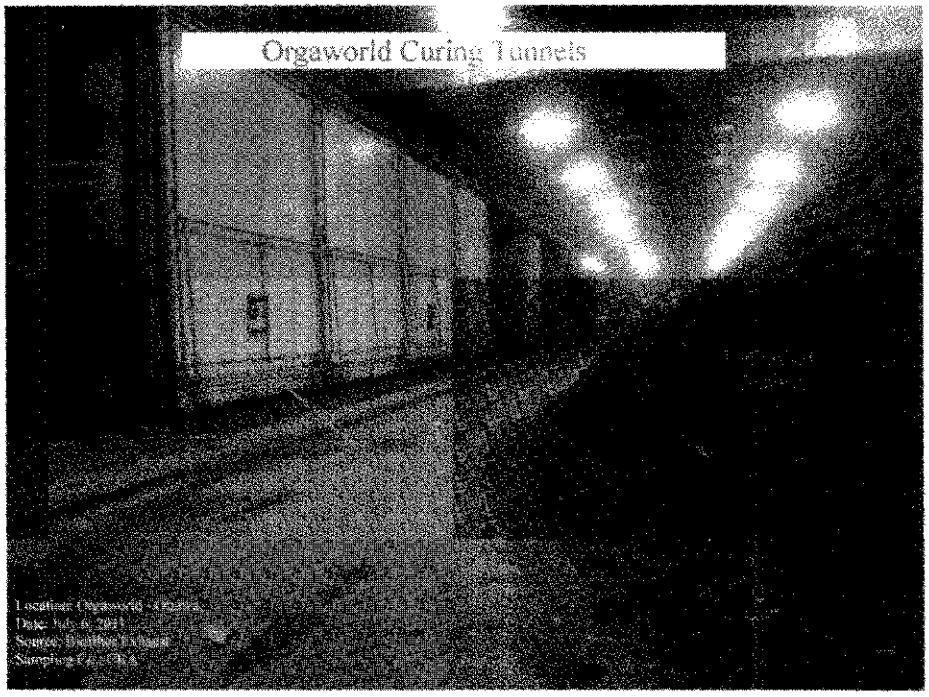
The following photos depict the main stack and the odour sampling location.



Site Observation



On the test date (July 6, 2011) three of the six tunnels were in the heating stage. Two other tunnels



were in transition (either being filled or emptied) and one tunnel was empty. This is consistent with production typically seen at the site. It should be noted however that unlike the previous round of testing there was a significant amount of material in the building, both on the tipping floor and on the storage/processing pad. It appeared that the facility was near its volumetric capacity and process data provided by Orgaworld indicates that a significantly higher amount of materials were being received on a daily basis, for the weeks prior to testing, as compared to previous test programs. All process data, as provided by Orgaworld, has been appended to this report.

Two other notable changes at the facility since the last round of testing include the addition of an on-site shredder which is housed within the building on the processing floor between the tipping floor and the tunnels. This unit is used prior to the curing process. Materials are shredded providing a more consistent feed that can lead to shorter processing times. In addition it was stated that the reject materials which fell in the 10 – 100 mm range are now between the 10 – 20 mm range. Though not confirmed it was assumed that changes have been made in the screening process. Reasons for the changes were not discussed.

A site tour was completed with Michael Rooke (Orgaworld Compliance Officer) and Tracy Hart (MOE Ottawa District Environmental Officer). At the time of the tour (~10:00 a.m.) there was a significant amount of material in the receiving area of the plant and the processing area appeared to be near capacity. The storage pads located across from the curing tunnels (called the mixing/shredding pile by Mr. Rooke) appeared to be completely full. Mr. Rooke estimated the material to consist of approximately 1,200 tonnes. Photos of the facility's processing areas can be seen on the following pages.

Tipping Floor - Receiving Area

Incoming Material Shredder

Both tunnels 7 and 8, which have not been commissioned to-date, were being used to store what appeared to be "10 – 20" material.

A summary of the various stages of each tunnel (as of ~9:00a.m, July 6) can be seen below:

	Mode	Decription
Tunnel #1	Stage II	~80 hrs - estimated 300T material in tunnel
Tunnel #2	---	Being filled with fresh material ~1/2 full
Tunnel #3	Stage IV	~175 hrs - estimated 300T material in tunnel
Tunnel #4	Stage V	~270 hrs - estimated 300T material in tunnel
Tunnel #5	---	Being emptied ~2/3 full or 200T material in tunnel
Tunnel #6	---	Empty

Estimates of materials in tunnels provided by Michael Rooke (Compliance Officer - Orgaworld)

Unlike the previous round of testing there was a significant amount of material in the building, both on the tipping floor and in the processing floor. It appeared that the facility was near its volumetric capacity. Process data, as provided by Orgaworld, has been appended to this report.

Sampling Methodology / Observations

Sampling was completed by John McRae and Chris Adam of CRA. Flow measurements were obtained with the assistance of a crane and a basket, while odour samples were collected from ground level using a port installed on the breaching leading to the main stack.

A moisture test was completed for a period of twenty minutes following the Ontario Source Testing Code Version #2, Nov 1980 – Method 4, to obtain the stack gas moisture content. Odour sampling was completed following procedures outlined in the Draft odour sampling method ON-6 found in the Draft Ontario Source Testing Code, Version #3, July 2009.

TRS sampling was completed following Environment Canada Method EPS 1/RM/6 which utilizes an 85% solution of phosphoric acid contained within a midget impinger for the purpose of removing moisture prior to capturing the stack gas in a Tedlar® sample container. Samples were analyzed on-site using CRA's GC-FPD analyzer.

TRS sampling was completed prior to odour sampling. TRS analysis was completed on-site by CRA using a GC-FPD analyzer. In the previous program personnel from the analytical laboratory (Air Zone) came to the site with the GC analyzer to complete the TRS analysis. For this round of testing CRA had employed their own GC-FPD analyzer. Only portions of the GC-FPD calibration were witnessed prior to departure from site.

Ambient temperature and meteorological data were obtained from Environment Canada. The data originates from a weather station located at the Ottawa International Airport which is located within approximately 15 kilometers of the Orgaworld facility. This data can be seen on the following page:

Final Comments

In general, the portions of the sampling program which were witnessed were completed following the methodology outlined in the approved pre-test plan protocol. As a result of the analysis limitations in the TRS sampling method (Environment Canada EPS Method 1/RM/6) which states

that sample analysis should begin within one (1) hour of sampling, CRA opted to complete on-site analysis. It was clear that CRA was not well versed with the analytical equipment and methodology. Unfortunately as a result of previous commitments, only a portion of the time consuming calibration procedure could be witnessed.

The Orgaworld facility was operating at a much higher production level as compared to previous test programs. Though the facility appeared to be near its volumetric capacity, the low density characteristics of the waste materials (mostly leaf and yard) means they are likely operating below their annual permitted capacity.

MEMORANDUM

TO:	Rick Mosher	REF. NO.:	045804
FROM:	Sarah Tebbutt/Stephen Koo/ca/2	DATE:	March 5, 2009
RE:	**AERMOD Odour Modelling** **Orgaworld Canada Limited, Ottawa, Ontario**		

1.0 INTRODUCTION

This memorandum has been prepared for the Orgaworld Canada Limited facility located in Ottawa, Ontario (Facility). Conestoga-Rovers & Associates (CRA) performed AERMOD dispersion modelling of the Facility to assess future air contaminant compliance against Ontario Regulation 419/05 Schedule 3 standards, and proposed Ontario Ministry of the Environment (MOE) odour guidance.

The dispersion modelling was performed using the United States Environmental Protection Agency (USEPA) multi-source dispersion model, AERMOD, to assess the Facility's ground level concentrations (GLCs). AERMOD is an advanced steady-state plume model that has the ability to incorporate building cavity downwash, actual source parameters, emission rates, terrain, and historical meteorological information to predict ground level concentrations (GLCs) at specified locations.

The AERMOD air dispersion model was used for this assessment as it has been scheduled by the MOE to replace the Regulation 346 model as the new regulatory model in Ontario after a phase in period, as specified by Ontario Regulation 419/05. The Facility's North American Industry Classification System Code is 562210, and the AERMOD model will become the regulatory model for the Facility with Ontario Regulation 419/05 Schedule 3 air quality standards beginning in 2013.

For air contaminants, the MOE air dispersion modelling guidance document "Air Dispersion Modelling Guideline for Ontario" (ADMGO) dated July 2005 was followed. For odour, the MOE position paper "Proposed Approach for the Implementation of Odour-Based Standards and Guidelines" dated June 2006 was followed.

2.0 MODEL DEVELOPMENT

2.1 Computational Models

The following approved dispersion models and pre-processor models were used in the assessment:

- AERMOD dispersion model (v. 07026);
- AERMAP surface pre-processor (v. 06341); and

REGISTERED COMPANY FOR ISO 9001 ENGINEERING DESIGN

- BPIP building downwash pre-processor (v. 04274).

2.2 Meteorological Data

MOE provides three sets of pre-processed meteorological screening data for use with dispersion modelling. They are: urban, crops and forest. Based on the land-use characteristics around the Facility, the "crops" dataset was used. The surface data is from the Ottawa Airport and Upper Air Data is from Maniwaki, Quebec. The meteorological data covers the dates from January 1, 1996 to December 31, 2000. The hourly data included many factors which affect the dispersion of air contaminants including wind speed, wind direction, temperature, ceiling height, and atmospheric stability.

2.3 Averaging Periods

Averaging periods were selected based on the type of air contaminants modelled. For the unitized emission rate model, the following averaging periods were selected: 1-hour, 24-hour, and 30-day. For the odour model, only the 1-hour averaging period was selected.

2.4 Digital Elevation Model Data

Digital elevation model (DEM) data was obtained from the MOE website and processed using the AERMOD terrain processor AERMAP. AERMAP determines base terrain elevation using the DEM data for all sources, receptors and buildings, and provides the user with a suitable input file for use with AERMOD. The DEM data was provided by the MOE (tile set 135).

2.5 Source Input Parameters

The Facility bio-scrubber was modelled as a point source, with parameters based on the final operational design specifications. The area sources, used in the odour models, are based on predicted operational conditions.

A summary of the AERMOD source input parameters is provided in Table 1.

2.6 Ground Level Concentration Receptor Grid

A tiered receptor grid was defined starting with a rectangular boundary that encloses all the modelled sources (bounding box). A tiered grid was then defined starting from the edge of the bounding box with a fine resolution, to coarser resolutions further away. All tiered distances were defined relative to the bounding box. The receptor grid used is described as follows:

- 20 m spacing within 200 m of the edge of the bounding box;
- 50 m spacing from 200 to 500 m;
- 100 m spacing from 500 to 1,000 m; and
- 200 m spacing from 1,000 to 2,000 m.

