Attention: **Mr. Scott Stinson**

Subject: **Phase I – Environmental Site Assessment Update**
301 Somme Street
Ottawa, Ontario

Dear Sir,

Further to your request, Paterson Group (Paterson) has carried out a Phase I Environmental Site Assessment (ESA) Update for the aforementioned property. This report updates a previous Phase I ESA Update entitled, *"Phase I Environmental Site Assessment Update, 301 Somme Street, Ottawa, Ontario"* prepared by Paterson Group Inc. (Paterson), dated July 26, 2022.

This report is intended to meet the requirements for an updated Phase I ESA, as per Ontario Regulation (O. Reg.) 153/04, as amended, and is to be read in conjunction with the 2022 report.

Site Information

The Phase I Property is located on the north side of Somme Street, at the intersection of Somme Street and Sappers Ridge, in the City of Ottawa. The subject site is vacant with a large gravel pad on the western portion of the property. While the site is referred to as 301 Somme Street, the property also includes part of 331 Somme Street and part of 3748 Rideau Road. Please refer to the Site Plan for the property limits.

The Phase I Property is an irregular shaped lot with an area of approximately 61,000 m^2. The Phase I Property is situated in a rural heavy industrial area that relies on private wells and septic systems. Refer to Figure 1 – Key Plan, following the text of this letter report, for site contextual information.

Previous Engineering Reports

- ❑ *"Phase I Environmental Site Assessment, Part Lot 26 & 27 Concession 6, Ottawa, Ontario, prepared by CRA, dated July 2008*.

The 2008 Phase I ESA was carried out for a larger tract of land than the current Phase I Property. The 2008 Phase I ESA indicated that a former waste disposal site (x.9013) was documented on the northern portion of the lands that they were assessing, however, they found no evidence of the waste disposal site through a review of the aerial photographs or through on-site observations including test pits. CRA concluded that the designation of part of the lands as a waste disposal site was an error.

The Ontario Ministry of Environment (MOE) approved the placement of non-recyclable asphalt and waste road building materials more than 30 years ago (MOE letter, 1990). The placement of waste road building materials (granular materials, non-recyclable asphalt and presumably concrete) on site in the past was considered by CRA to represent a potential environmental concern on the subject site. CRA recommended a Phase II ESA to assess the site conditions due to the former handling of waste road building materials on site.

- ❑ *"Phase I Environmental Site Assessment, Northern Part of 5123 Hawthorne Road (formerly) and now readdressed 301 Somme Street, Ottawa, Ontario,"* prepared by Paterson Group Inc. (Paterson), dated November 20, 2020.

A Phase I ESA was carried out by Paterson Group in November of 2020 in general accordance with the Ontario Regulation (O.Reg.) 153/04, as amended. The Phase I ESA identified the following on site PCA that generated an APEC on the Phase I Property:

- PCA 30 – *"Importation of Fill Material of Unknown Quality"* associated with handling and placement of fill material across the majority of the Phase I Property (APEC 1).

A Phase II ESA was recommended to address the aforementioned APEC on the Phase I Property.

- ❑ *"Phase II Environmental Site Assessment, Northern Part of 5123 Hawthorne Road (formerly) and now readdressed 301 Somme Street, Ottawa, Ontario,"* prepared by Paterson Group Inc. (Paterson), dated November 30, 2020.

The Phase II ESA was carried out to assess the quality of the fill material that had been placed on site by the owner of the property, R.W. Tomlinson. The field program consisted of placing three (3) boreholes on the subject site. It should be noted that a previously drilled well from 2008 (MW7-08) was sampled as part of the program. The boreholes were placed to obtain a general coverage of the area. The soil profile generally consisted of a layer of fill, overlying native clayey silt/silty clay and/or a silty fine sand with traces of gravel. Practical refusal was reached at depths ranging from 5.28 to 10.67m below the existing grade on inferred bedrock. The fill material consisted of a mix of clay, silt, sand and gravel with varying amounts of asphaltic concrete and concrete. The fill varied in thickness from 2.3 to 5.8m.

Six (6) soil samples were submitted for metals, PHCs (fraction 2 to 4), PAHs, electrical conductivity (EC), sodium adsorption ratio (SAR) and pH analysis. All soil samples complied with the MECP Table 2 Commercial standards. A comparison of the soil data to the MECP Table 1 Industrial standards, indicated that the petroleum hydrocarbon fraction 4 concentrations in several soil samples exceed the Table 1 standards, as well as molybdenum and chromium concentrations.

Groundwater samples were recovered from the monitoring wells BH1, BH2 and MW7-08 on May 28 and June 7, 2019 and November 10, 2020. No visual or olfactory signs of contamination were noted in the groundwater. The groundwater samples were submitted for PHCs (F1-F4), PAHs, VOCs and sodium and chloride analysis. Concentrations of PHCs and VOCs in the groundwater samples analyzed were not detected above the laboratory detection limits. VOC and PHC test results complied with the MECP Table 2 standards.

Detectable PAH parameters were identified in all of the groundwater samples analyzed for the May 28, 2019 sampling event. All PAH parameters in the groundwater from MW7-08 were in compliance with the MECP Table 2 standards. Benzo[a]pyrene concentrations in BH1 and BH2 were in excess of the selected standards. Benzo[b]fluoranthene and chrysene concentrations in BH2 were also in excess of the selected MECP standards.

It was speculated that some sediment was present in the groundwater samples, and as such, BH1 and BH2 were resampled on June 7, 2019 and November 10, 2020.

Based on the last two (2) sampling events, the analytical test results showed that the groundwater complied with the MECP Table 2 standards.

The apparent discrepancies between these analytical results, are considered to be a result of sediment present in the first groundwater samples analyzed.

- ❑ *"Phase I Environmental Site Assessment Update, 301 Somme Street, Ottawa, Ontario,"* prepared by Paterson Group Inc. (Paterson), dated July 26, 2022.

Based on the findings of the Phase I ESA Update, no new on or off-site PCAs were identified and as such, no new APECs were present on the subject property.

- ❑ *"Phase II Environmental Site Assessment Update, 301 Somme Street, Ottawa, Ontario,"* prepared by Paterson Group Inc. (Paterson), dated September 26, 2022.

A water supply well (A342117) and observation well (MW22-1) was installed on the Phase II Property on July 29, 2022. The previously sampled wells were unable to be resampled as they were decommissioned prior to recent grading and compaction that took place on site; thus, a groundwater sample was collected from MW22-1 on August 12, 2022. No visual or olfactory signs of contamination were noted in the groundwater. The groundwater sample was submitted for PAH and VOC analysis. Concentrations of PAHs and VOCs in the groundwater sample analyzed were not detected above the laboratory detection limits.

Based on the findings of the Phase II ESA Update, no further investigative work was required on the Phase II Property.

Historical Records Update

Environment Canada

A search of the National Pollutant Release Inventory (NPRI) database was conducted as part of this assessment. The Phase I Property was not listed in the NPRI database. No records of pollutant release were listed in the database for properties located within the Phase I Study Area.

Ministry of the Environment, Conservation and Parks (MECP) Instruments

As part of the current assessment, a request was submitted to the MECP Freedom of Information office for information with respect to certificates of approval, permits to take water, certificates of property use or any other similar MECP issued instruments for the Phase I Property. The response from the MECP indicated that no relevant records were identified on the Phase I Property. The MECP FOI response has been included in Appendix 2.

According to the ERIS report, two (2) environmental certificates of approval were issued for the Phase I Property. The ECAs were issued for Municipal and Private Sewage Works. One (1) additional environmental certificate of approval was issued for a property within the Phase I Study Area. The ECA was issued for Industrial Sewage Works. Based on the nature of these approvals, they are not considered to represent a potentially contaminating activity to the Phase I Property.

Several provisional Certificates of Approval (CAs) and Environmental Compliance Approval (ECA) records were issued for the historical address 5123 Hawthorne Road, associated with the waste treatment facility (Orgaworld Canada Ltd. / Convertus Canada Ltd.) located approximately 500m south of the Phase I Property. Based on the overall separation distance of these records, they are not considered to represent a potentially contaminating activity or an area of potential environmental concern to the Phase I Property.

MECP Submissions

As part of the current assessment, a request was submitted to the MECP Freedom of Information office for information with respect to reports related to environmental conditions for the Phase I Property. The response from the MECP indicated that no relevant records were identified on the Phase I Property. The MECP FOI response has been included in Appendix 2.

Based on a review of the ERIS report, which contains records from various Ministry databases and is further discussed below, no records pertaining to MECP submissions were identified for the Phase I Property or other properties within the Phase I Study Area.

Annual groundwater and surface water monitoring programs have been carried out for the historical address 5123 Hawthorne Road, associated with the waste treatment facility (Orgaworld Canada Ltd. / Convertus Canada Ltd.) located approximately 500m south of the Phase I Property. Based on the overall separation of the monitoring area, these records are not considered to represent a potentially contaminating activity or an area of potential environmental concern to the Phase I Property.

MECP Incident Reports

As part of the current assessment, a request was submitted to the MECP Freedom of Information office for information with respect to records concerning environmental incidents, order, offences, spills, discharges of contaminants, or inspections maintained by the MECP for the Phase I Property or any of the neighbouring properties. The response from the MECP indicated that no relevant records were identified on the Phase I Property. The MECP FOI response has been included in Appendix 2

According to the ERIS report, no pertinent information was reported for the Phase I Property or other properties within the Phase I Study Area.

Incident reports were identified for the historical address 5123 Hawthorne Road, associated with the waste treatment facility (Orgaworld Canada Ltd. / Convertus Canada Ltd.) located approximately 500m south of the Phase I Property. The incident records were limited to air, administrative non-compliance and minor equipment failure resulting in small spills. In addition, several inspection reports related to the operation of the 5123 Hawthorne Road facility were identified, documenting compliance with the facility's ECAs. Based on the overall separation distance and nature of these records, they are not considered to represent a potentially contaminating activity or an area of potential environmental concern to the Phase I Property.

MECP Waste Management

As part of the current assessment, a request was submitted to the MECP Freedom of Information office for information with respect to waste management records for the Phase I Property. The response from the MECP indicated that no relevant records were identified on the Phase I Property. The MECP FOI response has been included in Appendix 2.

According to the ERIS report, no waste management records were found for the Phase I Property.

The MECP FOI identified a waste transfer facility located at 5123 Hawthorne Road (Orgaworld Canada Ltd. / Convertus Canada Ltd.) that is approved to accept solid non-hazardous domestic waste, commercial, institutional or industrial organic waste from the provinces of Ontario and Quebec. The approved organic waste consists of food wastes, paper fibres, leaf and yard wastes, and similar organic materials. Based on the overall separation distance and nature of these records, they are not considered to represent a potentially contaminating activity or an area of potential environmental concern to the Phase I Property.

The ERIS report identified one waste generator documented since 2024 within the Phase I Study Area. The waste generator is associated with the newly developed property to the south, addressed 300 Somme Street. The waste class documented was waste oil and lubricants. Due to its cross-gradient orientation relative to the subject land, the waste generator is not considered to pose a potential environmental concern on the Phase I Property.

MECP Brownfields Environmental Site Registry

A search of the MECP Environmental Site Registry was conducted as part of this assessment for the site, neighbouring properties and general area of the site. No Records of Site Condition (RSCs) were filed for the Phase I Property or for properties within the Phase I Study Area.

OMNRF Areas of Natural and Scientific Interest (ANSI)

A search for ANSI sites situated within the Phase I Study Area was conducted electronically via the Ontario Ministry of Natural Resources and Forestry (OMNRF) website as part of this assessment. A review of the available mapping information did not identify any ANSI sites situated on the Phase I Property or within the Phase I Study Area.

Technical Standards and Safety Authority (TSSA)

The TSSA Fuels Safety Branch in Toronto was contacted electronically as part of this assessment to inquire about current and former fuel storage tanks, spills, and historical incidents for the Phase I Property as well as the neighbouring properties within the Phase I Study Area. The response from the TSSA indicated that no records were identified associated with the Phase I Property, and no pertinent records were identified in the neighbouring addresses searched within the Phase I Study Area.

A copy of the correspondence with the TSSA has been appended to this report.

City of Ottawa HLUI

As part of the 2020 Phase I ESA, a request was submitted to the City of Ottawa for information from the Historical Land Use Inventory (HLUI) database for any environmental records pertaining to the Phase I Property as well as any properties situated within the Phase I Study Area. The response from the City identified one historical on-site activity, specifically the use of the Phase I Property as an MOE registered waste disposal site, Site X1102. However, based on the MOE waste disposal inventory, the former waste site identified was situated off Glebe Avenue, west of Bank Street. This waste disposal site was identified in error and does not apply to the Phase I Property. A copy of the original HLUI response is appended to this report.

No other former waste disposal sites or other HLUI activities were identified on the Phase I Property or on properties within the Phase I Study Area, with the exception of the known disposal of road building material waste (gravel, limited concrete and asphalt) on the Phase I Property.

ERIS Database Report

A database report, prepared by ERIS (Environmental Risk Information Services Ltd.), dated June 24, 2025, was acquired and reviewed as part of this assessment. This report provides a compilation of various provincial and federal environmental related records pertaining to any properties situated within the Phase I Study Area. The complete ERIS report has been included in the appendix of this report.

The ERIS report identified two (2) records pertaining to an Anderson Waste Disposal Site and Waste Disposal Sites – MOE 1991 Historical Approval Inventory records for the Phase I Property. As discussed in the Previous Reports section, CRA in 2008 concluded that the designation of a former waste disposal site on the Phase I Property was an error.

The ERIS report identified three (3) records pertaining to Environmental Registry and Environmental Compliance Approval on the Phase I Property. The records were limited to municipal and private sewage works and are not considered to represent a potentially contaminating activity (PCA) on the Phase I Property.

The ERIS report identified a total of 11 records for properties within the 250 m radius of the Phase I Property (2 of which are previous ERIS searches), as detailed below:

The ERIS report identified 1 Waste Generator record for properties within 250 m of the Phase I Property. The record was associated with the property addressed 300 Somme Street, located approximately 30m south of the Phase I Property, associated with the newly constructed Copart facility. The waste classes identified in the record pertain to waste oil and lubricants. Based on its cross-gradient orientation, this property poses no potential environmental concern to the Phase I Property.

The ERIS report identified one (1) record pertaining to an Environmental Compliance Approval record associated with the property addressed 300 Somme Street, located approximately 30m south of the Phase I Property. This record was limited to industrial sewage works and is not considered to represent a potentially contaminating activity (PCA) on the Phase I Property.

The ERIS report identified 6 well records within the Phase I Study Area, which are further discussed in the MECP Water Well Records section of this report.

Aerial Photographs

The latest aerial photograph reviewed as part of the original Phase I ESA was from 2019. A 2022 and 2024 aerial photograph were reviewed for this update. In the 2022 aerial photograph, the subject property is undergoing the initial stages of site development. The neighbouring properties to the south were also observed to be undergoing the initial stages of site development. In the 2024 aerial photograph, the subject property is observed to have a large gravel pad on the western half of the property. The neighbouring properties to the south have been developed with a large automotive auctioning facility, mainly used for parking.

No potentially contaminating activities were identified on the Phase I Property or adjacent lands during the aerial photo review.

Well Records

A search of the MECPs website for all drilled well records within a 250 m radius of the Phase I Property was conducted as part of this assessment. Five (5) well records were identified for the Phase I Property. The records identified on the Phase I Property pertain to wells installed between 2008 and 2022 and have been used for groundwater observation purposes

The search identified six (6) monitoring well records within the Phase I Study Area. These records pertain to wells installed between 1950 and 2021 and were used for water supply and groundwater observation purposes.

According to the well records, the subsurface stratigraphy in the general area of the Phase I Property consists of fill material overlying glacial till. Fill material generally consisted of silty sand to sandy silt with clay and gravel. Bedrock was not encountered in the wells.

A copy of the water well records are appended to this report.

Property Owner Representative Interview

As part of the previous investigation, Mr. Craig Bellinger of R.W. Tomlinson, a representative of the former owner of the property was interviewed. Mr. Bellinger stated that R.W. Tomlinson have owned the property for more than 35 years, during which, it has remained undeveloped. From the 1990s to 2014, R.W. Tomlinson have used the property to dispose of waste road building materials, approved by the MOE in 1992. Since 2014, the property has been vacant and unutilized land. The site was acquired by a new landowner in 2020, Fastrate (Ottawa) Holdings Inc.

At the time of the previous update, Mr. Pierre Courteau of CBRE Ltd., acting on behalf of the property owners was interviewed. Mr. Courteau stated that nothing had changed to the property since its acquisition in 2020, with the exception of some minor earthworks, such as site grading and compaction.

Based on our knowledge of the site and the lack of activity on-site since the previous interview, an updated interview was not considered likely to provide any additional information and was not completed as part of this report.

Site Reconnaissance

A site visit was conducted for the Phase I Property on June 11, 2025. Weather conditions were sunny, with a temperature of approximately 24°C. Mr. Grant Paterson from the Environmental Department of Paterson Group conducted the site assessment. In addition to the site, the uses of neighbouring properties within the Phase I Study Area were also assessed at the time of the site visit.

Site Description

The Phase I Property is an undeveloped vacant lot with a large gravel pad on the western portion of the subject property. The remainder of the Phase I Property is occupied by grassed areas with some small piles of waste road building materials.

The site topography is relatively flat and at grade with neighbouring properties, while the regional topography gently slopes downward to the southeast. The Phase I Property is situated in an area where private wells and septic systems are relied upon.

Site drainage consists of infiltration throughout the property. No ponded water, stressed vegetation, or any other indication of potential subsurface contamination were observed at the time of the site inspection. No new potentially contaminating activities were identified on the Phase I Property, at the time of the site visit.

A depiction of the Phase I Property is illustrated on Drawing PE7096-1 – Site Plan, appended to this report.

Neighbouring Properties

A visual inspection of the neighbouring properties was conducted from publicly accessible roadways at the time of the site inspection. Land use adjacent to the subject site was recorded as follows:

North:	Rideau Road, followed by vacant land;
East:	Vacant land, followed by agricultural land;
West:	Somme Street, followed by vacant parcel of land;
South:	Somme Street, followed by Copart vehicle auctioning and vehicle storage yard.

No environmental concerns were identified with respect to the current use of the neighbouring properties.

The neighbouring land use within the Phase I Study Area is illustrated on Drawing PE7096-2 – Surrounding Land Use Plan, appended to this report.

Review and Evaluation of Information

Land Use History

Based on a review of available historical information, the Phase I Property has historically been vacant land and never officially developed.

Conceptual Site Model

Geological and Hydrogeological Setting

Based on the available mapping information, bedrock in the area of the site consists of sandstone of the Nepean Formation. Overburden soils reportedly consist of a combination of sand, reworked glaciofluvial deposit and organic deposits, with a drift thickness ranging from 0 to 2 m.

Fill Placement

Based on the historical review in combination with the site visit and the previous Phase II ESA, the subject land was used for fill placement from 2002 to 2014. The unknown quality of the fill material imported on site represents an APEC on the Phase I Property.

Existing Buildings and Structures

No buildings or structures are present on the Phase I Property.

Drinking Water Wells

One potable water well is present on the Phase II Property.

Subsurface Structures and Utilities

No subsurface structures or utilities are expected to be present on the Phase I Property.

Water Bodies and Areas of Natural and Scientific Interest

No areas of natural and scientific interest are present within the Phase I Study Area. The nearest named water body with respect to the Phase I Property is a tributary of the North Castor River, located approximately 330m to the southeast.

Neighbouring Land Use

Neighbouring land use in the Phase I Study Area consists of industrial properties, agricultural or vacant lands. Current land use is shown on Drawing PE7096-2 – Surrounding Land Use Plan.

Potentially Contaminating Activities and Areas of Potential Environmental Concern

Based on the findings of this Phase I ESA Update, one on-site PCA was considered to result in an APEC. This APEC is summarized in Table 1, along with its respective location and contaminants of potential concern (CPCs) on the Phase I Property.

Table 1: Areas of Potential Environmental Concern

Area of Potential Environmental Concern	Location of Area of Potential Environmental Concern	Potentially Contaminating Activity	Location of PCA (on-site or off-site)	Contaminants of Potential Concern	Media Potentially Impacted (Groundwater, Soil, and/or Sediment)
APEC 1: Resulting from fill material of unknown quality	Across the Phase I Property	PCA 30 – "*Importation of Fill Material of Unknown Quality*"	On-site	VOCs PHCs PAHs Metals EC and SAR	Soil Groundwater

Contaminants of Potential Concern

As per the identified APEC in Table 1, the contaminants of potential concern (CPCs) in soil and/or groundwater include:

- ❑ Volatile organic compounds (VOCs)
- ❑ Petroleum hydrocarbons (PHCs, Fractions F1-F4)
- ❑ Polycyclic aromatic hydrocarbons (PAHs)
- ❑ Metals
- ❑ Electrical Conductivity (EC) and Sodium Adsorption Ratio (SAR)

The CPCs are expected to be present in the soil and/or groundwater of the Phase I Property.

Assessment of Uncertainty and/or Absence of Information

The information available for review as part of the preparation of this Phase I ESA Update is considered to be sufficient to conclude that there is an on site PCA that has resulted in an APEC on the Phase I Property. A variety of independent sources were consulted as part of this assessment, and as such, the conclusions of this report are not affected by uncertainty which may be present with respect to the individual sources.

Conclusion

A review of more recent environmental records, in conjunction with a visual inspection of the property, generally confirmed the information and findings contained in the 2022 Phase I ESA report completed by Paterson. Since that time, the Phase I Property has remained unchanged, and no new potential environmental concerns were identified with respect to the use of the site or the neighbouring properties, however, the current Phase I Property includes some additional lands. As a result, it is our opinion that **a Phase II – Environmental Site Assessment Update is required for the Phase I Property** for site plan application purposes.

Statement of Limitations

This Phase I – Environmental Site Assessment Update report has been prepared in general accordance with O. Reg. 153/04, as amended, and CSA Z768-01 (reaffirmed 2022). The conclusions presented herein are based on information gathered from a limited historical review of readily available geological, historical, and regulatory information, as well as a cursory review made at the time of the field assessment. The historical research relies on information supplied by others, such as local, provincial, and federal agencies, and was limited within the scope-of-work, time, and budget of the project herein. Should any conditions be encountered at the site and/or historical information that differ from our findings, we request that we be notified immediately in order to allow for a reassessment.

This report was prepared for the sole use of W.O. Stinson & Son Ltd. Permission and notification from the above noted party and Paterson will be required prior to the release of this report to any other party.

We trust that this submission satisfies your current requirements. Should you have any questions please contact the undersigned.

Regards,

Paterson Group Inc.

Joshua Dempsey, B.Sc.

INSPECTION REPORT

Entity: CONVERTUS CANADA LTD.
Inspection Start Date: March 29, 2022
Inspection End Date: March 29, 2022
Inspected By: Alexander Baker
Badge #: 1863

Alex Baker

(signature)

NON-COMPLIANCE

The following item(s) have been identified as non-compliance, based on a "No" response captured for a legislative question(s). For additional information on each question see the Inspection Details section of the report.

Ministry Program: WASTE | **Regulated Activity:** Landfills

Item	Question	Compliance Response/Corrective Action(s)
NC-1	**Question ID:** NOL 3 Does the holder of the landfill ECA own the entire site?	No

RECOMMENDATIONS

This should not be construed as a confirmation of full conformance with all potential applicable BMPs. These inspection findings are limited to the components and/or activities that were assessed, and the legislative framework(s) that were applied. It remains the responsibility of the owner to ensure compliance with all applicable legislative and regulatory requirements.

If you have any questions related to this inspection, please contact the signed Provincial Officer.

INSPECTION DETAILS

This section includes all questions that were assessed during the inspection.

Ministry Program: WASTE | **Regulated Activity:** Landfills

Question ID	NOL 1	**Question Type**	Legislative

Legislative Requirement(s):
EPA | 27 | (1);

Question:
Does the Open landfill site have an Environmental Compliance Approval (ECA)?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes

The facility has an ECA #2766-7HEPSZ

Question ID	NOL 3	**Question Type**	Legislative

Legislative Requirement(s):
EPA | 27 | (1); EPA | O. Reg. 232/98 | 3;

Question:
Does the holder of the landfill ECA own the entire site?

Compliance Response(s)/Corrective Action(s)/Observation(s):
No

The facility is a tenant on the property upon which the facility operates.

Question ID	NOL 2	**Question Type**	Information

Legislative Requirement(s):
Not Applicable

Question:
Is this landfill on Crown land?

Compliance Response(s)/Corrective Action(s)/Observation(s):
No

Question ID	NOL 4	**Question Type**	Information

Legislative Requirement(s):
Not Applicable

Question:
Does the landfill have a Contaminant Attenuation Zone (CAZ)?

Compliance Response(s)/Corrective Action(s)/Observation(s):
No

This unique waste disposal site does not require a CAZ as material is not permanently land applied. The waste brought to the site is processed and then removed from the site. Conditions in the ECA are included to ensure that the Site is operated and maintained in an environmentally acceptable manner which does not result in a negative impact on the natural environment or any person.

Question ID	NOL 11	**Question Type**	Legislative

Legislative Requirement(s):
EPA | 27 | (1); EPA | O. Reg. 232/98 | 5;

Question:
Has the holder of the ECA notified the Director in writing within 30 days of a change in holder's status, identity, ownership, or CAZ property rights?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes

Question ID	NOL 12	**Question Type**	Legislative

Legislative Requirement(s):
EPA | 27 | (1);

Question:
Does the landfill have a large enough Buffer Area as specified in the ECA or Regulation 232/98?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes

The facility is a "Processing" waste disposal site for the temporary storage, transfer, and processing of solid non-hazardous waste.

Question ID	NOL 13	**Question Type**	Information

Legislative Requirement(s):
EPA | 27 | (1);

Question:
Are access roads and on-site roads provided so that vehicles hauling waste to and on the site may travel readily on any day under all normal weather conditions?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes

During the inspection, access roads were clear, well organized, and had sufficient space.

Question ID	NOL 14	Question Type	Legislative

Legislative Requirement(s):
EPA | 27 | (1);

Question:
Is site access limited to times when an attendant is on duty?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes

The facility complies with the hours set in their ECA, and an attendant is always available.

Question ID	NOL 15	Question Type	Legislative

Legislative Requirement(s):
EPA | 27 | (1);

Question:
Does the site only receive waste from within its approved service area?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes

The service area is limited to the Province of Quebec and Ontario.

Question ID	NOL 16	Question Type	Information

Legislative Requirement(s):
Not Applicable

Question:
Is the site required to have a ground water monitoring program by the ECA?

Compliance Response(s)/Corrective Action(s)/Observation(s):
No

Question ID	NOL 18	Question Type	Legislative

Legislative Requirement(s):
EPA | 27 | (1); EPA | O. Reg. 232/98 | 25;

Question:
Are monitoring well samples taken and tested to determine the quality of the ground water?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes

The samples are collected not as a condition of this waste ECA, but rather as a condition of the facility's sewage works ECA.

Question ID	NOL 20	Question Type	Information

Legislative Requirement(s):
Not Applicable

Question:
Is there ongoing abatement to address any concerns the ministry has with the ground water monitoring?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes

Abatement is undergoing under the sewage works ECA #2844-9YNGZC, not this waste ECA.

Question ID	NOL 21	Question Type	Information

Legislative Requirement(s):
Not Applicable

Question:
Is the site required to manage leachate by the ECA?

Compliance Response(s)/Corrective Action(s)/Observation(s):
No

Question ID	NOL 25	Question Type	Information

Legislative Requirement(s):
Not Applicable

Question:
Is there ongoing abatement to address any concerns the ministry has with the leachate monitoring?

Compliance Response(s)/Corrective Action(s)/Observation(s):
No

Question ID	NOL 26	Question Type	Information

Legislative Requirement(s):
Not Applicable

Question:
Is the site required to manage landfill gas by the ECA?

Compliance Response(s)/Corrective Action(s)/Observation(s):
No

Question ID	NOL 30	Question Type	Information

Legislative Requirement(s):
Not Applicable

Question:
Is there ongoing abatement to address any concerns the ministry has with landfill gas at this site?

Compliance Response(s)/Corrective Action(s)/Observation(s):
No

Question ID	NOL 31	Question Type	Information

Legislative Requirement(s):
Not Applicable

Question:
Is the site required to have a surface water monitoring program by the ECA?

Compliance Response(s)/Corrective Action(s)/Observation(s):
No

Question ID	NOL 36	Question Type	Legislative

Legislative Requirement(s):
EPA | 27 | (1);

Question:
Is proper equipment available for the compaction of waste and applying cover material?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes

Question ID	NOL 37	Question Type	Legislative

Legislative Requirement(s):
EPA | 27 | (1);

Question:
Is the landfill able to accurately determine the amount of waste received?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes

The mass balance for the 2021operating year was reviewed. The data provided in the mass balance confirms the Facility is in compliance with tonnage limits outlined in the ECA.

Question ID	NOL 38	Question Type	Legislative

Legislative Requirement(s):
EPA | 27 | (1);

Question:
Are all disposal operations at the site adequately and continually supervised?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes

Trained personnel inspect the loads and supervise the unloading of waste at the facility. Where waste is deemed to not be acceptable, there is a procedure in place to reject that waste load.

Question ID	NOL 39	Question Type	Information

Legislative Requirement(s):
Not Applicable

Question:
Does the landfill operator have a site inspection program as required by the ECA?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes

Trained personnel conduct routine inspections and ensure that any identified deficiencies are promptly corrected.

Question ID	NOL 40	Question Type	Legislative

Legislative Requirement(s):
EPA | 27 | (1);

Question:
Does the landfill operator have a procedure in place to address issues identified by staff

during the site inspection?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes

Question ID	NOL 43	Question Type	Legislative

Legislative Requirement(s):
EPA | 27 | (1);

Question:
Are procedures implemented to control rodents or other animals and insects at the site?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes

Question ID	NOL 44	Question Type	Legislative

Legislative Requirement(s):
EPA | 27 | (1);

Question:
Is site access restricted by use of a gate, fence, or physical barrier when the site is not operating?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes

Question ID	NOL 45	Question Type	Legislative

Legislative Requirement(s):
EPA | 27 | (1);

Question:
Is the waste disposal area adequately screened from public view?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes

Question ID	NOL 46	Question Type	Legislative

Legislative Requirement(s):
EPA | 27 | (1); EPA | O. Reg. 232/98 | 21;

Question:
Are daily records of site operations available at the site for at least the past 2 years or as otherwise required by the ECA?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes

Question ID	NOL 47	Question Type	Legislative

Legislative Requirement(s):
EPA | 27 | (1);

Question:
Has the annual operations report been submitted to MECP or available on site as required by the ECA?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes

Question ID	NOL 48	Question Type	Legislative

Legislative Requirement(s):
EPA | 27 | (1); EPA | O. Reg. 232/98 | 23;

Question:
Is scavenging being prevented?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes

Question ID	NOL 51	Question Type	Legislative

Legislative Requirement(s):
EPA | 27 | (1);

Question:
Is the landfill only accepting the types of waste that they are approved to receive?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes

The Site may only accept solid non-hazardous domestic, commercial, institutional or industrial Organic Waste from the Provinces of Ontario and Quebec, limited to the following Organic Waste:
(a) Source-separated Organic Waste limited to the following:
(i) Food wastes: fruit, vegetable and general table scraps, meat and fish products, dairy products, egg shells, confectionery products, sauces, bones, pet food, fat, bread and grains, rice, pasta, coffee grounds, filters;
(ii) Paper fibres: soiled paper towels, tissues, paper plates, soiled paper food packaging items such as boxboard, cardboard, newspaper, and other packaging materials;
(iii) Miscellaneous: houseplants and yard wastes, dryer lint and hair, pet fur, sawdust and wood shavings and litter or bedding.

(b) Organic Waste from the food processing industry and other industries that produce food wastes;
(c) Organic Waste from the commercial sector, including but not be limited to food waste from restaurants, hotels, institutions, commercial operations that collect organic wastes;
(d) Leaf & yard waste;
(e) Organic sludges, including but not be limited to starches and paper wastes, but excluding sewage sludge and biosolids.

The annual reports confirm that the Facility is in compliance with Condition 2(1) by only accepting
waste from the City of Ottawa and local Industrial, Commercial & Institutional (IC&I) sector which is within the approved service area outlined in ECA.

No hazardous waste is being received at the site.

Question ID	NOL 52	**Question Type**	Information

Legislative Requirement(s):
Not Applicable

Question:
Does the landfill have a waste refusal procedure in place to manage waste that arrives at the site that the site is not approved the accept?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes

There was one rejected load on February 11, 2021. The rejected material was sent to landfill for disposal. MECP was notified.

Question ID	NOL 53	**Question Type**	Legislative

Legislative Requirement(s):
EPA | 27 | (1);

Question:
is the waste refusal procedure being followed?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes

Question ID	NOL 54	Question Type	Legislative

Legislative Requirement(s):
EPA | 27 | (1);

Question:
Does the landfill have a procedure in place to address and document spills and fires?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes

Question ID	NOL 55	Question Type	Legislative

Legislative Requirement(s):
EPA | 27 | (1);

Question:
Does the landfill have emergency contingency plan as required by the ECA?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes

The facility's Emergency Response and Contingency Plan for Spills, Odours, Process Upsets, Fires, Power Failure, and Labour disruptions is in place and in effect.

Question ID	NOL 56	Question Type	Information

Legislative Requirement(s):
Not Applicable

Question:
Is there an ECA condition requiring financial assurance?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes

Question ID	NOL 57	Question Type	Legislative

Legislative Requirement(s):
EPA | 27 | (1);

Question:
Has the financial assurance been submitted, as specified in the ECA?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes

Question ID	NOL 59	Question Type	Legislative

Legislative Requirement(s):
EPA | 27 | (1);

Question:
Does the landfill have a procedure in place to address complaints?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes

The facility conducted an odour investigation as a result of a complaint on July 24, 2021. The facility response process was effective.

Question ID	NOL 58	Question Type	Legislative

Legislative Requirement(s):
EPA | 27 | (1);

Question:
Has the company provided financial assurance re-evaluation estimates in compliance with the ECA?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes

NON-COMPLIANCE/NON-CONFORMANCE ITEMS

The following item(s) have been identified as non-compliance/non-conformance, based on a "No" response captured for a legislative or best management practice (BMP) question (s), respectively.

Question Group: Operations

Question ID	NOL 3	**Question Type**	Legislative
Question: Does the holder of the landfill ECA own the entire site?			
Legislative Requirement	EPA | 27 | (1); EPA | O. Reg. 232/98 | 3;		
Observation/Corrective Action(s)			
No The facility is a tenant on the property upon which the facility operates.			

INSPECTION DETAILS

This section includes all questions that were assessed during the inspection.

Ministry Program: WASTE | **Regulated Activity:** Landfills

Question ID	NOL 1	**Question Type**	Legislative
Question: Does the Open landfill site have an Environmental Compliance Approval (ECA)?			
Legislative Requirement	EPA | 27 | (1);		
Observation			
Yes The facility has an ECA #2766-7HEPSZ			

Question ID	NOL 3	**Question Type**	Legislative
Question: Does the holder of the landfill ECA own the entire site?			
Legislative Requirement	EPA | 27 | (1); EPA | O. Reg. 232/98 | 3;		
Observation			
No The facility is a tenant on the property upon which the facility operates.			

Question ID	NOL 2	**Question Type**	Information
Question: Is this landfill on Crown land?			
Legislative Requirement	Not Applicable		
Observation			
No			

Question ID	NOL 4	**Question Type**	Information
Question: Does the landfill have a Contaminant Attenuation Zone (CAZ)?			
Legislative Requirement	Not Applicable		

Observation
No This unique waste disposal site does not require a CAZ as material is not permanently land applied. The waste brought to the site is processed and then removed from the site. Conditions in the ECA are included to ensure that the Site is operated and maintained in an environmentally acceptable manner which does not result in a negative impact on the natural environment or any person.

Question ID	NOL 11	Question Type	Legislative
Question: Has the holder of the ECA notified the Director in writing within 30 days of a change in holder's status, identity, ownership, or CAZ property rights?			
Legislative Requirement	EPA | 27 | (1); EPA | O. Reg. 232/98 | 5;		
Observation			
Yes			

Question ID	NOL 12	Question Type	Legislative
Question: Does the landfill have a large enough Buffer Area as specified in the ECA or Regulation 232/98?			
Legislative Requirement	EPA | 27 | (1);		
Observation			
Yes The facility is a "Processing" waste disposal site for the temporary storage, transfer, and processing of solid non-hazardous waste.			

Question ID	NOL 13	Question Type	Information
Question: Are access roads and on-site roads provided so that vehicles hauling waste to and on the site may travel readily on any day under all normal weather conditions?			
Legislative Requirement	EPA | 27 | (1);		
Observation			
Yes During the inspection, access roads were clear, well organized, and had sufficient space.			

Question ID	NOL 14	Question Type	Legislative
Question: Is site access limited to times when an attendant is on duty?			
Legislative Requirement	EPA | 27 | (1);		
Observation			
Yes The facility complies with the hours set in their ECA, and an attendant is always available.			

Question ID	NOL 15	Question Type	Legislative
Question: Does the site only receive waste from within its approved service area?			
Legislative Requirement	EPA | 27 | (1);		
Observation			
Yes The service area is limited to the Province of Quebec and Ontario.			

Question ID	NOL 16	Question Type	Information
Question: Is the site required to have a ground water monitoring program by the ECA?			
Legislative Requirement	Not Applicable		
Observation			
No			

Question ID	NOL 18	Question Type	Legislative
Question: Are monitoring well samples taken and tested to determine the quality of the ground water?			
Legislative Requirement	EPA | 27 | (1); EPA | O. Reg. 232/98 | 25;		
Observation			
Yes The samples are collected not as a condition of this waste ECA, but rather as a condition of the facility's sewage works ECA.			

Question ID	NOL 20	Question Type	Information
Question: Is there ongoing abatement to address any concerns the ministry has with the ground water monitoring?			
Legislative Requirement	Not Applicable		
Observation			
Yes Abatement is undergoing under the sewage works ECA #2844-9YNGZC, not this waste ECA.			

Question ID	NOL 21	Question Type	Information
Question: Is the site required to manage leachate by the ECA?			
Legislative Requirement	Not Applicable		
Observation			
No			

Question ID	NOL 25	Question Type	Information
Question: Is there ongoing abatement to address any concerns the ministry has with the leachate monitoring?			
Legislative Requirement	Not Applicable		
Observation			
No			

Question ID	NOL 26	Question Type	Information
Question: Is the site required to manage landfill gas by the ECA?			
Legislative Requirement	Not Applicable		
Observation			
No			

Question ID	NOL 30	Question Type	Information
Question: Is there ongoing abatement to address any concerns the ministry has with landfill gas at this site?			
Legislative Requirement	Not Applicable		
Observation			
No			

Question ID	NOL 31	Question Type	Information
Question: Is the site required to have a surface water monitoring program by the ECA?			
Legislative Requirement	Not Applicable		
Observation			
No			

Question ID	NOL 36	Question Type	Legislative
Question: Is proper equipment available for the compaction of waste and applying cover material?			
Legislative Requirement	EPA | 27 | (1);		
Observation			
Yes			

Question ID	NOL 37	Question Type	Legislative
Question: Is the landfill able to accurately determine the amount of waste received?			
Legislative Requirement	EPA | 27 | (1);		
Observation			
Yes The mass balance for the 2021operating year was reviewed. The data provided in the mass balance confirms the Facility is in compliance with tonnage limits outlined in the ECA.			

Question ID	NOL 38	Question Type	Legislative
Question: Are all disposal operations at the site adequately and continually supervised?			
Legislative Requirement	EPA | 27 | (1);		
Observation			
Yes Trained personnel inspect the loads and supervise the unloading of waste at the facility. Where waste is deemed to not be acceptable, there is a procedure in place to reject that waste load.			

Question ID	NOL 39	Question Type	Information
Question: Does the landfill operator have a site inspection program as required by the ECA?			
Legislative Requirement	Not Applicable		
Observation			
Yes Trained personnel conduct routine inspections and ensure that any identified deficiencies are promptly corrected.			

Question ID	NOL 40	Question Type	Legislative
Question: Does the landfill operator have a procedure in place to address issues identified by staff during the site inspection?			
Legislative Requirement	EPA | 27 | (1);		
Observation			
Yes			

Question ID	NOL 43	Question Type	Legislative
Question: Are procedures implemented to control rodents or other animals and insects at the site?			
Legislative Requirement	EPA | 27 | (1);		
Observation			
Yes			

Question ID	NOL 44	Question Type	Legislative
Question: Is site access restricted by use of a gate, fence, or physical barrier when the site is not operating?			
Legislative Requirement	EPA | 27 | (1);		
Observation			
Yes			

Question ID	NOL 45	Question Type	Legislative
Question: Is the waste disposal area adequately screened from public view?			
Legislative Requirement	EPA | 27 | (1);		
Observation			
Yes			

Question ID	NOL 46	Question Type	Legislative
Question: Are daily records of site operations available at the site for at least the past 2 years or as otherwise required by the ECA?			
Legislative Requirement	EPA | 27 | (1); EPA | O. Reg. 232/98 | 21;		
Observation			
Yes			

Question ID	NOL 47	Question Type	Legislative
Question: Has the annual operations report been submitted to MECP or available on site as required by the ECA?			
Legislative Requirement	EPA | 27 | (1);		
Observation			
Yes			

Question ID	NOL 48	Question Type	Legislative
Question: Is scavenging being prevented?			
Legislative Requirement	EPA | 27 | (1); EPA | O. Reg. 232/98 | 23;		
Observation			
Yes			

Question ID	NOL 51	Question Type	Legislative
Question: Is the landfill only accepting the types of waste that they are approved to receive?			
Legislative Requirement	EPA | 27 | (1);		
Observation			
Yes The Site may only accept solid non-hazardous domestic, commercial, institutional or industrial Organic Waste from the Provinces of Ontario and Quebec, limited to the following Organic Waste: (a) Source-separated Organic Waste limited to the following: (i) Food wastes: fruit, vegetable and general table scraps, meat and fish products, dairy products, egg shells, confectionery products, sauces, bones, pet food, fat, bread and grains, rice, pasta, coffee grounds, filters; (ii) Paper fibres: soiled paper towels, tissues, paper plates, soiled paper food packaging items such as boxboard, cardboard, newspaper, and other packaging materials; (iii) Miscellaneous: houseplants and yard wastes, dryer lint and hair, pet fur, sawdust and wood shavings and litter or bedding. (b) Organic Waste from the food processing industry and other industries that produce food wastes; (c) Organic Waste from the commercial sector, including but not be limited to food waste from restaurants, hotels, institutions, commercial operations that collect organic wastes; (d) Leaf & yard waste; (e) Organic sludges, including but not be limited to starches and paper wastes, but excluding sewage sludge and biosolids. The annual reports confirm that the Facility is in compliance with Condition 2(1) by only accepting waste from the City of Ottawa and local Industrial, Commercial & Institutional (IC&I) sector which is within the approved service area outlined in ECA. No hazardous waste is being received at the site.			

Question ID	NOL 52	**Question Type**	Information
Question: Does the landfill have a waste refusal procedure in place to manage waste that arrives at the site that the site is not approved the accept?			
Legislative Requirement	Not Applicable		
Observation			
Yes There was one rejected load on February 11, 2021. The rejected material was sent to landfill for disposal. MECP was notified.			

Question ID	NOL 53	**Question Type**	Legislative
Question: is the waste refusal procedure being followed?			
Legislative Requirement	EPA | 27 | (1);		
Observation			
Yes

NON-COMPLIANCE

The following item(s) have been identified as non-compliance, based on a "No" response captured for a legislative question(s). For additional information on each question see the Inspection Details section of the report.

Ministry Program: SEWAGE | **Regulated Activity:** Industrial Sewage

Item	Question	Compliance Response/Corrective Action(s)
NC-1	**Question ID:** WW_IMPAIRMENT_200000 Were there no indications of a known or anticipated environmental impact during the inspection and/or review of relevant material?	No: There were indications of a known or anticipated environmental impact associated with the operation of the sewage works.

RECOMMENDATIONS

This should not be construed as a confirmation of full conformance with all potential applicable BMPs. These inspection findings are limited to the components and/or activities that were assessed, and the legislative framework(s) that were applied. It remains the responsibility of the owner to ensure compliance with all applicable legislative and regulatory requirements.

If you have any questions related to this inspection, please contact the signed Provincial Officer.

INSPECTION DETAILS

This section includes all questions that were assessed during the inspection.

Ministry Program: SEWAGE | **Regulated Activity:** Industrial Sewage

Question ID	CQ_PREV_NON_COMPLIANCE_100000	**Question Type**	Information

Legislative Requirement(s):
Not Applicable

Question:
Have there been any required or recommended actions as a result of non-compliance identified during the inspection period?

Compliance Response(s)/Corrective Action(s)/Observation(s):
No: There were no required or recommended actions as a result of a previous inspection.

The Ministry of the Environment, Conservation and Parks previously conducted an Industrial Sewage Works inspection at Convertus Canada on February 27, 2020 to assess compliance with issued Environmental Compliance Approval No. 2844-9YNGZC. No Compliance issues were identified.

Question ID	CQ_COMPLAINTS_100000	**Question Type**	BMP

Legislative Requirement(s):
Not Applicable

Question:
Does the facility have documented procedures for receiving, recording and responding to public complaints?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes: The facility has adequate documented procedures for receiving, recording, and responding to public complaints.

Question ID	CQ_COMPLAINTS_200000	**Question Type**	Information

Legislative Requirement(s):
Not Applicable

Question:
Were there any complaints received by the site or ministry regarding the operations of the sewage works during the inspection period?

Compliance Response(s)/Corrective Action(s)/Observation(s):
No: Complaints applicable to the sewage works were not received since the last inspection.

Question ID	WW_APPROVAL_100000	Question Type	Information

Legislative Requirement(s):
OWRA | 53 | (1);

Question:
Is an Environmental Compliance Approval (ECA) required for this sewage works?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes: This sewage works is subject to the ECA requirement.

Industrial Sewage Works Environmental Compliance Approval No. 9465-7NVRWT
- issued September 16, 2009

Industrial Sewage Works Environmental Compliance Approval No. 7032-88XPRA
- issued September 7, 2010

Industrial Sewage Works Environmental Compliance Approval No. 7251-8GKRPD
- issued May 30, 2011

Industrial Sewage Works Environmental Compliance Approval No. 2844-9YNGZC
- issued February 1, 2017

Question ID	WW_APPROVAL_110000	Question Type	Legislative

Legislative Requirement(s):
OWRA | 53 | (1);

Question:
Do all sewage works currently being inspected have a valid Environmental Compliance Approval (ECA)?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes: There is currently a valid ECA for the sewage works.

Question ID	WW_APPROVAL_111000	Question Type	Legislative

Legislative Requirement(s):
OWRA | 53 | (1);

Question:
Is the sewage works constructed in accordance with the Environmental Compliance Approval

(ECA)?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes: The sewage works is currently constructed in accordance with the ECA.

On site observations confirm that the sewage works is constructed in accordance with the ECA. Stormwater is collected in an on-Site open ditch system leading to a stormwater management pond that discharges off-Site to the Hawthorne Industrial Park ditch system which eventually enters into Findlay Creek system.

Process water generated inside the building is stored in leachate holding tanks buried on the east-side of the building. Should the Facility need to use water in their process (wetting the composting material), the Facility uses the leachate from the storage tanks and/or water from the stormwater pond. Should the leachate tanks need to be emptied, the Facility retains the services of a ministry approved waste management system to pick up and dispose of the leachate at a ministry approved waste disposal site. The Hazardous Waste Information Network Generator Number for the Site is ON3338779, and indicates that the leachate is classified as waste class 270 L - Other specified organic sludges, slurries and solids. According to Facility representatives, the Facility operates in a water negative environment in the summer but has found that they collect leachate in the winter.

Question ID	WW_FINANCIAL_ASSURANCE_100000	**Question Type**	Information

Legislative Requirement(s):
Not Applicable

Question:
Is there existing Financial Assurance for this sewage works?

Compliance Response(s)/Corrective Action(s)/Observation(s):
No: This site may require FA and does not have any at this time.

Question ID	WW_RECORDS_100000	**Question Type**	Information

Legislative Requirement(s):
Not Applicable

Question:
Is there a requirement to keep records associated with the sewage works?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes: This sewage works has record keeping requirements.

Condition 5(5) of the ECA requires the Facility to analyse the stormwater management pond to the parameters listed in Table 2. Condition 10 requires these records to be available to

Ministry staff. Records were available.

Question ID	WW_RECORDS_110000	Question Type	BMP

Legislative Requirement(s):
OWRA | 53 | (1);

Question:
Were all records kept as required during this inspection period?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes: All record keeping requirements were met during the inspection period.

Question ID	WW_REPORTS_100000	Question Type	Information

Legislative Requirement(s):
Not Applicable

Question:
Is there a requirement to create any reports associated with the sewage works?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes: This sewage works is required to create reports.

The owner shall prepare a performance report on an annual basis, following the end of the reporting period.

Question ID	WW_REPORTS_110000	Question Type	BMP

Legislative Requirement(s):
OWRA | 53 | (1);

Question:
Have all reports been prepared as required?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes: All reports have been prepared as required.

Question ID	WW_REPORTS_120000	Question Type	BMP

Legislative Requirement(s):
OWRA | 53 | (1);

Question:
Have all reports been submitted to the ministry if required?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes: All reports have been submitted to the ministry as required.

Question ID	WW_REPORTS_121000	Question Type	BMP

Legislative Requirement(s):
OWRA | 53 | (1);

Question:
Have all reports been submitted on time?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes: All reports have been submitted on time

To date, every report has been submitted on time.

Question ID	WW_SPCP_100000	Question Type	Information

Legislative Requirement(s):
Not Applicable

Question:
Is the facility required to have a Spill Prevention and Contingency Plan (SPCP) as required by Ontario Regulation 224/07?

Compliance Response(s)/Corrective Action(s)/Observation(s):
No: This facility is not currently subject to O. Reg 224/07.

he Facility is not required under Ontario Regulation 227/07 to develop a Sills Prevention and Contingency Plan.

As a requirement of Environmental Compliance Approval No. 2766-7HEPSZ and Environmental Compliance Approval 2844-9YNGZC, the Facility is required to develop and implement an Emergency Response and Contingency Plan and Spill Contingency and Pollution Prevention Plan which includes procedures to be undertaken in the event of a spill, process upset, power failure, fire or any other emergency situation. The Plans outline protocols with names and telephone numbers of persons to be contacted, including persons responsible for the Site, the Ministry's District Office and the Spills Action Centre, the local Fire Department, the local Municipality, the local Medical Officer of Health, and the Ministry of Labour, and the names and telephone numbers of waste management companies available for emergency response.

At the time of the inspection the Emergency Response and Contingency Plan and Spill Contingency and Pollution Prevention Plan was observed to be on-Site and updated to reflect current operations.

Question:
Has each portion of the facility's operations been tested at least once during a five-year period?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes: Each portion of the facility's operations has been tested at least once during a five-year period, or as required

Question ID	WW_OPERATIONS_MAINTENANCE_000000	Question Type	Information

Legislative Requirement(s):
Not Applicable

Question:
Is the facility required to have an operations and maintenance manual?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes: This facility is required to have an operations and maintenance manual.

Required by condition 5.

Question ID	WW_OPERATIONS_MAINTENANCE_100000	Question Type	Information

Legislative Requirement(s):
Not Applicable

Question:
Does the facility have an operations and maintenance manual?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes: The facility has an operations and maintenance manual.

Question ID	WW_OPERATIONS_MAINTENANCE_110000	Question Type	BMP

Legislative Requirement(s):
Not Applicable

Question:
Does the operations and maintenance manual meet any specified requirements?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes: The operations and maintenance manual meets specified requirements.

Question ID	WW_OPERATIONS_MAINTENANCE_200000	Question Type	BMP

Legislative Requirement(s):
OWRA | 53 | (1);

Question:
Is all equipment maintained as required?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes: All equipment has been maintained as required.

Question ID	WW_OPERATIONS_MAINTENANCE_400000	Question Type	BMP

Legislative Requirement(s):
OWRA | 53 | (1);

Question:
Has all equipment been calibrated as required (other than flow meters)?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes: All equipment had been calibrated as required.

Question ID	WW_FLOW_100000	Question Type	Information

Legislative Requirement(s):
Not Applicable

Question:
Is there a requirement to monitor flow at this site?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes: There is a requirement to monitor flow at this site.

Question ID	WW_FLOW_110000	Question Type	Legislative

Legislative Requirement(s):
OWRA | 53 | (1);

Question:
Have all flow monitoring requirements been met?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes: Flow monitoring requirements have been met.

Condition 4 of the ECA outlines the requirements for the Facility to conduct monitoring on a monthly basis, the water quality of the Stormwater Management Pond.
The facility has also complied with Condition 5 for monitoring requirements - set out in table 2 of the ECA - prior to discharge from the storm water management pond to the natural environment.

The facility is in compliance with the ongoing monitoring requirements to date.

Question ID	WW_CAPACITY_100000	**Question Type**	Information

Legislative Requirement(s):
Not Applicable

Question:
Does the sewage works have a defined design capacity?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes: The sewage works has a defined design capacity.

Question ID	WW_CAPACITY_110000	**Question Type**	BMP

Legislative Requirement(s):
OWRA | 53 | (1);

Question:
Does the sewage works operate within design capacity?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes: The sewage works operate within design capacity.

Question ID	WW_CAPACITY_210000	**Question Type**	BMP

Legislative Requirement(s):
OWRA | 53 | (1);

Question:
Has the sewage works operated within its listed peak flow rate during the inspection period?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes: The sewage works operated within its peak flow rate during the inspection period.

Question ID	WW_SOILS_SLUDGE_100000	Question Type	Information

Legislative Requirement(s):
Not Applicable

Question:
Were there any biosolids and/or sludge generated by the sewage works during the inspection period?

Compliance Response(s)/Corrective Action(s)/Observation(s):
No: Biosolids and/or sludge are not generated by the sewage works.

Question ID	WW_ENVIRONMENTAL_MONITORING_100000	Question Type	Information

Legislative Requirement(s):
Not Applicable

Question:
Are there any monitoring well(s) on site related to the sewage works?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes: There are monitoring wells onsite related to the sewage works.

Question ID	WW_ENVIRONMENTAL_MONITORING_110000	Question Type	BMP

Legislative Requirement(s):
OWRA | 53 | (1);

Question:
Are monitoring well(s) maintained in a manner sufficient to prevent the entry of surface water and other foreign materials?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes: Monitoring wells on site are maintained in a manner sufficient to prevent the entry of surface water and other foreign materials.

Question ID	WW_ENVIRONMENTAL_MONITORING_200000	Question Type	Information

Legislative Requirement(s):
Not Applicable

Question:
Are there any additional monitoring locations (other than effluent, flow or biosolids/sludge) on

site related to the sewage works? (eg influent, surface water)?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes: There are additional monitoring locations onsite related to the sewage works.

The additional monitoring wells are for groundwater monitoring.

Question ID	WW_ENVIRONMENTAL_MONITORING_210000	**Question Type**	BMP

Legislative Requirement(s):
OWRA | 53 | (1);

Question:
Has monitoring been conducted at all additional locations (other than effluent, flow or biosolids/sludge) as required?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes: Monitoring at additional locations has been conducted as required.

Question ID	WW_SPILLS_100000	**Question Type**	BMP

Legislative Requirement(s):
OWRA | 53 | (1);

Question:
Does the facility have appropriate contingency plans and procedures for dealing with equipment breakdowns, potential spills and any other abnormal situations?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes: The facility does have contingency plans and procedures for dealing with abnormal situations.

These contingency plans were reviewed during inspection.

Question ID	WW_SPILLS_200000	**Question Type**	Information

Legislative Requirement(s):
Not Applicable

Question:
Has the facility had any spills during the inspection period?

Compliance Response(s)/Corrective Action(s)/Observation(s):
No: The facility has not had spills during the inspection period.

Question ID	WW_SAMPLING_100000	Question Type	Information

Legislative Requirement(s):
Not Applicable

Question:
Does this sewage works have sampling requirements?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes: This sewage works has sampling requirements.

Sampling is a requirement for both surface water and groundwater. The facility has complied with all sampling requirements.

Condition 4. SURFACE WATER MONITORING AND RECORDING
(1) The Owner shall, upon commencement of operation of the Works, carry out the following effluent monitoring program. Composite samples comprised of three (3) or more equal volumes of grab samples from different locations of the pond shall be collected from the SWM Pond at a monthly frequency and analyzed for the following parameters listed in Table 1.

The monthly samples were collected by the Facility and sent for analysis for the parameters listed in Table 1 - Effluent Monitoring SWM Pond.

Condition 9 of the ECA outlines the requirement for the Facility to implement the groundwater monitoring program for the unconfined shallow aquifer and deep bedrock aquifer. As part of the ECA requirements, the Facility must complete an annual report outlining the completion of the groundwater monitoring program and the findings of the program of the operating year.

MECP is still awaiting the 2021 Groundwater and Surface Water Monitoring Report. Once it is received it will be reviewed. During the inspection, it was identified that there is an increase in ammonia concentrations within the groundwater. Once the annual report is received and reviewed, the Ministry will determine what actions are required to address the increased ammonia levels.

Question ID	WW_SAMPLING_110000	Question Type	Legislative

Legislative Requirement(s):
OWRA | 53 | (1);

Question:
Did the facility comply with all sampling requirements since during the inspection period?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes: The facility has complied with all sampling requirements during the inspection period.

Question ID	WW_AUDIT_SAMPLE_100000	Question Type	Information

Legislative Requirement(s):
Not Applicable

Question:
Were Ministry audit samples collected during this inspection?

Compliance Response(s)/Corrective Action(s)/Observation(s):
No: Audit samples were not collected during this inspection.

Question ID	WW_LIMITS_100000	Question Type	Information

Legislative Requirement(s):
Not Applicable

Question:
Does this sewage works have effluent limits set by an Environmental Compliance Approval (ECA)?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes: This sewage works has effluent limits set by an ECA.

The Owner shall, upon commencement of operation of the Works, carry out the following effluent monitoring program. Composite samples comprised of three (3) or more equal volumes of grab samples from different locations of the pond shall be collected from the SWM Pond at a monthly frequency and analyzed for the parameters listed in Table 1 of the ECA.

Question ID	WW_LIMITS_110000	Question Type	Legislative

Legislative Requirement(s):
OWRA | 53 | (1);

Question:
Have all effluent limits set by the Environmental Compliance Approval (ECA) been met?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes: All effluent limits set by an ECA have been met.

Question ID	WW_OBJECTIVES_100000	Question Type	Information

Legislative Requirement(s):
Not Applicable

Question:
Does this sewage works have effluent objectives set by an Environmental Compliance Approval (ECA)?

Compliance Response(s)/Corrective Action(s)/Observation(s):
No: This sewage works does not have effluent objectives set by an ECA.

Question ID	WW_LIMITS_400000	Question Type	Information

Legislative Requirement(s):
Not Applicable

Question:
Does this sewage works have limits somewhere other than the effluent discharge (e.g., raw sewage, groundwater)?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes: The sewage works has limits in locations other than the effluent discharge.

The facility has groundwater monitoring requirements or trigger levels that must be adhered to. The facility has adhered to these trigger level monitoring requirements.

Question ID	WW_LIMITS_410000	Question Type	Legislative

Legislative Requirement(s):
OWRA | 53 | (1);

Question:
Have limits at locations other than the effluent discharge been met?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes: All applicable limits have been met.

Question ID	WW_IMPAIRMENT_100000	Question Type	Legislative

Legislative Requirement(s):
OWRA | 30 | (1);

Question:
Were there no indications of a known or anticipated human health impact during the inspection and/or review of relevant material ?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes: There were no indications of a known or anticipated human health impact associated with the operation of the sewage works.

Question ID	WW_IMPAIRMENT_200000	Question Type	Legislative

Legislative Requirement(s):
OWRA | 30 | (1);

Question:
Were there no indications of a known or anticipated environmental impact during the inspection and/or review of relevant material?

Compliance Response(s)/Corrective Action(s)/Observation(s):
No: There were indications of a known or anticipated environmental impact associated with the operation of the sewage works.

It was discussed that the ammonia concentration in the shallow groundwater aquifer has increased. This indicates the potential for an onsite ammonia source. Upon receipt of the 2021 Groundwater and Surface Water Monitoring Report, the Ministry will review and discuss appropriate abatement action with the facility.

Question ID	949100	Question Type	Legislative

Legislative Requirement(s):
Not Applicable

Question:
Were the inspection questions sufficient to address other identified non-compliance items?

Compliance Response(s)/Corrective Action(s)/Observation(s):

Ontario

Convertus Ottawa Processing Facility
5123 HAWTHORNE RD, OTTAWA, ON, K0A 1V0

Inspection Report

(signature)

NON-COMPLIANCE/NON-CONFORMANCE ITEMS

The following item(s) have been identified as non-compliance/non-conformance, based on a "No" response captured for a legislative or best management practice (BMP) question (s), respectively.

Question Group: Water Quality Assessment

Question ID	WW_IMPAIRMENT_200000	**Question Type**	Legislative
Question: Were there no indications of a known or anticipated environmental impact during the inspection and/or review of relevant material?			
Legislative Requirement	OWRA | 30 | (1);		
Observation/Corrective Action(s)			
No: There were indications of a known or anticipated environmental impact associated with the operation of the sewage works. It was discussed that the ammonia concentration in the shallow groundwater aquifer has increased. This indicates the potential for an onsite ammonia source. Upon receipt of the 2021 Groundwater and Surface Water Monitoring Report, the Ministry will review and discuss appropriate abatement action with the facility.			

INSPECTION DETAILS

This section includes all questions that were assessed during the inspection.

Ministry Program: SEWAGE | **Regulated Activity:** Industrial Sewage

Question ID	CQ_PREV_NON_COMPLIANCE_100000	**Question Type**	Information
Question: Have there been any required or recommended actions as a result of non-compliance identified during the inspection period?			
Legislative Requirement	Not Applicable		
Observation			
No: There were no required or recommended actions as a result of a previous inspection. The Ministry of the Environment, Conservation and Parks previously conducted an Industrial Sewage Works inspection at Convertus Canada on February 27, 2020 to assess compliance with issued Environmental Compliance Approval No. 2844-9YNGZC. No Compliance issues were identified.			

Question ID	CQ_COMPLAINTS_100000	**Question Type**	BMP
Question: Does the facility have documented procedures for receiving, recording and responding to public complaints?			
Legislative Requirement	Not Applicable		
Observation			
Yes: The facility has adequate documented procedures for receiving, recording, and responding to public complaints.			

Question ID	CQ_COMPLAINTS_200000	**Question Type**	Information
Question: Were there any complaints received by the site or ministry regarding the operations of the sewage works during the inspection period?			
Legislative Requirement	Not Applicable		
Observation			

No: Complaints applicable to the sewage works were not received since the last inspection.

Question ID	WW_APPROVAL_100000	**Question Type**	Information
Question: Is an Environmental Compliance Approval (ECA) required for this sewage works?			
Legislative Requirement	OWRA | 53 | (1);		
Observation			
Yes: This sewage works is subject to the ECA requirement. Industrial Sewage Works Environmental Compliance Approval No. 9465-7NVRWT - issued September 16, 2009 Industrial Sewage Works Environmental Compliance Approval No. 7032-88XPRA - issued September 7, 2010 Industrial Sewage Works Environmental Compliance Approval No. 7251-8GKRPD - issued May 30, 2011 Industrial Sewage Works Environmental Compliance Approval No. 2844-9YNGZC - issued February 1, 2017			

Question ID	WW_APPROVAL_110000	**Question Type**	Legislative
Question: Do all sewage works currently being inspected have a valid Environmental Compliance Approval (ECA)?			
Legislative Requirement	OWRA | 53 | (1);		
Observation			
Yes: There is currently a valid ECA for the sewage works.			

Question ID	WW_APPROVAL_111000	**Question Type**	Legislative
Question: Is the sewage works constructed in accordance with the Environmental Compliance Approval (ECA)?			
Legislative Requirement	OWRA | 53 | (1);		

Observation
Yes: The sewage works is currently constructed in accordance with the ECA. On site observations confirm that the sewage works is constructed in accordance with the ECA. Stormwater is collected in an on-Site open ditch system leading to a stormwater management pond that discharges off-Site to the Hawthorne Industrial Park ditch system which eventually enters into Findlay Creek system. Process water generated inside the building is stored in leachate holding tanks buried on the east-side of the building. Should the Facility need to use water in their process (wetting the composting material), the Facility uses the leachate from the storage tanks and/or water from the stormwater pond. Should the leachate tanks need to be emptied, the Facility retains the services of a ministry approved waste management system to pick up and dispose of the leachate at a ministry approved waste disposal site. The Hazardous Waste Information Network Generator Number for the Site is ON3338779, and indicates that the leachate is classified as waste class 270 L - Other specified organic sludges, slurries and solids. According to Facility representatives, the Facility operates in a water negative environment in the summer but has found that they collect leachate in the winter.

Question ID	WW_FINANCIAL_ASSURANCE_100000	Question Type	Information
Question: Is there existing Financial Assurance for this sewage works?			
Legislative Requirement	Not Applicable		
Observation			
No: This site may require FA and does not have any at this time.			

Question ID	WW_RECORDS_100000	Question Type	Information
Question: Is there a requirement to keep records associated with the sewage works?			
Legislative Requirement	Not Applicable		
Observation			
Yes: This sewage works has record keeping requirements. Condition 5(5) of the ECA requires the Facility to analyse the stormwater management pond to the parameters listed in Table 2. Condition 10 requires these records to be available to Ministry staff. Records were available.			

Question ID	WW_RECORDS_110 000	Question Type	BMP
Question: Were all records kept as required during this inspection period?			
Legislative Requirement	OWRA | 53 | (1);		
Observation			
Yes: All record keeping requirements were met during the inspection period.			

Question ID	WW_REPORTS_100 000	Question Type	Information
Question: Is there a requirement to create any reports associated with the sewage works?			
Legislative Requirement	Not Applicable		
Observation			
Yes: This sewage works is required to create reports. The owner shall prepare a performance report on an annual basis, following the end of the reporting period.			

Question ID	WW_REPORTS_110 000	Question Type	BMP
Question: Have all reports been prepared as required?			
Legislative Requirement	OWRA | 53 | (1);		
Observation			
Yes: All reports have been prepared as required.			

Question ID	WW_REPORTS_120 000	Question Type	BMP
Question: Have all reports been submitted to the ministry if required?			
Legislative Requirement	OWRA | 53 | (1);		
Observation			
Yes: All reports have been submitted to the ministry as required.			

Question ID	WW_REPORTS_121000	Question Type	BMP
Question: Have all reports been submitted on time?			
Legislative Requirement	OWRA | 53 | (1);		
Observation			
Yes: All reports have been submitted on time To date, every report has been submitted on time.			

Question ID	WW_SPCP_100000	Question Type	Information
Question: Is the facility required to have a Spill Prevention and Contingency Plan (SPCP) as required by Ontario Regulation 224/07?			
Legislative Requirement	Not Applicable		
Observation			
No: This facility is not currently subject to O. Reg 224/07. he Facility is not required under Ontario Regulation 227/07 to develop a Sills Prevention and Contingency Plan. As a requirement of Environmental Compliance Approval No. 2766-7HEPSZ and Environmental Compliance Approval 2844-9YNGZC, the Facility is required to develop and implement an Emergency Response and Contingency Plan and Spill Contingency and Pollution Prevention Plan which includes procedures to be undertaken in the event of a spill, process upset, power failure, fire or any other emergency situation. The Plans outline protocols with names and telephone numbers of persons to be contacted, including persons responsible for the Site, the Ministry's District Office and the Spills Action Centre, the local Fire Department, the local Municipality, the local Medical Officer of Health, and the Ministry of Labour, and the names and telephone numbers of waste management companies available for emergency response. At the time of the inspection the Emergency Response and Contingency Plan and Spill Contingency and Pollution Prevention Plan was observed to be on-Site and updated to reflect current operations.			

Question ID	WW_SPCP_110000	Question Type	Legislative
Question: Has the SPCP been developed as required?			

Legislative Requirement	Not Applicable
Observation	
Yes: The Spill Prevention and Contingency Plan has been developed	

Question ID	WW_SPCP_111000	**Question Type**	Legislative
Question: Has the SPCP been implemented?			
Legislative Requirement	Not Applicable		
Observation			
Yes: The Spill Prevention and Contingency Plan has been implemented as required			

Question ID	WW_SPCP_112000	**Question Type**	Legislative
Question: Does the SPCP contain all the required information as outlined in the Regulation?			
Legislative Requirement	Not Applicable		
Observation			
Yes: The SPCP contains all required information			

Question ID	WW_SPCP_114000	**Question Type**	Legislative
Question: Is the SPCP retained and available at the facility?			
Legislative Requirement	Not Applicable		
Observation			
Yes: The SPCP is retained at the facility as required			

Question ID	WW_SPCP_115000	**Question Type**	Legislative
Question: Is a SPCP summary available upon request?			
Legislative Requirement	Not Applicable		

Observation
Yes: A SPCP summary was available upon request

Question ID	WW_SPCP_117000	Question Type	Legislative
Question: Is the annual written statement about the effectiveness of the SPCP held and retained for five years?			
Legislative Requirement	Not Applicable		
Observation			
Yes: An annual written statement about the effectiveness of the SPCP has been held and retained for five years			

Question ID	WW_SPCP_118000	Question Type	Legislative
Question: Are spill response records for reportable and/or non-reportable spills retained for five years, as required?			
Legislative Requirement	Not Applicable		
Observation			
Yes: Spill response records for reportable and/or non-reportable spills have been retained for five years, or as required			

Question ID	WW_SPCP_119000	Question Type	Legislative
Question: Has each portion of the facility's operations been tested at least once during a five-year period?			
Legislative Requirement	Not Applicable		
Observation			
Yes: Each portion of the facility's operations has been tested at least once during a five-year period, or as required			

Question ID	WW_OPERATIONS_MAINTENANCE_000	Question Type	Information

	000		
Question: Is the facility required to have an operations and maintenance manual?			
Legislative Requirement	Not Applicable		
Observation			
Yes: This facility is required to have an operations and maintenance manual. Required by condition 5.			

Question ID	WW_OPERATIONS_MAINTENANCE_100000	**Question Type**	Information
Question: Does the facility have an operations and maintenance manual?			
Legislative Requirement	Not Applicable		
Observation			
Yes: The facility has an operations and maintenance manual.			

Question ID	WW_OPERATIONS_MAINTENANCE_110000	**Question Type**	BMP
Question: Does the operations and maintenance manual meet any specified requirements?			
Legislative Requirement	Not Applicable		
Observation			
Yes: The operations and maintenance manual meets specified requirements.			

Question ID	WW_OPERATIONS_MAINTENANCE_200000	**Question Type**	BMP
Question: Is all equipment maintained as required?			
Legislative Requirement	OWRA | 53 | (1);		
Observation			

Yes: All equipment has been maintained as required.

Question ID	WW_OPERATIONS_MAINTENANCE_400000	Question Type	BMP
Question: Has all equipment been calibrated as required (other than flow meters)?			
Legislative Requirement	OWRA | 53 | (1);		
Observation			
Yes: All equipment had been calibrated as required.			

Question ID	WW_FLOW_100000	Question Type	Information
Question: Is there a requirement to monitor flow at this site?			
Legislative Requirement	Not Applicable		
Observation			
Yes: There is a requirement to monitor flow at this site.			

Question ID	WW_FLOW_110000	Question Type	Legislative
Question: Have all flow monitoring requirements been met?			
Legislative Requirement	OWRA | 53 | (1);		
Observation			
Yes: Flow monitoring requirements have been met. Condition 4 of the ECA outlines the requirements for the Facility to conduct monitoring on a monthly basis, the water quality of the Stormwater Management Pond. The facility has also complied with Condition 5 for monitoring requirements - set out in table 2 of the ECA - prior to discharge from the storm water management pond to the natural environment. The facility is in compliance with the ongoing monitoring requirements to date.			

Question ID	WW_CAPACITY_100000	Question Type	Information

Question: Does the sewage works have a defined design capacity?	
Legislative Requirement	Not Applicable
Observation	
Yes: The sewage works has a defined design capacity.	

Question ID	WW_CAPACITY_110000	**Question Type**	BMP
Question: Does the sewage works operate within design capacity?			
Legislative Requirement	OWRA | 53 | (1);		
Observation			
Yes: The sewage works operate within design capacity.			

Question ID	WW_CAPACITY_210000	**Question Type**	BMP
Question: Has the sewage works operated within its listed peak flow rate during the inspection period?			
Legislative Requirement	OWRA | 53 | (1);		
Observation			
Yes: The sewage works operated within its peak flow rate during the inspection period.			

Question ID	WW_SOILS_SLUDGE_100000	**Question Type**	Information
Question: Were there any biosolids and/or sludge generated by the sewage works during the inspection period?			
Legislative Requirement	Not Applicable		
Observation			
No: Biosolids and/or sludge are not generated by the sewage works.			

Question ID	WW_ENVIRONMENTAL_MONITORING_100000	Question Type	Information
Question: Are there any monitoring well(s) on site related to the sewage works?			
Legislative Requirement	Not Applicable		
Observation			
Yes: There are monitoring wells onsite related to the sewage works.			

Question ID	WW_ENVIRONMENTAL_MONITORING_110000	Question Type	BMP
Question: Are monitoring well(s) maintained in a manner sufficient to prevent the entry of surface water and other foreign materials?			
Legislative Requirement	OWRA | 53 | (1);		
Observation			
Yes: Monitoring wells on site are maintained in a manner sufficient to prevent the entry of surface water and other foreign materials.			

Question ID	WW_ENVIRONMENTAL_MONITORING_200000	Question Type	Information
Question: Are there any additional monitoring locations (other than effluent, flow or biosolids/sludge) on site related to the sewage works? (eg influent, surface water)?			
Legislative Requirement	Not Applicable		
Observation			
Yes: There are additional monitoring locations onsite related to the sewage works. The additional monitoring wells are for groundwater monitoring.			

Question ID	WW_ENVIRONMENTAL_MONITORING_210000	Question Type	BMP
Question:			

Has monitoring been conducted at all additional locations (other than effluent, flow or biosolids/sludge) as required?	
Legislative Requirement	OWRA | 53 | (1);
Observation	
Yes: Monitoring at additional locations has been conducted as required.	

Question ID	WW_SPILLS_100000	**Question Type**	BMP
Question: Does the facility have appropriate contingency plans and procedures for dealing with equipment breakdowns, potential spills and any other abnormal situations?			
Legislative Requirement	OWRA | 53 | (1);		
Observation			
Yes: The facility does have contingency plans and procedures for dealing with abnormal situations. These contingency plans were reviewed during inspection.			

Question ID	WW_SPILLS_200000	**Question Type**	Information
Question: Has the facility had any spills during the inspection period?			
Legislative Requirement	Not Applicable		
Observation			
No: The facility has not had spills during the inspection period.			

Question ID	WW_SAMPLING_100000	**Question Type**	Information
Question: Does this sewage works have sampling requirements?			
Legislative Requirement	Not Applicable		
Observation			
Yes: This sewage works has sampling requirements. Sampling is a requirement for both surface water and groundwater. The facility has complied with all sampling requirements. Condition 4. SURFACE WATER MONITORING AND RECORDING (1) The Owner shall, upon commencement of operation of the Works, carry out the			

following effluent monitoring program. Composite samples comprised of three (3) or more equal volumes of grab samples from different locations of the pond shall be collected from the SWM Pond at a monthly frequency and analyzed for the following parameters listed in Table 1.

The monthly samples were collected by the Facility and sent for analysis for the parameters listed in Table 1 - Effluent Monitoring SWM Pond.

Condition 9 of the ECA outlines the requirement for the Facility to implement the groundwater monitoring program for the unconfined shallow aquifer and deep bedrock aquifer. As part of the ECA requirements, the Facility must complete an annual report outlining the completion of the groundwater monitoring program and the findings of the program of the operating year.

MECP is still awaiting the 2021 Groundwater and Surface Water Monitoring Report. Once it is received it will be reviewed. During the inspection, it was identified that there is an increase in ammonia concentrations within the groundwater. Once the annual report is received and reviewed, the Ministry will determine what actions are required to address the increased ammonia levels.

Question ID	WW_SAMPLING_110000	**Question Type**	Legislative
Question: Did the facility comply with all sampling requirements since during the inspection period?			
Legislative Requirement	OWRA | 53 | (1);		
Observation			
Yes: The facility has complied with all sampling requirements during the inspection period.			

Question ID	WW_AUDIT_SAMPLE_100000	**Question Type**	Information
Question: Were Ministry audit samples collected during this inspection?			
Legislative Requirement	Not Applicable		
Observation			
No: Audit samples were not collected during this inspection.			

Question ID	WW_LIMITS_100000	Question Type	Information
Question: Does this sewage works have effluent limits set by an Environmental Compliance Approval (ECA)?			
Legislative Requirement	Not Applicable		
Observation			
Yes: This sewage works has effluent limits set by an ECA. The Owner shall, upon commencement of operation of the Works, carry out the following effluent monitoring program. Composite samples comprised of three (3) or more equal volumes of grab samples from different locations of the pond shall be collected from the SWM Pond at a monthly frequency and analyzed for the parameters listed in Table 1 of the ECA.			

Question ID	WW_LIMITS_110000	Question Type	Legislative
Question: Have all effluent limits set by the Environmental Compliance Approval (ECA) been met?			
Legislative Requirement	OWRA | 53 | (1);		
Observation			
Yes: All effluent limits set by an ECA have been met.			

Question ID	WW_OBJECTIVES_100000	Question Type	Information
Question: Does this sewage works have effluent objectives set by an Environmental Compliance Approval (ECA)?			
Legislative Requirement	Not Applicable		
Observation			
No: This sewage works does not have effluent objectives set by an ECA.			

Question ID	WW_LIMITS_400000	Question Type	Information
Question: Does this sewage works have limits somewhere other than the effluent discharge (e.g., raw sewage, groundwater)?			
Legislative Requirement	Not Applicable		

Observation
Yes: The sewage works has limits in locations other than the effluent discharge. The facility has groundwater monitoring requirements or trigger levels that must be adhered to. The facility has adhered to these trigger level monitoring requirements.