A property line ground level receptor grid with 10 m spacing was used to evaluate the maximum property boundary concentration. No receptors were placed inside the Facility's property line.

2.7 Discrete Sensitive Receptors

For the evaluation of odour, discrete sensitive receptors were defined around the Facility based on the locations of nearby homes and communities. MOE defines a sensitive receptor as: residences, camping grounds, schools, community centres, day care centres, recreational centres and outdoor recreational areas; or any other locations as specified by the MOE. A total of 79 sensitive receptors were identified and modelled.

Table 2 provides a list of modelled sensitive receptors.

2.8 On-Site Building Data

The Facility buildings were entered into the model using the USEPA Building Profile Input Program (BPIP), and run to evaluate any building cavity downwashing that may be occurring. Cavity downwash can result in air contaminants being forced to ground level prematurely under certain meteorological conditions.

The single on-site building was modelled with an average roof height of 11 metres.

3.0 DISPERSION MODELLING RESULTS

The AERMOD models were developed and executed following the methodology described above.

The five years of meteorological data included over 43,800 hours of data. For the unitized emission rate AERMOD model, the model was run to calculate the maximum 1-hour and 24-hour unitized GLC dispersion factors, in micrograms per cubic metre per one gram per second ($\mu g/m^3$ per g/s), potentially emitted from the Facility through the bio-scrubber. By multiplying the bio-scrubber contaminant emission rate, in grams per second, by the unitized GLC dispersion factor, a contaminant specific GLC is calculated. For the odour models, the 1-hour 99.85th percentile GLC was calculated for comparison against the odour guideline limit. The MOE proposed guidance specifies the 99.85th percentile modelled maximum concentration to be used for odour assessment. The meteorological conditions, which result in the maximum concentration, are typically stable atmospheric conditions such as an inversion with low wind speed.

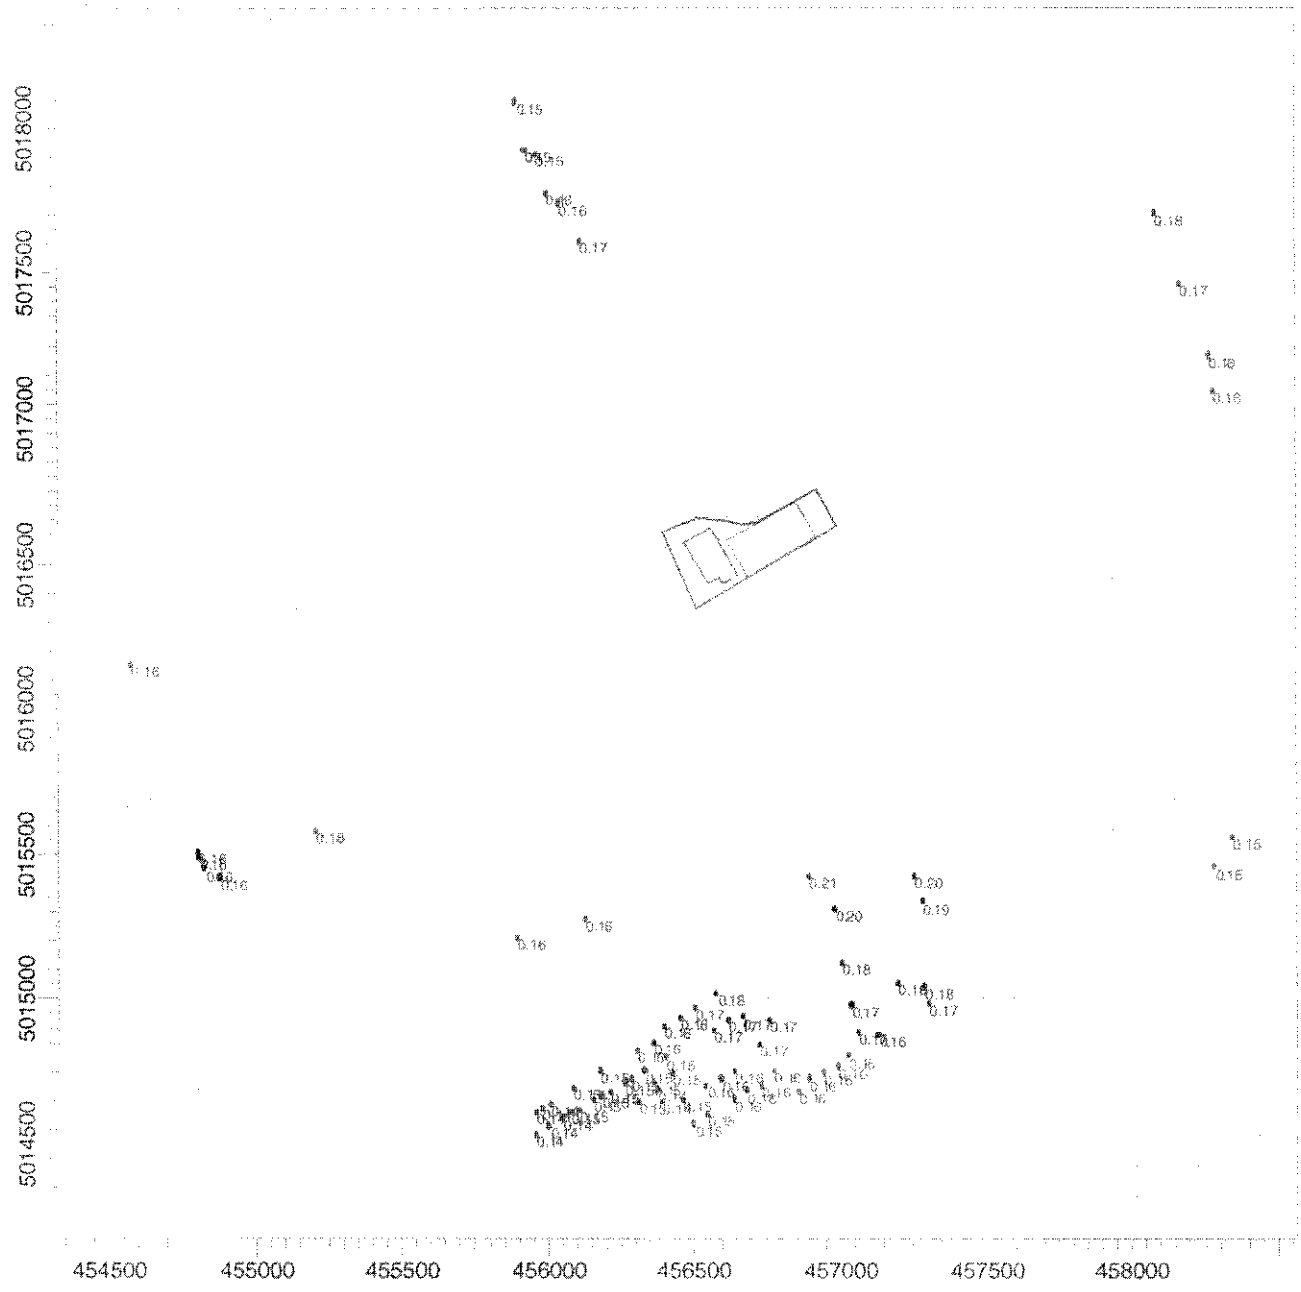
MOE guidance allows for the removal of meteorological outliers for comparison of GLCs against a standard or guideline limit. For the 1-hour averaging period, the eight highest 1-hour averaging periods for each single year was removed for a total of 40 one-hour periods. For the 24-hour averaging period, the single highest 24-hour averaging period for each single year was removed for a total of five 24-hour periods. For each air contaminant, the appropriate unitized averaging period GLC dispersion factor was multiplied by the emission rate of the contaminant to calculate its GLC.

Table 3 summarizes the maximum predicted GLCs for each air contaminant and its percentage of the POI.

For odour, the calculated 1-hour 99.85th percentile odour value was converted to a 10-minute odour value using the MOE time-based conversion factor of 1.65. Figure 1 presents the maximum calculated 10-minute 99.85th percentile odour level at each discrete receptor. Figure 2 presents the maximum calculated 10-minute 99.85th percentile odour isopleths around the Facility.

4.0 CONCLUSIONS

The AERMOD dispersion modelling assessment was completed for odour and each of the contaminants potentially emitted from the Facility.



Based on the modelled GLC results, no air contaminants were identified to exceed any Ontario Regulation 419/05 Schedule 3 standard or MOE guideline.

Based on the modelled odour results, no sensitive receptors were identified that would be impacted with an odour value of greater than the allowable one odour unit.

Should you have any questions on the above, please do not hesitate to contact us.

MEMORANDUM

TO:	Rick Mosher	REF. NO.:	045804
FROM:	Sarah Tebbutt/Stephen Koo/ca/2	DATE:	March 5, 2008
RE:	**AERMOD Odour Modelling** **Orgaworld Canada Limited, Ottawa, Ontario**		

1.0 INTRODUCTION

This memorandum has been prepared for the Orgaworld Canada Limited facility located in Ottawa, Ontario (Facility). Conestoga-Rovers & Associates (CRA) performed AERMOD dispersion modelling of the Facility to assess future air contaminant compliance against Ontario Regulation 419/05 Schedule 3 standards, and proposed Ontario Ministry of the Environment (MOE) odour guidance.

The dispersion modelling was performed using the United States Environmental Protection Agency (USEPA) multi-source dispersion model, AERMOD, to assess the Facility's ground level concentrations (GLCs). AERMOD is an advanced steady-state plume model that has the ability to incorporate building cavity downwash, actual source parameters, emission rates, terrain, and historical meteorological information to predict ground level concentrations (GLCs) at specified locations.

The AERMOD air dispersion model was used for this assessment as it has been scheduled by the MOE to replace the Regulation 346 model as the new regulatory model in Ontario after a phase in period, as specified by Ontario Regulation 419/05. The Facility's North American Industry Classification System Code is 562210, and the AERMOD model will become the regulatory model for the Facility with Ontario Regulation 419/05 Schedule 3 air quality standards beginning in 2013.

For air contaminants, the MOE air dispersion modelling guidance document "Air Dispersion Modelling Guideline for Ontario" (ADMGO) dated July 2005 was followed. For odour, the MOE position paper "Proposed Approach for the Implementation of Odour-Based Standards and Guidelines" dated June 2006 was followed.

2.0 MODEL DEVELOPMENT

2.1 Computational Models

The following approved dispersion models and pre-processor models were used in the assessment:

- AERMOD dispersion model (v. 07026);
- AERMAP surface pre-processor (v. 06341); and

REGISTERED COMPANY FOR ISO 9001 ENGINEERING DESIGN

- BPIP building downwash pre-processor (v. 04274).