Question ID	WW_LIMITS_410000	Question Type	Legislative
Question: Have limits at locations other than the effluent discharge been met?			
Legislative Requirement	OWRA | 53 | (1);		
Observation			
Yes: All applicable limits have been met.			

Question ID	WW_IMPAIRMENT_100000	Question Type	Legislative
Question: Were there no indications of a known or anticipated human health impact during the inspection and/or review of relevant material ?			
Legislative Requirement	OWRA | 30 | (1);		
Observation			
Yes: There were no indications of a known or anticipated human health impact associated with the operation of the sewage works.			

Question ID	WW_IMPAIRMENT_200000	Question Type	Legislative
Question: Were there no indications of a known or anticipated environmental impact during the inspection and/or review of relevant material?			
Legislative Requirement	OWRA | 30 | (1);		
Observation			
No: There were indications of a known or anticipated environmental impact associated with the operation of the sewage works. It was discussed that the ammonia concentration in the shallow groundwater aquifer has increased. This indicates the potential for an onsite ammonia source. Upon receipt of the 2021 Groundwater and Surface Water Monitoring Report, the Ministry will review and discuss appropriate abatement action with the facility.			

Question ID	949100	Question Type	Legislative
Question: Were the inspection questions sufficient to address other identified non-compliance items?			
Legislative Requirement	Not Applicable		
Observation

NON-COMPLIANCE

This should not be construed as a confirmation of full compliance with all potential applicable legal requirements. These inspection findings are limited to the components and/or activities that were assessed, and the legislative framework(s) that were applied. It remains the responsibility of the owner to ensure compliance with all applicable legislative and regulatory requirements.

If you have any questions related to this inspection, please contact the signed Provincial Officer.

RECOMMENDATIONS

This should not be construed as a confirmation of full conformance with all potential applicable BMPs. These inspection findings are limited to the components and/or activities that were assessed, and the legislative framework(s) that were applied. It remains the responsibility of the owner to ensure compliance with all applicable legislative and regulatory requirements.

If you have any questions related to this inspection, please contact the signed Provincial Officer.

INSPECTION DETAILS

This section includes all questions that were assessed during the inspection.

Ministry Program: AIR | **Regulated Activity:** ECA Air Emissions

Question ID	1.1	**Question Type**	Information

Legislative Requirement(s):
Not Applicable

Question:
Is there information in regards to site conditions that should be documented for this inspection?

Compliance Response(s)/Corrective Action(s)/Observation(s):

Question ID	2.1	**Question Type**	Information

Legislative Requirement(s):
Not Applicable

Question:
Was there non-compliance identified during a previous air inspection?

Compliance Response(s)/Corrective Action(s)/Observation(s):

A review of the previous Air Facility inspection conducted in 2018 indicated that there were no previous non-compliance issues.

Question ID	3.1	**Question Type**	Legislative

Legislative Requirement(s):
EPA | 9 | (1)(a);

Question:
Does the facility have an Environmental Compliance Approval(s) as required by section 9 of the Environmental Protection Act?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes, the facility has the required air Environmental Compliance Approval(s).

The facility has Environmental Compliance Approval #1631 A2ELCQ in effect.

Question ID	3.2	Question Type	Legislative

Legislative Requirement(s):
EPA | 9 | (1)(a);

Question:
Was the facility in compliance with the requirement to obtain either an amendment to their air Environmental Compliance Approval or registration to the Air Emissions Environmental Activity and Sector Registry, in regard to a modification made at the facility?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes, the facility has the required air Environmental Compliance Approval(s) and does not require an amendment.

Question ID	5.1.1	Question Type	Legislative

Legislative Requirement(s):
EPA | 9 | (1)(a);

Question:
Does the facility comply with limits in their air Environmental Compliance Approval?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes, the facility is complying or has complied with a limit(s) in their air Environmental Compliance Approval.

At this time the facility is satisfying the limits set out in the ECA. The 2021 Annual Source Test Report confirms this compliance.

Question ID	6.2.1	Question Type	Legislative

Legislative Requirement(s):
EPA | 9 | (1)(a);

Question:
Has the facility made the required notification to the ministry or other parties as required by their air Environmental Compliance Approval?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes, the facility has complied with the requirement to notify the Ministry in accordance with their air Environmental Compliance Approval, the Act and/or Regulations, as appropriate.

Condition 8.2(d) of the Environmental Compliance Approval requires notification. Convertus provided appropriate notification and investigation for a July 24, 2021 odour complaint. The facility is diligent with reporting and investigating complaints pertinent to the Air ECA.

Question ID	7.1	Question Type	Legislative

Legislative Requirement(s):
EPA | 9 | (1)(a);

Question:
Has the facility implemented the required procedures for receiving, recording and responding to public complaints as required by their air Environmental Compliance Approval?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes, the facility has complied with the requirement to implement the required procedures for receiving, recording and responding to public complaints as required by their air Environmental Compliance Approval.

Question ID	8.1	Question Type	Legislative

Legislative Requirement(s):
EPA | 9 | (1)(a);

Question:
Did the facility prepare and implement operating procedures and maintenance programs as required by their air Environmental Compliance Approval?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes, the facility has complied with the requirement to prepare and/or implement operating procedures and maintenance plans as required by their air Environmental Compliance Approval.

During the inspection records were available for review and requested. The Facility had available numerous binders containing records related to process data, inspections, repair, maintenance, annual updates to ESDM and Acoustic Assessment Reports, training logs, etc. The operating procedures and maintenance programs were reviewed at the time of the inspection and deemed to be adequate.

Question ID	10.1.1	Question Type	Legislative

Legislative Requirement(s):
EPA | 9 | (1)(a);

Question:
Has the facility installed, operated and maintained a continuous emissions monitoring system in accordance with air Environmental Compliance Approval conditions?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes, the facility has complied with monitoring requirements as set out in their air Environmental Compliance Approval.

The Facility utilizes SCADA to program, adjust, measure and monitor the organic waste processing. The SCADA system also records the data collected during the processing process. In reviewing the process data, the records were collected as required and indicate the biofilters and bioscrubber are being properly operated and monitored.

Question ID	10.1.4	Question Type	Legislative

Legislative Requirement(s):
EPA | 9 | (1)(a);

Question:
Has the facility met all the requirements related to air quality monitoring set out in the air Environmental Compliance Approval?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes, the facility has complied with requirements related to ambient air monitoring as set out in their air Environmental Compliance Approval.

Condition 11 of the ECA requires the Facility to conduct source testing to determine the rates of odour, hydrogen sulphide and total mercaptans from the exhaust stack from the exhaust stack for the pollution control equipment (ammonia scrubber, biofilters & bioscrubber). This condition is satisfied.

Question ID	10.1.5	Question Type	Legislative

Legislative Requirement(s):
EPA | 9 | (1)(a);

Question:
Has the facility met all the requirements pertaining to odour assessments as set out in the air Environmental Compliance Approval?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes, the facility has complied with the monitoring or testing requirements related to odour as set out in their air Environmental Compliance Approval.

Question ID	10.1.6	Question Type	Legislative

Legislative Requirement(s):
EPA | 9 | (1)(a);

Question:
Has the facility met all assessment requirements pertaining to noise/sound as set out in the air Environmental Compliance Approval?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes, the facility has complied with the monitoring requirements related to noise as set out in their air Environmental Compliance Approval.

Question ID	10.1.3	Question Type	Legislative

Legislative Requirement(s):
EPA | 9 | (1)(a);

Question:
Has the facility met all source testing requirements as set out in the air Environmental Compliance Approval?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes, the facility has complied with source testing requirements as set out in their air Environmental Compliance Approval.

Condition 10 of the ECA requires the Facility to monitoring the parameters of the Air Pollution Control Equipment. Based on the review of the records indicate the parameters of the Air Pollution Control Equipment are being monitored and recorded as required.

Question ID	11.1	**Question Type**	Legislative

Legislative Requirement(s):
EPA | 9 | (1)(a);

Question:
Have all documents and reports been prepared and updated as required in the air Environmental Compliance Approval?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes, the facility has prepared and updated the required report(s) as set out in their air Environmental Compliance Approval.

The ministry received the 2021 Source Test Report for Amended ECA No. 1631-A2ELCQ on February 4, 2022.

Question ID	13.1	**Question Type**	Legislative

Legislative Requirement(s):
EPA | 9 | (1)(a);

Question:
Does the facility comply with all record keeping requirements in the air Environmental Compliance Approval?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes, the facility has complied with all record keeping requirements in their air Environmental Compliance Approval.

Question ID	14.1	**Question Type**	Legislative

Legislative Requirement(s):
EPA | 9 | (1)(a);

Question:
Does the facility comply with other requirements set out in the air Environmental Compliance Approval that are not otherwise specified in this inspection form?

Compliance Response(s)/Corrective Action(s)/Observation(s):

Yes, the facility has complied with all other requirements in the air ECA, not addressed in other questions.

Condition 6 of Environmental Compliance Approval Number 1631-A2ELCQ requires the Facility to provide the Director no later than May 31 of each year, a Written Summary Form to be submitted to the MECP's website that shall include the following:
- a declaration of whether the Facility was in compliance with section 9 of the Environmental Protection Act, Ontario Regulation 419/05 and the conditions of Environmental Compliance Approval Number 1631-A2ELCQ
- a summary of each Modification satisfying Condition 2.1 (a) and (b) that took place in the previous calendar year that resulted in a change in the previously calculated concentration at a Point of Impingement for any Compound of Concern or resulted in a change in the sound levels reported in the Acoustic Assessment Summary Table at any Point of Reception

The Facility submitted the Written Summary prior to May 31 of the 2021 operating year.

As a requirement of Environmental Compliance Approval No. 2766-7HEPSZ, the Facility is required to develop and implement an Emergency Response and Contingency Plan which includes procedures to be undertaken in the event of a spill, process upset, power failure, fire or any other emergency situation. The Emergency Response and Contingency Plan also outlines protocols with names and telephone numbers of persons to be contacted, including persons responsible for the Site, the Ministry's District Office and the Spills Action Centre, the local Fire Department, the local Municipality, the local Medical Officer of Health, and the Ministry of Labour, and the names and telephone numbers of waste management companies available for emergency response.

At the time of the inspection the Emergency Response and Contingency Plan was observed to be on-site and updated to reflect current operations.

Question ID	16.1	**Question Type**	Legislative

Legislative Requirement(s):
EPA | 9 | (1)(a);

Question:
Does the facility comply with other applicable air regulatory requirements?

Compliance Response(s)/Corrective Action(s)/Observation(s):

Yes, the facility has complied with an air regulatory requirement.

Question ID	16.2	Question Type	BMP

Legislative Requirement(s):
Not Applicable

Question:
Does the facility conform with other applicable practices and procedures?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes, the facility has adhered to applicable air practices and procedures.

Question ID	949100	Question Type	Legislative

Legislative Requirement(s):
Not Applicable

Question:
Were the inspection questions sufficient to address other identified non-compliance items?

Compliance Response(s)/Corrective Action(s)/Observation(s):

Question ID	11.2	Question Type	Legislative

Legislative Requirement(s):
EPA | 9 | (1)(a);

Question:
Have all reports been submitted to the ministry as required and by the date set out in the air Environmental Compliance Approval?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes, the facility has submitted the required report(s) as set out in their air Environmental Compliance Approval.

Question ID	11.3	Question Type	Legislative

Legislative Requirement(s):
EPA | 9 | (1)(a);

Question:
Are all reports available to the ministry and the public as required in the air Environmental Compliance Approval?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes, the facility has made reports available to the ministry or the public as required in their air

Environmental Compliance Approval.

NON-COMPLIANCE/NON-CONFORMANCE ITEMS

This should not be construed as a confirmation of full compliance with all potential applicable legal requirement and BMPs. These inspection findings are limited to the components and/or activities that were assessed, and the legislative framework(s) that were applied. It remains the responsibility of the owner to ensure compliance with all applicable legislative and regulatory requirements.

If you have any questions related to this inspection, please contact the signed Provincial Officer.

INSPECTION DETAILS

This section includes all questions that were assessed during the inspection.

Ministry Program: AIR | **Regulated Activity:** ECA Air Emissions

Question ID	1.1	**Question Type**	Information
Question: Is there information in regards to site conditions that should be documented for this inspection?			
Legislative Requirement	Not Applicable		
Observation			

Question ID	2.1	**Question Type**	Information
Question: Was there non-compliance identified during a previous air inspection?			
Legislative Requirement	Not Applicable		
Observation			
A review of the previous Air Facility inspection conducted in 2018 indicated that there were no previous non-compliance issues.			

Question ID	3.1	**Question Type**	Legislative
Question: Does the facility have an Environmental Compliance Approval(s) as required by section 9 of the Environmental Protection Act?			
Legislative Requirement	EPA | 9 | (1)(a);		
Observation			
Yes, the facility has the required air Environmental Compliance Approval(s). The facility has Environmental Compliance Approval #1631 A2ELCQ in effect.			

Question ID	3.2	**Question Type**	Legislative

Question: Was the facility in compliance with the requirement to obtain either an amendment to their air Environmental Compliance Approval or registration to the Air Emissions Environmental Activity and Sector Registry, in regard to a modification made at the facility?	
Legislative Requirement	EPA | 9 | (1)(a);
Observation	
Yes, the facility has the required air Environmental Compliance Approval(s) and does not require an amendment.	

Question ID	5.1.1	**Question Type**	Legislative
Question: Does the facility comply with limits in their air Environmental Compliance Approval?			
Legislative Requirement	EPA | 9 | (1)(a);		
Observation			
Yes, the facility is complying or has complied with a limit(s) in their air Environmental Compliance Approval. At this time the facility is satisfying the limits set out in the ECA. The 2021 Annual Source Test Report confirms this compliance.			

Question ID	6.2.1	**Question Type**	Legislative
Question: Has the facility made the required notification to the ministry or other parties as required by their air Environmental Compliance Approval?			
Legislative Requirement	EPA | 9 | (1)(a);		
Observation			
Yes, the facility has complied with the requirement to notify the Ministry in accordance with their air Environmental Compliance Approval, the Act and/or Regulations, as appropriate. Condition 8.2(d) of the Environmental Compliance Approval requires notification. Convertus provided appropriate notification and investigation for a July 24, 2021 odour complaint. The facility is diligent with reporting and investigating complaints pertinent to the Air ECA.			

Question ID	7.1	**Question Type**	Legislative
Question: Has the facility implemented the required procedures for receiving, recording and responding to public complaints as required by their air Environmental Compliance			

Approval?	
Legislative Requirement	EPA | 9 | (1)(a);
Observation	
Yes, the facility has complied with the requirement to implement the required procedures for receiving, recording and responding to public complaints as required by their air Environmental Compliance Approval.	

Question ID	8.1	**Question Type**	Legislative
Question: Did the facility prepare and implement operating procedures and maintenance programs as required by their air Environmental Compliance Approval?			
Legislative Requirement	EPA | 9 | (1)(a);		
Observation			
Yes, the facility has complied with the requirement to prepare and/or implement operating procedures and maintenance plans as required by their air Environmental Compliance Approval. During the inspection records were available for review and requested. The Facility had available numerous binders containing records related to process data, inspections, repair, maintenance, annual updates to ESDM and Acoustic Assessment Reports, training logs, etc. The operating procedures and maintenance programs were reviewed at the time of the inspection and deemed to be adequate.			

Question ID	10.1.1	**Question Type**	Legislative
Question: Has the facility installed, operated and maintained a continuous emissions monitoring system in accordance with air Environmental Compliance Approval conditions?			
Legislative Requirement	EPA | 9 | (1)(a);		
Observation			
Yes, the facility has complied with monitoring requirements as set out in their air Environmental Compliance Approval. The Facility utilizes SCADA to program, adjust, measure and monitor the organic waste processing. The SCADA system also records the data collected during the processing process. In reviewing the process data, the records were collected as required and indicate the biofilters and bioscrubber are being properly operated and monitored.			

Question ID	10.1.4	**Question Type**	Legislative

Question: Has the facility met all the requirements related to air quality monitoring set out in the air Environmental Compliance Approval?	
Legislative Requirement	EPA | 9 | (1)(a);
Observation	
Yes, the facility has complied with requirements related to ambient air monitoring as set out in their air Environmental Compliance Approval. Condition 11 of the ECA requires the Facility to conduct source testing to determine the rates of odour, hydrogen sulphide and total mercaptans from the exhaust stack from the exhaust stack for the pollution control equipment (ammonia scrubber, biofilters & bioscrubber). This condition is satisfied.	

Question ID	10.1.5	**Question Type**	Legislative
Question: Has the facility met all the requirements pertaining to odour assessments as set out in the air Environmental Compliance Approval?			
Legislative Requirement	EPA | 9 | (1)(a);		
Observation			
Yes, the facility has complied with the monitoring or testing requirements related to odour as set out in their air Environmental Compliance Approval.			

Question ID	10.1.6	**Question Type**	Legislative
Question: Has the facility met all assessment requirements pertaining to noise/sound as set out in the air Environmental Compliance Approval?			
Legislative Requirement	EPA | 9 | (1)(a);		
Observation			
Yes, the facility has complied with the monitoring requirements related to noise as set out in their air Environmental Compliance Approval.			

Question ID	10.1.3	**Question Type**	Legislative
Question: Has the facility met all source testing requirements as set out in the air Environmental Compliance Approval?			

Legislative Requirement	EPA | 9 | (1)(a);
Observation	
Yes, the facility has complied with source testing requirements as set out in their air Environmental Compliance Approval. Condition 10 of the ECA requires the Facility to monitoring the parameters of the Air Pollution Control Equipment. Based on the review of the records indicate the parameters of the Air Pollution Control Equipment are being monitored and recorded as required.	

Question ID	11.1	Question Type	Legislative
Question: Have all documents and reports been prepared and updated as required in the air Environmental Compliance Approval?			
Legislative Requirement	EPA | 9 | (1)(a);		
Observation			
Yes, the facility has prepared and updated the required report(s) as set out in their air Environmental Compliance Approval. The ministry received the 2021 Source Test Report for Amended ECA No. 1631-A2ELCQ on February 4, 2022.			

Question ID	13.1	Question Type	Legislative
Question: Does the facility comply with all record keeping requirements in the air Environmental Compliance Approval?			
Legislative Requirement	EPA | 9 | (1)(a);		
Observation			
Yes, the facility has complied with all record keeping requirements in their air Environmental Compliance Approval.			

Question ID	14.1	Question Type	Legislative
Question: Does the facility comply with other requirements set out in the air Environmental Compliance Approval that are not otherwise specified in this inspection form?			
Legislative Requirement	EPA | 9 | (1)(a);		
Observation			

Yes, the facility has complied with all other requirements in the air ECA, not addressed in other questions. Condition 6 of Environmental Compliance Approval Number 1631-A2ELCQ requires the Facility to provide the Director no later than May 31 of each year, a Written Summary Form to be submitted to the MECP's website that shall include the following:
- a declaration of whether the Facility was in compliance with section 9 of the Environmental Protection Act, Ontario Regulation 419/05 and the conditions of Environmental Compliance Approval Number 1631-A2ELCQ
- a summary of each Modification satisfying Condition 2.1 (a) and (b) that took place in the previous calendar year that resulted in a change in the previously calculated concentration at a Point of Impingement for any Compound of Concern or resulted in a change in the sound levels reported in the Acoustic Assessment Summary Table at any Point of Reception

The Facility submitted the Written Summary prior to May 31 of the 2021 operating year.

As a requirement of Environmental Compliance Approval No. 2766-7HEPSZ, the Facility is required to develop and implement an Emergency Response and Contingency Plan which includes procedures to be undertaken in the event of a spill, process upset, power failure, fire or any other emergency situation. The Emergency Response and Contingency Plan also outlines protocols with names and telephone numbers of persons to be contacted, including persons responsible for the Site, the Ministry's District Office and the Spills Action Centre, the local Fire Department, the local Municipality, the local Medical Officer of Health, and the Ministry of Labour, and the names and telephone numbers of waste management companies available for emergency response.

At the time of the inspection the Emergency Response and Contingency Plan was observed to be on-site and updated to reflect current operations.

Question ID	16.1	**Question Type**	Legislative
Question: Does the facility comply with other applicable air regulatory requirements?			
Legislative Requirement	EPA | 9 | (1)(a);		
Observation			
Yes, the facility has complied with an air regulatory requirement.			

Question ID	16.2	**Question Type**	BMP

Question: Does the facility conform with other applicable practices and procedures?	
Legislative Requirement	Not Applicable
Observation	
Yes, the facility has adhered to applicable air practices and procedures.	

Question ID	949100	**Question Type**	Legislative
Question: Were the inspection questions sufficient to address other identified non-compliance items?			
Legislative Requirement	Not Applicable		
Observation			

Question ID	11.2	**Question Type**	Legislative
Question: Have all reports been submitted to the ministry as required and by the date set out in the air Environmental Compliance Approval?			
Legislative Requirement	EPA | 9 | (1)(a);		
Observation			
Yes, the facility has submitted the required report(s) as set out in their air Environmental Compliance Approval.			

Question ID	11.3	**Question Type**	Legislative
Question: Are all reports available to the ministry and the public as required in the air Environmental Compliance Approval?			
Legislative Requirement	EPA | 9 | (1)(a);		
Observation			
Yes, the facility has made reports available to the ministry or the public as required in their air Environmental Compliance Approval.

NON-COMPLIANCE

This should not be construed as a confirmation of full compliance with all potential applicable legal requirements. These inspection findings are limited to the components and/or activities that were assessed, and the legislative framework(s) that were applied. It remains the responsibility of the owner to ensure compliance with all applicable legislative and regulatory requirements.

If you have any questions related to this inspection, please contact the signed Provincial Officer.

RECOMMENDATIONS

This should not be construed as a confirmation of full conformance with all potential applicable BMPs. These inspection findings are limited to the components and/or activities that were assessed, and the legislative framework(s) that were applied. It remains the responsibility of the owner to ensure compliance with all applicable legislative and regulatory requirements.

If you have any questions related to this inspection, please contact the signed Provincial Officer.

INSPECTION DETAILS

This section includes all questions that were assessed during the inspection.

Ministry Program: AIR | **Regulated Activity:** ECA Air Emissions

Question ID	1.1	**Question Type**	Information

Legislative Requirement(s):
Not Applicable

Question:
Is there information in regards to site conditions that should be documented for this inspection?

Compliance Response(s)/Corrective Action(s)/Observation(s):
No.

Question ID	2.1	**Question Type**	Information

Legislative Requirement(s):
Not Applicable

Question:
Was there non-compliance identified during a previous air inspection?

Compliance Response(s)/Corrective Action(s)/Observation(s):
No.

Question ID	3.1	**Question Type**	Legislative

Legislative Requirement(s):
EPA | 9 | (1)(a);

Question:
Does the facility have an Environmental Compliance Approval(s) as required by section 9 of the Environmental Protection Act?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes, the facility has the required air Environmental Compliance Approval(s).

The facility has Environmental Compliance Approval #1631 A2ELCQ in effect.

Question ID	3.2	Question Type	Legislative

Legislative Requirement(s):
EPA | 9 | (1)(a);

Question:
Was the facility in compliance with the requirement to obtain either an amendment to their air Environmental Compliance Approval or registration to the Air Emissions Environmental Activity and Sector Registry, in regard to a modification made at the facility?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes, the facility has the required air Environmental Compliance Approval(s) and does not require an amendment.

Question ID	5.1.1	Question Type	Legislative

Legislative Requirement(s):
EPA | 9 | (1)(a);

Question:
Does the facility comply with limits in their air Environmental Compliance Approval?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes, the facility is complying or has complied with a limit(s) in their air Environmental Compliance Approval.

Question ID	6.2.1	Question Type	Legislative

Legislative Requirement(s):
EPA | 9 | (1)(a);

Question:
Has the facility made the required notification to the ministry or other parties as required by their air Environmental Compliance Approval?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes, the facility has complied with the requirement to notify the Ministry in accordance with their air Environmental Compliance Approval, the Act and/or Regulations, as appropriate.

Question ID	7.1	Question Type	Legislative

Legislative Requirement(s):
EPA | 9 | (1)(a);

Question:
Has the facility implemented the required procedures for receiving, recording and responding

to public complaints as required by their air Environmental Compliance Approval?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes, the facility has complied with the requirement to implement the required procedures for receiving, recording and responding to public complaints as required by their air Environmental Compliance Approval.

Question ID	8.1	Question Type	Legislative

Legislative Requirement(s):
EPA | 9 | (1)(a);

Question:
Did the facility prepare and implement operating procedures and maintenance programs as required by their air Environmental Compliance Approval?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes, the facility has complied with the requirement to prepare and/or implement operating procedures and maintenance plans as required by their air Environmental Compliance Approval.

During the inspection records were available for review and requested. The Facility had available numerous binders containing records related to process data, inspections, repair, maintenance, annual updates to ESDM and Acoustic Assessment Reports, training logs, etc. The operating procedures and maintenance programs were reviewed at the time of the inspection and deemed to be adequate.

Question ID	10.1.1	Question Type	Legislative

Legislative Requirement(s):
EPA | 9 | (1)(a);

Question:
Has the facility installed, operated and maintained a continuous emissions monitoring system in accordance with air Environmental Compliance Approval conditions?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes, the facility has complied with monitoring requirements as set out in their air Environmental Compliance Approval.

Question ID	10.1.4	Question Type	Legislative

Legislative Requirement(s):
EPA | 9 | (1)(a);

Question:
Has the facility met all the requirements related to air quality monitoring set out in the air Environmental Compliance Approval?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes, the facility has complied with requirements related to ambient air monitoring as set out in their air Environmental Compliance Approval.

Question ID	10.1.5	Question Type	Legislative

Legislative Requirement(s):
EPA | 9 | (1)(a);

Question:
Has the facility met all the requirements pertaining to odour assessments as set out in the air Environmental Compliance Approval?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes, the facility has complied with the monitoring or testing requirements related to odour as set out in their air Environmental Compliance Approval.

Question ID	10.1.6	Question Type	Legislative

Legislative Requirement(s):
EPA | 9 | (1)(a);

Question:
Has the facility met all assessment requirements pertaining to noise/sound as set out in the air Environmental Compliance Approval?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes, the facility has complied with the monitoring requirements related to noise as set out in their air Environmental Compliance Approval.

Question ID	10.1.3	Question Type	Legislative

Legislative Requirement(s):
EPA | 9 | (1)(a);

Question:
Has the facility met all source testing requirements as set out in the air Environmental Compliance Approval?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes, the facility has complied with source testing requirements as set out in their air Environmental Compliance Approval.

Condition 11 of the ECA requires the Facility to conduct source testing to determine the rates of odour, hydrogen sulphide and total mercaptans from the exhaust stack from the exhaust stack for the pollution control equipment (ammonia scrubber, biofilters & bioscrubber). This condition is satisfied.

Question ID	11.1	Question Type	Legislative

Legislative Requirement(s):
EPA | 9 | (1)(a);

Question:
Have all documents and reports been prepared and updated as required in the air Environmental Compliance Approval?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes, the facility has prepared and updated the required report(s) as set out in their air Environmental Compliance Approval.

Question ID	13.1	Question Type	Legislative

Legislative Requirement(s):
EPA | 9 | (1)(a);

Question:
Does the facility comply with all record keeping requirements in the air Environmental Compliance Approval?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes, the facility has complied with all record keeping requirements in their air Environmental Compliance Approval.

Question ID	14.1	Question Type	Legislative

Legislative Requirement(s):
EPA | 9 | (1);

Question:
Does the facility comply with other requirements set out in the air Environmental Compliance Approval that are not otherwise specified in this inspection form?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes, the facility has complied with all other requirements in the air ECA, not addressed in other questions.

Condition 6 of Environmental Compliance Approval Number 1631- A2ELCQ requires the Facility to provide the Director no later than May 31 of each year, a Written Summary Form to be submitted to the MECP's website that shall include the following:

- a declaration of whether the Facility was in compliance with section 9 of the Environmental Protection Act, Ontario Regulation 419/05 and the conditions of Environmental Compliance Approval Number 1631-A2ELCQ
- a summary of each Modification satisfying Condition 2.1 (a) and (b) that took place in the previous calendar year that resulted in a change in the previously calculated concentration at a Point of Impingement for any Compound of Concern or resulted in a change in the sound levels reported in the Acoustic Assessment Summary Table at any Point of Reception

The Facility submitted the Written Summary prior to May 31 of the 2023 operating year.

As a requirement of Environmental Compliance Approval No. 2766-7HEPSZ, the Facility is required to develop and implement an Emergency Response and Contingency Plan which includes procedures to be undertaken in the event of a spill, process upset, power failure, fire or any other emergency situation. The Emergency Response and Contingency Plan also outlines protocols with names and telephone numbers of persons to be contacted, including persons responsible for the Site, the Ministry's District Office and the Spills Action Centre, the local Fire Department, the local Municipality, the local Medical Officer of Health, and the Ministry of Labour, and the names and telephone numbers of waste management companies available for emergency response.

At the time of the inspection the Emergency Response and Contingency Plan was observed to be on-site and updated to reflect current operations.

Question ID	16.1	**Question Type**	Legislative

Legislative Requirement(s):
EPA | 9 | (1);

Question:
Does the facility comply with other applicable air regulatory requirements?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes, the facility has complied with an air regulatory requirement.

Question ID	16.2	**Question Type**	BMP

Legislative Requirement(s):
Not Applicable

Question:
Does the facility conform with other applicable practices and procedures?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes, the facility has adhered to applicable air practices and procedures.

Question ID	949100	Question Type	Legislative

Legislative Requirement(s):
Not Applicable

Question:
Were the inspection questions sufficient to address other identified non-compliance items?

Compliance Response(s)/Corrective Action(s)/Observation(s):

Question ID	11.2	Question Type	Legislative

Legislative Requirement(s):
EPA | 9 | (1)(a);

Question:
Have all reports been submitted to the ministry as required and by the date set out in the air Environmental Compliance Approval?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes, the facility has submitted the required report(s) as set out in their air Environmental Compliance Approval.

Question ID	11.3	Question Type	Legislative

Legislative Requirement(s):
EPA | 9 | (1)(a);

Question:
Are all reports available to the ministry and the public as required in the air Environmental Compliance Approval?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes, the facility has made reports available to the ministry or the public as required in their air Environmental Compliance Approval.

NON-COMPLIANCE

This should not be construed as a confirmation of full compliance with all potential applicable legal requirements. These inspection findings are limited to the components and/or activities that were assessed, and the legislative framework(s) that were applied. It remains the responsibility of the owner to ensure compliance with all applicable legislative and regulatory requirements.

If you have any questions related to this inspection, please contact the signed Provincial Officer.

RECOMMENDATIONS

This should not be construed as a confirmation of full conformance with all potential applicable BMPs. These inspection findings are limited to the components and/or activities that were assessed, and the legislative framework(s) that were applied. It remains the responsibility of the owner to ensure compliance with all applicable legislative and regulatory requirements.

If you have any questions related to this inspection, please contact the signed Provincial Officer.

INSPECTION DETAILS

This section includes all questions that were assessed during the inspection.

Ministry Program: AIR | **Regulated Activity:** ECA Air Emissions

Question ID	1.1	**Question Type**	Information
Legislative Requirement(s): Not Applicable			
Question: Is there information in regards to site conditions that should be documented for this inspection?			
Compliance Response(s)/Corrective Action(s)/Observation(s): No.			

Question ID	2.1	**Question Type**	Information
Legislative Requirement(s): Not Applicable			
Question: Was there non-compliance identified during a previous air inspection?			
Compliance Response(s)/Corrective Action(s)/Observation(s): No.			

Question ID	3.1	**Question Type**	Legislative
Legislative Requirement(s): EPA | 9 | (1)(a);			
Question: Does the facility have an Environmental Compliance Approval(s) as required by section 9 of the Environmental Protection Act?			
Compliance Response(s)/Corrective Action(s)/Observation(s): Yes, the facility has the required air Environmental Compliance Approval(s). The facility has Environmental Compliance Approval #1631 A2ELCQ in effect.			

Question ID	3.2	**Question Type**	Legislative
Legislative Requirement(s): EPA | 9 | (1)(a);			
Question: Was the facility in compliance with the requirement to obtain either an amendment to their air			

Environmental Compliance Approval or registration to the Air Emissions Environmental Activity and Sector Registry, in regard to a modification made at the facility?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes, the facility has the required air Environmental Compliance Approval(s) and does not require an amendment.

Question ID	5.1.1	**Question Type**	Legislative

Legislative Requirement(s):
EPA | 9 | (1)(a);

Question:
Does the facility comply with limits in their air Environmental Compliance Approval?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes, the facility is complying or has complied with a limit(s) in their air Environmental Compliance Approval.

Question ID	6.2.1	**Question Type**	Legislative

Legislative Requirement(s):
EPA | 9 | (1)(a);

Question:
Has the facility made the required notification to the ministry or other parties as required by their air Environmental Compliance Approval?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes, the facility has complied with the requirement to notify the Ministry in accordance with their air Environmental Compliance Approval, the Act and/or Regulations, as appropriate.

Question ID	7.1	**Question Type**	Legislative

Legislative Requirement(s):
EPA | 9 | (1)(a);

Question:
Has the facility implemented the required procedures for receiving, recording and responding to public complaints as required by their air Environmental Compliance Approval?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes, the facility has complied with the requirement to implement the required procedures for receiving, recording and responding to public complaints as required by their air Environmental Compliance Approval.

Question ID	8.1	**Question Type**	Legislative

Legislative Requirement(s):
EPA | 9 | (1)(a);

Question:
Did the facility prepare and implement operating procedures and maintenance programs as required by their air Environmental Compliance Approval?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes, the facility has complied with the requirement to prepare and/or implement operating procedures and maintenance plans as required by their air Environmental Compliance Approval.

During the inspection records were available for review and requested. The Facility had available numerous binders containing records related to process data, inspections, repair, maintenance, annual updates to ESDM and Acoustic Assessment Reports, training logs, etc. The operating procedures and maintenance programs were reviewed at the time of the inspection and deemed to be adequate.

Question ID	10.1.1	**Question Type**	Legislative

Legislative Requirement(s):
EPA | 9 | (1)(a);

Question:
Has the facility installed, operated and maintained a continuous emissions monitoring system in accordance with air Environmental Compliance Approval conditions?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes, the facility has complied with monitoring requirements as set out in their air Environmental Compliance Approval.

Question ID	10.1.4	**Question Type**	Legislative

Legislative Requirement(s):
EPA | 9 | (1)(a);

Question:
Has the facility met all the requirements related to air quality monitoring set out in the air Environmental Compliance Approval?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes, the facility has complied with requirements related to ambient air monitoring as set out in their air Environmental Compliance Approval.

Question ID	10.1.5	**Question Type**	Legislative

Legislative Requirement(s):
EPA | 9 | (1)(a);

Question:

Has the facility met all the requirements pertaining to odour assessments as set out in the air Environmental Compliance Approval?

Compliance Response(s)/Corrective Action(s)/Observation(s):

Yes, the facility has complied with the monitoring or testing requirements related to odour as set out in their air Environmental Compliance Approval.

Question ID	10.1.6	**Question Type**	Legislative

Legislative Requirement(s):

EPA | 9 | (1)(a);

Question:

Has the facility met all assessment requirements pertaining to noise/sound as set out in the air Environmental Compliance Approval?

Compliance Response(s)/Corrective Action(s)/Observation(s):

Yes, the facility has complied with the monitoring requirements related to noise as set out in their air Environmental Compliance Approval.

Question ID	10.1.3	**Question Type**	Legislative

Legislative Requirement(s):

EPA | 9 | (1)(a);

Question:

Has the facility met all source testing requirements as set out in the air Environmental Compliance Approval?

Compliance Response(s)/Corrective Action(s)/Observation(s):

Yes, the facility has complied with source testing requirements as set out in their air Environmental Compliance Approval.

Condition 11 of the ECA requires the Facility to conduct source testing to determine the rates of odour, hydrogen sulphide and total mercaptans from the exhaust stack from the exhaust stack for the pollution control equipment (ammonia scrubber, biofilters & bioscrubber). This condition is satisfied.

Question ID	11.1	**Question Type**	Legislative

Legislative Requirement(s):

EPA | 9 | (1)(a);

Question:

Have all documents and reports been prepared and updated as required in the air Environmental Compliance Approval?

Compliance Response(s)/Corrective Action(s)/Observation(s):

Yes, the facility has prepared and updated the required report(s) as set out in their air

Environmental Compliance Approval.

Question ID	13.1	Question Type	Legislative

Legislative Requirement(s):
EPA | 9 | (1)(a);

Question:
Does the facility comply with all record keeping requirements in the air Environmental Compliance Approval?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes, the facility has complied with all record keeping requirements in their air Environmental Compliance Approval.

Question ID	14.1	Question Type	Legislative

Legislative Requirement(s):
EPA | 9 | (1);

Question:
Does the facility comply with other requirements set out in the air Environmental Compliance Approval that are not otherwise specified in this inspection form?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes, the facility has complied with all other requirements in the air ECA, not addressed in other questions.

Condition 6 of Environmental Compliance Approval Number 1631- A2ELCQ requires the Facility to provide the Director no later than May 31 of each year, a Written Summary Form to be submitted to the MECP's website that shall include the following:
- a declaration of whether the Facility was in compliance with section 9 of the Environmental Protection Act, Ontario Regulation 419/05 and the conditions of Environmental Compliance Approval Number 1631-A2ELCQ
- a summary of each Modification satisfying Condition 2.1 (a) and (b) that took place in the previous calendar year that resulted in a change in the previously calculated concentration at a Point of Impingement for any Compound of Concern or resulted in a change in the sound levels reported in the Acoustic Assessment Summary Table at any Point of Reception

The Facility submitted the Written Summary prior to May 31 of the 2023 operating year.

As a requirement of Environmental Compliance Approval No. 2766-7HEPSZ, the Facility is required to develop and implement an Emergency Response and Contingency Plan which includes procedures to be undertaken in the event of a spill, process upset, power failure, fire or any other emergency situation. The Emergency Response and Contingency Plan also outlines protocols with names and telephone numbers of persons to be contacted, including persons responsible for the Site, the Ministry's District Office and the Spills Action

Centre, the local Fire Department, the local Municipality, the local Medical Officer of Health, and the Ministry of Labour, and the names and telephone numbers of waste management companies available for emergency response.

At the time of the inspection the Emergency Response and Contingency Plan was observed to be on-site and updated to reflect current operations.

Question ID	16.1	Question Type	Legislative

Legislative Requirement(s):
EPA | 9 | (1);

Question:
Does the facility comply with other applicable air regulatory requirements?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes, the facility has complied with an air regulatory requirement.

Question ID	16.2	Question Type	BMP

Legislative Requirement(s):
Not Applicable

Question:
Does the facility conform with other applicable practices and procedures?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes, the facility has adhered to applicable air practices and procedures.

Question ID	949100	Question Type	Legislative

Legislative Requirement(s):
Not Applicable

Question:
Were the inspection questions sufficient to address other identified non-compliance items?

Compliance Response(s)/Corrective Action(s)/Observation(s):

Question ID	11.2	Question Type	Legislative

Legislative Requirement(s):
EPA | 9 | (1)(a);

Question:
Have all reports been submitted to the ministry as required and by the date set out in the air Environmental Compliance Approval?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes, the facility has submitted the required report(s) as set out in their air Environmental Compliance Approval.

Question ID	11.3	**Question Type**	Legislative

Legislative Requirement(s):
EPA | 9 | (1)(a);

Question:
Are all reports available to the ministry and the public as required in the air Environmental Compliance Approval?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes, the facility has made reports available to the ministry or the public as required in their air Environmental Compliance Approval.

INSPECTION DETAILS

This section includes all questions that were assessed during the inspection.

Ministry Program: WASTE | **Regulated Activity:** Receiver Transfer Processing

Question ID	1-E2RB6B	**Question Type**	Legislative

Legislative Requirement(s):
EPA | 27 | (1); EPA | 40;

Question:
Is the site only accepting wastes limited to the types specified in the ECA?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes

The site may only receive solid non-hazardous waste specified in condition 3.1 of the ECA #2766-7HEPSZ.

The Site may only accept solid non-hazardous domestic, commercial, institutional or industrial Organic Waste from the Provinces of Ontario and Quebec, limited to the following Organic Waste:
(a) Source-separated Organic Waste limited to the following:
(i) Food wastes: fruit, vegetable and general table scraps, meat and fish products, dairy products, egg shells, confectionery products, sauces, bones, pet food, fat, bread and grains, rice, pasta, coffee grounds, filters;
(ii) Paper fibres: soiled paper towels, tissues, paper plates, soiled paper food packaging items such as boxboard, cardboard, newspaper, and other packaging materials;
(iii) Miscellaneous: houseplants and yard wastes, dryer lint and hair, pet fur, sawdust and wood shavings and litter or bedding.
(b) Organic Waste from the food processing industry and other industries that produce food wastes;
(c) Organic Waste from the commercial sector, including but not be limited to food waste from restaurants, hotels, institutions, commercial operations that collect organic wastes;
(d) Leaf & yard waste;
(e) Organic sludges, including but not be limited to starches and paper wastes, but excluding sewage sludge and biosolids.

The annual reports confirm that the Facility is in compliance with Condition 2(1) by only accepting waste from the City of Ottawa and local Industrial, Commercial & Institutional (IC&I) sector
which is within the approved service area outlined in ECA. No hazardous waste is being received at the site.

Question ID	1-E2TK4H	Question Type	Legislative

Legislative Requirement(s):
EPA | 27 | (1); EPA | 40;

Question:
Is waste received at the Site within the approved limits as specified in the ECA?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes

Question ID	1-E2TK4P	Question Type	Legislative

Legislative Requirement(s):
EPA | 27 | (1);

Question:
Are wastes stored and handled in accordance with the ECA conditions?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes

Question ID	1-E2TOAX	Question Type	Legislative

Legislative Requirement(s):
EPA | 27 | (1);

Question:
Are wastes processed in accordance with the ECA conditions?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes

A full review of the ECA was conducted and it is confirmed that the facility is in full compliance with all conditions. Additionally, trained personnel inspect the loads and supervise the unloading of waste at the facility. Where waste is deemed to not be acceptable, there is a procedure in place to reject that waste load. Trained personnel conduct routine inspections and ensure that any identified deficiencies are promptly corrected.

Question ID	1-E2TOCQ	Question Type	Legislative

Legislative Requirement(s):
EPA | 27 | (1);

Question:
Is the site maintaining records on incoming, outgoing, and waste storage amounts, as specified in the ECA?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes

The mass balance for the 2022 operating year was reviewed. The data provided in the mass balance confirms the Facility is in compliance with tonnage limits outlined in the ECA.

Ministry Program: WASTE | **Regulated Activity:** Landfills

Question ID	NOL 1	**Question Type**	Legislative
Legislative Requirement(s): EPA | 27 | (1);			
Question: Does the Open landfill site have an Environmental Compliance Approval (ECA)?			
Compliance Response(s)/Corrective Action(s)/Observation(s): Yes The facility has an ECA #2766-7HEPSZ			

Question ID	NOL 2	**Question Type**	Information
Legislative Requirement(s): Not Applicable			
Question: Is this landfill on Crown land?			
Compliance Response(s)/Corrective Action(s)/Observation(s): No			

Question ID	NOL 4	**Question Type**	Information
Legislative Requirement(s): Not Applicable			
Question: Does the landfill have a Contaminant Attenuation Zone (CAZ)?			
Compliance Response(s)/Corrective Action(s)/Observation(s): No			

Question ID	NOL 13	**Question Type**	Information
Legislative Requirement(s): EPA | 27 | (1);			
Question: Are access roads and on-site roads provided so that vehicles hauling waste to and on the site may travel readily on any day under all normal weather conditions?			

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes

During the inspection, access roads were clear, well organized, and had sufficient space.

Question ID	NOL 14	**Question Type**	Legislative

Legislative Requirement(s):
EPA | 27 | (1);

Question:
Is site access limited to times when an attendant is on duty?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes

The facility complies with the hours set in their ECA, and an attendant is always available.

Question ID	NOL 15	**Question Type**	Legislative

Legislative Requirement(s):
EPA | 27 | (1);

Question:
Does the site only receive waste from within its approved service area?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes

The service area is limited to the Province of Quebec and Ontario.

Question ID	NOL 16	**Question Type**	Information

Legislative Requirement(s):
Not Applicable

Question:
Is the site required to have a ground water monitoring program by the ECA?

Compliance Response(s)/Corrective Action(s)/Observation(s):
No

Question ID	NOL 18	**Question Type**	Legislative

Legislative Requirement(s):
EPA | 27 | (1); EPA | O. Reg. 232/98 | 25;

Question:

Are monitoring well samples taken and tested to determine the quality of the ground water?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes

The samples are collected not as a condition of this waste ECA, but rather as a condition of the facility's sewage works ECA.

Question ID	NOL 19	**Question Type**	Information

Legislative Requirement(s):
Not Applicable

Question:
Is the ministry concerned with the results of the samples that have been tested?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes

The Ministry is closely watching the concentrations of ammonia, and abatement is ongoing under the sewage works ECA #2844-9YNGZC, not this waste ECA.

Question ID	NOL 20	**Question Type**	Information

Legislative Requirement(s):
Not Applicable

Question:
Is there ongoing abatement to address any concerns the ministry has with the ground water monitoring?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes

Question ID	NOL 21	**Question Type**	Information

Legislative Requirement(s):
Not Applicable

Question:
Is the site required to manage leachate by the ECA?

Compliance Response(s)/Corrective Action(s)/Observation(s):
No

Question ID	NOL 26	**Question Type**	Information

Legislative Requirement(s):
Not Applicable

Question:
Is the site required to manage landfill gas by the ECA?

Compliance Response(s)/Corrective Action(s)/Observation(s):
No

Question ID	NOL 31	Question Type	Information

Legislative Requirement(s):
Not Applicable

Question:
Is the site required to have a surface water monitoring program by the ECA?

Compliance Response(s)/Corrective Action(s)/Observation(s):
No

Question ID	NOL 36	Question Type	Legislative

Legislative Requirement(s):
EPA | 27 | (1);

Question:
Is proper equipment available for the compaction of waste and applying cover material?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes

Question ID	NOL 37	Question Type	Legislative

Legislative Requirement(s):
EPA | 27 | (1);

Question:
Is the landfill able to accurately determine the amount of waste received?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes

Question ID	NOL 38	Question Type	Legislative

Legislative Requirement(s):
EPA | 27 | (1);

Question:
Are all disposal operations at the site adequately and continually supervised?

Compliance Response(s)/Corrective Action(s)/Observation(s):

Yes

Trained personnel inspect the loads and supervise the unloading of waste at the facility. Where waste is deemed to not be acceptable, there is a procedure in place to reject that waste load.

Question ID	NOL 39	**Question Type**	Information

Legislative Requirement(s):
Not Applicable

Question:
Does the landfill operator have a site inspection program as required by the ECA?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes

Question ID	NOL 40	**Question Type**	Legislative

Legislative Requirement(s):
EPA | 27 | (1);

Question:
Does the landfill operator have a procedure in place to address issues identified by staff during the site inspection?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes

Question ID	NOL 41	**Question Type**	Legislative

Legislative Requirement(s):
EPA | 27 | (1);

Question:
Is the waste being compacted adequately?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes

Question ID	NOL 43	**Question Type**	Legislative

Legislative Requirement(s):
EPA | 27 | (1);

Question:
Are procedures implemented to control rodents or other animals and insects at the site?

Compliance Response(s)/Corrective Action(s)/Observation(s):

Yes

Question ID	NOL 44	Question Type	Legislative

Legislative Requirement(s):
EPA | 27 | (1);

Question:
Is site access restricted by use of a gate, fence, or physical barrier when the site is not operating?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes

Question ID	NOL 45	Question Type	Legislative

Legislative Requirement(s):
EPA | 27 | (1);

Question:
Is the waste disposal area adequately screened from public view?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes

Question ID	NOL 46	Question Type	Legislative

Legislative Requirement(s):
EPA | 27 | (1); EPA | O. Reg. 232/98 | 21;

Question:
Are daily records of site operations available at the site for at least the past 2 years or as otherwise required by the ECA?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes

Question ID	NOL 47	Question Type	Legislative

Legislative Requirement(s):
EPA | 27 | (1);

Question:
Has the annual operations report been submitted to MECP or available on site as required by the ECA?

Compliance Response(s)/Corrective Action(s)/Observation(s):

Yes

Question ID	NOL 48	Question Type	Legislative

Legislative Requirement(s):
EPA | 27 | (1); EPA | O. Reg. 232/98 | 23;

Question:
Is scavenging being prevented?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes

Question ID	NOL 51	Question Type	Legislative

Legislative Requirement(s):
EPA | 27 | (1);

Question:
Is the landfill only accepting the types of waste that they are approved to receive?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes

The Site may only accept solid non-hazardous domestic, commercial, institutional or industrial Organic Waste from the Provinces of Ontario and Quebec, limited to the following Organic Waste:
(a) Source-separated Organic Waste limited to the following:
(i) Food wastes: fruit, vegetable and general table scraps, meat and fish products, dairy products, egg shells, confectionery products, sauces, bones, pet food, fat, bread and grains, rice, pasta, coffee grounds, filters;
(ii) Paper fibres: soiled paper towels, tissues, paper plates, soiled paper food packaging items such as boxboard, cardboard, newspaper, and other packaging materials;
(iii) Miscellaneous: houseplants and yard wastes, dryer lint and hair, pet fur, sawdust and wood shavings and litter or bedding.
(b) Organic Waste from the food processing industry and other industries that produce food wastes;
(c) Organic Waste from the commercial sector, including but not be limited to food waste from restaurants, hotels, institutions, commercial operations that collect organic wastes;
(d) Leaf & yard waste;
(e) Organic sludges, including but not be limited to starches and paper wastes, but excluding sewage sludge and biosolids.
The annual reports confirm that the Facility is in compliance with Condition 2(1) by only accepting
waste from the City of Ottawa and local Industrial, Commercial & Institutional (IC&I) sector which is within the approved service area outlined in ECA.

NON-COMPLIANCE

This should not be construed as a confirmation of full compliance with all potential applicable legal requirements. These inspection findings are limited to the components and/or activities that were assessed, and the legislative framework(s) that were applied. It remains the responsibility of the owner to ensure compliance with all applicable legislative and regulatory requirements.

If you have any questions related to this inspection, please contact the signed Provincial Officer.

RECOMMENDATIONS

This should not be construed as a confirmation of full conformance with all potential applicable BMPs. These inspection findings are limited to the components and/or activities that were assessed, and the legislative framework(s) that were applied. It remains the responsibility of the owner to ensure compliance with all applicable legislative and regulatory requirements.

If you have any questions related to this inspection, please contact the signed Provincial Officer.

INSPECTION DETAILS

This section includes all questions that were assessed during the inspection.

Ministry Program: WASTE | **Regulated Activity:** Receiver Transfer Processing

Question ID	1-E2RB6B	**Question Type**	Legislative

Legislative Requirement(s):
EPA | 27 | (1); EPA | 40;

Question:
Is the site only accepting wastes limited to the types specified in the ECA?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes

The site may only receive solid non-hazardous waste specified in condition 3.1 of the ECA #2766-7HEPSZ.

The Site may only accept solid non-hazardous domestic, commercial, institutional or industrial Organic Waste from the Provinces of Ontario and Quebec, limited to the following Organic Waste:
(a) Source-separated Organic Waste limited to the following:
(i) Food wastes: fruit, vegetable and general table scraps, meat and fish products, dairy products, egg shells, confectionery products, sauces, bones, pet food, fat, bread and grains, rice, pasta, coffee grounds, filters;
(ii) Paper fibres: soiled paper towels, tissues, paper plates, soiled paper food packaging items such as boxboard, cardboard, newspaper, and other packaging materials;
(iii) Miscellaneous: houseplants and yard wastes, dryer lint and hair, pet fur, sawdust and wood shavings and litter or bedding.
(b) Organic Waste from the food processing industry and other industries that produce food wastes;
(c) Organic Waste from the commercial sector, including but not be limited to food waste from restaurants, hotels, institutions, commercial operations that collect organic wastes;
(d) Leaf & yard waste;
(e) Organic sludges, including but not be limited to starches and paper wastes, but excluding sewage sludge and biosolids.

The annual reports confirm that the Facility is in compliance with Condition 2(1) by only accepting waste from the City of Ottawa and local Industrial, Commercial & Institutional (IC&I) sector
which is within the approved service area outlined in ECA. No hazardous waste is being received at the site.

Question ID	1-E2TK4H	**Question Type**	Legislative

Legislative Requirement(s):

EPA | 27 | (1); EPA | 40;

Question:
Is waste received at the Site within the approved limits as specified in the ECA?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes

Question ID	1-E2TK4P	**Question Type**	Legislative

Legislative Requirement(s):
EPA | 27 | (1);

Question:
Are wastes stored and handled in accordance with the ECA conditions?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes

Question ID	1-E2TOAX	**Question Type**	Legislative

Legislative Requirement(s):
EPA | 27 | (1);

Question:
Are wastes processed in accordance with the ECA conditions?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes

A full review of the ECA was conducted and it is confirmed that the facility is in full compliance with all conditions. Additionally, trained personnel inspect the loads and supervise the unloading of waste at the facility. Where waste is deemed to not be acceptable, there is a procedure in place to reject that waste load. Trained personnel conduct routine inspections and ensure that any identified deficiencies are promptly corrected.

Question ID	1-E2TOCQ	**Question Type**	Legislative

Legislative Requirement(s):
EPA | 27 | (1);

Question:
Is the site maintaining records on incoming, outgoing, and waste storage amounts, as specified in the ECA?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes

The mass balance for the 2022 operating year was reviewed. The data provided in the

mass balance confirms the Facility is in compliance with tonnage limits outlined in the ECA.

NON-COMPLIANCE

The following item(s) have been identified as non-compliance, based on a "No" response captured for a legislative question(s). For additional information on each question see the Inspection Details section of the report.

Ministry Program: SEWAGE | **Regulated Activity:** Industrial Sewage

Item	Question	Compliance Response/Corrective Action(s)
NC-1	**Question ID:** .WW_IMPAIRMENT_200000 Were there no indications of a known or anticipated environmental impact during the inspection and/or review of relevant material?	No: There were indications of a known or anticipated environmental impact associated with the operation of the sewage works.

RECOMMENDATIONS

This should not be construed as a confirmation of full conformance with all potential applicable BMPs. These inspection findings are limited to the components and/or activities that were assessed, and the legislative framework(s) that were applied. It remains the responsibility of the owner to ensure compliance with all applicable legislative and regulatory requirements.

If you have any questions related to this inspection, please contact the signed Provincial Officer.

INSPECTION DETAILS

This section includes all questions that were assessed during the inspection.

Ministry Program: SEWAGE | **Regulated Activity:** Industrial Sewage

Question ID	. CQ_PREV_NON_COMPLIANCE_100000	**Question Type**	Information

Legislative Requirement(s):
Not Applicable

Question:
Have there been any required or recommended actions as a result of non-compliance identified during the inspection period?

Compliance Response(s)/Corrective Action(s)/Observation(s):
No: There were no required or recommended actions as a result of a previous inspection.

There were indications of a known or anticipated environmental impact associated with the operation of the sewage works. It was discussed that the ammonia concentration in the shallow groundwater aquifer continues to be observed in elevated concentrations. This indicates a strong likelihood for an onsite ammonia source. Upon receipt of the 2023 Groundwater and Surface Water Monitoring Report, the Ministry will review and discuss appropriate abatement action with the facility.

Question ID	.CQ_COMPLAINTS_100000	**Question Type**	Information

Legislative Requirement(s):
Not Applicable

Question:
Does the facility have documented procedures for receiving, recording and responding to public complaints?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes: The facility has adequate documented procedures for receiving, recording, and responding to public complaints.

The facility has adequate documented procedures for receiving, recording, and responding to public complaints.

Question ID	.CQ_COMPLAINTS_200000	**Question Type**	Information

Legislative Requirement(s):
Not Applicable

Question:
Were there any complaints received by the site or ministry regarding the operations of the sewage works during the inspection period?

Compliance Response(s)/Corrective Action(s)/Observation(s):
No: Complaints applicable to the sewage works were not received since the last inspection.

Question ID	.WW_APPROVAL_100000	Question Type	Information

Legislative Requirement(s):
OWRA | 53 | (1);

Question:
Is an Environmental Compliance Approval (ECA) required for this sewage works?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes: This sewage works is subject to the ECA requirement.

Industrial Sewage Works Environmental Compliance Approval No. 2844-9YNGZC.

Question ID	.WW_APPROVAL_110000	Question Type	Legislative

Legislative Requirement(s):
OWRA | 53 | (1);

Question:
Do all sewage works currently being inspected have a valid Environmental Compliance Approval (ECA)?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes: There is currently a valid ECA for the sewage works.

Question ID	.WW_APPROVAL_111000	Question Type	Legislative

Legislative Requirement(s):
OWRA | 53 | (1);

Question:
Is the sewage works constructed in accordance with the Environmental Compliance Approval (ECA)?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes: The sewage works is currently constructed in accordance with the ECA.

The sewage works is currently constructed in accordance with the ECA. On site observations confirm that the sewage works is constructed in accordance with the ECA. Stormwater is

collected in an on-Site open ditch system leading to a stormwater management pond that discharges off-Site to the Hawthorne Industrial Park ditch system which eventually enters into Findlay Creek system.

Process water generated inside the building is stored in leachate holding tanks buried on the east-side of the building. Should the Facility need to use water in their process (wetting the composting material), the Facility uses the leachate from the storage tanks and/or water from the stormwater pond. Should the leachate tanks need to be emptied, the Facility retains the services of a ministry approved waste management system to pick up and dispose of the leachate at a ministry approved waste disposal site. The Hazardous Waste Information Network Generator Number for the Site is ON3338779, and indicates that the leachate is classified as waste class 270 L - Other specified organic sludges, slurries and solids. According to Facility representatives, the Facility operates in a water negative environment in the summer but has found that they collect leachate in the winter.

Question ID	. WW_SOURCE_PROTECTION_ 100000	**Question Type**	Information

Legislative Requirement(s):
Not Applicable

Question:
Has the review of the Environmental Compliance Approval (ECA) confirmed this works is a significant drinking water threat (SDWT), and that source protection prescribed instrument polices (SPPs) apply?

Compliance Response(s)/Corrective Action(s)/Observation(s):
No: A review of the ECA has confirmed that this works is not a SDWT at this time.

Question ID	.WW_LAND_100000	**Question Type**	Information

Legislative Requirement(s):
Not Applicable

Question:
Are all components of the sewage works located on one parcel of land?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes: All components of the sewage works are located on one parcel of land.

Question ID	.WW_LAND_110000	**Question Type**	Information

Legislative Requirement(s):
Not Applicable

Question:

Does the sewage works owner own or lease the land for the various sewage works components?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes: All parcels of land for which the sewage works is located is owned by the facility and/or the facility has a land use agreement in place.

Question ID	. WW_FINANCIAL_ASSURANCE_100000	Question Type	Information

Legislative Requirement(s):
Not Applicable

Question:
Are there Financial Assurance (FA) requirements for this sewage works?

Compliance Response(s)/Corrective Action(s)/Observation(s):
No: There are no Financial Assurance (FA) requirements for this sewage works.

Question ID	.WW_RECORDS_100000	Question Type	Information

Legislative Requirement(s):
Not Applicable

Question:
Is there a requirement to keep records associated with the sewage works?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes: This sewage works has record keeping requirements.

Question ID	.WW_RECORDS_110000	Question Type	Legislative

Legislative Requirement(s):
OWRA | 53 | (1);

Question:
Were all records kept as required during this inspection period?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes: All record keeping requirements were met during the inspection period.

This sewage works has record keeping requirements. Condition 5(5) of the ECA

requires the Facility to analyse the stormwater management pond to the parameters listed in Table 2. Condition 10 requires these records to be available to Ministry staff. Records were available.

Question ID	.WW_REPORTS_100000	Question Type	Information

Legislative Requirement(s):
Not Applicable

Question:
Is there a requirement to create any reports associated with the sewage works?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes: This sewage works is required to create reports.

The owner shall prepare a performance report on an annual basis, following the end of the reporting period.

Question ID	.WW_REPORTS_110000	Question Type	Legislative

Legislative Requirement(s):
OWRA | 53 | (1);

Question:
Have all reports been prepared as required?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes: All reports have been prepared as required.

Question ID	.WW_REPORTS_120000	Question Type	Legislative

Legislative Requirement(s):
OWRA | 53 | (1);

Question:
Have all reports been submitted to the ministry if required?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes: All reports have been submitted to the ministry as required.

Question ID	.WW_REPORTS_121000	Question Type	Legislative

Legislative Requirement(s):
OWRA | 53 | (1);

Question:
Have all reports been submitted on time?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes: All reports have been submitted on time.

Question ID	.WW_REPORTS_122000	Question Type	Information

Legislative Requirement(s):
Not Applicable

Question:
Does the facility have adequate record keeping and/or reporting towards effective sewage works operations or oversight?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes: The facility would benefit from record keeping or reporting to help improve the sewage works operations and/or oversight.

Question ID	.WW_SPCP_100000	Question Type	Information

Legislative Requirement(s):
Not Applicable

Question:
Is the facility required to have a Spill Prevention and Contingency Plan (SPCP)?

Compliance Response(s)/Corrective Action(s)/Observation(s):
No: This facility is not currently subject to O. Reg 224/07.

As a requirement of Environmental Compliance Approval No. 2766-7HEPSZ and Environmental Compliance Approval 2844-9YNGZC, the Facility is required to develop and implement an Emergency Response and Contingency Plan and Spill Contingency and Pollution Prevention Plan which includes procedures to be undertaken in the event of a spill, process upset, power failure, fire or any other emergency situation. The Plans outline protocols with names and telephone numbers of persons to be contacted, including persons responsible for the Site, the Ministry's District Office and the Spills Action Centre, the local Fire Department, the local Municipality, the local Medical Officer of Health, and the Ministry of Labour, and the names and telephone numbers of waste management companies available for emergency response.

At the time of the inspection the Emergency Response and Contingency Plan and Spill Contingency and Pollution Prevention Plan was observed to be on-Site and updated to reflect current operations.

Question ID	.WW_SPCP_110000	Question Type	Legislative

Legislative Requirement(s):
EPA | O. Reg. 224/07 | 3 | (1); OWRA | 53 | (1);

Question:
Has the Spill Prevention and Contingency Plan (SPCP) been developed as required?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes: The SPCP has been developed.

Question ID	.WW_SPCP_111000	Question Type	Legislative

Legislative Requirement(s):
EPA | O. Reg. 224/07 | 3 | (1); OWRA | 53 | (1);

Question:
Has the Spill Prevention and Contingency Plan (SPCP) been implemented?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes: The SPCP has been implemented as required.

Question ID	. WW_OPERATIONS_MAINTENANCE_000000	Question Type	Information

Legislative Requirement(s):
Not Applicable

Question:
Is the facility required to have an operations and maintenance manual?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes: This facility is required to have an operations and maintenance manual.

Question ID	. WW_OPERATIONS_MAINTENANCE_210000	Question Type	BMP

Legislative Requirement(s):
Not Applicable

Question:
Is this statement true? Observations during the inspection seems to indicate the sewage works is operating effectively and as designed.

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes: The sewage works appears to be operating effectively and as designed.

Question ID	. WW_OPERATIONS_MAINTENANCE_100000	**Question Type**	Legislative

Legislative Requirement(s):
OWRA | 53 | (1);

Question:
Does the facility have an operations and maintenance manual?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes: The facility has an operations and maintenance manual.

Question ID	. WW_OPERATIONS_MAINTENANCE_110000	**Question Type**	Legislative

Legislative Requirement(s):
OWRA | 53 | (1);

Question:
Does the operations and maintenance manual meet any specified requirements?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes: The operations and maintenance manual meets specified requirements.

Question ID	. WW_OPERATIONS_MAINTENANCE_020000	**Question Type**	Information

Legislative Requirement(s):
Not Applicable

Question:
Does the facility have inspection, operations and/or maintenance requirements in the Environmental Compliance Approval (ECA)?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes: The facility has inspection, operations and/or maintenance requirements in the Environmental Compliance Approval (ECA).

Question ID	. WW_OPERATIONS_MAINTENANCE_200000	Question Type	Legislative

Legislative Requirement(s):
OWRA | 53 | (1);

Question:
Is the facility being inspected, operated and/or maintained as required in the ECA?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes: The facility is being inspected, operated, and/or maintained as required by the ECA

Question ID	. WW_OPERATIONS_MAINTENANCE_400000	Question Type	Information

Legislative Requirement(s):

Question:
Has the sewage works had any bypasses/overflows during the inspection period?

Compliance Response(s)/Corrective Action(s)/Observation(s):
No: There have not been bypasses/ overflows during the inspection period.

Question ID	.WW_SOILS_SLUDGE_100000	Question Type	Information

Legislative Requirement(s):
Not Applicable

Question:
Were there any biosolids and/or sludge generated by the sewage works during the inspection period?

Compliance Response(s)/Corrective Action(s)/Observation(s):
No: Biosolids and/or sludge are not generated by the sewage works.

Question ID	.WW_SPILLS_010000	Question Type	Information

Legislative Requirement(s):
Not Applicable

Question:
Does the facility have a requirement for contingency plans and procedures for dealing with equipment breakdowns, potential spills, and any other abnormal situations?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes: The facility is required to have contingency plans and procedures for dealing with equipment breakdowns, potential spills, and any other abnormal situation.

Question ID	.WW_SPILLS_100000	Question Type	Legislative

Legislative Requirement(s):
OWRA | 53 | (1);

Question:
Does the facility have the required contingency plans and procedures for dealing with equipment breakdowns, potential spills, and any other abnormal situations?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes: The facility has the required contingency plans and procedures for dealing with equipment breakdowns, potential spills, and any other abnormal situation.

Question ID	.WW_SPILLS_200000	Question Type	Information

Legislative Requirement(s):
Not Applicable

Question:
Has the facility had any spills during the inspection period?

Compliance Response(s)/Corrective Action(s)/Observation(s):
No: The facility has not had spills during the inspection period.

Question ID	.WW_SAMPLING_100000	Question Type	Information

Legislative Requirement(s):
Not Applicable

Question:
Does this sewage works have sampling requirements?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes: This sewage works has sampling requirements.

Sampling is a requirement for both surface water and groundwater. The facility has complied with all sampling requirements. Condition 4. SURFACE WATER MONITORING AND RECORDING

Question ID	.WW_SAMPLING_110000	Question Type	Legislative

Legislative Requirement(s):
OWRA | 53 | (1);

Question:
Did the facility comply with all sampling and monitoring requirements for the discharge(s) during the inspection period? This does not include spills, bypasses and overflows.

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes: The facility complied with all sampling and monitoring requirements for the discharge(s) during the inspection period.

Question ID	.WW_SAMPLING_120000	Question Type	Legislative

Legislative Requirement(s):
OWRA | 53 | (1);

Question:
Did the facility comply with all other sewage works sampling and monitoring requirements during the inspection period, e.g., influent, operational, merging effluents? This does not include discharges, flow, or biosolids/sludge.

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes: The facility complied with all other sampling requirements during the inspection period.

Question ID	.WW_SAMPLING_130000	Question Type	Legislative

Legislative Requirement(s):
OWRA | 53 | (1);

Question:
Did the facility comply with the environmental sampling and monitoring requirements during the inspection period, e.g., surface water or groundwater?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes: The facility complied with environmental sampling and monitoring requirements during the inspection period.

Question ID	.WW_SAMPLING_131000	Question Type	Information

Legislative Requirement(s):
Not Applicable

Question:
Are there any monitoring well(s) on site related to the sewage works?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes: There are monitoring wells onsite related to the sewage works.

Question ID	.WW_SAMPLING_132000	Question Type	Legislative

Legislative Requirement(s):
OWRA | 53 | (1); OWRA | R.R.O. 1990, Reg. 903 | 20 | (1);

Question:
Are monitoring well(s) maintained as required and in a manner sufficient to prevent the entry of surface water and other foreign materials?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes: Monitoring well(s) are maintained as required and in a manner sufficient to prevent the entry of surface water and other foreign materials.

Question ID	.WW_AUDIT_SAMPLE_100000	Question Type	Information

Legislative Requirement(s):
Not Applicable

Question:
Were Ministry sewage or water quality audit samples collected during this inspection?

Compliance Response(s)/Corrective Action(s)/Observation(s):
No: Audit samples were not collected during this inspection.

Question ID	.WW_LIMITS_100000	Question Type	Information

Legislative Requirement(s):
Not Applicable

Question:
Does this sewage works have effluent limits set by an Environmental Compliance Approval (ECA)?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes: This sewage works has effluent limits set by an ECA.

Question ID	.WW_LIMITS_400000	Question Type	Information

Legislative Requirement(s):
Not Applicable

Question:
Does this sewage works have limits somewhere other than the effluent discharge (e.g., raw sewage, groundwater)?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes: The sewage works has limits in locations other than the effluent discharge.

Question ID	.WW_LIMITS_410000	Question Type	Legislative

Legislative Requirement(s):
OWRA | 53 | (1);

Question:
Have limits at locations other than the effluent discharge been met?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes: All applicable limits have been met.

The facility has trigger level concentrations built into their ECA for groundwater. The elevated ammonia concentration at the site puts the facility into Tier 3 (Contingency Measures and Compliance Monitoring Program).

Question ID	.WW_LIMITS_110000	Question Type	Legislative

Legislative Requirement(s):
OWRA | 53 | (1);

Question:
Have all effluent limits set by the Environmental Compliance Approval (ECA) been met?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes: All effluent limits set by an Environmental Compliance Approval (ECA) have been met.

The facility has trigger level concentrations built into their ECA. The elevated ammonia concentration at the site puts the facility into Tier 3 (Contingency Measures and Compliance Monitoring Program).

Question ID	.WW_OBJECTIVES_100000	Question Type	Information

Legislative Requirement(s):
Not Applicable

Question:
Does this sewage works have effluent objectives set by an Environmental Compliance Approval (ECA)?

Compliance Response(s)/Corrective Action(s)/Observation(s):
No: This sewage works does not have effluent objectives set by an Environmental Compliance Approval (ECA).

Question ID	.WW_IMPAIRMENT_100000	Question Type	Legislative

Legislative Requirement(s):
OWRA | 30 | (1);

Question:
Were there no indications of a known or anticipated human health impact during the inspection and/or review of relevant material?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes: There were no indications of a known or anticipated human health impact associated with the operation of the sewage works.

Question ID	.WW_IMPAIRMENT_200000	Question Type	Legislative

Legislative Requirement(s):
OWRA | 30 | (1);

Question:
Were there no indications of a known or anticipated environmental impact during the

inspection and/or review of relevant material?

Compliance Response(s)/Corrective Action(s)/Observation(s):
No: There were indications of a known or anticipated environmental impact associated with the operation of the sewage works.

It was discussed that the ammonia concentration in the shallow groundwater aquifer has continued to increase and it is of high likelihood that the source is leaks from the facility. Upon receipt of the 2023 Groundwater and Surface Water Monitoring Report, the Ministry will review and discuss appropriate abatement action with the facility.

Question ID	.WW_OTHER	**Question Type**	Legislative

Legislative Requirement(s):
Not Applicable

Question:
Were the inspection questions sufficient to address other identified non-compliance items?

Compliance Response(s)/Corrective Action(s)/Observation(s):

(signature)

NON-COMPLIANCE

The following item(s) have been identified as non-compliance, based on a "No" response captured for a legislative question(s). For additional information on each question see the Inspection Details section of the report.

Ministry Program: SEWAGE | **Regulated Activity:** Industrial Sewage

Item	Question	Compliance Response/Corrective Action(s)
NC-1	**Question ID:** .WW_IMPAIRMENT_200000 Were there no indications of a known or anticipated environmental impact during the inspection and/or review of relevant material?	No: There were indications of a known or anticipated environmental impact associated with the operation of the sewage works.

RECOMMENDATIONS

This should not be construed as a confirmation of full conformance with all potential applicable BMPs. These inspection findings are limited to the components and/or activities that were assessed, and the legislative framework(s) that were applied. It remains the responsibility of the owner to ensure compliance with all applicable legislative and regulatory requirements.

If you have any questions related to this inspection, please contact the signed Provincial Officer.

INSPECTION DETAILS

This section includes all questions that were assessed during the inspection.

Ministry Program: SEWAGE | **Regulated Activity:** Industrial Sewage

Question ID	. CQ_PREV_NON_COMPLIANCE_100000	**Question Type**	Information

Legislative Requirement(s):
Not Applicable

Question:
Have there been any required or recommended actions as a result of non-compliance identified during the inspection period?

Compliance Response(s)/Corrective Action(s)/Observation(s):
No: There were no required or recommended actions as a result of a previous inspection.

There were indications of a known or anticipated environmental impact associated with the operation of the sewage works. It was discussed that the ammonia concentration in the shallow groundwater aquifer continues to be observed in elevated concentrations. This indicates a strong likelihood for an onsite ammonia source. Upon receipt of the 2023 Groundwater and Surface Water Monitoring Report, the Ministry will review and discuss appropriate abatement action with the facility.

Question ID	.CQ_COMPLAINTS_100000	**Question Type**	Information

Legislative Requirement(s):
Not Applicable

Question:
Does the facility have documented procedures for receiving, recording and responding to public complaints?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes: The facility has adequate documented procedures for receiving, recording, and responding to public complaints.

The facility has adequate documented procedures for receiving, recording, and responding to public complaints.

Question ID	.CQ_COMPLAINTS_200000	**Question Type**	Information

Legislative Requirement(s):
Not Applicable

Question:
Were there any complaints received by the site or ministry regarding the operations of the

sewage works during the inspection period?

Compliance Response(s)/Corrective Action(s)/Observation(s):
No: Complaints applicable to the sewage works were not received since the last inspection.

Question ID	.WW_APPROVAL_100000	**Question Type**	Information

Legislative Requirement(s):
OWRA | 53 | (1);

Question:
Is an Environmental Compliance Approval (ECA) required for this sewage works?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes: This sewage works is subject to the ECA requirement.

Industrial Sewage Works Environmental Compliance Approval No. 2844-9YNGZC.

Question ID	.WW_APPROVAL_110000	**Question Type**	Legislative

Legislative Requirement(s):
OWRA | 53 | (1);

Question:
Do all sewage works currently being inspected have a valid Environmental Compliance Approval (ECA)?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes: There is currently a valid ECA for the sewage works.

Question ID	.WW_APPROVAL_111000	**Question Type**	Legislative

Legislative Requirement(s):
OWRA | 53 | (1);

Question:
Is the sewage works constructed in accordance with the Environmental Compliance Approval (ECA)?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes: The sewage works is currently constructed in accordance with the ECA.

The sewage works is currently constructed in accordance with the ECA. On site observations confirm that the sewage works is constructed in accordance with the ECA. Stormwater is collected in an on-Site open ditch system leading to a stormwater management pond that discharges off-Site to the Hawthorne Industrial Park ditch system which eventually enters into Findlay Creek system.

Process water generated inside the building is stored in leachate holding tanks buried on the

east-side of the building. Should the Facility need to use water in their process (wetting the composting material), the Facility uses the leachate from the storage tanks and/or water from the stormwater pond. Should the leachate tanks need to be emptied, the Facility retains the services of a ministry approved waste management system to pick up and dispose of the leachate at a ministry approved waste disposal site. The Hazardous Waste Information Network Generator Number for the Site is ON3338779, and indicates that the leachate is classified as waste class 270 L - Other specified organic sludges, slurries and solids. According to Facility representatives, the Facility operates in a water negative environment in the summer but has found that they collect leachate in the winter.

Question ID	. WW_SOURCE_PROTECTION_ 100000	**Question Type**	Information

Legislative Requirement(s):
Not Applicable

Question:
Has the review of the Environmental Compliance Approval (ECA) confirmed this works is a significant drinking water threat (SDWT), and that source protection prescribed instrument polices (SPPs) apply?

Compliance Response(s)/Corrective Action(s)/Observation(s):
No: A review of the ECA has confirmed that this works is not a SDWT at this time.

Question ID	.WW_LAND_100000	**Question Type**	Information

Legislative Requirement(s):
Not Applicable

Question:
Are all components of the sewage works located on one parcel of land?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes: All components of the sewage works are located on one parcel of land.

Question ID	.WW_LAND_110000	**Question Type**	Information

Legislative Requirement(s):
Not Applicable

Question:

Does the sewage works owner own or lease the land for the various sewage works components?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes: All parcels of land for which the sewage works is located is owned by the facility and/or the

facility has a land use agreement in place.

Question ID	. WW_FINANCIAL_ASSURANCE _100000	Question Type	Information

Legislative Requirement(s):
Not Applicable

Question:
Are there Financial Assurance (FA) requirements for this sewage works?

Compliance Response(s)/Corrective Action(s)/Observation(s):
No: There are no Financial Assurance (FA) requirements for this sewage works.

Question ID	.WW_RECORDS_100000	Question Type	Information

Legislative Requirement(s):
Not Applicable

Question:
Is there a requirement to keep records associated with the sewage works?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes: This sewage works has record keeping requirements.

Question ID	.WW_RECORDS_110000	Question Type	Legislative

Legislative Requirement(s):
OWRA | 53 | (1);

Question:
Were all records kept as required during this inspection period?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes: All record keeping requirements were met during the inspection period.

This sewage works has record keeping requirements. Condition 5(5) of the ECA requires the Facility to analyse the stormwater management pond to the parameters listed in Table 2. Condition 10 requires these records to be available to Ministry staff. Records were available.

Question ID	.WW_REPORTS_100000	Question Type	Information

Legislative Requirement(s):
Not Applicable

Question:

Is there a requirement to create any reports associated with the sewage works?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes: This sewage works is required to create reports.

The owner shall prepare a performance report on an annual basis, following the end of the reporting period.

Question ID	.WW_REPORTS_110000	**Question Type**	Legislative

Legislative Requirement(s):
OWRA | 53 | (1);

Question:
Have all reports been prepared as required?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes: All reports have been prepared as required.

Question ID	.WW_REPORTS_120000	**Question Type**	Legislative

Legislative Requirement(s):
OWRA | 53 | (1);

Question:
Have all reports been submitted to the ministry if required?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes: All reports have been submitted to the ministry as required.

Question ID	.WW_REPORTS_121000	**Question Type**	Legislative

Legislative Requirement(s):
OWRA | 53 | (1);

Question:
Have all reports been submitted on time?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes: All reports have been submitted on time.

Question ID	.WW_REPORTS_122000	**Question Type**	Information

Legislative Requirement(s):
Not Applicable

Question:
Does the facility have adequate record keeping and/or reporting towards effective sewage works operations or oversight?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes: The facility would benefit from record keeping or reporting to help improve the sewage works operations and/or oversight.

Question ID	.WW_SPCP_100000	Question Type	Information

Legislative Requirement(s):
Not Applicable

Question:
Is the facility required to have a Spill Prevention and Contingency Plan (SPCP)?

Compliance Response(s)/Corrective Action(s)/Observation(s):
No: This facility is not currently subject to O. Reg 224/07.

As a requirement of Environmental Compliance Approval No. 2766-7HEPSZ and Environmental Compliance Approval 2844-9YNGZC, the Facility is required to develop and implement an Emergency Response and Contingency Plan and Spill Contingency and Pollution Prevention Plan which includes procedures to be undertaken in the event of a spill, process upset, power failure, fire or any other emergency situation. The Plans outline protocols with names and telephone numbers of persons to be contacted, including persons responsible for the Site, the Ministry's District Office and the Spills Action Centre, the local Fire Department, the local Municipality, the local Medical Officer of Health, and the Ministry of Labour, and the names and telephone numbers of waste management companies available for emergency response.

At the time of the inspection the Emergency Response and Contingency Plan and Spill Contingency and Pollution Prevention Plan was observed to be on-Site and updated to reflect current operations.

Question ID	.WW_SPCP_110000	Question Type	Legislative

Legislative Requirement(s):
EPA | O. Reg. 224/07 | 3 | (1); OWRA | 53 | (1);

Question:
Has the Spill Prevention and Contingency Plan (SPCP) been developed as required?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes: The SPCP has been developed.

Question ID	.WW_SPCP_111000	Question Type	Legislative

Legislative Requirement(s):
EPA | O. Reg. 224/07 | 3 | (1); OWRA | 53 | (1);

Question:
Has the Spill Prevention and Contingency Plan (SPCP) been implemented?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes: The SPCP has been implemented as required.

Question ID	. WW_OPERATIONS_MAINTENANCE_000000	**Question Type**	Information

Legislative Requirement(s):
Not Applicable

Question:
Is the facility required to have an operations and maintenance manual?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes: This facility is required to have an operations and maintenance manual.

Question ID	. WW_OPERATIONS_MAINTENANCE_210000	**Question Type**	BMP

Legislative Requirement(s):
Not Applicable

Question:
Is this statement true? Observations during the inspection seems to indicate the sewage works is operating effectively and as designed.

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes: The sewage works appears to be operating effectively and as designed.

Question ID	. WW_OPERATIONS_MAINTENANCE_100000	**Question Type**	Legislative

Legislative Requirement(s):
OWRA | 53 | (1);

Question:
Does the facility have an operations and maintenance manual?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes: The facility has an operations and maintenance manual.

Question ID	. WW_OPERATIONS_MAINTENANCE_110000	**Question Type**	Legislative

Legislative Requirement(s):
OWRA | 53 | (1);

Question:
Does the operations and maintenance manual meet any specified requirements?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes: The operations and maintenance manual meets specified requirements.

Question ID	. WW_OPERATIONS_MAINTENANCE_020000	**Question Type**	Information

Legislative Requirement(s):
Not Applicable

Question:
Does the facility have inspection, operations and/or maintenance requirements in the Environmental Compliance Approval (ECA)?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes: The facility has inspection, operations and/or maintenance requirements in the Environmental Compliance Approval (ECA).

Question ID	. WW_OPERATIONS_MAINTENANCE_200000	**Question Type**	Legislative

Legislative Requirement(s):
OWRA | 53 | (1);

Question:
Is the facility being inspected, operated and/or maintained as required in the ECA?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes: The facility is being inspected, operated, and/or maintained as required by the ECA

Question ID	. WW_OPERATIONS_MAINTENANCE_400000	**Question Type**	Information

Legislative Requirement(s):
Not Applicable

Question:
Does the facility discharge to groundwater (e.g., septic field, exfiltration lagoon)?

Compliance Response(s)/Corrective Action(s)/Observation(s):

No: The facility does not discharge to groundwater (e.g., septic field, exfiltration lagoon).

Question ID	.WW_CAPACITY_100000	Question Type	Information

Legislative Requirement(s):
Not Applicable

Question:
Is the sewage works design capacity evident in the approval or any supporting documentation?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes: The sewage works design capacity is evident in the approval and/or supporting documentation

Question ID	.WW_CAPACITY_110000	Question Type	Legislative

Legislative Requirement(s):
OWRA | 53 | (1);

Question:
Does the sewage works operate within the design capacity?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes: The sewage works operates within the design capacity.

Question ID	.WW_CAPACITY_200000	Question Type	Information

Legislative Requirement(s):
Not Applicable

Question:
Does the sewage works have a defined peak flow capacity?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes: The sewage works has a defined peak flow capacity.

Question ID	.WW_CAPACITY_210000	Question Type	Legislative

Legislative Requirement(s):
OWRA | 53 | (1);

Question:
Has the sewage works operated within its listed peak flow rate during the inspection period?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes: The sewage works operated within its peak flow rate during the inspection period.

Question ID	.WW_BYPASSES_100000	Question Type	Information

Legislative Requirement(s):
Not Applicable

Question:
Has the sewage works had any bypasses/overflows during the inspection period?

Compliance Response(s)/Corrective Action(s)/Observation(s):
No: There have not been bypasses/ overflows during the inspection period.

Question ID	.WW_SOILS_SLUDGE_100000	Question Type	Information

Legislative Requirement(s):
Not Applicable

Question:
Were there any biosolids and/or sludge generated by the sewage works during the inspection period?

Compliance Response(s)/Corrective Action(s)/Observation(s):
No: Biosolids and/or sludge are not generated by the sewage works.

Question ID	.WW_SPILLS_010000	Question Type	Information

Legislative Requirement(s):
Not Applicable

Question:
Does the facility have a requirement for contingency plans and procedures for dealing with equipment breakdowns, potential spills, and any other abnormal situations?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes: The facility is required to have contingency plans and procedures for dealing with equipment breakdowns, potential spills, and any other abnormal situation.

Question ID	.WW_SPILLS_100000	Question Type	Legislative

Legislative Requirement(s):
OWRA | 53 | (1);

Question:
Does the facility have the required contingency plans and procedures for dealing with equipment breakdowns, potential spills, and any other abnormal situations?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes: The facility has the required contingency plans and procedures for dealing with equipment breakdowns, potential spills, and any other abnormal situation.

Question ID	.WW_SPILLS_200000	Question Type	Information

Legislative Requirement(s):
Not Applicable

Question:
Has the facility had any spills during the inspection period?

Compliance Response(s)/Corrective Action(s)/Observation(s):
No: The facility has not had spills during the inspection period.

Question ID	.WW_SAMPLING_100000	Question Type	Information

Legislative Requirement(s):
Not Applicable

Question:
Does this sewage works have sampling requirements?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes: This sewage works has sampling requirements.

Sampling is a requirement for both surface water and groundwater. The facility has complied with all sampling requirements. Condition 4. SURFACE WATER MONITORING AND RECORDING

Question ID	.WW_SAMPLING_110000	Question Type	Legislative

Legislative Requirement(s):
OWRA | 53 | (1);

Question:
Did the facility comply with all sampling and monitoring requirements for the discharge(s) during the inspection period? This does not include spills, bypasses and overflows.

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes: The facility complied with all sampling and monitoring requirements for the discharge(s) during the inspection period.

Question ID	.WW_SAMPLING_120000	Question Type	Legislative

Legislative Requirement(s):
OWRA | 53 | (1);

Question:
Did the facility comply with all other sewage works sampling and monitoring requirements during the inspection period, e.g., influent, operational, merging effluents? This does not include discharges, flow, or biosolids/sludge.

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes: The facility complied with all other sampling requirements during the inspection period.

Question ID	.WW_SAMPLING_130000	**Question Type**	Legislative

Legislative Requirement(s):
OWRA | 53 | (1);

Question:
Did the facility comply with the environmental sampling and monitoring requirements during the inspection period, e.g., surface water or groundwater?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes: The facility complied with environmental sampling and monitoring requirements during the inspection period.

Question ID	.WW_SAMPLING_131000	**Question Type**	Information

Legislative Requirement(s):
Not Applicable

Question:
Are there any monitoring well(s) on site related to the sewage works?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes: There are monitoring wells onsite related to the sewage works.

Question ID	.WW_SAMPLING_132000	**Question Type**	Legislative

Legislative Requirement(s):
OWRA | 53 | (1); OWRA | R.R.O. 1990, Reg. 903 | 20 | (1);

Question:
Are monitoring well(s) maintained as required and in a manner sufficient to prevent the entry of surface water and other foreign materials?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes: Monitoring well(s) are maintained as required and in a manner sufficient to prevent the entry of surface water and other foreign materials.

Question ID	.WW_AUDIT_SAMPLE_100000	**Question Type**	Information

Legislative Requirement(s):
Not Applicable

Question:
Were Ministry sewage or water quality audit samples collected during this inspection?

Compliance Response(s)/Corrective Action(s)/Observation(s):
No: Audit samples were not collected during this inspection.

Question ID	.WW_LIMITS_100000	**Question Type**	Information

Legislative Requirement(s):
Not Applicable

Question:
Does this sewage works have effluent limits set by an Environmental Compliance Approval (ECA)?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes: This sewage works has effluent limits set by an ECA.

Question ID	.WW_LIMITS_400000	**Question Type**	Information

Legislative Requirement(s):
Not Applicable

Question:
Does this sewage works have limits somewhere other than the effluent discharge (e.g., raw sewage, groundwater)?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes: The sewage works has limits in locations other than the effluent discharge.

Question ID	.WW_LIMITS_410000	**Question Type**	Legislative

Legislative Requirement(s):
OWRA | 53 | (1);

Question:
Have limits at locations other than the effluent discharge been met?

Compliance Response(s)/Corrective Action(s)/Observation(s):
Yes: All applicable limits have been met.

The facility has trigger level concentrations built into their ECA for groundwater. The elevated ammonia concentration at the site puts the facility into Tier 3 (Contingency Measures and Compliance Monitoring Program).

Question ID	.WW_LIMITS_110000	**Question Type**	Legislative

Legislative Requirement(s):
OWRA | 53 | (1);

Question:

Have all effluent limits set by the Environmental Compliance Approval (ECA) been met?

Compliance Response(s)/Corrective Action(s)/Observation(s):

Yes: All effluent limits set by an Environmental Compliance Approval (ECA) have been met.

The facility has trigger level concentrations built into their ECA. The elevated ammonia concentration at the site puts the facility into Tier 3 (Contingency Measures and Compliance Monitoring Program).

Compost inspections 2013- 2014
Post Inspection Questions

General Questions

1. Is the finished compost produced at the sites exempt from Part V of the EPA and Regulation 347?
   - Yes/No both AA and a product that is not "compost"
   - ~~Provide~~ explanation in the comments it requires NASM
   - *Valid Answers:*
     - *Yes – Existing facility – AA compost meeting three Part II Standards (metals, feedstock and pathogens) and reference other parameters in the ECA and are in compliance with the ECA*
     - *Yes – Existing facility – AA compost meeting all Part II Standards*
     - *Yes – Existing or New Facility – A compost meeting all Part II Standard including labelling*
     - *No – Existing and new facility – Category B compost produced*

2. Is Category B compost transported from the site by an approved hauler?
   - *Yes/No/NA*

3. Is Category B compost going to agricultural land to be applied under an approved NASM plan?
   - *Yes/No/NA*
   - *Note – that if the answer is No, that the compost is subject to all ministry approval requirements and can only be land applied in accordance with an ECA*

Info on Approval

4. What type of compost is the company attempting to produce?
   - *Text answer (AA, A, B)*

5. If AA is produced and the facility has an existing ECA, does the compost meet the standards in Part II of the Ontario Compost Quality Standards for metals in compost?
   - *Yes/No/NA (Refer to "Answering the Compost Inspection Questions")*
   - *If no, specify in comments what concentration levels have been exceeded.*

6. If AA is produced and the facility has an existing ECA, does the compost meet the standards in Part II of the Ontario Compost Quality Standards for quality of feedstock?
   - *Yes/No/NA (Refer to "Answering the Compost Inspection Questions")*
   - *If no, specify in comments what concentration levels have been exceeded or what feedstock was used.*

7. If AA is produced and the facility has an existing ECA, does the compost meet the standards in Part II of the Ontario Compost Quality Standards for pathogens?
   - *Yes/No/NA (Refer to "Answering the Compost Inspection Questions")*
   - *If no, specify in comment requirement(s) not met.*

8. If AA is produced and the facility has an existing ECA, does the facility's ECA reference other compost quality standards (ie. ~~foreign~~ matter and maturity?)
   - *Yes/No/NA (Refer to "Answering the Compost Inspection Questions")* P. 16(4)
   - *If yes, specify in comments what parameters are included in the ECA.*

Have to follow OMA until 2015

Currently not doing dual flask test P.16(4)(iii), have done some respirate rate test as per reg but doesn't believe it kicks in until 2015

9. If AA is produced and the facility has an existing ECA, is the facility incompliance with the compost quality standards in their ECA?
   - *Yes/No/NA (Refer to "Answering the Compost Inspection Questions")*

- *If no, specify in comments issue(s) of non-compliance.*

10. If A is produced (for new and existing sites), does the compost meet the standards in Part II of the Ontario Compost Quality Standards for metals in compost?
    - *Yes/No/NA (Refer to "Answering the Compost Inspection Questions")*
    - *If no, specify in comments what concentration levels have been exceeded.*

11. If A is produced (for new and existing sites), does the compost meet the standards in Part II of the Ontario Compost Quality Standards for quality of feedstock?
    - *Yes/No/NA (Refer to "Answering the Compost Inspection Questions")*
    - *If no, specify in comments what concentration levels have been exceeded or what feedstock was used.*

12. If A is produced (for new and existing sites), does the compost meet the standards in Part II of the Ontario Compost Quality Standards for pathogens?
    - *Yes/No/NA (Refer to "Answering the Compost Inspection Questions")*
    - *If no, specify in comment requirement(s) not met.*

13. If A is produced (for new and existing sites), does the compost meet the standards in Part II of the Ontario Compost Quality Standards for foreign matter?
    - *Yes/No/NA (Refer to "Answering the Compost Inspection Questions")*
    - *If no, specify in comments what parameter(s) was exceeded.*

14. If A is produced (for new and existing sites), does the compost meet the standards in Part II of the Ontario Compost Quality Standards for maturity?
    - *Yes/No/NA (Refer to "Answering the Compost Inspection Questions")*
    - *If no, specify in comments the requirement(s) not met*

15. If A is produced (for new and existing sites), does the compost meet the labelling requirements in Part II of the Ontario Compost Quality Standards?
    - *Yes/No/NA (Refer to "Answering the Compost Inspection Questions")*
    - *If no, specify in comments the requirement(s) not met.*

16. If B is produced (for new and existing sites), does the compost meet the standards in Part II of the Ontario Compost Quality Standards for metals in compost?
    - *Yes/No/NA (Refer to "Answering the Compost Inspection Questions")*
    - *If no, specify in comments what concentration levels have been exceeded.*

17. If B is produced (for new and existing sites), does the compost meet the standards in Part II of the Ontario Compost Quality Standards for quality of feedstock?
    - *Yes/No/NA (Refer to "Answering the Compost Inspection Questions")*
    - *If no, specify in comments what concentration levels have been exceeded.*

18. If B is produced (for new and existing sites), does the compost meet the standards in Part II of the Ontario Compost Quality Standards for pathogens?
    - *Yes/No/NA (Refer to "Answering the Compost Inspection Questions")*
    - *If no, specify in comment requirement(s) not met.*

19. If B is produced (for new and existing sites), does the compost meet the standards in Part II of the Ontario Compost Quality Standards for foreign matter?
    - *Yes/No/NA (Refer to "Answering the Compost Inspection Questions")*
    - *If no, specify in comments what parameter(s) was exceeded.*

20. If B is produced (for new and existing sites), does the compost meet the standards in Part II of the Ontario Compost Quality Standards for maturity?
    - *Yes/No/NA (Refer to "Answering the Compost Inspection Questions")*
    - *If no, specify in comments what requirement(s) was not met.*

21. Will the compost be applied to an agricultural land?
    - *Yes/No*

22. Does the finished compost require a Part V approval for transportation?
    - *Yes/No*
    - *Refer to flowchart - "Determining Part V Approval and Reg 347 Requirement for Finished Compost at a Composting Facility"*

23. Does the finished compost require a Part V approval for use?
    - *Yes/No*
    - *Refer to flowchart - "Determining Part V Approval and Reg 347 Requirement for Finished Compost at a Composting Facility"*

Info on Feedstock

24. What type of feedstock(s) is used at the site?
    - *Text answer* All municipal res from ottawa / Leaf + yard small % ICI from Ottawa
25. Is the site considering using biosolids as a feedstock in the future?
    - *Yes/No*

26. Is the site considering using septage as a feedstock in the future?
    - *Yes/No*

27. Is the feedstock tested before it arrives at the site or at the site?
    - *Text answer (Before, At site)*

Info on curing

28. What % moisture does the site cure at?
    - *Numeric answer* Around 20-25% a little higher in winter test by sending to lab or oven
29. How many days curing is currently used at the site?
    - *Numeric answer* 21 days
    - *If the answer is less than 21 days, ask site to explain why and include in comments*

30. How does the site test for maturity?
    - *Text answer (e.g. Solvita Index™ tes, DEWAR self-heating test)*
      dual flask but not consistently & respiration
31. Has the site used either of the two tests O2 Consumption or CO2 Production for respiration?
    - *Yes/No* occasionally
    - *If yes, list which one has been used in the comments*

32. Has the site experienced difficulty curing at >40% moisture?
    - *Yes/No answer* haven't gone that high, anticipate it would cause an issue at sticking to screens
33. Does the site rehydrate the curing materials?
    - *Yes/No* only during maturation process
    - *If yes, ask them to describe the process they use and include in the comments*

34. Is the site using leachate to rehydrate the curing materials?
    - *Yes/No*
    - *Note: Leachate should only be used to rehydrate the composting material prior to the termophilic temperature period. Operators should also be aware that extensive use of this practice may lead to the accumulation of contaminants.*

35. Is the water the site uses to rehydrate materials treated before it is used?
    - *Yes/No*

Info on how they sample –

36. Does the site have a Standard Operating Procedure or written methodology for Sampling?
    - *Yes/No*
    - *Will need to review SOP/methodology to determine if it follows the recommended method outlines in "Appendix 1: Feedstock and Compost Sampling of the Ontario Compost Quality Standards"*
        - *e.g. determine if 10 grab samples (1-3 liters each) are mixed to prepare an appropriate composite laboratory submission sample. Grabs should be taken from different, evenly spaced points on the pile. The outside and base of the pile should be avoided.*

Asked for

37. Does the site take random grab samples?
    - *Yes/No* ~~Use random~~ part of SOP
    - *If yes, specify in the comments where they take the sample from (From 1m inside the pile, From the surface or From both)*

38. Is a duplicate sample being maintained on site for 6 months? → no
    - *Yes/No* Lab keeps it

39. What method is used by the site to measure the temperature of the compost?
    - *Text answer (e.g. (55oC) of thermophilic phase – at 1 m inside the pile, or at surface*

    Probe 1m, fully inserted

40. At what stage in the process does the site send the compost for testing?
    - *Text answer (At maturity, At bagging, Before or After screening)*

41. What equipment does the site use for screening?
    - *Text answer (Explain the equipment used)*

    Trommel screens

42. What size screen is used during the screening process?
    - *Numeric answer (Units in mm)*

    Compost 12mm / NASM 12.mm – 20 mm

43. Does the site count or consider the bulking agent (e.g., woodchips) as "feedstock"?
    - *Yes/No*

    NA. No need for bulking agent

44. Does the site test the Bulking agent?
    - *Yes/No* NA

45. Does the site anticipate any issues achieving new Category AA foreign matter standards by July 15, 2015?
    - *Yes/No* Feedstock is clean

Water losses and process considerations

46. Does the site experience water loss at any stage of the process?
    - *Yes/No*
    - *If yes, specify in comments generally if the water loss is consistent or highly variable*

warmer weather feedstock is dry, winter is wetter → leachate

47. If water loss is experienced, does the site know what the water loss is at each stage of the process
    - *Yes/No*
    - *If yes, specify in comments generally the water loss at each stage of the process*

48. Does the site use forced aeration during curing?
    - *Yes/No*
    - *If yes, specify the type (e.g. fans, ventilation) in the comments*

49. Has the site received odour complaints (related to the anaerobic conditions and/or odor during the curing process)?
    - *Yes/No*
    - *If yes, specify in comments what steps the facility has taken to address the concerns.*

50. How much water is used on the site per day (worst case scenario)?
    - *Numeric Answer*

Not sure, not measured.

Received ✓ 20/2013

Orgaworld Part of Shanks Group	Quality System	Code: . ST02
		Version 2012.2 Document: Sampling/Testing of outgoing Compost
	Sampling / Testing Procedures for Outgoing Compost	Date : 03/10/2012
		Page: 1 of 4

1. GENERAL DESCRIPTION

It is a requirement as stated in our Certificate of Approval (Waste) for both facilities, that certain procedures and methodology be followed when sampling compost for analysis. In September 2012 this changed with the introduction of the "Ontario Compost Quality Standards". These standards outline what must be sampled, when it must be sampled and what parameters must be tested for and met, before Orgaworld compost can be sent to the customer. **This important document SUPERCEDES each facilities Environmental Compliance Approval (ECA – formerly our Certificate of Approval).** Therefore all testing of Orgaworld compost for the London and Ottawa facilities will conform to this new standard.

This new standard becomes effective January 1, 2013 for everything except the limits for maturity and foreign matter, which come into effect on July 15, 2015.

2. SCOPE

The old ECA's for London and Ottawa detailed a sampling frequency: "a composite sample, consisting of a minimum of ten representative grab samples, shall be collected **every two (2) months** representing all compost generated within the preceding sixty (60) days or **every 5,000 tonnes** of finished compost, whichever comes first;" This has now changed. For both facilities the sampling frequency is determined by **Table A1: Baseline Sampling Frequency of Compost in the Ontario Compost Quality Standards.** It uses compost production volume, and whether the compost contains "Human Body Waste Feedstock" which is defined as "feedstock materials derived from or containing wastes from the human body, including sewage biosolids, domestic septage and **diapers.**"

At the time of writing, both facilities were producing compost in the range of 15,000 – 50,000 tonnes annually. By using the chart you see that both facilities have to perform at least **12 samples per year distributed throughout the production year to capture seasonal variability.** Additionally, because they accept diapers in their feedstock, the **London facility has to add a further 4 samples per year.**

Therefore, every year: **Ottawa must sample their compost 12 times throughout the year.**
London must sample their compost 16 times throughout the year.

3. RESPONSIBILITIES

The person giving the responsibility of taking the samples must follow this procedure. The Compost Process Supervisor and Site Manager will be responsible to ensure this procedure is followed and that all samples are taken and submitted as per the requirements of the Ontario Compost Quality Standards.

4. PROCEDURE FOR SAMPLING COMPOST

Required Equipment:

- Clean hand shovel
- Clean plastic bag, bucket or pail large enough to contain 10 grab samples of 1-3 litres each
- Clean tarp at least 2mX 3m
- Implement handle that can be cleaned and disinfected between samples to split the sample on tarp
- Clean sample containers (ie. new plastic freezer bags)
- Marker to identify the sample (ie. date, location, bin number, etc)
- Shovel to remove rejected material from the tarp

A clean area where the tarp can be laid out and the compost mixed and handled is essential. This can be a cleaned part of the concrete floor, a paved area, or a sheet of plywood.

The sample locations should be randomly selected from a lot of compost following these steps:

respiration rate 2015 → ADD

METHOD:

1. Select a starting point (usually at the front of the compost bunker to be sampled)
2. Measure the perimeter of the lot of compost (this can be done by pacing if you are sampling a free standing pile). For both facilities, you can calculate what the perimeter length is knowing the dimensions of the bunker.
   Perimeter = Length + width + length + width
3. Divide the total perimeter distance into 10 parts (since you will be taking 10 grab samples) to give the length of one distance interval
   Ex. If your perimeter was 100m, divided by 10 is 10m. Therefore you would sample every 10m.
4. In order to ensure "randomness", the MOE has introduced the concept of generating a random number. This can be done by:
   Using Excel, use the following formula to generate a random number (=round(rand(),2). Multiply that number by the distance interval, rounding up or down as required. For example, if your sample interval was 10m as calculated in step 3, and you generated a random number of 0.68, then 10 X 0.68 = 6.8 metres. Therefore every 6.8 metres you would take a sample.
5. Pace off this distance from the starting point to find the first sampling location.
6. At the midpoint between the top and bottom of the lot, dig approximately 1 metre into the compost using a small shovel or similar tool.
7. Collect a 1-3 litre grab sample and place the grab sample in a plastic bucket or pail
8. Walk a distance equal to the distance interval and collect a second grab sample (1-3 litres) and combine it with the first sample in the bucket.

Repeat until all 10 grab samples have been collected.

QUARTERING METHOD TO PREPARE A LABORATORY SAMPLE

a) Take the sample from the pail and form it into a conical pile in the middle of the clean tarp.
b) Flatten the top of the cone and divide it into 4 sections
c) Flip a coin to decide which tow diagonal quarters to accept and which to reject. Remove and discard the opposite sections
d) Mix the remaining quarters into a pile and repeat steps a,b and c until the desired volume is achieved (usually about 5 to 10 kg)
e) **Split this sample into two parts. One can be sent to the lab as the "representative sample" and the other must be kept in a refrigerator for a minimum of 6 months. The ministry may require additional testing to be performed on this duplicate sample, therefore this sample must be handled and stored "appropriately"**

2) The representative sample can then be placed in a clean dry sample container (freezer bag) and labelled with the appropriate information such as bunker number, date sample was taken, and name of person taking it.
3) **Ensure that the necessary information is written down in the facility sample log. This log will require information such as:**
   a) **sample locations and volumes collected**
   b) **day and time of sample collection**
   c) **sample handling procedures**
   d) **parameters tested for and the resulting concentrations**
   e) **name of laboratory facility conducting the testing**
   f) **conclusions drawn with respect to results of the monitoring and testing**
4) The representative sample shall be stored at a temperature from 0 C to 5 C during shipping and storage until the time of analysis
5) In order to determine the fecal coliform content, the delay between the collection of increments and the analysis shall not exceed 48 hrs.

METAL ANALYSIS:

For both facilities, the compost must be analyzed for the maximum concentration of metals in the compost:

Item	Column 1	Column 2	Column 3	Column 4
	Metal	Category AA Compost	Category A Compost	Category B Compost
		mg/kg dry weight		
1.	Arsenic	13	13	75
2.	Cadmium	3	3	20
3.	Chromium	210	210	1060
4.	Cobalt	34	34	150
5.	Copper	100	400	760
6.	Lead	150	150	500
7.	Mercury	0.8	0.8	5
8.	Molybdenum	5	5	20
9.	Nickel	62	62	180
10.	Selenium	2	2	14
11.	Zinc	500	700	1850

Note: PCB analysis no longer required

PATHOGEN LIMITS:

For both Orgaworld facilities, the pathogen limits are:
E. Coli – must not exceed 1000 colony forming units (CFU) / gram total solids
Salmonella – must not exceed 3 MPN(most probable number)/4 grams total solids

FOREIGN MATTER: JUNE 2015

Parameter	Category AA	Category A	Category B
Foreign matter	Total foreign matter greater than 3 mm shall not exceed 1.0%, calculated on a dry weight basis, and plastic cannot exceed 0.5%: **and** Compost shall not contain any foreign matter greater than 25 mm per 500 ml.	Total foreign matter greater than 3 mm shall not exceed 1.0%, calculated on a dry weight basis, and plastic cannot exceed 0.5%: **and** Compost shall not contain any foreign matter greater than 25 mm per 500 ml.	Total foreign matter greater than 3 mm shall not exceed 2.0%, calculated on a dry weight basis, and plastic cannot exceed 0.5%: **and** Compost shall not contain any foreign matter greater than 25 mm per 500 ml.
Sharp Foreign matter	Compost shall contain no material of a size or shape that can reasonably cause human or animal injury.	Compost shall contain no material of a size or shape that can reasonably cause human or animal injury.	Compost shall have a maximum of 3 pieces of sharp foreign matter per 500ml: **and** The maximum dimension of any sharp foreign matter shall be 12.5 mm.

MATURITY:

For regulatory purposes the Dewar Flask can no longer be used to demonstrate Maturity.
Compost will be deemed mature if cured for a minimum of 21 days from the day the last portion of material went into the batch, and the respiration rate is :

- Less than or equal to, 400 milligrams of oxygen per kilogram of volatile solids (on a dry weight basis) per hour: or,

- Less than or equal to, 4 milligrams of carbon in the form of carbon dioxide per gram of organic matter (on a dry weight basis) per day

5. SAMPLE FAILURE PROCEDURE (RE-TESTING)

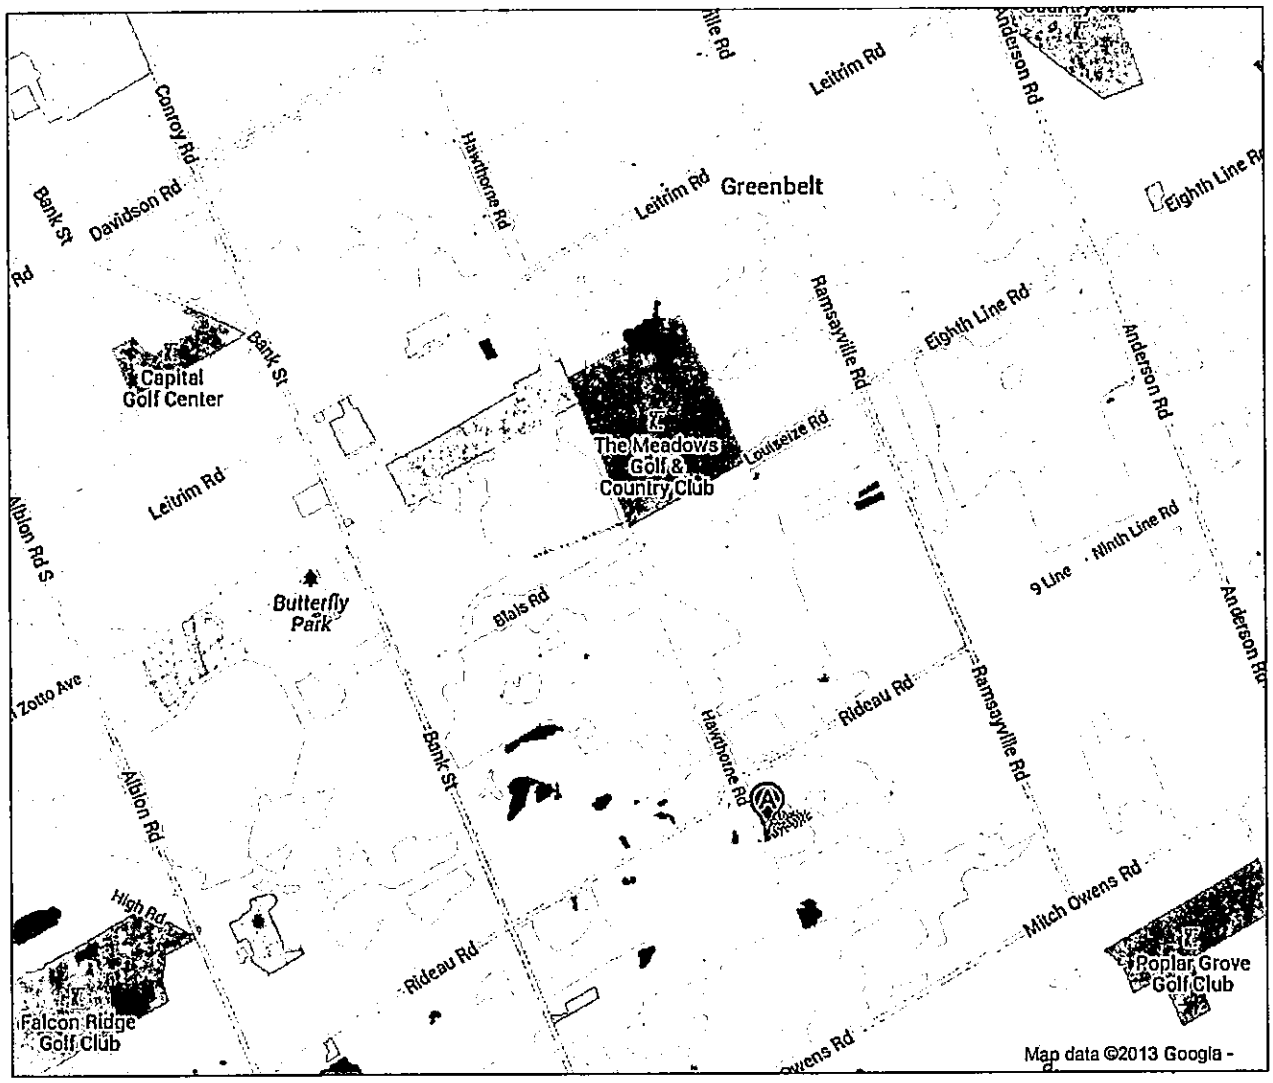
If the analytical result of a compost sample shows parameters for metals content or pathogens above regulatory limits, then the following procedure must be completed.

i. Additional samples must be taken (**at least 4 samples**)
ii. These four samples must all pass the criteria
iii. The average of all the samples taken (even the failed one) must then pass the criteria
iv. If the above criteria are not met after a total of 12 samples are taken, the batch fails.
v. All documentation and test results must be maintained and made available to the MOE upon request.

6. TIME FOR COMPLETION

This procedure will take approximately one hour to complete.

7. HEALTH AND SAFETY CONCERNS



Clean, unused gloves are required for this test. The gloves will have to be heavy duty as the compost can be quite warm depending on how deep the sample is obtained from. A dust mask should be worn as well.

CERTIFICATE OF APPROVAL
AIR
NUMBER 7021-7HQNDE
Issue Date: September 16, 2009

Orgaworld Canada Ltd.
Post Office Box, No. 364
Waterloo, Ontario
N2J 4A4

Site Location: 5123 Hawthorne Road, Gloucesster (Ottawa)
Lot 27, Concession 6 (Rideau Front), Gloucester
Ottawa City, Ontario

You have applied in accordance with Section 9 of the Environmental Protection Act for approval of:

Description Section

An aerobic composting facility, consisting of the following processes and support units:

- receipt of organic materials and leaf and yard waste;
- pre-processing of the organic materials and leaf and yard waste;
- composting of the pre-processed materials in composting tunnels;
- removal of the materials from the composting tunnels at end of the composting process, and screening and curing of the finished compost inside the enclosed building;

including the *Equipment* and any other ancillary and support processes and activities, **operating at a *Facility Production Limit* of up to 150,000 tonnes per year of *Organic Waste*** exhausting to the atmosphere as described in the *ESDM Report.*

For the purpose of this Certificate of Approval and the terms and conditions specified below, the following definitions apply:

1. *"Acoustic Assessment Report"* means the report, prepared in accordance with *Publication NPC-233* and Appendix A of the *Basic Comprehensive User Guide,* by Conestoga-Rovers & Associates Ltd., and dated June 20, 2008, submitted in support of the application, that documents all sources of noise emissions and *Noise Control Measures* present at the *Facility* and includes all up-dated *Acoustic Assessment Reports* as required by the Documentation Requirements conditions of this *Certificate* to demonstrate continued compliance with the *Performance Limits* following the implementation of any *Modification.*

2. *"Acoustic Assessment Summary Table"* means a table prepared in accordance with the *Basic Comprehensive User Guide* summarising the results of the *Acoustic Assessment Report,* up-dated as required by the Documentation Requirements conditions of this *Certificate.*

3. *"AERMOD"* means the dispersion model developed by the American Meteorological Society/U.S. Environmental Protection Agency Regulatory Model Improvement Committee (AERMIC) including the PRIME (Plume Rise Model Enhancement) algorithm, used to calculate, as a minimum, one-hour and 24-hour average concentrations of a contaminant at the *Point of Impingement* and at the *Sensitive Receptors.*

4. *"Air Pollution Control Equipment"* means the air pollution control equipment, including but not limit to the ammonia scrubber, biofilters and bioscrubber used to treat the air in the *Facility* as described in the *ESDM Report* before the air is discharged into the atmosphere.

5. *"Air Standards Manager"* means the Manager, Human Toxicology and Air Standards Section, Standards Development Branch, or any other person who represents and carries out the duties of the Manager, Human Toxicology and Air Standards Section, Standards Development Branch, as those duties relate to the conditions of this *Certificate.*

6. *"Basic Comprehensive User Guide"* means the *Ministry* document titled "Basic Comprehensive Certificates of Approval (Air) User Guide" dated April 2004 as amended.

7. *"Certificate"* means this entire certificate of approval document, issued in accordance with section 9 of the *EPA* and includes all the *Schedules,* and the *Supporting Documentation.*

8. *"Certificate (Waste)"* means the Provisional Certificate of Approval (Waste Disposal Site) number 2766-7HEPSZ issued to the *Company* in accordance with section 27 of the *EPA* and includes all the schedules contained in the certificate, as amended.

9. *"Company"* means Orgaworld Canada Ltd. that is responsible for the construction or operation of the *Facility* and includes any successors and assigns.

10. *"Compound of Concern"* means a contaminant that, based on generally available information, may be emitted to the atmosphere in a quantity from any source at the *Facility* that is significant either in comparison to the relevant *Ministry Point of Impingement Limit* or if a *Ministry Point of Impingement Limit* is not available for the compound then, based on generally available toxicological information, the compound has the potential to cause an adverse effect as defined by the *EPA* at a *Point of Impingement.*

11. *"Description Section"* means the section on page one of the *Certificate* describing the *Company's* operations and the *Equipment* located at the *Facility* and specifying the *Facility Production Limit* for the *Facility.*

12. *"Director"* means any person appointed in writing by the Minister of the Environment pursuant to section 5 of the *EPA* as a Director for the purposes of section 9 of the *EPA.*

13. *"District Manager"* means the District Manager of the appropriate local district office of the *Ministry,* where the *Facility* is geographically located.

14. *"Emission Summary Table"* means the table prepared in accordance with *O. Reg. 419/05* and the *Procedure Document* listing the appropriate *Point of Impingement* concentrations of each *Compound of Concern* from the *Facility* and providing comparison to the corresponding *Ministry Point of Impingement Limit* or *Maximum Concentration Level Assessment.*

15. *"Environmental Assessment Act"* means the Environmental Assessment Act, R.S.O. 1990, c.E.18.

16. *"EPA"* means the Environmental Protection Act, R.S.O. 1990, c.E.19.

17. *"Equipment"* means equipment or processes described in the *ESDM Report,* this *Certificate* and in the *Supporting Documentation* referred to herein and any other equipment or processes.

18. *"Equipment with Specific Operational Limits"* means any *Equipment* related to the thermal oxidation of waste or waste derived fuels, fume incinerators or any other *Equipment* that is specifically referenced in any published *Ministry* document that outlines specific operational guidance that must be considered by the *Director* in issuing of a Certificate of Approval.

19. *"ESDM Report"* means the Emission Summary and Dispersion Modelling Report prepared in accordance with the *Procedure Document* by Conestoga-Rovers & Associates and dated June 2008 submitted in support of the application, and includes any amendments to the ESDM Report listed in *Schedule A* and all up-dated ESDM Reports prepared as required by the Documentation Requirements conditions of this *Certificate.*

20. *"Facility"* means the entire operation located on the property where the *Equipment* is located.

21. *"Facility Production Limit"* means the production limit placed on the main product(s) or raw materials used by the *Facility* that represents the design capacity of the *Facility* and assists in the definition of the operations approved by the *Director.*

22. *"Fugitive Odour Control Plan"* means a document or a set of documents, forming part of the *Manual,* that provides written instructions to staff of the *Company* to meet the requirements in Condition 6.1(d) in this *Certificate.*

23. *"Log"* means the up-to-date log that is used to track all *Modifications* to the *Facility* since the date of this *Certificate* as required by the Documentation Requirements conditions of this *Certificate.*

24. *"Manager"* means the Manager, Technology Standards Section, Standards Development Branch of the *Ministry,* or any other person who represents and carries out the duties of the Manager, as those duties relate to the conditions of this *Certificate.*

25. *"Manual"* means a document or a set of documents that provides written instructions to staff of the *Company,* to meet the requirements in Condition 6.1 in this *Certificate.*

26. *"Maximum Concentration Level Assessment"* means the Maximum Concentration Level Assessment for the purposes of a Basic Comprehensive Certificate of Approval, described in the *Basic Comprehensive User Guide,* prepared by a *Toxicologist* using currently available toxicological information, that demonstrates that the concentration at any *Point of Impingement* for a *Compound of Concern* that does not have a *Ministry Point of Impingement Limit* is not likely to cause an adverse effect as defined by the *EPA.* The concentration at *Point of Impingement* for a *Compound of Concern* must be calculated in accordance with *O. Reg. 419/05.*

27. *"Ministry"* means the ministry of the government of Ontario responsible for the *EPA* and includes all officials, employees or other persons acting on its behalf.

28. *"Ministry Point of Impingement Limit"* means the appropriate Standard from Schedule 1, 2 or 3 from *O.Reg. 419/05* and if a standard is not provided for a *Contaminant of Concern* the appropriate criteria listed in the *Ministry* publication titled "Summary of Standards and Guidelines to support Ontario Regulation 419: Air Pollution - Local Air Quality (including Schedule 6 of O. Reg. 419 on Upper Risk Thresholds)", dated February 2008, as amended.

29. *"Modification"* means any construction, alteration, extension or replacement of any plant, structure, equipment, apparatus, mechanism or thing, or alteration of a process or rate of production at the *Facility* that may discharge or alter the rate or manner of discharge of a *Compound of Concern* to the atmosphere or discharge or alter noise or vibration emissions from the *Facility.*

30. *"Noise Control Measures"* means measures to reduce the noise emissions from the *Facility* and/or *Equipment* including, but not limited to, silencers, acoustic louvres, enclosures, absorptive treatment, plenums and barriers.

31. *"O. Reg. 419/05"* means the Ontario Regulation 419/05, Air Pollution – Local Air Quality.

32. *"Operating Envelope"* means the limits on the *Company's* approved operations set out in Conditions 2.3 to 2.7 of this *Certificate.*

33. *"Organic Waste"* means the organic waste listed in Condition 2(1) in the *Company's Certificate (Waste),* that the *Company* is approved to receive and process in the *Facility.*

34. *"Performance Limits"* means the performance limits specified in the section of this *Certificate* titled Performance Limits.

35. *"Point of Impingement"* means any point outside the facility in the natural environment and as defined by s.2 of *O. Reg. 419/05.*

36. *"Point of Reception"* means Point of Reception as defined by *Publication NPC-205* and/or *Publication NPC-232,* as applicable.

37. *"Pre-Test Information"* means the information outlined in Section 1 of the *Source Testing Code.*

38. *"Procedure Document"* means *Ministry* Procedure titled "Procedure for Preparing an Emission Summary and Dispersion Modelling Report" dated July 2005, as amended.

39. *"Processes with Significant Environmental Aspects"* means the *Equipment* which, during regular operation or if not properly operated or maintained, may cause or are likely to cause an adverse effect.

40. *"Publication NPC-205"* means the *Ministry* Publication NPC-205, "Sound Level Limits for Stationary Sources in Class 1 & 2 Areas (Urban)", October, 1995 as amended.

41. *"Publication NPC-207"* means the *Ministry* draft technical publication "Impulse Vibration in Residential Buildings", November 1983, supplementing the Model Municipal Noise Control By-Law, Final Report, August 1978, published by the *Ministry.*

42. *"Publication NPC-232"* means the *Ministry* Publication NPC-232, "Sound Level Limits for Stationary Sources in Class 3 Areas (Rural)", October, 1995 as amended.

43. *"Publication NPC-233"* means the *Ministry* Publication NPC-233, "Information to be Submitted for Approval of Stationary Sources of Sound", October, 1995 as amended.

44. *"Schedules"* means the following schedules attached to the *Certificate* and forming part of the *Certificate* namely:

    Schedule "A" - *Supporting Documentation*
    Schedule "B" - Procedure to calculate 10-minute average concentrations of odour

45. *"Sensitive Receptor"* means any location where routine or normal activities occurring at reasonably expected times would experience adverse effect(s) from odour discharges from the *Facility,* including one or a combination of:

    (a) private residences or public facilities where people sleep (e.g.: single and multi-unit dwellings, nursing homes, hospitals, trailer parks, camping grounds, etc.),
    (b) institutional facilities (e.g.: schools, churches, community centres, day care centres, recreational centres, etc.),
    (c) outdoor public recreational areas (e.g.: trailer parks, play grounds, picnic areas, etc.), and

(d) other outdoor public areas where there are continuous human activities (e.g.: commercial plazas and office buildings).

46. *"Source Testing Code"* means the Source Testing Code, Version 2, Report No. ARB-66-80, dated November 1980, prepared by the *Ministry,* as amended.

47. *"Source Testing"* means sampling and testing to measure the rates of emissions of odour, hydrogen sulphide and total mercaptans as required under this *Certificate* from the exhaust stack of the *Air Pollution Control Equipment* in the *Facility* under process conditions which represent a maximum operating range achievable at the time of the measurement, within the approved operating capacity of the *Facility.*

48. *"Start-up Date"* means the date when *Organic Waste* is first received at the *Facility.*

49. *"Supporting Documentation"* means the documents listed in Schedule "A" of this *Certificate* which forms part of this *Certificate.*

50. *"Toxicologist"* means a qualified professional currently active in the field of risk assessment, risk management and toxicology that has a combination of formal university education, training and experience necessary to assess the *Compound of Concern* in question.

51. *"Written Summary"* means the written summary that must be submitted annually to the *Ministry* as required by the Section titled Reporting Requirements of this *Certificate.*

You are hereby notified that this approval is issued to you subject to the terms and conditions outlined below:

TERMS AND CONDITIONS

1. GENERAL

1.1 Except as otherwise provided by this *Certificate,* the *Facility* shall be designed, developed, built, operated and maintained in accordance with the terms and conditions of this *Certificate* and in accordance with the application, the *ESDM Report,* the *Acoustic Assessment Report,* plans, specifications and *Supporting Documentation* submitted and the following *Schedules* attached hereto:

Schedule "A" - *Supporting Documentation*
Schedule "B" - Procedure to calculate 10-minute average concentrations of odour

2. OPERATIONAL FLEXIBILITY

2.1 The *Company* may make *Modifications* to the *Facility* in accordance with this *Certificate.*

2.2 Despite Condition 2.1, all *Modifications* made by the *Company* shall be within the *Operating Envelope* of the *Facility* as defined by conditions 2.3 to 2.7.

2.3 Despite Condition 2.1, the *Company* shall not make *Modifications* to the *Facility* that are outside the scope of the intended operations of the *Facility* as described in the *Description Section.*

2.4 Despite Condition 2.1, the *Company* shall not make *Modifications* to the *Facility* that result in an increase of the *Facility Production Limit* above the level specified in this *Certificate.*

2.5 Despite Condition 2.1, the *Company* shall not make *Modifications* to the *Facility* that would add any *Equipment with Specific Operational Limits.*

2.6 Despite Condition 2.1, the *Company* shall only make *Modifications* to the *Facility* which comply with the *Performance Limits.*

2.7 Despite Condition 2.1, the *Company* shall not make *Modifications* to the *Facility* if the *Modifications* would be subject to the *Environmental Assessment Act.*

2.8 Condition 2.1 of this *Certificate* shall expire five (5) years from the date of this *Certificate,* unless this *Certificate* is revoked prior to this date. Upon expiry of Condition 2.1 of this *Certificate,* the *Company* shall apply for amendment to include the current *ESDM Report* and the current *Acoustic Assessment Report* in Schedule "A" as *Supporting Documentation* to this *Certificate.*

3. PERFORMANCE LIMITS

3.1 The *Company* shall, at all times, ensure that all *Equipment* that are a source of a *Compound of Concern* from the *Facility* are operated to comply with the following *Performance Limits:*

(a) the maximum concentration of any *Compound of Concern* at a *Point of Impingement* shall not exceed the corresponding *Ministry Point of Impingement Limit;*

(b) for any *Compound of Concern* that does not have a *Ministry Point of Impingement Limit,* the maximum concentration of any *Compound of Concern* at a *Point of Impingement* shall not be greater than a level assessed as part of the original *ESDM Report;*

(c) for any *Compound of Concern* that does not have a *Ministry Point of Impingement Limit,* the maximum concentration of any *Compound of Concern* at a *Point of Impingement* shall not be greater than the *Maximum Concentration Level Assessment* submitted to the *Ministry* and accepted by the *Air Standards Manager;*

(d) the maximum 10-minute average concentration of odour at the most impacted *Sensitive Receptor,* computed in accordance with Schedule "B", resulting from the operation of the *Facility,* shall not be greater than 1.0 odour unit.

3.2 The *Company* shall, no later than thirty (30) days prior to:

(a) the introduction of a new *Compound of Concern* that does not have a *Ministry Point of Impingement Limit;*

(b) an increase to the concentration at a *Point of Impingement* of a *Compound of Concern* that does not have a *Ministry Point of Impingement Limit* such that the resulting concentration at a *Point of Impingement* will be greater than the level that was reviewed as part of the original *ESDM Report;* or

(c) an increase to the concentration at a *Point of Impingement* of a *Compound of Concern* that does not have a *Ministry Point of Impingement Limit* such that the resulting concentration at a *Point of Impingement* will be greater than the corresponding *Maximum Concentration Level Assessment* previously accepted by the *Air Standards Manager;*

submit a proposed or revised *Maximum Concentration Level Assessment* for the *Compound of Concern* to the *Director* for review by the *Air Standards Manager.*

3.3 The *Company* may not use the *Maximum Concentration Level Assessment* prior to thirty (30) days from the date of an acknowledgment letter from the *Ministry* unless the *Company* receives written acceptance by the *Director.*

3.4 If the *Air Standards Manager* does not accept the proposed *Maximum Concentration Level Assessment,* the *Company* shall not introduce or increase the emission rate of the *Compound of Concern* without approval from the *Director.*

3.5 The *Company* shall, at all times, ensure that the noise emissions from the *Facility* comply with the limits set out in *Ministry Publication NPC-205.*

3.6 The *Company* shall, at all times, ensure that the vibration emissions from the *Facility* comply with the limits set out in *Ministry Publication NPC-207.*

4. DOCUMENTATION REQUIREMENTS

4.1 The *Company* shall, within three (3) months after the *Start-up Date* of the *Facility,* update the *ESDM Report* to incorporate all the as-built details of the *Facility.*

4.2 The *Company* shall, at all times, maintain documentation that describes the current operations of the *Facility,* including but not limited to:

(a) a current *ESDM Report* that demonstrates compliance with the *Performance Limits* for the *Facility* regarding all *Compounds of Concern;*

(b) a current *Acoustic Assessment Report* that demonstrates compliance with the *Performance Limits* for the *Facility* regarding noise emissions;

(c) an up-to-date *Log* that describes each *Modification* to the *Facility;* and

(d) a record of the changes to the *ESDM Report* and *Acoustic Assessment Report* that documents how each *Modification* is in compliance with the *Performance Limits.*

4.3 The *Company* shall, during regular business hours, make the current *Emission Summary Table* and *Acoustic Assessment Summary Table* available for inspection at the *Facility* by any interested member of the public.

5. REPORTING REQUIREMENTS

5.1 The *Company* shall provide the *District Manager* and the *Director* no later than May 31 of each year, a *Written Summary* of activities undertaken in the previous calendar year that shall include the following:

(a) a signed statement that the *Facility* was in compliance with the *Performance Limits;*

(b) a summary of each *Modification* that took place in the previous calendar year and resulted in a change in the previously calculated concentration at the *Point of Impingement* for any *Compound of Concern* or resulted in a change in the sound levels reported in the *Acoustic Assessment Summary Table* at any *Point of Reception;*

(c) a list of each *Compound of Concern* submitted to the *Air Standards Manager* for review in the previous calendar year;

(d) a review of any changes to a *Ministry Point of Impingement Limit* undertaken in the previous calendar year that affect a *Compound of Concern* emitted from the *Facility;*

(e) a tabulated summary of the changes in the emission rate of any *Compound of Concern* and the resultant increase or decrease in the *Point of Impingement* concentration reported in the *ESDM Report* over the previous calendar year; and

(f) the *Emission Summary Table* and *Acoustic Assessment Summary Table* for the *Facility* as of December 31 from the previous calendar year.

6. OPERATION AND MAINTENANCE

6.1 The *Company* shall prepare and submit to the *District Manager,* not later than three (3) months prior to the *Start-up Date* of the *Facility,* a *Manual* outlining the operating procedures and maintenance programs for all *Processes with Significant Environmental Aspects.* The *Company* shall finalize the *Manual* in consultation with the *District Manager* and update the *Manual* if required. The *Company* shall ensure that all *Processes with Significant Environmental Aspects* are operated and maintained at all times in accordance with this *Certificate,* and the most updated operating procedures and maintenance programs in the *Manual.* The operating procedures and maintenance programs in the *Manual* shall specify, as a minimum,:

(a) frequency of inspections and scheduled preventative maintenance;

(b) the parameters and the frequency of monitoring of those parameters to ensure the proper operation and maintenance of the equipment in the *Air Pollution Control Equipment;*

(c) procedures to prevent upset conditions;

(d) the *Fugitive Odour Control Plan,* identifying fugitive odour emission sources from the operation of the *Facility* and outlining the physical and procedural controls such as policies and standard operating procedures required in order to prevent or mitigate fugitive odour emissions from the operation of the *Facility;*

(e) procedures for record keeping activities relating to the operation and maintenance programs.

6.2 The *Company* shall keep all doors in the enclosed building of the *Facility* fully closed at all times, except when used for necessary personnel or vehicle entrance and exit.

6.3 The *Company* shall keep the enclosed building of the *Facility* under adequate negative pressure whenever there are raw *Organic Waste* or *Organic Waste* in process or partially cured compost materials inside the building of the *Facility.*

6.4 The *Company* shall, whenever incoming leaf and yard waste is unloaded on the storage pad, immediately screen the materials for odorous materials such as grass clippings and move those materials inside the enclosed building for storage or processing.

7. COMPLAINTS RECORDING PROCEDURE

7.1 A designated representative of the *Company* shall be available to receive complaints twenty-four (24) hours per day, seven (7) days per week.

7.2 If at any time, the *Company* receives any environmental complaints from the public regarding the operation of the *Equipment* approved by this *Certificate,* the *Company* shall respond to these complaints according to the following procedures:

Step 1: Record of Compliant

(a) The *Company* shall record each complaint in a computerized tracking system. The information to be recorded shall include the following:

(i) name, address and the telephone number of the complainant, if known;
(ii) time and date of the complaint; and
(iii) details of the complaint.

Step 2: Investigation and Handling of Complaint

(b) After the complaint has been recorded in the tracking system, the *Company* shall immediately report, either to the *District Manager* by phone during office hours or to the *Ministry's* Spills Action Centre at 1-800-268-6060 off office hours, on the receipt of the complaint. The *Company* shall immediately initiate investigation of the complaint. The investigation shall include, as a minimum, the following:

(i) determination of the activities undertaken in the *Facility* at the time of the complaint;
(ii) meteorological conditions including, but not limited to the ambient temperature, approximate wind speed and its direction;
(iii) determination if the complaint is attributed to activities in the *Facility* and if so, the possible cause(s) of the complaint;
(iv) determination of the remedial action(s) to address the cause(s) of the complaint, and implementation of the remedial action(s) as soon as practicably possible.

(c) The *Company* shall document the response provided to the complainant, if known, and shall make the document(s) available for inspection by staff of the *Ministry* upon request. The response shall include the results of the investigation of the complaint, the action(s) taken or planned to be taken to address the cause(s) of the complaint, and if follow-up response(s) would be provided.

(d) Upon successful resolution of the complaint, the *Company* shall, within three (3) business days, submit a report to the *District Manager* on that complaint, and all proposed action(s) to prevent recurrence of the complaint in the future.

All the information collected and action(s) taken in this step have to be recorded in the computerized tracking system.

Step 3: Suspension of Operation

(e) If the complaint could not be resolved to the satisfaction of the *District Manager,* or complaints have continually been received during the course of resolution of the complaint(s), the *Company* shall, upon written instructions from the *District Manager,* suspend the receipt of *Organic Waste* and/or suspend operations of the *Facility* in accordance with the Emergency Response and Contingency Plan contained in the *Company's Certificate (Waste).*

8. RECORD KEEPING REQUIREMENTS

8.1 Any information requested by the *Ministry* concerning the *Facility* and its operation under this *Certificate,* including, but not limited to, any records required to be kept by this *Certificate,* shall be provided to the *Ministry,* upon request, in a timely manner.

8.2 The *Company* shall retain, for a minimum of seven (7) years from the date of their creation, except as noted below, all reports, records and information described in this *Certificate* and shall include but not be limited to:

(a) the current *ESDM Report;*

(b) the *Acoustic Assessment Report;*

(c) supporting information used in the emission rate calculations performed in the *ESDM Report* and *Acoustic Assessment Report* to document compliance with the *Performance Limits* (superseded information must be retained for a period of three (3) years after *Modification);*

(d) the *Log* that describes each *Modification* to the *Facility;*

(e) the *Written Summaries* provided to the *Ministry;*

(f) the *Manual* on the operating procedures and maintenance programs, including records on the maintenance, repair and inspection of the *Equipment* related to all *Processes with Significant Environmental Aspects;*

(g) all reports of the *Source Testing;*

(h) all records generated from the monitoring of the *Air Pollution Control Equipment;* and

(i) the complaints recording procedure, including records related to all environmental complaints made by the public as required by the section titled Complaints Recording Procedure of this *Certificate.*

9. MONITORING

9.1 The *Company* shall monitor the parameters of the *Air Pollution Control Equipment,* either as specified in the *Manual* which shall contain the manuals of the equipment manufacturers, or as deemed necessary in accordance with site operational conditions. The results of monitoring of these parameters shall be recorded in a log.

10. SOURCE TESTING

10.1 The *Company* shall perform *Source Testing* to determine the rates of emissions of odour, hydrogen sulphide and total mercaptans from the exhaust stack of the *Air Pollution Control Equipment,* once within six (6) months after the *Start-up Date* of the *Facility,* and every six (6) months thereafter within a period as directed or agreed to by the *District Manager.*

10.2 The *Company* shall also determine, at times of *Source Testing,* the rate of emission of odour from the fugitive odour source(s) in the *Facility.* The fugitive odour sources include the leaf and yard waste on the storage pad outside the enclosed building of the *Facility,* and the finished compost stored outside the *Facility* if they are required to be stored outdoor.

10.3 The *Company* shall submit, not later than three (3) months prior to the *Start-up Date* of the *Facility,* to the *Manager* a test protocol, including the *Pre-Test Information* for fugitive odour emission measurement and the *Source Testing* required by the *Source Testing Code.* The *Company* shall finalize the test protocol in consultation with the *Manager.*

10.4 The *Company* shall not perform *Source Testing* and the fugitive odour emission measurement required under this *Certificate* until the *Manager* has accepted the test protocol.

10.5 The *Company* shall, after the *Manager* has accepted the test protocol, conduct the *Source Testing* and the fugitive odour emission measurement required in this *Certificate* in accordance with the testing schedule unless the schedule has been changed otherwise by the *District Manager.*

10.6 The *Company* shall notify the *Director,* the *District Manager* and the *Manager* in writing of the location, date and time of any impending *Source Testing* and fugitive odour emission measurement required by this *Certificate,* at least fifteen (15) days prior to the *Source Testing* and fugitive odour emission measurement.

10.7 The *Company* shall submit a report, whenever *Source Testing* and fugitive odour emission measurement are completed, on the *Source Testing* and the fugitive odour emission measurement to the *Director,* the *District Manager* and the *Manager* not later than two (2) months after completing the *Source Testing* and the fugitive odour emission measurement. The report shall be in the format described in the *Source Testing Code,* and shall include, but not be limited to,:

(1) an executive summary;

(2) records of weather conditions such as ambient temperature and relative humidity, wind speed and direction, and any environmental compliants if received, at the time of the *Source Testing* and fugitive odour emission measurement;

(3) all operating conditions of the *Facility,* including the quantity of leaf and yard waste on the storage pad, the quantity of organic materials received, the quantity of organic materials on the tipping floor, the quantity of materials in the composting tunnels, the quantity of materials in the curing section, and the results of monitoring of the *Air Pollution Control Equipment,* at the time of the *Source Testing* and fugitive odour emission measurement;

(4) results of the *Source Testing* and fugitive odour emission measurement;

(5) the results of dispersion calculations employing the *AERMOD* dispersion model that employs at least five (5) years of hourly local meteorological data, and using the average of the results of the *Source Testing,* to indicate the maximum one-hour concentrations of hydrogen sulphide and total mercaptans at the *Point of Impingement* and the most impacted *Sensitive Receptor,* and, using a conversion factor of 1.2 and 1.65 respectively, to calculate the maximum 1/2-hour and 10-minute average concentrations for hydrogen sulphide and total mercaptans at the *Point of Impingement* and the most impacted *Sensitive Receptor;* and

(6) the results of dispersion calculations, using the average of the results of the *Source Testing* and fugitive odour emission measurement, indicating the maximum 10-minute average concentrations for odour at the *Point of Impingement* and at the most impacted *Sensitive Receptor* computed in accordance with Schedule "B", and their comparison with the performance limit for odour contained in this *Certificate.*

10.8 The *Director* may not accept the results of the *Source Testing* and the fugitive odour emission measurement if:

(1) the *Source Testing Code* or the requirements of the *Manager* were not followed, or

(2) the *Company* did not notify the *Director,* the *District Manager* and the *Manager* of the *Source Testing* and the fugitive odour emission measurement, or

(3) the *Company* failed to provide a complete report on the *Source Testing* and the fugitive odour emission measurement.

10.9 If the *Director* does not accept the results of the *Source Testing* and the fugitive odour emission measurement, the *Director* may require re-testing.

10.10 If the results of dispersion calculations conducted in any report on the *Source Testing* or fugitive odour emission measurement indicate non-compliance with Condition 3.1(d) of this *Certificate,* the *Company* shall include in the report of the *Source Testing* an action plan to investigate the cause(s) of the non-compliance and an implementation schedule of the remedial action(s) identified to bring the *Facility* back into compliance. The *Company* shall repeat the *Source Testing* within one (1) month after completion of remedial action(s).

10.11 The *District Manager* may not require subsequent testing of hydrogen sulphide or total mercaptans or relax the frequency of subsequent *Source Testing* and/or fugitive odour emission measurement if the results of the *Source Testing* and/or fugitive odour emission measurement indicate that the environmental impact from the contaminants and/or the fugitive sources are insignificant and/or that the odour emissions from the fugitive sources have already been sufficiently characterized as determined by the *Director.*

The reasons for the imposition of these terms and conditions are as follows:

1. GENERAL

Condition No. 1 is included to require the *Certificate* holder to build, operate and maintain the *Facility* in accordance with the *Supporting Documentation* considered by the *Director* in issuing this *Certificate.*

2. OPERATIONAL FLEXIBILITY AND PERFORMANCE LIMITS

Conditions No. 2 and 3 are included to limit *Modifications* and define the operating envelope permitted by this *Certificate.* The holder of the *Certificate* is approved for operational flexibility for the *Facility* that is consistent with the description of the operations included with the application up to the *Facility* · *Production Limit.* In return for the operational flexibility the *Certificate* places performance based limits that cannot be exceeded under the terms of this *Certificate. Certificate* holders will still have to obtain other relevant approvals required to operate the *Facility,* including requirements under other environmental legislation such as the *Environmental Assessment Act.*

3. DOCUMENTATION REQUIREMENTS

Condition No. 4 is included to require the *Company* to maintain ongoing documentation that demonstrates compliance with the *Performance Limits* of this *Certificate* and allows the *Ministry* to monitor on-going compliance with these *Performance Limits.* The *Company* is required to have an up to date *ESDM Report* and *Acoustic Assessment Report* that describe the *Facility* at all times and make the *Emission Summary Table* and *Acoustic Assessment Summary Table* from these reports available to the public on an ongoing basis in order to maintain public communication with regard to the emissions from the *Facility.*

4. REPORTING REQUIREMENTS

Condition No. 5 is included to require the *Company* to provide a yearly *Written Summary* to the *Ministry.*

5. OPERATION AND MAINTENANCE

Condition No. 6 is included to require the *Company* to properly operate and maintain the *Processes with Significant Environmental Aspects* to minimize the impact to the environment from these processes.

6. COMPLAINTS RECORDING PROCEDURE

Condition No. 7 is included to require the *Company* to respond to any environmental complaints regarding the operation of the *Equipment,* according to the procedures contained in the *Certificate (Waste)* issued to the *Company.*

7. RECORD KEEPING REQUIREMENTS

Condition No. 8 is included to require the *Company* to retain all documentation related to this *Certificate* and provide access to *Ministry* staff, upon request, so that the *Ministry* can determine if a more detailed review of compliance with the *Performance Limits* is necessary.

8. MONITORING

Condition No. 9 is included to provide the minimum performance requirements considered necessary to prevent an adverse effect resulting from the operation of the *Facility.*

9. *SOURCE TESTING*

Condition No. 10 is included to require the *Company* to gather accurate information so that compliance with the *EPA,* the regulations and this *Certificate* can be verified.

SCHEDULE "A"

Supporting Documentation

(a) Application dated June 10, 2008, signed by Frederick Mosher and submitted by the *Company* for a Certificate of Approval (Air & Noise);

(b) Emission Summary and Dispersion Modelling Report, dated June 2008, prepared by Conestoga-Rovers & Associates;

(c) Acoustic Assessment Report, dated June 2008, prepared by Conestoga-Rovers & Associates;

(d) A copy of the Application for a Provisional Certificate of Approval for a Waste Disposal Site submitted to the *Ministry,* sent by Conestoga-Rovers & Associates in a transmittal dated September 2, 2008;

(e) Additional information contained in a letter dated September 22, 2008 and signed by Tej Gidda, P.Eng., Conestoga-Rovers & Associates;

(f) Additional information contained in a letter dated March 16, 2009 and signed by Tej Gidda, P.Eng., Conestoga-Rovers & Associates;

(g) Revised Emission Summary and Dispersion Modelling Report, dated March 2009, prepared by Conestoga-Rovers & Associates, received by the *Ministry* on March 31, 2009.

SCHEDULE "B"

Procedure to calculate and record the 10-minute average concentrations of odour at the *Point of Impingement* and at the most impacted *Sensitive Receptor*

(a) Calculate and record one-hour average concentration of odour at the *Point of Impingement* and at the most impacted *Sensitive Receptor*, employing the *AERMOD* atmospheric dispersion model that employs at least five (5) years of hourly local meteorological data and that can provide results reported as individual one-hour average odour concentrations;

(b) Convert and record each of the one-hour average concentrations predicted over the five (5) years of hourly local meteorological data at the *Point of Impingement* and at the most impacted *Sensitive Receptor* to 10-minute average concentrations using the One-hour Average to 10-Minute Average Conversion described below; and

(c) Record and present the 10-Minute Average concentrations predicted to occur over a five (5) year period at the *Point of Impingement* and at the most impacted *Sensitive Receptor* in a histogram. The histogram shall identify all predicted 10-minute average odour concentration occurrences in terms of frequency, identifying the number of occurrences over the entire range of predicted odour concentration in increments of not more than 1/10 of one odour unit. The maximum 10-minute average concentration of odour at the *Sensitive Receptor* will be considered to be the maximum odour concentration at the most impacted *Sensitive Receptor* that occurs and is represented in the histogram, disregarding outlying data points on the histogram as agreed to by the *Director*.

One-hour Average To 10-minute Average Conversion

Use the following formula to convert and record one-hour average concentrations predicted by the *AERMOD* atmospheric dispersion model to 10-minute average concentrations:

$$X10min = X60min * 1.65$$

where X10min = 10-minute average concentration
X60min = one-hour average concentration

In accordance with Section 139 of the Environmental Protection Act, R.S.O. 1990, Chapter E-19, as amended, you may by written Notice served upon me, the Environmental Review Tribunal and in accordance with Section 47 of the Environmental Bill of Rights, S.O. 1993, Chapter 28, the Environmental Commissioner, within 15 days after receipt of this Notice, require a hearing by the Tribunal. The Environmental Commissioner will place notice of your appeal on the Environmental Registry. Section 142 of the Environmental Protection Act, provides that the Notice requiring the hearing shall state:

1. The portions of the approval or each term or condition in the approval in respect of which the hearing is required, and;
2. The grounds on which you intend to rely at the hearing in relation to each portion appealed.

The Notice should also include:

3. The name of the appellant;
4. The address of the appellant;
5. The Certificate of Approval number;
6. The date of the Certificate of Approval;
7. The name of the Director;
8. The municipality within which the works are located;

And the Notice should be signed and dated by the appellant.

This Notice must be served upon:

The Secretary*

Ministry of the Environment
Ministère de l'Environnement

AMENDMENT TO PROVISIONAL CERTIFICATE OF APPROVAL
WASTE DISPOSAL SITE
NUMBER 2766-7HEPSZ
Notice No. 1
Issue Date: October 21, 2010

Orgaworld Canada Ltd.
5123 Hawthorne Rd
Ottawa, Ontario
K1G 3Y3

Site Location: Orgaworld Canada Ltd. Ottawa Composting Facility
5123 Hawthorne Rd Lot 27, Conc.6, Reference Plan 2003 Official Plan
Ottawa City,

You are hereby notified that I have amended Provisional Certificate of Approval No. 2766-7HEPSZ issued on September 16, 2009 for 10.12-hectare Waste Disposal Site (Processing) serving the Provinces of Ontario and Quebec, for the temporary storage, transfer and processing (composting) of solid non-hazardous, domestic, commercial, institutional or industrial organic waste, *as follows:*

1. The following definitions are added:

   "Mobile Unit" means the mobile grinding unit proposed for the temporary operation at the Site and described in Items #5 and #6 of the attached Schedule "A";

   "Mobile Unit Start-up Date" means the day on which the mobile grinding unit commenced operating at the Site and as per the required notification to the District Manager;

2. The following conditions are added:

   5. (6) (b) (i) The Owner may process the Organic Waste limited to the 10-100 fraction, generated by screening of the Immature Compost and described in Item #7 of the attached Schedule "A".

   (ii) The Organic Waste processing referred to in Condition 5.(6)(b)(i), above, shall be undertaken by the Mobile Unit as defined in this Certificate.

   (iii) Should the Organic Waste processing referred to in Conditions 5.(6)(b)(i) and (ii), be

undertaken outdoors, the Mobile Unit shall be located as shown on the drawing described in Item #5.(b) of the attached Schedule "A".

(c) Within three (3) days following the commencement of the Mobile Unit operation, the Owner shall notify the District Manager, in writing, of the Mobile Unit Start-up Date.

(d) The duration of the Mobile Unit operation shall not exceed five (5) weeks from the Mobile Unit Start-up Date.

(e) Within seven (7) days from completion of the Mobile Unit operation, the Owner shall notify the District Manager, in writing, that the Mobile Unit operation has been completed.

3. The following documents were added to Schedule "A":

5. Application for this Certificate dated October 12, 2010 and signed by Henk Kaskens, Orgaworld Canada Ltd., including the following supporting documentation:

   (a) letter dated October 12, 2010 from Tej Gidda, Conestoga-Rovers & Associates, to Director, Environmental Assessment and Approvals Branch, Ontario Ministry of the Environment providing additional information on the proposal
   (b) Figure 1 entitled "Temporary 10-100 Material Shredding Location, Amendment Application to Certificate of Approval (Waste) No. 2766-7HEPSZ, Organics Composting Facility, Ottawa, Ontario"
   (c) Figure 2 entitled "Point of Reception Locations, Orgaworld Canada Ltd, Ottawa Ontario" and prepared by Conestoga-Rovers & Associates

6. E-mail dated October 14, 2010 (5:00 p.m.) from Tej Gidda, Conestoga-Rovers & Associates, to Margaret Wojcik, Ontario Ministry of the Environment, providing the maximum amount of waste to be processed by the Mobile Unit, the expected truck traffic and the schedule of the ground waste removal off-site.

7. E-mail dated October 18, 2010 (3:41 p.m.) from Greg Mariotti, Orgaworld Canada Ltd., to Tracy Hart, Ontario Ministry of the Environment, providing confirmation that only 10-100 material associated with the fires and currently stored outdoors will be processed by the Mobile Unit.

The reason for this amendment to the Certificate of Approval is as follows:

to approve a temporary operation of a mobile grinder to allow Orgaworld Canada Inc. to process and remove off-site the 10-100 Organic Waste fraction, which if stored indoors poses a fire hazard and therefore a risk to the health and safety of the environment or any person.

This Notice shall constitute part of the approval issued under Provisional Certificate of Approval No. 2766-7HEPSZ dated September 16, 2009, as amended.

In accordance with Section 139 of the Environmental Protection Act, R.S.O. 1990, Chapter E-19, as amended, you may by written notice served upon me and the Environmental Review Tribunal within 15 days after receipt of this Notice, require a hearing by the Tribunal. Section 142 of the Environmental Protection Act, provides that the Notice requiring the hearing shall state:

1. The portions of the approval or each term or condition in the approval in respect of which the hearing is required, and;
2. The grounds on which you intend to rely at the hearing in relation to each portion appealed.

The Notice should also include:

3. The name of the appellant;
4. The address of the appellant;
5. The Certificate of Approval number;
6. The date of the Certificate of Approval;
7. The name of the Director;
8. The municipality within which the waste disposal site is located;

And the Notice should be signed and dated by the appellant.

This Notice must be served upon:

AMENDMENT TO ENVIRONMENTAL COMPLIANCE APPROVAL
NUMBER 2766-7HEPSZ
Notice No. 2
Issue Date: May 2, 2012

Orgaworld Canada Ltd.
5123 Hawthorne Rd
Ottawa, Ontario
K1G 3Y3

Site Location: Orgaworld Canada Ltd. Ottawa Composting Facility
5123 Hawthorne Rd Lot 27, Conc.6, Reference Plan 2003 Official Plan
Ottawa City,

You are hereby notified that I have amended Approval No. 2766-7HEPSZ issued on September 16, 2009 for 0.12-hectare Waste Disposal Site (Processing) serving the Provinces of Ontario and Quebec, for the temporary storage, transfer and processing (composting) of solid non-hazardous, domestic, commercial, institutional or industrial organic waste, *as follows:*

1. Condition 5.(1)(a) is amended to read as follows:

Receipt and Removal of Waste from the Site

(a) The Owner shall receive waste at the Site and ship waste from the Site between the hours of 6:00 a.m. and 8:00 p.m. Monday through Friday, and between the hours of 7:00 a.m. and 8:00 p.m. on Saturdays.

2. The following documents are added to Schedule "A":

8. Application for Environmental Compliance Approval dated November 8, 2011 and signed and submitted by Michael Rooke, Orgaworld Canada Ltd., and including the cover letter dated November 21, 2011 from Michael Rooke to Director, Waste Unit, Environmental Assessment and Approvals Branch, Ontario Ministry of the Environment.

9. Letter dated December 21, 2011 from Michael Rooke, Orgaworld Canada Ltd. to Julius Arscott, Ontario Ministry of the Environment, providing additional clarification of the proposal, the drawing entitled "Site Plan" and the drawing entitled "Site and Landscape Plan".

The reason for this amendment to the Approval is as follows:

to approve extended waste receipt hours as requested by the Company.

This Notice shall constitute part of the approval issued under Approval No. 2766-7HEPSZ dated September 16, 2009, as amended.

In accordance with Section 139 of the Environmental Protection Act, you may by written Notice served upon me and the Environmental Review Tribunal within 15 days after receipt of this Notice, require a hearing by the Tribunal. Section 142 of the Environmental Protection Act provides that the Notice requiring the hearing shall state:

1. The portions of the environmental compliance approval or each term or condition in the environmental compliance approval in respect of which the hearing is required, and;
2. The grounds on which you intend to rely at the hearing in relation to each portion appealed.

Pursuant to subsection 139(3) of the Environmental Protection Act, a hearing may not be required with respect to any terms and conditions in this environmental compliance approval, if the terms and conditions are substantially the same as those contained in an approval that is amended or revoked by this environmental compliance approval.

The Notice should also include:

3. The name of the appellant;
4. The address of the appellant;
5. The environmental compliance approval number;
6. The date of the environmental compliance approval;
7. The name of the Director, and;
8. The municipality or municipalities within which the project is to be engaged in.

And the Notice should be signed and dated by the appellant.

This Notice must be served upon:

PROVISIONAL CERTIFICATE OF APPROVAL
WASTE DISPOSAL SITE
NUMBER 2766-7HEPSZ
Issue Date: September 16, 2009

Orgaworld Canada Ltd.
Post Office Box, No. 364
Waterloo, Ontario
N2J 4A4

Site Location: Organics Composting Facility (ORGAWORLD Ottawa)
Lot 27, Concession 6
Ottawa City, Ontario

You have applied in accordance with Section 27 of the Environmental Protection Act for approval of:

a 10.12-hectare Waste Disposal Site (Processing) serving the Provinces of Ontario and Quebec, for the temporary storage, transfer and processing (composting) of solid non-hazardous, domestic, commercial, institutional or industrial organic waste at a maximum rate of 1,200 tonnes per day and 150,000 tonnes per year of Organic Waste and encompassing the following processes and support units:

- receipt and temporary storage of Organic Waste in accordance with Condition 2. of this Certificate;
- pre-processing of Organic Waste within an enclosed building;
- composting of the pre-processed Organic Waste in aerated composting tunnels;
- removal of the processed Organic Waste from the composting tunnels at end of the composting process; and
- screening and curing of the immature compost within an enclosed building;

to be used for processing of the following types of waste:

- solid non-hazardous organic waste derived from plants or animals, including wastes consisting of other compounds of carbon, all readily biodegradable, and as listed in Condition 2. of this Certificate.

Note: Use of the site for any other type of waste is not approved under this Certificate, and requires obtaining a separate approval amending this Certificate.