2.2 Meteorological Data

MOE provides three sets of pre-processed meteorological screening data for use with dispersion modelling. They are: urban, crops and forest. Based on the land-use characteristics around the Facility, the "crops" dataset was used. The surface data is from the Ottawa Airport and Upper Air Data is from Maniwaki, Quebec. The meteorological data covers the dates from January 1, 1996 to December 31, 2000. The hourly data included many factors which affect the dispersion of air contaminants including wind speed, wind direction, temperature, ceiling height, and atmospheric stability.

2.3 Averaging Periods

Averaging periods were selected based on the type of air contaminants modelled. For the unitized emission rate model, the following averaging periods were selected: 1-hour, 24-hour, and 30-day. For the odour model, only the 1-hour averaging period was selected.

2.4 Digital Elevation Model Data

Digital elevation model (DEM) data was obtained from the MOE website and processed using the AERMOD terrain processor AERMAP. AERMAP determines base terrain elevation using the DEM data for all sources, receptors and buildings, and provides the user with a suitable input file for use with AERMOD. The DEM data was provided by the MOE (tile set 135).

2.5 Source Input Parameters

The Facility bio-scrubber was modelled as a point source, with parameters based on the final operational design specifications. The area sources, used in the odour models, are based on predicted operational conditions.

A summary of the AERMOD source input parameters is provided in Table 1.

2.6 Ground Level Concentration Receptor Grid

A tiered receptor grid was defined starting with a rectangular boundary that encloses all the modelled sources (bounding box). A tiered grid was then defined starting from the edge of the bounding box with a fine resolution, to coarser resolutions further away. All tiered distances were defined relative to the bounding box. The receptor grid used is described as follows:

- 20 m spacing within 200 m of the edge of the bounding box;
- 50 m spacing from 200 to 500 m;
- 100 m spacing from 500 to 1,000 m; and
- 200 m spacing from 1,000 to 2,000 m.

A property line ground level receptor grid with 10 m spacing was used to evaluate the maximum property boundary concentration. No receptors were placed inside the Facility's property line.

2.7 Discrete Sensitive Receptors

For the evaluation of odour, discrete sensitive receptors were defined around the Facility based on the locations of nearby homes and communities. MOE defines a sensitive receptor as: residences, camping grounds, schools, community centres, day care centres, recreational centres and outdoor recreational areas; or any other locations as specified by the MOE. A total of 79 sensitive receptors were identified and modelled.

Table 2 provides a list of modelled sensitive receptors.

2.8 On-Site Building Data

The Facility buildings were entered into the model using the USEPA Building Profile Input Program (BPIP), and run to evaluate any building cavity downwashing that may be occurring. Cavity downwash can result in air contaminants being forced to ground level prematurely under certain meteorological conditions.

The single on-site building was modelled with an average roof height of 11 metres.

3.0 DISPERSION MODELLING RESULTS

The AERMOD models were developed and executed following the methodology described above.

The five years of meteorological data included over 43,800 hours of data. For the unitized emission rate AERMOD model, the model was run to calculate the maximum 1-hour and 24-hour unitized GLC dispersion factors, in micrograms per cubic metre per one gram per second ($\mu g/m^3$ per g/s), potentially emitted from the Facility through the bio-scrubber. By multiplying the bio-scrubber contaminant emission rate, in grams per second, by the unitized GLC dispersion factor, a contaminant specific GLC is calculated. For the odour models, the 1-hour 99.85th percentile GLC was calculated for comparison against the odour guideline limit. The MOE proposed guidance specifies the 99.85th percentile modelled maximum concentration to be used for odour assessment. The meteorological conditions, which result in the maximum concentration, are typically stable atmospheric conditions such as an inversion with low wind speed.

MOE guidance allows for the removal of meteorological outliers for comparison of GLCs against a standard or guideline limit. For the 1-hour averaging period, the eight highest 1-hour averaging periods for each single year was removed for a total of 40 one-hour periods. For the 24-hour averaging period, the single highest 24-hour averaging period for each single year was removed for a total of five 24-hour periods. For each air contaminant, the appropriate unitized averaging period GLC dispersion factor was multiplied by the emission rate of the contaminant to calculate its GLC.

Table 3 summarizes the maximum predicted GLCs for each air contaminant and its percentage of the POI.

For odour, the calculated 1-hour 99.85th percentile odour value was converted to a 10-minute odour value using the MOE time-based conversion factor of 1.65. Figure 1 presents the maximum calculated 10-minute 99.85th percentile odour level at each discrete receptor. Figure 2 presents the maximum calculated 10-minute 99.85th percentile odour isopleths around the Facility.

4.0 CONCLUSIONS

The AERMOD dispersion modelling assessment was completed for odour and each of the contaminants potentially emitted from the Facility.

Based on the modelled GLC results, no air contaminants were identified to exceed any Ontario Regulation 419/05 Schedule 3 standard or MOE guideline.

Based on the modelled odour results, no sensitive receptors were identified that would be impacted with an odour value of greater than the allowable one odour unit.

Should you have any questions on the above, please do not hesitate to contact us.

Notes:
NA - Not Available.
PS - Proposed standard.
S - Ontario Regulation 419/05 published standard
(1) Units are in ug/m^3 unless otherwise noted.
(2) The odour value represents the maximum predicted 10-minute 99.85th percentile value at any sensitive receptor identified in Table 2.
(3) Based on a 1-hour unitized dispersion factor, after removal of meteorological outliers, of 6.24 ug/m^3 per g/s.
(4) Based on a 24-hour unitized dispersion factor, after removal of meteorological outliers, of 1.88 ug/m^3 per g/s.
(5) Based on the 1-hour unitized dispersion factor as described in note (3) and applying the MOE 1-hour to 30-minute time-based conversion factor of 1.2.

Attachments: Air Facility Inspection Report - Orgaworld Canada Ltd (March 15, 2018).pdf; Industrial Sewage Works Inspection Report - Orgaworld Canada Ltd (March 15, 2018).pdf; Non-Hazardous Waste Transfer Processing Inspection Report - Orgaworld Canada Ltd (March 15, 2018).pdf; Subject Waste Generator Inspection Report - Orgaworld Canada Ltd (March 15, 2018).pdf

Hello David,

Please find attached copies of the inspection reports completed at Orgaworld Ottawa, dated March 15, 2018, located at 5123 Hawthorne Road, Ottawa, On. If you have any questions after the review of the reports please contact me to discuss.

Attachments:

- Air Facility Inspection Report
- Industrial Sewage Works Inspection Report
- Non-Hazardous Waste Transfer Processing Inspection Report
- Subject Waste Generator Inspection Report

The Subject Waste Generator Inspection Report outlines an action item for the confirmation of Copy 6 of Waste Manifest No. RS77263. In your email, dated March 23, 2018, the copy was provided to me therefore the action item has been addressed. The report was already completed and sent for sign-off when you provided the information therefore I couldn't make any changes at that time.

Thank you,

Kyle Straberger

RE: Convertus Processing Facility
5123 Hawthorne Road, Ottawa
- 2024 Groundwater and Surface Water Monitoring Report
- Groundwater Work Plan

I have reviewed the hydrogeology aspects of the following documents for the Convertus Processing Facility at 5123 Hawthorne Road in Ottawa (the "site"):

- "2024 Groundwater and Surface Water Monitoring Report" dated March 28, 2025 and completed by GHD consultants.

- "Convertus Ottawa Groundwater Workplan" dated July 5, 2024 and completed by Convertus.

2024 Monitoring Report

GHD provided the following (groundwater) conclusions in their 2024 annual report:

- Based on the groundwater elevations gathered in April/May, August and December of 2024, shallow unconfined aquifer flow occurs in an east-northeast direction and groundwater in the deep bedrock aquifer flows in a west-southwest direction, opposite to the direction of the shallow unconfined aquifer.

- Analytical results for the shallow unconfined aquifer samples indicate that groundwater quality at the Site has been historically affected by Facility operations. The distribution of concentrations of ammonia, DOC, iron, and manganese are consistent with an area of impact related to an organic contaminant source in the vicinity of the Facility. Significant improvements in water quality were observed during 2023 and 2024.

- In 2021 and 2022, there were increases in ammonia and DOC in proximity to the Facility (EW107-15 and MW105-13). A damaged knee wall was discovered within the Facility in 2021, which likely contributed to leakage of affected water

into the shallow groundwater. The damage was repaired in 2022 and significant improvements in shallow groundwater quality were observed in the vicinity of the Facility in 2023 and 2024.

- Repair of a failed gasket in a leachate management system manhole in February 2024 eliminated a potential historical source of leakage of leachate to shallow groundwater. Shallow groundwater quality results from 2024 suggest that this repair contributed to improvements in shallow groundwater quality in the vicinity of the Facility.

- Analytical sample results obtained from the deep bedrock aquifer unit monitoring wells indicate that groundwater quality in the deep bedrock aquifer is naturally poor. This observation is consistent with investigations of deep bedrock groundwater quality prior to Facility construction and operation.

Based on these conclusions, GHD recommends the following for 2025:

- The groundwater extraction system at EW107-15 should be operated in such a manner that as much impacted groundwater from the shallow flow system is removed as is feasible.

- The SCADA monitoring system should continue to be used to accurately record the volume of water pumped from EW107-15.

- Groundwater samples should continue to be collected from EW107-15 on a monthly basis during 2025.

- Well condition of bedrock monitoring well TW-4 should be assessed by a licenced well contractor to determine if the well has been compromised. The well should be repaired or replaced, based on the results of the assessment.

- Surveying should be completed in 2025 for monitoring wells MW106-15, MW108-20, MW109-21, MW110-21, and MW111-21. Surveying should also be completed at extraction well EW107-15.

- Wells MW101-13, MW102-09, MW104-13, MW106-15, and MW108-20 should be sampled in duplicate in 2025 as part of a Tier II TLP response.

GHD indicated that a leachate tank inspection was conducted in response to my previous recommendation and the integrity of the tanks was confirmed (no leaks). GHD further indicated that offsite wells MW109-21, MW110-21 and MW111-21 will be included as part of the ongoing monitoring program.

Groundwater Workplan

Convertus indicated the following in the Workplan document:

- Convertus also indicated that monitoring wells MW109-21, MW110-21 and MW111-21 will be included as part of the ongoing monitoring program.

- Convertus agrees that the groundwater extraction well (EW107-15) will be operated to remove as much impacted shallow groundwater as feasible.

- The plan to implement remedial measures at the site (the "Treewell" system) was put on hold in 2022 when concentrations of ammonia and other organic indicators were found to be increasing in wells near the facility. Convertus shifted their focus to identifying and stopping the potential sources of this impact. This led to repair of the receiving area knee wall (June 2022) and a leaking manhole connected to the leachate USTs (March 2024).

- Convertus is exploring transporting impacted water pumped from the extraction well to ROPEC for treatment.