For the purpose of this Provisional Certificate of Approval and the terms and conditions specified below, the following definitions apply:

"*EPA* " means the *Environmental Protection Act* , R.S.O. 1990, c.E-19, as amended;

"***O. Reg.** 347* " means *Ontario Regulation 347* , R.R.O. 1990, General - Waste Management, made under the *EPA* , as amended from time to time;

"**Certificate**" means this entire provisional Certificate of Approval, issued in accordance with Section 39 of the *EPA* , and includes any schedules to it, the application and the supporting documentation listed in Schedule "A;

"**Owner**" means any person that is responsible for the establishment or operation of the Site being approved by this Certificate, and includes Orgaworld Canada Ltd., its successors and assigns;

"**Site**" means the waste disposal site located on Lot 27, Concession 6 (Rideau Front) Gloucester in the City of Ottawa, approved in this Certificate;

"**Organic Waste**" means solid non-hazardous waste derived from plants or animals, including wastes consisting of other compounds of carbon, all readily biodegradable, and as listed in Condition 2. of this Certificate;

"**Composting**" means an aerobic biological process, conducted under controlled engineered conditions designed to decompose and stabilize organic matter; simple exposure of organic matter under non-engineered conditions resulting in uncontrolled decay is not considered composting;

"**Immature Compost**" means Organic Waste which has been composted in the aerated composting tunnels and screened within the confines of the Curing Compost Storage Hall of the Processing Building. Composted Organic Waste is considered an Immature Compost until it has been fully cured and is ready for compliance testing for compost quality criteria. Immature Compost is considered a waste;

"**Finished Compost**" means Organic Waste that has been composted and fully cured and is considered ready for sampling and testing for compliance with the compost quality criteria. Finished Compost is considered a waste until testing for the compost quality criteria is completed and compliance with the criteria is demonstrated;

"**Compost**" means the material produced by an aerobic composting of Organic Waste and which has been tested to show compliance with the compost quality criteria listed in this Certificate and can be used as a soil additive or for other similar uses;

"**District Manager**" means the District Manager of the Ottawa District Office of the Ministry;

"**Director**" means any Ministry employee appointed in writing by the Minister pursuant to section 5 of the *EPA* as a Director for the purposes of Part V of the *EPA* ;

"**Ministry**" means the Ontario Ministry of the Environment;

"***OWRA*** " means the *Ontario Water Resources Act* , R.S.O. 1990, c. O.40, as amended;

"***PA*** " means the *Pesticides Act* , R.S.O. 1990, c. P-11, as amended from time to time;

"*NMA* " means *Nutrient Management Act* , 2002, S.O. 2002, c. 4, as amended from time to time;

"***SDWA*** " means *Safe Drinking Water Act* , 2002, S.O. 2002, c. 32, as amended from time to time;

"**Provincial Officer**" means any person designated in writing by the Minister as a provincial officer pursuant to Section 5 of the *OWRA* or Section 5 of the *EPA* or Section 17 of *PA* or Section 4 of *NMA* or Section 8 of *SDWA* .

"**Residual Waste**" means waste resulting from the Organic Waste processing activities at the Site and the waste that cannot be composted and that is destined for final disposal;

"**Rejected Waste**" means the incoming waste received at the Site that does not meet the incoming waste quality criteria set out in this Certificate or cannot be composted;

"**Air Emission Control Equipment**" means the air emission control equipment to abate emissions to the atmosphere originating from the Processing Building;

"**trained personnel**" means knowledgeable in the following through instruction and/or practice:

(i) relevant waste management legislation, regulations and guidelines;
(ii) major environmental concerns pertaining to the waste to be handled;
(iii) occupational health and safety concerns pertaining to the processes and wastes to be handled;
(iv) management procedures including the use and operation of equipment for the processes and wastes to be handled;
(v) records keeping procedures;
(vi) emergency response procedures;
(vii) specific written procedures for the control of adverse effects from the Site;
(viii) specific written procedures for refusal of unacceptable waste loads;
(ix) the requirements of this Certificate;

"**Processing Building**" means the building at the Site where the Organic Waste is received, pre-processed, composted, screened and cured;

"**Certificate of Approval (Air/Noise)**" means the Certificate of Approval issued under section 9 of the *EPA* for this Site;

"Certificate of Approval (Industrial Sewage)" means the Certificate of Approval issued under section 53 of the *OWRA* for this Site;

You are hereby notified that this approval is issued to you subject to the terms and conditions outlined below:

TERMS AND CONDITIONS

1. **GENERAL**

Compliance

(1) The Owner shall ensure compliance with all the conditions of this Certificate and shall ensure that any person authorized to carry out work on or operate any aspect of the Site is notified of this Certificate and the conditions herein and shall take all reasonable measures to ensure any such person complies with the same.

(2) Any person authorized to carry out work on or operate any aspect of the Site shall comply with the conditions of this Certificate.

Build, etc. in Accordance

(3) Except as otherwise provided by this Certificate, the Site shall be designed, developed, built, operated and maintained in accordance with the application for this Certificate dated June 10, 2008 and signed by Frederick Mosher, Orgaworld Canada Ltd. and the supporting documentation listed in the attached Schedule "A".

As-built Drawings

(4) Within ninety (90) days from the first receipt of waste at the Site, a set of as-built drawings showing the Site, as constructed shall be prepared and kept at the Site.

Interpretation

(5) Where there is a conflict between a provision of any document, including the application referred to in this Certificate and the conditions of this Certificate, the conditions in this Certificate shall take precedence.

(6) Where there is a conflict between the application and a provision in any documents listed in Schedule "A", the application shall take precedence, unless it is clear that the purpose of the document was to amend the application and that the Ministry approved the amendment.

(7) Where there is a conflict between any two documents listed in Schedule "A", other than the application, the document bearing the most recent date shall take precedence.

(8) The requirements of this Certificate are severable. If any requirement of this Certificate, or the application of any requirement of this Certificate to any circumstance, is held invalid or unenforceable, the application of such requirement to other circumstances and the remainder of this Certificate shall not be affected thereby.

Other Legal Obligations

(9) The issuance of, and compliance with the conditions of this Certificate does not:

(a) relieve any person of any obligation to comply with any provision of any applicable statute, regulation or other legal requirement; or

(b) limit in any way the authority of the Ministry to require certain steps be taken or to require the Owner to furnish any further information related to compliance with this Certificate.

Adverse Effects

(10) The Site shall be constructed, operated and maintained in a manner which ensures the health and safety of all persons and prevents adverse effects on the natural environment or on any persons.

(11) The Owner shall take steps to minimize and ameliorate any adverse effect on the natural environment or impairment of water quality resulting from the approved operations at the Site, including such accelerated or additional monitoring as may be necessary to determine the nature and extent of the effect or impairment.

(12) Despite an Owner or any other person fulfilling any obligations imposed by this Certificate, the person remains responsible for any contravention of any other condition of this Certificate or any applicable statute, regulation, or other legal requirement resulting from any act or emission that caused the adverse effect to the natural environment or impairment of water quality.

(13) If at any time odours, pests, litter, dust, noise or other such negative effects are generated at this Site and cause an adverse effect, the Owner shall take immediate appropriate remedial action that may be necessary to alleviate the adverse effect, including suspension of all waste management activities if necessary.

Change of Owner

(14) The Owner shall notify the Director in writing, and forward a copy of the notification to the District Manager, within thirty (30) days of the occurrence of any changes:

(a) the ownership of the Site;
(b) the operator of the Site;

(c) the address of the Owner;
(d) the partners, where the Owner is or at any time becomes a partnership and a copy of the most recent declaration filed under the Business Names Act, R.S.O. 1990, c. B.17, as amended, shall be included in the notification;
(e) the name of the corporation where the Owner is or at any time becomes a corporation, other than a municipal corporation, and a copy of the most current information filed under the Corporations Information Act, R.S.O. 1990, c. C.39, as amended, shall be included in the notification.

(15) No portion of this Site shall be transferred or encumbered prior to or after closing of the Site unless the Director is notified in advance and sufficient financial assurance is deposited with the Ministry to ensure that these conditions will be carried out. In the event of any change in ownership of the Site, other than change to a successor municipality, the Owner shall notify the successor of and provide the successor with a copy of this Certificate, and the Owner shall provide a copy of the notification to the District Manager and the Director.

Inspections by the Ministry

(16) No person shall hinder or obstruct a Provincial Officer from carrying out any and all inspections authorized by the *OWRA* , the *EPA* , the *PA* , the *SDWA* or the *NMA* of any place to which this Certificate relates, and without limiting the foregoing:

(a) to enter upon the premises where the approved processing is undertaken, or the location where the records required by the conditions of this Certificate are kept;
(b) to have access to, inspect, and copy any records required to be kept by the conditions of this Certificate;
(c) to inspect the Site, related equipment and appurtenances;
(d) to inspect the practices, procedures, or operations required by the conditions of this Certificate;
(f) to conduct interviews with staff, contractors, agents and assignees of the company; and
(e) to sample and monitor for the purposes of assessing compliance with the terms and conditions of this Certificate or the *EPA* , the *OWRA* , the *PA* , the *SDWA* or the *NMA* .

Information and Record Retention

(17) Any information requested by the Ministry, concerning the operation of the Site and its operation under this Certificate, including but not limited to any records required to be kept by this Certificate shall be provided to the Ministry,immediately upon request. Records shall be retained for two (2) years except as otherwise authorized in writing by the Director.

(18) The receipt of any information by the Ministry or the failure of the Ministry to prosecute any person or to require any person to take any action, under this Certificate or under any statute, regulation or other legal requirement, in relation to the information, shall not be construed as:

(a) an approval, waiver, or justification by the Ministry of any act or omission of any person

that contravenes any term or condition of this Certificate or any statute, regulation or other legal requirement; or

(b) acceptance by the Ministry of the information's completeness or accuracy.

(19) The Owner shall ensure that a copy of this Certificate, in its entirety and including all its Notices of Amendment, and the documentation listed in Schedule "A", are retained at the Site at all times.

Financial Assurance

(20) (a) A minimum of sixty (60) days prior to the first receipt of the waste at the Site, the Owner shall submit to the Director, Financial Assurance, as defined in Section 131 of the *EPA*. This Financial Assurance shall be in a form acceptable to the Director and shall provide sufficient funds for the transportation, Site clean-up and disposal of all quantities of waste on the Site at any one time. No waste shall be received at the Site unless the acceptable Financial Assurance has been submitted to the Ministry and approved by the Director.

(b) The Financial Assurance shall be provided to the Ministry in accordance with the schedule stipulated in the attached Schedule "C". The Owner shall not receive and store more waste than the amount for which the financial assurance has been provided for and approved by the Director, in accordance the most up-to-date version of Schedule "C".

(c) Commencing on March 31, 2012 and at intervals of three (3) years thereafter, the Owner shall submit to the Director, a re-evaluation of the amount of Financial Assurance to implement the actions required under Condition 1.(20)(a). The re-evaluation shall include an assessment based on any new information relating to the environmental conditions of the Site and shall include the costs of additional monitoring and/or implementation of contingency plans required by the Director upon review of the closure plan and annual reports. The Financial Assurance re-evaluation submission must include the quotes of the Financial Assurance must be submitted to the Director within ten (10) days of written acceptance of the re-evaluation by the Director.

(d) Commencing on March 31, 2010, the Owner shall prepare and maintain at the Site an updated re-evaluation of the amount of the Financial Assurance required to implement the actions required under Condition 1.(20)(a) for each of the intervening years in which a re-evaluation is not required to be submitted to the Director under Condition 1.(20)(c). The re-evaluation shall be made available to the Ministry, upon request.

(e) The amount of the Financial Assurance is subject to review at any time by the Director and may be amended at his/her discretion. If any Financial Assurance is scheduled to expire or notice is received, indicating the Financial Assurance will not be renewed, and satisfactory methods have not been made to replace the Financial assurance at least sixty (60) days before the Financial Assurance terminates, the Financial Assurance shall

forthwith be replaced by cash.

2. SERVICE AREA, APPROVED WASTE TYPES, RATES & STORAGE

(1) The Site may only accept solid non-hazardous domestic, commercial, institutional or industrial Organic Waste from the Provinces of Ontario and Quebec, limited to the following Organic Waste:

(a) Source-separated Organic Waste limited to the following:
  (i) Food wastes: fruit, vegetable and general table scraps, meat and fish products, dairy products, egg shells, confectionery products, sauces, bones, pet food, fat, bread and grains, rice, pasta, coffee grounds, filters;
  (ii) Paper fibres: soiled paper towels, tissues, paper plates, soiled paper food packaging items such as boxboard, cardboard, newspaper, and other packaging materials;
  (iii) Miscellaneous: houseplants and yard wastes, dryer lint and hair, pet fur, sawdust and wood shavings and litter or bedding.

(b) Organic Waste from the food processing industry and other industries that produce food wastes;

(c) Organic Waste from the commercial sector, including but not be limited to food waste from restaurants, hotels, institutions, commercial operations that collect organic wastes;

(d) Leaf & yard waste;

(e) Organic sludges, including but not be limited to starches and paper wastes, but excluding sewage sludge and biosolids.

(2) (i) The Owner shall not accept at the Site sanitary products and human body waste.

(ii) The Owner shall not accept at the Site any waste that is collected through a waste collection program that allows use of plastic bags.

(iii) The Owner shall not accept at the Site any waste that is classified as hazardous waste or liquid industrial waste in accordance with *O. Reg. 347* .

(3) The Owner is only approved to receive Organic Waste in quantities that are not to exceed:

(a) a maximum of 1,200 tonnes on a daily basis; and

(b) a maximum of 150,000 tonnes per year.

(4) The Owner is approved to store the following amounts of waste at the Site:

(a) unprocessed Organic Waste stored within the Processing Building awaiting processing shall not exceed 3,000 tonnes;

(b) leaf & yard waste stored at the Site shall not exceed 1,500 tonnes;

(c) Organic Waste, including leaf & yard waste and biofilter medium waste, undergoing Composting in the composting tunnels shall not exceed 5,040 tonnes;

(d) Immature Compost in various stages of curing shall not exceed 10,000 tonnes;

(e) Residual Waste and Rejected Waste shall not exceed 1,000 tonnes.

(5) Waste storage at the Site is subject to the following limitations:

(a) unprocessed Organic Waste, excluding leaf & yard waste, shall be stored within the confines of the Processing Building;

(b) leaf & yard waste shall be stored within the confines of the Processing Building, or in accordance with the requirements of Condition 6.(14) of the Certificate of Approval (Industrial Sewage) for this Site;

(c) Immature Compost in various stages of curing shall be stored within the confines of the Processing Building;

(d) solid Residual Waste shall be stored in lugger bins located within the confines of the Processing Building;

(e) solid putrescible waste generated through activities not relating to the handling and processing of Organic Waste (ie. office, lunch room, etc.) may be stored in a covered bin outdoors and it shall be removed from the Site as required in accordance with *O. Reg 347* and the *EPA* .

(6) Organic Waste storage duration is limited to the following:

(a) The maximum storage duration of the leaf & yard waste shall not exceed thirty (30) days from the time of its receipt.

(b) The maximum storage duration of the purchased wood amendment materials shall not exceed ninety (90) days from the time of their receipt.

(c) The maximum storage duration of the Organic Waste within the Processing Building prior to loading into the aerated composting tunnels shall not exceed the time period that is required to accumulate enough Organic Waste to fill one (1) composting tunnel.

(d) The Owner shall not store the Residual Waste at the Site in excess of thirty (30) days

from the date of its generation, or as directed by the District Manager.

(e) If in the opinion of the District Manager, the duration of waste storage from (a) and/or (b) and/or (d), above, results in odour complaint(s), the Owner, in consultation with the District Manager shall undertake appropriate steps, including reducing waste storage duration, so that odour complaint(s) are eliminated.

(7) No outside waste storage other than that described in Condition (5), above, is approved under this Certificate.

(8) The Company shall ensure that all waste storage is undertaken in a manner that does not cause an adverse effect or a hazard to the environment or any person.

(9) In the event that Organic Waste cannot be processed at the Site and the Site is at its approved waste storage capacity, the Owner shall cease accepting additional Organic Waste. Receipt of additional Organic Waste may be resumed once such receipt complies with the waste storage limits approved in this Certificate.

(10) All waste removed from the Site for final disposal shall only be disposed of at a site for which a Provisional Certificate of Approval has been issued by the Ministry and the site is approved to receive this type and quantity of waste.

3. SIGNS

(1) Prior to receipt of waste at the Site, the Owner shall ensure that a sign is posted at the entrance to the Site. The sign shall be visible from the main road leading to the Site. The following information shall be included on the sign:

(a) name of the Owner;
(b) this Certificate number;
(c) hours during which the Site is open;
(d) waste types that are approved to be accepted at the Site;
(e) Owner's telephone number (a hotline) to which complaints may be directed;
(f) Owner's twenty-four hour emergency telephone number (if different from above);
(g) a warning against unauthorized access;
(h) a warning against dumping at the Site.

(2) The Owner shall ensure that appropriate signs are posted at the Site clearly identifying the waste and stating warnings about the nature of the waste and any possible hazards.

4. SITE SECURITY

(1) All unloading and loading of waste and all waste processing activities at the Site shall at all times be undertaken by Trained Personnel.

(2) The Owner shall ensure that access to the Site is regulated and that all entrances are secured by lockable gates to restrict access only to authorized personnel when the Site is not open.

(3) The Owner shall ensure that the Site is operated in a safe and secure manner, and that waste is properly handled, packaged or contained and stored so as not to pose any threat to the general public and the Site personnel.

(4) The Owner shall ensure that all entrances and storage areas are to be adequately lit.

5. **SITE OPERATIONS**

(1) The Site is approved to operate within the following operating hours, subject to limitations of the local municipal by-laws:

Receipt and Removal of Waste from the Site

(a) The Owner shall receive waste at the Site and ship waste from the Site between the hours of 6:00 a.m. and 7:00 p.m. Monday through Friday, and between the hours of 7:00 a.m. and 7:00 p.m. on Saturdays.

Shipment of Compost from the Site

(b) Compost may be shipped from the Site Monday through Friday between the hours of 7:00 a.m. and 7:00 p.m. and between 7:00 a.m. and 5:00 p.m. on Saturdays.

Processing Within the Processing Building

(c) The Owner may process waste within the confines of the Processing Building twenty four (24) hours per day, seven (7) days per week.

Approved Outdoor Activities

(d) All approved outdoor activities shall be undertaken Monday through Friday between the hours of 7:00 a.m. and 7:00 p.m. and between 7:00 a.m. and 5:00 p.m. on Saturdays.

Emergency Receipt of Waste

(e) The Owner may receive waste at the Site outside of the operating hours specified in subcondition (i), above, on an emergency basis only.

(f) Within seventy two (72) hours from the emergency receipt of waste, the Owner shall notify, in writing, the District Manager that waste was received outside of the approved hours.

(g) If in the opinion of the District Manager, the emergency receipt of waste results in complaint(s), the Owner shall not receive waste outside of the approved hours.

(2) Incoming Organic Waste receipt:

(a) The Owner shall ensure that all unloading of Organic Waste shall take place entirely

within the confines of the Processing Building except for the receipt of the leaf & yard waste approved to be unloaded and stored in accordance with the requirements of Condition 6.(14) of the Certificate of Approval (Industrial Sewage) for this Site.

(b) All loads of incoming Organic Waste shall be accompanied by documentation containing the results of the required waste characterization or the identification of a pre-approved generator of waste.

(c) Trained Personnel shall inspect the required documentation prior to acceptance of the incoming Organic Waste at Site.

(d) Organic Waste that have not been characterized in accordance with this Certificate or that is not accompanied by the required documentation shall not be accepted at the Site and shall immediately be directed off-Site.

(e) Trained Personnel shall also visually inspect the incoming Organic Waste to ensure that only approved waste type is accepted at the Site.

(f) The Owner shall only accept the incoming Organic Waste that is delivered in vehicles that have been approved by the Ministry, as required.

(3) Rejected Waste handling:

(a) In the event that waste that is not approved under this Certificate is inadvertently accepted at the Site, the Owner shall ensure that all Rejected Waste:

(i) is stored in a way that ensures that no adverse effects result from such storage;
(ii) is segregated from all other waste;
(iii) is handled and removed from the Site in accordance with *O.Reg. 347* and the *EPA* ;
(iv) is removed from the Site within three (3) days of its receipt or as acceptable to the District Manager.

(b) (i) In the event that Rejected Waste is inadvertently accepted at the Site, a record shall be made in the daily log book or in an electronic file of the reason why the waste was rejected and of the origin of the waste, if known.

(ii) The District Manager shall be notified in writing of the receipt of unacceptable waste within four (4) business days of its receipt. The following information shall be included in the notification to the District Manager:

- quantity and type of the Rejected Waste;
- source of the Rejected Waste, if known;
- final destination of the Rejected Waste; and
- date of receipt and time and date of removal from the Site.

(4) Should outdoor storage of leaf & yard waste be undertaken, the following handling procedures must be followed:

(a) The Owner shall ensure that, if needed, the leaf & yard waste storage stockpiles are turned at a rate frequent enough to reduce the likelihood of anaerobic conditions arising within the stockpiles.

(b) Upon the receipt of the leaf & yard waste at the Site, the Owner shall inspect the received waste, separate potentially odourous components and immediately transfer these potentially odourous components into the Processing Building.

(c) Should anaerobic conditions arise in a leaf & yard waste pile, or, in a specific portion of a leaf & yard waste pile, the Owner shall ensure that this portion of leaf & yard waste is prioritized for use within the composting process within twenty four (24) hours of anaerobic conditions occurring, or, if this is not practical, the Owner shall remove of the waste from the Site within twenty four (24) hours.

(5) Residual Waste handling:

(a) The Owner shall ensure that storage of solid Residual Waste resulting from processing of Organic Waste at the Site is undertaken within the confines of the Processing Building.

(6) Waste Processing:

(a) The Owner shall ensure that all Organic Waste pre-processing, composting, screening and curing of Immature Compost are undertaken within the confines of the Processing Building.

(7) Odour Control:

(a) The Owner shall maintain and monitor a negative air pressure atmosphere within the Processing Building at all times in accordance with the documents in Schedule "A". In the event that adequate negative air pressure cannot be maintained within the Processing Building, the Owner shall cease accepting additional Organic Waste waste and shall keep the loading bay doors and the air intake louvers closed until such time that negative pressure is re-established.

(b) The Owner shall ensure that the outside loading bay doors into the Small Truck and Large Truck Halls of the Processing Building are kept closed at all times except to permit the entry or exit of waste transportation vehicles.

(c) The Owner shall ensure that the loading bay doors into the Compost Curing Storage Hall of the Processing Building are kept closed at all times except to permit the entry or exit of Compost transportation equipment.

(d) The Owner shall maintain an air lock when Organic Waste is received in the Small Truck Receiving Hall of the Processing Building.

(e) The Owner shall ensure that, at all times, the air from the Processing Building is exhausted through an appropriate air pollution control equipment approved by the Ministry in the Certificate of Approval (Air/Noise).

(f) If in the opinion of the District Manager, the air emissions originating from the leaf & yard waste stockpile in the future outdoor storage area result in odour complaint(s), the Owner shall within two (2) days of the receipt of the written notification from the District Manager move the leaf & yard waste from the future outdoor storage area into the Processing Building.

(g) The Owner shall ensure that no equipment handling Organic Waste or their storage containers are kept outside, unless they have been washed to prevent odours.

6. EQUIPMENT AND SITE INSPECTIONS & MAINTENANCE

(1) Prior to receipt of any waste at the Site, the Owner shall prepare a comprehensive written inspection program which includes inspections of all aspects of the Site's operations including the following:

(a) loading/unloading area of the leaf & yard waste storage pad;
(b) parking lot area for evidence of run-off from the leaf & yard waste storage pad;
(c) Processing Building and the air pollution control equipment;
(d) security fence and property line;
(e) on-site roads for presence of leaks and drips from the waste delivery trucks;
(f) presence of excessive fugitive dust emissions from the on-site roads or the Compost stockpiles;
(g) on and off-site litter;
(h) presence of vector and vermin.

(2) The inspections are to be undertaken daily by Trained Personnel in accordance with the inspection program to ensure that all equipment and facilities at the Site are maintained in good working order at all times and that no off Site impacts are occurring. Any deficiencies detected during these regular inspections must be promptly corrected.

(3) The Owner shall develop and implement a preventative maintenance program for all on-Site equipment associated with the processing and managing of waste and control of odour and dust emissions. The preventative maintenance program shall be maintained up-to-date and shall be available for inspection by a Provincial Officer upon request.

7. QUALITY CRITERIA , TESTING & MONITORING

(1) **Cross-Contamination Prevention**

(a) The Owner shall ensure that the incoming Organic Waste and the equipment used in handling of the incoming Organic Waste are kept separate and do not come in contact with the Immature Compost / the Finished Compost and the Compost except where the Immature Compost / the Finished Compost and the Compost are being fed back into the composting process.

(b) On an emergency basis, the Owner may use equipment utilized in processing of incoming Organic Waste to process the Immature Compost / the Finished Compost and the Compost provided that the equipment has been cleaned to prevent the Immature Compost / the Finished Compost and the Compost from being contaminated by the incoming Organic Waste.

(2) **Quality Control Monitoring of Organic Waste at the generator site:**

(a) Prior to being accepted at the Site for the first time, the incoming Organic Waste from a new source/stream shall be characterized in accordance with the Ministry's regulatory requirements for sampling and testing to ensure that the incoming Organic Waste complies with the quality criteria specified in this Certificate. The incoming Organic Waste may be considered a pre-approved waste source/stream once the incoming Organic Waste meets the required quality criteria and has been classified as such by the Company.

(b) The incoming Organic Waste shall be re-characterized following any process changes, operational issues or other factors that may affect the quality of the incoming Organic Waste from the pre-approved source/stream.

(3) **Quality Control Monitoring of the Incoming Organic Waste**

(a) The Owner shall not accept for composting any individual Organic Waste source or an additive necessary for composting that exceeds the following quality parameters set out in "Schedule B" of this Certificate:

(i) trace elements;
(ii) organic chemicals.

(b) The Owner shall conduct quality control monitoring of the incoming Organic Waste, except leaf & yard waste, as follows:

(i) incoming Organic Waste from each source shall be sampled and analyzed weekly;

(ii) for incoming Organic Waste from a particular source with consistent quality as demonstrated through a minimum of four (4) analytical events spaced over a minimum of four (4) weeks, the sampling frequency may be reduced to once every two (2) months; and

(iii) all new sources of incoming Organic Waste shall be sampled and analyzed in accordance to (a) above, prior to incorporation into the composting process.

Finished Compost Quality Criteria

(4) Finished Compost is considered to be a Compost when it meets the following compost quality criteria:

(a) compost quality criteria set out in Schedule "B" of this Certificate; and

(b) curing duration of a minimum of twenty one (21) days and compliance with one (1) of the following three (3) maturity criteria:

(i) the respiration rate is less than, or equal to, 400 milligrams of oxygen per kilogram of volatile solids (or organic matter) per hour; or

(ii) the carbon dioxide evolution rate is less than, or equal to, 4 milligrams of carbon in the form of carbon dioxide per gram of organic matter per day; or

(iii) the temperature rise of the compost above ambient temperature is less than 8°C.

using this one

Non-compliance with Compost Quality Criteria

(5) (a) Finished Compost is considered a waste until sampling/testing required by this Certificate demonstrates that all compost quality criteria specified in this Certificate are met. The Owner shall segregate the Immature Compost at various stages of curing until all compost quality criteria specified in this Certificate are tested for and met.

(b) Finished Compost that continues to be classified as waste shall be handled in accordance with *O. Reg. 347* and the *EPA* .

(c) (i) Finished Compost that does not meet the pathogen criteria from Schedule "B" and/or non-biodegradable matter criteria from Condition 7.(4) shall be moved back to the Processing Building for re-processing.

(ii) Should Finished Compost consistently exceed the pathogen criteria set out in Schedule "B" of this Certificate, as demonstrated by five (5) sampling/testing events, the Owner, in consultation with the District Manager, shall implement appropriate modifications to the Composting process to ensure consistent destruction of pathogens in the compost.

(d) Finished Compost that does not meet the maturation criteria from Condition 7.(4) shall be re-tested and shall not be removed from the Curing Building until the maturation criteria are met.

(e) Finished Compost that does not meet the trace elements and/or organic chemicals criteria from Schedule "B" shall be kept segregated from all other compost and waste and shall be disposed of in accordance with *O. Reg. 347* and the *EPA* .

Quality Control Monitoring of Finished Compost

(6) The Owner shall conduct quality control monitoring of the Finished Compost as follows:

(a) a composite sample, consisting of a minimum of ten (10) representative grab samples, shall be collected for every 500 tonnes of Finished Compost produced during the first four (4) months of operation; and

(b) following the first four (4) months of operation, a composite sample, consisting of a minimum of ten (10) representative grab samples, shall be collected every two (2) months representing all compost generated within the preceding sixty (60) days or every 5,000 tonnes of Finished Compost, whichever comes first; and

(c) if non-compliance with the compost quality criteria has taken place during five (5) consecutive sampling events, the Owner shall sample and test compost in accordance with (a) until compliance with the compost criteria is demonstrated again.

(d) all composite samples shall be analyzed for the parameters listed in Schedule "B".

Sampling And Testing Methods

(7) All sampling and testing required in this Certificate for the purpose of verifying compliance with the finished compost criteria from Condition 7.(4) shall be undertaken in compliance with the document entitled "National Standard of Canada CAN/BNQ 0413-200/2005 Organic Soil Conditioners – Composts", dated 2005, as amended from time to time.

Process Monitoring

(8) The Owner shall ensure that the following process parameters are monitored:

(a) temperature of the composting Organic Waste in the composting tunnels;
(c) inlet air temperature;
(d) outlet air temperature;
(e) relative humidity in the composting tunnels;
(f) air flow into the tunnels;
(g) oxygen content in the air; and

(h) temperature of the Immature Compost in the curing piles.

Compliance With Composting Process Operating Parameters

(9) (a) The Owner shall ensure that the composting Organic Waste is maintained in the composting tunnels at a minimum temperature of 55°C for a minimum of seventy two (72) hours, as measured at any point one (1) metre inside the composting mass, to ensure complete inactivation of pathogens in the composting Organic Waste.

(b) The temperature must be monitored daily and at points sufficient to provide a temperature profile of the composting Organic Waste.

(c) Should temperature monitoring show that the above has not been achieved, the composting process must be continued until the above requirement has been achieved.

Temperature Monitoring Within the Curing Stockpiles

(10) As a minimum, the Owner shall monitor the temperature of the Immature Compost within the curing stockpiles daily. The measurements shall be taken one (1) metre inside the curing stockpile mass and at points sufficient to provide a temperature profile of the Immature Compost.

(11) Should the temperature of the Immature Compost within the curing stockpile reheat to the thermophillic temperature of 55°C, as demonstrated by the temperature monitoring required by this Certificate, the Company shall remove the Immature Compost from the curing stockpile area and shall re-introduce it into the composting tunnels to complete the composting process.

(12) Should the Immature Compost within the curing stockpiles consistently reheat to the thermophillic temperature of 55°C, as demonstrated by five (5) events of removal of the Immature Compost from the curing area to the composting tunnels, the Owner, in consultation with the District Manager, shall implement appropriate modifications to the composting process to ensure complete biodegradation of organic matter within the waste in the composting tunnels.

Odour Monitoring Program

(13) A minimum of ninety (90) days prior to any waste being received at the Site, the Company shall prepare and submit to the District Manager an Odour Monitoring Program. The Odour Monitoring Program shall be designed to detect and identify any odours originating from the operation of the Site which may cause nuisance impacts. The Odour Monitoring Program shall include a description of the equipment and inspection protocol to ensure that negative pressure is maintained at all times throughout the processing building. The Odour Monitoring Program shall be implemented after written concurrence from the District Manager has been received. In the future should it be necessary to modify the approved Odour Monitoring Program the written authorization of the District Manager.

8. NUISANCE IMPACT CONTROL & HOUSEKEEPING

(1) The Owner shall ensure that all vehicles that have delivered waste to the Site are not leaking or dripping waste when leaving the Site.

(2) The Owner shall ensure that the exterior of all trucks delivering waste to the Site is cleaned prior to leaving the Site, as needed, to prevent odours. Truck washing shall occur only in the dedicated wash down area of the processing building.

(3) The Owner shall ensure that there is no queuing or parking of vehicles that are waiting to enter the Site on any roadway that is not a distinct part of the Site.

(4) Should the Owner become aware that the truck(s) delivering waste to the Site have leaked wastewater on the municipal roadways, the Owner shall immediately notify the owner of the leaking vehicle(s) and the District Manager about the leak problem.

(5) The Owner shall:

(a) take all practical steps to prevent the escape of litter from the Site;
(b) pick up litter around the Site on a daily basis, or more frequently if necessary; and
(c) if necessary, erect litter fences around the areas causing a litter problem.

(6) Prior to the receipt of any waste at the Site, the Owner shall:

(a) implement necessary housekeeping procedures to eliminate sources of attraction for vermin and vectors; and
(b) hire a qualified, licensed pest control professional to design and implement a pest control plan for the Site. The pest control plan shall remain in place, and be updated from time to time as necessary, until the Site has been closed and this Certificate has been revoked.

(7) The Owner shall ensure that all on-Site roads and operations/yard areas are regularly swept/washed to prevent dust impacts off-Site.

(8) (i) The Owner shall store Compost within the confines of the Processing Building, or in accordance with the requirements of Condition 6.(14) of the Certificate of Approval (Industrial Sewage) for this Site.

(ii) Notwithstanding the requirements of Condition 8.(8)(i), above, the Owner shall ensure that the Compost stockpiles are not a source of fugitive dust emissions. If the proposed Compost storage features are deemed insufficient to control the fugitive dust emissions from the Compost stockpiles, the Owner shall provide additional covers or spray the stockpiles with water, or use any other method to minimize the fugitive dust emissions.

(9) The Owner shall regularly clean and disinfect, if necessary, all equipment and storage areas that

are used to handle and process waste at the Site.

9. OPERATIONS MANUAL & STAFF TRAINING

(1) The Owner shall prepare an Operations Manual for use by the Site personnel. The Operations Manual shall contain the following:

(a) outline the responsibilities of the Site personnel;
(b) personnel training protocols;
(c) waste receiving and screening procedures;
(d) unloading, handling and storage procedures;
(e) waste processing procedures;
(f) sampling and testing procedures;
(g) Site inspections and recording procedures;
(h) the emergency response procedures;
(i) procedure for handling complaints as described in the Certificate of Approval (Air/Noise) for this Site.

(2) A copy of this Operations Manual shall be kept at the Site, must be accessible to personnel at all times and must be updated, as required.

(3) (a) All operators of the Site shall be trained with respect to the following:

(i) terms, conditions and operating requirements of this Certificate;
(ii) operation and management of the Site, or area(s) within the Site, as per the specific job requirements of each individual operator, and which may include procedures for receiving, screening and identifying waste, refusal, handling, processing and temporarily storing wastes;
(iii) an outline of the responsibilities of Site personnel including roles and responsibilities during emergency situations;
(iv) the Emergency Response and Contingency Plan including exit locations and evacuation routing, and location of relevant equipment available for emergency situations;
(v) environmental, and occupational health and safety concerns pertaining to the wastes to be handled;
(vi) emergency first-aid information;
(vii) relevant waste management legislation and regulations, including the *EPA* and *O. Reg. 347* ;
(viii) recording procedures as required by this Certificate;
(ix) equipment and site inspection procedures, as required by this Certificate;
(x) nuisance impact control & housekeeping procedures, as required by this Certificate; and
(xi) procedures for recording and responding to public complaints as required by the Certificate of Approval (Air/Noise) for this Site.

(4) The Owner shall ensure that all personnel are trained in the requirements of this Certificate relevant to the employee's position:

(a) upon commencing employment at the Site in a particular position;
(b) whenever items listed in Condition 9.(1) are changed or updated.

10. EMERGENCY RESPONSE AND CONTINGENCY PLAN

(1) Within six (6) months from the date of this Certificate, the Company shall submit to the District Manager an Emergency Response and Contingency Plan. The Emergency Response and Contingency Plan shall be prepared in consultation with the District Manager, the local Municipality and the Fire Department and as a minimum it shall include the following information:

(a) emergency response procedures to be undertaken in the event of a spill, process upset, power failure, fire or any other emergency situation, including specific clean up methods for wastes expected to be generated from the emergency situation;

(b) a list of equipment and clean up materials available for dealing with the emergency situations;

(c) notification protocol with names and telephone numbers of persons to be contacted, including persons responsible for the Site, the Ministry's District Office and Spills Action Centre, the local Fire Department, the local Municipality, the local Medical Officer of Health, and the Ministry of Labour, and the names and telephone numbers of waste management companies available for emergency response;

(d) procedures and actions to be taken should the incoming Organic Waste not meet the quality criteria specified by this Certificate;

(e) procedures and actions to be taken should the outgoing Residual Waste not meet the quality criteria required by the specified by this Certificate;

(f) procedures and actions to be taken should the composted Organic Waste fail to meet the compost quality criteria specified by the Certificate;

(g) procedures and actions to be taken should the occurrence of the complaints require the Company to suspend the waste processing activities at the Site.

(2) No waste shall be received at the Site for storage or processing until the District Manager provides a written concurrence to the Emergency Response and Contingency Plan required by Condition 10.(1).

(3) An up-to-date version of the Emergency Response and Contingency Plan shall be kept at the Site at all times, in a central location available to all staff, and a copy shall be submitted to the District Manager, the local Municipality and the Fire Department.

(4) The Emergency Response and Contingency Plan shall be reviewed on an annual basis and updated, if necessary. The revised version of the Emergency Response and Contingency Plan shall be submitted to the District Manager, the local Municipality and the Fire Department for comments and concurrence.

11. EMERGENCY SITUATIONS RESPONSE AND REPORTING

(1) The Company shall immediately take all necessary measures, as outlined in the Emergency Response and Contingency Plan, to handle the emergency situations occurring at the Site.

(2) The Company shall ensure that the equipment and materials outlined in the Emergency Response and Contingency Plan are immediately available at the Site at all times and are in a good state of repair and fully operational.

(3) The Company shall ensure that all Site personnel are fully trained in the use of the equipment and materials outlined in the Emergency Response and Contingency Plan, and in the procedures to be employed in the event of an emergency.

(4) All Spills, as defined in the *EPA* , shall be immediately reported to the **Ministry's Spills Action Centre at 1-800-268-6060** and shall be recorded in the log book as to the nature and cause of the spill, and the action taken for clean-up, correction and prevention of similar future occurrences.

(5) Should a Spill, as defined in the *EPA* , occur at the Site, in addition to fulfilling the requirements from the *EPA* , the Company shall submit to the District Manager a written report within three (3) calendar days outlining the nature of the Spill, remedial measure taken and the measures taken to prevent future occurrences at the Site.

12. RECORDS KEEPING

Daily Activities

(1) The Owner shall maintain an on-Site written or digital record of activities undertaken at the Site. All measurements shall be recorded in consistent metric units of measurement. The record shall include, as a minimum, the following information:

(a) date, quantity, source and type of Organic Waste, (including any analytical data), received at the Site;
(b) date, quantity, type and the destination of Compost, transferred off-Site;
(c) date, quantity, type and the destination of Residual Waste, transferred off-Site for final disposal;

(d) date, quantity, type and the destination of Rejected Waste, transferred off-Site;
(e) pre-composting and post-composting processing activities undertaken at the Site;
(f) tunnel loading / unloading activities and number of tunnels actively undergoing composting;
(g) amount of Immature Compost transferred from the tunnels to the curing area;
(h) amount of Compost transferred from the curing area to the outdoor Compost storage area;
(i) housecleaning activities, including litter collection, floor washing, leaf & yard waste pad cleaning activities;

Emergency Situations

(3) The Owner shall maintain an on-Site written or digital record of the emergency situations. The record shall include, as a minimum, the following:

(a) the type of an emergency situation;
(b) description of how the emergency situation was handled;
(b) the type and amount of material spilled, if applicable;
(b) a description of how the spilled material was cleaned up and stored, if generated; and
(c) the location and time of final disposal, if applicable.

Inspections

(4) The Owner shall maintain an on-Site written or digital record of inspections as required by this Certificate. The record shall include, as a minimum, the following:

(a) the name and signature of person that conducted the inspection;
(b) the date and time of the inspection;
(c) the list of any deficiencies discovered;
(d) the recommendations for remedial action; and
(e) the date, time and description of actions taken.

Training

(5) The Owner shall maintain an on-Site written or digital record of training as required by this Certificate. The record shall include, as a minimum, the following:

(a) date of training;
(b) name and signature of person who has been trained; and
(c) description of the training provided.

Sampling & Testing Records

(6) The Owner shall establish and maintain a written or digital record of all sampling and testing activities at the Site. This record shall include, as a minimum, the following information:

(a) waste sampled, sample collection locations and volume collected;
(b) day and time of collection;
(c) sample handling procedures;
(d) parameters tested for and the resulting concentrations;
(e) name of the laboratory facility conducting the testing;
(f) conclusions drawn with respect to the results of the monitoring and testing.

Monitoring Records

(7) The Owner shall establish and maintain a written or digital record of all monitoring activities at the Site as required by this Certificate.

Complaints Response Records

(8) The Owner shall establish and maintain a written or digital record of complaints received and the responses made as required by the Certificate of Approval (Air/Noise) for this Site.

Annual Report

(9) By March 31st following the end of each operating year, the Owner shall prepare and submit to the District Manager and the Public Liaison Committee (PLC), an Annual Report summarizing the operation of the Site covering the previous calendar year. This Annual Report shall include, as a minimum, the following information:

(a) a monthly mass balance of the Organic Waste received, processed and transferred from this Site, including waste type, quantity, sources and/or disposal destinations;
(b) an annual summary mass balance of the Organic Waste received, processed and transferred from this Site, including waste type, quantity, sources and/or disposal destination;
(c) an annual summary of any deficiencies, items of non-compliance or process aberrations that occurred at this Site and any remedial/mitigative action taken to correct them;
(d) a descriptive summary of any spills, incidents or other emergency situations which have occurred at this Site, any remedial measures taken, and the measures taken to prevent future occurrences;
(e) a summary describing any Rejected Waste including quantity, waste type, reasons for rejection and origin of the Rejected Waste;
(f) any environmental and operational problems, that could negatively impact the environment, encountered during the operation of the Site or identified during the facility inspections and any mitigative actions taken;
(g) any changes to the Emergency Response and Contingency Plan, the Operations Manual or the Closure Plan that have been approved by the Director since the last Annual Report;
(h) any recommendations to minimize environmental impacts from the operation of the Site and to improve Site operations and monitoring programs in this regard;

(i) a summary of any complaints received and the responses made, as required by the Certificate of Approval (Air/Noise);
(j) an update on the amount of Financial Assurance which has been provided to the Director;
(k) update on activities of the PLC;
(l) a condition-by-condition analysis of compliance with all Conditions of this Certificate.

13. WASTEWATER MANAGEMENT

(1) The Owner shall ensure that all wastewater generated within the Processing Building is:

(a) contained within the Processing Building;
(b) collected in the sufficiently designed wastewater storage facilities; and
(c) either utilized in the process or discharged to the sanitary sewer or disposed of at a Ministry-approved site.

(2) The Owner shall ensure that no sumps or wastewater storage/holding areas are located in the vicinity of the loading bay doors into the Processing Building.

(3) The Owner shall regularly empty, clean and disinfect if necessary, all sumps or wastewater storage/holding areas that are used to contain and collect the wastewater generated within the Processing Building.

14. CLOSURE PLAN

(1) (a) The Owner shall submit, for approval by the Director, a written Closure Plan for the Site at least nine (9) months prior to closure of the Site. This plan shall include, as a minimum, a description of the work that will be done to facilitate closure of the Site and a schedule for completion of that work.

(b) Within ten (10) days after closure of the Site, the Owner shall notify the Director, in writing, that the Site is closed and that the Site Closure Plan has been implemented.

15. PUBLIC LIAISON COMMITTEE

(1) A minimum of ninety (90) days prior to the receipt of waste at the Site, the Owner shall prepare Terms of Reference for the Public Liaison Committee (ToR PLC) and submit it to the District Manager for approval. The ToR PLC shall be prepared in consultation with the interested members of the affected public and the Owner shall invite representation from the following groups to participate on the preparation of the ToR PLC:

(a) The City of Ottawa;
(b) home owners within 2,000 metres of the Site;
(c) any interested NGOs.

(2) The ToR PLC shall be amended from time to time according to appropriate amending

procedures identified within the content of the ToR PLC. Any amendment to the ToR PLC must be approved by the District Manager prior to its implementation.

(3) Within thirty (30) days from the District Manager's approval, the Owner shall take all reasonable steps to establish, maintain and participate in a Public Liaison Committee (PLC), which shall serve as a forum for dissemination, consultation, review and exchange of information regarding the operation of the Site, including environmental monitoring, maintenance, complaint resolution, and new approvals or amendments to existing approvals related to the operation of this Site.

(4) The Owner shall invite representation from the following groups to participate on the PLC:

(a) The City of Ottawa;
(b) home owners within 2,000 metres of the Site;
(c) any interested NGOs;.

(5) The number of representatives from each group shall be as specified in the ToR PLC approved by the District Manager.

(6) No later than ninety (90) days from the District Manager's approval, from 15.(3) above, the Owner shall submit to the District Manager a written report that details steps to be taken by the Owner to establish, maintain and participate in a PLC. This report shall include the identification of each of the representatives that have been invited to participate in the PLC.

Schedule "A"

1. Application for this Certificate dated June 10, 2008 and signed by Frederick Mosher, Orgaworld Canada Ltd., including a report entitled "Design and Operations Report", dated June 2008 and prepared by Conestoga-Rovers & Associates.

2. Letter dated June 27, 2008, from Tej Gidda, by Conestoga-Rovers & Associates to Sanja Jankovic, Ontario Ministry of the Environment providing the estimate for the financial assurance.

3. Letter dated October 3, 2008, from Tej Gidda, by Conestoga-Rovers & Associates to Margaret Wojcik Ontario Ministry of the Environment, providing additional information on the proposal.

4. Letter dated January 29, 2009, from Tej Gidda, by Conestoga-Rovers & Associates to Margaret Wojcik Ontario Ministry of the Environment, providing additional information on the proposal, the financial assurance estimate and including Figure 1.0.

Schedule "B"

Compost Quality Criteria

Parameter		Concentration
Trace Elements (mg/kg dry weight)[1]	arsenic	13
	cadmium	3
	chromium	210
	cobalt	34
	copper	100
	lead	150
	mercury	0.8
	molybdenum	5
	nickel	62
	selenium	2
	zinc	500
Organic chemicals (mg/kg dry weight)[1]	PCBs[2]	0.5
Pathogens	fecal coliforms ✓ now E. Coli	<1000 MPN/g of total solids calculated on a dry weight basis[3]
	salmonellae	<3 MPN/4g total solids calculated on a dry weight basis[3]
Non-biodegradable matter[4] % dry weight	plastic	1
	other	2

Note 1 – means milligrams per kilogram
Note 2 - means polychlorinated biphenols
Note 3 - means "Most Probable Number"
Note 4 - will not fit through a size 8 mesh

Schedule "C"

This Schedule "C" forms part of this Provisional Certificate of Approval for a Waste Disposal Site

FINANCIAL ASSURANCE VS STORAGE CAPACITY SCHEDULE:

INCREMENTAL FINANCIAL ASSURANCE LEVELS			
	Maximum Approved Waste Processing Capacity	Units	Total Financial Assurance Requirement per Level **(year 2009)**
Level 1	100,000	tonnes	$727,700.00
Level 2	150,000	tonnes	$1,018,000

The reasons for the imposition of these terms and conditions are as follows:

1. **GENERAL**

(1) Conditions 1.(1), (2), (5), (6), (7), (8), (9), (10), (11), (12), (13), (17), (18) and (19) are included to clarify the legal rights and responsibilities of the applicant.

(2) Conditions 1.(3) and (4) are included to ensure that the Site is operated in accordance with the application and supporting documentation submitted by the Owner, and not in a manner which the Director has not been asked to consider.

(3) Condition 1.(14) is included to ensure that the Site is operated under the corporate name which appears on the application form submitted for this approval and to ensure that the Director is informed of any changes.

(4) Condition 1.(15) is included to restrict potential transfer or encumbrance of the Site without the approval of the Director and to ensure that any transfer of encumbrance can be made only on the basis that it will not endanger compliance with this Certificate.

(5) Condition 1.(16) is included to ensure that the appropriate Ministry staff has ready access to the operations of the Site which are approved under this Certificate. The Condition is supplementary to the powers of entry afforded a Provincial Officer pursuant to the *EPA* ,

the *OWRA* , the *PA* , the *NMA* and the *SDWA* .

(6) Condition 1.(20) is included to ensure that sufficient funds are available to the Ministry to clean up the Site in the event that the Owner is unable or unwilling to do so.

2. **SERVICE AREA, APPROVED WASTE TYPES, RATES & STORAGE**

(1) Condition 2. is included to specify the approved waste receipt rate, the approved waste types and the service area from which waste may be accepted at the Site based on the Owner's application and supporting documentation. Condition 2.(4) is also included to specify the maximum amount of waste that is approved to be stored at the Site that is covered by the required Financial Assurance.

3. **SIGNS**

(1) Condition 3. is included to ensure that the Site's users, operators and the public are fully aware of important information and restrictions related to the operation of the Site.

4. **SITE SECURITY**

(1) Condition 4. is included to ensure that the Site is sufficiently secured, supervised and operated by properly trained personnel and to ensure controlled access and integrity of the Site by preventing unauthorized access when the Site is closed and no site personnel is on duty.

5. **SITE OPERATIONS**

(1) Condition 5.(1) is included to specify the hours of operation for the Site to ensure that the hours of Site's operation do not result in an adverse effect or a hazard to the natural environment or any person.

(2) Condition 5.(2) is included to ensure that only the approved waste types are accepted and processed at the Site.

(3) Condition 5.(3) is included to specify the requirements for handling of the Rejected Waste that was inadvertently received at the Site.

(4) Conditions 5.(4), (5) and (6) are included to ensure that waste handling and storage are undertaken in done in a way which does not result in an adverse effect or a hazard to the environment or any person.

(5) Condition 5.(7) is included to specify odour control measures to minimize a potential for odour emissions from the Site.

6. **SITE INSPECTION AND MAINTENANCE**

(1) Condition 6. is included to require the Site to be maintained and inspected thoroughly and on a regular basis to ensure that the operations at the Site are undertaken in a manner which does not result in an adverse effect or a hazard to the health and safety of the environment or any person.

7. **QUALITY CRITERIA , TESTING & MONITORING**

(1) Condition 7. is included to require the Owner to characterize all waste received at the Site and shipped off the Site to ensure that only waste approved by this Certificate is handled at the Site and that all waste transferred off Site is handled in accordance with the Ministry's requirements. Condition 7. is also included to require the Owner to monitor the composting process parameters.

8. **NUISANCE IMPACT CONTROL & HOUSEKEEPING**

(1) Condition 8. is included to ensure that the Site is operated and maintained in an environmentally acceptable manner which does not result in a negative impact on the natural environment or any person.

9. **OPERATIONS MANUAL & TRAINING**

(1) Condition 9. is included to ensure that personnel employed at the Site are fully aware and properly trained on the requirements and restrictions related to Site operations under this Certificate.

10. **EMERGENCY RESPONSE AND CONTINGENCY PLAN & EMERGENCY SITUATIONS RESPONSE AND REPORTING**

(1) Condition 10. is included to ensure that the Owner is prepared and properly equipped to take action in the event of an emergency situation.

(2) Conditions 11. also is included to require further spill notification to the Ministry, in addition to the requirements already listed in Part X of the *EPA* .

11. **RECORDS KEEPING**

(1) Condition 12. is included to ensure that detailed records of Site activities, inspections, monitoring and upsets are recorded and maintained for inspection and information purposes.

12. **WASTEWATER MANAGEMENT**

(1) Condition 13. is included to ensure that the wastewater generated at the Site is handled in

accordance with the Ministry's requirements and in a manner which does not result in a negative impact on the natural environment or any person.

13. **CLOSURE**

(1) Condition 14. is included to ensure that final closure of the Site is completed in accordance with Ministry's standards.

14. **PUBLIC LIAISON COMMITTEE**

(1). Condition 15. is included to require the Owner to establish a forum for the exchange of information and public dialogue on activities carried out at the Site. Open communication with the public and local authorities is important in helping to maintain high standards for the operation of the Site and protection of the natural environment.

In accordance with Section 139 of the Environmental Protection Act, R.S.O. 1990, Chapter E-19, as amended, you may by written Notice served upon me, the Environmental Review Tribunal and in accordance with Section 47 of the Environmental Bill of Rights, S.O. 1993, Chapter 28, the Environmental Commissioner, within 15 days after receipt of this Notice, require a hearing by the Tribunal. The Environmental Commissioner will place notice of your appeal on the Environmental Registry. Section 142 of the Environmental Protection Act, provides that the Notice requiring the hearing shall state:

1. The portions of the approval or each term or condition in the approval in respect of which the hearing is required, and;
2. The grounds on which you intend to rely at the hearing in relation to each portion appealed.

The Notice should also include:

3. The name of the appellant;
4. The address of the appellant;
5. The Certificate of Approval number;
6. The date of the Certificate of Approval;
7. The name of the Director;
8. The municipality within which the works are located;

And the Notice should be signed and dated by the appellant.

This Notice must be served upon:

The Secretary*
Environmental Review Tribunal
655 Bay Street, 15th Floor
Toronto, Ontario
M5G 1E5

AND

The Environmental Commissioner
1075 Bay Street, 6th Floor
Suite 605

Section 1.0 Introduction

Conestoga-Rovers & Associates (CRA) was retained by Orgaworld Canada Ltd. (Orgaworld) to conduct a Groundwater and Surface Water Monitoring Program (Monitoring Program) at the Orgaworld Source Separated Organics (SSO) Processing Facility (Facility) located at 5123 Hawthorne Road in Ottawa, Ontario (Site). A Site location map is provided on Figure 1.1.

The Monitoring Program is being completed in accordance with the scope of work outlined in the June 25, 2009 correspondence to the Ministry of the Environment and Climate Change (MOECC) under MOECC reference number 4852-7KEQ29, and as required under the Facilities Industrial Sewage Works Environmental Compliance Approval (No. 7251-8GKRPD), as amended on May 30, 2011 (herein referred to as the ECA). A copy of the Facility's ECA is provided as Appendix A on the CD included with this report. Please note that all Appendices and a complete PDF of this report are also included on the CD.

The purpose of the Monitoring Program is to assess the potential for activities conducted at the Site to adversely affect the surrounding surface water and groundwater quality, in accordance with the ECA.

1.1 Site Background

The Site consists of an area of approximately 10-hectares that is located within an industrial development area. The area, known as the Hawthorne Industrial Park, occupies a surface area of approximately 80-hectares (referred to herein as the HIP subdivision) and has been developed by R.W. Tomlinson (Tomlinson) as an industrial business area. Orgaworld is a tenant of Tomlinson.

Between June and August 2008, CRA conducted Phase I and II Environmental Site Assessment (ESA) investigations for Tomlinson to determine the general suitability of the HIP subdivision lands for development as an industrial park. More specifically, the ESAs were completed to support a Site Plan Control Application for the lease and subsequent development and operation of the SSO facility in the southwest portion of the HIP (CRA, 2008a). CRA submitted the ESAs to the City of Ottawa on behalf of Orgaworld.

The 2008 groundwater monitoring/sampling activities included sampling of ten shallow aquifer wells (MW1-08 to MW10-08) and three surface water locations (SW1 to SW3). In addition, Golder Associates (Golder) conducted pump testing and sampling of the deep groundwater wells in August 2008 (TW-2 and TW-3) and October 2008 (TW-4 to TW-6) (Golder, 2008).

In 2009, CRA was tasked by Orgaworld to generate the Monitoring Program, based on a request from the MOECC through the process of reviewing the ECA application. In March 2010, the

Monitoring Program was modified through an ECA amendment to reflect current Site conditions and monitoring well availability. Further modifications to the monitoring program were required in 2013, to reflect additional changes in the monitoring well network (replacement and addition of new monitoring wells).

Condition 9(8) of the ECA (Industrial Sewage Works No. 7251-8GKRPD) states that:

> *"the Owner shall establish a comprehensive Compliance and Trigger Level Monitoring Program based on the groundwater monitoring, and submit it along with an application to amend this Certificate to the Director and the District Manager."*

In order to satisfy this condition, CRA prepared a Compliance and Trigger Level Monitoring Program (TLP) in 2014/ 2015. The TLP was submitted to the MOECC along with an application to amend the ECA in March 2015. The updated TLP uses a focused set of parameters and statistically based upper tolerance limits (UTLs) developed from historical data for the purpose of setting Site-specific trigger levels for the selected parameters. A complete discussion and assessment consistent with the TLP is included in Section 5.0. For reference, a copy of the memorandum sent to the MOECC that outlines the updated TLP is included in Appendix B.

CRA prepared a Monitoring Program Rationalization (MPR) for the Site during 2015. The purpose of the MPR was to ensure adequate monitoring of the groundwater and surface water was being accomplished through the monitoring program and to remove any redundant or unnecessary monitoring from the program. The principal recommendations of the MPR are as follows:

- Incorporate the proposed monitoring and extraction wells into the monitoring program upon installation
- Reduce monitoring from quarterly to three times per year
- Remove polycyclic aromatic hydrocarbon and petroleum hydrocarbon monitoring from the program

A copy of the CRA's memorandum outlining the MPR is included in Appendix C.

This report presents an assessment of the groundwater and surface water quality at the Site and covers the period between January and December 2014.

1.2 Site Setting

The Site is located at the southwest corner of the HIP subdivision lands, located within the former Township of Gloucester (community of South Gloucester), which was amalgamated in

January 2001 as part of the City of Ottawa. The HIP subdivision was developed by Tomlinson, and is located southeast of the Hawthorne Road and Rideau Road intersection, in the southeast area of the City of Ottawa. The Site limits included in the Orgaworld lease and the boundary of the HIP subdivision are provided on Figure 1.2.

The layout of the Site, commencing at the western portion of the Site off the Hawthorne Road entrance, consists of the large processing plant with delivery receiving area, administrative office, septic bed area, and emission stack. There is an asphalt skirt around three sides of the building, which slopes north, east, and south towards an on-Site perimeter ditch system which drains to the storm water management (SWM) pond located at the east side of the Site. A weigh scale is located northeast of the administrative office. The central and southwestern portions of the Site are unfinished and consist of exposed bedrock, gravelly sands, and a few shrubs and grass scrub. Surface run-off from the Site generally drains to the on-Site perimeter ditch system to the on-site SWM pond where it is impounded for re-use in the Facility process or until manual release off-Site through local roadside ditches within the HIP subdivision, to a central stormwater dry pond for the HIP subdivision, and then to Findlay Creek Municipal Drain, to Shields Creek, to North Castor River, to South Nation River, and then to the Ottawa River.

Historically, since the early 1990's, the HIP Subdivision lands have been used for the placement of inert fill from construction and demolition projects as backfill, and as a temporary storage area for precast concrete pipe and chambers. The fill placement on the HIP lands represented materials that were being progressively used for backfill/leveling operations throughout the Industrial Park. A ditch used to evacuate groundwater pumped from the Rideau Road Quarries (Quarry #1 and Quarry #2) and the Dibblee Quarry has been observed along the western and northern boundaries of the HIP subdivision. This ditch eventually flows into the Findlay Creek Municipal Drain at the northeast corner of the HIP subdivision. Findlay Creek Municipal Drain is situated along the northeastern boundary of the HIP subdivision.

1.3 Site Processes

The Facility is an aerobic composting operation that is approved to receive and process organics including source separated organics (SSO), brush material, food wastes (solid or sludge), commercial waste (restaurant wastes, etc.) and other sludges, into an unrestricted use product (UUP) suitable for application on agricultural lands, use as potting soil, or for other similar applications. The Facility is intended to receive and process organics, to manage the resulting products and emissions, and to manage environmental impacts of the processing operations.

Storm water run-off from the Site drains to the on-Site SWM pond and is retained for use in Orgaworld's process, in accordance with the Site's ECA. If excess water is available in the SWM

pond, then Orgaworld undertakes analysis and testing of the pond water and then discharges upon receipt of suitable test results.

1.4 MOECC Correspondence to Date

The below correspondences document the communications between Orgaworld and the MOECC with regards to the application, requested amendments, and subsequent issuance of the Site's current ECA (Industrial Sewage Works) No. 7251-8GKRPD:

- Application for Approval of Industrial Sewage Works, Storm Water Management Facility, Ottawa City, Ontario, MOE Reference Number 4852-7KEQ29 (CRA; September 19, 2008) (CRA, 2008b)
- Proposed Groundwater/Surface Water Monitoring Program, Application for Approval of Industrial Sewage Works, Orgaworld Source Separated Organics Processing Facility, 5123 Hawthorne Road, City of Ottawa, Ontario, MOE Reference Number 4852-7KEQ29 (CRA; June 25, 2009)
- Certificate of Approval (Industrial Sewage Works) No. 9465-7NVRWT, Organics Composting Facility, Part Lot 27, Concession 6, 5123 Hawthorne Road, City of Ottawa, Ontario (MOE; September 16, 2009)
- Summary of Pre-Start-up Groundwater/Surface Water Monitoring Program, Orgaworld Source Separated Organics Processing Facility, 5123 Hawthorne Road, Ottawa, Ontario (CRA; February 5, 2010a)
- Amendment Application, Deep Groundwater Monitoring Well Relocations, Certificate of Approval (Industrial Sewage Works) No. 9465-7NVRWT, Orgaworld Canada Ltd., 5123 Hawthorne Road, Ottawa, Ontario (CRA; March 25, 2010b)
- Amended Certificate of Approval (Industrial Sewage Works) No. 7032-88XPRA, 5123 Hawthorne Road South, Lot Part of West Half of 27, Concession 6, Ottawa City, K1G 3Y3 (MOE; September 7, 2010)
- Amendment Application, New Equipment Installation, Certificate of Approval (Industrial Sewage Works) No. 7032-88XPRA, 5123 Hawthorne Road South, Lot Part of West Half of 27, Concession 6, Ottawa City, K1G 3Y3 (CRA; March 18, 2010c)
- Amended Certificate of Approval (Industrial Sewage Works) No. 7251-8GKRPD, 5123 Hawthorne Road South, Lot Part of West Half of 27, Concession 6, Ottawa City, K1G 3Y3 (MOE; May 30, 2011)Letter RE: 2012 Groundwater/Surface Water Monitoring and Compliance Report, Orgaworld Organics Facility — SWM Pond, from Ministry of the Environment Ottawa District Office (MOE, September 13, 2013)
- Memorandum RE: Groundwater Assessment and Work Plan – Orgaworld Canada Ltd., Ottawa, Ontario (CRA; July 16, 2014)

- Memorandum RE: Recommended Compliance and Trigger Level Program – Orgaworld Canada Ltd., Ottawa, Ontario (CRA; February 3, 2015)
- Memorandum RE: Proposed Monitoring Program – Orgaworld Canada Ltd., Ottawa, Ontario (CRA; February 27, 2015)

1.5 Groundwater/Surface Water Monitoring Activities

In accordance with recommendations of the Groundwater/Surface Water Monitoring Program (CRA, 2009) and Amendment Application (CRA, 2010b), CRA has completed ongoing monitoring from 2009 to present. The following monitoring activities were completed at the Site during the current monitoring period:

- April 2014 – Quarterly sampling
  - Sampling at six shallow unconfined aquifer wells (MW5-09, MW101-13, MW102-09, MW103-09, MW104-13, and MW105-13)
  - Hydraulic monitoring at the remaining shallow unconfined aquifer and deep bedrock aquifer wells (with the exception of MW1-08)
- May 2014 – Semi-annual sampling
  - Sampling at four surface water locations (SW1-09 to SW4-09)
  - Sampling and hydraulic monitoring at all shallow unconfined aquifer and deep bedrock aquifer wells with the exception of TW-4
- August 2014 – Quarterly sampling
  - Sampling at six shallow unconfined aquifer wells (MW5-09, MW101-13, MW102-09, MW103-09, MW104-13, and MW105-13)
  - Hydraulic monitoring at the remaining shallow unconfined aquifer and deep bedrock aquifer wells
- November 2014 – Semi-annual sampling
  - Sampling at four surface water locations (SW1-09 to SW4-09)
  - Sampling and hydraulic monitoring at all shallow unconfined aquifer and deep bedrock aquifer wells

Typically, the initial quarterly sampling event takes place in February; however, the event was delayed in 2014 due to the majority of the well network being frozen and inaccessible.

Section 2.0 Physical Setting

2.1 Site Geology

The Site-specific geology was determined through visual examination of the soil samples collected across the HIP subdivision lands during previous investigations and examination of the stratigraphic logs. Examination of the stratigraphic logs prepared by CRA, as provided in Appendix D, indicates that the geology is generally consistent across the HIP subdivision. Six main geologic units were identified across the area investigated; these units are:

- Heterogeneous fill
- Topsoil layer
- Alluvial sand and silts
- Silty clay
- Glacial till
- Bedrock

The topography and geology observed throughout the region are remnants of glacial scour, and more recently, by marine deposits removed by fluvial erosion. The filling activities carried out since the early 1990's have also significantly altered the local topography.

For 15 years or so prior to Facility construction, portions of the HIP subdivision have reportedly received inert fill from construction and demolition projects throughout the Ottawa area. The fill material received at the HIP subdivision was historically used to level some of the topography; however the southern and eastern areas have historically received very little amounts of fill.

The HIP subdivision is generally flat with the exception of the southwest corner, where there formerly existed a rock knoll, now a rock outcrop. The top of this rock outcrop is approximately 10 m higher than the surrounding grades of the HIP subdivision.

The geology and hydrogeology of the geological units identified are discussed below.

Fill

Results of borehole drilling and soil sampling investigations by CRA indicate that most of the HIP subdivision is overlain by fill material. The fill was found to be heterogeneous and generally consisted of a granular matrix (sand, silts, and gravel) with traces of construction waste (concrete, asphalt, wood, and brick) and occasionally some clay and boulders. The fill material was generally observed to be in a compact and moist state.

Topsoil

The topsoil found was generally fine silty sand with organic material. It was in a loose state, was dark brown to black in colour, and was generally in a moist state. The topsoil was found in most locations that were not currently being used as roads. In several locations, the topsoil contained roots and wood debris.

Alluvial Sands and Silts

Underlying the fill and/or topsoil, alluvial sand and silt deposits were locally observed. Where encountered, these deposits were found to vary in density from loose to dense, and generally described as very moist to wet.

Glacial Till

A glacial till was encountered below the fill and/or alluvial sands and silts in the western half of the HIP subdivision. The glacial till encountered was predominately a silty sand matrix with some gravel, cobbles, and trace clay and boulders. The material was brown to grey in colour, was generally very moist to wet, and was in a compact to dense state. The glacial till was observed to be directly overlaying the bedrock.

Bedrock

On a regional basis, the bedrock underlying the HIP subdivision consists predominantly of limestone, sandstone, and dolostone of the Nepean, March and Oxford Formations. Top of bedrock was observed at depths varying from surface exposure to a depth in excess of 7.62 metres below ground surface (m bgs) at the location of MW6-08. Bedrock core extending from 1.1 to 2.6 m into the bedrock was collected from MW2-08 and MW4-08 to permit bedrock identification and characterization. The bedrock consists of a weathered and fractured, grey limestone. Limestone bedrock was generally found to be fractured in the upper meter, where bedrock recovery ranging from 93 to 94 percent was reported, and Rock Quality Designation (RQD) numbers varying from 63 to 75 percent were measured. At depths in excess of 1 m into the bedrock, at the location of MW2-08, the limestone was found to be competent with a recovery of 100 percent and a RQD of 93 percent.

2.2 Site Hydrogeology

Based on the review of information, the geological sequence observed at the HIP subdivision can be grouped into the two main hydrogeological units:

- An shallow unconfined groundwater unit (referred to as shallow unconfined aquifer) within the permeable fill, alluvial sands and silts and shallow fractured bedrock

- A deep confined bedrock unit (referred to as the deep bedrock aquifer)

A total of eighteen monitoring wells were completed into the unconfined shallow aquifer unit throughout the HIP subdivision, ten of which were completed within the limits of the Orgaworld Site. The geological unit intercepted at each well is summarized in the monitoring well construction details provided in Appendix D. Well details are also provided in Table 2.1.

The horizontal hydraulic conductivity determined from single well response tests ranged from less than 1×10^{-7} cm/sec to 4.4×10^{-4} cm/sec (CRA, 2008a). Additional groundwater information regarding groundwater flow direction and velocity within the unconfined shallow aquifer unit is discussed in Section 4.1.

Test wells (TW-1 to TW-3) installed at the HIP subdivision in 1993 by Golder intercepted the deep bedrock unit, at depths varying from 25 to 36 m bgs (Golder, 2008). The deep bedrock aquifer unit was estimated by Golder to be within the Nepean bedrock formation. Based on the results of the laboratory chemical, physical and bacteriological analyses conducted and the field groundwater quality monitoring performed in 1993, Golder concluded that the groundwater quality of the deep bedrock aquifer unit met the Ontario Drinking Water Standards (ODWS) (MOECC, 2003) with respect to the parameters analyzed, with the exceptions of iron, manganese, turbidity and TDS.

Three additional test wells (TW-4 to TW-6) were advanced by Golder at the HIP subdivision in 2008. CRA oversaw the installation of two additional on-Site test wells (TW-7 and TW-8) in May 2010, since access to deep wells TW-1, TW-2, TW-3, TW-5, and TW-6, which had been historically used to assess the groundwater quality of the deep aquifer unit, was removed by Tomlinson as of January 2010. Deep aquifer well TW-4 (on-Site) is now also used to provide potable water for the Facility.

The test wells (TW-1 to TW-8) consist of a 6-inch diameter steel casing extending between 6.25 and 17.67 m bgs and anchored in bedrock. These deep bedrock aquifer wells extended to depths varying from 30 to 83 m bgs, as shown on the water wells records and well construction details provided in Appendix D and E, respectively. Well details are also provided in Table 2.1. Additional groundwater information regarding groundwater flow direction within the deep bedrock aquifer groundwater unit is discussed in Section 4.1.

As part of CRA's Phase II ESA in 2008 (CRA, 2008a), an assessment of the connectivity between the shallow unconfined aquifer unit and the underlying deep bedrock aquifer unit was conducted by performing pumping tests at TW-1 through TW-3 in the deep bedrock aquifer unit. The water levels gathered from the shallow unconfined aquifer unit registered no corresponding drawdown decline in elevations, while the deep bedrock aquifer unit was

lowered from 1.18 to 3.7 m during 6-hour pumping tests. Based on the data, it was concluded that the shallow unconfined aquifer unit and the deep bedrock aquifer units are not hydraulically connected.

2.3 Surface Water and Drainage Features

Surface run-off from the HIP subdivision generally drains through local ditches to Findlay Creek Municipal Drain, to Shields Creek, to North Castor River, to South Nation River, and then to the Ottawa River.

A series of ditches within the Site drains to an on-Site SWM pond. The flow of the water from the SWM pond is controlled by a valve that outlets to a ditch that runs along the HIP subdivision internal roadway (Somme Street), towards the east through a central SWM pond, eventually outletting to Findlay Creek.

Another ditch runs along Hawthorne Road, flowing towards and eventually along Rideau Road, connecting to Findlay Creek; this ditch does not connect to the Orgaworld Site at Hawthorne Road or to Somme Street.

2.4 Groundwater Use

Water well data reviewed by CRA shows that the shallow unconfined water table unit is not locally used as a potable water source (Golder, 2008) (deemed unsuitable due to proximity to ground surface, limited saturated thickness, and low yield). The water well records indicate that the deep bedrock aquifer test wells located in proximity of the HIP subdivision are all installed within the deep bedrock aquifer formation at depths generally at or in excess of 30 m bgs. The deep bedrock aquifer well logs are provided in Appendix E.

Bottled water is brought in for consumption at the Site, while water from TW-4 supplies sinks, showers, toilets, and the dishwashing machine for the Facility. As necessary, TW-4 is also used as an alternative refilling source for replenishing the fire water tank.

Section 3.0 Monitoring Program

The Monitoring Program developed and implemented at the Site includes:

- Monitoring prior to the January 2010 Facility start-up
- Monitoring post Facility start-up, in accordance with the ECA, respectively quarterly and semi-annual monitoring, between May 2010 and November 2014

The Monitoring Program consists of the following:

- Hydraulic (water level) monitoring
- Groundwater and surface water sample collection and analysis
- Quality Assurance/Quality Control (QA/QC) sample collection and analysis

3.1 Monitoring Network

Currently, the groundwater monitoring network consists of the following monitoring wells:

- Shallow unconfined aquifer: eleven groundwater monitoring wells, respectively MW01-08, MW2-08, MW3-08, MW4-08, MW4-09, MW5-09, MW101-13, MW102-09, MW103-09, MW104-13, and MW105-13.
- Deep bedrock aquifer: three monitoring wells, respectively TW-4, TW-7, and TW-8.

Surface water is monitored through four surface water monitoring locations (SW1-09 to SW4-09).

Table 3.1 provides a summary of the current monitoring program. The groundwater and surface water monitoring locations are provided on Figure 3.1.

3.2 Monitoring Protocol

3.2.1 Groundwater Monitoring

The depth to groundwater was measured using an electronic water level meter with the top of the monitoring well riser pipe as the reference point, or to the top of the steel casing for all deep bedrock aquifer monitoring wells. Groundwater elevations were subsequently calculated for each monitoring well by subtracting the depth to water measurement from the reference point elevation.

Groundwater samples were collected by following CRA's field method guideline protocols, which are consistent with MOECC requirements. All shallow aquifer monitoring wells and deep aquifer monitoring wells, except TW-8, were purged and sampled using low-flow sampling methodology with dedicated polyethylene tubing and a peristaltic pump. Wells were sampled once field readings were stabilized, indicating that a representative sample could be collected.

Due to the greater depth to groundwater, deep bedrock aquifer monitoring well TW-8 was sampled using low-flow methods with dedicated polyethylene tubing and a bladder pump system.

The samples collected for metals analysis were field filtered using disposable 0.45 µm in-line filters. All groundwater samples collected were submitted to ALS Environmental (ALS) of Waterloo, Ontario for analysis under standard chain-of-custody protocol. Analytical results are discussed in Section 4.0.

The analytical parameter list for groundwater is summarized in Table 3.1.

The original laboratory analytical reports are provided in Appendix F.

3.2.2 Surface Water Monitoring

Surface water samples were collected at four locations (SW1-09 to SW4-09) by following CRA's field method guidelines. Surface water samples were collected by gently immersing the sample bottles in the ditch/creek water, taking care not to disturb the underlying sediments. Readings for pH, conductivity, and temperature were recorded at the time of sample collection. All surface water samples were collected without field filtering and as such, represent total parameter concentrations. Potential dissolution of particulates by the acid preservative in the metals sample bottles may affect parameter results for the surface water samples. All surface water samples collected were submitted to the laboratory for analysis under standard chain-of-custody protocol. The sample parameter list for surface water sampling is the same as the parameter list for groundwater (refer to Table 3.1).

3.3 Quality Assurance/Quality Control Program

A QA/QC program was undertaken as part of the Monitoring Program. This program involved the collection and analysis of field duplicate samples and the evaluation of standard laboratory quality control samples and procedures. The potential for contamination of samples through field and laboratory procedures is monitored through the analysis of field and laboratory blanks and duplicates samples.

The quality control parameters were found to be within acceptable ranges of standard laboratory practice. Several qualifications of the 2014 analytical data were made through the QA/QC assessment. All analytical data tables have been updated to provide those qualifications.

Details of the QA/QC Assessment for the current monitoring period are provided in Appendix F. The qualifications indicated in Appendix F do not significantly alter the interpretation of the data or affect the conclusions provided in this report.

Section 4.0 Monitoring Results

The results of the Monitoring Program for the current monitoring period are presented in the following sections as follows:

- Section 4.1 Groundwater Hydraulic Monitoring
- Section 4.2 Water Quality Monitoring

To better facilitate discussion of the water quality, the sampling points for the Monitoring Program have been divided into the following areas: shallow aquifer, deep aquifer, and surface water. Each is discussed in an upgradient to downgradient or upstream to downstream fashion.

Shallow Unconfined Aquifer

Upgradient: MW3-08, MW4-08, and MW4-09
Downgradient: MW1-08, MW2-08, MW5-09, MW102-09, MW103-09, MW101-13, MW104-13, and MW105-13

Deep Bedrock Aquifer

Upgradient: TW-7
Downgradient: TW-4 and TW-8

Surface Water

Upstream: SW1-09 and SW2-09
Downstream: SW3-09 and SW4-09

MW101-09 was abandoned and replaced in 2013; however, the analytical results from the monitor are included in the groundwater quality discussion to provide historical water quality in the vicinity of its replacement monitoring well MW101-13.

4.1 Groundwater Hydraulic Monitoring

Groundwater elevation data collected in during the current monitoring period is presented in Table 4.1. Groundwater elevations measured during the May and November 2014 monitoring

events are consistent with those observed historically at the Site, and were used in the development of groundwater contours, as presented on Figures 4.1 to 4.4. Shallow unconfined aquifer and deep bedrock aquifer groundwater elevations and contours for the May 2014 monitoring event are presented on Figures 4.1 and 4.3, respectively, and shallow unconfined aquifer and deep bedrock aquifer groundwater levels and contours for the November 2014 monitoring event are presented on Figures 4.2 and 4.4, respectively.

The shallow aquifer water table was encountered at elevations varying from 90.48 to 98.52 metres above mean sea level (m AMSL) during the May monitoring event and 90.20 to 98.44 m AMSL during the November event. Based on the groundwater elevations gathered in May and November 2014, shallow unconfined aquifer flow occurs in a northeasterly direction in the shallow unconfined aquifer. This is consistent with previous monitoring years.

The horizontal hydraulic gradients for the shallow unconfined aquifer unit for the May and November 2014 monitoring events were estimated from groundwater contours presented on Figures 4.1 and 4.2 to be approximately 0.019 to 0.022 m/m across the Site. The horizontal hydraulic conductivity determined from single well response tests ranged from less than 1×10^{-7} cm/sec to 4.4×10^{-4} cm/sec (CRA 2008b). Assuming an effective porosity of 25 percent for the shallow unconfined aquifer unit, an estimate of the groundwater flow velocity can be determined from the following equation:

$$v = \frac{Ki}{n}$$

Where:

v = groundwater flow velocity (L/T)
K = hydraulic conductivity (L/T)
i = horizontal hydraulic gradient (unitless)
n = effective porosity

Based on this equation, the local groundwater velocity in 2014 is estimated to be a few millimeters per year in the slightly fractured bedrock to a high of approximately 12.0 m per year in the fill deposits. Note that the hydraulic conductivity was estimated prior to development of the Site and may not be reflective of the current conditions at the Site.

In 2014 the deep bedrock aquifer unit groundwater levels were encountered at elevations varying from 84.25 to 89.11 m AMSL in May and from 83.12 to 88.54 m AMSL in November. Based on the groundwater elevations gathered in 2014, groundwater in the deep bedrock aquifer unit flows in a southwesterly direction, in the opposite direction of the shallow

unconfined aquifer unit. It is likely that the presence of a quarry to the west and southwest of the Site has influenced the groundwater flow direction within the deep bedrock aquifer unit.

Based on groundwater contours generated for the Site, hydraulic gradients for the deep aquifer unit were calculated at 0.012 and 0.013 m/m for the May and November 2014 events.

4.2 Water Quality Monitoring

The following Sections provide a discussion regarding the spatial and temporal trends of selected indicator parameters at the Site.

4.2.1 Shallow Unconfined Aquifer Unit Groundwater Quality

Groundwater flow in the shallow unconfined aquifer occurs in a northeasterly direction, as illustrated on Figures 4.1 and 4.2. According to the position relative to the Facility, the groundwater monitoring wells can be grouped as:

- Upgradient wells: MW3-08, MW4-08, and MW4-09,
- Upgradient/crossgradient wells: MW2-08
- Downgradient wells: MW5-09, MW101-09, MW101-13, MW102-09, MW103-09, MW104-13, and MW105-13

Tabulated analytical results for the shallow unconfined aquifer from the 2014 sampling program are provided in Table 4.2.

On behalf of Orgaworld, CRA completed a Groundwater Assessment and Work Plan in July 2014 (Groundwater Assessment). The Groundwater Assessment evaluated current and historical groundwater quality in order to determine appropriate parameters of concern for the Site. Previous evaluations of groundwater quality at the Site identified ammonia as the primary indicator parameter for facility-related groundwater quality impacts at the Site. The Groundwater Assessment confirmed the presence of a plume of ammonia within the shallow unconfined aquifer, originating from the Facility.

The Groundwater Assessment also identified additional parameters of concern through a comparison of the 2013 water quality data to background water quality and the MOECC criteria listed in the Ontario Drinking Water Standards (ODWS) (MOECC, 2003, amended 2006). The comparison identified the following additional indicator parameters for identifying potential groundwater impacts from Facility operations: iron, manganese, dissolved organic carbon (DOC), sulfate, and total dissolved solids (TDS).

A copy of the Groundwater Assessment memo is included in Appendix G.

Ammonia and DOC are direct indicators of groundwater quality impacts associated with the discharge of organic waste related contaminants to the subsurface. Iron and manganese concentrations typically increase in groundwater impacted by organic waste due to the alteration of redox conditions within the groundwater. The biological breakdown of dissolved organic matter consumes dissolved oxygen and related oxygen sources in groundwater and creates reducing conditions. Where conditions are reducing, naturally-occurring iron and manganese oxides within the geologic material are reduced to more soluble forms, which results in an increase in dissolved iron and manganese concentrations. Concentrations of total dissolved solids (TDS) increase as additional iron and manganese dissolve into the groundwater.

Figures 4.5 through 4.8 provide concentration isopleths (lines of inferred equal concentration) for ammonia, dissolved iron, dissolved manganese, and DOC. The 2014 median concentrations from the shallow unconfined aquifer unit monitoring wells have been used to create the isopleths. Concentration isopleths figures are useful for evaluating and presenting spatial patterns in groundwater chemistry. In each figure (Figures 4.5 through 4.8), the presence of elevated concentrations of each indicator parameter is identified in close proximity to the Facility. Concentrations are observed to decrease with distance from the facility. The distribution of elevated concentrations of ammonia, DOC, iron, and manganese is consistent with a contaminant plume related to an organic contaminant source emanating from the Facility.

Figures H1-A to H1-I in Appendix H-1 present the evolution of groundwater chemistry at the wells across the Site for the selected indicator parameters; these figures assist in visually identifying temporal trends in groundwater chemistry and are thus useful for understanding the historical evolution of groundwater.

The following tables provide summaries of the trends and concentration ranges of ammonia, DOC, iron, and manganese in the shallow unconfined aquifer:

Location	*Trend*	*Ammonia Concentration Range (mg/L)*	
		Historic	*2014*
MW4-08	--	ND(0.05) – 0.069	ND(0.050) – ND(0.067)
MW4-09	--	ND(0.05) – 0.117	ND(0.5)
MW3-08	--	ND(0.05) – 0.123	ND(0.05) – 0.051
MW2-08	--	ND(0.05) – 0.105	ND(0.05)
MW105-13	↑	22.3 – 34.3	18.2 – 76.0
MW101-09[1]	↑	7.89 -108.0	--
MW101-13	↑	6.98 – 34.9	19.6 – 34.9
MW104-13	↑	4.69 – 14.3	4.8 – 13.2
MW5-09	↑	0.32 – 30.4	6.91 – 30.4
MW102-09	↑	0.823 – 10.4	5.47 – 10.4
MW1-08	↑	0.335 – 2.08	1.22 – 2.08
MW103-09	↓	0.508 – 2.26	0.667 – 1.49

Notes:
1. MW101-09 was decommissioned in 2013.
ND non-detect at the associated value

As presented above, each of the upgradient locations have shown relatively stable and low ammonia levels. With the exception of MW103-09 and MW2-08, each of the downgradient monitoring locations have shown increasing temporal trends in ammonia concentrations. Ammonia concentrations have shown an overall decreasing trend at MW103-09; however, this is mostly related to a sharp drop in concentrations between May 2010 and May 2011. Ammonia has increased at MW103-09 since 2011. MW2-08 is located cross-gradient from the Facility and has shown little evidence of impacts. Ammonia concentrations at MW2-08 have remained consistently very low to non-detect.

Location	*Trend*	*DOC Concentration Range (mg/L)*	
		Historic	*2014*
MW4-08	--	1.6 – 8.7	ND(1.0) – 1.1
MW4-09	--	1.0 – 3.1	1.7 – 2.0
MW3-08	--	1.7 – 9.0	1.5 – 2.7
MW2-08	--	1.6 – 10.0	2.2 – 5.6
MW105-13	↑	2.6 – 7.5	4.2 – 9.4
MW101-09[1]	↓	4.0 – 266.0	-
MW101-13	--	3.9 – 14.8	3.6 – 6.7
MW104-13	↓	10.3 – 51.2	10.3 – 14.3
MW5-09	--	5.5 – 12.1	7.1 – 9.2
MW102-09	--	7.7 – 18.5	7.7 – 10.9
MW1-08	↑	6.2 – 9.9	6.4 – 7.4
MW103-09	↑	3.0 – 17.9	6.9 – 11.3

Notes:
1. MW101-09 was decommissioned in 2013.
ND non-detect at the associated value

Similar to the trends in ammonia concentrations, levels of DOC have remained consistent and relatively low in the upgradient monitoring wells. Monitoring wells located downgradient of the Facility have demonstrated trends of elevated or increasing levels of DOC.

Location	*Trend*	*Iron (dissolved) Concentration Range (mg/L)*	
		Historic	*2014*
MW4-08	--	ND(0.05) – 0.32	ND(0.05) – 0.335
MW4-09	--	ND(0.05) – 1.86	0.221 – 0.382
MW3-08	↓	ND(0.05) – 1.04	ND(0.05)
MW2-08	--	ND(0.05)	ND(0.05)
MW105-13	↓	2.07 – 5.31	0.08 – 2.75
MW101-09[1]	--	ND(0.05) – 3.24	-
MW101-13	↓	ND(0.05) – 34.5	ND(0.05) – 10.7
MW104-13	↓	0.932 – 23.9	2.74 – 18.2
MW5-09	↑	1.99 – 7.47	4.68 – 7.82
MW102-09	↓	4.85 – 24.7	5.12 – 9.19
MW1-08	↓	0.897 – 17.2	2.54 – 2.78
MW103-09	↓	5.03 – 23.8	2.69 – 5.16

Location	*Trend*	*Manganese (dissolved) Concentration Range (mg/L)*	
		Historic	*2014*
MW4-08	↓	0.22 – 1.10	0.0861 – 0.27
MW4-09	↓	0.218 – 1.25	0.182 – 0.234
MW3-08	↓ to --	0.0014 – 0.0987	ND(0.001) – 0.0055
MW2-08	--	0.0035 – 0.177	0.0019 – 0.0047
MW105-13	↓	0.487 – 0.650	0.413 – 0.580
MW101-09[1]	↑	0.462 – 1.660	-
MW101-13	--	0.179 – 2.24	0.0299 – 1.62
MW104-13	↑	1.82 -19.4	5.35 – 14.6
MW5-09	↑	2.65 – 4.79	2.5 – 3.28
MW102-09	↑	1.95 – 4.5	3.17 – 5.02
MW1-08	↓	0.539 – 11.0	0.901 – 1.23
MW103-09	↓	2.73 – 7.77	1.78 – 2.99

Notes:
1. MW101-09 was decommissioned in 2013.
ND non-detect at the associated value

Elevated concentrations of dissolved iron and manganese are apparent downgradient of the facility, with the most elevated concentrations being reported at MW104-13, MW101-13, MW5-09, and MW102-09. This pattern is consistent with the patterns observed for DOC and ammonia.

Concentrations of dissolved iron and manganese show variable temporal trends downgradient of the Facility. However, in many instances concentrations have shown an overall decreasing trend. The overall decreases are partially related to sharp drops in iron concentrations observed between May 2010 and May 2011 at several monitoring locations. Since 2011 many locations have shown relatively stable levels of dissolved iron and manganese.

Shallow Groundwater to Surface Water Discharge

In comments provided by the MOECC on the 2012 annual report, the MOECC requested that a comparison of shallow groundwater quality at MW103-09 to PWQOs be completed as part of the future annual monitoring reports. Table 4.2A provides the 2014 analytical data for MW103-09 along with the PWQOs for comparative reference, with exceedances highlighted.

As indicated in Table 4.2A, several parameters exceeded their respective PWQOs at MW103-09 during 2014. The following provides a summary of those exceedances:

- Arsenic – 3 of 4 samples
- Cobalt – 1 of 4 samples
- Iron – 4 of 4 samples
- Phosphorus – 2 of 4 samples
- Un-ionized Ammonia – 1 of 4 samples
- Field pH – 1 of 4 samples

The Groundwater Assessment included recommendations to further investigate the relationship between shallow groundwater and surface water. Recommendations included staff gauges be installed at four points within the northern ditch and that a topographic survey of the northern portion of the Site be undertaken. Once the additional staff gauges are installed and geodetically surveyed a direct comparison between the surface and groundwater elevations in the ditch and stormwater pond can be made. This will allow a better understanding of the potential impacts to surface water resulting from shallow groundwater discharge. Work to install and measure the staff gauges is currently underway.

The results of this assessment will be provided to the MOECC in the 2015 monitoring report.

The proposed staff gauge locations are described in the Groundwater Assessment memo in Appendix G.

4.2.3 Deep Bedrock Aquifer Groundwater Quality

Based on the available data for the deep bedrock aquifer, groundwater flow in the deep bedrock aquifer occurs to the southwest across the Site, as illustrated on Figures 4.3 and 4.4. According to their position relative to the Facility, the deep bedrock groundwater monitoring wells can be grouped as:

- Upgradient well: TW-7
- Downgradient wells: TW-4, TW-8

The discussion regarding the evolution of the selected parameters will be applied in the same way as for the shallow unconfined aquifer.

Tabulated analytical results for the deep bedrock aquifer from the 2014 sampling program are provided in Table 4.3.

Because the deep bedrock aquifer is a potential source of drinking water in the vicinity of the Site, Table 4.3 also provides a comparison of the deep bedrock water quality to the Ontario Drinking Water Quality Standards (ODWQS) (Technical Support Document for Ontario Drinking Water Standards, Objectives and Guidelines, MOECC, June 2003, revised June 2006).

Table 4.3 shows that several parameters have frequently been reported above their respective ODWQS in samples collected from each of the deep bedrock wells (TW-4, TW-7, and TW-8). The following provides a summary of the parameters reported above their ODWQS limits at least once in 2014:

- TW-7 (upgradient) – iron, manganese, colour, TDS, and turbidity
- TW-4 (downgradient) – iron, manganese, alkalinity, colour, DOC, TDS, and turbidity
- TW-8 (downgradient) – iron, manganese, colour, total coliform bacteria, TDS, and turbidity (field and lab.)

ODWQS Operational Guidelines as well as the criteria for colour and turbidity do not relate directly to water samples collected from groundwater wells. The criteria for colour and turbidity were are included in the ODWQS as they related to the effectiveness of water treatment and are not relevant to samples collected from groundwater monitoring wells. Alkalinity and pH concentrations should be given consideration in the evaluation of water quality; however, the ODWQS established for these parameters are Operational Guidelines set for water treatment plant operations and are thus not directly relevant to evaluations of water quality samples from groundwater monitoring wells.

Table 4.3 shows that water quality within the deep bedrock aquifer has historically been poor. Based on the upgradient water quality from TW-7 and the surrounding land uses there are several potential upgradient sources of water quality impairments within this aquifer. The 2014 water quality results from TW-7 show ODWQS exceedances for iron, manganese, and TDS. Concentrations of alkalinity, chloride, and DOC were also elevated but remained below the applicable ODWQS.

Water quality results from the both downgradient wells show that operations at the Facility are potentially degrading the already poor upgradient water quality. ODWQS exceedances for alkalinity and DOC at TW-4 and total coliform bacteria at TW-8 were found at in addition to those noted in the samples collected from TW-7.

Figures H2-A to H2-C in Appendix H-2 present the evolution of groundwater chemistry at the deep bedrock wells across the Site for the selected indicator parameters; these figures assist in visually identifying temporal trends in groundwater chemistry and are thus useful for understanding the historical evolution of groundwater.

Location	*Trend*	*Ammonia Concentration Range (mg/L)*	
		Historic	*2014*
TW-7	↓	0.091 – 0.157	ND(0.05) – 0.055
TW-4	↑	0.218 – 1.91	1.13 – 3.72
TW-8	↑	0.311 – 4.60	0.273 – 2.69
Location	**Trend**	**DOC Concentration Range (mg/L)**	
		Historic	**2014**
TW-7	↓	6.9 -15.1	3.0– 3.5
TW-4	↓	4.4 – 8.0	4.4 – 7.6
TW-8	↓	3.1 – 13.5	2.5 – 4.2
Location	*Trend*	*Iron (dissolved) Concentration Range (mg/L)*	
		Historic	*2014*
TW-7	↓	0.082 – 9.16	1.12 – 11.1
TW-4	↓	0.455 – 3.3	ND(0.05) – 1.72
TW-8	--	ND(0.05) – 6.25	ND(0.05) – 3.06
Location	*Trend*	*Manganese (dissolved) Concentration Range (mg/L)*	
		Historic	*2014*
TW-7	↓	0.0838 – 1.71	0.0994 – 1.02
TW-4	↑	0.496 – 1.94	1.30
TW-8	--	0.321 – 2.95	0.648 – 1.34

Based on the temporal trends, there is additional evidence for potential Site-related impacts to the deep bedrock aquifer. In particular, increasing trends in ammonia concentrations in both downgradient monitoring wells indicate that the Facility operations may be degrading water quality in the deep bedrock aquifer. Ammonia concentrations in the upgradient monitoring well have steadily remained below or near the detection limits.

A pumping test completed in 2008 showed that the shallow unconfined aquifer and the deep bedrock unit are not hydraulically connected. In addition, recent monitoring results show a sharp decrease in ammonia concentrations at both downgradient deep aquifer monitoring wells. These results could be indicative of natural fluctuations or improving water quality within the deep bedrock aquifer. It is recommended that monitoring results for downgradient deep bedrock aquifer monitoring wells continue to be reviewed and assessed for potential Site-related water quality impacts. If trends of continuing deteriorating water quality are

apparent, consideration should be given to undertaking further investigation or evaluating the need for a remedial strategy.

4.2.4. Surface Water Quality

Analytical results for surface water samples collected from the storm water management pond (SW4-09) and local ditch monitoring locations (SW1-09 through SW3-09) are presented in Table 4.4 and compared to the Provincial Water Quality objectives (PWQO). The following table summarizes the PWQO exceedances noted at the surface water monitoring locations during the 2014 semi-annual sampling events.

Location	*Parameter*	*Units*	*PWQO*	*Spring*	*Fall*
SW1-09	Cobalt	mg/L	0.0009	--	0.00141
SW1-09	Molybdenum	mg/L	0.04	0.585	0.301
SW1-09	Phosphorus	mg/L	0.01	0.0183	--
SW2-09	Iron	mg/L	0.3	0.385	0.459
SW2-09	Phosphorus	mg/L	0.01	0.0259	0.0368
SW3-09	Molybdenum	mg/L	0.04	0.157	--
SW3-09	Phosphorus	mg/L	0.01	0.021	0.0336
SW4-09	Phosphorus	mg/L	0.01	0.0556 (0.133)	0.158 (0.170)
SW4-09	Un-ionized Ammonia	mg/L	0.02	--	0.0468 (0.0537)

Notes:

(0.0537) indicates duplicate analytical results

- No exceedance for sampling event

In general, water quality at the downstream monitoring point (SW3-09) is similar to that reported at the upstream monitoring locations (SW1-09 and SW2-09). Concentrations of phosphorus were consistently above the PWQO at all monitoring locations. Sporadic metals exceedances were noted at SW1-09, SW2-09, and SW3-09 in 2014.

Concentrations of un-ionized ammonia have shown increases at SW4-09 during recent monitoring periods. As discussed in Section 4.2.1, the potential for shallow groundwater to discharge to surface exists within the ditch and SWP. The presence of un-ionized ammonia at elevated concentrations in SW4-09 is likely related to the discharge of impacted groundwater directly to the SWP or via overland flow of impacted runoff. As previously mentioned, the

Groundwater Assessment memo included recommendations to further investigate the potential discharge of shallow groundwater to surface water.

Nine additional samples were collected by Orgaworld staff at surface water monitoring point SW4-09 during 2014. Orgaworld staff collected samples in April, twice in May, twice in June, July, August, September, and October. The analytical results for these samples have been included in Table 4.5 with PWQO exceedances highlighted. As indicated in Table 4.5, PWQO exceedances were noted for:

- Chromium – June and October
- Cobalt – June
- E. Coli – June and October
- pH (Laboratory) – June and August
- Total Phosphorus – exceeded in each sample where phosphorus analysis was completed
- Un-ionized Ammonia – June, August, September, and October

With the exception of April 24th, water was not discharged from the SMP during 2014. Table 4.5 provides the analytical results from the surface water samples collected from SW4-09 in April. As seen in the Table, phosphorus was the only parameter above its respective PWQO. All parameters, including phosphorus, were below the discharge criteria listed in the Sites ECA (see Appendix A). Thus, there was no impact to local surface water occurring as a result of stormwater discharge from the SWP. Any difference between upstream and downstream surface water quality is not attributable to Site-related stormwater discharge. Orgaworld utilized all excess water in the on-Site process, in accordance with the ECA.

Section 5.0 Compliance and Trigger Level Program

Condition 9(3b) of the amended ECA requires the development of trigger level criteria in accordance with MOECC Guideline B-7 (Incorporation of the Reasonable Use Concept into MOEE Groundwater Management Activities). In a memorandum to the MOECC, dated February 27, 2015, CRA provided an outline for a recommended Compliance and Trigger Level Program (TLP). A copy of the memo is included in Appendix B. The memo provides a detailed history of developing the TLP as well as the three tiered approach to evaluating compliance at the Site.

The following Sections provide a brief summary of the key points of the TLP and an assessment of the current water quality.

5.1 Trigger Parameters

A reduced set of parameters have been chosen to focus on the sources of potential impacts from on-Site activities. The TLP is to include the following trigger parameters: ammonia, phosphorus, DOC, nitrate, iron, manganese, alkalinity, and E. coli.

Ammonia, phosphorus, DOC, nitrate and E.coli are all direct indicators of groundwater quality impacts associated with the discharge of organic waste-related contaminants to the subsurface.

Alkalinity is a suitable indicator as it will increase in groundwater where biological consumption of dissolved organic carbon results in an increase in dissolved carbon dioxide. The increase in dissolved carbon dioxide results in the dissolution of carbonate from natural geologic materials within the aquifer and a corresponding increase in total alkalinity.

Iron and manganese concentrations typically increase in groundwater impacted by organic waste due to the alteration of redox conditions within the groundwater. The biological breakdown of dissolved organic matter consumes dissolved oxygen and related oxygen sources in groundwater and creates reducing conditions. Where conditions are reducing, naturally-occurring iron and manganese oxides within the geologic material are reduced to more soluble forms, which results in an increase in dissolved iron and manganese concentrations.

5.2 Trigger Concentrations

Shallow Unconfined Aquifer

The following table provides the trigger levels for the above-referenced trigger parameters for the shallow unconfined aquifer. The trigger levels are based on the 95 percent upper-tolerance limits (UTLs) for aggregate pre-start-up groundwater data in the shallow unconfined aquifer. The UTLs were calculated using methods that were appropriate for the observed parameter-specific data distribution (e.g., parametric-gamma, non-parametric, etc.). More detail of how the trigger concentrations were calculated is provided in Appendix B.

Parameter	***Trigger Level***
Ammonia	4.0 mg/L
Phosphorus	7.2 mg/L
Dissolved Organic Carbon	34.6 mg/L
Nitrate	1.3 mg/L
Iron	48.3 mg/L
Manganese	17.1 mg/L

Parameter	*Trigger Level*
Alkalinity	633 mg/L
E. coli	25.6 CFU/100mL

Deep Bedrock Aquifer

Insufficient pre-start-up water quality data is available to calculate UTLs on this basis for the deep bedrock aquifer. As an alternative, 95 percent UTLs have been calculated for the available data for TW-7, as this well is located in an upgradient position relative to Facility operations.

The following table provides the recommended trigger levels for the above-referenced trigger parameters for the deep bedrock aquifer. The trigger levels are based on the 95 percent (UTL) for upgradient (TW-7) groundwater data in the deep bedrock aquifer. The UTLs were calculated using methods that were appropriate for the observed parameter-specific data distribution (e.g., parametric-gamma, non-parametric, etc.).

Parameter	*Trigger Level*
Ammonia	0.2 mg/L
Phosphorus	0.5 mg/L
Dissolved Organic Carbon	18.4 mg/L
Nitrate	0.5 mg/L
Iron	10.6 mg/L
Manganese	2.1 mg/L
Alkalinity	996 mg/L
E. coli	5.0 CFU/100 mL

5.3 Trigger Level Assessment

The first Tier of the TLP consists of regular quarterly and semi-annual monitoring as outlined in Table 3.1. The second Tier of the TLP will be implemented if during a single monitoring event, two or more trigger parameter concentrations exceed the established Tier I trigger concentrations at a single trigger location. The tabulated analytical results for the shallow unconfined aquifer and deep bedrock aquifers (Tables 4.2 and 4.3, respectively) have been updated to include the trigger concentrations.

The Tier II Confirmation Monitoring program consists of collecting water quality samples in duplicate from the location exhibiting the Tier I exceedance during the next scheduled monitoring event in order to confirm the Tier I exceedance of the two or more trigger parameters. If the concentrations reported in the duplicate samples return to below their respective trigger levels, then Tier I monitoring will resume.

If the Tier I exceedance is confirmed, then the next step in the Tier II Confirmation Monitoring program will be to re-evaluate the degree, nature, and potential source(s) of trigger level impact(s) identified in Tier I. The implications of the exceedances in terms of the potential for impacts to downgradient off-Site water users should be given consideration in the evaluation.

Shallow Unconfined Aquifer Assessment

The following table summarizes the results of the shallow unconfined groundwater TLP sampling undertaken during the current monitoring period:

Location ID	*2014 Tier*	*Trigger Level Exceedances*				*2015 Tier*
		Winter	*Spring*	*Summer*	*Fall*	
MW1-08	-	--	None	--	None	I
MW2-08	-	--	None	--	None	I
MW5-09	-	Alkalinity, Ammonia,	Alkalinity, Ammonia	Alkalinity, Ammonia	Ammonia	II
MW101-13	-	Ammonia	Ammonia	Ammonia	Ammonia	I
MW102-13	-	Ammonia	Ammonia	Ammonia	Ammonia	I
MW103-13	-	None	None	None	None	I
MW104-13	-	Ammonia	Ammonia	Ammonia	Ammonia	I
MW105-13	-	Alkalinity, Ammonia, E. Coli	Ammonia	Ammonia	Ammonia	I

Notes: - -- not sampled

As indicated in the above table, there are several locations where ammonia concentrations were reported above the recommended trigger level during 2014. The presence of a plume of elevated ammonia originating near the facility has been documented in previous evaluations of on-Site groundwater quality and in response to the deteriorating water quality Orgaworld implemented a remediation strategy to mitigate the effects of Facility operations on shallow unconfined groundwater quality. Specifically, a shallow groundwater extraction well will be installed in early 2015 in the vicinity of former monitoring well MW101-09. The purpose of the extraction well is to remove the most heavily impacted groundwater from the source area. It is anticipated that the operation of this extraction well will result in observable improvements in shallow unconfined aquifer groundwater quality downgradient of the Facility over time. If the long-term monitoring program demonstrates that improvements in water quality are insufficient, then consideration will be given to expanding the remediation program.

Future trigger level program assessments will be used to gauge the effectiveness of the extraction well at controlling the downgradient migration of Facility-related groundwater quality impacts.

It should be noted that a recommendation was included in the Groundwater Assessment to install a shallow unconfined aquifer monitoring well to the west of MW5-09 in order to better define the lateral extent of Facility-related water quality impacts in this area. This monitoring well was installed in March 2015 and has been incorporated into the regular monitoring program. The results of monitoring at this location will be discussed in the 2015 Annual Monitoring Report.

Deep Bedrock Aquifer

The following table summarizes the results of the deep bedrock groundwater TLP sampling undertaken during the current monitoring period:

Location ID	***2014 Tier***	***Trigger Level Exceedances***		***2015 Tier***
		Spring	***Fall***	
TW-7	-	None	None	I
TW-4	-	Ammonia	Ammonia, Nitrate	II
TW-8	-	Ammonia	Ammonia	I

Concentrations of ammonia and nitrate exceeded their respective deep bedrock Tier I trigger concentrations at TW-4 in the fall 2014 sample. It is recommended that Tier II sampling be initiated at TW-4 in the spring of 2015, which involves sampling this well in duplicate to confirm the results.

The results of the Tier II duplicate sampling will be assessed against the recommended trigger levels and background groundwater quality in order to determine if a Tier III response is warranted.

Section 6.0 Conclusions

The following conclusions have been developed based on results of the groundwater and surface water monitoring and sampling activities conducted in 2014:

1. Based on the groundwater elevations gathered in May and November 2014, shallow unconfined aquifer flow occurs in a northeasterly direction and groundwater in the

deep bedrock aquifer flows in a southwesterly direction, opposite to the direction of the shallow unconfined aquifer.

2. Analytical results for the shallow unconfined aquifer samples indicate that groundwater quality at the Site is being altered by Facility operations. The distribution of elevated concentrations of ammonia, DOC, iron, and manganese are consistent with a contaminant plume related to an organic contaminant source emanating from the Facility. The impacts are particularly evident with respect to ammonia concentrations which show steadily increasing trends at downgradient monitoring locations.
3. Analytical results obtained from the deep bedrock aquifer samples indicate that groundwater quality in the deep bedrock aquifer may be altered by Facility operations. Increasing trends of ammonia concentrations during previous monitoring periods have been observed downgradient of the Facility. Recent monitoring results have shown a potential reversal of this trend.
4. Analytical results obtained from surface water samples indicate that surface water quality downstream of the Site is not being altered by current Site activities.
5. General decreasing trends in surface water quality are observed in the Stormwater Management Pond. The source of impacts is likely related to overland flow of impacted water from Facility operations or impacted shallow groundwater discharging to the pond. Surface water was discharged from the on-Site Stormwater Management Pond during April 2014. All parameters were below their respective discharge levels listed in the Sites ECA.

Section 7.0 Recommendations

Based on the results of the water quality monitoring program conducted at the Facility, the following recommendations are presented:

1. The Monitoring Program presented in the Monitoring Program Rationalization should be implemented for the next monitoring year (2015), with the following exceptions:
   a. TW-4 should be sampled in duplicate as per Tier II sampling protocol
2. The staff gauges recommended in the Groundwater Assessment memo should be installed and monitored for the next two years. An assessment of potential groundwater discharge to surface water should be made using the monitoring results from the each staff gauge. It is noted that work is underway to install these staff gauges.
3. The results of the additional investigative efforts should be included in the 2015 annual report. An additional section discussing the effectiveness of the groundwater remediation program should also be included.

4. Future monitoring reports should continue to include trigger level assessments consistent with the proposed TLP included in Appendix B.
5. The shallow unconfined aquifer extraction well proposed in the Groundwater Assessment should be installed and operated for the purpose of mitigating groundwater impacts to the shallow unconfined aquifer in the source area. Future monitoring reports should assess the effectiveness of this extraction well and provide recommendations for continued operation or expansion, as appropriate, of the remediation system. It is noted that work is underway to install the extraction well.

Notes:

[1] General chemistry parameters - colour, alkalinity, ammonia, BOD, COD, chloride, colour, DOC, nitrate, nitrite, pH, phenols, phosphorus, sulphate, TDS, TKN, TSS turbidity, and un-ionized ammonia

[2] Additional Surface Water General Chemistry parameters analyzed at SW-4 - conductivity, oil and grease (mineral/HEM/animal and vegetable)

[3] Metals - arsenic, boron, cadmium, chromium, cobalt, copper, iron, lead, manganese, mercury, molybdenum, nickel, and zinc

[4] Surface water metals are total while groundwater metals are dissolved.

[5] PAHs - polycyclic aromatic hydrocarbons - anthracene, benzo(a)pyrene

[6] Escherichia coli (e.coli), fecal coliform bacteria, total coliform bacteria

[7] SW4-09 is sampled by CRA field staff on a bi-annual basis and monthly by Orgaworld staff (when it's safe to do so)

[8] Expanded PAHs - collected once per year at downgradient locations. Includes:
1-methylnaphthatlene, 2-methylnapthalene, acenaphthene, acenaphthylene, acridine, benzo(a)anthracene, Benzo(b)fluoranthene
benzo(b)pyridine (quinoline), benzo(g,h,i)perylene, benzo(k)fluoranthene, carcinogenic potency equivalent, chrysene, dibenz(a,h)anthracene
fluoranthene, fluorene, indeno(1,2,3-cd)pyrene, naphthalene, phenanthrene,and pyrene

X Samples to be collected quarterly (winter, spring, summer, and fall)
√ Samples to be collected semi-annually (spring and fall)
o Samples are collected annually (typically spring)

Notes:

1) TLP - Trigger Level Program Concentration (CRA, 2015)
J - Estimated concentration.
ND - Non-detect at associated value.
U - Not present at or above the associated value.
R - Rejected.
- - Not analyzed.
▭ - Exceedence of the Tier I Trigger Level

Notes:

1) TLP - Trigger Level Program Concentration (CRA, 2015)
J - Estimated concentration.
ND - Non-detect at associated value.
U - Not present at or above the associated value.
R - Rejected.
- - Not analyzed.
Exceedence of the Tier I Trigger Level

Notes:

1) TLP - Trigger Level Program Concentration (CRA, 2015)
2) ODWQS - Ontario Drinking Water Quality Standards. Technical Support Document
for Ontario Drinking Water Standards, Objectives and Guidelines (MOECC, June 2003, revised June 2006)
J - Estimated concentration.
ND - Non-detect at associated value.
U - Not present at or above the associated value.
R - Rejected.
- - Not analyzed.
[ ]: Exceedence of the Tier I Trigger Level
[ ]: Exceedence of the ODWQS

Notes:

PWQO - Provincial Water Quality Objectives
Exceedance of the PWQO
J - Estimated concentration.
ND - Non-detect at associated value.
U - Not present at or above the associated value.
R - Rejected.
- - Not analyzed.

Appendix A

Environmental Compliance Approval (No. 7251 8GKRPD)

CONTENT COPY OF ORIGINAL

Ontario

Ministry of the Environment
Ministère de l'Environnement

AMENDED CERTIFICATE OF APPROVAL
INDUSTRIAL SEWAGE WORKS
NUMBER 7251-8GKRPD
Issue Date: May 30, 2011

Orgaworld Canada Ltd.
4675 Wellington Rd S
London, Ontario
N6K 0C7

Site Location: 5123 Hawthorne Road South
Lot Part of West Half of 27, Concession 6
Ottawa City,
K1G 3Y3

You have applied in accordance with Section 53 of the Ontario Water Resources Act for approval of:

the establishment of stormwater management *Works* for the collection, transmission, treatment and disposal of stormwater runoff and process/wash sewage from a catchment area of 10.14 hectares, to provide Normal water quality protection (Level 2) and to attenuate post-development peak flows to pre-development levels, discharging to a roadside ditch, then to a central SWM facility off site (adjacent Hawthorne Industrial Park), and subsequently discharging through a ditch to Findlay Creek, for all storm events up to and including the 100 year return storm, consisting of the following:

PROPOSED WORKS

- one (1) submersible pump capable of pumping up to 229 m^3/day of stormwater collected from the south ditch of the Site. The pumped stormwater is transferred via a sub-surface 50 mm PVC forcemain to underground storage tanks located on the east side of the Facility for integration into the process water stream or transported off-site for final treatment.
- one (1) terrain tank located on the north side of the Facility, adjacent to the north ditch, having an approximate volume of 45 m^3. Initial stormwater run-off will drain from a portion of the asphalt pad on the north side of the Facility into the tank for assessment by site operations staff as to disposal point (ditch/pond, into plant, or hauled off-site). As the tank fills, tank will spill-over (after initial flush) into the north ditch and travel to the wet detention pond.
- installation of aerators in the south-east portions of the wet detention pond to be operated as required, in order to maintain the stormwater management pond water quality trigger parameters below trigger levels.

EXISTING WORKS

Part I Stormwater Management Works

- one (1) wet extended detention stormwater pond in U shape with approximately base dimensions as follows: 120 m long and 12 m wide, and a maximum depth of 2.0 m, to permanent pool level and 3.4 m to overflow weir elevation (emergency elevation), with 4:1 side slopes, with the following volume structure:

Stage Storage	Elevation (m)	Storage Volume (m^3)
Permanent Pool	90.25 – 91.25	5,385
Extended Detention	91.25 – 91.45	1,311
Quantity	91.45 – 92.25	6,080
Emergency	92.25 – 92.65	3,532

and equipped with the following structures:

- one (1) forebay approximately 65 m long and 12 m wide in U shape, and a maximum depth of 1.0 m to permanent pool level and 3.4 m to overflow weir elevation, equipped with two inlet structures:
    1. Inlet structure. A 12.5 m long 900 mm diameter concrete storm inlet pipe with concrete headwall, connected through the Vortechs unit before entering the sedimentation forebay at an invert elevation of 89.60 m, designed to convey up to a maximum 714 L/s;
    2. Overflow channel. A 9.0 m wide (base), 1.5 m long and approximately 250 mm high channel connecting the open ditch system to the forebay at an invert elevation of 92.45 m, designed to convey up to a maximum 3.07 m³/sec.
- one (1) 150 mm diameter orifice plate set at an elevation of 91.25 m for quality control. This flow restrictor is installed within a 2400 mm diameter maintenance hole (MH2) and attached at the downstream end of a 300 mm diameter PVC pipe, equipped with a cast iron sluice gate valve (Armtec series 20-10C), which will be in **closed position** during normal operation periods;
- one (1) 825 mm diameter concrete pipe and 3.8 m length for quantity control up to the 100-year post-development flow set at an elevation of 91.45 m.
- one (1) 4.0 m wide 250 mm high emergency overflow spillway set at an elevation of 92.25 m, discharging to a concrete stabilized swale and ultimately the roadside dith draining to the Findlay Creek, a tributary to Shields Creek.
- one (1) precast concrete oil/grit separator (Vortechs Model 16000) designed to handle stormwater runoff to convey up to 714 L/s storm flows, providing a sediment storage capacity of 5.43 m³ and having interior dimensions of 5.49 m long, 3.66 m widen and 2.13 m high, designed to provide over 80% total net annual TSS removal, discharging to a forebay of the wet pond;
- an open ditch/swale system with sufficient capacity to convey up to the 100-year storm event (estimated at 3.07 m³/sec), with approximately 1,000 m length of a trapezoidal shaped perimeter ditch along the site boundaries, having a top width of approximately 1.0 m wide flat bottom ditch and side slopes of 3V:1H up to 10:1 with variable widths and depths, running through three culverts of 18 to 30 m in length and 600 mm diameter concrete sewers, and discharging through a 2400 mm diameter maintenance hole (MH1) connecting to the oil/grit separator described above;
- a minor drainage system of storm sewers and appurtances designed to capture and convey runoff during frequent storm events up to the 10-year storm event with PVC sewers ranging from 150 mm to 300 mm diameter sewers. The minor drainage system connects the organics composting facility through approximately 200 m length 300 mm diameter sewer to the MH5 for further discharge into the inlet structures.
- one (1) maintenance access road for operational, inspection and maintenance purposes, consisting of a 4 m wide gravel/grassed access lane located around the perimeter of the facility and a 70 m long gravel lane to the inlet structures at the northwest corner of the pond to the outlet structures.

The simulated modelling estimate and drainage pattern of the site are as follows:

Storm Events	2-year	5-year	25-year	100-year
Existing flows, pre-development (L/s)	206	351	606	848
Post-development flows (L/s)	1,118	1,651	2,410	3,067
Post-development attenuated flows (L/s)	56	89	189	283

The above, including erosion/sedimentation control measures during construction and all other controls and appurtenances essential for the proper operation of the aforementioned *Works*.

Part II <u>Process Water Recirculation System</u>

- A Process Water Recirculation System (WRS) to provide optimum humidity levels for the composting process and for odour control system, consisting of the following:
- Six (6) reinforced precast concrete underground storage tanks equipped with level control system with a capacity of 45 m³ each;
- Four (4) plastic above ground storage tanks (bioscrubber, sulphuric acid storage, tank and two ammonium sulphate storage tanks) equipped with level control system with a capacity of 180, 45, 50, and 50 m³ respectively;
- Eight (8) pumps to recirculate collected water from composting tunnels, biofilters and bioscrubber to the composting tunnels, biofilter and bioscrubber and for washdown supply.
- Piping for percolate/washdown water supply to the composting area including a sprinkling system;
- An odour control equipment consisting of a biofilters and bio scrubber to recirculate filtrate water and supply of filtered effluent to the washdown lines, and equipped with chemical addition piping for pH control; and

- Piping for the supply of stormwater from the wet pond to the process tanks for composting requirements.

The above, including all other controls and appurtenances essential for the proper operation of the aforementioned *Works*.

All in accordance with the following submitted supporting documents:

1. Application for Approval of Industrial Sewage Works submitted by Frederick (Rick) Mosher of Orgaworld Canada Ltd., dated September 19, 2008, with supporting information prepared by J.L. Richards & Associates Limited of Ottawa.

2. Stormwater Site Management Plan, Orgaworld Ottawa Composting Facility, dated September 2008, prepared by Mark Buchanan, EIT, Derrick Upton, P.Eng., Guy Forget, P.Eng., from J.L. Richards and Associates Limited; and Ron Cherkewski, P.Eng. of Conestoga-Rovers & Associates.

3. Hydrological Investigation, Terrain Analysis and Impact Assessment, Proposed Industrial Subdivision Report. Lots 26 & 27 Concession VI, Geographic City of Gloucester, City of Ottawa, Ontario, dated December 2008, and prepared by Golder Associates.

4. Letter from Ron Cherkewski, P.Eng. of Conestoga-Rovers & Associates to Edgardo Tovilla, P.Eng. of the MOE, dated February 17, 2009, and received on March 9, 2009, with response to MOE letter of information request dated February 4, 2009.

5. Application for a Provisional Certificate of Approval for Waste Disposal Site - Organics Composting Facility - Orgaworld Canada Ltd., dated June 2008, prepared by Conestoga-Rovers and Associates of Waterloo.

6. Letter from Ron Cherkewski, P.Eng. of Conestoga-Rovers & Associates to Edgardo Tovilla, P.Eng. of the MOE, dated February 17, 2009, with response to MOE letter dated February 2, 2009.

7. Email from Tej Gidda, P. Eng., Ph. D., of Conestoga-Rovers & Associates to Edgardo Tovilla, P.Eng. of the MOE, dated March 21, 2009, in agreement with Spill Contingency and Pollution Prevention Plan.

8. Letter from Ron Cherkewski, P.Eng. of Conestoga-Rovers & Associates to Edgardo Tovilla, P.Eng. of the MOE, dated April 9, 2009, with response to MOE letter dated March 25, 2009.

9. Letter from Jennifer L. Boyer, M.Sc., B.E.S., of South Nation Consercation to Mike Schmidt of the City of Ottawa, dated May 26, 2009, with final review of the SWM Report for the Tomilson/Hawthorne Industrial Park subdivision.

10. Letter from Ron Cherkewski, P.Eng. of Conestoga-Rovers & Associates to Edgardo Tovilla, P.Eng. of the MOE, dated June 1, 2009, with response to MOE letter dated May 11, 2009.

11. Letter from Francois La Forge, P.Eng., of Conestoga-Rovers & Associates to Edgardo Tovilla, P.Eng. of the MOE, dated June 30, 2009, with the proposed Groundwater/Surface Water Monitoring Program.

12. Letters from Tej Gidda, P. Eng., Ph. D. of Conestoga-Rovers & Associates to Edgardo Tovilla, P.Eng. of the MOE, dated July 17, 20 & 23, and August 21, 2009, with response to information requested on June 8, 2009, and final revisions to the Draft CofA.

13. Application for Approval of Industrial Sewage Works submitted by Henk Kaskens of Orgaworld Canada Ltd., dated March 23, 2010, with supporting information prepared by Conestoga Rovers & Associates of Waterloo.

14. Meeting minutes prepared by Conestoga Rovers & Associated, dated August 23, 2010, after meeting with the Ottawa District Office and MOE Technical Support.

15. Application for Approval of Industrial Sewage Works submitted by Henk Kaskens of Orgaworld Canada Ltd., dated March 18, 2010, with supporting information prepared by Conestoga-Rovers & Associates of Waterloo.

For the purpose of this Certificate of Approval and the terms and conditions specified below, the following definitions apply:

"*Act*" means the Ontario Water Resources Act, R.S.O. 1990, Chapter 0.40, as amended;

"*BOD5*" (also known as TBOD5) means five day biochemical oxygen demand measured in an unfiltered sample and includes carbonaceous and nitrogenous oxygen demand;

"*CBOD5*" means five day carbonaceous (nitrification inhibited) biochemical oxygen demand measured in an unfiltered sample;

"*Certificate*" means this entire certificate of approval document, issued in accordance with Section 53 of the *Act*, and includes any schedules;

"*COD*" means Chemical Oxygen Demand;

"*Director*" means any *Ministry* employee appointed by the Minister pursuant to section 5 of the *Act*;

"*District Manager*" means the District Manager of the Ottawa District Office of the Ministry;

"*DOC*" means Dissolved Organic Carbon;

"*Leachate Contaminated Sewage*" means sewage collected on site that exceeds any of the the trigger parameter levels for a water quality listed in Table 2;

"*Ministry*" means the Ontario Ministry of the Environment;

"*Owner*" means Orgaworld Canada Ltd., also referred as OCL, and includes its successors and assignees;

"*Substantial Completion*" has the same meaning as "*substantial performance*" in the Construction Lien Act; and

"*Works*" means the sewage works described in the *Owner's* application, this *Certificate* and in the supporting documentation referred to herein, to the extent approved by this *Certificate*.

You are hereby notified that this approval is issued to you subject to the terms and conditions outlined below:

TERMS AND CONDITIONS

PART I - GENERAL

1. GENERAL PROVISIONS

(1) The *Owner* shall ensure that any person authorized to carry out work on or operate any aspect of the *Works* is notified of this *Certificate* and the conditions herein and shall take all reasonable measures to ensure any such person complies with the same.

(2) Except as otherwise provided by these Conditions, the *Owner* shall design, build, install, operate and maintain the *Works* in accordance with the description given in this *Certificate* the application for approval of the works and the submitted supporting documents and plans and specifications as listed in this *Certificate*.

(3) Where there is a conflict between a provision of any submitted document referred to in this *Certificate* and the Conditions of this *Certificate*, the Conditions in this *Certificate* shall take precedence, and where there is a conflict between the listed submitted documents, the document bearing the most recent date shall prevail.

(4) Where there is a conflict between the listed submitted documents, and the application, the application shall take precedence unless it is clear that the purpose of the document was to amend the application.

(5) The requirements of this *Certificate* are severable. If any requirement of this *Certificate*, or the application of any

CONTENT COPY OF ORIGINAL

requirement of this *Certificate* to any circumstance, is held invalid or unenforceable, the application of such requirement to other circumstances and the remainder of this certificate shall not be affected thereby.

2. EXPIRY OF APPROVAL

The approval issued by this *Certificate* will cease to apply to those parts of the *Works* which have not been constructed within **five (5) years** of the date of this *Certificate.*

3. CHANGE OF OWNER

(1) The *Owner* shall notify the *District Manager* and the *Director,* in writing, of any of the following changes within **thirty (30) days** of the change occurring:

(a) change of *Owner;*

(b) change of address of the *Owner;*

(c) change of partners where the *Owner* is or at any time becomes a partnership, and a copy of the most recent declaration filed under the Business Names Act, R.S.O. 1990, c.B17 shall be included in the notification to the *District Manager;*

(d) change of name of the corporation where the *Owner* is or at any time becomes a corporation, and a copy of the most current information filed under the Corporations Information Act, R.S.O. 1990, c. C39 shall be included in the notification to the *District Manager;*

(2) In the event of any change in ownership of the *Works,* other than a change to a successor municipality, the *Owner* shall notify in writing the succeeding owner of the existence of this *Certificate,* and a copy of such notice shall be forwarded to the *District Manager* and the *Director.*

4. UPON THE SUBSTANTIAL COMPLETION OF THE WORKS

(1) Within **one (1) year** of the *Substantial Completion* of the *Works,* a set of as-built drawings showing the *Works* as "constructed" shall be completed and submitted by the *Owner* to the *District Manager.* These drawings shall be kept up to date through revisions undertaken from time to time and a copy shall be retained at the *Works* or at operational office of the *Owner* for the operational life of the *Works.*

(2) The *Owner* shall inform in writing to the *District Manager* when sewage from the site is transported by a licensed waste hauler for further treatment at a sewage treatment plant or to any disposal site. The *Owner* shall inform the *District Manager* of any other alternative measures for further treatment, management and disposal of sewage.

PART II - STORMWATER MANAGEMENT WORKS

5. SURFACE WATER MONITORING AND RECORDING

(1) The *Owner* shall, upon commencement of operation of the *Works,* carry out the following effluent monitoring program. Composite samples comprised of three (3) or more equal volumes of grab samples from different locations of the pond shall be collected from the **SWM Pond at a monthly frequency** and analyzed for the following parameters listed in Table 1:

Table 1 - Effluent Monitoring SWMPond		
General Parameters	**Inorganics**	**Field Parameters**
BOD5	Arsenic	Conductivity
COD	Boron	Dissolved Oxygen
DOC	Cadmium	pH
Total Ammonia Nitrogen	Chromium	Temperature
Total Kjeldahl Nitrogen	Cobalt	
Nitrate-N	Copper	
Nitrite-N	Lead	
Total Phenols	Mercury	
Total Phosphorus	Nickel	
Total Suspended Solids (TSS)	Zinc	
E-Coli		
Oil & Grease		
pH		

(2) The methods and protocols for sampling, analysis and recording shall conform, in order of precedence, to the methods and protocols specified in the following:

(a) the Ministry's Procedure F-10-1, "Procedures for Sampling and Analysis Requirements for Municipal and Private Sewage Treatment Works (Liquid Waste Streams Only), as amended from time to time by more recently published editions;

(b) the Ministry's publication "Protocol for the Sampling and Analysis of Industrial/Municipal Wastewater" (January 1999), ISBN 0-7778-1880-9, as amended from time to time by more recently published editions;

(c) the publication "Standard Methods for the Examination of Water and Wastewater" (20th edition), as amended from time to time by more recently published editions;

(3) The list of parameters and monitoring frequencies specified in subsection (1) of this Condition in respect to any parameter are minimum requirements which may, after two (2) years of operation of the *Works* in accordance with this Condition, be modified by the *District Manager* in writing from time to time.

(4) The Owner shall establish four (4) surface water stations named SW-1, SW-2, SW-3, and SW-4 as per Figure 1 - Shallow Unconfined Water Table Groundwater and Surface Water Monitoring Locations, dated June 30, 2009, prepared by Conestoga-Rovers Associates, and implement a long-term monitoring program for the surface water quality of Findlay Creek.

(5) The *Owner*shall retain for a minimum of **three (3) years** from the date of their creation, all records and information related to or resulting from the monitoring activities required by this *Certificate.*

6. OPERATION AND MAINTENANCE

(1) Up on commencement of operation of the *Works,*the *Owner*shall ensure that a "Spill Contingency and Pollution Prevention Plan" for the *Works*prepared in accordance with Condition (8) is submitted to the *District Manager*for comments and concurrance;

(2) Upon commencement of operation of the *Works,*the *Owner*shall implement all operating procedures identified in the operations manual. This manual shall include, but not necessarily be limited to, the following information:

(a) operating procedures for routine operation of the *Works;*

(b) inspection programs, including frequency of inspection, for the *Works*and the methods or tests

employed to detect when maintenance is necessary;

(c) repair and maintenance programs, including the frequency of repair and maintenance for the *Works;*

(d) procedures for the inspection and calibration of monitoring equipment;

(e) a spill prevention control and countermeasures plan, consisting of contingency plans and procedures for dealing with equipment breakdowns, potential spills and any other abnormal situations, including notification of the *District Manager;* and

(f) procedures for receiving, responding and recording public complaints, including recording any follow-up actions taken.

(3) The *Owner* shall maintain the operations manual current and retain a copy at the location of the *Works* for the operational life of the *Works.* Upon request, the *Owner* shall make the manual available to *Ministry* staff.

(4) The *Owner* shall keep the **SWMPond** discharge outlet sluice gate valve in **closed position** during normal operation periods.

(5) Prior to any discharge from the **SWMPond** to the natural environment, the *Owner* shall collect grab samples from a designated sampling location at the **SWMPond** and analyze for the parameters listed in Table 2 using the analytical protocols listed in Condition 5(2). The *Owner* shall compare monitoring results for each and all grab samples with the corresponding trigger level of each parameter listed in Table 2 to identify any leachate contamination of stormwater **before allowing any discharge from the SWMPond.**

Table 2
Trigger Parameters

Parameter	Trigger Level (mg/L if not specified)
Ammonia (unionized)	0.05
Nitrate-N (NO3-N)	2.93
CBOD5	15
Total Phosphorus	0.4
Total Suspended Solids	15
E-Coli	100 count/100 mL
pH	6.5 to 8.5
Temperature (maximum)	23°C

(6) In the event of an exceedance of a trigger level for any trigger parameter, the *Owner* shall implement the "Spill Contingency and Pollution Prevention Plan" approved under Condition 6 (1) and identify the cause of contamination and implement remedial measures to prevent storm sewage being contaminated with leachate.

(7) After the implementation of remedial measures, the *Owner* shall ensure that the contents of the SWM pond which is still deemed to be leachate contaminated sewage is disposed of in a pre-approved manner;

(8) The *Owner* shall generate a record for each instance when leachate contaminated sewage is hauled off-site for further treatment and include in this record the date, quantity of leachate contaminated sewage, and location where it has been hauled to;

(9) Discharge of leachate contaminated sewage from the *Works* to receiving surface water is prohibited, except where it is necessary to avoid loss of life, personal injury, danger to public health or severe property damage;

(10) The *Owner* shall notify the *District Manager* orally, as soon as possible, and in writing within **seven (7) days** of the discharge to receiving surface water of leachate contaminated sewage. This reporting shall include but not be limited to:

(a) an assessment of the impacts – real and potential – relating to each discharge;

(b) the cause(s) of or the conditions leading to the discharge event;

(c) the analytical results of each grab sample taken prior to and during the discharge event and its comparison with the trigger parameters listed in Table 2;

(d) the estimated volume of leachate contaminated sewage discharged; and

(e) the proposed and/or completed remedial actions.

(11) The *Owner* shall maintain the water level in the detention pond at a level that ensures adequate storage is available for stormwater runoff associated with major storm events by ensuring that detained stormwater is disposed of in a timely manner to minimize the occurrence of emergency overflow during major storm events.

(12) The *Owner* shall inspect the *Works* at least once a year and, if necessary, clean and maintain the *Works* to prevent the excessive build-up of sediments and/or vegetation.

(13) The *Owner* shall maintain a logbook to record the results of these inspections and any cleaning and maintenance operations undertaken, and shall keep the logbook at the site and/or *Owner's* operational headquarters for inspection by the *Ministry*. The logbook shall include the following:

(a) the name of the *Works;*

(b) the date and results of each inspection, maintenance and cleaning, including an estimate of the quantity of any materials removed;

(c) the volume of contaminated stormwater disposed off-site, the date, and the name of the receiving sewage treatment plant; and

(d) the sample monitoring results (Table 1 parameters).

(14) The *Owner* shall not store any end-product, including leaves and yard waste outdoors until the *Owner* prepares a Conditions Assessment and implementation plan approved by the *District Manager*. This Assessment and implementation plan shall include at a minimum:

(a) providing crib-bin walls or equivalent for the outdoor covered shelter structure to prevent contact between finished compost and wind-driven moisture;

(b) design of a monitoring plan with sample locations, frequency, sample type and parameters; and

(c) identification of trigger parameters and corrective actions in case of consistently exceeding these parameters.

PART III - PROCESS WATER RECIRCULATION SYSTEM

7. OPERATION AND MAINTENANCE

(1) Before the commencement of operation of the *Works*, the *Owner* shall ensure that a "Spill Contingency and Pollution Prevention Plan" for the *Works* is prepared as per Condition (8), submitted to the *District Manager;*

(2) Up on commencement of operation of the *Works,* the *Owner* shall implement all operational procedures identified in the operation manual. The operation manual shall include, but not necessarily limited to, the following information:

(a) operating procedures for routine operation of the *Works;*

(b) inspection programs, including frequency of inspection, for the *Works* and the methods or tests

employed to detect when maintenance is necessary;

(c) repair and maintenance programs, including the frequency of repair and maintenance for the *Works;*

(d) procedures for the inspection and calibration of monitoring equipment;

(e) a spill prevention control and countermeasures plan, consisting of contingency plans and procedures for dealing with equipment breakdowns, potential spills and any other abnormal situations, including notification of the *District Manager;* and

(f) procedures for receiving, responding and recording public complaints, including recording any follow-up actions taken.

(3) The *Owner* shall maintain the operations manual current and retain a copy at the location of the *Works* for the operational life of the *Works.* Upon request, the *Owner* shall make the manual available to *Ministry* staff.

PART IV - GENERAL

8. SPILL CONTINGENCY AND POLLUTION PREVENTION PLAN

(1) Upon commencement of operation of the *Works,* the O*wner* shall implement a Spill Contingency and Pollution Prevention Plan that outlines procedures as to how to mitigate the impacts of a spill within the area serviced by the works and/or prevent pollution incidents. The said plan shall include as a minimum, but not limited to:

(a) the name, job title and location (address) of the owner, person in charge, management or control of the facility;

(b) the name, job title and 24-hour telephone number of the person(s) responsible for activating the spill contingency plan;

(c) a site plan drawn to scale showing the facility, nearby buildings, streets, catchbasins & manholes, drainage patterns (including direction(s) of flow in storm sewers) and any features which need to be taken into account in terms of potential impacts on access and response (including physical obstructions and location of response and clean-up equipment);

(d) steps to be taken to report, contain, clean up and dispose of contaminants following a spill;

(e) a listing of telephone numbers for: local clean-up company(ies) who may be called upon to assist in responding to spills; local emergency responders including health institution(s); and MOE Spills Action Centre 1-800-268-6060;

(f) Materials Safety Data Sheets (MSDS) for each hazardous material which may be transported or stored within the area serviced by the works;

(g) the means (internal corporate procedures) by which the spill contingency plan is activated;

(h) a description of the spill response and pollution prevention training provided to employees assigned to work in the area serviced by the works, the date(s) on which the training was provided and to whom;

(i) an inventory of response and clean-up equipment available to implement the spill contingency plan, location and, date of maintenance/replacement if warranted; and

(j) the date on which the contingency and pollution prevention plan was prepared and subsequently, amended.

(2) The Spill Contingency and Pollution Prevention Plan shall be kept in a conspicuous place inside the building and in the close vicinity of the truck loading/unloading area.

(3) The Spill Contingency and Pollution Prevention Plan will be amended from time to time as needed by changes in the

operation of the facility or to reflect the City of Ottawa's municipal By-Laws updates or improved Best Management Practices by the *Owner*.

9. GROUNDWATER MONITORING

Upon issuance of this *Certificate,* the *Owner* shall establish the following groundwater monitoring program with monitoring wells located as per Figure 1 - Shallow Unconfined Water Table Groundwater and Surface Water Monitoring Locations, dated June 30, 2009, prepared by Conestoga-Rovers Associates.

(1) For the unconfined shallow groundwater aquifer, the *Owner* shall establish and maintain in accordance with O.Reg. 903, R.R.O. 1990, as amended from time to time, all existing eight (8) monitoring wells designated as: MW1-08 to MW5-08; and MW101 to MW103 and such wells that would be necessary for the appropriate monitoring of the groundwater quality.

(2) For the confined deep bedrock aquifer, the *Owner* shall maintain in accordance with O.Reg. 903, R.R.O. 1990, as amended from time to time, all existing three (3) monitoring wells designated as: TW-4, TW-7, and TW-8 (within the Orgaworld Canada Ltd. site), and such wells that would be necessary for the appropriate monitoring of the groundwater quality.

(3) Within **sixty (60) days** of the issuance of this Certificate, the *Owner* shall:

(a) complete an assessment of the groundwater quality for each stratrigraphic unit;

(b) develop criteria in accordance with the Ministry Guideline B-7 - Incorporation of the Reasonable Use Concept into MOEE Groundwater Management Activities; and

(c) submit to the *District Manager* for review and concurrence.

(4) The *Owner* shall collect groundwater samples twice per year - in May and November - from the monitoring wells listed at subsections (1) and (2), and increase the sampling frequency to four times per year - in February, May, August and November - for the three new wells MW101, MW102, and MW103.

(5) The Owner shall have the samples collected pursuant to subsection (2) filtered and analyzed for Alkalinity, Colour, Iron, Manganese, Cadmium, Molybdenum, Zinc, Petroleum Hydrocarbons fractions, Anthracene, arsenic, E.Coli, feacal coliforms, total coliforms, Total Disssolved Solids (TDS), DOC, turbidity, pH, CBOD5, temperature, using the analytical protocols listed at Condition 5 (2).

(6) The Owner shall measure the water level elevation in each of the monitoring wells identified in subsection (1) and (2) at the time of collection of water samples pursuant to subsections (4).

(7) The measurement frequencies specified in subsection (4) in respect of any parameter are minimum requirements which may, after **two (2) years** of operation of the Works, be modified by the *District Manager* in writing from time to time.

(8) After **two (2) years** of operation of the *Works,* the *Owner* shall establish a comprehensive Compliance and Trigger Level Monitoring Program based on the groundwater monitoring, and submit it along with an application to amend this *Certificate* to the *Director* and the *District Manager*.

10. REPORTING

(1) **One (1) week** prior to the start up of the operation of the *Works,* the *Owner* shall notify the *District Manager* (in writing) of the pending start up date.

(2) The *Owner* shall, upon request, make all manuals, plans, records, data, procedures and supporting documentation available to *Ministry* staff.

(3) The *Owner* shall prepare a performance report on an annual basis, within **ninety (90) days** following the end of the

period being reported upon. The first such report shall cover the first annual period following the commencement of operation of the *Works* and subsequent reports shall be submitted to cover successive annual periods following thereafter. The reports shall contain, but shall not be limited to, the following information:

(a) a description of any operating problems encountered and corrective actions taken;

(b) a summary of all maintenance carried out on any major structure, equipment, apparatus, mechanism or thing forming part of the *Works;*

(c) a summary of all effluent monitoring results undertaken in the reporting period;

(d) a summary of the quantity of leachate contaminated sewage that was hauled to a municipal sewage treatment plant and the number of times the contents of the SWM Pond were disposed in such manner;

(e) a summary of the calibration and maintenance carried out on all effluent monitoring equipment;

(f) all analytical results and water level elevations obtained from the groundwater monitoring, pursuant to condition 9; and

(e) any other information the *District Manager* requires from time to time.

The reasons for the imposition of these terms and conditions are as follows:

1. Condition 1 is imposed to ensure that the *Works* are built and operated in the manner in which they were described for review and upon which approval was granted. This condition is also included to emphasize the precedence of Conditions in the *Certificate* and the practice that the Approval is based on the most current document, if several conflicting documents are submitted for review. The condition also advises the Owners their responsibility to notify any person they authorized to carry out work pursuant to this *Certificate* the existence of this *Certificate.*

2. Condition 2 is included to ensure that, when the *Works* are constructed, the *Works* will meet the standards that apply at the time of construction to ensure the ongoing protection of the environment.

3. Condition 3 is included to ensure that the *Ministry* records are kept accurate and current with respect to the approved works and to ensure that subsequent owners of the *Works* are made aware of the *Certificate* and continue to operate the *Works* in compliance with it.

4. Condition 4 is included to ensure that the *Works* are constructed in accordance with the approval and that record drawings of the *Works* "as constructed" are maintained for future references.

5. Conditions 5 and 9 are included to enable the *Owner* to evaluate and demonstrate the performance of the *Works,* on a continual basis, so that the *Works* are properly operated and maintained at a level which is consistent with the design objectives specified in the *Certificate* and that the *Works* does not cause any impairment to the receiving watercourse.

6. Conditions 6, 7 and 8 are included to require that the *Works* be properly operated, maintained, funded, staffed and equipped such that the environment is protected and deterioration, loss, injury or damage to any person or property is prevented. As well, the inclusion of a comprehensive operations manual governing all significant areas of operation, maintenance and repair is prepared, implemented and kept up-to-date by the owner and made available to the *Ministry.*

7. Condition 10 is included to provide a performance record for future references, to ensure that the *Ministry* is made aware of problems as they arise, and to provide a compliance record for all the terms and conditions outlined in this *Certificate,* so that the *Ministry* can work with the *Owner* in resolving any problems in a timely manner.

This Certificate of Approval revokes and replaces Certificate(s) of Approval No. 7032-88XPRA issued on September 7, 2010.

written notice served upon me and the Environmental Review Tribunal within 15 days after receipt of this Notice, require a hearing by the Tribunal. Section 101 of the Ontario Water Resources Act, R.S.O. 1990, Chapter 0.40, provides that the Notice requiring the hearing shall state:

1. The portions of the approval or each term or condition in the approval in respect of which the hearing is required, and;
2. The grounds on which you intend to rely at the hearing in relation to each portion appealed.

The Notice should also include:

3. The name of the appellant;
4. The address of the appellant;
5. The Certificate of Approval number;
6. The date of the Certificate of Approval;
7. The name of the Director;
8. The municipality within which the works are located;

And the Notice should be signed and dated by the appellant.

MEMORANDUM

TO:	Ministry of Environment and Climate Change	REF. NO.:	045804
FROM:	Ben Kempel/Tej Gidda/mg/28	DATE:	February 27, 2015
CC:	Ben Constable, CRA Michael Rooke, Orgaworld		
RE:	**Recommended Compliance and Trigger Level Program - Orgaworld Canada Ltd., Ottawa, Ontario**		

1.0 Introduction

Conestoga-Rovers & Associates has prepared this memorandum to outline a recommended groundwater Compliance and Trigger Level Program (TLP) for the Orgaworld Canada Ltd. (OCL) organic waste processing facility (Facility) located at the 5123 Hawthorne Road, Ottawa, Ontario (Site). The TLP has been developed to satisfy Condition 9(8) of the Environmental Compliance Approval (Industrial Sewage Works No. 7251-8GKRPD) (ECA) for the Site and is being submitted in support of an application to amend the ECA. The application is being submitted for the purpose of incorporating a groundwater TLP and revised groundwater and surface water monitoring programs into the ECA.

The following Section discusses the results of previous assessments of groundwater compliance and trigger level assessments for the Site. A recommended TLP for the Site is presented in Section 3.0.

2.0 Background

The OCL Site is approximately 10 hectares in area and is situated in the southwest corner of the Hawthorne Industrial Park (HIP) subdivision, which covers an area of approximately 80 hectares. Since the early/mid 1990's, the HIP subdivision has historically received excess fill materials from various construction and demolition projects, which is understood to consist primarily of clean soil with some concrete debris and reclaimed asphalt pavement and aggregate materials, and has also been intermittently used for temporary storage of various construction related materials. The area surrounding the HIP subdivision has a number of mineral aggregate extraction operations in place (south-east, west, and north-west of HIP), some of which are still active. The OCL Site was also subject to mineral aggregate removals prior to Facility development by OCL. Given the historic and ongoing land uses around the subject Site, there is the potential for soil, groundwater, and surface water quality impairment related to the various past activities.

REGISTERED COMPANY FOR ISO 9001 ENGINEERING DESIGN

As part of the ECA development for this Site, the MOE requested a groundwater monitoring program be implemented to ensure that the proposed operation of the OCL Facility does not adversely affect the surrounding environment (there are concerns for downstream agricultural users of the shallow/surface water regime, and for the deeper-aquifer which supplies potable water to a number of nearby properties). The purpose of the groundwater monitoring program is to evaluate the potential impact of OCL activities on the groundwater and surface water quality; regular monitoring allows for the analysis of trends over time and ensures there is an early warning of potential problems.

Previous assessments of groundwater quality at the Site have identified pre-existing groundwater quality as an obstacle to developing a functional TLP for groundwater in the current Site context. Historical backfill material used on Site, as well as historical and surrounding land uses have resulted in highly variable groundwater quality. For this reason, typical assessments using generic water quality standards as the basis for assessing compliance at the Site boundary do not provide meaningful indications of the effects of Facility operations on groundwater quality.

Condition 9(3b) of the ECA requires the development of criteria in accordance with MOE Guideline B-7 (Incorporation of the Reasonable Use Concept into MOEE Groundwater Management Activities). CRA initially completed an assessment of on-Site water quality in accordance with the Reasonable Use Concept in a memo to Tracy Hart of the MOE dated February 5, 2010. Assessments of water quality provided in Annual Monitoring Reports following submission of the February 5, 2010 memo concluded that the application of the Reasonable Use Concept at the downgradient property boundary is irrelevant due to the presence of numerous parameters elevated above generic standards in background water quality. As such, the Site-specific criteria calculated using the Reasonable Use Concept are not considered appropriate for evaluating Site compliance.

A groundwater trigger level assessment that used intra-well baseline data was provided in the 2012 Annual Monitoring Report for the Site. This type of assessment can be useful for identifying potential increases in groundwater quality impacts by comparing current data to statistically-based upper tolerance limits (UTLs) developed from historical data at individual wells. However, the use of trigger levels based on intra-well baseline UTLs is not considered appropriate for the Site for the following reasons:

1. There is insufficient pre-start-up data to provide statistically valid intra-well baseline data.
2. The intra-well baseline method does not account for the movement of pre-start-up water quality impacts from one portion of the Site to another. Based on the highly variable water quality on-Site prior to start-up of Facility operations, this could yield false triggers in downgradient on-Site monitoring wells.

3.0 Recommended Compliance and Trigger Level Program

For the purposes of assessing potential groundwater quality impairments related to the activities approved under the ECA, comparison of post-start-up data to pre-start-up data provides a useful comparison. Water quality data from pre-start-up monitoring demonstrated considerable variability within the shallow unconfined aquifer across the Site. This pattern is consistent with variable pre-existing sources of water

quality impacts upgradient and/or on-Site. Some sources of water quality impacts un-related to the Facility operations include: current and historical quarrying operations located upgradient of the Site, historical backfill materials used for grading at the Site, and various other current and historical industrial and agricultural activities in the vicinity.

Therefore, in consideration of the variable water quality pre-existing Facility operations, it is recommended that the aggregate Site-wide pre-start-up water quality data be used as the basis for establishing groundwater trigger levels for the shallow unconfined aquifer. The pre-start-up data is all data collected from shallow unconfined aquifer monitoring wells between July 2008 and January 2010. By using an appropriate statistical representation of the overall pre-existing water quality, the trigger levels will provide indications of new water quality impairments, not related to historical activities. This method will reduce the potential for trigger levels being exceeded at specific on-Site monitoring locations due to the migration of pre-existing water quality impairments within the Site boundaries.

It is recommended that the groundwater trigger level program focus on a reduced set of parameters that reflect the sources of potential impact from on-Site activities. These parameters will thus act as surrogates for Site-related water quality impacts. Based on a review of water quality data for the Site and the known sources of impact associated with organic waste processing, the trigger level program should include the following trigger parameters: ammonia, phosphorus, dissolved organic carbon, nitrate, iron, manganese, alkalinity and E. coli.

Ammonia, phosphorus, dissolved organic carbon; nitrate and E.coli are all direct indicators of groundwater quality impacts associated with the discharge of organic waste-related contaminants to the subsurface.

Alkalinity is a suitable indicator as it will increase in groundwater where biological consumption of dissolved organic carbon results in an increase in dissolved carbon dioxide. The increase in dissolved carbon dioxide results in the dissolution of carbonate from natural geologic materials within the aquifer and a corresponding increase in total alkalinity.

Iron and manganese concentrations typically increase in groundwater impacted by organic waste due to the alteration of redox conditions within the groundwater. The biological breakdown of dissolved organic matter consumes dissolved oxygen and related oxygen sources in groundwater and creates reducing conditions. Where conditions are reducing, naturally-occurring iron and manganese oxides within the geologic material are reduced to more soluble forms, which results in an increase in dissolved iron and manganese concentrations.

Shallow Unconfined Aquifer

The following table provides the recommended trigger levels for the above-referenced trigger parameters for the shallow unconfined aquifer. The trigger levels are based on the 95% UTLs for aggregate pre-start-up groundwater data in the shallow unconfined aquifer. The UTLs were calculated using methods that were appropriate for the observed parameter-specific data distribution (e.g. parametric-gamma, non-parametric, etc.).

Parameter	*Trigger Level*
Ammonia	4.0 mg/L
Phosphorus	7.2 mg/L
Dissolved Organic Carbon	34.6 mg/L
Nitrate	1.3 mg/L
Iron	48.3 mg/L
Manganese	17.1 mg/L
Alkalinity	633 mg/L
E. coli	25.6 CFU/100mL

Deep Bedrock Unit

Insufficient pre-start-up water quality data is available to calculate UTLs on this basis for the bedrock aquifer. As an alternative, 95% UTLs have been calculated for the available data for TW-7, as this well is located in an upgradient position relative to Facility operations.

The following table provides the recommended trigger levels for the above-referenced trigger parameters for the bedrock aquifer. The trigger levels are based on the 95% (UTL) for upgradient (TW-7) groundwater data in the bedrock aquifer. The UTLs were calculated using methods that were appropriate for the observed parameter-specific data distribution (e.g. parametric-gamma, non-parametric, etc.).

Parameter	*Trigger Level*
Ammonia	0.2 mg/L
Phosphorus	0.5 mg/L
Dissolved Organic Carbon	18.4 mg/L
Nitrate	0.5 mg/L
Iron	10.6 mg/L
Manganese	2.1 mg/L
Alkalinity	996 mg/L
E. coli	5.0 CFU/100mL

A pumping test completed in 2008 within the deep bedrock unit as part of the Phase II ESA confirmed that the shallow unconfined aquifer and the deep bedrock unit are not hydraulically connected. For this reason, any exceedances of the above-referenced trigger levels for the deep bedrock unit should be reviewed in conjunction with other monitoring data to assess whether or not the exceedances are related to Facility operations. It is unlikely that Facility operations will affect deep bedrock unit water quality.

Trigger level program - Tiers

The TLP should be implemented using a series of three Tiers to verify the results and direct potential contingency implementation. The following paragraphs describe the three Tiers recommended to be included as part of the TLP.

Tier I – Routine Monitoring and Trigger Locations

Tier I monitoring involves the sampling of all on-Site groundwater monitoring wells at the frequency prescribed in the Site environmental monitoring program. All groundwater monitoring activities completed at the Site will be considered Tier I monitoring unless two or more trigger parameters exceed their respective trigger levels in a single sample.

Groundwater monitoring will be conducted at the Site, as follows:

- Tri-annually (three times per year) at MW101-13, MW102-09, MW104-13, MW105-09, MW5-09, MW106-15*
- Semi-annually (twice per year) at all remaining overburden and bedrock monitoring wells, respectively MW1-08, MW2-08, MW3-08, MW4-09, and MW103-09

*-Not yet installed

Tier II – Confirmation Monitoring

If during a single monitoring event, two or more trigger parameter concentrations exceed the established Tier I trigger concentrations at a single trigger location, the Tier II Confirmation Monitoring program will be implemented. The Tier II Confirmation Monitoring program consists of collecting water quality samples in duplicate from the location exhibiting the Tier I exceedance during the next scheduled monitoring event in order to confirm the Tier I exceedance of the two or more trigger parameters. If the concentrations reported in the duplicate samples return to below their respective trigger levels, then Tier I monitoring will resume.

If the Tier I exceedance is confirmed, then the next step in the Tier II Confirmation Monitoring program will be to re-evaluate the degree, nature, and potential source(s) of trigger level impact(s) identified in Tier I. The implications of the exceedances in terms of the potential for impacts to downgradient off-Site water users should be given consideration in the evaluation.

The comparison of the observed water quality to generic criteria, the applicable regulatory compliance framework, the pre-existing water quality, and downgradient use of groundwater will dictate the timing and urgency of response. The comparison should also include parameter trend analyses over time and the contributions of sources of impact other than the Facility. If the Tier II Confirmation Monitoring program and subsequent evaluation indicate that Facility operations are having a detrimental effect on water quality migrating off-Site, then Tier III - Contingency Measures will be implemented.

Tier III – Contingency Measures and Compliance Monitoring

The Tier III portion of the TLP involves assessment and implementation of contingency measures in the event of imminent off-Site groundwater quality impairment. Contingency measures to be evaluated would include extraction of impacted groundwater and/or surface water for on-Site treatment or off-Site disposal, or acquisition of groundwater rights and registration of a contaminant attenuation zone on title of adjacent lands.

Tier III also includes ongoing monitoring to continually assess the effectiveness of any contingency measures that have been implemented. The Tier III compliance monitoring program details would be determined in conjunction with the development and implementation of preferred contingency measure(s). The compliance monitoring parameters, locations and monitoring frequency would be determined at the time of implementation of contingency measures.

Appropriate remedial alternatives should be evaluated in detail after exceedances are confirmed. As the nature of potential future water quality issues cannot be known in advance, it is not practical to develop remediation plans that will necessarily best suit the particular situation in the event of water quality impairment.

4.0 Closing

It is recognized that using pre-existing water quality data as the basis for the groundwater trigger level program will not necessarily provide an effective measure of the potential for off-Site migration of adverse water quality, as it relates to adjacent water uses. For this reason, it is necessary that evaluations of water quality included within the Annual Monitoring Reports take into consideration the potential for impairment of downgradient water quality uses, regardless of the nature of the source of the impact (off-Site sources, Facility operations, historical impacts, etc.).

As such, evaluations of the shallow unconfined aquifer should compare water quality adjacent to surface water courses to the Provincial Water Quality Objectives (PWQOs) to assess the potential effects of shallow groundwater discharging to surface. Evaluations of deep bedrock groundwater should compare water quality to the Ontario Drinking Water Quality Standards (ODWQSs).

MEMORANDUM

TO:	Ministry of Environment and Climate Change	REF. NO.:	045804
FROM:	Ben Kempel/Tej Gidda/mg/27	DATE:	February 27, 2015
CC:	Ben Constable, CRA Michael Rooke, Orgaworld		
RE:	**Proposed Monitoring Program - Orgaworld Canada Ltd., Ottawa, Ontario**		

1.0 Introduction

Conestoga-Rovers & Associates has prepared this memorandum to outline the proposed groundwater and surface water monitoring programs for the Orgaworld Canada Ltd. (OCL) organic waste processing facility (Site) located at 5123 Hawthorne Road, Ottawa, Ontario. This memorandum has been prepared in support of an application to amend ECA No. 9465-7NVRWT (Industrial Sewage Works). The application is being submitted for the purpose of incorporating a groundwater TLP and revised groundwater and surface water monitoring programs into the ECA.

1.1 Current Monitoring Program

The current monitoring program for the Site is defined in the above-referenced ECA and includes hydraulic monitoring and sampling at 11 groundwater monitoring well locations within the shallow unconfined aquifer and 3 groundwater monitoring wells in the deep bedrock aquifer unit. The monitoring program also includes sampling at 4 surface water locations. The following locations are currently sampled on a semi-annual basis (twice per year):

Unconfined Shallow Aquifer	*Deep Bedrock Aquifer*	*Surface Water*
MW1-08	TW-4	SW-1
MW2-08	TW-7	SW-2
MW3-08	TW-8	SW-3
MW4-08		SW-4
MW4-09		

REGISTERED COMPANY ISO 9001 ENVIRONMENTAL MANAGEMENT

The following locations are sampled on a quarterly basis.

Unconfined Shallow Aquifer
MW5-09
MW101-13
MW102-09
MW103-09
MW104-13
MW105-13

The current analytical parameter list for the Site, as per the Site's Environmental Compliance Approval (ECA No. 7251-8GKRPD, as amended) consists of selected general chemistry, bacteriologic components, metals, petroleum hydrocarbons (PHCs), and polycyclic aromatic hydrocarbons (PAHs).