- Convertus will continue to work with Geosyntec and Applied Natural Sciences to evaluate the Treewell system. Convertus will also reconsider the onsite pump and treat option previously proposed by Current Water Technologies.

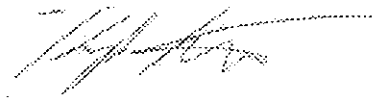
- Convertus has indicated that they have taken significant steps to control groundwater impacts from the facility and has increased the extraction of impacted groundwater.

Conclusions and Recommendations

Based on my review I offer the following comments for your consideration:

- Repairs to the knee wall and failed manhole gasket have apparently resulted in significant improvements to shallow groundwater quality at the site.

- I am in general agreement with the recommendations presented by GHD in the 2024 annual report.



- Monitoring wells MW109-21, MW110-21 and MW111-21 should be included as part of the ongoing monitoring program as agreed to by Convertus and GHD.

- I support the commitment from Convertus to continue assessment of an appropriate remediation approach for the site based on ongoing monitoring results.

- Based on groundwater flow conditions at the site, shallow groundwater impacts extend onto the property north of Somme Street and potentially onto the property east of the site. Supply wells at these properties access water from a deeper aquifer unit that is interpreted to not be hydraulically connected to the shallow groundwater flow system where impacts reside. Groundwater quality at these supply wells is therefore not expected to be adversely impacted by impacts at the site. Despite this I recommend that these property owners should be notified of shallow contamination conditions at the Convertus property just hydraulically upgradient of their properties and likely extending onto their properties. The easiest way to do this may be for Convertus to provide the annual report to adjacent property owners.

- There is potential for impact to surface water resources at this site. As such, I recommend that the documents should be reviewed by the ministry's Surface Water Specialist.

Please contact me if you would like to further discuss these comments.

Subject:	Voluntary Groundwater Remediation Plan for Renewi Ottawa
Date:	June 5, 2019 4:09:28 PM
Attachments:	Outlook-1519225495.png 2019-05-13 Renewi Laboratory Study Final Report.pdf 2019-04-12 Renewi Ottawa CWT Groundwater Sample Summary.xlsx Ottawa Extraction Well Map.pdf

Good Afternoon Kyle,

Attached is a copy of the final report from the groundwater pump and treat pilot test at the Renewi Ottawa Facility performed by Current Water Technologies (CWT) in Guelph that we discussed previously. I am also enclosing an Excel file that summarizes the analytical findings. Overall, the test demonstrated that the AmmEL + ESD units would successfully treat impacted groundwater for ammonia and metals to levels below the PWQOs. While the AmmEL + ESD treatment train was effective in significantly reducing the concentration of phosphorus and phenols found in the groundwater, these two lone compounds remained at levels above their respective PWQOs in several treated samples. Addressing these compounds may need to be achieved through alternative means.

As per your recommendation from your email of May 1st, Renewi wishes to amend our existing Industrial Sewage Works ECA (2844-9YNGZC) to include the operation of CWT's remediation equipment. While the treatment equipment from CWT would be installed as described in the report, we think it would be beneficial to install new extraction well, with a 6" casing, in the grassy area shown in the Map attachment. This would provide an extraction well very close to the highest concentrations of ammonia described in GHD's 2018 Annual Monitoring Report, and closer to the property boundary. We found from the trial that the 2" casing in the existing monitoring wells is too small to allow for continual groundwater pumping. We would then pump groundwater from the new well (EW108-19) and EW107-15 simultaneously into CWT's treatment train, discharging the treated effluent to the NE ditch. It is our intention to meter the water inputs and remain below the daily extraction volume requiring a Permit to Take Water.

GHD is performing the Spring 2019 sampling round in Ottawa during the week of June 17th. Before making a final decision on the location of the new extraction well we will review the latest water chemistry data to ensure proper placement.

Renewi will work with GHD to prepare an amendment application. We would like to take you up on your offer to help coordinate pre-submission consultation meetings with Tech Support and provide support for an expedited review once the application is received.

To maximize the volume of groundwater treated next year, we would like to begin pumping

on April 1st, 2020. The ECA amendment would need to be in place prior to that date. Weather permitting, we would then pump and treat impacted groundwater until late Fall 2020. The impact of the pump and treat effort will be monitored during GHD's regular annual groundwater and surface water monitoring program occurring throughout 2020.

I will be in touch shortly to arrange a pre-submission consultation meeting with Tech Support. Representatives will be present from Renewi, GHD, and Current Water Technologies.

Best regards,

David Veinot

Well Record for Well Cluster - Part 3 of 3
Detailed Drawing of All Well Locations

Note: This **Well Record for Well Cluster Part 3 - Detailed Drawing of all Well Locations,** must be attached to Parts 1 and 2. The drawing must include all property boundaries, an arrow indicating the North direction, all named roads and sufficient measurements to locate all wells in the cluster in relation to fixed points. The drawing must show the location of each well and each well must be numbered on the drawing to match number used for that well on the **Well Record for Well Cluster Parts 1 and 2.** The well with the well tag must be clearly identified on the Drawing.
UTM coordinates should appear beside each well, if space permits. Additional comments on wells can be included on the drawing

External Email: Do not click on links or open attachments unless you trust the sender.

Hello ,

NO RECORD FOUND IN CURRENT DATABASE:

- We confirm that there are NO **fuels records** in our database at the subject address(es).

For a further search in our archives, please go to the **TSSA Client Portal** to complete an Application for Release of Public Information. Please refer to Training (tssa.org) for instructions on how to use the portal. Please refer to How to Submit a Public Information Request (tssa.org) for instructions.

The associated fee must be paid via credit card (Visa or MasterCard).

Once all steps have been successfully completed you will receive your payment receipt via email.

TSSA does not make any representations or warranties with respect to the accuracy or completeness of any records released. The requestor assumes all risk in using or relying on the information provided.

If you have any questions or concerns, please do not hesitate to contact our Public Information Release team at publicinformationservices@tssa.org.

Kind regards,

Aleena Tahir | Public Information & Records Agent

*Sent via email [*mwitteman@patersongroup.ca*]*

Dear Ms. Witteman,

Re: Information Request
Part of 5123 Hawthorne Road, Ottawa, Ontario ("Subject Property")

Internal Department Circulation

The Planning, Infrastructure and Economic Development Department has the following information in response to your request for information regarding the Subject Property:

- **Sewer Use Program:** The City's Sewer Use Program has found the following information pertaining to the subject property: Hauled waste approval and inspection.

Search of Historical Land Use Inventory

This acknowledges receipt of the signed Disclaimer regarding your request for information from the City's Historical Land Use Inventory (HLUI 2005) database for the Subject Property.

A search of the HLUI database revealed the following information:

- There is one (1) activity associated with the Subject Property.

The HLUI database was also searched for activity associated with properties located within 250m of the Subject Property. The search revealed the following:

- There is one (1) activity associated with one (1) property located within 250m of the Subject Property.

Please note that certain activities have been identified to have a PIN Certainty of “2”. This identifier acknowledges that there is some uncertainty about the exact location of the land use activity and that the activity may or may not have been located on the property. All database entries with a PIN Certainty of “2” require independent verification as to their precise location.

A **site map** and **table** have been included to show the location of the Subject Property as well as the location of all the activities noted above, including the HLUI database’s location of the Activity Numbers with a PIN Certainty of “2”.

Additional information may be obtained by contacting:

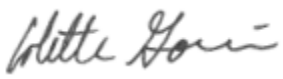
Ontario’s Environmental Registry

The Environmental Registry found at http://www.ebr.gov.on.ca/ERS-WEB-External/ contains "public notices" about environmental matters being proposed by all government ministries covered by the Environmental Bill of Rights. The public notices may contain information about proposed new laws, regulations, policies and programs or about proposals to change or eliminate existing ones. By using keys words i.e. name of proponent/owner and the address one can ascertain if there is any information on the proponent and address under the following categories: Ministry, keywords, notice types, Notice Status, Acts, Instruments and published date (all years).

The Ontario Land Registry Office

Registration of real property is recorded in the Ontario Land Registry Office through the Land Titles Act or the Registry Act. Documents relating to title and other agreements that may affect your property are available to the public for a fee. It is recommended that a property search at the Land Registry Office be included in any investigation as to the historic use of your property. The City of Ottawa cannot comment on any documents to which it is not a party.

Court House
161 Elgin Street 4th Floor
Ottawa ON K2P 2K1
Tel: (613) 239-1230
Fax: (613) 239-1422



Please note, as per the HLUI Disclaimer, that the information contained in the HLUI database has been compiled from publicly available records and other sources of information. The HLUI may contain erroneous information given that the records used as sources of information may be flawed. For instance, changes in municipal addresses over time may introduce error. Accordingly, all information from the HLUI database is provided on an “as is” basis with no representation or warranty by the City with respect to the information’s accuracy or exhaustiveness in responding to the request.

Furthermore, the HLUI database and the results of this search in no way confirm the presence or absence of contamination or pollution of any kind. This information is provided on the assumption that it will not be relied upon by any person for any purpose whatsoever. The City of Ottawa denies all liability to any persons attempting to rely on any information provided from the HLUI database.

Please note that in responding to your request, the City of Ottawa does not guarantee or comment on the environmental condition of the Subject Property. You may wish to contact the Ontario Ministry of Environment and Climate Change for additional information.

If you have any further questions or comments, please contact Colette Gorni at 613-580-2424 ext. 21239 or HLUI@ottawa.ca

Sincerely,

Colette Gorni

Notice: IMPORTANT LIMITATIONS and YOUR LIABILITY

Reliance on information in Report: This report DOES NOT replace a full Phase I Environmental Site Assessment but is solely intended to be used as a database review of environmental records.

License for use of information in Report: No page of this report can be used without this cover page, this notice and the project property identifier. The information in Report(s) may not be modified or re-sold.

Your Liability for misuse: Using this Service and/or its reports in a manner contrary to this Notice or your agreement will be in breach of copyright and contract and ERIS may obtain damages for such mis-use, including damages caused to third parties, and gives ERIS the right to terminate your account, rescind your license to any previous reports and to bar you from future use of the Service.

No warranty of Accuracy or Liability for ERIS: The information contained in this report has been produced by ERIS Information Limited Partnership ("ERIS") using various sources of information, including information provided by Federal and Provincial government departments. The report applies only to the address and up to the date specified on the cover of this report, and any alterations or deviation from this description will require a new report. This report and the data contained herein does not purport to be and does not constitute a guarantee of the accuracy of the information contained herein and does not constitute a legal opinion nor medical advice. Although ERIS has endeavored to present you with information that is accurate, ERIS disclaims, any and all liability for any errors, omissions, or inaccuracies in such information and data, whether attributable to inadvertence, negligence or otherwise, and for any consequences arising therefrom. Liability on the part of ERIS is limited to the monetary value paid for this report.