A complete summary of the current monitoring program is provided in Table 1.

2.0 Proposed Monitoring Program

Based on the results of monitoring completed to date, there is sufficient data collected to warrant reductions in the monitoring program. The reductions in monitoring include changes in monitoring frequency at selected locations and removal of several analytical parameters from the list of analytes. The following sections discuss the proposed changes to the monitoring program.

2.1 Monitoring Frequency

A significant amount of monitoring data has been collected to date for the on-Site monitoring wells. The monitoring data has allowed for a comprehensive understanding of the spatial and temporal patterns in groundwater quality. As groundwater quality is generally well understood, it is recommended that monitoring frequency be reduced at selected locations.

During recent monitoring years, field staff has been unable to complete the winter monitoring event during February due to frozen monitoring wells. For this reason, it is recommended that the winter (February) monitoring event be removed from the monitoring program. Three monitoring events (spring, summer, and fall) should be maintained per year at locations where detailed groundwater monitoring is suitable.

The following table summarizes the recommended groundwater monitoring frequency.

Location	*Current Sampling Frequency*	*Proposed Sampling Frequency*	*Unit*	*Trigger Well*
MW101-13	Quarterly	Tri-Annual	Unconfined Shallow Aquifer	Yes
MW102-09	Quarterly	Tri-Annual	Unconfined Shallow Aquifer	Yes
MW103-09	Quarterly	Semi-Annual	Unconfined Shallow Aquifer	Yes
MW1-08	Semi-Annual	Semi-Annual	Unconfined Shallow Aquifer	Yes
MW2-08	Semi-Annual	Semi-Annual	Unconfined Shallow Aquifer	Yes
MW3-08	Semi-Annual	Semi-Annual	Unconfined Shallow Aquifer	Yes+
MW4-09	Semi-Annual	Semi-Annual	Unconfined Shallow Aquifer	Yes+
MW5-09	Quarterly	Tri-Annual	Unconfined Shallow Aquifer	Yes
MW104-13	Quarterly	Tri-Annual	Unconfined Shallow Aquifer	Yes
MW105-13	Quarterly	Tri-Annual	Unconfined Shallow Aquifer	Yes
MW106-15	NA	Tri-Annual	Unconfined Shallow Aquifer	Yes
EW107*	NA	Tri-Annual	Unconfined Shallow Aquifer	No
TW-4	Semi-Annual	Semi-Annual	Deep Bedrock Aquifer	No
TW-7	Semi-Annual	Semi-Annual	Deep Bedrock Aquifer	No
TW-8	Semi-Annual	Semi-Annual	Deep Bedrock Aquifer	No

*- Not yet installed
+ - Upgradient well
NA – Not applicable

As indicated in the above table, the recommended changes to the monitoring program include:

- Reduction of monitoring from quarterly to tri-annual (three times per year) at selected locations
- Reduction of monitoring from quarterly to semi-annual at MW103-09. This location is located away from verified sources of impact and semi-annual monitoring will provide adequate water quality data at this location.

It should be noted that the monitoring frequency specified above is consistent with the monitoring frequency proposed in the updated TLP.

Groundwater monitoring well (MW106) and extraction well (EW107) have not yet been installed, but are scheduled for installation prior to the spring 2015 monitoring event. These wells should be incorporated into the monitoring program at the monitoring frequency specified above, following installation.

Surface water sampling is currently conducted at two upstream locations: SW1-09 and SW2-09. The analytical results have generally been consistent between these two locations. As there are no Site-related sources of impact between SW-1 and SW-2, it is recommended that sampling at SW-1 be discontinued. As such, surface water quality monitoring should continue semi-annually at locations SW2-09 and SW3-09. SW4-09 should continue to be sampled on a monthly basis (when weather conditions permit safe sampling at this location).

2.2 Monitoring Parameters

The existing monitoring program includes sampling of groundwater and surface water for PHC and PAH parameters. The results of PHC and PAH analyses have demonstrated largely non-detect results for the majority of these parameter lists. The sporadic detections of PHCs or PAH parameters have been inconsistent and at very low concentrations often just above the detection limits. In addition, similar infrequent low-level detections have also been reported at background monitoring locations. Therefore, it is likely that any detection of PHCs or PAHs parameters are the result of background conditions and/or related to fill materials historically used in the vicinity of the Site. Thus, PHCs and PAHs are not considered useful in evaluating groundwater and surface water for potential environmental impacts related to Site operations.

It is recommended that PHCs and PAHs be removed from the current monitoring parameter list.

The recommended monitoring program for the Site is summarized in Table 2.

Notes:

[1] General chemistry parameters - colour, alkalinity, ammonia, BOD, COD, chloride, colour, DOC, nitrate, nitrite, pH, phenols, phosphorus, sulphate, TDS, TKN, TSS turbidity, and un-ionized ammonia

[2] Additional Surface Water General Chemistry parameters analyzed at SW-4 - conductivity, oil and grease (mineral/HEM/animal and vegetable)

[3] Metals - arsenic, boron, cadmium, chromium, cobalt, copper, iron, lead, manganese, mercury, molybdenum, nickel, and zinc

[4] Surface water metals are total while groundwater metals are dissolved.

[5] PAHs - polycyclic aromatic hydrocarbons - anthracene, benzo(a)pyrene

[6] Escherichia coli (e.coli), fecal coliform bacteria, total coliform bacteria

[7] SW4-09 is sampled by CRA field staff on a bi-annual basis and monthly by Orgaworld staff (when it's safe to do so)

[8] Expanded PAHs - collected once per year at downgradient locations. Includes:
1-methylnaphthatlene, 2-methylnapthalene, acenaphthene, acenaphthylene, acridine, benzo(a)anthracene, Benzo(b)fluoranthene
benzo(b)pyridine (quinoline), benzo(g,h,i)perylene, benzo(k)fluoranthene, carcinogenic potency equivalent, chrysene, dibenz(a,h)anthracene
fluoranthene, fluorene, indeno(1,2,3-cd)pyrene, naphthalene, phenanthrene,and pyrene

X Samples collected quarterly (winter, spring summer, and fall)

√ Samples to be collected semi-annually (spring and fall)

o Samples are collected annually (typically spring)

MEMORANDUM

TO:	Ron Cherkewski, Joseph Drader, Monica Radulescu	REF. NO.:	045804-58
FROM:	Airesse MacPhee/bar/5	DATE:	January 27, 2014

RE: Analytical Data Verification
5123 Hawthorne Road – Water Analysis
Orgaworld Canada Ltd
Ottawa, Ontario
February - November 2013

1.0 Introduction

The following document details an analytical data verification of results for groundwater and surface water samples collected from the 5123 Hawthorne Road site in Ottawa, Ontario from February to November 2013. The samples were submitted to ALS Canada Ltd. (ALS) located in Waterloo, Ontario. A sample collection and analysis summary is presented in Table 1. A summary of the analytical methodology is presented in Table 2.

Standard Conestoga-Rovers & Associates (CRA) report deliverables were submitted by the laboratory. The final results and supporting quality assurance/quality control (QA/QC) data were assessed. Evaluation of the data was based on information obtained from the chain of custody forms, finished report forms, method blank data, duplicate data, recovery data from surrogate spikes, laboratory control samples (LCS), matrix spikes (MS), and field QC samples.

The QA/QC criteria by which these data have been assessed are outlined in the analytical methods referenced in Table 2 and applicable guidance from the documents entitled:

i) "USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review", United States Environmental Protection Agency (USEPA) 540/R-99-008, October 1999

ii) "USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review", USEPA 540/R-94-013, February 1994

iii) "Protocol for Analytical Methods Used in the Assessment of Properties under Part XV.1 of the Environmental Protection Act", Laboratory Services Branch, Ministry of the Environment. March 9, 2004, amended as of July 1, 2011.

Items i) and ii) will subsequently be referred to as the "Guidelines" in this Memorandum. Item iii) will subsequently be referred to as the "O. Reg. 153 Analytical Protocols".

REGISTERED COMPANY FOR ISO 9001 ENGINEERING DESIGN

2.0 Sample Holding Time and Preservation

The sample holding time criteria for the analyses are summarized in Table 2. Sample chain of custody documents and analytical reports were used to determine sample holding times. The samples summarized in Table 3 were qualified due to sample holding time period exceedances. The remaining samples were prepared and/or analyzed within the specified holding time periods.

Most samples were properly preserved, delivered on ice, and stored by the laboratory at the required temperature (<10°C). Samples associated with lab report # L1275259 and L1391837 arrived at the laboratory on the day of sampling and had not had time to achieve a temperature of <10°C. This is acceptable since the cooling process had been initiated.

3.0 Laboratory Method Blank Analyses

Method blanks are prepared from a purified matrix and analyzed with investigative samples to determine the existence and magnitude of sample contamination introduced during the analytical procedures.

For this study, laboratory method blanks were analyzed at a minimum frequency of 1 per 20 investigative samples and/or 1 per analytical batch.

All method blank results were non-detect, indicating that laboratory contamination was not a factor for this investigation.

4.0 Surrogate Spike Recoveries

In accordance with the methods employed, all samples, blanks, and QC samples analyzed for organics are spiked with surrogate compounds prior to sample extraction and/or analysis. Surrogate recoveries provide a means to evaluate the effects of laboratory performance on individual sample matrices.

All samples submitted for semi-volatile compound (SVOC) and petroleum hydrocarbon (PHC) determinations were spiked with the appropriate number of surrogate compounds prior to sample analysis.

Surrogate recoveries were assessed against laboratory control limits. All surrogate recoveries met the above criteria.

5.0 Laboratory Control Sample (LCS) Analyses

LCS are prepared and analyzed as samples to assess the analytical efficiencies of the methods employed, independent of sample matrix effects.

For this study, LCS were analyzed at a minimum frequency of 1 per 20 investigative samples and/or 1 per analytical batch.

Organic Analyses

The LCS contained all compounds of interest. All LCS recoveries were within the laboratory control limits, demonstrating acceptable analytical accuracy.

Inorganic Analyses

The LCS contained all analytes of interest. LCS recoveries were assessed per the "Guidelines". All LCS recoveries were within the control limits, demonstrating acceptable analytical accuracy.

6.0 Matrix Spike (MS) Analyses

To evaluate the effects of sample matrices on the extraction or digestion process, measurement procedures, and accuracy of a particular analysis, samples are spiked with a known concentration of the analyte of concern and analyzed as MS samples. If the original sample concentration is significantly greater than the spike concentration, the recovery is not assessed.

Organic Analyses

The MS samples were spiked with all compounds of interest. All percent recoveries were within the laboratory control limits, demonstrating acceptable analytical accuracy.

Inorganic Analyses

The MS samples were spiked with the analytes of interest, and the results were evaluated using the "Guidelines". All percent recoveries were within the control limits, demonstrating acceptable analytical accuracy.

7.0 Duplicate Sample Analyses

Analytical precision is evaluated based on the analysis of laboratory duplicate samples. For this study, duplicate samples were prepared and analyzed by the laboratory. The laboratory performed additional site-specific duplicate analyses internally. The duplicate results were evaluated per the "Guidelines".

Most duplicate analyses performed were acceptable, demonstrating acceptable analytical precision. The fecal coliform results for sample GW-45804-03052013-TS-008 and its duplicate exhibited variability and associated sample results have been qualified as estimated (see Table 4).

8.0 Ion Abundance Ratio

Naphthalene and benzo(a)pyrene results were flagged by the laboratory because the ion abundance ratios did not meet acceptance criteria. The associated sample results have been qualified as estimated (see Table 5).

9.0 Field QA/QC Samples

The field QA/QC consisted of four field blank samples and six field duplicate sample sets.

Field Blank Sample Analysis

To evaluate contamination sample collection, transportation, storage, and analytical activities, four field blanks were collected and submitted to the laboratory for analyses.

Most sample concentrations were non-detect for the compounds of interest. Low level concentrations of total Kjeldahl nitrogen (TKN), dissolved organic carbon (DOC), PHCs, color, turbidity and phenols were detected in groundwater field blanks and the results with concentrations similar to that reported in the associated field blanks were qualified as not detected at the associated reporting limit (see Table 6). Associated sample concentrations that were greater than five times the blank values were not qualified.

Field Duplicate Sample Analysis

To assess the analytical and sampling protocol precision, six field duplicate sample sets were collected and submitted "blind" to the laboratory, as specified in Table 1. The RPDs associated with these duplicate samples must be less than 50 percent for water samples. If the reported concentration in either the investigative sample or its duplicate is less than five times the reporting limit (RL), the evaluation criteria is one times the RL value for water samples.

Most duplicate analyses performed were acceptable, demonstrating acceptable analytical precision. Results which exhibited variability have been qualified as estimated (See Table 7).

10.0 Conclusion

Based on the assessment detailed in the foregoing, the data are acceptable with the specific qualifications noted herein.

Reference Information

QC Samples with Qualifiers & Comments:

QC Type Description	Parameter	Qualifier	Applies to Sample Number(s)
Duplicate	Manganese (Mn)-Dissolved	DLM	L1445355-1, -2, -3, -4, -5, -6, -7, -8
Duplicate	Total Suspended Solids	DLM	L1445355-1, -2, -3, -4, -5, -6, -7, -8
Duplicate	Chloride (Cl)	DLM	L1445355-1, -2, -3, -4, -5, -6, -7, -8
Duplicate	Sulphate (SO4)	DLM	L1445355-1, -2, -3, -4, -5, -6, -7, -8
Method Blank	Acenaphthylene	MB-LOR	L1445355-1, -2, -3, -4, -5, -6, -7, -8
Method Blank	Naphthalene	MB-LOR	L1445355-1, -2, -3, -4, -5, -6, -7, -8
Matrix Spike	Iron (Fe)-Dissolved	MS-B	L1445355-1, -2, -3, -4, -5, -6, -7, -8
Matrix Spike	Manganese (Mn)-Dissolved	MS-B	L1445355-1, -2, -3, -4, -5, -6, -7, -8
Matrix Spike	Ammonia, Total (as N)	MS-B	L1445355-1, -2, -3, -4, -5, -6, -7, -8
Matrix Spike	Chloride (Cl)	MS-B	L1445355-1, -2, -3, -4, -5, -6, -7, -8
Matrix Spike	Sulphate (SO4)	MS-B	L1445355-1, -2, -3, -4, -5, -6, -7, -8
Matrix Spike	Chloride (Cl)	MS-B	L1445355-1, -2, -3, -4, -5, -6, -7, -8

Sample Parameter Qualifier key listed:

Qualifier	Description
DLM	Detection Limit Adjusted due to sample matrix effects.
MB-LOR	Method Blank exceeds ALS DQO. Limits of Reporting have been adjusted for samples with positive hits below 5x blank level.
MS-B	Matrix Spike recovery could not be accurately calculated due to high analyte background in sample.
RRR	Refer to Report Remarks for issues regarding this analysis

Test Method References:

ALS Test Code	Matrix	Test Description	Method Reference**
ALK-WT	Water	Alkalinity, Total (as CaCO3)	EPA 310.2
BOD-C-WT	Water	BOD Carbonaceous	APHA 5210 B (CBOD)
Sample is incubated at 20 C– 1 C for 5 days using a nitrification inhibitor.			
C-DIS-ORG-WT	Water	Dissolved Organic Carbon	APHA 5310 B-INSTRUMENTAL
Sample is filtered through a 0.45um filter, sample is then injected into a heated reaction chamber which is packed with an oxidative catalyst. The water is vaporized and the organic cabon is oxidized to carbon dioxide. The carbon dioxide is transported in a carrier gas and is measured by a non-dispersive infrared detector.			
CL-WT	Water	Chloride	EPA 300.0 (IC)
COD-WT	Water	Chemical Oxygen Demand	APHA 5220 D
The dichromate ion oxidizes COD material when the sample is digested and after digestion the sample is then analyzed on a spectrophotometer.			
COLOUR-WT	Water	Colour	APHA 2120
Apparent colour is determined by analysis of the decanted sample using the platinum-cobalt colourimetric method.			
EC-MF-WT	Water	E. coli	SM 9222D
A 100mL volume of sample is filtered through a membrane, the membrane is placed on mFC-BCIG agar and incubated at @44.5–0.2 C for 24–2h. Method ID: WT-TM-1200			
ETL-NH3-UNION-CLI-WT	Water	Un-ionized ammonia	CALCULATION
F1-F4-CALC-WT	Water	CCME Total Hydrocarbons	CCME CWS-PHC DEC-2000 - PUB# 1310-L

Analytical methods used for analysis of CCME Petroleum Hydrocarbons have been validated and comply with the Reference Method for the CWS PHC.

In cases where results for both F4 and F4G are reported, the greater of the two results must be used in any application of the CWS PHC guidelines and the gravimetric heavy hydrocarbons cannot be added to the C6 to C50 hydrocarbons.
In samples where BTEX and F1 were analyzed , F1-BTEX represents a value where the sum of Benzene, Toluene, Ethylbenzene and total Xylenes has been subtracted from F1.

In samples where PAHs, F2 and F3 were analyzed, F2-Naphth represents the result where Naphthalene has been subtracted from F2. F3-PAH represents a result where the sum of Benzo(a)anthracene, Benzo(a)pyrene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Dibenzo(a,h)anthracene, Fluoranthene, Indeno(1,2,3-cd)pyrene, Phenanthrene, and Pyrene has been subtracted from F3.

Unless otherwise qualified, the following quality control criteria have been met for the F1 hydrocarbon range:
1. All extraction and analysis holding times were met.
2. Instrument performance showing response factors for C6 and C10 within 30% of the response factor for toluene.
3. Linearity of gasoline response within 15% throughout the calibration range.

Unless otherwise qualified, the following quality control criteria have been met for the F2-F4 hydrocarbon ranges:

Reference Information

1. All extraction and analysis holding times were met.
2. Instrument performance showing C10, C16 and C34 response factors within 10% of their average.
3. Instrument performance showing the C50 response factor within 30% of the average of the C10, C16 and C34 response factors.
4. Linearity of diesel or motor oil response within 15% throughout the calibration range.

F1-HS-WT Water F1 (O.Reg.153/04) E3421/CCME (HS)
Fraction F1 is determined by analyzing by headspace-GC/FID.

F2-F4-WT Water F2-F4 (O.Reg.153/04) MOE DECPH-E3421/CCME TIER 1
The petroleum hydrocarbons are extracted from the aqueous samples using solvent partition. The extracts are treated with silica gel to remove polar contaminants. The final concentrated extract is analyzed by gas chromatography (GC) using flame ionization detection (FID) and a 100% polydimethylsiloxane column.

The F2 fraction is determined by integrating the area in the chromatogram from the apex of nC10 to the apex nC16 and quantitating using external calibration using a standard mix containing nC10, nC16 and nC34. Similarly, the F3 fraction extends from the apex of nC16 to the apex nC34 and the F4 fraction covers the area from the apex nC34 to the apex nC50. If the chromatogram does not return to the baseline by the time nC50 elutes, a gravimetric determination of the F4 is performed.

FC-MF-WT Water Fecal Coliforms SM 9222D
A 100mL volume of sample is filtered through a membrane, the membrane is placed on mFC agar and incubated at 24–2h@44.5–0.2 C. Method ID: WT-TM-1200

HG-D-CVAA-WT Water Dissolved Mercury in Water by CVAAS EPA SW846 7470A
Liquid sample is filtered, then digested with a heated, strong, mixed acid solution to convert all forms of mercury to divalent mercury. The divalent mercury is then reduced to elemental mercury, sparged from solution and analyzed by CVAAS.

Analysis conducted in accordance with the Protocol for Analytical Methods Used in the Assessment of Properties under Part XV.1 of the Environmental Protection Act (July 1, 2011).

MET-D-MS-WT Water Dissolved Metals in Water by ICPMS EPA 200.8
The metal constituents of a non-acidified sample that pass through a membrane filter prior to ICP/MS analysis.

Analysis conducted in accordance with the Protocol for Analytical Methods Used in the Assessment of Properties under Part XV.1 of the Environmental Protection Act (July 1, 2011).

NH3-WT Water Ammonia, Total as N EPA 350.1
Sample is measured colorimetrically. When sample is turbid a distillation step is required, sample is distilled into a solution of boric acid and measured colorimetrically.

NO2-WT Water Nitrite-N EPA 300.0 (IC)
A filtered water sample (drinking waters-unfiltered) is analyzed by ion chromatography.

NO3-WT Water Nitrate-N EPA 300.0 (IC)
A filtered water sample (drinking waters-unfiltered) is analyzed by ion chromatography.

P-TOTAL-WT Water Phosphorus, Total APHA 4500-P B E
Samples are digested to convert the total phosphorus to orthophosphate. The orthophosphate reacts with ammonium molybdate and potassium antimonyl tartrate to form a antimonyl-phosphomolybdate complex. This complex is measured colorimetrically and reported as phosphorus.

PAH-CCME-WT Water CCME PAHs SW846 8270
Sample is extracted at neutral pH using separate aliquots of dichloromethane with a modified separatory funnel technique, extracts are then concentrated and analyzed by GC/MSD. Depending on the analytical GC/MS column used benzo(j)fluoranthene may chromatographically co-elute with benzo(b)fluoranthene or benzo(k)fluoranthene.

PH,TEMP-CLIENT-WT Water pH & Temperature Results supplied by client

PH-WT Water pH APHA 4500 H-Electrode
Water samples are analyzed directly by a calibrated pH meter.

Analysis conducted in accordance with the Protocol for Analytical Methods Used in the Assessment of Properties under Part XV.1 of the Environmental Protection Act (July 1, 2011).

PHENOLS-4AAP-WT Water Phenol (4AAP) EPA 9066
An automated method is used to distill the sample. The distillate is then buffered to pH 9.4 which reacts with 4AAP and potassium ferricyanide to form a red complex which is measured colorimetrically.

SO4-WT Water Sulphate EPA 300.0 (IC)

SOLIDS-TDS-WT Water Total Dissolved Solids APHA 2540C
A well-mixed sample is filtered though glass fibres filter. A known volume of the filtrate is evaporated and dried at 105–5 C overnight and then 180–10 C for 1hr.

SOLIDS-TSS-WT Water Suspended solids APHA 2540 D-Gravimetric
A well-mixed sample is filtered through a weighed standard glass fibre filter and the residue retained is dried in an oven at 105–5 C for a minimum of

Reference Information

four hours or until a constant weight is achieved.

TC-MF-WT Water Total Coliforms SM 9222B

A 100mL volume of sample is filtered through a membrane, the membrane is placed on mENDO LES agar and incubated at 35–0.5 C for 24–2h.
Method ID: WT-TM-1200

TKN-WT Water Total Kjeldahl Nitrogen APHA 4500-N

Sample is digested to convert the TKN to ammonium sulphate. The ammonia ions are heated to produce a colour complex. The absorbance measured by the instrument is proportional to the concentration of ammonium sulphate in the sample and is reported as TKN.

TURBIDITY-WT Water Turbidity APHA 2130 B

Sample result is based on a comparison of the intensity of the light scattered by the sample under defined conditions with the intensity of light scattered by a standard reference suspension under the same conditions. Sample readings are obtained from a Nephelometer.

** ALS test methods may incorporate modifications from specified reference methods to improve performance.

The last two letters of the above test code(s) indicate the laboratory that performed analytical analysis for that test. Refer to the list below:

Laboratory Definition Code	Laboratory Location
WT	ALS ENVIRONMENTAL - WATERLOO, ONTARIO, CANADA

Chain of Custody Numbers:

36931

GLOSSARY OF REPORT TERMS

Surrogates are compounds that are similar in behaviour to target analyte(s), but that do not normally occur in environmental samples. For applicable tests, surrogates are added to samples prior to analysis as a check on recovery. In reports that display the D.L. column, laboratory objectives for surrogates are listed there.
mg/kg - milligrams per kilogram based on dry weight of sample
mg/kg wwt - milligrams per kilogram based on wet weight of sample
mg/kg lwt - milligrams per kilogram based on lipid weight of sample
mg/L - unit of concentration based on volume, parts per million.
< - Less than.
D.L. - The reporting limit.
N/A - Result not available. Refer to qualifier code and definition for explanation.

Test results reported relate only to the samples as received by the laboratory.
UNLESS OTHERWISE STATED, ALL SAMPLES WERE RECEIVED IN ACCEPTABLE CONDITION.
Analytical results in unsigned test reports with the DRAFT watermark are subject to change, pending final QC review.

Legend:

Limit	ALS Control Limit (Data Quality Objectives)
DUP	Duplicate
RPD	Relative Percent Difference
N/A	Not Available
LCS	Laboratory Control Sample
SRM	Standard Reference Material
MS	Matrix Spike
MSD	Matrix Spike Duplicate
ADE	Average Desorption Efficiency
MB	Method Blank
IRM	Internal Reference Material
CRM	Certified Reference Material
CCV	Continuing Calibration Verification
CVS	Calibration Verification Standard
LCSD	Laboratory Control Sample Duplicate

Sample Parameter Qualifier Definitions:

Qualifier	Description
DLM	Detection Limit Adjusted due to sample matrix effects.
J	Duplicate results and limits are expressed in terms of absolute difference.
MB-LOR	Method Blank exceeds ALS DQO. Limits of Reporting have been adjusted for samples with positive hits below 5x blank level.
MS-B	Matrix Spike recovery could not be accurately calculated due to high analyte background in sample.
RPD-NA	Relative Percent Difference Not Available due to result(s) being less than detection limit.

Hold Time Exceedances:

All test results reported with this submission were conducted within ALS recommended hold times.

ALS recommended hold times may vary by province. They are assigned to meet known provincial and/or federal government requirements. In the absence of regulatory hold times, ALS establishes recommendations based on guidelines published by the US EPA, APHA Standard Methods, or Environment Canada (where available). For more information, please contact ALS.

The ALS Quality Control Report is provided to ALS clients upon request. ALS includes comprehensive QC checks with every analysis to ensure our high standards of quality are met. Each QC result has a known or expected target value, which is compared against pre-determined data quality objectives to provide confidence in the accuracy of associated test results.

Please note that this report may contain QC results from anonymous Sample Duplicates and Matrix Spikes that do not originate from this Work Order.

Sample Parameter Qualifier key listed:

Qualifier	Description
DLM	Detection Limit Adjusted due to sample matrix effects.
MS-B	Matrix Spike recovery could not be accurately calculated due to high analyte background in sample.
PEHT	Parameter Exceeded Recommended Holding Time Prior to Analysis

Test Method References:

ALS Test Code	Matrix	Test Description	Method Reference**
ALK-WT	Water	Alkalinity, Total (as CaCO3)	EPA 310.2
BOD-C-WT	Water	BOD Carbonaceous	APHA 5210 B (CBOD)
Sample is incubated at 20 C– 1 C for 5 days using a nitrification inhibitor.			
C-DIS-ORG-WT	Water	Dissolved Organic Carbon	APHA 5310 B-INSTRUMENTAL
Sample is filtered through a 0.45um filter, sample is then injected into a heated reaction chamber which is packed with an oxidative catalyst. The water is vaporized and the organic cabon is oxidized to carbon dioxide. The carbon dioxide is transported in a carrier gas and is measured by a non-dispersive infrared detector.			
CL-WT	Water	Chloride	EPA 300.0 (IC)
COD-WT	Water	Chemical Oxygen Demand	APHA 5220 D
The dichromate ion oxidizes COD material when the sample is digested and after digestion the sample is then analyzed on a spectrophotometer.			
COLOUR-WT	Water	Colour	APHA 2120
Apparent colour is determined by analysis of the decanted sample using the platinum-cobalt colourimetric method.			
EC-WW-MF-WT	Water	E. Coli	SM 9222D
ETL-NH3-UNION-CLI-WT	Water	Un-ionized ammonia	CALCULATION
F1-F4-CALC-WT	Water	CCME Total Hydrocarbons	CCME CWS-PHC DEC-2000 - PUB# 1310-L

Analytical methods used for analysis of CCME Petroleum Hydrocarbons have been validated and comply with the Reference Method for the CWS PHC.

In cases where results for both F4 and F4G are reported, the greater of the two results must be used in any application of the CWS PHC guidelines and the gravimetric heavy hydrocarbons cannot be added to the C6 to C50 hydrocarbons.
In samples where BTEX and F1 were analyzed , F1-BTEX represents a value where the sum of Benzene, Toluene, Ethylbenzene and total Xylenes has been subtracted from F1.

In samples where PAHs, F2 and F3 were analyzed, F2-Naphth represents the result where Naphthalene has been subtracted from F2. F3-PAH represents a result where the sum of Benzo(a)anthracene, Benzo(a)pyrene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Dibenzo(a,h)anthracene, Fluoranthene, Indeno(1,2,3-cd)pyrene, Phenanthrene, and Pyrene has been subtracted from F3.

Unless otherwise qualified, the following quality control criteria have been met for the F1 hydrocarbon range:

Reference Information

1. All extraction and analysis holding times were met.
2. Instrument performance showing response factors for C6 and C10 within 30% of the response factor for toluene.
3. Linearity of gasoline response within 15% throughout the calibration range.

Unless otherwise qualified, the following quality control criteria have been met for the F2-F4 hydrocarbon ranges:
1. All extraction and analysis holding times were met.
2. Instrument performance showing C10, C16 and C34 response factors within 10% of their average.
3. Instrument performance showing the C50 response factor within 30% of the average of the C10, C16 and C34 response factors.
4. Linearity of diesel or motor oil response within 15% throughout the calibration range.

F1-HS-WT Water F1 (O.Reg.153/04) E3421/CCME (HS)
Fraction F1 is determined by analyzing by headspace-GC/FID.

F2-F4-WT Water F2-F4 (O.Reg.153/04) MOE DECPH-E3421/CCME TIER 1
The petroleum hydrocarbons are extracted from the aqueous samples using solvent partition. The extracts are treated with silica gel to remove polar contaminants. The final concentrated extract is analyzed by gas chromatography (GC) using flame ionization detection (FID) and a 100% polydimethylsiloxane column.

The F2 fraction is determined by integrating the area in the chromatogram from the apex of nC10 to the apex nC16 and quantitating using external calibration using a standard mix containing nC10, nC16 and nC34. Similarly, the F3 fraction extends from the apex of nC16 to the apex nC34 and the F4 fraction covers the area from the apex nC34 to the apex nC50. If the chromatogram does not return to the baseline by the time nC50 elutes, a gravimetric determination of the F4 is performed.

FC-WW-MF-WT Water Fecal Coliforms SM 9222D

HG-T-CVAA-WT Water Total Mercury in Water by CVAAS EPA SW846 7470A
Liquid sample is digested with a heated, strong, mixed acid solution to convert all forms of mercury to divalent mercury. The divalent mercury is then reduced to elemental mercury, sparged from solution and analyzed by CVAAS.

MET-T-MS-WT Water Total Metals in Water by ICPMS EPA 200.8
This analysis involves preliminary sample treatment by hotblock acid digestion (APHA 3030E). Instrumental analysis is by inductively coupled plasma - mass spectrometry (EPA Method 6020A).

NH3-WT Water Ammonia, Total as N EPA 350.1
Sample is measured colorimetrically. When sample is turbid a distillation step is required, sample is distilled into a solution of boric acid and measured colorimetrically.

NO2-WT Water Nitrite-N EPA 300.0 (IC)
A filtered water sample (drinking waters-unfiltered) is analyzed by ion chromatography.

NO3-WT Water Nitrate-N EPA 300.0 (IC)
A filtered water sample (drinking waters-unfiltered) is analyzed by ion chromatography.

P-TOTAL-LOW-WT Water Phosphorus, Total, Low Level APHA 4500-P B E
This analysis is carried by out an discrete colorimetric auto-analyzer using procedures adapted from APHA Method 4500-P "Phosphorus".

PAH-CCME-WT Water CCME PAHs SW846 8270
Sample is extracted at neutral pH using separate aliquots of dichloromethane with a modified separatory funnel technique, extracts are then concentrated and analyzed by GC/MSD. Depending on the analytical GC/MS column used benzo(j)fluoranthene may chromatographically co-elute with benzo(b)fluoranthene or benzo(k)fluoranthene.

PH,TEMP-CLIENT-WT Water pH & Temperature Results supplied by client

PH-WT Water pH APHA 4500 H-Electrode
Water samples are analyzed directly by a calibrated pH meter.

Analysis conducted in accordance with the Protocol for Analytical Methods Used in the Assessment of Properties under Part XV.1 of the Environmental Protection Act (July 1, 2011).

PHENOLS-4AAP-WT Water Phenol (4AAP) EPA 9066
An automated method is used to distill the sample. The distillate is then buffered to pH 9.4 which reacts with 4AAP and potassium ferricyanide to form a red complex which is measured colorimetrically.

SO4-WT Water Sulphate EPA 300.0 (IC)

SOLIDS-TDS-WT Water Total Dissolved Solids APHA 2540C
A well-mixed sample is filtered though glass fibres filter. A known volume of the filtrate is evaporated and dried at 105–5 C overnight and then 180–10 C for 1hr.

SOLIDS-TSS-WT Water Suspended solids APHA 2540 D-Gravimetric
A well-mixed sample is filtered through a weighed standard glass fibre filter and the residue retained is dried in an oven at 105–5 C for a minimum of four hours or until a constant weight is achieved.

TC-WW-MF-WT Water Total Coliforms SM 9222B

Reference Information

Water sample is filtered through a membrane, the membrane is placed on mENDO LES agar and incubated at 35–0.5 C for 24–2h.

TKN-WT Water Total Kjeldahl Nitrogen APHA 4500-N

Sample is digested to convert the TKN to ammonium sulphate. The ammonia ions are heated to produce a colour complex. The absorbance measured by the instrument is proportional to the concentration of ammonium sulphate in the sample and is reported as TKN.

TURBIDITY-WT Water Turbidity APHA 2130 B

Sample result is based on a comparison of the intensity of the light scattered by the sample under defined conditions with the intensity of light scattered by a standard reference suspension under the same conditions. Sample readings are obtained from a Nephelometer.

** ALS test methods may incorporate modifications from specified reference methods to improve performance.

The last two letters of the above test code(s) indicate the laboratory that performed analytical analysis for that test. Refer to the list below:

Laboratory Definition Code	Laboratory Location
WT	ALS ENVIRONMENTAL - WATERLOO, ONTARIO, CANADA

Chain of Custody Numbers:

GLOSSARY OF REPORT TERMS

Surrogates are compounds that are similar in behaviour to target analyte(s), but that do not normally occur in environmental samples. For applicable tests, surrogates are added to samples prior to analysis as a check on recovery. In reports that display the D.L. column, laboratory objectives for surrogates are listed there.
mg/kg - milligrams per kilogram based on dry weight of sample
mg/kg wwt - milligrams per kilogram based on wet weight of sample
mg/kg lwt - milligrams per kilogram based on lipid weight of sample
mg/L - unit of concentration based on volume, parts per million.
< - Less than.
D.L. - The reporting limit.
N/A - Result not available. Refer to qualifier code and definition for explanation.

Test results reported relate only to the samples as received by the laboratory.
UNLESS OTHERWISE STATED, ALL SAMPLES WERE RECEIVED IN ACCEPTABLE CONDITION.
Analytical results in unsigned test reports with the DRAFT watermark are subject to change, pending final QC review.

Legend:

Limit	ALS Control Limit (Data Quality Objectives)
DUP	Duplicate
RPD	Relative Percent Difference
N/A	Not Available
LCS	Laboratory Control Sample
SRM	Standard Reference Material
MS	Matrix Spike
MSD	Matrix Spike Duplicate
ADE	Average Desorption Efficiency
MB	Method Blank
IRM	Internal Reference Material
CRM	Certified Reference Material
CCV	Continuing Calibration Verification
CVS	Calibration Verification Standard
LCSD	Laboratory Control Sample Duplicate

Sample Parameter Qualifier Definitions:

Qualifier	Description
DLM	Detection Limit Adjusted due to sample matrix effects.
J	Duplicate results and limits are expressed in terms of absolute difference.
MS-B	Matrix Spike recovery could not be accurately calculated due to high analyte background in sample.
PEHT	Parameter Exceeded Recommended Holding Time Prior to Analysis
RPD-NA	Relative Percent Difference Not Available due to result(s) being less than detection limit.

Hold Time Exceedances:

All test results reported with this submission were conducted within ALS recommended hold times.

ALS recommended hold times may vary by province. They are assigned to meet known provincial and/or federal government requirements. In the absence of regulatory hold times, ALS establishes recommendations based on guidelines published by the US EPA, APHA Standard Methods, or Environment Canada (where available). For more information, please contact ALS.

The ALS Quality Control Report is provided to ALS clients upon request. ALS includes comprehensive QC checks with every analysis to ensure our high standards of quality are met. Each QC result has a known or expected target value, which is compared against pre-determined data quality objectives to provide confidence in the accuracy of associated test results.

Please note that this report may contain QC results from anonymous Sample Duplicates and Matrix Spikes that do not originate from this Work Order.

Matrix Spike	Sulphate (SO4)	MS-B	L1461908-1, -2, -3
Duplicate	Color, Apparent	PEHT	L1461908-1, -2, -3

Sample Parameter Qualifier key listed:

Qualifier	Description
DLM	Detection Limit Adjusted due to sample matrix effects.
MS-B	Matrix Spike recovery could not be accurately calculated due to high analyte background in sample.
PEHT	Parameter Exceeded Recommended Holding Time Prior to Analysis

Test Method References:

ALS Test Code	Matrix	Test Description	Method Reference**
ALK-WT	Water	Alkalinity, Total (as CaCO3)	EPA 310.2
BOD-C-WT	Water	BOD Carbonaceous	APHA 5210 B (CBOD)
Sample is incubated at 20 C– 1 C for 5 days using a nitrification inhibitor.			
C-DIS-ORG-WT	Water	Dissolved Organic Carbon	APHA 5310 B-INSTRUMENTAL
Sample is filtered through a 0.45um filter, sample is then injected into a heated reaction chamber which is packed with an oxidative catalyst. The water is vaporized and the organic cabon is oxidized to carbon dioxide. The carbon dioxide is transported in a carrier gas and is measured by a non-dispersive infrared detector.			
CL-WT	Water	Chloride	EPA 300.0 (IC)
COD-WT	Water	Chemical Oxygen Demand	APHA 5220 D
The dichromate ion oxidizes COD material when the sample is digested and after digestion the sample is then analyzed on a spectrophotometer.			
COLOUR-WT	Water	Colour	APHA 2120
Apparent colour is determined by analysis of the decanted sample using the platinum-cobalt colourimetric method.			
EC-WW-MF-WT	Water	E. Coli	SM 9222D
ETL-NH3-UNION-CLI-WT	Water	Un-ionized ammonia	CALCULATION
F1-F4-CALC-WT	Water	CCME Total Hydrocarbons	CCME CWS-PHC DEC-2000 - PUB# 1310-L

Analytical methods used for analysis of CCME Petroleum Hydrocarbons have been validated and comply with the Reference Method for the CWS PHC.

In cases where results for both F4 and F4G are reported, the greater of the two results must be used in any application of the CWS PHC guidelines and the gravimetric heavy hydrocarbons cannot be added to the C6 to C50 hydrocarbons.
In samples where BTEX and F1 were analyzed , F1-BTEX represents a value where the sum of Benzene, Toluene, Ethylbenzene and total Xylenes has been subtracted from F1.

In samples where PAHs, F2 and F3 were analyzed, F2-Naphth represents the result where Naphthalene has been subtracted from F2. F3-PAH represents a result where the sum of Benzo(a)anthracene, Benzo(a)pyrene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Dibenzo(a,h)anthracene, Fluoranthene, Indeno(1,2,3-cd)pyrene, Phenanthrene, and Pyrene has been subtracted from F3.

Unless otherwise qualified, the following quality control criteria have been met for the F1 hydrocarbon range:

Reference Information

1. All extraction and analysis holding times were met.
2. Instrument performance showing response factors for C6 and C10 within 30% of the response factor for toluene.
3. Linearity of gasoline response within 15% throughout the calibration range.

Unless otherwise qualified, the following quality control criteria have been met for the F2-F4 hydrocarbon ranges:
1. All extraction and analysis holding times were met.
2. Instrument performance showing C10, C16 and C34 response factors within 10% of their average.
3. Instrument performance showing the C50 response factor within 30% of the average of the C10, C16 and C34 response factors.
4. Linearity of diesel or motor oil response within 15% throughout the calibration range.

F1-HS-WT Water F1 (O.Reg.153/04) E3421/CCME (HS)
Fraction F1 is determined by analyzing by headspace-GC/FID.

F2-F4-WT Water F2-F4 (O.Reg.153/04) MOE DECPH-E3421/CCME TIER 1
The petroleum hydrocarbons are extracted from the aqueous samples using solvent partition. The extracts are treated with silica gel to remove polar contaminants. The final concentrated extract is analyzed by gas chromatography (GC) using flame ionization detection (FID) and a 100% polydimethylsiloxane column.

The F2 fraction is determined by integrating the area in the chromatogram from the apex of nC10 to the apex nC16 and quantitating using external calibration using a standard mix containing nC10, nC16 and nC34. Similarly, the F3 fraction extends from the apex of nC16 to the apex nC34 and the F4 fraction covers the area from the apex nC34 to the apex nC50. If the chromatogram does not return to the baseline by the time nC50 elutes, a gravimetric determination of the F4 is performed.

FC-WW-MF-WT Water Fecal Coliforms SM 9222D

HG-T-CVAA-WT Water Total Mercury in Water by CVAAS EPA SW846 7470A
Liquid sample is digested with a heated, strong, mixed acid solution to convert all forms of mercury to divalent mercury. The divalent mercury is then reduced to elemental mercury, sparged from solution and analyzed by CVAAS.

MET-T-MS-WT Water Total Metals in Water by ICPMS EPA 200.8
This analysis involves preliminary sample treatment by hotblock acid digestion (APHA 3030E). Instrumental analysis is by inductively coupled plasma - mass spectrometry (EPA Method 6020A).

NH3-WT Water Ammonia, Total as N EPA 350.1
Sample is measured colorimetrically. When sample is turbid a distillation step is required, sample is distilled into a solution of boric acid and measured colorimetrically.

NO2-WT Water Nitrite-N EPA 300.0 (IC)
A filtered water sample (drinking waters-unfiltered) is analyzed by ion chromatography.

NO3-WT Water Nitrate-N EPA 300.0 (IC)
A filtered water sample (drinking waters-unfiltered) is analyzed by ion chromatography.

P-TOTAL-LOW-WT Water Phosphorus, Total, Low Level APHA 4500-P B E
This analysis is carried by out an discrete colorimetric auto-analyzer using procedures adapted from APHA Method 4500-P "Phosphorus".

PAH-CCME-WT Water CCME PAHs SW846 8270
Sample is extracted at neutral pH using separate aliquots of dichloromethane with a modified separatory funnel technique, extracts are then concentrated and analyzed by GC/MSD. Depending on the analytical GC/MS column used benzo(j)fluoranthene may chromatographically co-elute with benzo(b)fluoranthene or benzo(k)fluoranthene.

PH,TEMP-CLIENT-WT Water pH & Temperature Results supplied by client

PH-WT Water pH APHA 4500 H-Electrode
Water samples are analyzed directly by a calibrated pH meter.

Analysis conducted in accordance with the Protocol for Analytical Methods Used in the Assessment of Properties under Part XV.1 of the Environmental Protection Act (July 1, 2011).

PHENOLS-4AAP-WT Water Phenol (4AAP) EPA 9066
An automated method is used to distill the sample. The distillate is then buffered to pH 9.4 which reacts with 4AAP and potassium ferricyanide to form a red complex which is measured colorimetrically.

SO4-WT Water Sulphate EPA 300.0 (IC)

SOLIDS-TDS-WT Water Total Dissolved Solids APHA 2540C
A well-mixed sample is filtered though glass fibres filter. A known volume of the filtrate is evaporated and dried at 105–5 C overnight and then 180–10 C for 1hr.

SOLIDS-TSS-WT Water Suspended solids APHA 2540 D-Gravimetric
A well-mixed sample is filtered through a weighed standard glass fibre filter and the residue retained is dried in an oven at 105–5 C for a minimum of four hours or until a constant weight is achieved.

TC-WW-MF-WT Water Total Coliforms SM 9222B

Reference Information

Water sample is filtered through a membrane, the membrane is placed on mENDO LES agar and incubated at 35–0.5 C for 24–2h.

TKN-WT Water Total Kjeldahl Nitrogen APHA 4500-N

Sample is digested to convert the TKN to ammonium sulphate. The ammonia ions are heated to produce a colour complex. The absorbance measured by the instrument is proportional to the concentration of ammonium sulphate in the sample and is reported as TKN.

TURBIDITY-WT Water Turbidity APHA 2130 B

Sample result is based on a comparison of the intensity of the light scattered by the sample under defined conditions with the intensity of light scattered by a standard reference suspension under the same conditions. Sample readings are obtained from a Nephelometer.

** ALS test methods may incorporate modifications from specified reference methods to improve performance.

The last two letters of the above test code(s) indicate the laboratory that performed analytical analysis for that test. Refer to the list below:

Laboratory Definition Code	Laboratory Location
WT	ALS ENVIRONMENTAL - WATERLOO, ONTARIO, CANADA

Chain of Custody Numbers:

GLOSSARY OF REPORT TERMS

Surrogates are compounds that are similar in behaviour to target analyte(s), but that do not normally occur in environmental samples. For applicable tests, surrogates are added to samples prior to analysis as a check on recovery. In reports that display the D.L. column, laboratory objectives for surrogates are listed there.
mg/kg - milligrams per kilogram based on dry weight of sample
mg/kg wwt - milligrams per kilogram based on wet weight of sample
mg/kg lwt - milligrams per kilogram based on lipid weight of sample
mg/L - unit of concentration based on volume, parts per million.
< - Less than.
D.L. - The reporting limit.
N/A - Result not available. Refer to qualifier code and definition for explanation.

Test results reported relate only to the samples as received by the laboratory.
UNLESS OTHERWISE STATED, ALL SAMPLES WERE RECEIVED IN ACCEPTABLE CONDITION.
Analytical results in unsigned test reports with the DRAFT watermark are subject to change, pending final QC review.

Legend:

Limit	ALS Control Limit (Data Quality Objectives)
DUP	Duplicate
RPD	Relative Percent Difference
N/A	Not Available
LCS	Laboratory Control Sample
SRM	Standard Reference Material
MS	Matrix Spike
MSD	Matrix Spike Duplicate
ADE	Average Desorption Efficiency
MB	Method Blank
IRM	Internal Reference Material
CRM	Certified Reference Material
CCV	Continuing Calibration Verification
CVS	Calibration Verification Standard
LCSD	Laboratory Control Sample Duplicate

Sample Parameter Qualifier Definitions:

Qualifier	Description
DLM	Detection Limit Adjusted due to sample matrix effects.
J	Duplicate results and limits are expressed in terms of absolute difference.
MS-B	Matrix Spike recovery could not be accurately calculated due to high analyte background in sample.
PEHT	Parameter Exceeded Recommended Holding Time Prior to Analysis
RPD-NA	Relative Percent Difference Not Available due to result(s) being less than detection limit.

Hold Time Exceedances:

All test results reported with this submission were conducted within ALS recommended hold times.

ALS recommended hold times may vary by province. They are assigned to meet known provincial and/or federal government requirements. In the absence of regulatory hold times, ALS establishes recommendations based on guidelines published by the US EPA, APHA Standard Methods, or Environment Canada (where available). For more information, please contact ALS.

The ALS Quality Control Report is provided to ALS clients upon request. ALS includes comprehensive QC checks with every analysis to ensure our high standards of quality are met. Each QC result has a known or expected target value, which is compared against pre-determined data quality objectives to provide confidence in the accuracy of associated test results.

Please note that this report may contain QC results from anonymous Sample Duplicates and Matrix Spikes that do not originate from this Work Order.

Reference Information

QC Samples with Qualifiers & Comments:

QC Type Description	Parameter	Qualifier	Applies to Sample Number(s)
Duplicate	Total Suspended Solids	DLM	L1461921-1, -2, -3
Matrix Spike	Chloride (Cl)	MS-B	L1461921-1, -2, -3
Matrix Spike	Sulphate (SO4)	MS-B	L1461921-1, -2, -3
Duplicate	Color, Apparent	PEHT	L1461921-1, -2, -3

Sample Parameter Qualifier key listed:

Qualifier	Description
DLM	Detection Limit Adjusted due to sample matrix effects.
MS-B	Matrix Spike recovery could not be accurately calculated due to high analyte background in sample.
PEHT	Parameter Exceeded Recommended Holding Time Prior to Analysis

Test Method References:

ALS Test Code	Matrix	Test Description	Method Reference**
ALK-WT	Water	Alkalinity, Total (as CaCO3)	EPA 310.2
BOD-C-WT	Water	BOD Carbonaceous	APHA 5210 B (CBOD)

Sample is incubated at 20 C– 1 C for 5 days using a nitrification inhibitor.

C-DIS-ORG-WT Water Dissolved Organic Carbon APHA 5310 B-INSTRUMENTAL

Sample is filtered through a 0.45um filter, sample is then injected into a heated reaction chamber which is packed with an oxidative catalyst. The water is vaporized and the organic cabon is oxidized to carbon dioxide. The carbon dioxide is transported in a carrier gas and is measured by a non-dispersive infrared detector.

CL-WT Water Chloride EPA 300.0 (IC)

COD-WT Water Chemical Oxygen Demand APHA 5220 D

The dichromate ion oxidizes COD material when the sample is digested and after digestion the sample is then analyzed on a spectrophotometer.

COLOUR-WT Water Colour APHA 2120

Apparent colour is determined by analysis of the decanted sample using the platinum-cobalt colourimetric method.

EC-MF-WT Water E. coli SM 9222D

A 100mL volume of sample is filtered through a membrane, the membrane is placed on mFC-BCIG agar and incubated at @44.5–0.2 C for 24–2h.
Method ID: WT-TM-1200

ETL-NH3-UNION-CLI-WT Water Un-ionized ammonia CALCULATION

F1-F4-CALC-WT Water CCME Total Hydrocarbons CCME CWS-PHC DEC-2000 - PUB# 1310-L

Analytical methods used for analysis of CCME Petroleum Hydrocarbons have been validated and comply with the Reference Method for the CWS PHC.

In cases where results for both F4 and F4G are reported, the greater of the two results must be used in any application of the CWS PHC guidelines and the gravimetric heavy hydrocarbons cannot be added to the C6 to C50 hydrocarbons.
In samples where BTEX and F1 were analyzed , F1-BTEX represents a value where the sum of Benzene, Toluene, Ethylbenzene and total Xylenes has been subtracted from F1.

In samples where PAHs, F2 and F3 were analyzed, F2-Naphth represents the result where Naphthalene has been subtracted from F2. F3-PAH represents a result where the sum of Benzo(a)anthracene, Benzo(a)pyrene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Dibenzo(a,h)anthracene, Fluoranthene, Indeno(1,2,3-cd)pyrene, Phenanthrene, and Pyrene has been subtracted from F3.

Unless otherwise qualified, the following quality control criteria have been met for the F1 hydrocarbon range:
1. All extraction and analysis holding times were met.
2. Instrument performance showing response factors for C6 and C10 within 30% of the response factor for toluene.
3. Linearity of gasoline response within 15% throughout the calibration range.

Unless otherwise qualified, the following quality control criteria have been met for the F2-F4 hydrocarbon ranges:
1. All extraction and analysis holding times were met.
2. Instrument performance showing C10, C16 and C34 response factors within 10% of their average.
3. Instrument performance showing the C50 response factor within 30% of the average of the C10, C16 and C34 response factors.
4. Linearity of diesel or motor oil response within 15% throughout the calibration range.

F1-HS-WT Water F1 (O.Reg.153/04) E3421/CCME (HS)

Fraction F1 is determined by analyzing by headspace-GC/FID.

F2-F4-WT Water F2-F4 (O.Reg.153/04) MOE DECPH-E3421/CCME TIER 1

The petroleum hydrocarbons are extracted from the aqueous samples using solvent partition. The extracts are treated with silica gel to remove polar contaminants. The final concentrated extract is analyzed by gas chromatography (GC) using flame ionization detection (FID) and a 100%

Reference Information

polydimethylsiloxane column.

The F2 fraction is determined by integrating the area in the chromatogram from the apex of nC10 to the apex nC16 and quantitating using external calibration using a standard mix containing nC10, nC16 and nC34. Similarly, the F3 fraction extends from the apex of nC16 to the apex nC34 and the F4 fraction covers the area from the apex nC34 to the apex nC50. If the chromatogram does not return to the baseline by the time nC50 elutes, a gravimetric determination of the F4 is performed.

FC-MF-WT Water Fecal Coliforms SM 9222D
A 100mL volume of sample is filtered through a membrane, the membrane is placed on mFC agar and incubated at 24–2h@44.5–0.2 C. Method ID: WT-TM-1200

HG-D-CVAA-WT Water Dissolved Mercury in Water by CVAAS EPA SW846 7470A
Liquid sample is filtered, then digested with a heated, strong, mixed acid solution to convert all forms of mercury to divalent mercury. The divalent mercury is then reduced to elemental mercury, sparged from solution and analyzed by CVAAS.

Analysis conducted in accordance with the Protocol for Analytical Methods Used in the Assessment of Properties under Part XV.1 of the Environmental Protection Act (July 1, 2011).

MET-D-MS-WT Water Dissolved Metals in Water by ICPMS EPA 200.8
The metal constituents of a non-acidified sample that pass through a membrane filter prior to ICP/MS analysis.

Analysis conducted in accordance with the Protocol for Analytical Methods Used in the Assessment of Properties under Part XV.1 of the Environmental Protection Act (July 1, 2011).

NH3-WT Water Ammonia, Total as N EPA 350.1
Sample is measured colorimetrically. When sample is turbid a distillation step is required, sample is distilled into a solution of boric acid and measured colorimetrically.

NO2-WT Water Nitrite-N EPA 300.0 (IC)
A filtered water sample (drinking waters-unfiltered) is analyzed by ion chromatography.

NO3-WT Water Nitrate-N EPA 300.0 (IC)
A filtered water sample (drinking waters-unfiltered) is analyzed by ion chromatography.

P-TOTAL-WT Water Phosphorus, Total APHA 4500-P B E
Samples are digested to convert the total phosphorus to orthophosphate. The orthophosphate reacts with ammonium molybdate and potassium antimonyl tartrate to form a antimonyl-phosphomolybdate complex. This complex is measured colorimetrically and reported as phosphorus.

PAH-CCME-WT Water CCME PAHs SW846 8270
Sample is extracted at neutral pH using separate aliquots of dichloromethane with a modified separatory funnel technique, extracts are then concentrated and analyzed by GC/MSD. Depending on the analytical GC/MS column used benzo(j)fluoranthene may chromatographically co-elute with benzo(b)fluoranthene or benzo(k)fluoranthene.

PH,TEMP-CLIENT-WT Water pH & Temperature Results supplied by client

PH-WT Water pH APHA 4500 H-Electrode
Water samples are analyzed directly by a calibrated pH meter.

Analysis conducted in accordance with the Protocol for Analytical Methods Used in the Assessment of Properties under Part XV.1 of the Environmental Protection Act (July 1, 2011).

PHENOLS-4AAP-WT Water Phenol (4AAP) EPA 9066
An automated method is used to distill the sample. The distillate is then buffered to pH 9.4 which reacts with 4AAP and potassium ferricyanide to form a red complex which is measured colorimetrically.

SO4-WT Water Sulphate EPA 300.0 (IC)

SOLIDS-TDS-WT Water Total Dissolved Solids APHA 2540C
A well-mixed sample is filtered though glass fibres filter. A known volume of the filtrate is evaporated and dried at 105–5 C overnight and then 180–10 C for 1hr.

SOLIDS-TSS-WT Water Suspended solids APHA 2540 D-Gravimetric
A well-mixed sample is filtered through a weighed standard glass fibre filter and the residue retained is dried in an oven at 105–5 C for a minimum of four hours or until a constant weight is achieved.

TC-MF-WT Water Total Coliforms SM 9222B
A 100mL volume of sample is filtered through a membrane, the membrane is placed on mENDO LES agar and incubated at 35–0.5 C for 24–2h. Method ID: WT-TM-1200

TKN-WT Water Total Kjeldahl Nitrogen APHA 4500-N
Sample is digested to convert the TKN to ammonium sulphate. The ammonia ions are heated to produce a colour complex. The absorbance measured by the instrument is proportional to the concentration of ammonium sulphate in the sample and is reported as TKN.

TURBIDITY-WT Water Turbidity APHA 2130 B
Sample result is based on a comparison of the intensity of the light scattered by the sample under defined conditions with the intensity of light scattered by a standard reference suspension under the same conditions. Sample readings are obtained from a Nephelometer.

Reference Information

** ALS test methods may incorporate modifications from specified reference methods to improve performance.

The last two letters of the above test code(s) indicate the laboratory that performed analytical analysis for that test. Refer to the list below:

Laboratory Definition Code	Laboratory Location
WT	ALS ENVIRONMENTAL - WATERLOO, ONTARIO, CANADA

Chain of Custody Numbers:

GLOSSARY OF REPORT TERMS

Surrogates are compounds that are similar in behaviour to target analyte(s), but that do not normally occur in environmental samples. For applicable tests, surrogates are added to samples prior to analysis as a check on recovery. In reports that display the D.L. column, laboratory objectives for surrogates are listed there.
mg/kg - milligrams per kilogram based on dry weight of sample
mg/kg wwt - milligrams per kilogram based on wet weight of sample
mg/kg lwt - milligrams per kilogram based on lipid weight of sample
mg/L - unit of concentration based on volume, parts per million.
< - Less than.
D.L. - The reporting limit.
N/A - Result not available. Refer to qualifier code and definition for explanation.

Test results reported relate only to the samples as received by the laboratory.
UNLESS OTHERWISE STATED, ALL SAMPLES WERE RECEIVED IN ACCEPTABLE CONDITION.
Analytical results in unsigned test reports with the DRAFT watermark are subject to change, pending final QC review.

Legend:

Limit	ALS Control Limit (Data Quality Objectives)
DUP	Duplicate
RPD	Relative Percent Difference
N/A	Not Available
LCS	Laboratory Control Sample
SRM	Standard Reference Material
MS	Matrix Spike
MSD	Matrix Spike Duplicate
ADE	Average Desorption Efficiency
MB	Method Blank
IRM	Internal Reference Material
CRM	Certified Reference Material
CCV	Continuing Calibration Verification
CVS	Calibration Verification Standard
LCSD	Laboratory Control Sample Duplicate

Sample Parameter Qualifier Definitions:

Qualifier	Description
DLM	Detection Limit Adjusted due to sample matrix effects.
J	Duplicate results and limits are expressed in terms of absolute difference.
MS-B	Matrix Spike recovery could not be accurately calculated due to high analyte background in sample.
PEHT	Parameter Exceeded Recommended Holding Time Prior to Analysis
RPD-NA	Relative Percent Difference Not Available due to result(s) being less than detection limit.

Hold Time Exceedances:

ALS Product Description	Sample ID	Sampling Date	Date Processed	Rec. HT	Actual HT	Units	Qualifier
Physical Tests							
Colour							
	1	28-MAY-14 11:00	30-MAY-14 11:52	48	49	hours	EHT

Legend & Qualifier Definitions:

EHTR-FM:	Exceeded ALS recommended hold time prior to sample receipt. Field Measurement recommended.
EHTR:	Exceeded ALS recommended hold time prior to sample receipt.
EHTL:	Exceeded ALS recommended hold time prior to analysis. Sample was received less than 24 hours prior to expiry.
EHT:	Exceeded ALS recommended hold time prior to analysis.
Rec. HT:	ALS recommended hold time (see units).

Notes*:
Where actual sampling date is not provided to ALS, the date (& time) of receipt is used for calculation purposes.
Where actual sampling time is not provided to ALS, the earlier of 12 noon on the sampling date or the time (& date) of receipt is used for calculation purposes. Samples for L1461921 were received on 29-MAY-14 09:00.

ALS recommended hold times may vary by province. They are assigned to meet known provincial and/or federal government requirements. In the absence of regulatory hold times, ALS establishes recommendations based on guidelines published by the US EPA, APHA Standard Methods, or Environment Canada (where available). For more information, please contact ALS.

The ALS Quality Control Report is provided to ALS clients upon request. ALS includes comprehensive QC checks with every analysis to ensure our high standards of quality are met. Each QC result has a known or expected target value, which is compared against pre-determined data quality objectives to provide confidence in the accuracy of associated test results.

Please note that this report may contain QC results from anonymous Sample Duplicates and Matrix Spikes that do not originate from this Work Order.

Matrix Spike	Sulphate (SO4)	MS-B	L1462687-1, -11, -12, -2, -3, -4, -5, -6, -7, -8
Matrix Spike	Ammonia, Total (as N)	MS-B	L1462687-1, -10, -11, -2, -3, -4, -5, -6, -7, -8

Sample Parameter Qualifier key listed:

Qualifier	Description
DLM	Detection Limit Adjusted due to sample matrix effects.
MS-B	Matrix Spike recovery could not be accurately calculated due to high analyte background in sample.

Test Method References:

ALS Test Code	Matrix	Test Description	Method Reference**
ALK-WT	Water	Alkalinity, Total (as CaCO3)	EPA 310.2
BOD-C-WT	Water	BOD Carbonaceous	APHA 5210 B (CBOD)
Sample is incubated at 20 C– 1 C for 5 days using a nitrification inhibitor.			
C-DIS-ORG-WT	Water	Dissolved Organic Carbon	APHA 5310 B-INSTRUMENTAL
Sample is filtered through a 0.45um filter, sample is then injected into a heated reaction chamber which is packed with an oxidative catalyst. The water is vaporized and the organic cabon is oxidized to carbon dioxide. The carbon dioxide is transported in a carrier gas and is measured by a non-dispersive infrared detector.			
CL-WT	Water	Chloride	EPA 300.0 (IC)
COD-WT	Water	Chemical Oxygen Demand	APHA 5220 D
The dichromate ion oxidizes COD material when the sample is digested and after digestion the sample is then analyzed on a spectrophotometer.			
COLOUR-WT	Water	Colour	APHA 2120
Apparent colour is determined by analysis of the decanted sample using the platinum-cobalt colourimetric method.			
EC-MF-WT	Water	E. coli	SM 9222D
A 100mL volume of sample is filtered through a membrane, the membrane is placed on mFC-BCIG agar and incubated at @44.5–0.2 C for 24–2h. Method ID: WT-TM-1200			
ETL-NH3-UNION-CLI-WT	Water	Un-ionized ammonia	CALCULATION
F1-F4-CALC-WT	Water	CCME Total Hydrocarbons	CCME CWS-PHC DEC-2000 - PUB# 1310-L

Analytical methods used for analysis of CCME Petroleum Hydrocarbons have been validated and comply with the Reference Method for the CWS PHC.

In cases where results for both F4 and F4G are reported, the greater of the two results must be used in any application of the CWS PHC guidelines and the gravimetric heavy hydrocarbons cannot be added to the C6 to C50 hydrocarbons.
In samples where BTEX and F1 were analyzed , F1-BTEX represents a value where the sum of Benzene, Toluene, Ethylbenzene and total Xylenes has been subtracted from F1.

In samples where PAHs, F2 and F3 were analyzed, F2-Naphth represents the result where Naphthalene has been subtracted from F2. F3-PAH

Reference Information

represents a result where the sum of Benzo(a)anthracene, Benzo(a)pyrene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Dibenzo(a,h)anthracene, Fluoranthene, Indeno(1,2,3-cd)pyrene, Phenanthrene, and Pyrene has been subtracted from F3.

Unless otherwise qualified, the following quality control criteria have been met for the F1 hydrocarbon range:
1. All extraction and analysis holding times were met.
2. Instrument performance showing response factors for C6 and C10 within 30% of the response factor for toluene.
3. Linearity of gasoline response within 15% throughout the calibration range.

Unless otherwise qualified, the following quality control criteria have been met for the F2-F4 hydrocarbon ranges:
1. All extraction and analysis holding times were met.
2. Instrument performance showing C10, C16 and C34 response factors within 10% of their average.
3. Instrument performance showing the C50 response factor within 30% of the average of the C10, C16 and C34 response factors.
4. Linearity of diesel or motor oil response within 15% throughout the calibration range.

F1-HS-WT Water F1 (O.Reg.153/04) E3421/CCME (HS)
Fraction F1 is determined by analyzing by headspace-GC/FID.

F2-F4-WT Water F2-F4 (O.Reg.153/04) MOE DECPH-E3421/CCME TIER 1
The petroleum hydrocarbons are extracted from the aqueous samples using solvent partition. The extracts are treated with silica gel to remove polar contaminants. The final concentrated extract is analyzed by gas chromatography (GC) using flame ionization detection (FID) and a 100% polydimethylsiloxane column.

The F2 fraction is determined by integrating the area in the chromatogram from the apex of nC10 to the apex nC16 and quantitating using external calibration using a standard mix containing nC10, nC16 and nC34. Similarly, the F3 fraction extends from the apex of nC16 to the apex nC34 and the F4 fraction covers the area from the apex nC34 to the apex nC50. If the chromatogram does not return to the baseline by the time nC50 elutes, a gravimetric determination of the F4 is performed.

FC-MF-WT Water Fecal Coliforms SM 9222D
A 100mL volume of sample is filtered through a membrane, the membrane is placed on mFC agar and incubated at 24–2h@44.5–0.2 C. Method ID: WT-TM-1200

HG-D-CVAA-WT Water Dissolved Mercury in Water by CVAAS EPA SW846 7470A
Liquid sample is filtered, then digested with a heated, strong, mixed acid solution to convert all forms of mercury to divalent mercury. The divalent mercury is then reduced to elemental mercury, sparged from solution and analyzed by CVAAS.

Analysis conducted in accordance with the Protocol for Analytical Methods Used in the Assessment of Properties under Part XV.1 of the Environmental Protection Act (July 1, 2011).

MET-D-MS-WT Water Dissolved Metals in Water by ICPMS EPA 200.8
The metal constituents of a non-acidified sample that pass through a membrane filter prior to ICP/MS analysis.

Analysis conducted in accordance with the Protocol for Analytical Methods Used in the Assessment of Properties under Part XV.1 of the Environmental Protection Act (July 1, 2011).

NH3-WT Water Ammonia, Total as N EPA 350.1
Sample is measured colorimetrically. When sample is turbid a distillation step is required, sample is distilled into a solution of boric acid and measured colorimetrically.

NO2-WT Water Nitrite-N EPA 300.0 (IC)
A filtered water sample (drinking waters-unfiltered) is analyzed by ion chromatography.

NO3-WT Water Nitrate-N EPA 300.0 (IC)
A filtered water sample (drinking waters-unfiltered) is analyzed by ion chromatography.

P-TOTAL-WT Water Phosphorus, Total APHA 4500-P B E
Samples are digested to convert the total phosphorus to orthophosphate. The orthophosphate reacts with ammonium molybdate and potassium antimonyl tartrate to form a antimonyl-phosphomolybdate complex. This complex is measured colorimetrically and reported as phosphorus.

PAH-CCME-WT Water CCME PAHs SW846 8270
Sample is extracted at neutral pH using separate aliquots of dichloromethane with a modified separatory funnel technique, extracts are then concentrated and analyzed by GC/MSD. Depending on the analytical GC/MS column used benzo(j)fluoranthene may chromatographically co-elute with benzo(b)fluoranthene or benzo(k)fluoranthene.

PH,TEMP-CLIENT-WT Water pH & Temperature Results supplied by client

PH-WT Water pH APHA 4500 H-Electrode
Water samples are analyzed directly by a calibrated pH meter.

Analysis conducted in accordance with the Protocol for Analytical Methods Used in the Assessment of Properties under Part XV.1 of the Environmental Protection Act (July 1, 2011).

PHENOLS-4AAP-WT Water Phenol (4AAP) EPA 9066
An automated method is used to distill the sample. The distillate is then buffered to pH 9.4 which reacts with 4AAP and potassium ferricyanide to form a red complex which is measured colorimetrically.

Reference Information

SO4-WT	Water	Sulphate	EPA 300.0 (IC)
SOLIDS-TDS-WT	Water	Total Dissolved Solids	APHA 2540C

A well-mixed sample is filtered though glass fibres filter. A known volume of the filtrate is evaporated and dried at 105–5 C overnight and then 180–10 C for 1hr.

SOLIDS-TSS-WT	Water	Suspended solids	APHA 2540 D-Gravimetric

A well-mixed sample is filtered through a weighed standard glass fibre filter and the residue retained is dried in an oven at 105–5 C for a minimum of four hours or until a constant weight is achieved.

TC-MF-WT	Water	Total Coliforms	SM 9222B

A 100mL volume of sample is filtered through a membrane, the membrane is placed on mENDO LES agar and incubated at 35–0.5 C for 24–2h.
Method ID: WT-TM-1200

TKN-WT	Water	Total Kjeldahl Nitrogen	APHA 4500-N

Sample is digested to convert the TKN to ammonium sulphate. The ammonia ions are heated to produce a colour complex. The absorbance measured by the instrument is proportional to the concentration of ammonium sulphate in the sample and is reported as TKN.

TURBIDITY-WT	Water	Turbidity	APHA 2130 B

Sample result is based on a comparison of the intensity of the light scattered by the sample under defined conditions with the intensity of light scattered by a standard reference suspension under the same conditions. Sample readings are obtained from a Nephelometer.

** ALS test methods may incorporate modifications from specified reference methods to improve performance.

The last two letters of the above test code(s) indicate the laboratory that performed analytical analysis for that test. Refer to the list below:

Laboratory Definition Code	Laboratory Location
WT	ALS ENVIRONMENTAL - WATERLOO, ONTARIO, CANADA

Chain of Custody Numbers:

GLOSSARY OF REPORT TERMS

Surrogates are compounds that are similar in behaviour to target analyte(s), but that do not normally occur in environmental samples. For applicable tests, surrogates are added to samples prior to analysis as a check on recovery. In reports that display the D.L. column, laboratory objectives for surrogates are listed there.
mg/kg - milligrams per kilogram based on dry weight of sample
mg/kg wwt - milligrams per kilogram based on wet weight of sample
mg/kg lwt - milligrams per kilogram based on lipid weight of sample
mg/L - unit of concentration based on volume, parts per million.
< - Less than.
D.L. - The reporting limit.
N/A - Result not available. Refer to qualifier code and definition for explanation.

Test results reported relate only to the samples as received by the laboratory.
UNLESS OTHERWISE STATED, ALL SAMPLES WERE RECEIVED IN ACCEPTABLE CONDITION.
Analytical results in unsigned test reports with the DRAFT watermark are subject to change, pending final QC review.

Legend:

Limit	ALS Control Limit (Data Quality Objectives)
DUP	Duplicate
RPD	Relative Percent Difference
N/A	Not Available
LCS	Laboratory Control Sample
SRM	Standard Reference Material
MS	Matrix Spike
MSD	Matrix Spike Duplicate
ADE	Average Desorption Efficiency
MB	Method Blank
IRM	Internal Reference Material
CRM	Certified Reference Material
CCV	Continuing Calibration Verification
CVS	Calibration Verification Standard
LCSD	Laboratory Control Sample Duplicate

Sample Parameter Qualifier Definitions:

Qualifier	Description
DLM	Detection Limit Adjusted due to sample matrix effects.
J	Duplicate results and limits are expressed in terms of absolute difference.
MS-B	Matrix Spike recovery could not be accurately calculated due to high analyte background in sample.
RPD-NA	Relative Percent Difference Not Available due to result(s) being less than detection limit.

Hold Time Exceedances:

All test results reported with this submission were conducted within ALS recommended hold times.

ALS recommended hold times may vary by province. They are assigned to meet known provincial and/or federal government requirements. In the absence of regulatory hold times, ALS establishes recommendations based on guidelines published by the US EPA, APHA Standard Methods, or Environment Canada (where available). For more information, please contact ALS.

The ALS Quality Control Report is provided to ALS clients upon request. ALS includes comprehensive QC checks with every analysis to ensure our high standards of quality are met. Each QC result has a known or expected target value, which is compared against pre-determined data quality objectives to provide confidence in the accuracy of associated test results.

Please note that this report may contain QC results from anonymous Sample Duplicates and Matrix Spikes that do not originate from this Work Order.

Qualifiers for Sample Submission Listed:

Qualifier	Description
CINT	Cooling initiated. Samples were packaged with ice or ice packs upon receipt.

Sample Parameter Qualifier key listed:

Qualifier	Description
DLM	Detection Limit Adjusted due to sample matrix effects.
MS-B	Matrix Spike recovery could not be accurately calculated due to high analyte background in sample.

Test Method References:

ALS Test Code	Matrix	Test Description	Method Reference**
ALK-WT	Water	Alkalinity, Total (as CaCO3)	EPA 310.2
BOD-C-WT	Water	BOD Carbonaceous	APHA 5210 B (CBOD)
Sample is incubated at 20 C– 1 C for 5 days using a nitrification inhibitor.			
C-DIS-ORG-WT	Water	Dissolved Organic Carbon	APHA 5310 B-INSTRUMENTAL
Sample is filtered through a 0.45um filter, sample is then injected into a heated reaction chamber which is packed with an oxidative catalyst. The water is vaporized and the organic cabon is oxidized to carbon dioxide. The carbon dioxide is transported in a carrier gas and is measured by a non-dispersive infrared detector.			
CL-WT	Water	Chloride	EPA 300.0 (IC)
COD-WT	Water	Chemical Oxygen Demand	APHA 5220 D
The dichromate ion oxidizes COD material when the sample is digested and after digestion the sample is then analyzed on a spectrophotometer.			
COLOUR-WT	Water	Colour	APHA 2120
Apparent colour is determined by analysis of the decanted sample using the platinum-cobalt colourimetric method.			
EC-MF-WT	Water	E. coli	SM 9222D
A 100mL volume of sample is filtered through a membrane, the membrane is placed on mFC-BCIG agar and incubated at @44.5–0.2 C for 24–2h. Method ID: WT-TM-1200			
ETL-NH3-UNION-CLI-WT	Water	Un-ionized ammonia	CALCULATION
F1-F4-CALC-WT	Water	CCME Total Hydrocarbons	CCME CWS-PHC DEC-2000 - PUB# 1310-L

Analytical methods used for analysis of CCME Petroleum Hydrocarbons have been validated and comply with the Reference Method for the CWS PHC.

In cases where results for both F4 and F4G are reported, the greater of the two results must be used in any application of the CWS PHC guidelines and the gravimetric heavy hydrocarbons cannot be added to the C6 to C50 hydrocarbons.
In samples where BTEX and F1 were analyzed , F1-BTEX represents a value where the sum of Benzene, Toluene, Ethylbenzene and total Xylenes has been subtracted from F1.

In samples where PAHs, F2 and F3 were analyzed, F2-Naphth represents the result where Naphthalene has been subtracted from F2. F3-PAH represents a result where the sum of Benzo(a)anthracene, Benzo(a)pyrene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Dibenzo(a,h)anthracene, Fluoranthene, Indeno(1,2,3-cd)pyrene, Phenanthrene, and Pyrene has been subtracted from F3.

Unless otherwise qualified, the following quality control criteria have been met for the F1 hydrocarbon range:
1. All extraction and analysis holding times were met.
2. Instrument performance showing response factors for C6 and C10 within 30% of the response factor for toluene.
3. Linearity of gasoline response within 15% throughout the calibration range.

Unless otherwise qualified, the following quality control criteria have been met for the F2-F4 hydrocarbon ranges:
1. All extraction and analysis holding times were met.

Reference Information

2. Instrument performance showing C10, C16 and C34 response factors within 10% of their average.
3. Instrument performance showing the C50 response factor within 30% of the average of the C10, C16 and C34 response factors.
4. Linearity of diesel or motor oil response within 15% throughout the calibration range.

F1-HS-WT Water F1 (O.Reg.153/04) E3421/CCME (HS)
Fraction F1 is determined by analyzing by headspace-GC/FID.

F2-F4-WT Water F2-F4 (O.Reg.153/04) MOE DECPH-E3421/CCME TIER 1
The petroleum hydrocarbons are extracted from the aqueous samples using solvent partition. The extracts are treated with silica gel to remove polar contaminants. The final concentrated extract is analyzed by gas chromatography (GC) using flame ionization detection (FID) and a 100% polydimethylsiloxane column.

The F2 fraction is determined by integrating the area in the chromatogram from the apex of nC10 to the apex nC16 and quantitating using external calibration using a standard mix containing nC10, nC16 and nC34. Similarly, the F3 fraction extends from the apex of nC16 to the apex nC34 and the F4 fraction covers the area from the apex nC34 to the apex nC50. If the chromatogram does not return to the baseline by the time nC50 elutes, a gravimetric determination of the F4 is performed.

FC-MF-WT Water Fecal Coliforms SM 9222D
A 100mL volume of sample is filtered through a membrane, the membrane is placed on mFC agar and incubated at 24–2h@44.5–0.2 C. Method ID: WT-TM-1200

HG-D-CVAA-WT Water Dissolved Mercury in Water by CVAAS EPA SW846 7470A
Liquid sample is filtered, then digested with a heated, strong, mixed acid solution to convert all forms of mercury to divalent mercury. The divalent mercury is then reduced to elemental mercury, sparged from solution and analyzed by CVAAS.

Analysis conducted in accordance with the Protocol for Analytical Methods Used in the Assessment of Properties under Part XV.1 of the Environmental Protection Act (July 1, 2011).

MET-D-MS-WT Water Dissolved Metals in Water by ICPMS EPA 200.8
The metal constituents of a non-acidified sample that pass through a membrane filter prior to ICP/MS analysis.

Analysis conducted in accordance with the Protocol for Analytical Methods Used in the Assessment of Properties under Part XV.1 of the Environmental Protection Act (July 1, 2011).

NH3-WT Water Ammonia, Total as N EPA 350.1
Sample is measured colorimetrically. When sample is turbid a distillation step is required, sample is distilled into a solution of boric acid and measured colorimetrically.

NO2-WT Water Nitrite-N EPA 300.0 (IC)
A filtered water sample (drinking waters-unfiltered) is analyzed by ion chromatography.

NO3-WT Water Nitrate-N EPA 300.0 (IC)
A filtered water sample (drinking waters-unfiltered) is analyzed by ion chromatography.

P-TOTAL-WT Water Phosphorus, Total APHA 4500-P B E
Samples are digested to convert the total phosphorus to orthophosphate. The orthophosphate reacts with ammonium molybdate and potassium antimonyl tartrate to form a antimonyl-phosphomolybdate complex. This complex is measured colorimetrically and reported as phosphorus.