Trademark and Copyright: You may not use the ERIS trademarks or attribute any work to ERIS other than as outlined above. This Service and Report (s) are protected by copyright owned by ERIS Information Limited Partnership. Copyright in data used in the Service or Report(s) (the "Data") is owned by ERIS or its licensors. The Service, Report(s) and Data may not be copied or reproduced in whole or in any substantial part without prior written consent of ERIS.

Appendix: Database Descriptions

Environmental Risk Information Services (ERIS) can search the following databases. The extent of historical information varies with each database and current information is determined by what is publicly available to ERIS at the time of update. ***Note:*** *Databases denoted with " * " indicates that the database will no longer be updated. See the individual database description for more information.*

Abandoned Aggregate Inventory: Provincial AAGR

The MAAP Program maintains a database of abandoned pits and quarries. Please note that the database is only referenced by lot and concession and city/town location. The database provides information regarding the location, type, size, land use, status and general comments.*

Government Publication Date: Sept 2002*

Aggregate Inventory: Provincial AGR

This database of licensed and permitted pits and quarries is maintained by the Ontario Ministry of Natural Resources and Forestry (MNRF), as regulated under the Aggregate Resources Act, R.S.O. 1990. Aggregate site data has been divided into active and inactive sites. Active sites may be further subdivided into partial surrenders. In partial surrenders, defined areas of a site are inactive while the rest of the site remains active.

Government Publication Date: Up to Nov 2024

Abandoned Mine Information System: Provincial AMIS

The Abandoned Mines Information System contains data on known abandoned and inactive mines located on both Crown and privately held lands. The information was provided by the Ministry of Northern Development and Mines (MNDM), with the following disclaimer: "the database provided has been compiled from various sources, and the Ministry of Northern Development and Mines makes no representation and takes no responsibility that such information is accurate, current or complete". Reported information includes official mine name, status, background information, mine start/end date, primary commodity, mine features, hazards and remediation.

Government Publication Date: 1800-Apr 2024

Anderson's Waste Disposal Sites: Private ANDR

The information provided in this database was collected by examining various historical documents which aimed to characterize the likely position of former waste disposal sites from 1860 to present. The research initiative behind the creation of this database was to identify those sites that are missing from the Ontario MOE Waste Disposal Site Inventory, as well as to provide revisions and corrections to the positions and descriptions of sites currently listed in the MOE inventory. In addition to historic waste disposal facilities, the database also identifies certain auto wreckers and scrap yards that have been extrapolated from documentary sources. Please note that the data is not warranted to be complete, exhaustive or authoritative. The information was collected for research purposes only.

Government Publication Date: 1860s-Present

Aboveground Storage Tanks: Provincial AST

Historical listing of aboveground storage tanks made available by the Department of Natural Resources and Forestry. Includes tanks used to hold water or petroleum. This dataset has been retired as of September 25, 2014 and will no longer be updated.

Government Publication Date: May 31, 2014

Automobile Wrecking & Supplies: Private AUWR

This database provides an inventory of known locations that are involved in the scrap metal, automobile wrecking/recycling, and automobile parts & supplies industry. Information is provided on the company name, location and business type.

Government Publication Date: 1999-Apr 30, 2025

Borehole: Provincial BORE

A borehole is the generalized term for any narrow shaft drilled in the ground, either vertically or horizontally. The information here includes geotechnical investigations or environmental site assessments, mineral exploration, or as a pilot hole for installing piers or underground utilities. Information is from many sources such as the Ministry of Transportation (MTO) boreholes from engineering reports and projects from the 1950 to 1990's in Southern Ontario. Boreholes from the Ontario Geological Survey (OGS) including The Urban Geology Analysis Information System (UGAIS) and the York Peel Durham Toronto (YPDT) database of the Conservation Authority Moraine Coalition. This database will include fields such as location, stratigraphy, depth, elevation, year drilled, etc. For all water well data or oil and gas well data for Ontario please refer to WWIS and OOGW.

Government Publication Date: 1875-Jul 2018

Certificates of Approval: Provincial CA

This database contains the following types of approvals: Air & Noise, Industrial Sewage, Municipal & Private Sewage, Waste Management Systems and Renewable Energy Approvals. The MOE in Ontario states that any facility that releases emissions to the atmosphere, discharges contaminants to ground or surface water, provides potable water supplies, or stores, transports or disposes of waste, must have a Certificate of Approval before it can operate lawfully. Fields include approval number, business name, address, approval date, approval type and status. This database will no longer be updated, as CofA's have been replaced by either Environmental Activity and Sector Registry (EASR) or Environmental Compliance Approval (ECA). Please refer to those individual databases for any information after Oct.31, 2011.

Government Publication Date: 1985-Oct 30, 2011*

Dry Cleaning Facilities: Federal CDRY

List of dry cleaning facilities made available by Environment and Climate Change Canada. Environment and Climate Change Canada's Tetrachloroethylene (Use in Dry Cleaning and Reporting Requirements) Regulations (SOR/2003-79) are intended to reduce releases of tetrachloroethylene to the environment from dry cleaning facilities.

Government Publication Date: Jan 2004-Dec 2023

Commercial Fuel Oil Tanks: Provincial CFOT

Locations of commercial underground fuel oil tanks. This is not a comprehensive or complete inventory of commercial fuel tanks in the province; this listing is a copy of records of registered commercial underground fuel oil tanks obtained under Access to Public Information.
Note that the following types of tanks do not require registration: waste oil tanks in apartments, office buildings, residences, etc.; aboveground gas or diesel tanks. Records are not verified for accuracy or completeness.

Government Publication Date: Oct 2023

Chemical Manufacturers and Distributors: Private CHEM

This database includes information from both a one time study conducted in 1992 and private source and is a listing of facilities that manufacture or distribute chemicals. The production of these chemical substances may involve one or more chemical reactions and/or chemical separation processes (i.e. fractionation, solvent extraction, crystallization, etc.).

Government Publication Date: 1999-Jan 31, 2020

Chemical Register: Private CHM

This database includes a listing of locations of facilities within the Province or Territory that either manufacture and/or distributes chemicals.

Government Publication Date: 1999-Apr 30, 2025

Compressed Natural Gas Stations: Private CNG

Canada has a network of public access compressed natural gas (CNG) refuelling stations. These stations dispense natural gas in compressed form at 3,000 pounds per square inch (psi), the pressure which is allowed within the current Canadian codes and standards. The majority of natural gas refuelling is located at existing retail gasoline that have a separate refuelling island for natural gas. This list of stations is made available by the Canadian Natural Gas Vehicle Alliance.

Government Publication Date: Dec 2012 -Apr 2025

Inventory of Coal Gasification Plants and Coal Tar Sites: Provincial COAL

This inventory includes both the "Inventory of Coal Gasification Plant Waste Sites in Ontario-April 1987" and the Inventory of Industrial Sites Producing or Using Coal Tar and Related Tars in Ontario-November 1988) collected by the MOE. It identifies industrial sites that produced and continue to produce or use coal tar and other related tars. Detailed information is available and includes: facility type, size, land use, information on adjoining properties, soil condition, site operators/occupants, site description, potential environmental impacts and historic maps available. This was a one-time inventory.*

Government Publication Date: Apr 1987 and Nov 1988*

Compliance and Convictions: Provincial CONV

This database summarizes the fines and convictions handed down by the Ontario courts beginning in 1989. Companies and individuals named here have been found guilty of environmental offenses in Ontario courts of law.

Government Publication Date: 1989-Apr 2025

Certificates of Property Use: Provincial CPU

This is a subset taken from Ontario's Environmental Registry (EBR) database. It will include CPU's on the registry such as (EPA s. 168.6) - Certificate of Property Use.

Government Publication Date: 1994 - May 31, 2025

Drill Hole Database: Provincial DRL

The Ontario Drill Hole Database (ODHD) is offered by the Province of Ontario's Ministry of Mines. The dataset contains information for over 164,000 percussion, overburden, sonic and diamond-drill holes. The presence of assay results with cutoff values for gold, silver, copper, zinc, lead, nickel and platinum group elements is noted. Drill hole data are compiled from assessment files that have been submitted to the ministry in accordance with the Ontario Mining Act (OMA). Source assessment file numbers are captured for cross reference with the Ontario Assessment File Database (OAFD). Please note that limited data is available for southern Ontario, as it was the last area to be completed. The database was created when surveys submitted to the Ministry were converted in the Assessment File Research Image Database (AFRI) project. However, the degree of accuracy (coordinates) as to the exact location of drill holes is dependent upon the source document submitted. Levels of accuracy used to locate holes are: centering on the mining claim; a sketch of the mining claim; a 1:50,000 map; a detailed company map; or from submitted a "Report of Work".

Government Publication Date: 1886 - Aug 2024

Delisted Fuel Tanks: Provincial DTNK

List of fuel storage tank sites that were once found in - and have since been removed from - the list of fuel storage tanks made available by the regulatory agency under Access to Public Information.

Government Publication Date: Oct 2023

Environmental Activity and Sector Registry: Provincial EASR

On October 31, 2011, a smarter, faster environmental approvals system came into effect in Ontario. The EASR allows businesses to register certain activities with the ministry, rather than apply for an approval. The registry is available for common systems and processes, to which preset rules of operation can be applied. The EASR is currently available for: heating systems, standby power systems and automotive refinishing. Businesses whose activities aren't subject to the EASR may apply for an ECA (Environmental Compliance Approval), Please see our ECA database.

Government Publication Date: Oct 2011 - May 31, 2025

Environmental Registry: Provincial EBR

The Environmental Registry lists proposals, decisions and exceptions regarding policies, Acts, instruments, or regulations that could significantly affect the environment. Through the Registry, thirteen provincial ministries notify the public of upcoming proposals and invite their comments. For example, if a local business is requesting a permit, license, or certificate of approval to release substances into the air or water; these are notified on the registry. Data includes: Approval for discharge into the natural environment other than water (i.e. Air) - EPA s. 9, Approval for sewage works - OWRA s. 53(1), and EPA s. 27 - Approval for a waste disposal site. For information regarding Permit to Take Water (PTTW), Certificate of Property Use (CPU) and (ORD) Orders please refer to those individual databases.

Government Publication Date: 1994 - May 31, 2025

Environmental Compliance Approval: Provincial ECA

On October 31, 2011, a smarter, faster environmental approvals system came into effect in Ontario. In the past, a business had to apply for multiple approvals (known as certificates of approval) for individual processes and pieces of equipment. Today, a business either registers itself, or applies for a single approval, depending on the types of activities it conducts. Businesses whose activities aren't subject to the EASR may apply for an ECA. A single ECA addresses all of a business's emissions, discharges and wastes. Separate approvals for air, noise and waste are no longer required. This database will also include Renewable Energy Approvals. For certificates of approval prior to Nov 1st, 2011, please refer to the CA database. For all Waste Disposal Sites please refer to the WDS database.

Government Publication Date: Oct 2011 - May 31, 2025

Environmental Effects Monitoring: Federal EEM

The Environmental Effects Monitoring program assesses the effects of effluent from industrial or other sources on fish, fish habitat and human usage of fisheries resources. Since 1992, pulp and paper mills have been required to conduct EEM studies under the Pulp and Paper Effluent Regulations. This database provides information on the mill name, geographical location and sub-lethal toxicity data.

Government Publication Date: 1992-2007*

ERIS Historical Searches: Private EHS

ERIS has compiled a database of all environmental risk reports completed since March 1999. Available fields for this database include: site location, date of report, type of report, and search radius. As per all other databases, the ERIS database can be referenced on both the map and "Statistical Profile" page.

Government Publication Date: 1999-Aug 31, 2024

Environmental Issues Inventory System: Federal EIIS

The Environmental Issues Inventory System was developed through the implementation of the Environmental Issues and Remediation Plan. This plan was established to determine the location and severity of contaminated sites on inhabited First Nation reserves, and where necessary, to remediate those that posed a risk to health and safety; and to prevent future environmental problems. The EIIS provides information on the reserve under investigation, inventory number, name of site, environmental issue, site action (Remediation, Site Assessment), and date investigation completed.

Government Publication Date: 1992-2001*

Emergency Management Historical Event: Provincial EMHE

List of locations of historical occurrences of emergency events, including those assigned to the Ministry of Natural Resources by Order-In-Council (OIC) under the Emergency Management and Civil Protection Act, as well as events where MNR provided requested emergency response assistance. Many of these events will have involved community evacuations, significant structural loss, and/or involvement of MNR emergency response staff. These events fall into one of ten (10) type categories: Dam Failure; Drought / Low Water; Erosion; Flood; Forest Fire; Soil and Bedrock Instability; Petroleum Resource Center Event, EMO Requested Assistance, Continuity of Operations Event, Other Requested Assistance. EMHE record details are reproduced by ERIS under License with the Ontario Ministry of Natural Resources © Queen's Printer for Ontario, 2017.

Government Publication Date: Apr 30, 2022

Environmental Penalty Annual Report: Provincial EPAR

This database contains data from Ontario's annual environmental penalty report published by the Ministry of the Environment, Conservation and Parks (MECP). These reports provide information on environmental penalties for land or water violations issued to companies in one of the nine industrial sectors covered by the Municipal Industrial Strategy for Abatement (MISA) regulations.

Government Publication Date: Jan 1, 2011 - Dec 31, 2024

List of Expired Fuels Safety Facilities: Provincial EXP

List of facilities and tanks for which there was once a fuel registration. This is not a comprehensive or complete inventory of expired tanks/tank facilities in the province; this listing is a copy of previously registered tanks and facilities obtained under Access to Public Information. Includes private fuel outlets, bulk plants, fuel oil tanks, gasoline stations, marinas, propane filling stations, liquid fuel tanks, piping systems, etc; includes tanks which have been removed from the ground.
Notes: registration was not required for private fuel underground/aboveground storage tanks prior to January 1990, nor for furnace oil tanks prior to May 1, 2002; registration is not required for waste oil tanks in apartments, office buildings, residences, etc., or aboveground gas or diesel tanks. Records are not verified for accuracy or completeness.

Government Publication Date: Oct 2023

Federal Convictions: Federal FCON

Environment Canada maintains a database referred to as the "Environmental Registry" that details prosecutions under the Canadian Environmental Protection Act (CEPA) and the Fisheries Act (FA). Information is provided on the company name, location, charge date, offence and penalty.

Government Publication Date: 1988-Jun 2007*

Contaminated Sites on Federal Land: Federal FCS

The Federal Contaminated Sites Inventory includes information on known federal contaminated sites under the custodianship of departments, agencies and consolidated Crown corporations as well as those that are being or have been investigated to determine whether they have contamination arising from past use that could pose a risk to human health or the environment. The inventory also includes non-federal contaminated sites for which the Government of Canada has accepted some or all financial responsibility. It does not include sites where contamination has been caused by, and which are under the control of, enterprise Crown corporations, private individuals, firms or other levels of government. Includes fire training sites and sites at which Per- and Polyfluoroalkyl Substances (PFAS) are a concern.

Government Publication Date: Jun 2000-Jan 2025

Fisheries & Oceans Fuel Tanks: Federal FOFT

Fisheries & Oceans Canada maintains an inventory of aboveground & underground fuel storage tanks located on Fisheries & Oceans property or controlled by DFO. Our inventory provides information on the site name, location, tank owner, tank operator, facility type, storage tank location, tank contents & capacity, and date of tank installation.

Government Publication Date: 1964-Sep 2019

Federal Identification Registry for Storage Tank Systems (FIRSTS): Federal FRST

A list of federally regulated Storage tanks from the Federal Identification Registry for Storage Tank Systems (FIRSTS). FIRSTS is Environment and Climate Change Canada's database of storage tank systems subject to the Storage Tank for Petroleum Products and Allied Petroleum Products Regulations. The main objective of the Regulations is to prevent soil and groundwater contamination from storage tank systems located on federal and aboriginal lands. Storage tank systems that do not have a valid identification number displayed in a readily visible location on or near the storage tank system may be refused product delivery.

Government Publication Date: Oct 31, 2021

Fuel Storage Tank: Provincial FST

List of registered private and retail fuel storage tanks. This is not a comprehensive or complete inventory of private and retail fuel storage tanks in the province; this listing is a copy of registered private and retail fuel storage tanks, obtained under Access to Public Information.
Notes: registration was not required for private fuel underground/aboveground storage tanks prior to January 1990, nor for furnace oil tanks prior to May 1, 2002; registration is not required for waste oil tanks in apartments, office buildings, residences, etc., or aboveground gas or diesel tanks. Records are not verified for accuracy or completeness.

Government Publication Date: Oct 2023

Fuel Storage Tank - Historic: Provincial FSTH

The Fuels Safety Branch of the Ontario Ministry of Consumer and Commercial Relations maintained a database of all registered private fuel storage tanks. Public records of private fuel storage tanks are only available since the registration became effective in September 1989. This information is now collected by the Technical Standards and Safety Authority.

Government Publication Date: Pre-Jan 2010*

Ontario Regulation 347 Waste Generators Summary: Provincial GEN

Regulation 347 of the Ontario EPA defines a waste generation site as any site, equipment and/or operation involved in the production, collection, handling and/or storage of regulated wastes. A generator of regulated waste is required to register the waste generation site and each waste produced, collected, handled, or stored at the site. This database contains the registration number, company name and address of registered generators including the types of hazardous wastes generated. It includes data on waste generating facilities such as: drycleaners, waste treatment and disposal facilities, machine shops, electric power distribution etc. This information is a summary of all years from 1986 including the most currently available data. As of January 1, 2023, businesses and institutions subject to the amended Reg. 347: General – Waste Management are required to report their activities and pay fees through Resource Productivity & Recovery Authority (RPRA) online Hazardous Waste Program Registry (HWPR) rather than the Hazardous Waste Information Network (HWIN) system previously operated by the Ministry of the Environment, Conservation and Parks (MECP). Some records may contain, within the company name, the phrase "See & Use..." followed by a series of letters and numbers. This occurs when one company is amalgamated with or taken over by another registered company. The number listed as "See & Use", refers to the new ownership and the other identification number refers to the original ownership. This phrase serves as a link between the 2 companies until operations have been fully transferred.

Government Publication Date: 1986-Dec 31, 2024

Greenhouse Gas Emissions from Large Facilities: Federal GHG

List of greenhouse gas emissions from large facilities made available by Environment Canada. Greenhouse gas emissions in kilotonnes of carbon dioxide equivalents (kt CO2 eq).

Government Publication Date: 2013-Apr 2024

TSSA Historic Incidents: Provincial HINC

List of historic incidences of spills and leaks of diesel, fuel oil, gasoline, natural gas, propane, and hydrogen recorded by the TSSA in their previous incident tracking system. The TSSA's Fuels Safety Program administers the Technical Standards & Safety Act 2000, providing fuel-related safety services associated with the safe transportation, storage, handling and use of fuels such as gasoline, diesel, propane, natural gas and hydrogen. Under this Act, the TSSA regulates fuel suppliers, storage facilities, transport trucks, pipelines, contractors and equipment or appliances that use fuels. Records are not verified for accuracy or completeness. This is not a comprehensive or complete inventory of historical fuel spills and leaks in the province. This listing is a copy of the data captured at one moment in time and is hence limited by the record date provided here.

Government Publication Date: 2006-June 2009*

Indian & Northern Affairs Fuel Tanks: Federal IAFT

The Department of Indian & Northern Affairs Canada (INAC) maintains an inventory of aboveground & underground fuel storage tanks located on both federal and crown land. Our inventory provides information on the reserve name, location, facility type, site/facility name, tank type, material & ID number, tank contents & capacity, and date of tank installation.

Government Publication Date: 1950-Aug 2003*

Fuel Oil Spills and Leaks: Provincial INC

Listing of spills and leaks of diesel, fuel oil, gasoline, natural gas, propane, and hydrogen reported to the Spills Action Centre (SAC). This is not a comprehensive or complete inventory of fuel-related leaks, spills, and incidents in the province; this listing in a copy of incidents reported to the SAC, obtained under Access to Public Information. Includes incidents from fuel-related hazards such as spills, fires, and explosions. Records are not verified for accuracy or completeness.

Government Publication Date: 31 Oct, 2023

Landfill Inventory Management Ontario: Provincial LIMO

The Landfill Inventory Management Ontario (LIMO) database is updated every year, as the Ministry of the Environment, Conservation and Parks compiles new and updated information. Includes small and large landfills currently operating as well as those which are closed and historic. Operators of larger landfills provide landfill information for the previous operating year to the ministry for LIMO including: estimated amount of total waste received, landfill capacity, estimated total remaining landfill capacity, fill rates, engineering designs, reporting and monitoring details, size of location, service area, approved waste types, leachate of site treatment, contaminant attenuation zone and more. The small landfills include information such as site owner, site location and certificate of approval # and status.

Government Publication Date: Mar 31, 2022

Canadian Mine Locations: Private MINE

This information is collected from the Canadian & American Mines Handbook. The Mines database is a national database that provides over 290 listings on mines (listed as public companies) dealing primarily with precious metals and hard rocks. Listed are mines that are currently in operation, closed, suspended, or are still being developed (advanced projects). Their locations are provided as geographic coordinates (x, y and/or longitude, latitude). As of 2002, data pertaining to Canadian smelters and refineries has been appended to this database.