PAH-CCME-WT Water CCME PAHs SW846 8270
Sample is extracted at neutral pH using separate aliquots of dichloromethane with a modified separatory funnel technique, extracts are then concentrated and analyzed by GC/MSD. Depending on the analytical GC/MS column used benzo(j)fluoranthene may chromatographically co-elute with benzo(b)fluoranthene or benzo(k)fluoranthene.

PH,TEMP-CLIENT-WT Water pH & Temperature Results supplied by client

PH-WT Water pH APHA 4500 H-Electrode
Water samples are analyzed directly by a calibrated pH meter.

Analysis conducted in accordance with the Protocol for Analytical Methods Used in the Assessment of Properties under Part XV.1 of the Environmental Protection Act (July 1, 2011).

PHENOLS-4AAP-WT Water Phenol (4AAP) EPA 9066
An automated method is used to distill the sample. The distillate is then buffered to pH 9.4 which reacts with 4AAP and potassium ferricyanide to form a red complex which is measured colorimetrically.

SO4-WT Water Sulphate EPA 300.0 (IC)

SOLIDS-TDS-WT Water Total Dissolved Solids APHA 2540C
A well-mixed sample is filtered though glass fibres filter. A known volume of the filtrate is evaporated and dried at 105–5 C overnight and then 180–10 C for 1hr.

SOLIDS-TSS-WT Water Suspended solids APHA 2540 D-Gravimetric
A well-mixed sample is filtered through a weighed standard glass fibre filter and the residue retained is dried in an oven at 105–5 C for a minimum of four hours or until a constant weight is achieved.

Reference Information

TC-MF-WT	Water	Total Coliforms	SM 9222B

A 100mL volume of sample is filtered through a membrane, the membrane is placed on mENDO LES agar and incubated at 35–0.5 C for 24–2h.
Method ID: WT-TM-1200

TKN-WT	Water	Total Kjeldahl Nitrogen	APHA 4500-N

Sample is digested to convert the TKN to ammonium sulphate. The ammonia ions are heated to produce a colour complex. The absorbance measured by the instrument is proportional to the concentration of ammonium sulphate in the sample and is reported as TKN.

TURBIDITY-WT	Water	Turbidity	APHA 2130 B

Sample result is based on a comparison of the intensity of the light scattered by the sample under defined conditions with the intensity of light scattered by a standard reference suspension under the same conditions. Sample readings are obtained from a Nephelometer.

** ALS test methods may incorporate modifications from specified reference methods to improve performance.

The last two letters of the above test code(s) indicate the laboratory that performed analytical analysis for that test. Refer to the list below:

Laboratory Definition Code	Laboratory Location
WT	ALS ENVIRONMENTAL - WATERLOO, ONTARIO, CANADA

Chain of Custody Numbers:

36917

GLOSSARY OF REPORT TERMS

Surrogates are compounds that are similar in behaviour to target analyte(s), but that do not normally occur in environmental samples. For applicable tests, surrogates are added to samples prior to analysis as a check on recovery. In reports that display the D.L. column, laboratory objectives for surrogates are listed there.
mg/kg - milligrams per kilogram based on dry weight of sample
mg/kg wwt - milligrams per kilogram based on wet weight of sample
mg/kg lwt - milligrams per kilogram based on lipid weight of sample
mg/L - unit of concentration based on volume, parts per million.
< - Less than.
D.L. - The reporting limit.
N/A - Result not available. Refer to qualifier code and definition for explanation.

Test results reported relate only to the samples as received by the laboratory.
UNLESS OTHERWISE STATED, ALL SAMPLES WERE RECEIVED IN ACCEPTABLE CONDITION.
Analytical results in unsigned test reports with the DRAFT watermark are subject to change, pending final QC review.

Legend:

Limit	ALS Control Limit (Data Quality Objectives)
DUP	Duplicate
RPD	Relative Percent Difference
N/A	Not Available
LCS	Laboratory Control Sample
SRM	Standard Reference Material
MS	Matrix Spike
MSD	Matrix Spike Duplicate
ADE	Average Desorption Efficiency
MB	Method Blank
IRM	Internal Reference Material
CRM	Certified Reference Material
CCV	Continuing Calibration Verification
CVS	Calibration Verification Standard
LCSD	Laboratory Control Sample Duplicate

Sample Parameter Qualifier Definitions:

Qualifier	Description
DLM	Detection Limit Adjusted due to sample matrix effects.
J	Duplicate results and limits are expressed in terms of absolute difference.
MS-B	Matrix Spike recovery could not be accurately calculated due to high analyte background in sample.
RPD-NA	Relative Percent Difference Not Available due to result(s) being less than detection limit.

Hold Time Exceedances:

All test results reported with this submission were conducted within ALS recommended hold times.

ALS recommended hold times may vary by province. They are assigned to meet known provincial and/or federal government requirements. In the absence of regulatory hold times, ALS establishes recommendations based on guidelines published by the US EPA, APHA Standard Methods, or Environment Canada (where available). For more information, please contact ALS.

The ALS Quality Control Report is provided to ALS clients upon request. ALS includes comprehensive QC checks with every analysis to ensure our high standards of quality are met. Each QC result has a known or expected target value, which is compared against pre-determined data quality objectives to provide confidence in the accuracy of associated test results.

Please note that this report may contain QC results from anonymous Sample Duplicates and Matrix Spikes that do not originate from this Work Order.

Reference Information

QC Samples with Qualifiers & Comments:

QC Type Description	Parameter	Qualifier	Applies to Sample Number(s)
Duplicate	Phenols (4AAP)	DLM	L1506459-1, -2, -3, -4, -5, -6, -7, -8
Matrix Spike	Boron (B)-Dissolved	MS-B	L1506459-1, -2, -3, -4, -5, -6, -7, -8
Matrix Spike	Iron (Fe)-Dissolved	MS-B	L1506459-1, -2, -3, -4, -5, -6, -7, -8
Matrix Spike	Manganese (Mn)-Dissolved	MS-B	L1506459-1, -2, -3, -4, -5, -6, -7, -8
Matrix Spike	Chloride (Cl)	MS-B	L1506459-1, -2, -3, -4, -5, -6, -7, -8
Matrix Spike	Nitrate-N (NO3-N)	MS-B	L1506459-1, -2, -3, -4, -5, -6, -7, -8
Matrix Spike	Chloride (Cl)	MS-B	L1506459-1, -2, -3, -4, -5, -6, -7, -8
Matrix Spike	Sulphate (SO4)	MS-B	L1506459-1, -2, -3, -4, -5, -6, -7, -8
Matrix Spike	Ammonia, Total (as N)	MS-B	L1506459-3, -4, -7, -8

Sample Parameter Qualifier key listed:

Qualifier	Description
DLM	Detection Limit Adjusted due to sample matrix effects.
MS-B	Matrix Spike recovery could not be accurately calculated due to high analyte background in sample.
PEHT	Parameter Exceeded Recommended Holding Time Prior to Analysis

Test Method References:

ALS Test Code	Matrix	Test Description	Method Reference**
ALK-WT	Water	Alkalinity, Total (as CaCO3)	EPA 310.2
BOD-C-WT	Water	BOD Carbonaceous	APHA 5210 B (CBOD)
Sample is incubated at 20 C– 1 C for 5 days using a nitrification inhibitor.			
C-DIS-ORG-WT	Water	Dissolved Organic Carbon	APHA 5310 B-INSTRUMENTAL
Sample is filtered through a 0.45um filter, sample is then injected into a heated reaction chamber which is packed with an oxidative catalyst. The water is vaporized and the organic cabon is oxidized to carbon dioxide. The carbon dioxide is transported in a carrier gas and is measured by a non-dispersive infrared detector.			
CL-WT	Water	Chloride	EPA 300.0 (IC)
COD-WT	Water	Chemical Oxygen Demand	APHA 5220 D
The dichromate ion oxidizes COD material when the sample is digested and after digestion the sample is then analyzed on a spectrophotometer.			
COLOUR-WT	Water	Colour	APHA 2120
Apparent colour is determined by analysis of the decanted sample using the platinum-cobalt colourimetric method.			
EC-MF-WT	Water	E. coli	SM 9222D
A 100mL volume of sample is filtered through a membrane, the membrane is placed on mFC-BCIG agar and incubated at @44.5–0.2 C for 24–2h. Method ID: WT-TM-1200			
ETL-NH3-UNION-CLI-WT	Water	Un-ionized ammonia	CALCULATION
F1-F4-CALC-WT	Water	CCME Total Hydrocarbons	CCME CWS-PHC DEC-2000 - PUB# 1310-L

Analytical methods used for analysis of CCME Petroleum Hydrocarbons have been validated and comply with the Reference Method for the CWS PHC.

In cases where results for both F4 and F4G are reported, the greater of the two results must be used in any application of the CWS PHC guidelines and the gravimetric heavy hydrocarbons cannot be added to the C6 to C50 hydrocarbons.
In samples where BTEX and F1 were analyzed , F1-BTEX represents a value where the sum of Benzene, Toluene, Ethylbenzene and total Xylenes has been subtracted from F1.

In samples where PAHs, F2 and F3 were analyzed, F2-Naphth represents the result where Naphthalene has been subtracted from F2. F3-PAH represents a result where the sum of Benzo(a)anthracene, Benzo(a)pyrene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Dibenzo(a,h)anthracene, Fluoranthene, Indeno(1,2,3-cd)pyrene, Phenanthrene, and Pyrene has been subtracted from F3.

Unless otherwise qualified, the following quality control criteria have been met for the F1 hydrocarbon range:
1. All extraction and analysis holding times were met.
2. Instrument performance showing response factors for C6 and C10 within 30% of the response factor for toluene.
3. Linearity of gasoline response within 15% throughout the calibration range.

Unless otherwise qualified, the following quality control criteria have been met for the F2-F4 hydrocarbon ranges:
1. All extraction and analysis holding times were met.
2. Instrument performance showing C10, C16 and C34 response factors within 10% of their average.
3. Instrument performance showing the C50 response factor within 30% of the average of the C10, C16 and C34 response factors.
4. Linearity of diesel or motor oil response within 15% throughout the calibration range.

Reference Information

F1-HS-WT	Water	F1 (O.Reg.153/04)	E3421/CCME (HS)

Fraction F1 is determined by analyzing by headspace-GC/FID.

F2-F4-WT	Water	F2-F4 (O.Reg.153/04)	MOE DECPH-E3421/CCME TIER 1

The petroleum hydrocarbons are extracted from the aqueous samples using solvent partition. The extracts are treated with silica gel to remove polar contaminants. The final concentrated extract is analyzed by gas chromatography (GC) using flame ionization detection (FID) and a 100% polydimethylsiloxane column.

The F2 fraction is determined by integrating the area in the chromatogram from the apex of nC10 to the apex nC16 and quantitating using external calibration using a standard mix containing nC10, nC16 and nC34. Similarly, the F3 fraction extends from the apex of nC16 to the apex nC34 and the F4 fraction covers the area from the apex nC34 to the apex nC50. If the chromatogram does not return to the baseline by the time nC50 elutes, a gravimetric determination of the F4 is performed.

F4G-ADD-WT	Water	F4G-SG (O.Reg.153/04)	MOE DECPH-E3421/CCME TIER 1

FC-MF-WT	Water	Fecal Coliforms	SM 9222D

A 100mL volume of sample is filtered through a membrane, the membrane is placed on mFC agar and incubated at 24–2h@44.5–0.2 C. Method ID: WT-TM-1200

HG-D-CVAA-WT	Water	Dissolved Mercury in Water by CVAAS	EPA SW846 7470A

Liquid sample is filtered, then digested with a heated, strong, mixed acid solution to convert all forms of mercury to divalent mercury. The divalent mercury is then reduced to elemental mercury, sparged from solution and analyzed by CVAAS.

Analysis conducted in accordance with the Protocol for Analytical Methods Used in the Assessment of Properties under Part XV.1 of the Environmental Protection Act (July 1, 2011).

MET-D-MS-WT	Water	Dissolved Metals in Water by ICPMS	EPA 200.8

The metal constituents of a non-acidified sample that pass through a membrane filter prior to ICP/MS analysis.

Analysis conducted in accordance with the Protocol for Analytical Methods Used in the Assessment of Properties under Part XV.1 of the Environmental Protection Act (July 1, 2011).

NH3-WT	Water	Ammonia, Total as N	EPA 350.1

Sample is measured colorimetrically. When sample is turbid a distillation step is required, sample is distilled into a solution of boric acid and measured colorimetrically.

NO2-WT	Water	Nitrite-N	EPA 300.0 (IC)

A filtered water sample (drinking waters-unfiltered) is analyzed by ion chromatography.

NO3-WT	Water	Nitrate-N	EPA 300.0 (IC)

A filtered water sample (drinking waters-unfiltered) is analyzed by ion chromatography.

P-TOTAL-WT	Water	Phosphorus, Total	APHA 4500-P B E

Samples are digested to convert the total phosphorus to orthophosphate. The orthophosphate reacts with ammonium molybdate and potassium antimonyl tartrate to form a antimonyl-phosphomolybdate complex. This complex is measured colorimetrically and reported as phosphorus.

PAH-CCME-WT	Water	CCME PAHs	SW846 8270

Sample is extracted at neutral pH using separate aliquots of dichloromethane with a modified separatory funnel technique, extracts are then concentrated and analyzed by GC/MSD. Depending on the analytical GC/MS column used benzo(j)fluoranthene may chromatographically co-elute with benzo(b)fluoranthene or benzo(k)fluoranthene.

PH,TEMP-CLIENT-WT	Water	pH & Temperature	Results supplied by client
PH-WT	Water	pH	APHA 4500 H-Electrode

Water samples are analyzed directly by a calibrated pH meter.

Analysis conducted in accordance with the Protocol for Analytical Methods Used in the Assessment of Properties under Part XV.1 of the Environmental Protection Act (July 1, 2011).

PHENOLS-4AAP-WT	Water	Phenol (4AAP)	EPA 9066

An automated method is used to distill the sample. The distillate is then buffered to pH 9.4 which reacts with 4AAP and potassium ferricyanide to form a red complex which is measured colorimetrically.

SO4-WT	Water	Sulphate	EPA 300.0 (IC)
SOLIDS-TDS-WT	Water	Total Dissolved Solids	APHA 2540C

A well-mixed sample is filtered though glass fibres filter. A known volume of the filtrate is evaporated and dried at 105–5 C overnight and then 180–10 C for 1hr.

SOLIDS-TSS-WT	Water	Suspended solids	APHA 2540 D-Gravimetric

A well-mixed sample is filtered through a weighed standard glass fibre filter and the residue retained is dried in an oven at 105–5 C for a minimum of four hours or until a constant weight is achieved.

Reference Information

TC-MF-WT	Water	Total Coliforms	SM 9222B

A 100mL volume of sample is filtered through a membrane, the membrane is placed on mENDO LES agar and incubated at 35–0.5 C for 24–2h.
Method ID: WT-TM-1200

TKN-WT	Water	Total Kjeldahl Nitrogen	APHA 4500-N

Sample is digested to convert the TKN to ammonium sulphate. The ammonia ions are heated to produce a colour complex. The absorbance measured by the instrument is proportional to the concentration of ammonium sulphate in the sample and is reported as TKN.

TURBIDITY-WT	Water	Turbidity	APHA 2130 B

Sample result is based on a comparison of the intensity of the light scattered by the sample under defined conditions with the intensity of light scattered by a standard reference suspension under the same conditions. Sample readings are obtained from a Nephelometer.

** ALS test methods may incorporate modifications from specified reference methods to improve performance.

The last two letters of the above test code(s) indicate the laboratory that performed analytical analysis for that test. Refer to the list below:

Laboratory Definition Code	Laboratory Location
WT	ALS ENVIRONMENTAL - WATERLOO, ONTARIO, CANADA

Chain of Custody Numbers:

GLOSSARY OF REPORT TERMS

Surrogates are compounds that are similar in behaviour to target analyte(s), but that do not normally occur in environmental samples. For applicable tests, surrogates are added to samples prior to analysis as a check on recovery. In reports that display the D.L. column, laboratory objectives for surrogates are listed there.
mg/kg - milligrams per kilogram based on dry weight of sample
mg/kg wwt - milligrams per kilogram based on wet weight of sample
mg/kg lwt - milligrams per kilogram based on lipid weight of sample
mg/L - unit of concentration based on volume, parts per million.
< - Less than.
D.L. - The reporting limit.
N/A - Result not available. Refer to qualifier code and definition for explanation.

Test results reported relate only to the samples as received by the laboratory.
UNLESS OTHERWISE STATED, ALL SAMPLES WERE RECEIVED IN ACCEPTABLE CONDITION.
Analytical results in unsigned test reports with the DRAFT watermark are subject to change, pending final QC review.

Legend:

Limit	ALS Control Limit (Data Quality Objectives)
DUP	Duplicate
RPD	Relative Percent Difference
N/A	Not Available
LCS	Laboratory Control Sample
SRM	Standard Reference Material
MS	Matrix Spike
MSD	Matrix Spike Duplicate
ADE	Average Desorption Efficiency
MB	Method Blank
IRM	Internal Reference Material
CRM	Certified Reference Material
CCV	Continuing Calibration Verification
CVS	Calibration Verification Standard
LCSD	Laboratory Control Sample Duplicate

Sample Parameter Qualifier Definitions:

Qualifier	Description
DLM	Detection Limit Adjusted due to sample matrix effects.
J	Duplicate results and limits are expressed in terms of absolute difference.
MS-B	Matrix Spike recovery could not be accurately calculated due to high analyte background in sample.
RPD-NA	Relative Percent Difference Not Available due to result(s) being less than detection limit.

Legend & Qualifier Definitions:

EHTR-FM:	Exceeded ALS recommended hold time prior to sample receipt. Field Measurement recommended.
EHTR:	Exceeded ALS recommended hold time prior to sample receipt.
EHTL:	Exceeded ALS recommended hold time prior to analysis. Sample was received less than 24 hours prior to expiry.
EHT:	Exceeded ALS recommended hold time prior to analysis.
Rec. HT:	ALS recommended hold time (see units).

Notes*:
Where actual sampling date is not provided to ALS, the date (& time) of receipt is used for calculation purposes.
Where actual sampling time is not provided to ALS, the earlier of 12 noon on the sampling date or the time (& date) of receipt is used for calculation purposes. Samples for L1506459 were received on 22-AUG-14 09:00.

ALS recommended hold times may vary by province. They are assigned to meet known provincial and/or federal government requirements. In the absence of regulatory hold times, ALS establishes recommendations based on guidelines published by the US EPA, APHA Standard Methods, or Environment Canada (where available). For more information, please contact ALS.

The ALS Quality Control Report is provided to ALS clients upon request. ALS includes comprehensive QC checks with every analysis to ensure our high standards of quality are met. Each QC result has a known or expected target value, which is compared against pre-determined data quality objectives to provide confidence in the accuracy of associated test results.

Please note that this report may contain QC results from anonymous Sample Duplicates and Matrix Spikes that do not originate from this Work Order.

Reference Information

QC Samples with Qualifiers & Comments:

QC Type Description	Parameter	Qualifier	Applies to Sample Number(s)
Duplicate	Total Suspended Solids	DLM	L1550748-1, -2, -3, -4, -5
Matrix Spike	Ammonia, Total (as N)	MS-B	L1550748-1, -10, -2, -3, -4, -5, -6, -7, -8, -9

Sample Parameter Qualifier key listed:

Qualifier	Description
DLM	Detection Limit Adjusted due to sample matrix effects.
MS-B	Matrix Spike recovery could not be accurately calculated due to high analyte background in sample.

Test Method References:

ALS Test Code	Matrix	Test Description	Method Reference**
ALK-WT	Water	Alkalinity, Total (as CaCO3)	EPA 310.2
BOD-C-WT	Water	BOD Carbonaceous	APHA 5210 B (CBOD)
Sample is incubated at 20 C– 1 C for 5 days using a nitrification inhibitor.			
C-DIS-ORG-WT	Water	Dissolved Organic Carbon	APHA 5310 B-INSTRUMENTAL
Sample is filtered through a 0.45um filter, sample is then injected into a heated reaction chamber which is packed with an oxidative catalyst. The water is vaporized and the organic cabon is oxidized to carbon dioxide. The carbon dioxide is transported in a carrier gas and is measured by a non-dispersive infrared detector.			
CL-WT	Water	Chloride	EPA 300.0 (IC)
Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.			
COD-WT	Water	Chemical Oxygen Demand	APHA 5220 D
The dichromate ion oxidizes COD material when the sample is digested and after digestion the sample is then analyzed on a spectrophotometer.			
COLOUR-WT	Water	Colour	APHA 2120
Apparent colour is determined by analysis of the decanted sample using the platinum-cobalt colourimetric method.			
EC-MF-WT	Water	E. coli	SM 9222D
A 100mL volume of sample is filtered through a membrane, the membrane is placed on mFC-BCIG agar and incubated at @44.5–0.2 C for 24–2h. Method ID: WT-TM-1200			
ETL-NH3-UNION-CLI-WT	Water	Un-ionized ammonia	CALCULATION
F1-F4-CALC-WT	Water	CCME Total Hydrocarbons	CCME CWS-PHC DEC-2000 - PUB# 1310-L

Analytical methods used for analysis of CCME Petroleum Hydrocarbons have been validated and comply with the Reference Method for the CWS PHC.

In cases where results for both F4 and F4G are reported, the greater of the two results must be used in any application of the CWS PHC guidelines and the gravimetric heavy hydrocarbons cannot be added to the C6 to C50 hydrocarbons.
In samples where BTEX and F1 were analyzed , F1-BTEX represents a value where the sum of Benzene, Toluene, Ethylbenzene and total Xylenes has been subtracted from F1.

In samples where PAHs, F2 and F3 were analyzed, F2-Naphth represents the result where Naphthalene has been subtracted from F2. F3-PAH represents a result where the sum of Benzo(a)anthracene, Benzo(a)pyrene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Dibenzo(a,h)anthracene, Fluoranthene, Indeno(1,2,3-cd)pyrene, Phenanthrene, and Pyrene has been subtracted from F3.

Unless otherwise qualified, the following quality control criteria have been met for the F1 hydrocarbon range:
1. All extraction and analysis holding times were met.
2. Instrument performance showing response factors for C6 and C10 within 30% of the response factor for toluene.
3. Linearity of gasoline response within 15% throughout the calibration range.

Unless otherwise qualified, the following quality control criteria have been met for the F2-F4 hydrocarbon ranges:
1. All extraction and analysis holding times were met.
2. Instrument performance showing C10, C16 and C34 response factors within 10% of their average.
3. Instrument performance showing the C50 response factor within 30% of the average of the C10, C16 and C34 response factors.
4. Linearity of diesel or motor oil response within 15% throughout the calibration range.

F1-HS-WT	Water	F1 (O.Reg.153/04)	E3421/CCME (HS)
Fraction F1 is determined by analyzing by headspace-GC/FID.			
F2-F4-WT	Water	F2-F4 (O.Reg.153/04)	MOE DECPH-E3421/CCME TIER 1
The petroleum hydrocarbons are extracted from the aqueous samples using solvent partition. The extracts are treated with silica gel to remove polar contaminants. The final concentrated extract is analyzed by gas chromatography (GC) using flame ionization detection (FID) and a 100% polydimethylsiloxane column.			

The F2 fraction is determined by integrating the area in the chromatogram from the apex of nC10 to the apex nC16 and quantitating using external calibration

Reference Information

using a standard mix containing nC10, nC16 and nC34. Similarly, the F3 fraction extends from the apex of nC16 to the apex nC34 and the F4 fraction covers the area from the apex nC34 to the apex nC50. If the chromatogram does not return to the baseline by the time nC50 elutes, a gravimetric determination of the F4 is performed.

FC-MF-WT	Water	Fecal Coliforms	SM 9222D

A 100mL volume of sample is filtered through a membrane, the membrane is placed on mFC agar and incubated at 24–2h@44.5–0.2 C. Method ID: WT-TM-1200

HG-D-CVAA-WT	Water	Dissolved Mercury in Water by CVAAS	EPA SW846 7470A

Liquid sample is filtered, then digested with a heated, strong, mixed acid solution to convert all forms of mercury to divalent mercury. The divalent mercury is then reduced to elemental mercury, sparged from solution and analyzed by CVAAS.

Analysis conducted in accordance with the Protocol for Analytical Methods Used in the Assessment of Properties under Part XV.1 of the Environmental Protection Act (July 1, 2011).

MET-D-MS-WT	Water	Dissolved Metals in Water by ICPMS	EPA 200.8

The metal constituents of a non-acidified sample that pass through a membrane filter prior to ICP/MS analysis.

Analysis conducted in accordance with the Protocol for Analytical Methods Used in the Assessment of Properties under Part XV.1 of the Environmental Protection Act (July 1, 2011).

NH3-WT	Water	Ammonia, Total as N	EPA 350.1

Sample is measured colorimetrically. When sample is turbid a distillation step is required, sample is distilled into a solution of boric acid and measured colorimetrically.

NO2-WT	Water	Nitrite-N	EPA 300.0 (IC)

A filtered water sample (drinking waters-unfiltered) is analyzed by ion chromatography.

NO3-WT	Water	Nitrate-N	EPA 300.0 (IC)

A filtered water sample (drinking waters-unfiltered) is analyzed by ion chromatography.

P-TOTAL-WT	Water	Phosphorus, Total	APHA 4500-P B E

Samples are digested to convert the total phosphorus to orthophosphate. The orthophosphate reacts with ammonium molybdate and potassium antimonyl tartrate to form a antimonyl-phosphomolybdate complex. This complex is measured colorimetrically and reported as phosphorus.

PAH-CCME-WT	Water	CCME PAHs	SW846 8270

Sample is extracted at neutral pH using separate aliquots of dichloromethane with a modified separatory funnel technique, extracts are then concentrated and analyzed by GC/MSD. Depending on the analytical GC/MS column used benzo(j)fluoranthene may chromatographically co-elute with benzo(b)fluoranthene or benzo(k)fluoranthene.

PH,TEMP-CLIENT-WT	Water	pH & Temperature	Results supplied by client
PH-WT	Water	pH	APHA 4500 H-Electrode

Water samples are analyzed directly by a calibrated pH meter.

Analysis conducted in accordance with the Protocol for Analytical Methods Used in the Assessment of Properties under Part XV.1 of the Environmental Protection Act (July 1, 2011).

PHENOLS-4AAP-WT	Water	Phenol (4AAP)	EPA 9066

An automated method is used to distill the sample. The distillate is then buffered to pH 9.4 which reacts with 4AAP and potassium ferricyanide to form a red complex which is measured colorimetrically.

SO4-WT	Water	Sulphate	EPA 300.0 (IC)
SOLIDS-TDS-WT	Water	Total Dissolved Solids	APHA 2540C

A well-mixed sample is filtered though glass fibres filter. A known volume of the filtrate is evaporated and dried at 105–5 C overnight and then 180–10 C for 1hr.

SOLIDS-TSS-WT	Water	Suspended solids	APHA 2540 D-Gravimetric

A well-mixed sample is filtered through a weighed standard glass fibre filter and the residue retained is dried in an oven at 105–5 C for a minimum of four hours or until a constant weight is achieved.

TC-MF-WT	Water	Total Coliforms	SM 9222B

A 100mL volume of sample is filtered through a membrane, the membrane is placed on mENDO LES agar and incubated at 35–0.5 C for 24–2h. Method ID: WT-TM-1200

TKN-WT	Water	Total Kjeldahl Nitrogen	APHA 4500-N

Sample is digested to convert the TKN to ammonium sulphate. The ammonia ions are heated to produce a colour complex. The absorbance measured by the instrument is proportional to the concentration of ammonium sulphate in the sample and is reported as TKN.

TURBIDITY-WT	Water	Turbidity	APHA 2130 B

Sample result is based on a comparison of the intensity of the light scattered by the sample under defined conditions with the intensity of light scattered by a standard reference suspension under the same conditions. Sample readings are obtained from a Nephelometer.

** ALS test methods may incorporate modifications from specified reference methods to improve performance.

Reference Information

The last two letters of the above test code(s) indicate the laboratory that performed analytical analysis for that test. Refer to the list below:

Laboratory Definition Code	Laboratory Location
WT	ALS ENVIRONMENTAL - WATERLOO, ONTARIO, CANADA

Chain of Custody Numbers:

GLOSSARY OF REPORT TERMS

Surrogates are compounds that are similar in behaviour to target analyte(s), but that do not normally occur in environmental samples. For applicable tests, surrogates are added to samples prior to analysis as a check on recovery. In reports that display the D.L. column, laboratory objectives for surrogates are listed there.
mg/kg - milligrams per kilogram based on dry weight of sample
mg/kg wwt - milligrams per kilogram based on wet weight of sample
mg/kg lwt - milligrams per kilogram based on lipid weight of sample
mg/L - unit of concentration based on volume, parts per million.
< - Less than.
D.L. - The reporting limit.
N/A - Result not available. Refer to qualifier code and definition for explanation.

Test results reported relate only to the samples as received by the laboratory.
UNLESS OTHERWISE STATED, ALL SAMPLES WERE RECEIVED IN ACCEPTABLE CONDITION.
Analytical results in unsigned test reports with the DRAFT watermark are subject to change, pending final QC review.

Legend:

Limit	ALS Control Limit (Data Quality Objectives)
DUP	Duplicate
RPD	Relative Percent Difference
N/A	Not Available
LCS	Laboratory Control Sample
SRM	Standard Reference Material
MS	Matrix Spike
MSD	Matrix Spike Duplicate
ADE	Average Desorption Efficiency
MB	Method Blank
IRM	Internal Reference Material
CRM	Certified Reference Material
CCV	Continuing Calibration Verification
CVS	Calibration Verification Standard
LCSD	Laboratory Control Sample Duplicate

Sample Parameter Qualifier Definitions:

Qualifier	Description
DLM	Detection Limit Adjusted due to sample matrix effects.
J	Duplicate results and limits are expressed in terms of absolute difference.
MS-B	Matrix Spike recovery could not be accurately calculated due to high analyte background in sample.
RPD-NA	Relative Percent Difference Not Available due to result(s) being less than detection limit.

Hold Time Exceedances:

All test results reported with this submission were conducted within ALS recommended hold times.

ALS recommended hold times may vary by province. They are assigned to meet known provincial and/or federal government requirements. In the absence of regulatory hold times, ALS establishes recommendations based on guidelines published by the US EPA, APHA Standard Methods, or Environment Canada (where available). For more information, please contact ALS.

The ALS Quality Control Report is provided to ALS clients upon request. ALS includes comprehensive QC checks with every analysis to ensure our high standards of quality are met. Each QC result has a known or expected target value, which is compared against pre-determined data quality objectives to provide confidence in the accuracy of associated test results.

Please note that this report may contain QC results from anonymous Sample Duplicates and Matrix Spikes that do not originate from this Work Order.

Reference Information

QC Samples with Qualifiers & Comments:

QC Type Description	Parameter	Qualifier	Applies to Sample Number(s)
Matrix Spike	Total Phosphorus	MS-B	L1551246-1, -2, -3, -4, -5
Matrix Spike	Ammonia, Total (as N)	MS-B	L1551246-5

Sample Parameter Qualifier key listed:

Qualifier	Description
DLM	Detection Limit Adjusted due to sample matrix effects.
MS-B	Matrix Spike recovery could not be accurately calculated due to high analyte background in sample.

Test Method References:

ALS Test Code	Matrix	Test Description	Method Reference**
ALK-WT	Water	Alkalinity, Total (as CaCO3)	EPA 310.2
BOD-C-WT	Water	BOD Carbonaceous	APHA 5210 B (CBOD)

Sample is incubated at 20 C– 1 C for 5 days using a nitrification inhibitor.

C-DIS-ORG-WT Water Dissolved Organic Carbon APHA 5310 B-INSTRUMENTAL

Sample is filtered through a 0.45um filter, sample is then injected into a heated reaction chamber which is packed with an oxidative catalyst. The water is vaporized and the organic cabon is oxidized to carbon dioxide. The carbon dioxide is transported in a carrier gas and is measured by a non-dispersive infrared detector.

CL-WT Water Chloride EPA 300.0 (IC)

Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.

COD-WT Water Chemical Oxygen Demand APHA 5220 D

The dichromate ion oxidizes COD material when the sample is digested and after digestion the sample is then analyzed on a spectrophotometer.

COLOUR-WT Water Colour APHA 2120

Apparent colour is determined by analysis of the decanted sample using the platinum-cobalt colourimetric method.

EC-WW-MF-WT Water E. Coli SM 9222D

ETL-NH3-UNION-CLI-WT Water Un-ionized ammonia CALCULATION

F1-F4-CALC-WT Water CCME Total Hydrocarbons CCME CWS-PHC DEC-2000 - PUB# 1310-L

Analytical methods used for analysis of CCME Petroleum Hydrocarbons have been validated and comply with the Reference Method for the CWS PHC.

In cases where results for both F4 and F4G are reported, the greater of the two results must be used in any application of the CWS PHC guidelines and the gravimetric heavy hydrocarbons cannot be added to the C6 to C50 hydrocarbons.
In samples where BTEX and F1 were analyzed , F1-BTEX represents a value where the sum of Benzene, Toluene, Ethylbenzene and total Xylenes has been subtracted from F1.

In samples where PAHs, F2 and F3 were analyzed, F2-Naphth represents the result where Naphthalene has been subtracted from F2. F3-PAH represents a result where the sum of Benzo(a)anthracene, Benzo(a)pyrene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Dibenzo(a,h)anthracene, Fluoranthene, Indeno(1,2,3-cd)pyrene, Phenanthrene, and Pyrene has been subtracted from F3.

Unless otherwise qualified, the following quality control criteria have been met for the F1 hydrocarbon range:
1. All extraction and analysis holding times were met.
2. Instrument performance showing response factors for C6 and C10 within 30% of the response factor for toluene.
3. Linearity of gasoline response within 15% throughout the calibration range.

Unless otherwise qualified, the following quality control criteria have been met for the F2-F4 hydrocarbon ranges:
1. All extraction and analysis holding times were met.
2. Instrument performance showing C10, C16 and C34 response factors within 10% of their average.
3. Instrument performance showing the C50 response factor within 30% of the average of the C10, C16 and C34 response factors.
4. Linearity of diesel or motor oil response within 15% throughout the calibration range.

F1-HS-WT Water F1 (O.Reg.153/04) E3421/CCME (HS)

Fraction F1 is determined by analyzing by headspace-GC/FID.

F2-F4-WT Water F2-F4 (O.Reg.153/04) MOE DECPH-E3421/CCME TIER 1

The petroleum hydrocarbons are extracted from the aqueous samples using solvent partition. The extracts are treated with silica gel to remove polar contaminants. The final concentrated extract is analyzed by gas chromatography (GC) using flame ionization detection (FID) and a 100% polydimethylsiloxane column.

The F2 fraction is determined by integrating the area in the chromatogram from the apex of nC10 to the apex nC16 and quantitating using external calibration

Reference Information

using a standard mix containing nC10, nC16 and nC34. Similarly, the F3 fraction extends from the apex of nC16 to the apex nC34 and the F4 fraction covers the area from the apex nC34 to the apex nC50. If the chromatogram does not return to the baseline by the time nC50 elutes, a gravimetric determination of the F4 is performed.

FC-WW-MF-WT	Water	Fecal Coliforms	SM 9222D
HG-T-CVAA-WT	Water	Total Mercury in Water by CVAAS	EPA SW846 7470A

Liquid sample is digested with a heated, strong, mixed acid solution to convert all forms of mercury to divalent mercury. The divalent mercury is then reduced to elemental mercury, sparged from solution and analyzed by CVAAS.

MET-T-MS-WT	Water	Total Metals in Water by ICPMS	EPA 200.8

This analysis involves preliminary sample treatment by hotblock acid digestion (APHA 3030E). Instrumental analysis is by inductively coupled plasma - mass spectrometry (EPA Method 6020A).

NH3-WT	Water	Ammonia, Total as N	EPA 350.1

Sample is measured colorimetrically. When sample is turbid a distillation step is required, sample is distilled into a solution of boric acid and measured colorimetrically.

NO2-WT	Water	Nitrite-N	EPA 300.0 (IC)

A filtered water sample (drinking waters-unfiltered) is analyzed by ion chromatography.

NO3-WT	Water	Nitrate-N	EPA 300.0 (IC)

A filtered water sample (drinking waters-unfiltered) is analyzed by ion chromatography.

P-TOTAL-LOW-WT	Water	Phosphorus, Total, Low Level	APHA 4500-P B E

This analysis is carried by out an discrete colorimetric auto-analyzer using procedures adapted from APHA Method 4500-P "Phosphorus".

PAH-CCME-WT	Water	CCME PAHs	SW846 8270

Sample is extracted at neutral pH using separate aliquots of dichloromethane with a modified separatory funnel technique, extracts are then concentrated and analyzed by GC/MSD. Depending on the analytical GC/MS column used benzo(j)fluoranthene may chromatographically co-elute with benzo(b)fluoranthene or benzo(k)fluoranthene.

PH,TEMP-CLIENT-WT	Water	pH & Temperature	Results supplied by client
PH-WT	Water	pH	APHA 4500 H-Electrode

Water samples are analyzed directly by a calibrated pH meter.

Analysis conducted in accordance with the Protocol for Analytical Methods Used in the Assessment of Properties under Part XV.1 of the Environmental Protection Act (July 1, 2011).

PHENOLS-4AAP-WT	Water	Phenol (4AAP)	EPA 9066

An automated method is used to distill the sample. The distillate is then buffered to pH 9.4 which reacts with 4AAP and potassium ferricyanide to form a red complex which is measured colorimetrically.

SO4-WT	Water	Sulphate	EPA 300.0 (IC)
SOLIDS-TDS-WT	Water	Total Dissolved Solids	APHA 2540C

A well-mixed sample is filtered though glass fibres filter. A known volume of the filtrate is evaporated and dried at 105–5 C overnight and then 180–10 C for 1hr.

SOLIDS-TSS-WT	Water	Suspended solids	APHA 2540 D-Gravimetric

A well-mixed sample is filtered through a weighed standard glass fibre filter and the residue retained is dried in an oven at 105–5 C for a minimum of four hours or until a constant weight is achieved.

TC-WW-MF-WT	Water	Total Coliforms	SM 9222B

Water sample is filtered through a membrane, the membrane is placed on mENDO LES agar and incubated at 35–0.5 C for 24–2h.

TKN-WT	Water	Total Kjeldahl Nitrogen	APHA 4500-N

Sample is digested to convert the TKN to ammonium sulphate. The ammonia ions are heated to produce a colour complex. The absorbance measured by the instrument is proportional to the concentration of ammonium sulphate in the sample and is reported as TKN.

TURBIDITY-WT	Water	Turbidity	APHA 2130 B

Sample result is based on a comparison of the intensity of the light scattered by the sample under defined conditions with the intensity of light scattered by a standard reference suspension under the same conditions. Sample readings are obtained from a Nephelometer.

** ALS test methods may incorporate modifications from specified reference methods to improve performance.

The last two letters of the above test code(s) indicate the laboratory that performed analytical analysis for that test. Refer to the list below:

Laboratory Definition Code	Laboratory Location
WT	ALS ENVIRONMENTAL - WATERLOO, ONTARIO, CANADA

GLOSSARY OF REPORT TERMS

Surrogates are compounds that are similar in behaviour to target analyte(s), but that do not normally occur in environmental samples. For applicable tests, surrogates are added to samples prior to analysis as a check on recovery. In reports that display the D.L. column, laboratory objectives for surrogates are listed there.
mg/kg - milligrams per kilogram based on dry weight of sample
mg/kg wwt - milligrams per kilogram based on wet weight of sample
mg/kg lwt - milligrams per kilogram based on lipid weight of sample
mg/L - unit of concentration based on volume, parts per million.
< - Less than.
D.L. - The reporting limit.
N/A - Result not available. Refer to qualifier code and definition for explanation.

Test results reported relate only to the samples as received by the laboratory.
UNLESS OTHERWISE STATED, ALL SAMPLES WERE RECEIVED IN ACCEPTABLE CONDITION.
Analytical results in unsigned test reports with the DRAFT watermark are subject to change, pending final QC review.

Legend:

Limit	ALS Control Limit (Data Quality Objectives)
DUP	Duplicate
RPD	Relative Percent Difference
N/A	Not Available
LCS	Laboratory Control Sample
SRM	Standard Reference Material
MS	Matrix Spike
MSD	Matrix Spike Duplicate
ADE	Average Desorption Efficiency
MB	Method Blank
IRM	Internal Reference Material
CRM	Certified Reference Material
CCV	Continuing Calibration Verification
CVS	Calibration Verification Standard
LCSD	Laboratory Control Sample Duplicate

Sample Parameter Qualifier Definitions:

Qualifier	Description
J	Duplicate results and limits are expressed in terms of absolute difference.
MS-B	Matrix Spike recovery could not be accurately calculated due to high analyte background in sample.
RPD-NA	Relative Percent Difference Not Available due to result(s) being less than detection limit.

Hold Time Exceedances:

All test results reported with this submission were conducted within ALS recommended hold times.

ALS recommended hold times may vary by province. They are assigned to meet known provincial and/or federal government requirements. In the absence of regulatory hold times, ALS establishes recommendations based on guidelines published by the US EPA, APHA Standard Methods, or Environment Canada (where available). For more information, please contact ALS.

The ALS Quality Control Report is provided to ALS clients upon request. ALS includes comprehensive QC checks with every analysis to ensure our high standards of quality are met. Each QC result has a known or expected target value, which is compared against pre-determined data quality objectives to provide confidence in the accuracy of associated test results.

Please note that this report may contain QC results from anonymous Sample Duplicates and Matrix Spikes that do not originate from this Work Order.

Reference Information

QC Samples with Qualifiers & Comments:

QC Type Description	Parameter	Qualifier	Applies to Sample Number(s)
Matrix Spike	Ammonia, Total (as N)	MS-B	L1551723-1, -2, -3, -4, -5, -6
Matrix Spike	Iron (Fe)-Dissolved	MS-B	L1551723-1, -2, -3, -4, -5, -6
Matrix Spike	Manganese (Mn)-Dissolved	MS-B	L1551723-1, -2, -3, -4, -5, -6

Sample Parameter Qualifier key listed:

Qualifier	Description
DLM	Detection Limit Adjusted due to sample matrix effects.
MS-B	Matrix Spike recovery could not be accurately calculated due to high analyte background in sample.

Test Method References:

ALS Test Code	Matrix	Test Description	Method Reference**
ALK-WT	Water	Alkalinity, Total (as CaCO3)	EPA 310.2
BOD-C-WT	Water	BOD Carbonaceous	APHA 5210 B (CBOD)
Sample is incubated at 20 C– 1 C for 5 days using a nitrification inhibitor.			
C-DIS-ORG-WT	Water	Dissolved Organic Carbon	APHA 5310 B-INSTRUMENTAL
Sample is filtered through a 0.45um filter, sample is then injected into a heated reaction chamber which is packed with an oxidative catalyst. The water is vaporized and the organic cabon is oxidized to carbon dioxide. The carbon dioxide is transported in a carrier gas and is measured by a non-dispersive infrared detector.			
CL-WT	Water	Chloride	EPA 300.0 (IC)
Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.			
COD-WT	Water	Chemical Oxygen Demand	APHA 5220 D
The dichromate ion oxidizes COD material when the sample is digested and after digestion the sample is then analyzed on a spectrophotometer.			
COLOUR-WT	Water	Colour	APHA 2120
Apparent colour is determined by analysis of the decanted sample using the platinum-cobalt colourimetric method.			
EC-MF-WT	Water	E. coli	SM 9222D
A 100mL volume of sample is filtered through a membrane, the membrane is placed on mFC-BCIG agar and incubated at @44.5–0.2 C for 24–2h. Method ID: WT-TM-1200			
ETL-NH3-UNION-CLI-WT	Water	Un-ionized ammonia	CALCULATION
F1-F4-CALC-WT	Water	CCME Total Hydrocarbons	CCME CWS-PHC DEC-2000 - PUB# 1310-L

Analytical methods used for analysis of CCME Petroleum Hydrocarbons have been validated and comply with the Reference Method for the CWS PHC.

In cases where results for both F4 and F4G are reported, the greater of the two results must be used in any application of the CWS PHC guidelines and the gravimetric heavy hydrocarbons cannot be added to the C6 to C50 hydrocarbons.
In samples where BTEX and F1 were analyzed , F1-BTEX represents a value where the sum of Benzene, Toluene, Ethylbenzene and total Xylenes has been subtracted from F1.

In samples where PAHs, F2 and F3 were analyzed, F2-Naphth represents the result where Naphthalene has been subtracted from F2. F3-PAH represents a result where the sum of Benzo(a)anthracene, Benzo(a)pyrene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Dibenzo(a,h)anthracene, Fluoranthene, Indeno(1,2,3-cd)pyrene, Phenanthrene, and Pyrene has been subtracted from F3.

Unless otherwise qualified, the following quality control criteria have been met for the F1 hydrocarbon range:
1. All extraction and analysis holding times were met.
2. Instrument performance showing response factors for C6 and C10 within 30% of the response factor for toluene.
3. Linearity of gasoline response within 15% throughout the calibration range.

Unless otherwise qualified, the following quality control criteria have been met for the F2-F4 hydrocarbon ranges:
1. All extraction and analysis holding times were met.
2. Instrument performance showing C10, C16 and C34 response factors within 10% of their average.
3. Instrument performance showing the C50 response factor within 30% of the average of the C10, C16 and C34 response factors.
4. Linearity of diesel or motor oil response within 15% throughout the calibration range.

F1-HS-WT	Water	F1 (O.Reg.153/04)	E3421/CCME (HS)
Fraction F1 is determined by analyzing by headspace-GC/FID.			
F2-F4-WT	Water	F2-F4 (O.Reg.153/04)	MOE DECPH-E3421/CCME TIER 1
The petroleum hydrocarbons are extracted from the aqueous samples using solvent partition. The extracts are treated with silica gel to remove polar contaminants. The final concentrated extract is analyzed by gas chromatography (GC) using flame ionization detection (FID) and a 100% polydimethylsiloxane column.			

Reference Information

The F2 fraction is determined by integrating the area in the chromatogram from the apex of nC10 to the apex nC16 and quantitating using external calibration using a standard mix containing nC10, nC16 and nC34. Similarly, the F3 fraction extends from the apex of nC16 to the apex nC34 and the F4 fraction covers the area from the apex nC34 to the apex nC50. If the chromatogram does not return to the baseline by the time nC50 elutes, a gravimetric determination of the F4 is performed.

FC-MF-WT Water Fecal Coliforms SM 9222D

A 100mL volume of sample is filtered through a membrane, the membrane is placed on mFC agar and incubated at 24–2h@44.5–0.2 C. Method ID: WT-TM-1200

HG-D-CVAA-WT Water Dissolved Mercury in Water by CVAAS EPA SW846 7470A

Liquid sample is filtered, then digested with a heated, strong, mixed acid solution to convert all forms of mercury to divalent mercury. The divalent mercury is then reduced to elemental mercury, sparged from solution and analyzed by CVAAS.

Analysis conducted in accordance with the Protocol for Analytical Methods Used in the Assessment of Properties under Part XV.1 of the Environmental Protection Act (July 1, 2011).

MET-D-MS-WT Water Dissolved Metals in Water by ICPMS EPA 200.8

The metal constituents of a non-acidified sample that pass through a membrane filter prior to ICP/MS analysis.

Analysis conducted in accordance with the Protocol for Analytical Methods Used in the Assessment of Properties under Part XV.1 of the Environmental Protection Act (July 1, 2011).

NH3-WT Water Ammonia, Total as N EPA 350.1

Sample is measured colorimetrically. When sample is turbid a distillation step is required, sample is distilled into a solution of boric acid and measured colorimetrically.

NO2-WT Water Nitrite-N EPA 300.0 (IC)

A filtered water sample (drinking waters-unfiltered) is analyzed by ion chromatography.

NO3-WT Water Nitrate-N EPA 300.0 (IC)

A filtered water sample (drinking waters-unfiltered) is analyzed by ion chromatography.

P-TOTAL-WT Water Phosphorus, Total APHA 4500-P B E

Samples are digested to convert the total phosphorus to orthophosphate. The orthophosphate reacts with ammonium molybdate and potassium antimonyl tartrate to form a antimonyl-phosphomolybdate complex. This complex is measured colorimetrically and reported as phosphorus.

PAH-CCME-WT Water CCME PAHs SW846 8270

Sample is extracted at neutral pH using separate aliquots of dichloromethane with a modified separatory funnel technique, extracts are then concentrated and analyzed by GC/MSD. Depending on the analytical GC/MS column used benzo(j)fluoranthene may chromatographically co-elute with benzo(b)fluoranthene or benzo(k)fluoranthene.

PH,TEMP-CLIENT-WT Water pH & Temperature Results supplied by client

PH-WT Water pH APHA 4500 H-Electrode

Water samples are analyzed directly by a calibrated pH meter.

Analysis conducted in accordance with the Protocol for Analytical Methods Used in the Assessment of Properties under Part XV.1 of the Environmental Protection Act (July 1, 2011).

PHENOLS-4AAP-WT Water Phenol (4AAP) EPA 9066

An automated method is used to distill the sample. The distillate is then buffered to pH 9.4 which reacts with 4AAP and potassium ferricyanide to form a red complex which is measured colorimetrically.

SO4-WT Water Sulphate EPA 300.0 (IC)

SOLIDS-TDS-WT Water Total Dissolved Solids APHA 2540C

A well-mixed sample is filtered though glass fibres filter. A known volume of the filtrate is evaporated and dried at 105–5 C overnight and then 180–10 C for 1hr.

SOLIDS-TSS-WT Water Suspended solids APHA 2540 D-Gravimetric

A well-mixed sample is filtered through a weighed standard glass fibre filter and the residue retained is dried in an oven at 105–5 C for a minimum of four hours or until a constant weight is achieved.

TC-MF-WT Water Total Coliforms SM 9222B

A 100mL volume of sample is filtered through a membrane, the membrane is placed on mENDO LES agar and incubated at 35–0.5 C for 24–2h. Method ID: WT-TM-1200

TKN-WT Water Total Kjeldahl Nitrogen APHA 4500-N

Sample is digested to convert the TKN to ammonium sulphate. The ammonia ions are heated to produce a colour complex. The absorbance measured by the instrument is proportional to the concentration of ammonium sulphate in the sample and is reported as TKN.

TURBIDITY-WT Water Turbidity APHA 2130 B

Sample result is based on a comparison of the intensity of the light scattered by the sample under defined conditions with the intensity of light scattered by a standard reference suspension under the same conditions. Sample readings are obtained from a Nephelometer.

Reference Information

** ALS test methods may incorporate modifications from specified reference methods to improve performance.

The last two letters of the above test code(s) indicate the laboratory that performed analytical analysis for that test. Refer to the list below:

Laboratory Definition Code	Laboratory Location
WT	ALS ENVIRONMENTAL - WATERLOO, ONTARIO, CANADA

Chain of Custody Numbers:

GLOSSARY OF REPORT TERMS

Surrogates are compounds that are similar in behaviour to target analyte(s), but that do not normally occur in environmental samples. For applicable tests, surrogates are added to samples prior to analysis as a check on recovery. In reports that display the D.L. column, laboratory objectives for surrogates are listed there.
mg/kg - milligrams per kilogram based on dry weight of sample
mg/kg wwt - milligrams per kilogram based on wet weight of sample
mg/kg lwt - milligrams per kilogram based on lipid weight of sample
mg/L - unit of concentration based on volume, parts per million.
< - Less than.
D.L. - The reporting limit.
N/A - Result not available. Refer to qualifier code and definition for explanation.

Test results reported relate only to the samples as received by the laboratory.
UNLESS OTHERWISE STATED, ALL SAMPLES WERE RECEIVED IN ACCEPTABLE CONDITION.
Analytical results in unsigned test reports with the DRAFT watermark are subject to change, pending final QC review.

Sample Parameter Qualifier Definitions:

Qualifier	Description
J	Duplicate results and limits are expressed in terms of absolute difference.
MS-B	Matrix Spike recovery could not be accurately calculated due to high analyte background in sample.
RPD-NA	Relative Percent Difference Not Available due to result(s) being less than detection limit.

Hold Time Exceedances:

All test results reported with this submission were conducted within ALS recommended hold times.

ALS recommended hold times may vary by province. They are assigned to meet known provincial and/or federal government requirements. In the absence of regulatory hold times, ALS establishes recommendations based on guidelines published by the US EPA, APHA Standard Methods, or Environment Canada (where available). For more information, please contact ALS.

The ALS Quality Control Report is provided to ALS clients upon request. ALS includes comprehensive QC checks with every analysis to ensure our high standards of quality are met. Each QC result has a known or expected target value, which is compared against pre-determined data quality objectives to provide confidence in the accuracy of associated test results.

Please note that this report may contain QC results from anonymous Sample Duplicates and Matrix Spikes that do not originate from this Work Order.

MEMORANDUM

TO:	Ministry of the Environment	REF. NO.:	045804-22
FROM:	Ben Kempel/Ben Constable/mg/25	DATE:	July 16, 2014
CC:	Tej Gidda, Ron Cherkewski, Mike Rooke		
RE:	**Groundwater Assessment and Work Plan - Orgaworld Canada Ltd., Ottawa, Ontario**		

1.0 Introduction

Conestoga-Rovers & Associates (CRA) has prepared this memorandum on behalf of Orgaworld Canada Ltd. (Orgaworld) to provide the Ministry of Environment (MOE) with the results of supplementary data assessment completed on groundwater monitoring data for the Orgaworld organic waste processing facility (Facility) located at 5123 Hawthorne Road, Ottawa, Ontario (Site). The assessment has been undertaken in response to identified increases in ammonia concentrations within shallow groundwater downgradient of the Facility. The assessment has focused on monitoring data for the most recent (2013) monitoring period and included the following activities:

- 2013 Data Assessment – Ammonia (Section 2.0)
- Additional Parameters of Concern (Section 3.0)
- Groundwater Discharge to Surface (Section 4.0)
- Data Gap Analysis (Section 5.0)

CRA has prepared a work plan for further investigating and characterizing groundwater at the Site. The purpose of the additional investigation is to refine the ammonia plume delineation, improve understanding of the aquifer properties on-Site, and determine the potential receptors associated with the plume.

Orgaworld currently operates under the following Environmental Compliance Approvals (ECA's) for the Site:

- Number 7021-7HQNDE (Air), September 16, 2009
- Number 9465-7NVRWT (Industrial Sewage Works), September 16, 2009
- Number 7032-88XPRA (Industrial Sewage Works), Amended September 7, 2010
- Number 7251-8GKRPD (Industrial Sewage Works), Amended May 30, 2011
- Number 2766-7HEPSZ (Waste Disposal Site), September 16, 2009, Amended under Notice No. 1, October 21, 2010

REGISTERED COMPANY FOR ISO 9001 ENGINEERING DESIGN

Condition 9 (8) of ECA Number 7251-8GKRPD requires that Orgaworld establish a comprehensive Compliance and Trigger Level Monitoring Program based on groundwater monitoring within two years of operations. The Compliance and Trigger Level Monitoring Program is to be submitted to the MOE along with an application to amend the ECA. Orgaworld has not applied to amend the ECA, as the monitoring data gathered since 2010 to define baseline conditions for the site has been influenced by both existing conditions at the Site, largely comprised of historical fill materials and adjacent to quarrying activities, and potentially the Facility's operations. This work plan has been specifically designed to present results and interpretation of the historical and current data and to define steps moving ahead to address groundwater quality.

The following sections discuss the results of the assessment and describe the proposed work plan.

2.0 2013 Data Assessment - Ammonia

Interpretations of pre-2013 analytical data identified the existence of an ammonia plume within shallow groundwater originating near the eastern side of the organics composting facility and migrating to the northeast towards the Site boundary. Elevated concentrations of ammonia were originally reported in historic monitoring well MW101-09 in May 2010. Elevated ammonia concentrations were detected in monitoring wells located downgradient of MW101-09 during subsequent monitoring events. Ammonia concentrations were observed to increase within the interpreted source area (MW101-09) and downgradient Site boundary monitoring wells (MW5-09, MW102-09) through 2012. Based on a review of 2013 data, elevated ammonia concentrations are persistent within the source area and concentrations continued to increase through 2013 at the downgradient monitoring wells. The Site groundwater monitoring network is illustrated on the attached Site Plan (Figure 1).

Monitoring well MW101-09 was abandoned during 2012 due to suspicions that the well integrity may have been compromised. In addition, several new monitoring wells were installed near the interpreted source area in early 2013. The analytical results from the initial year of sampling at MW101-13 and MW104-13 confirm that elevated concentrations of ammonia exist immediately downgradient of former historic monitoring well MW101-09. The analytical results from MW105-13 show that the elevated concentrations of ammonia are also present to the northeast of MW101-09.

Figures 2 through 7 illustrate ammonia concentrations versus time for the monitoring wells within the source area and downgradient along the Site boundary. As depicted in the Figures, ammonia concentrations have demonstrated increasing trends at monitoring wells MW104-13, MW5-09, MW102-09, and MW101-13.

3.0 Additional Parameters of Concern

A comparison of the 2012 through 2013 analytical data for downgradient monitoring wells (MW5-09, MW102-09, MW1-08) located along the northern Property boundary to the Ontario Drinking Water Standards (ODWS) and upgradient water quality at MW3-08 was completed to identify additional parameters of potential environmental concern within shallow groundwater. Based on this comparison,

several general chemistry and metals parameters have been reported at concentrations above their respective ODWS criteria, and significantly elevated above upgradient levels. The following additional parameters have been identified as potential parameters of concern. The maximum reported downgradient, Site boundary concentrations and respective ODWS criteria (in brackets) are as follows:

- Iron – 7.5 mg/L (0.3 mg/L)
- Manganese – 4.8 mg/L (0.05 mg/L)
- Dissolved Organic Carbon – 12.1 mg/L (10 mg/L)
- Sulfate – 872 mg/L (200 mg/L)
- Total Dissolved Solids – 2030 mg/L (500 mg/L)

It should be noted that, similar to the trend noted for ammonia, the concentrations of the above parameters have generally demonstrated increasing trends during recent years at monitoring wells immediately downgradient of the Facility.

Figures 8 through 11 provide concentration isopleths for ammonia, dissolved organic carbon (DOC), dissolved iron, and dissolved manganese based on the median sample results from 2013 monitoring in monitoring wells completed within the shallow aquifer. Each figure illustrates the presence of elevated concentrations in the interpreted source area and downgradient towards the northern Site boundary. Elevated concentrations of iron, manganese, DOC and TDS are consistent with the interpretation that the contaminant plume is related to an organic contaminant source. As indicated on these figures, there is little known about the western extent of the plume near the northern Site boundary. The proposed work plan for addressing this data gap is discussed in Section 5.3.

4.0 Groundwater Discharge to Surface

The presence of elevated ammonia concentrations within shallow groundwater is primarily a potential concern with respect to the discharge of shallow groundwater to surface water, due to the relatively low Provincial Water Quality Objective (PWQO) for un-ionized ammonia (0.02 mg/L). As such, it is recommended that the hydraulic relationship between shallow groundwater and surface water be investigated through the installation of staff gauges and measurement of static water levels in both shallow groundwater and surface water. The work plan for addressing this investigation is discussed in Section 5.3.

5.0 Data Gap-Analysis

There is sufficient evidence to confirm that a plume exists on-Site within the shallow groundwater adjacent to and downgradient of the Facility. The available groundwater quality data suggests that the plume consists of organics-related contaminants with elevated concentrations of ammonia. As part of the data assessment, CRA completed a data-gap analysis to identify areas where important information is unavailable concerning the contaminant nature, distribution or fate.

The following sections discuss the identified data gaps and outline the proposed action items for addressing the data gaps. Completing these action items forms the basis of the proposed work plan.

5.1 Surface Water Levels

As discussed previously, elevated ammonia concentrations within groundwater can be an issue of environmental concern when groundwater discharges to surface water, as the PWQO for un-ionized ammonia is low (0.02 mg/L). As such, it is important to understand whether or not shallow groundwater discharges to surface water at the Site to determine if the elevated ammonia concentrations are entering the surface water regime.

The comparison of shallow groundwater elevations with adjacent/nearby surface water elevations during quarterly monitoring events will determine whether or not groundwater is discharging to surface. As such, a series of staff gauges will be installed within the ditch along the north side of the Site (and any other on-Site surface water features, as appropriate). These staff gauges will be surveyed for geodetic reference. Surface water elevation measurements will then be incorporated into the monitoring program during each monitoring event. These measurements will be completed for a minimum of one year in order to observe the shallow groundwater - surface water relationship in different seasons.

Recommendations concerning the potential continuation of monitoring in the ditch will be made following one year of monitoring.

5.2 Complete Topographic Site Survey

It is understood that an as-built topographical survey of the site is unavailable. Accurate comparison of ground water levels to site grades is needed to verify if groundwater is discharging to the Site's surface water bodies. As such, an up to date topographical survey will be completed so this interface can be accurately assessed. The topographic survey will also be used to verify the pond levels and the outflow levels from the site into the Hawthorne Industrial Park.

5.3 Additional Monitoring Data

Groundwater

Although the current monitoring network has adequately identified the presence of an ammonia plume, the western extent of the contaminant plume along the northern Site boundary is currently unknown. Therefore, a shallow groundwater monitoring well will be installed to the west of MW5-09, as indicated on Figure 1 to better define the western extent of the plume. The proposed monitoring well will be incorporated into the regular monitoring program for quarterly sampling until sufficient data is gathered to warrant a monitoring reduction.

Surface Water

As discussed in Section 5.1, four (4) surface water staff gauges will be installed within the ditch along the north end of the Site in order to measure water levels within the ditch. The staff gauges will be geodetically surveyed so that measured water levels can be converted into static elevations. These static

elevations will be compared to the static groundwater elevations in adjacent groundwater monitoring wells to determine if shallow groundwater is discharging to this ditch. The proposed surface water staff gauge locations are illustrated on Figure 1.

5.4 Hydraulic Testing

In order to have a thorough understanding of the hydraulic characteristics of the shallow overburden and bedrock aquifers, additional testing of the aquifer properties will be completed along the northern Site boundary. This testing will be accomplished through single well response tests on the existing and proposed shallow groundwater monitoring wells in this area (MW5-09, MW102-09 and the proposed monitoring well).

The results of this testing will be used to better estimate the aquifer properties along the northern Site boundary.

6.0 Groundwater Remediation

In response to the identified groundwater plume, a single shallow groundwater extraction well will be installed near the ammonia scrubber. Based on the nature of the contaminants observed, the contaminant distribution and the interpreted source of leakage, the area immediately downgradient of the ammonia scrubber is considered the most suitable location for a remediation/extraction well.

The purpose of the extraction well will be to remove the most heavily impacted groundwater from the subsurface for use in the Facility process. Up to 15,000 L of groundwater can be used in the process daily. As such, this source removal strategy represents an ideal opportunity to control a significant portion of the plume without the need for treatment or trucking to a disposal facility.

7.0 Closing

It is anticipated that the installation of an additional monitoring well, a remediation/extraction well and establishment of surface water staff gauges will occur during the summer of 2014. The monitoring points will be incorporated into the regular monitoring program during the next regularly scheduled monitoring event.

The results of the above-described work program, including recommendations for next steps, will be provided to the MOE in a letter report following completion of the assessment.

We trust this to be complete and in order for your use. Should you have any questions, please do not hesitate to contact our office.

Sample Parameter Qualifier key listed:

Qualifier	Description
DLDS	Detection Limit Raised: Dilution required due to high Dissolved Solids / Electrical Conductivity.
DLHC	Detection Limit Raised: Dilution required due to high concentration of test analyte(s).
DLM	Detection Limit Adjusted due to sample matrix effects.
MS-B	Matrix Spike recovery could not be accurately calculated due to high analyte background in sample.

Test Method References:

ALS Test Code	Matrix	Test Description	Method Reference**
ALK-WT	Water	Alkalinity, Total (as CaCO3)	EPA 310.2
BOD-C-WT	Water	BOD Carbonaceous	APHA 5210 B (CBOD)

This analysis is carried out using procedures adapted from APHA Method 5210B - "Biochemical Oxygen Demand (BOD)". All forms of biochemical oxygen demand (BOD) are determined by diluting and incubating a sample for a specified time period, and measuring the oxygen depletion using a dissolved oxygen meter. Dissolved BOD (SOLUBLE) is determined by filtering the sample through a glass fibre filter prior to dilution. Carbonaceous BOD (CBOD) is determined by adding a nitrification inhibitor to the diluted sample prior to incubation.

C-DIS-ORG-WT Water Dissolved Organic Carbon APHA 5310 B-INSTRUMENTAL

Sample is filtered through a 0.45um filter, sample is then injected into a heated reaction chamber which is packed with an oxidative catalyst. The water is vaporized and the organic cabon is oxidized to carbon dioxide. The carbon dioxide is transported in a carrier gas and is measured by a non-dispersive infrared detector.

CL-IC-WT Water Chloride by IC EPA 300.1 (mod)

Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.

Analysis conducted in accordance with the Protocol for Analytical Methods Used in the Assessment of Properties under Part XV.1 of the Environmental Protection Act (July 1, 2011).

COD-T-WT Water Chemical Oxygen Demand APHA 5220 D

This analysis is carried out using procedures adapted from APHA Method 5220 "Chemical Oxygen Demand (COD)". Chemical oxygen demand is determined using the closed reflux colourimetric method.

COLOUR-WT Water Colour APHA 2120

Apparent Colour is measured spectrophotometrically by comparison to platinum-cobalt standards using the single wavelength method after sample decanting. Colour measurements can be highly pH dependent, and apply to the pH of the sample as received (at time of testing), without pH adjustment. Concurrent measurement of sample pH is recommended.

EC-MF-WT Water E. coli SM 9222D

A 100 mL volume of sample is filtered through a membrane, the membrane is placed on mFC-BCIG agar and incubated at 44.5 –0 .2 C for 24 – 2 h.
Method ID: WT-TM-1200

ETL-NH3-UNION-CLI-WT Water Un-ionized ammonia CALCULATION

F1-F4-CALC-WT Water CCME Total Hydrocarbons CCME CWS-PHC, Pub #1310, Dec 2001-L

Analytical methods used for analysis of CCME Petroleum Hydrocarbons have been validated and comply with the Reference Method for the CWS PHC.

In cases where results for both F4 and F4G are reported, the greater of the two results must be used in any application of the CWS PHC guidelines and the gravimetric heavy hydrocarbons cannot be added to the C6 to C50 hydrocarbons.
In samples where BTEX and F1 were analyzed , F1-BTEX represents a value where the sum of Benzene, Toluene, Ethylbenzene and total Xylenes has been subtracted from F1.

In samples where PAHs, F2 and F3 were analyzed, F2-Naphth represents the result where Naphthalene has been subtracted from F2. F3-PAH represents a result where the sum of Benzo(a)anthracene, Benzo(a)pyrene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Dibenzo(a,h)anthracene, Fluoranthene, Indeno(1,2,3-cd)pyrene, Phenanthrene, and Pyrene has been subtracted from F3.

Reference Information

Unless otherwise qualified, the following quality control criteria have been met for the F1 hydrocarbon range:
1. All extraction and analysis holding times were met.
2. Instrument performance showing response factors for C6 and C10 within 30% of the response factor for toluene.
3. Linearity of gasoline response within 15% throughout the calibration range.

Unless otherwise qualified, the following quality control criteria have been met for the F2-F4 hydrocarbon ranges:
1. All extraction and analysis holding times were met.
2. Instrument performance showing C10, C16 and C34 response factors within 10% of their average.
3. Instrument performance showing the C50 response factor within 30% of the average of the C10, C16 and C34 response factors.
4. Linearity of diesel or motor oil response within 15% throughout the calibration range.

F1-HS-WT Water F1 (O.Reg.153/04) E3421/CCME (HS)
Fraction F1 is determined by analyzing by headspace-GC/FID.

F2-F4-WT Water F2-F4 (O.Reg.153/04) MOE DECPH-E3421/CCME TIER 1
The petroleum hydrocarbons are extracted from the aqueous samples using solvent partition. The extracts are treated with silica gel to remove polar contaminants. The final concentrated extract is analyzed by gas chromatography (GC) using flame ionization detection (FID) and a 100% polydimethylsiloxane column.

The F2 fraction is determined by integrating the area in the chromatogram from the apex of nC10 to the apex nC16 and quantitating using external calibration using a standard mix containing nC10, nC16 and nC34. Similarly, the F3 fraction extends from the apex of nC16 to the apex nC34 and the F4 fraction covers the area from the apex nC34 to the apex nC50. If the chromatogram does not return to the baseline by the time nC50 elutes, a gravimetric determination of the F4 is performed.

FC-MF-WT Water Fecal Coliforms SM 9222D
A 100mL volume of sample is filtered through a membrane, the membrane is placed on mFC agar and incubated at 24–2h@44.5–0.2 C. Method ID: WT-TM-1200

HG-T-CVAA-WT Water Total Mercury in Water by CVAAS EPA 1631E (mod)

Water samples undergo a cold-oxidation using bromine monochloride prior to reduction with stannous chloride, and analyzed by CVAAS.

MET-T-MS-WT Water Total Metals in Water by ICPMS EPA 200.8
This analysis involves preliminary sample treatment by hotblock acid digestion (APHA 3030E). Instrumental analysis is by inductively coupled plasma - mass spectrometry (EPA Method 6020A).

NH3-WT Water Ammonia, Total as N EPA 350.1
Sample is measured colorimetrically. When sample is turbid a distillation step is required, sample is distilled into a solution of boric acid and measured colorimetrically.

NO2-IC-WT Water Nitrite in Water by IC EPA 300.1 (mod)
Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.

NO3-IC-WT Water Nitrate in Water by IC EPA 300.1 (mod)
Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.

P-T-COL-WT Water Total P in Water by Colour APHA 4500-P B E

This analysis is carried out using procedures adapted from APHA Method 4500-P "Phosphorus". Total Phosphorus is deteremined colourimetrically after persulphate digestion of the sample.

P-T-COL-WT Water Total P in Water by Colour APHA 4500-P PHOSPHORUS

This analysis is carried out using procedures adapted from APHA Method 4500-P "Phosphorus". Total Phosphorus is deteremined colourimetrically after persulphate digestion of the sample.

PAH-CCME-WT Water CCME PAHs SW846 8270
Sample is extracted at neutral pH using separate aliquots of dichloromethane with a modified separatory funnel technique, extracts are then concentrated and analyzed by GC/MSD. Depending on the analytical GC/MS column used benzo(j)fluoranthene may chromatographically co-elute with benzo(b)fluoranthene or benzo(k)fluoranthene.

PH,TEMP-CLIENT-WT Water pH & Temperature Results supplied by client

PH-WT Water pH APHA 4500 H-Electrode

Water samples are analyzed directly by a calibrated pH meter.

Analysis conducted in accordance with the Protocol for Analytical Methods Used in the Assessment of Properties under Part XV.1 of the Environmental Protection Act (July 1, 2011).

PHENOLS-4AAP-WT Water Phenol (4AAP) EPA 9066
An automated method is used to distill the sample. The distillate is then buffered to pH 9.4 which reacts with 4AAP and potassium ferricyanide to form a red complex which is measured colorimetrically.

Reference Information

SO4-IC-N-WT	Water	Sulfate in Water by IC	EPA 300.1 (mod)

Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.

SOLIDS-TDS-WT	Water	Total Dissolved Solids	APHA 2540C

A well-mixed sample is filtered though glass fibres filter. A known volume of the filtrate is evaporated and dried at 105–5 C overnight and then 180–10 C for 1hr.

SOLIDS-TSS-WT	Water	Suspended solids	APHA 2540 D-Gravimetric

A well-mixed sample is filtered through a weighed standard glass fibre filter and the residue retained is dried in an oven at 104–1 C for a minimum of four hours or until a constant weight is achieved.

TC-MF-WT	Water	Total Coliforms	SM 9222B

A 100mL volume of sample is filtered through a membrane, the membrane is placed on mENDO LES agar and incubated at 35–0.5 C for 24–2h.
Method ID: WT-TM-1200

TKN-WT	Water	Total Kjeldahl Nitrogen	APHA 4500-N

Sample is digested to convert the TKN to ammonium sulphate. The ammonia ions are heated to produce a colour complex. The absorbance measured by the instrument is proportional to the concentration of ammonium sulphate in the sample and is reported as TKN.

TURBIDITY-WT	Water	Turbidity	APHA 2130 B

Sample result is based on a comparison of the intensity of the light scattered by the sample under defined conditions with the intensity of light scattered by a standard reference suspension under the same conditions. Sample readings are obtained from a Nephelometer.

** ALS test methods may incorporate modifications from specified reference methods to improve performance.

The last two letters of the above test code(s) indicate the laboratory that performed analytical analysis for that test. Refer to the list below:

Laboratory Definition Code	Laboratory Location
WT	ALS ENVIRONMENTAL - WATERLOO, ONTARIO, CANADA

Chain of Custody Numbers:

GLOSSARY OF REPORT TERMS

Surrogates are compounds that are similar in behaviour to target analyte(s), but that do not normally occur in environmental samples. For applicable tests, surrogates are added to samples prior to analysis as a check on recovery. In reports that display the D.L. column, laboratory objectives for surrogates are listed there.
mg/kg - milligrams per kilogram based on dry weight of sample
mg/kg wwt - milligrams per kilogram based on wet weight of sample
mg/kg lwt - milligrams per kilogram based on lipid weight of sample
mg/L - unit of concentration based on volume, parts per million.
< - Less than.
D.L. - The reporting limit.
N/A - Result not available. Refer to qualifier code and definition for explanation.

Test results reported relate only to the samples as received by the laboratory.
UNLESS OTHERWISE STATED, ALL SAMPLES WERE RECEIVED IN ACCEPTABLE CONDITION.
Analytical results in unsigned test reports with the DRAFT watermark are subject to change, pending final QC review.

Legend:

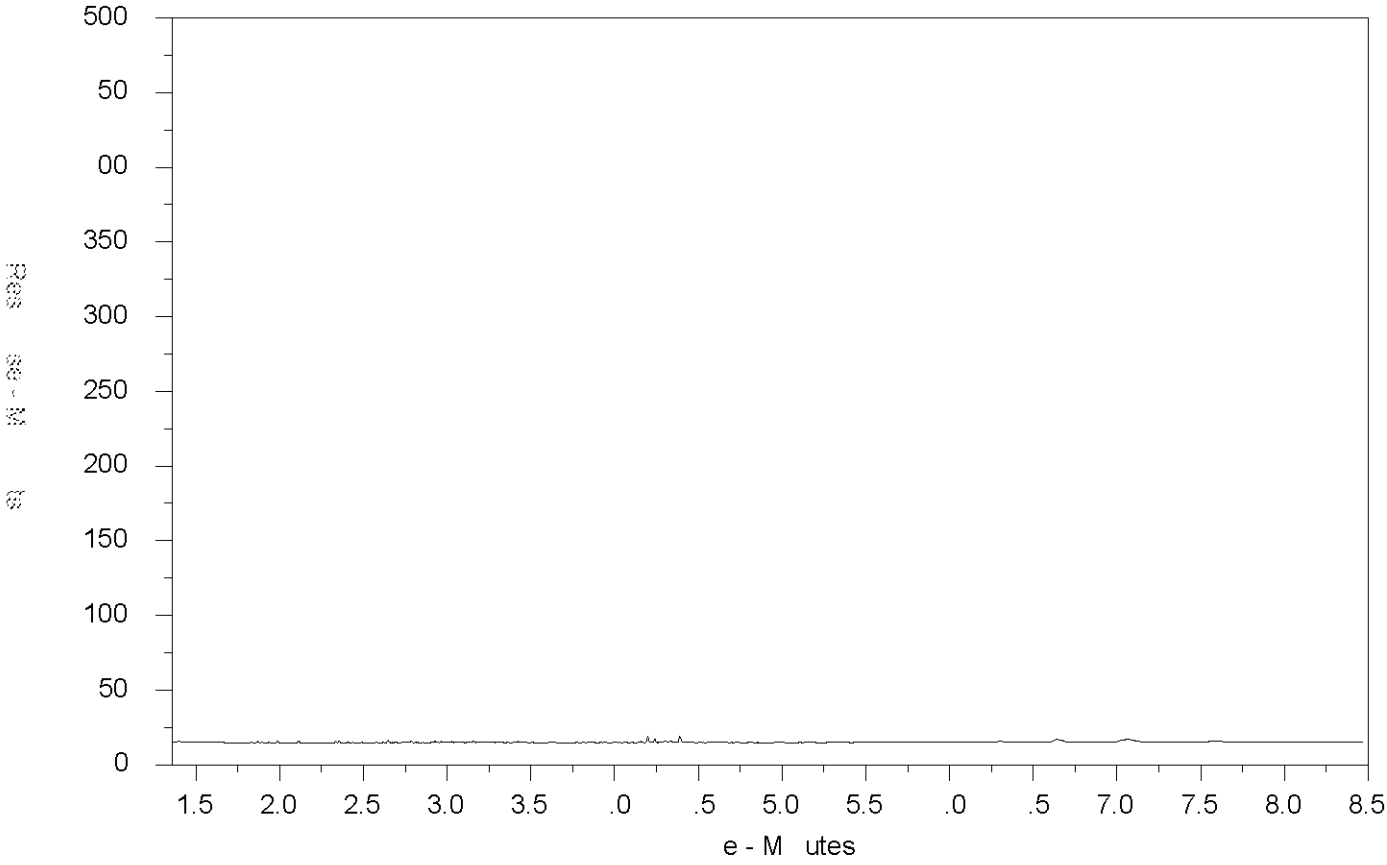
Limit	ALS Control Limit (Data Quality Objectives)
DUP	Duplicate
RPD	Relative Percent Difference
N/A	Not Available
LCS	Laboratory Control Sample
SRM	Standard Reference Material
MS	Matrix Spike
MSD	Matrix Spike Duplicate
ADE	Average Desorption Efficiency
MB	Method Blank
IRM	Internal Reference Material
CRM	Certified Reference Material
CCV	Continuing Calibration Verification
CVS	Calibration Verification Standard
LCSD	Laboratory Control Sample Duplicate

Sample Parameter Qualifier Definitions:

Qualifier	Description
DLDS	Detection Limit Raised: Dilution required due to high Dissolved Solids / Electrical Conductivity.
DLHC	Detection Limit Raised: Dilution required due to high concentration of test analyte(s).
J	Duplicate results and limits are expressed in terms of absolute difference.
MS-B	Matrix Spike recovery could not be accurately calculated due to high analyte background in sample.
RPD-NA	Relative Percent Difference Not Available due to result(s) being less than detection limit.