Government Publication Date: 1998-2009*

Mineral Occurrences: Provincial MNR

In the early 70's, the Ministry of Northern Development and Mines created an inventory of approximately 19,000 mineral occurrences in Ontario, in regard to metallic and industrial minerals, as well as some information on building stones and aggregate deposits. Please note that the "Horizontal Positional Accuracy" is approximately +/- 200 m. Many reference elements for each record were derived from field sketches using pace or chain/tape measurements against claim posts or topographic features in the area. The primary limiting factor for the level of positional accuracy is the scale of the source material. The testing of horizontal accuracy of the source materials was accomplished by comparing the plan metric (X and Y) coordinates of that point with the coordinates of the same point as defined from a source of higher accuracy.

Government Publication Date: 1846-Feb 2025

National Analysis of Trends in Emergencies System (NATES): Federal NATE

In 1974 Environment Canada established the National Analysis of Trends in Emergencies System (NATES) database, for the voluntary reporting of significant spill incidents. The data was to be used to assist in directing the work of the emergencies program. NATES ran from 1974 to 1994. Extensive information is available within this database including company names, place where the spill occurred, date of spill, cause, reason and source of spill, damage incurred, and amount, concentration, and volume of materials released.

Government Publication Date: 1974-1994*

Non-Compliance Reports: Provincial NCPL

The Ministry of the Environment Conservation and Parks (MECP) provides information about non-compliant discharges of contaminants to air and water that exceed legal allowable limits, from regulated industrial and municipal facilities. A reported non-compliance failure may be in regard to a Control Order, Certificate of Approval, Sectoral Regulation or specific regulation/act. MECP publicly releases the Environmental Compliance Report (ECR) on the Ontario Data Catalogue. In Ontario, all facilities with regulated wastewater discharges or air emissions under the Ontario Water Resources Act and the Environmental Protection Act must monitor and report any cases where approved operating limits have been exceeded.

Government Publication Date: Dec 31, 2023

National Defense & Canadian Forces Fuel Tanks: Federal NDFT

The Department of National Defense and the Canadian Forces maintains an inventory of all aboveground & underground fuel storage tanks located on DND lands. Our inventory provides information on the base name, location, tank type & capacity, tank contents, tank class, date of tank installation, date tank last used, and status of tank as of May 2001. This database will no longer be updated due to the new National Security protocols which have prohibited any release of this database.

Government Publication Date: Up to May 2001*

National Defense & Canadian Forces Spills: Federal NDSP

The Department of National Defense and the Canadian Forces maintains an inventory of spills to land and water. All spill sites have been classified under the "Transportation of Dangerous Goods Act - 1992". Our inventory provides information on the facility name, location, spill ID #, spill date, type of spill, as well as the quantity of substance spilled & recovered.

Government Publication Date: Mar 1999-Nov 2023

National Defence & Canadian Forces Waste Disposal Sites: Federal NDWD

The Department of National Defence and the Canadian Forces maintains an inventory of waste disposal sites located on DND lands. Where available, our inventory provides information on the base name, location, type of waste received, area of site, depth of site, year site opened/closed and status.

Government Publication Date: 2001-Apr 2007*

National Energy Board Pipeline Incidents: Federal NEBI

Locations of pipeline incidents from 2008 to present, made available by the Canada Energy Regulator (CER) - previously the National Energy Board (NEB). Includes incidents reported under the Onshore Pipeline Regulations and the Processing Plant Regulations related to pipelines under federal jurisdiction, does not include incident data related to pipelines under provincial or territorial jurisdiction.

Government Publication Date: 2008-May 31, 2025

National Energy Board Wells: Federal NEBP

The NEBW database contains information on onshore & offshore oil and gas wells that are outside provincial jurisdiction(s) and are thereby regulated by the National Energy Board. Data is provided regarding the operator, well name, well ID No./UWI, status, classification, well depth, spud and release date.

Government Publication Date: 1920-Feb 2003*

National Environmental Emergencies System (NEES): Federal NEES

In 2000, the Emergencies program implemented NEES, a reporting system for spills of hazardous substances. For the most part, this system only captured data from the Atlantic Provinces, some from Quebec and Ontario and a portion from British Columbia. Data for Alberta, Saskatchewan, Manitoba and the Territories was not captured. However, NEES is also a repository for previous Environment Canada spill datasets. NEES is composed of the historic datasets ' or Trends ' which dates from approximately 1974 to present. NEES Trends is a compilation of historic databases, which were merged and includes data from NATES (National Analysis of Trends in Emergencies System), ARTS (Atlantic Regional Trends System), and NEES. In 2001, the Emergencies Program determined that variations in reporting regimes and requirements between federal and provincial agencies made national spill reporting and trend analysis difficult to achieve. As a consequence, the department has focused efforts on capturing data on spills of substances which fall under its legislative authority only (CEPA and FA). As such, the NEES database will be decommissioned in December 2004.

Government Publication Date: 1974-2003*

National PCB Inventory: Federal NPCB

Environment Canada's National PCB inventory includes information on in-use PCB containing equipment in Canada including federal, provincial and private facilities. Federal out-of-service PCB containing equipment and PCB waste owned by the federal government or by federally regulated industries such as airlines, railway companies, broadcasting companies, telephone and telecommunications companies, pipeline companies, etc. are also listed. Although it is not Environment Canada's mandate to collect data on non-federal PCB waste, the National PCB inventory includes some information on provincial and private PCB waste and storage sites. Some addresses provided may be Head Office addresses and are not necessarily the location of where the waste is being used or stored.

Government Publication Date: 1988-2008*

National Pollutant Release Inventory: Federal NPR2

The National Pollutant Release Inventory (NPRI) is Canada's public inventory of pollutant releases (to air, water and land), disposals, and transfers for recycling. The inventory, managed by Environment and Climate Change Canada, tracks over 300 substances. Under the authority of the Canadian Environmental Protection Act (CEPA), owners or operators of facilities that meet published reporting requirements are required to report to the NPRI.

Government Publication Date: Feb 2024

National Pollutant Release Inventory - Historic: Federal NPRI

Environment Canada has defined the National Pollutant Release Inventory ("NPRI") as a federal government initiative designed to collect comprehensive national data regarding releases to air, water, or land, and waste transfers for recycling for more than 300 listed substances. This data holds historic records; current records are found in NPR2.

Government Publication Date: 1993-May 2017

Oil and Gas Wells: Private OGWE

The Nickle's Energy Group (publisher of the Daily Oil Bulletin) collects information on drilling activity including operator and well statistics. The well information database includes name, location, class, status and depth. The main Nickle's database is updated on a daily basis, however, this database is updated on a monthly basis. More information is available at www.nickles.com.

Government Publication Date: 1988-Feb 28, 2025

Ontario Oil and Gas Wells: Provincial OOGW

In 1998, the Ministry of Natural Resources (MNR) handed over to the Ontario Oil, Gas and Salt Resources (OGSR) Corporation, the responsibility of maintaining a database of oil and gas wells drilled in Ontario. The OGSR Library has over 20,000+ wells in their database. Information available for all wells in the ERIS database includes well owner/operator, location, permit issue date, and well cap date, license number, status, depth and the primary target (rock unit) of the well being drilled. All geology/stratigraphy table information, plus all water table information is also provided for each well record.

Government Publication Date: 1800-Aug 2024

Inventory of PCB Storage Sites: Provincial OPCB

The Ontario Ministry of Environment, Waste Management Branch, maintains an inventory of PCB storage sites within the province. Ontario Regulation 11/82 (Waste Management - PCB) and Regulation 347 (Generator Waste Management) under the Ontario EPA requires the registration of inactive PCB storage equipment and/or disposal sites of PCB waste with the Ontario Ministry of Environment. This database contains information on: 1) waste quantities; 2) major and minor sites storing liquid or solid waste; and 3) a waste storage inventory.

Government Publication Date: 1987-Oct 2004; 2012-Dec 2013

Orders: Provincial ORD

This is a subset taken from Ontario's Environmental Registry (EBR) database. It will include Orders on the registry such as (EPA s. 17) - Order for remedial work, (EPA s. 18) - Order for preventative measures, (EPA s. 43) - Order for removal of waste and restoration of site, (EPA s. 44) - Order for conformity with Act for waste disposal sites, (EPA s. 136) - Order for performance of environmental measures.

Government Publication Date: 1994 - May 31, 2025

Canadian Pulp and Paper: Private PAP

This information is part of the Pulp and Paper Canada Directory. The Directory provides a comprehensive listing of the locations of pulp and paper mills and the products that they produce.

Government Publication Date: 1999, 2002, 2004, 2005, 2009-2014

Parks Canada Fuel Storage Tanks: Federal PCFT

Canadian Heritage maintains an inventory of known fuel storage tanks operated by Parks Canada, in both National Parks and at National Historic Sites. The database details information on site name, location, tank install/removal date, capacity, fuel type, facility type, tank design and owner/operator.

Government Publication Date: 1920-Jan 2005*

Pesticide Register: Provincial PES

The Ontario Ministry of the Environment and Climate Change maintains a database of licensed operators and vendors of registered pesticides.

Government Publication Date: Oct 2011 - May 31, 2025

Ontario PFAS Spills: Provincial PFAS

This specific list of spills includes those incidents where one or more of the listed contaminants are identified in the PFAS Structure List and/or PFAS Chemicals Without Explicit Structure List made available by the United States Environmental Protection Agency (US EPA), is originally sourced from the Ministry of the Environment, Conservation and Parks spills related data. Information from 1988-2002 was part of the ORIS (Occurrence Reporting Information System). The SAC (Spills Action Centre) handles all spills reported in Ontario. Regulations for spills in Ontario are part of the MOE's Environmental Protection Act, Part X.

Government Publication Date: 1988-Jun 2024; Aug 2024; Oct-Nov 2024

NPRI Reporters - PFAS Substances: Federal PFCH

The National Pollutant Release Inventory (NPRI) is Canada's public inventory of releases, disposals, and transfers, tracking over 320 pollutants. Per - and polyfluoroalkyl substances (PFAS) are a group of over 4,700 human-made substances for which adverse environmental and health effects have been observed. This listing of PFAS substance reporters includes those NPRI facilities that reported substances that are found in either: a) the Comprehensive Global Database of PFASs compiled by the Organisation for Economic Co-operation and Development (OECD), b) the US Environmental Protection Agency (US EPA) Master List of PFAS Substances, c) the US EPA list of PFAS chemicals without explicit structures, or d) the US EPA list of PFAS structures (encompassing the largest set of structures having sufficient levels of fluorination to potentially impart PFAS-type properties).

Government Publication Date: Feb 2024

Potential PFAS Handlers from NPRI: Federal PFHA

The National Pollutant Release Inventory (NPRI) is Canada's public inventory of releases, disposals, and transfers, tracking over 320 pollutants. Per - and polyfluoroalkyl substances (PFAS) are a group of over 4,700 human-made substances for which adverse environmental and health effects have been observed. This list of potential PFAS handlers includes those NPRI facilities that reported business activity (NAICS code) included in the US Environmental Protection Agency (US EPA) list of Potential PFAS-Handling Industry Sectors, further described as operating in industry sectors where literature reviews indicate that PFAS may be handled and/or released. Inclusion of a facility in this listing does not indicate that PFAS are being manufactured, processed, used, or released by the facility - these are facilities that potentially handle PFAS based on their industrial profile.

Government Publication Date: Feb 2024

Pipeline Incidents: Provincial PINC

List of pipeline incidents (strikes, leaks, spills). This is not a comprehensive or complete inventory of pipeline incidents in the province; this listing in an historical copy of records previously obtained under Access to Public Information. Records are not verified for accuracy or completeness.

Government Publication Date: Feb 28, 2021

Potential PFAS Handlers from EASR: Provincial PPHA

The Ontario Environmental Activity and Sector Registry (EASR), described in Ontario Regulation 245/11, allows businesses with less complex operations - and hence not requiring an Environmental Compliance Approval - to register their activities with the Ontario Ministry of the Environment, Conservation and Parks (MECP). This list of potential PFAS handlers includes those EASR facilities that reported business activity (NAICS code) included in the US Environmental Protection Agency (US EPA) list of Potential PFAS-Handling Industry Sectors, further described as operating in industry sectors where literature reviews indicate that PFAS may be handled and/or released. Inclusion of a facility in this listing does not indicate that PFAS are being manufactured, processed, used.

Government Publication Date: Jun 30, 2024

Private and Retail Fuel Storage Tanks: Provincial PRT

The Fuels Safety Branch of the Ontario Ministry of Consumer and Commercial Relations maintained a database of all registered private fuel storage tanks and licensed retail fuel outlets. This database includes an inventory of locations that have gasoline, oil, waste oil, natural gas and/or propane storage tanks on their property. The MCCR no longer collects this information. This information is now collected by the Technical Standards and Safety Authority (TSSA).

Government Publication Date: 1989-1996*

Permit to Take Water: Provincial PTTW

This is a subset taken from Ontario's Environmental Registry (EBR) database. It will include PTTW's on the registry such as OWRA s. 34 - Permit to take water.

Government Publication Date: 1994 - May 31, 2025

Ontario Regulation 347 Waste Receivers Summary: Provincial REC

Part V of the Ontario Environmental Protection Act ("EPA") regulates the disposal of regulated waste through an operating waste management system or a waste disposal site operated or used pursuant to the terms and conditions of a Certificate of Approval or a Provisional Certificate of Approval. Regulation 347 of the Ontario EPA defines a waste receiving site as any site or facility to which waste is transferred by a waste carrier. A receiver of regulated waste is required to register the waste receiving facility. This database represents registered receivers of regulated wastes, identified by registration number, company name and address, and includes receivers of waste such as: landfills, incinerators, transfer stations, PCB storage sites, sludge farms and water pollution control plants. This information is a summary of all years from 1986 including the most currently available data.

Government Publication Date: 1986-1990, 1992-2021

Record of Site Condition: Provincial RSC

The Record of Site Condition (RSC) is part of the Ministry of the Environment's Brownfields Environmental Site Registry. Protection from environmental cleanup orders for property owners is contingent upon documentation known as a record of site condition (RSC) being filed in the Environmental Site Registry. In order to file an RSC, the property must have been properly assessed and shown to meet the soil, sediment and groundwater standards appropriate for the use (such as residential) proposed to take place on the property. The Record of Site Condition Regulation (O. Reg. 153/04) details requirements related to site assessment and clean up. RSCs filed after July 1, 2011 will also be included as part of the new (O.Reg. 511/09). The Government of Ontario states that it is not responsible for the accuracy of the information in this Registry.

Government Publication Date: 1997-Sept 2001, Oct 2004-May 2025

Retail Fuel Storage Tanks: Private RST

This database includes an inventory of retail fuel outlet locations (including marinas) that have on their property gasoline, oil, waste oil, natural gas and / or propane storage tanks.

Government Publication Date: 1999-Apr 30, 2025

Scott's Manufacturing Directory: Private SCT

Scott's Directories is a data bank containing information on over 200,000 manufacturers across Canada. Even though Scott's listings are voluntary, it is the most comprehensive database of Canadian manufacturers available. Information concerning a company's address, plant size, and main products are included in this database.

Government Publication Date: 1992-Mar 2011*

Ontario Spills: Provincial SPL

List of spills and incidents made available by the Ministry of the Environment, Conservation and Parks. This database identifies information such as location (approximate), type and quantity of contaminant, date of spill, environmental impact, cause, nature of impact, etc. Information from 1988-2002 was part of the ORIS (Occurrence Reporting Information System). The SAC (Spills Action Centre) handles all spills reported in Ontario. Regulations for spills in Ontario are part of the MOE's Environmental Protection Act, Part X.

Government Publication Date: 1988-Jun 2024; Aug-Feb 2025

Wastewater Discharger Registration Database: Provincial SRDS

Facilities that report either municipal treated wastewater effluent or industrial wastewater discharges under the Effluent Monitoring and Effluent Limits (EMEL) and Municipal/Industrial Strategy for Abatement Regulations. The Municipal/Industrial Strategy for Abatement (MISA) division of the Ontario Ministry of Environment keeps record of direct dischargers of toxic pollutants within nine sectors including: Electric Power Generation, Mining, Petroleum Refining, Organic Chemicals, Inorganic Chemicals, Pulp & Paper, Metal Casting, Iron & Steel, and Quarries.

Government Publication Date: 1990-Dec 31, 2021

Anderson's Storage Tanks: Private TANK

The information provided in this database was collected by examining various historical documents, which identified the location of former storage tanks, containing substances such as fuel, water, gas, oil, and other various types of miscellaneous products. Information is available in regard to business operating at tank site, tank location, permit year, permit & installation type, no. of tanks installed & configuration and tank capacity. Data contained within this database pertains only to the city of Toronto and is not warranted to be complete, exhaustive or authoritative. The information was collected for research purposes only.

Government Publication Date: 1915-1953*

Transport Canada Fuel Storage Tanks: Federal TCFT

List of fuel storage tanks currently or previously owned or operated by Transport Canada. This inventory also includes tanks on The Pickering Lands, which refers to 7,530 hectares (18,600 acres) of land in Pickering, Markham, and Uxbridge owned by the Government of Canada since 1972; properties on this land has been leased by the government since 1975, and falls under the Site Management Policy of Transport Canada, but is administered by Public Works and Government Services Canada. This inventory provides information on the site name, location, tank age, capacity and fuel type.

Government Publication Date: 1970 - Apr 2024

Variances for Abandonment of Underground Storage Tanks: Provincial VAR

Listing of variances granted for storage tank abandonment. This is not a comprehensive or complete inventory of tank abandonment variances in the province; this listing is a copy of tank abandonment variance records previously obtained under Access to Public Information. In Ontario, registered underground storage tanks must be removed within two years of disuse; if removal of a tank is not feasible, an application may be sought for a variance from this code requirement.
Records are not verified for accuracy or completeness.

Government Publication Date: Feb 28, 2022

Waste Disposal Sites - MOE CA Inventory: Provincial WDS

The Ontario Ministry of Environment, Waste Management Branch, maintains an inventory of known open (active or inactive) and closed disposal sites in the Province of Ontario. Active sites maintain a Certificate of Approval, are approved to receive and are receiving waste. Inactive sites maintain Certificate(s) of Approval but are not receiving waste. Closed sites are not receiving waste. The data contained within this database was compiled from the MOE's Certificate of Approval database. Locations of these sites may be cross-referenced to the Anderson database described under ERIS's Private Source Database section, by the CA number. All new Environmental Compliance Approvals handed out after Oct 31, 2011 for Waste Disposal Sites will still be found in this database.

Government Publication Date: Oct 2011 - May 31, 2025

Waste Disposal Sites - MOE 1991 Historical Approval Inventory: Provincial WDSH

In June 1991, the Ontario Ministry of Environment, Waste Management Branch, published the "June 1991 Waste Disposal Site Inventory", of all known active and closed waste disposal sites as of October 30st, 1990. For each "active" site as of October 31st 1990, information is provided on site location, site/CA number, waste type, site status and site classification. For each "closed" site as of October 31st 1990, information is provided on site location, site/CA number, closure date and site classification. Locations of these sites may be cross-referenced to the Anderson database described under ERIS's Private Source Database section, by the CA number.

Government Publication Date: Up to Oct 1990*

Water Well Information System: Provincial WWIS

This database describes locations and characteristics of water wells found within Ontario in accordance with Regulation 903. It includes such information as coordinates, construction date, well depth, primary and secondary use, pump rate, static water level, well status, etc. Also included are detailed stratigraphy information, approximate depth to bedrock and the approximate depth to the water table.

Government Publication Date: Dec 31 2023

Definitions

Database Descriptions: This section provides a detailed explanation for each database including: source, information available, time coverage, and acronyms used. They are listed in alphabetic order.

Detail Report: This is the section of the report which provides the most detail for each individual record. Records are summarized by location, starting with the project property followed by records in closest proximity.

Distance: The distance value is the distance between plotted points, not necessarily the distance between the sites' boundaries. All values are an approximation.

Direction: The direction value is the compass direction of the site in respect to the project property and/or center point of the report.

Elevation: The elevation value is taken from the location at which the records for the site address have been plotted. All values are an approximation. Source: Google Elevation API.

Executive Summary: This portion of the report is divided into 3 sections:

'Report Summary'- Displays a chart indicating how many records fall on the project property and, within the report search radii.

'Site Report Summary'-Project Property'- This section lists all the records which fall on the project property. For more details, see the 'Detail Report' section.

'Site Report Summary-Surrounding Properties'- This section summarizes all records on adjacent properties, listing them in order of proximity from the project property. For more details, see the 'Detail Report' section.

Map Key: The map key number is assigned according to closest proximity from the project property. Map Key numbers always start at #1. The project property will always have a map key of '1' if records are available. If there is a number in brackets beside the main number, this will indicate the number of records on that specific property. If there is no number in brackets, there is only one record for that property.

The symbol and colour used indicates 'elevation': the red inverted triangle will dictate 'ERIS Sites with Lower Elevation', the yellow triangle will dictate 'ERIS Sites with Higher Elevation' and the orange square will dictate 'ERIS Sites with Same Elevation.'

Unplottables: These are records that could not be mapped due to various reasons, including limited geographic information. These records may or may not be in your study area, and are included as reference.