Hold Time Exceedances:

All test results reported with this submission were conducted within ALS recommended hold times.



ALS recommended hold times may vary by province. They are assigned to meet known provincial and/or federal government requirements. In the absence of regulatory hold times, ALS establishes recommendations based on guidelines published by the US EPA, APHA Standard Methods, or Environment Canada (where available). For more information, please contact ALS.

The ALS Quality Control Report is provided to ALS clients upon request. ALS includes comprehensive QC checks with every analysis to ensure our high standards of quality are met. Each QC result has a known or expected target value, which is compared against pre-determined data quality objectives to provide confidence in the accuracy of associated test results.

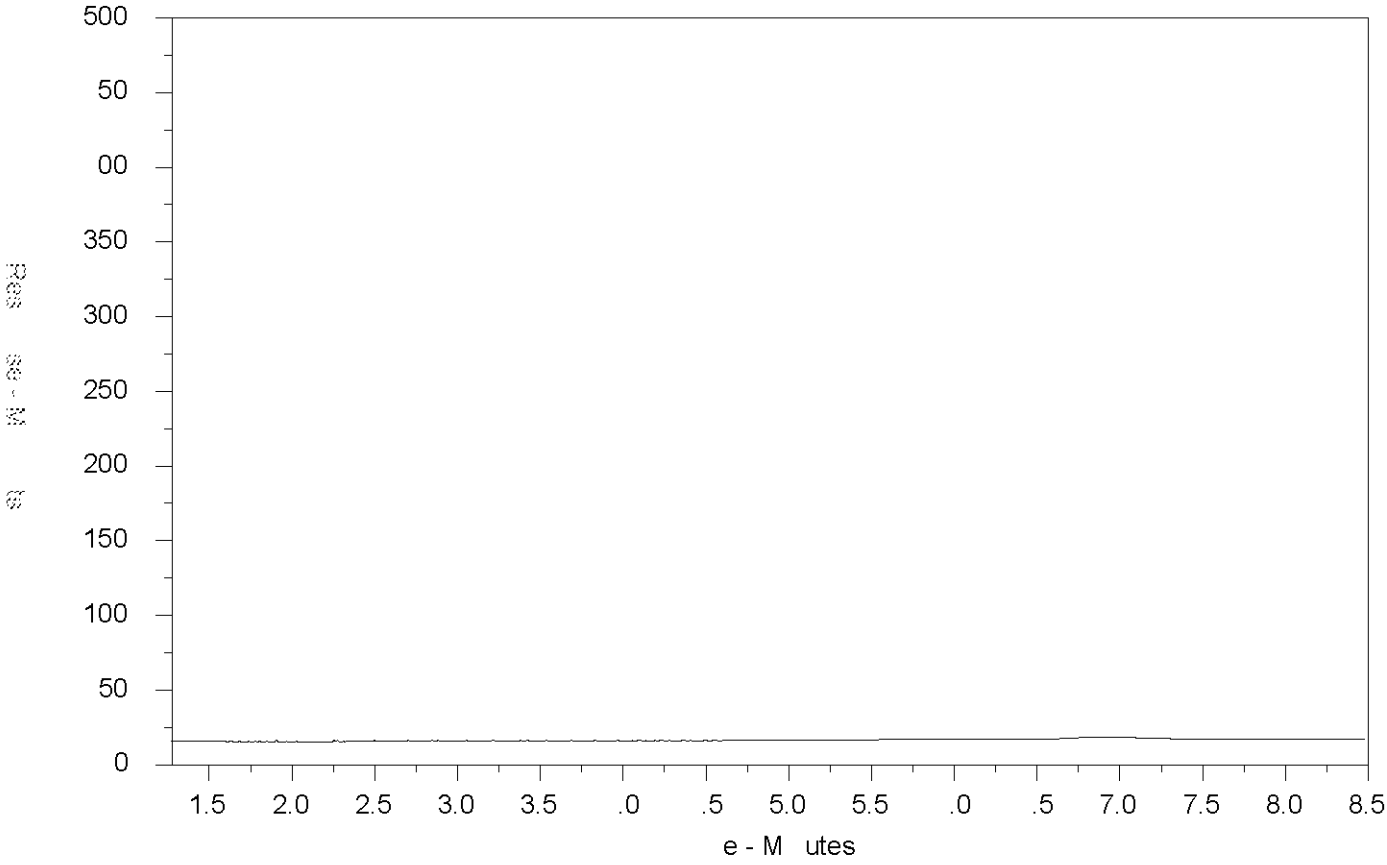
Please note that this report may contain QC results from anonymous Sample Duplicates and Matrix Spikes that do not originate from this Work Order.

CCME F2-F4 HYDROCARBON DISTRIBUTION REPORT

ALS Sample ID: L1769313-1
Client Sample ID: SW-45804-051616-TS-001

← F2 →	← F3 →	← F4 →	
nC10	nC16	nC34	nC50
174°C	287°C	481°C	575°C
346°F	549°F	898°F	1067°F
←Gasoline→		← Motor Oils/ Lube Oils/ Grease →	
←Diesel/ Jet Fuels→			

The CCME F2-F4 Hydrocarbon Distribution Report (HDR) is intended to assist you in characterizing hydrocarbon products that may be present in your sample.



The scale at the bottom of the chromatogram indicates the approximate retention times of common petroleum products and four n-alkane hydrocarbon marker compounds. Retention times may vary between samples, but general patterns and distributions will remain similar.

Peak heights in this report are a function of the sample concentration, the sample amount extracted, the sample dilution factor and the scale at the left.

Note: This chromatogram was produced using GC conditions that are specific to ALS Canada CCME F2-F4 method. Refer to the ALS Canada CCME F2-F4 Hydrocarbon Library for a collection of chromatograms from common reference samples (fuels, oils, etc.). The HDR Library can be found at www.alsglobal.com.

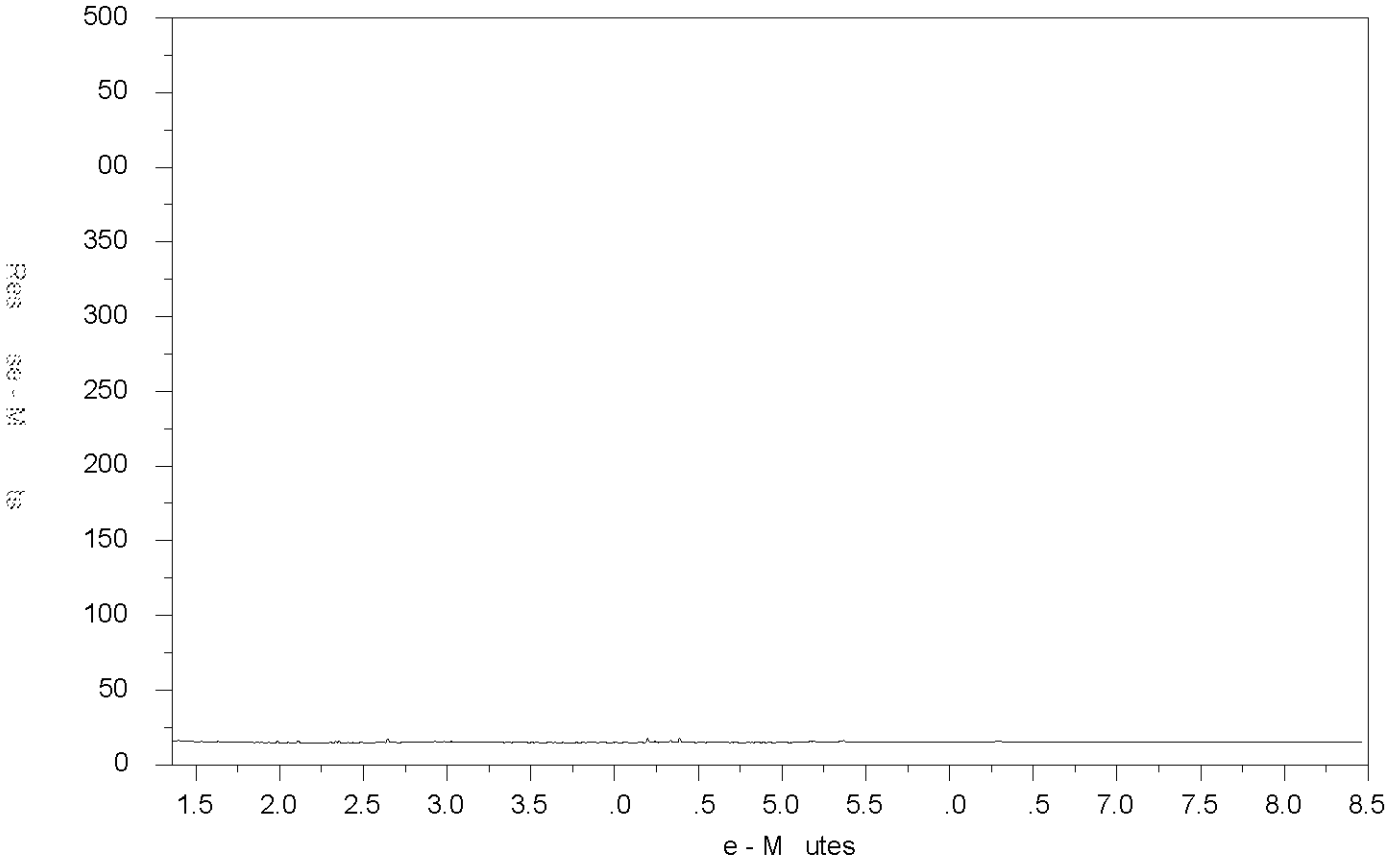
The CCME F2-F4 Hydrocarbon Distribution Report (HDR) is intended to assist you in characterizing hydrocarbon products that may be present in your sample.



The scale at the bottom of the chromatogram indicates the approximate retention times of common petroleum products and four n-alkane hydrocarbon marker compounds. Retention times may vary between samples, but general patterns and distributions will remain similar.

Peak heights in this report are a function of the sample concentration, the sample amount extracted, the sample dilution factor and the scale at the left.

Note: This chromatogram was produced using GC conditions that are specific to ALS Canada CCME F2-F4 method. Refer to the ALS Canada CCME F2-F4 Hydrocarbon Library for a collection of chromatograms from common reference samples (fuels, oils, etc.). The HDR Library can be found at www.alsglobal.com.

Sample Parameter Qualifier key listed:

Qualifier	Description
DLDS	Detection Limit Raised: Dilution required due to high Dissolved Solids / Electrical Conductivity.
DLHC	Detection Limit Raised: Dilution required due to high concentration of test analyte(s).
DLM	Detection Limit Adjusted due to sample matrix effects.
MS-B	Matrix Spike recovery could not be accurately calculated due to high analyte background in sample.

Test Method References:

ALS Test Code	Matrix	Test Description	Method Reference**
ALK-WT	Water	Alkalinity, Total (as CaCO3)	EPA 310.2
BOD-C-WT	Water	BOD Carbonaceous	APHA 5210 B (CBOD)

This analysis is carried out using procedures adapted from APHA Method 5210B - "Biochemical Oxygen Demand (BOD)". All forms of biochemical oxygen demand (BOD) are determined by diluting and incubating a sample for a specified time period, and measuring the oxygen depletion using a dissolved oxygen meter. Dissolved BOD (SOLUBLE) is determined by filtering the sample through a glass fibre filter prior to dilution. Carbonaceous BOD (CBOD) is determined by adding a nitrification inhibitor to the diluted sample prior to incubation.

C-DIS-ORG-WT | Water | Dissolved Organic Carbon | APHA 5310 B-INSTRUMENTAL

Sample is filtered through a 0.45um filter, sample is then injected into a heated reaction chamber which is packed with an oxidative catalyst. The water is vaporized and the organic cabon is oxidized to carbon dioxide. The carbon dioxide is transported in a carrier gas and is measured by a non-dispersive infrared detector.

CL-IC-WT | Water | Chloride by IC | EPA 300.1 (mod)

Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.

Analysis conducted in accordance with the Protocol for Analytical Methods Used in the Assessment of Properties under Part XV.1 of the Environmental Protection Act (July 1, 2011).

COD-T-WT | Water | Chemical Oxygen Demand | APHA 5220 D

This analysis is carried out using procedures adapted from APHA Method 5220 "Chemical Oxygen Demand (COD)". Chemical oxygen demand is determined using the closed reflux colourimetric method.

COLOUR-WT | Water | Colour | APHA 2120

Apparent Colour is measured spectrophotometrically by comparison to platinum-cobalt standards using the single wavelength method after sample decanting. Colour measurements can be highly pH dependent, and apply to the pH of the sample as received (at time of testing), without pH adjustment. Concurrent measurement of sample pH is recommended.

EC-MF-WT | Water | E. coli | SM 9222D

Reference Information

A 100 mL volume of sample is filtered through a membrane, the membrane is placed on mFC-BCIG agar and incubated at 44.5 –0 .2 C for 24 – 2 h. Method ID: WT-TM-1200

ETL-NH3-UNION-CLI-WT	Water	Un-ionized ammonia	CALCULATION

F1-F4-CALC-WT	Water	CCME Total Hydrocarbons	CCME CWS-PHC, Pub #1310, Dec 2001-L

Analytical methods used for analysis of CCME Petroleum Hydrocarbons have been validated and comply with the Reference Method for the CWS PHC.

In cases where results for both F4 and F4G are reported, the greater of the two results must be used in any application of the CWS PHC guidelines and the gravimetric heavy hydrocarbons cannot be added to the C6 to C50 hydrocarbons.
In samples where BTEX and F1 were analyzed , F1-BTEX represents a value where the sum of Benzene, Toluene, Ethylbenzene and total Xylenes has been subtracted from F1.

In samples where PAHs, F2 and F3 were analyzed, F2-Naphth represents the result where Naphthalene has been subtracted from F2. F3-PAH represents a result where the sum of Benzo(a)anthracene, Benzo(a)pyrene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Dibenzo(a,h)anthracene, Fluoranthene, Indeno(1,2,3-cd)pyrene, Phenanthrene, and Pyrene has been subtracted from F3.

Unless otherwise qualified, the following quality control criteria have been met for the F1 hydrocarbon range:
1. All extraction and analysis holding times were met.
2. Instrument performance showing response factors for C6 and C10 within 30% of the response factor for toluene.
3. Linearity of gasoline response within 15% throughout the calibration range.

Unless otherwise qualified, the following quality control criteria have been met for the F2-F4 hydrocarbon ranges:
1. All extraction and analysis holding times were met.
2. Instrument performance showing C10, C16 and C34 response factors within 10% of their average.
3. Instrument performance showing the C50 response factor within 30% of the average of the C10, C16 and C34 response factors.
4. Linearity of diesel or motor oil response within 15% throughout the calibration range.

F1-HS-WT	Water	F1 (O.Reg.153/04)	E3421/CCME (HS)

Fraction F1 is determined by analyzing by headspace-GC/FID.

F2-F4-WT	Water	F2-F4 (O.Reg.153/04)	MOE DECPH-E3421/CCME TIER 1

The petroleum hydrocarbons are extracted from the aqueous samples using solvent partition. The extracts are treated with silica gel to remove polar contaminants. The final concentrated extract is analyzed by gas chromatography (GC) using flame ionization detection (FID) and a 100% polydimethylsiloxane column.

The F2 fraction is determined by integrating the area in the chromatogram from the apex of nC10 to the apex nC16 and quantitating using external calibration using a standard mix containing nC10, nC16 and nC34. Similarly, the F3 fraction extends from the apex of nC16 to the apex nC34 and the F4 fraction covers the area from the apex nC34 to the apex nC50. If the chromatogram does not return to the baseline by the time nC50 elutes, a gravimetric determination of the F4 is performed.

FC-MF-WT	Water	Fecal Coliforms	SM 9222D

A 100mL volume of sample is filtered through a membrane, the membrane is placed on mFC agar and incubated at 24–2h@44.5–0.2 C. Method ID: WT-TM-1200

HG-D-CVAA-WT	Water	Dissolved Mercury in Water by CVAAS	EPA 1631E (mod)

Water samples are filtered (0.45 um), preserved with hydrochloric acid, then undergo a cold-oxidation using bromine monochloride prior to reduction with stannous chloride, and analyzed by CVAAS.

Analysis conducted in accordance with the Protocol for Analytical Methods Used in the Assessment of Properties under Part XV.1 of the Environmental Protection Act (July 1, 2011).

MET-D-CCMS-WT	Water	Dissolved Metals in Water by CRC ICPMS	APHA 3030B/6020A (mod)

Water samples are filtered (0.45 um), preserved with nitric acid, and analyzed by CRC ICPMS.

Method Limitation (re: Sulfur): Sulfide and volatile sulfur species may not be recovered by this method.

Analysis conducted in accordance with the Protocol for Analytical Methods Used in the Assessment of Properties under Part XV.1 of the Environmental Protection Act (July 1, 2011).

NH3-WT	Water	Ammonia, Total as N	EPA 350.1

Sample is measured colorimetrically. When sample is turbid a distillation step is required, sample is distilled into a solution of boric acid and measured colorimetrically.

NO2-IC-WT	Water	Nitrite in Water by IC	EPA 300.1 (mod)

Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.

NO3-IC-WT	Water	Nitrate in Water by IC	EPA 300.1 (mod)

Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.

P-T-COL-WT	Water	Total P in Water by Colour	APHA 4500-P B E

Reference Information

This analysis is carried out using procedures adapted from APHA Method 4500-P "Phosphorus". Total Phosphorus is deteremined colourimetrically after persulphate digestion of the sample.

P-T-COL-WT	Water	Total P in Water by Colour	APHA 4500-P PHOSPHORUS

This analysis is carried out using procedures adapted from APHA Method 4500-P "Phosphorus". Total Phosphorus is deteremined colourimetrically after persulphate digestion of the sample.

PAH-CCME-WT	Water	CCME PAHs	SW846 8270

Sample is extracted at neutral pH using separate aliquots of dichloromethane with a modified separatory funnel technique, extracts are then concentrated and analyzed by GC/MSD. Depending on the analytical GC/MS column used benzo(j)fluoranthene may chromatographically co-elute with benzo(b)fluoranthene or benzo(k)fluoranthene.

PH,TEMP-CLIENT-WT	Water	pH & Temperature	Results supplied by client
PH-WT	Water	pH	APHA 4500 H-Electrode

Water samples are analyzed directly by a calibrated pH meter.

Analysis conducted in accordance with the Protocol for Analytical Methods Used in the Assessment of Properties under Part XV.1 of the Environmental Protection Act (July 1, 2011).

PHENOLS-4AAP-WT	Water	Phenol (4AAP)	EPA 9066

An automated method is used to distill the sample. The distillate is then buffered to pH 9.4 which reacts with 4AAP and potassium ferricyanide to form a red complex which is measured colorimetrically.

SO4-IC-N-WT	Water	Sulfate in Water by IC	EPA 300.1 (mod)

Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.

SOLIDS-TDS-WT	Water	Total Dissolved Solids	APHA 2540C

A well-mixed sample is filtered though glass fibres filter. A known volume of the filtrate is evaporated and dried at 105–5 C overnight and then 180–10 C for 1hr.

SOLIDS-TSS-WT	Water	Suspended solids	APHA 2540 D-Gravimetric

A well-mixed sample is filtered through a weighed standard glass fibre filter and the residue retained is dried in an oven at 104–1 C for a minimum of four hours or until a constant weight is achieved.

TC-MF-WT	Water	Total Coliforms	SM 9222B

A 100mL volume of sample is filtered through a membrane, the membrane is placed on mENDO LES agar and incubated at 35–0.5 C for 24–2h.
Method ID: WT-TM-1200

TKN-WT	Water	Total Kjeldahl Nitrogen	APHA 4500-N

Sample is digested to convert the TKN to ammonium sulphate. The ammonia ions are heated to produce a colour complex. The absorbance measured by the instrument is proportional to the concentration of ammonium sulphate in the sample and is reported as TKN.

TURBIDITY-WT	Water	Turbidity	APHA 2130 B

Sample result is based on a comparison of the intensity of the light scattered by the sample under defined conditions with the intensity of light scattered by a standard reference suspension under the same conditions. Sample readings are obtained from a Nephelometer.

** ALS test methods may incorporate modifications from specified reference methods to improve performance.

The last two letters of the above test code(s) indicate the laboratory that performed analytical analysis for that test. Refer to the list below:

Laboratory Definition Code	Laboratory Location
WT	ALS ENVIRONMENTAL - WATERLOO, ONTARIO, CANADA

Chain of Custody Numbers:

GLOSSARY OF REPORT TERMS

Surrogates are compounds that are similar in behaviour to target analyte(s), but that do not normally occur in environmental samples. For applicable tests, surrogates are added to samples prior to analysis as a check on recovery. In reports that display the D.L. column, laboratory objectives for surrogates are listed there.
mg/kg - milligrams per kilogram based on dry weight of sample
mg/kg wwt - milligrams per kilogram based on wet weight of sample
mg/kg lwt - milligrams per kilogram based on lipid weight of sample
mg/L - unit of concentration based on volume, parts per million.
< - Less than.
D.L. - The reporting limit.
N/A - Result not available. Refer to qualifier code and definition for explanation.

Test results reported relate only to the samples as received by the laboratory.
UNLESS OTHERWISE STATED, ALL SAMPLES WERE RECEIVED IN ACCEPTABLE CONDITION.
Analytical results in unsigned test reports with the DRAFT watermark are subject to change, pending final QC review.

Legend:

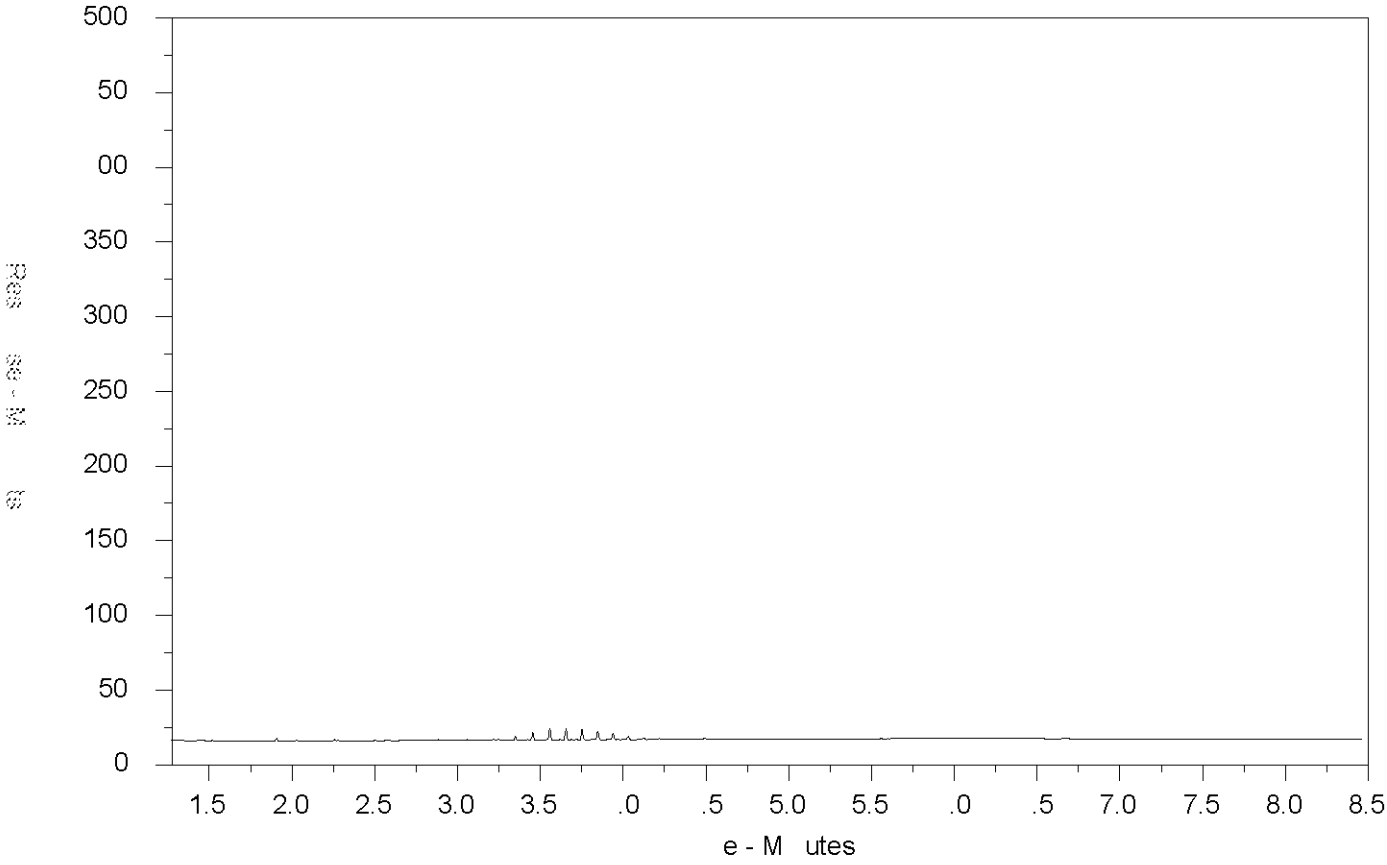
Limit	ALS Control Limit (Data Quality Objectives)
DUP	Duplicate
RPD	Relative Percent Difference
N/A	Not Available
LCS	Laboratory Control Sample
SRM	Standard Reference Material
MS	Matrix Spike
MSD	Matrix Spike Duplicate
ADE	Average Desorption Efficiency
MB	Method Blank
IRM	Internal Reference Material
CRM	Certified Reference Material
CCV	Continuing Calibration Verification
CVS	Calibration Verification Standard
LCSD	Laboratory Control Sample Duplicate

Sample Parameter Qualifier Definitions:

Qualifier	Description
DLHC	Detection Limit Raised: Dilution required due to high concentration of test analyte(s).
J	Duplicate results and limits are expressed in terms of absolute difference.
MS-B	Matrix Spike recovery could not be accurately calculated due to high analyte background in sample.
RPD-NA	Relative Percent Difference Not Available due to result(s) being less than detection limit.

Hold Time Exceedances:

All test results reported with this submission were conducted within ALS recommended hold times.



ALS recommended hold times may vary by province. They are assigned to meet known provincial and/or federal government requirements. In the absence of regulatory hold times, ALS establishes recommendations based on guidelines published by the US EPA, APHA Standard Methods, or Environment Canada (where available). For more information, please contact ALS.

The ALS Quality Control Report is provided to ALS clients upon request. ALS includes comprehensive QC checks with every analysis to ensure our high standards of quality are met. Each QC result has a known or expected target value, which is compared against pre-determined data quality objectives to provide confidence in the accuracy of associated test results.

Please note that this report may contain QC results from anonymous Sample Duplicates and Matrix Spikes that do not originate from this Work Order.

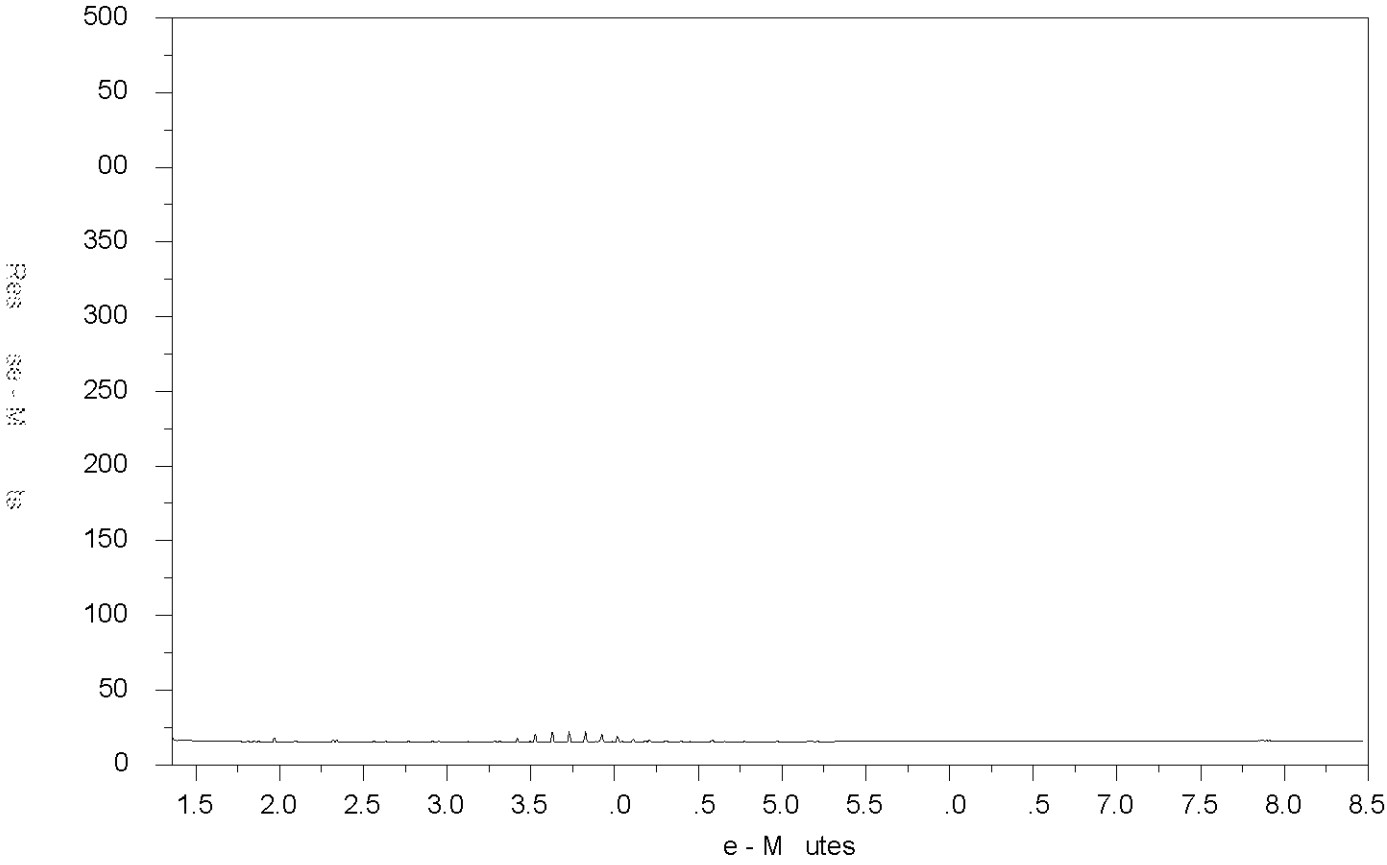
The CCME F2-F4 Hydrocarbon Distribution Report (HDR) is intended to assist you in characterizing hydrocarbon products that may be present in your sample.



The scale at the bottom of the chromatogram indicates the approximate retention times of common petroleum products and four n-alkane hydrocarbon marker compounds. Retention times may vary between samples, but general patterns and distributions will remain similar.

Peak heights in this report are a function of the sample concentration, the sample amount extracted, the sample dilution factor and the scale at the left.

Note: This chromatogram was produced using GC conditions that are specific to ALS Canada CCME F2-F4 method. Refer to the ALS Canada CCME F2-F4 Hydrocarbon Library for a collection of chromatograms from common reference samples (fuels, oils, etc.). The HDR Library can be found at www.alsglobal.com.

Reference Information

QC Samples with Qualifiers & Comments:

QC Type Description	Parameter	Qualifier	Applies to Sample Number(s)
Duplicate	Total Suspended Solids	DLHC	L1771020-1, -2, -3, -4, -5, -6, -7, -8, -9
Matrix Spike	Sulfate (SO4)	MS-B	L1771020-1, -2, -3, -4, -5, -6, -7, -8, -9
Matrix Spike	Total Kjeldahl Nitrogen	MS-B	L1771020-1, -2, -3, -4, -5, -6, -7, -8, -9
Matrix Spike	COD	MS-B	L1771020-1, -2, -3, -4, -5, -6, -7, -8, -9

Sample Parameter Qualifier key listed:

Qualifier	Description
DLDS	Detection Limit Raised: Dilution required due to high Dissolved Solids / Electrical Conductivity.
DLHC	Detection Limit Raised: Dilution required due to high concentration of test analyte(s).
DLM	Detection Limit Adjusted due to sample matrix effects.
MS-B	Matrix Spike recovery could not be accurately calculated due to high analyte background in sample.
SURR-ND	Surrogate recovery marginally exceeded ALS DQO. Reported non-detect results for associated samples were deemed to be unaffected.

Test Method References:

ALS Test Code	Matrix	Test Description	Method Reference**
ALK-WT	Water	Alkalinity, Total (as CaCO3)	EPA 310.2
BOD-C-WT	Water	BOD Carbonaceous	APHA 5210 B (CBOD)

This analysis is carried out using procedures adapted from APHA Method 5210B - "Biochemical Oxygen Demand (BOD)". All forms of biochemical oxygen demand (BOD) are determined by diluting and incubating a sample for a specified time period, and measuring the oxygen depletion using a dissolved oxygen meter. Dissolved BOD (SOLUBLE) is determined by filtering the sample through a glass fibre filter prior to dilution. Carbonaceous BOD (CBOD) is determined by adding a nitrification inhibitor to the diluted sample prior to incubation.

C-DIS-ORG-WT Water Dissolved Organic Carbon APHA 5310 B-INSTRUMENTAL

Sample is filtered through a 0.45um filter, sample is then injected into a heated reaction chamber which is packed with an oxidative catalyst. The water is vaporized and the organic cabon is oxidized to carbon dioxide. The carbon dioxide is transported in a carrier gas and is measured by a non-dispersive infrared detector.

CL-IC-WT Water Chloride by IC EPA 300.1 (mod)

Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.

Analysis conducted in accordance with the Protocol for Analytical Methods Used in the Assessment of Properties under Part XV.1 of the Environmental Protection Act (July 1, 2011).

COD-T-WT Water Chemical Oxygen Demand APHA 5220 D

This analysis is carried out using procedures adapted from APHA Method 5220 "Chemical Oxygen Demand (COD)". Chemical oxygen demand is determined using the closed reflux colourimetric method.

COLOUR-WT Water Colour APHA 2120

Apparent Colour is measured spectrophotometrically by comparison to platinum-cobalt standards using the single wavelength method after sample decanting. Colour measurements can be highly pH dependent, and apply to the pH of the sample as received (at time of testing), without pH adjustment. Concurrent measurement of sample pH is recommended.

EC-MF-WT Water E. coli SM 9222D

A 100 mL volume of sample is filtered through a membrane, the membrane is placed on mFC-BCIG agar and incubated at 44.5 –0 .2 C for 24 – 2 h.
Method ID: WT-TM-1200

ETL-NH3-UNION-CLI-WT Water Un-ionized ammonia CALCULATION

F1-F4-CALC-WT Water CCME Total Hydrocarbons CCME CWS-PHC, Pub #1310, Dec 2001-L

Analytical methods used for analysis of CCME Petroleum Hydrocarbons have been validated and comply with the Reference Method for the CWS PHC.

In cases where results for both F4 and F4G are reported, the greater of the two results must be used in any application of the CWS PHC guidelines and the gravimetric heavy hydrocarbons cannot be added to the C6 to C50 hydrocarbons.
In samples where BTEX and F1 were analyzed , F1-BTEX represents a value where the sum of Benzene, Toluene, Ethylbenzene and total Xylenes has been subtracted from F1.

In samples where PAHs, F2 and F3 were analyzed, F2-Naphth represents the result where Naphthalene has been subtracted from F2. F3-PAH represents a result where the sum of Benzo(a)anthracene, Benzo(a)pyrene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Dibenzo(a,h)anthracene, Fluoranthene, Indeno(1,2,3-cd)pyrene, Phenanthrene, and Pyrene has been subtracted from F3.

Unless otherwise qualified, the following quality control criteria have been met for the F1 hydrocarbon range:
1. All extraction and analysis holding times were met.
2. Instrument performance showing response factors for C6 and C10 within 30% of the response factor for toluene.
3. Linearity of gasoline response within 15% throughout the calibration range.

Unless otherwise qualified, the following quality control criteria have been met for the F2-F4 hydrocarbon ranges:
1. All extraction and analysis holding times were met.

Reference Information

2. Instrument performance showing C10, C16 and C34 response factors within 10% of their average.
3. Instrument performance showing the C50 response factor within 30% of the average of the C10, C16 and C34 response factors.
4. Linearity of diesel or motor oil response within 15% throughout the calibration range.

F1-HS-WT Water F1 (O.Reg.153/04) E3421/CCME (HS)
Fraction F1 is determined by analyzing by headspace-GC/FID.

F2-F4-WT Water F2-F4 (O.Reg.153/04) MOE DECPH-E3421/CCME TIER 1
The petroleum hydrocarbons are extracted from the aqueous samples using solvent partition. The extracts are treated with silica gel to remove polar contaminants. The final concentrated extract is analyzed by gas chromatography (GC) using flame ionization detection (FID) and a 100% polydimethylsiloxane column.

The F2 fraction is determined by integrating the area in the chromatogram from the apex of nC10 to the apex nC16 and quantitating using external calibration using a standard mix containing nC10, nC16 and nC34. Similarly, the F3 fraction extends from the apex of nC16 to the apex nC34 and the F4 fraction covers the area from the apex nC34 to the apex nC50. If the chromatogram does not return to the baseline by the time nC50 elutes, a gravimetric determination of the F4 is performed.

FC-MF-WT Water Fecal Coliforms SM 9222D
A 100mL volume of sample is filtered through a membrane, the membrane is placed on mFC agar and incubated at 24–2h@44.5–0.2 C. Method ID: WT-TM-1200

HG-D-CVAA-WT Water Dissolved Mercury in Water by CVAAS EPA 1631E (mod)
Water samples are filtered (0.45 um), preserved with hydrochloric acid, then undergo a cold-oxidation using bromine monochloride prior to reduction with stannous chloride, and analyzed by CVAAS.

Analysis conducted in accordance with the Protocol for Analytical Methods Used in the Assessment of Properties under Part XV.1 of the Environmental Protection Act (July 1, 2011).

MET-D-CCMS-WT Water Dissolved Metals in Water by CRC ICPMS APHA 3030B/6020A (mod)
Water samples are filtered (0.45 um), preserved with nitric acid, and analyzed by CRC ICPMS.

Method Limitation (re: Sulfur): Sulfide and volatile sulfur species may not be recovered by this method.

Analysis conducted in accordance with the Protocol for Analytical Methods Used in the Assessment of Properties under Part XV.1 of the Environmental Protection Act (July 1, 2011).

NH3-WT Water Ammonia, Total as N EPA 350.1
Sample is measured colorimetrically. When sample is turbid a distillation step is required, sample is distilled into a solution of boric acid and measured colorimetrically.

NO2-IC-WT Water Nitrite in Water by IC EPA 300.1 (mod)
Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.

NO3-IC-WT Water Nitrate in Water by IC EPA 300.1 (mod)
Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.

P-T-COL-WT Water Total P in Water by Colour APHA 4500-P B E

This analysis is carried out using procedures adapted from APHA Method 4500-P "Phosphorus". Total Phosphorus is deteremined colourimetrically after persulphate digestion of the sample.

P-T-COL-WT Water Total P in Water by Colour APHA 4500-P PHOSPHORUS

This analysis is carried out using procedures adapted from APHA Method 4500-P "Phosphorus". Total Phosphorus is deteremined colourimetrically after persulphate digestion of the sample.

PAH-CCME-WT Water CCME PAHs SW846 8270
Sample is extracted at neutral pH using separate aliquots of dichloromethane with a modified separatory funnel technique, extracts are then concentrated and analyzed by GC/MSD. Depending on the analytical GC/MS column used benzo(j)fluoranthene may chromatographically co-elute with benzo(b)fluoranthene or benzo(k)fluoranthene.

PH,TEMP-CLIENT-WT Water pH & Temperature Results supplied by client

PH-WT Water pH APHA 4500 H-Electrode

Water samples are analyzed directly by a calibrated pH meter.

Analysis conducted in accordance with the Protocol for Analytical Methods Used in the Assessment of Properties under Part XV.1 of the Environmental Protection Act (July 1, 2011).

PHENOLS-4AAP-WT Water Phenol (4AAP) EPA 9066

Reference Information

An automated method is used to distill the sample. The distillate is then buffered to pH 9.4 which reacts with 4AAP and potassium ferricyanide to form a red complex which is measured colorimetrically.

SO4-IC-N-WT Water Sulfate in Water by IC EPA 300.1 (mod)
Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.

SOLIDS-TDS-WT Water Total Dissolved Solids APHA 2540C
A well-mixed sample is filtered though glass fibres filter. A known volume of the filtrate is evaporated and dried at 105–5 C overnight and then 180–10 C for 1hr.

SOLIDS-TSS-WT Water Suspended solids APHA 2540 D-Gravimetric
A well-mixed sample is filtered through a weighed standard glass fibre filter and the residue retained is dried in an oven at 104–1 C for a minimum of four hours or until a constant weight is achieved.

TC-MF-WT Water Total Coliforms SM 9222B
A 100mL volume of sample is filtered through a membrane, the membrane is placed on mENDO LES agar and incubated at 35–0.5 C for 24–2h.
Method ID: WT-TM-1200

TKN-WT Water Total Kjeldahl Nitrogen APHA 4500-N
Sample is digested to convert the TKN to ammonium sulphate. The ammonia ions are heated to produce a colour complex. The absorbance measured by the instrument is proportional to the concentration of ammonium sulphate in the sample and is reported as TKN.

TURBIDITY-WT Water Turbidity APHA 2130 B
Sample result is based on a comparison of the intensity of the light scattered by the sample under defined conditions with the intensity of light scattered by a standard reference suspension under the same conditions. Sample readings are obtained from a Nephelometer.

** ALS test methods may incorporate modifications from specified reference methods to improve performance.

The last two letters of the above test code(s) indicate the laboratory that performed analytical analysis for that test. Refer to the list below:

Laboratory Definition Code	Laboratory Location
WT	ALS ENVIRONMENTAL - WATERLOO, ONTARIO, CANADA

Chain of Custody Numbers:

GLOSSARY OF REPORT TERMS

Surrogates are compounds that are similar in behaviour to target analyte(s), but that do not normally occur in environmental samples. For applicable tests, surrogates are added to samples prior to analysis as a check on recovery. In reports that display the D.L. column, laboratory objectives for surrogates are listed there.
mg/kg - milligrams per kilogram based on dry weight of sample
mg/kg wwt - milligrams per kilogram based on wet weight of sample
mg/kg lwt - milligrams per kilogram based on lipid weight of sample
mg/L - unit of concentration based on volume, parts per million.
< - Less than.
D.L. - The reporting limit.
N/A - Result not available. Refer to qualifier code and definition for explanation.

Test results reported relate only to the samples as received by the laboratory.
UNLESS OTHERWISE STATED, ALL SAMPLES WERE RECEIVED IN ACCEPTABLE CONDITION.
Analytical results in unsigned test reports with the DRAFT watermark are subject to change, pending final QC review.

Legend:

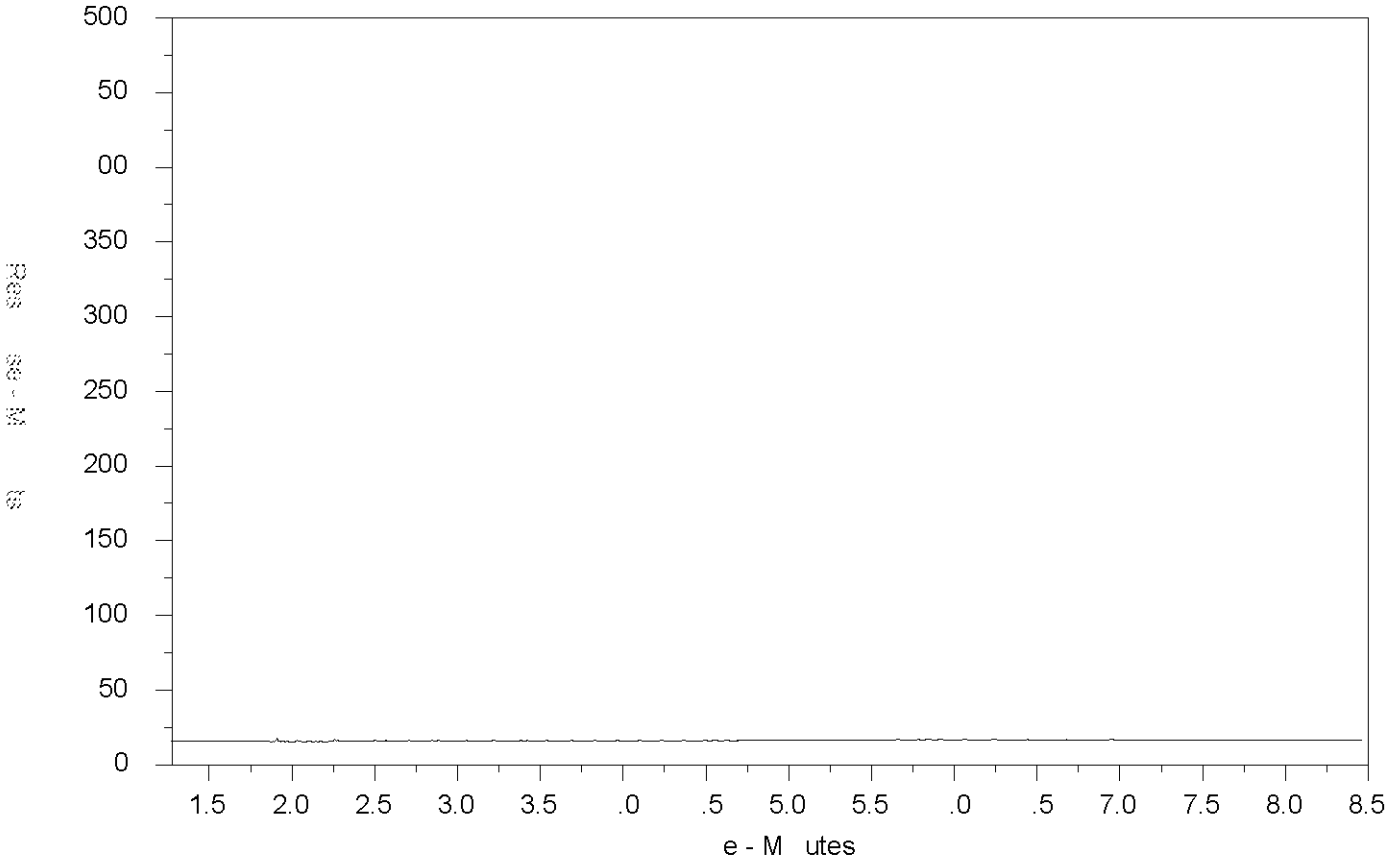
Limit	ALS Control Limit (Data Quality Objectives)
DUP	Duplicate
RPD	Relative Percent Difference
N/A	Not Available
LCS	Laboratory Control Sample
SRM	Standard Reference Material
MS	Matrix Spike
MSD	Matrix Spike Duplicate
ADE	Average Desorption Efficiency
MB	Method Blank
IRM	Internal Reference Material
CRM	Certified Reference Material
CCV	Continuing Calibration Verification
CVS	Calibration Verification Standard
LCSD	Laboratory Control Sample Duplicate

Sample Parameter Qualifier Definitions:

Qualifier	Description
DLHC	Detection Limit Raised: Dilution required due to high concentration of test analyte(s).
J	Duplicate results and limits are expressed in terms of absolute difference.
MS-B	Matrix Spike recovery could not be accurately calculated due to high analyte background in sample.
RPD-NA	Relative Percent Difference Not Available due to result(s) being less than detection limit.

Hold Time Exceedances:

All test results reported with this submission were conducted within ALS recommended hold times.



ALS recommended hold times may vary by province. They are assigned to meet known provincial and/or federal government requirements. In the absence of regulatory hold times, ALS establishes recommendations based on guidelines published by the US EPA, APHA Standard Methods, or Environment Canada (where available). For more information, please contact ALS.

The ALS Quality Control Report is provided to ALS clients upon request. ALS includes comprehensive QC checks with every analysis to ensure our high standards of quality are met. Each QC result has a known or expected target value, which is compared against pre-determined data quality objectives to provide confidence in the accuracy of associated test results.

Please note that this report may contain QC results from anonymous Sample Duplicates and Matrix Spikes that do not originate from this Work Order.

CCME F2-F4 HYDROCARBON DISTRIBUTION REPORT

ALS Sample ID: L1771020-1
Client Sample ID: GW-45804-051816-TS-010

← F2 →	← F3 →	← F4 →

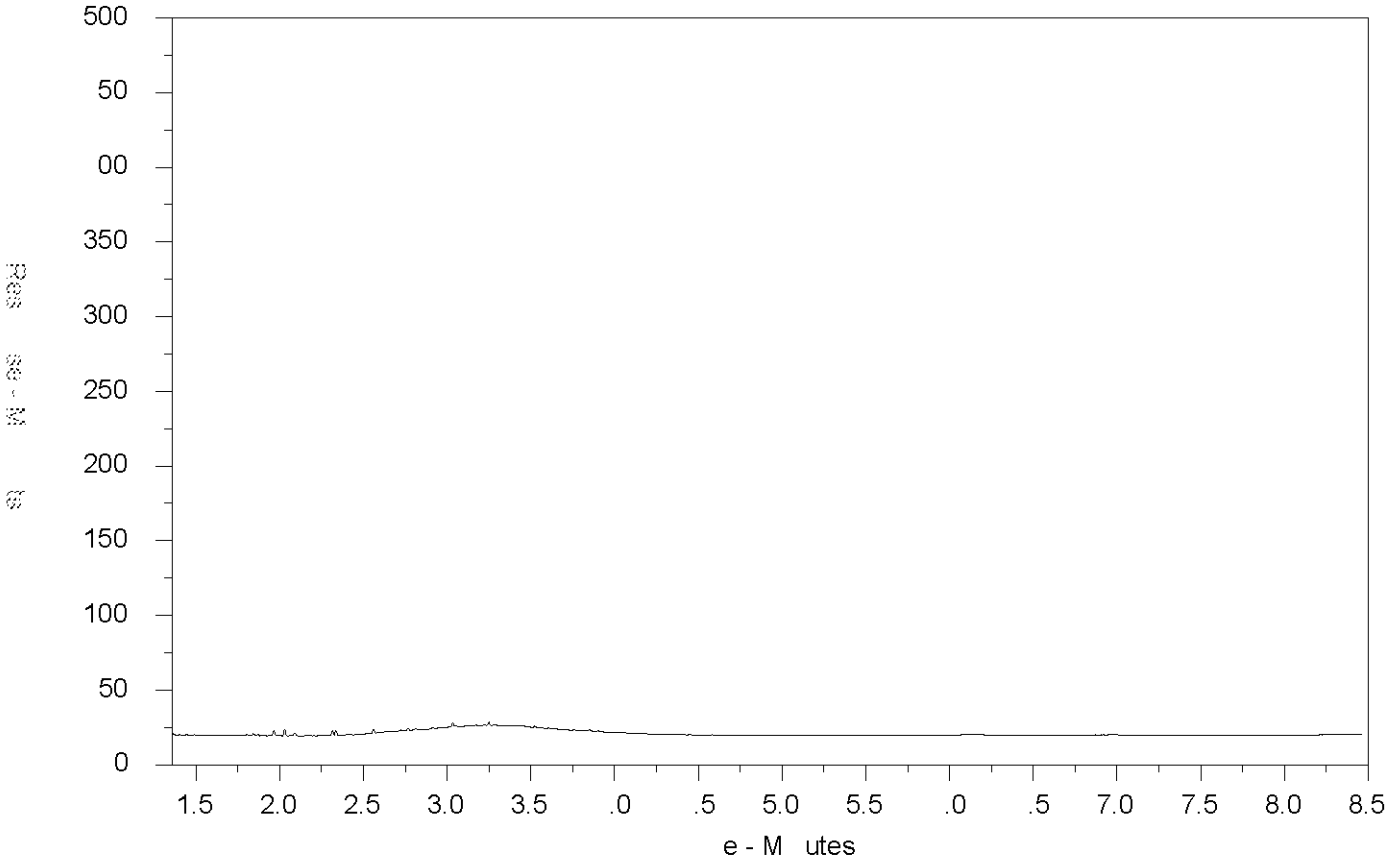
346°F	549°F	898°F	1067°F
←Gasoline→		← Motor Oils/ Lube Oils/ Grease →	
←Diesel/ Jet Fuels→			

The CCME F2-F4 Hydrocarbon Distribution Report (HDR) is intended to assist you in characterizing hydrocarbon products that may be present in your sample.



The scale at the bottom of the chromatogram indicates the approximate retention times of common petroleum products and four n-alkane hydrocarbon marker compounds. Retention times may vary between samples, but general patterns and distributions will remain similar.

Peak heights in this report are a function of the sample concentration, the sample amount extracted, the sample dilution factor and the scale at the left.

Note: This chromatogram was produced using GC conditions that are specific to ALS Canada CCME F2-F4 method. Refer to the ALS Canada CCME F2-F4 Hydrocarbon Library for a collection of chromatograms from common reference samples (fuels, oils, etc.). The HDR Library can be found at www.alsglobal.com.

Sample Parameter Qualifier key listed:

Qualifier	Description
DLDS	Detection Limit Raised: Dilution required due to high Dissolved Solids / Electrical Conductivity.
DLHC	Detection Limit Raised: Dilution required due to high concentration of test analyte(s).
DLM	Detection Limit Adjusted due to sample matrix effects (e.g. chemical interference, colour, turbidity).
MS-B	Matrix Spike recovery could not be accurately calculated due to high analyte background in sample.

Test Method References:

ALS Test Code	Matrix	Test Description	Method Reference**
ALK-WT	Water	Alkalinity, Total (as CaCO3)	EPA 310.2
BOD-C-WT	Water	BOD Carbonaceous	APHA 5210 B (CBOD)

This analysis is carried out using procedures adapted from APHA Method 5210B - "Biochemical Oxygen Demand (BOD)". All forms of biochemical oxygen demand (BOD) are determined by diluting and incubating a sample for a specified time period, and measuring the oxygen depletion using a dissolved oxygen meter. Dissolved BOD (SOLUBLE) is determined by filtering the sample through a glass fibre filter prior to dilution. Carbonaceous BOD (CBOD) is determined by adding a nitrification inhibitor to the diluted sample prior to incubation.

C-DIS-ORG-WT Water Dissolved Organic Carbon APHA 5310 B-INSTRUMENTAL

Sample is filtered through a 0.45um filter, sample is then injected into a heated reaction chamber which is packed with an oxidative catalyst. The water is vaporized and the organic cabon is oxidized to carbon dioxide. The carbon dioxide is transported in a carrier gas and is measured by a non-dispersive infrared detector.

CL-IC-WT Water Chloride by IC EPA 300.1 (mod)

Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.

Analysis conducted in accordance with the Protocol for Analytical Methods Used in the Assessment of Properties under Part XV.1 of the Environmental Protection Act (July 1, 2011).

COD-T-WT Water Chemical Oxygen Demand APHA 5220 D

This analysis is carried out using procedures adapted from APHA Method 5220 "Chemical Oxygen Demand (COD)". Chemical oxygen demand is determined using the closed reflux colourimetric method.

COLOUR-WT Water Colour APHA 2120

Apparent Colour is measured spectrophotometrically by comparison to platinum-cobalt standards using the single wavelength method after sample decanting. Colour measurements can be highly pH dependent, and apply to the pH of the sample as received (at time of testing), without pH adjustment. Concurrent measurement of sample pH is recommended.

EC-MF-WT Water E. coli SM 9222D

A 100 mL volume of sample is filtered through a membrane, the membrane is placed on mFC-BCIG agar and incubated at 44.5 –0 .2 C for 24 – 2 h.
Method ID: WT-TM-1200

ETL-NH3-UNION-CLI-WT Water Un-ionized ammonia CALCULATION

F1-F4-CALC-WT Water CCME Total Hydrocarbons CCME CWS-PHC, Pub #1310, Dec 2001-L

Reference Information

Analytical methods used for analysis of CCME Petroleum Hydrocarbons have been validated and comply with the Reference Method for the CWS PHC.

In cases where results for both F4 and F4G are reported, the greater of the two results must be used in any application of the CWS PHC guidelines and the gravimetric heavy hydrocarbons cannot be added to the C6 to C50 hydrocarbons.
In samples where BTEX and F1 were analyzed , F1-BTEX represents a value where the sum of Benzene, Toluene, Ethylbenzene and total Xylenes has been subtracted from F1.

In samples where PAHs, F2 and F3 were analyzed, F2-Naphth represents the result where Naphthalene has been subtracted from F2. F3-PAH represents a result where the sum of Benzo(a)anthracene, Benzo(a)pyrene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Dibenzo(a,h)anthracene, Fluoranthene, Indeno(1,2,3-cd)pyrene, Phenanthrene, and Pyrene has been subtracted from F3.

Unless otherwise qualified, the following quality control criteria have been met for the F1 hydrocarbon range:
1. All extraction and analysis holding times were met.
2. Instrument performance showing response factors for C6 and C10 within 30% of the response factor for toluene.
3. Linearity of gasoline response within 15% throughout the calibration range.

Unless otherwise qualified, the following quality control criteria have been met for the F2-F4 hydrocarbon ranges:
1. All extraction and analysis holding times were met.
2. Instrument performance showing C10, C16 and C34 response factors within 10% of their average.
3. Instrument performance showing the C50 response factor within 30% of the average of the C10, C16 and C34 response factors.
4. Linearity of diesel or motor oil response within 15% throughout the calibration range.

F1-HS-WT Water F1 (O.Reg.153/04) E3421/CCME (HS)
Fraction F1 is determined by analyzing by headspace-GC/FID.

F2-F4-WT Water F2-F4 (O.Reg.153/04) MOE DECPH-E3421/CCME TIER 1
The petroleum hydrocarbons are extracted from the aqueous samples using solvent partition. The extracts are treated with silica gel to remove polar contaminants. The final concentrated extract is analyzed by gas chromatography (GC) using flame ionization detection (FID) and a 100% polydimethylsiloxane column.

The F2 fraction is determined by integrating the area in the chromatogram from the apex of nC10 to the apex nC16 and quantitating using external calibration using a standard mix containing nC10, nC16 and nC34. Similarly, the F3 fraction extends from the apex of nC16 to the apex nC34 and the F4 fraction covers the area from the apex nC34 to the apex nC50. If the chromatogram does not return to the baseline by the time nC50 elutes, a gravimetric determination of the F4 is performed.

FC-MF-WT Water Fecal Coliforms SM 9222D
A 100mL volume of sample is filtered through a membrane, the membrane is placed on mFC agar and incubated at 24–2h@44.5–0.2 C. Method ID: WT-TM-1200

HG-D-CVAA-WT Water Dissolved Mercury in Water by CVAAS EPA 1631E (mod)
Water samples are filtered (0.45 um), preserved with hydrochloric acid, then undergo a cold-oxidation using bromine monochloride prior to reduction with stannous chloride, and analyzed by CVAAS.

Analysis conducted in accordance with the Protocol for Analytical Methods Used in the Assessment of Properties under Part XV.1 of the Environmental Protection Act (July 1, 2011).

MET-D-CCMS-WT Water Dissolved Metals in Water by CRC ICPMS APHA 3030B/6020A (mod)
Water samples are filtered (0.45 um), preserved with nitric acid, and analyzed by CRC ICPMS.

Method Limitation (re: Sulfur): Sulfide and volatile sulfur species may not be recovered by this method.

Analysis conducted in accordance with the Protocol for Analytical Methods Used in the Assessment of Properties under Part XV.1 of the Environmental Protection Act (July 1, 2011).

NH3-WT Water Ammonia, Total as N EPA 350.1
Sample is measured colorimetrically. When sample is turbid a distillation step is required, sample is distilled into a solution of boric acid and measured colorimetrically.

NO2-IC-WT Water Nitrite in Water by IC EPA 300.1 (mod)
Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.

NO3-IC-WT Water Nitrate in Water by IC EPA 300.1 (mod)
Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.

P-T-COL-WT Water Total P in Water by Colour APHA 4500-P PHOSPHORUS

This analysis is carried out using procedures adapted from APHA Method 4500-P "Phosphorus". Total Phosphorus is deteremined colourimetrically after persulphate digestion of the sample.

PAH-CCME-WT Water CCME PAHs SW846 8270
Sample is extracted at neutral pH using separate aliquots of dichloromethane with a modified separatory funnel technique, extracts are then concentrated and analyzed by GC/MSD. Depending on the analytical GC/MS column used benzo(j)fluoranthene may chromatographically co-elute with

Reference Information

benzo(b)fluoranthene or benzo(k)fluoranthene.

PH,TEMP-CLIENT-WT	Water	pH & Temperature	Results supplied by client

PH-WT	Water	pH	APHA 4500 H-Electrode

Water samples are analyzed directly by a calibrated pH meter.

Analysis conducted in accordance with the Protocol for Analytical Methods Used in the Assessment of Properties under Part XV.1 of the Environmental Protection Act (July 1, 2011).

PHENOLS-4AAP-WT Water Phenol (4AAP) EPA 9066
An automated method is used to distill the sample. The distillate is then buffered to pH 9.4 which reacts with 4AAP and potassium ferricyanide to form a red complex which is measured colorimetrically.

SO4-IC-N-WT Water Sulfate in Water by IC EPA 300.1 (mod)
Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.

SOLIDS-TDS-WT Water Total Dissolved Solids APHA 2540C
A well-mixed sample is filtered though glass fibres filter. A known volume of the filtrate is evaporated and dried at 105–5 C overnight and then 180–10 C for 1hr.

SOLIDS-TSS-WT Water Suspended solids APHA 2540 D-Gravimetric
A well-mixed sample is filtered through a weighed standard glass fibre filter and the residue retained is dried in an oven at 104–1 C for a minimum of four hours or until a constant weight is achieved.

TC-MF-WT Water Total Coliforms SM 9222B
A 100mL volume of sample is filtered through a membrane, the membrane is placed on mENDO LES agar and incubated at 35–0.5 C for 24–2h.
Method ID: WT-TM-1200

TKN-WT Water Total Kjeldahl Nitrogen APHA 4500-N
Sample is digested to convert the TKN to ammonium sulphate. The ammonia ions are heated to produce a colour complex. The absorbance measured by the instrument is proportional to the concentration of ammonium sulphate in the sample and is reported as TKN.

TURBIDITY-WT Water Turbidity APHA 2130 B
Sample result is based on a comparison of the intensity of the light scattered by the sample under defined conditions with the intensity of light scattered by a standard reference suspension under the same conditions. Sample readings are obtained from a Nephelometer.

** ALS test methods may incorporate modifications from specified reference methods to improve performance.

The last two letters of the above test code(s) indicate the laboratory that performed analytical analysis for that test. Refer to the list below:

Laboratory Definition Code	Laboratory Location
WT	ALS ENVIRONMENTAL - WATERLOO, ONTARIO, CANADA

Chain of Custody Numbers:

GLOSSARY OF REPORT TERMS

Surrogates are compounds that are similar in behaviour to target analyte(s), but that do not normally occur in environmental samples. For applicable tests, surrogates are added to samples prior to analysis as a check on recovery. In reports that display the D.L. column, laboratory objectives for surrogates are listed there.
mg/kg - milligrams per kilogram based on dry weight of sample
mg/kg wwt - milligrams per kilogram based on wet weight of sample
mg/kg lwt - milligrams per kilogram based on lipid weight of sample
mg/L - unit of concentration based on volume, parts per million.
< - Less than.
D.L. - The reporting limit.
N/A - Result not available. Refer to qualifier code and definition for explanation.

Test results reported relate only to the samples as received by the laboratory.
UNLESS OTHERWISE STATED, ALL SAMPLES WERE RECEIVED IN ACCEPTABLE CONDITION.
Analytical results in unsigned test reports with the DRAFT watermark are subject to change, pending final QC review.

Legend:

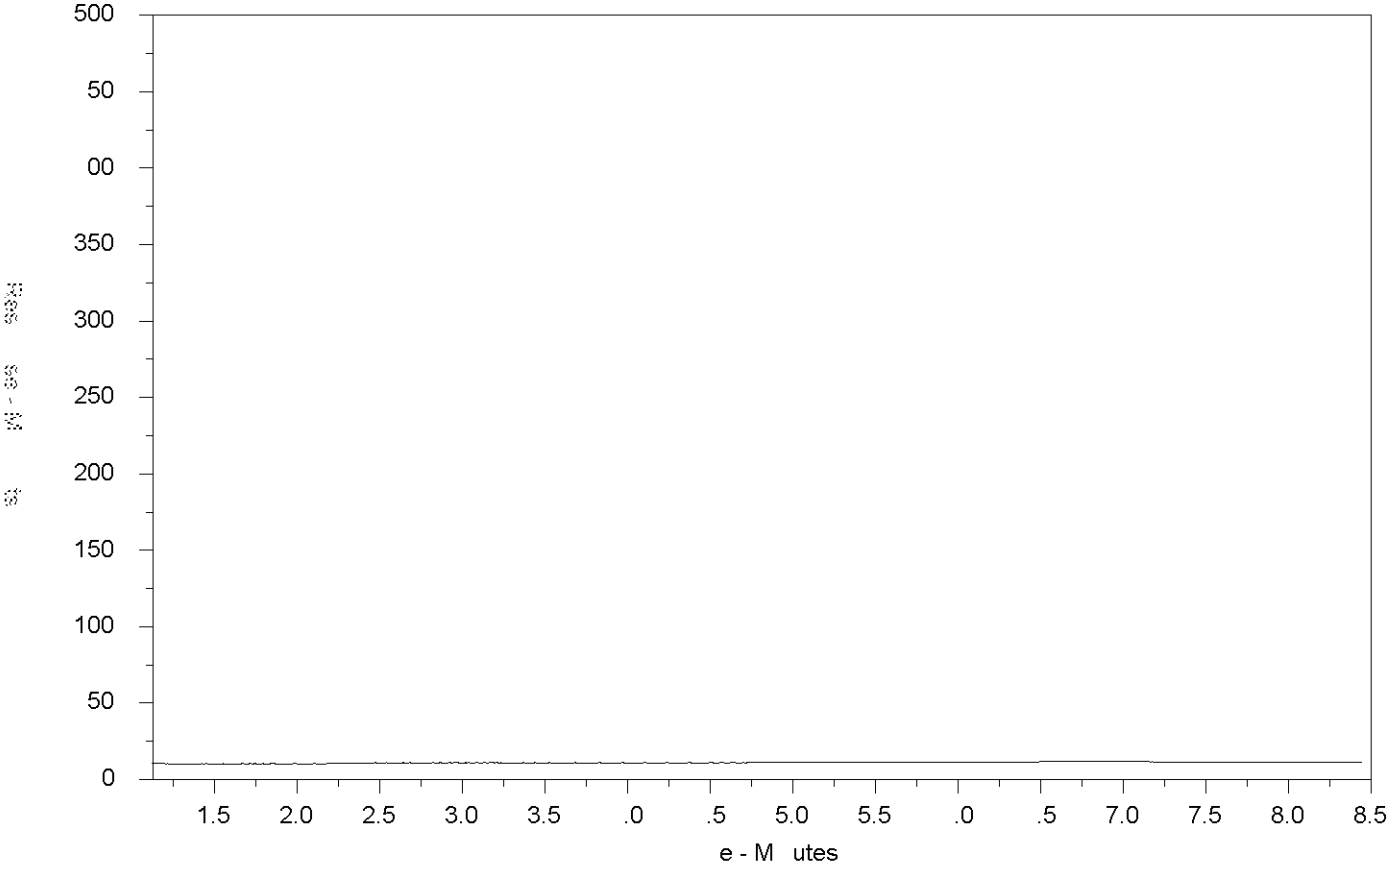
Limit	ALS Control Limit (Data Quality Objectives)
DUP	Duplicate
RPD	Relative Percent Difference
N/A	Not Available
LCS	Laboratory Control Sample
SRM	Standard Reference Material
MS	Matrix Spike
MSD	Matrix Spike Duplicate
ADE	Average Desorption Efficiency
MB	Method Blank
IRM	Internal Reference Material
CRM	Certified Reference Material
CCV	Continuing Calibration Verification
CVS	Calibration Verification Standard
LCSD	Laboratory Control Sample Duplicate

Sample Parameter Qualifier Definitions:

Qualifier	Description
DLHC	Detection Limit Raised: Dilution required due to high concentration of test analyte(s).
J	Duplicate results and limits are expressed in terms of absolute difference.
MS-B	Matrix Spike recovery could not be accurately calculated due to high analyte background in sample.
RPD-NA	Relative Percent Difference Not Available due to result(s) being less than detection limit.

Hold Time Exceedances:

All test results reported with this submission were conducted within ALS recommended hold times.



ALS recommended hold times may vary by province. They are assigned to meet known provincial and/or federal government requirements. In the absence of regulatory hold times, ALS establishes recommendations based on guidelines published by the US EPA, APHA Standard Methods, or Environment Canada (where available). For more information, please contact ALS.

The ALS Quality Control Report is provided to ALS clients upon request. ALS includes comprehensive QC checks with every analysis to ensure our high standards of quality are met. Each QC result has a known or expected target value, which is compared against pre-determined data quality objectives to provide confidence in the accuracy of associated test results.

Please note that this report may contain QC results from anonymous Sample Duplicates and Matrix Spikes that do not originate from this Work Order.

CCME F2-F4 HYDROCARBON DISTRIBUTION REPORT

ALS Sample ID: L1814405-1

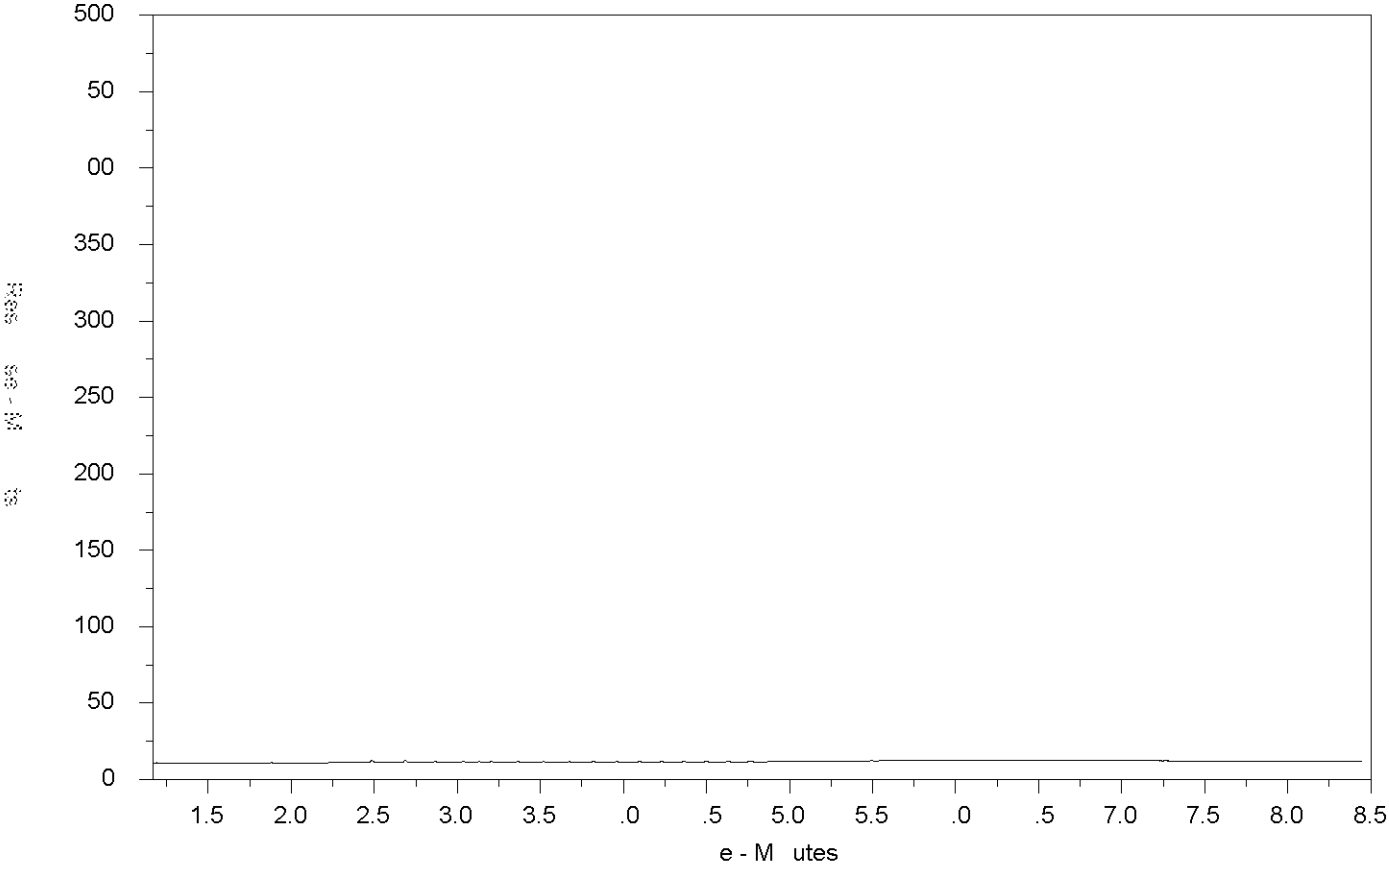
← Gasoline →		← Motor Oils/Lube Oils/Grease →	
← Diesel/Jet Fuels →			

The CCME F2-F4 Hydrocarbon Distribution Report (HDR) is intended to assist you in characterizing hydrocarbon products that may be present in your sample.



The scale at the bottom of the chromatogram indicates the approximate retention times of common petroleum products and four n-alkane hydrocarbon marker compounds. Retention times may vary between samples, but general patterns and distributions will remain similar.

Peak heights in this report are a function of the sample concentration, the sample amount extracted, the sample dilution factor and the scale at the left.

Note: This chromatogram was produced using GC conditions that are specific to ALS Canada CCME F2-F4 method. Refer to the ALS Canada CCME F2-F4 Hydrocarbon Library for a collection of chromatograms from common reference samples (fuels, oils, etc.). The HDR Library can be found at www.alsglobal.com.

SPECIAL INSTRUCTIONS/COMMENTS

PLEASE INCLUDE FIELD PH AND FIELD TEMP FOR UN-IONIZED AMMONIA CALCULATION.

GROUNDWATER METALS ARE FIELD FILTERED.

********** Short Hold Time for Micro & Turbidity **********

Reference Information

QC Samples with Qualifiers & Comments:

QC Type Description	Parameter	Qualifier	Applies to Sample Number(s)
Matrix Spike	Boron (B)-Total	MS-B	L1857475-1, -2, -3, -4, -5
Matrix Spike	Iron (Fe)-Total	MS-B	L1857475-1, -2, -3, -4, -5
Matrix Spike	Manganese (Mn)-Total	MS-B	L1857475-1, -2, -3, -4, -5
Matrix Spike	Ammonia, Total (as N)	MS-B	L1857475-1, -2, -3, -4, -5

Sample Parameter Qualifier key listed:

Qualifier	Description
DLDS	Detection Limit Raised: Dilution required due to high Dissolved Solids / Electrical Conductivity.
DLHC	Detection Limit Raised: Dilution required due to high concentration of test analyte(s).
DLM	Detection Limit Adjusted due to sample matrix effects (e.g. chemical interference, colour, turbidity).
MS-B	Matrix Spike recovery could not be accurately calculated due to high analyte background in sample.

Test Method References:

ALS Test Code	Matrix	Test Description	Method Reference**
ALK-WT	Water	Alkalinity, Total (as CaCO3)	EPA 310.2
BOD-C-WT	Water	BOD Carbonaceous	APHA 5210 B (CBOD)

This analysis is carried out using procedures adapted from APHA Method 5210B - "Biochemical Oxygen Demand (BOD)". All forms of biochemical oxygen demand (BOD) are determined by diluting and incubating a sample for a specified time period, and measuring the oxygen depletion using a dissolved oxygen meter. Dissolved BOD (SOLUBLE) is determined by filtering the sample through a glass fibre filter prior to dilution. Carbonaceous BOD (CBOD) is determined by adding a nitrification inhibitor to the diluted sample prior to incubation.

C-DIS-ORG-WT Water Dissolved Organic Carbon APHA 5310 B-INSTRUMENTAL

Sample is filtered through a 0.45um filter, sample is then injected into a heated reaction chamber which is packed with an oxidative catalyst. The water is vaporized and the organic cabon is oxidized to carbon dioxide. The carbon dioxide is transported in a carrier gas and is measured by a non-dispersive infrared detector.

CL-IC-WT Water Chloride by IC EPA 300.1 (mod)

Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.

Analysis conducted in accordance with the Protocol for Analytical Methods Used in the Assessment of Properties under Part XV.1 of the Environmental Protection Act (July 1, 2011).

COD-T-WT Water Chemical Oxygen Demand APHA 5220 D

This analysis is carried out using procedures adapted from APHA Method 5220 "Chemical Oxygen Demand (COD)". Chemical oxygen demand is determined using the closed reflux colourimetric method.

COLOUR-WT Water Colour APHA 2120

Apparent Colour is measured spectrophotometrically by comparison to platinum-cobalt standards using the single wavelength method after sample decanting. Colour measurements can be highly pH dependent, and apply to the pH of the sample as received (at time of testing), without pH adjustment. Concurrent measurement of sample pH is recommended.

EC-MF-WT Water E. coli SM 9222D

A 100 mL volume of sample is filtered through a membrane, the membrane is placed on mFC-BCIG agar and incubated at 44.5 –0 .2 C for 24 – 2 h.
Method ID: WT-TM-1200

ETL-NH3-UNION-CLI-WT Water Un-ionized ammonia CALCULATION

F1-F4-CALC-WT Water CCME Total Hydrocarbons CCME CWS-PHC, Pub #1310, Dec 2001-L

Analytical methods used for analysis of CCME Petroleum Hydrocarbons have been validated and comply with the Reference Method for the CWS PHC.

In cases where results for both F4 and F4G are reported, the greater of the two results must be used in any application of the CWS PHC guidelines and the gravimetric heavy hydrocarbons cannot be added to the C6 to C50 hydrocarbons.
In samples where BTEX and F1 were analyzed , F1-BTEX represents a value where the sum of Benzene, Toluene, Ethylbenzene and total Xylenes has been subtracted from F1.

In samples where PAHs, F2 and F3 were analyzed, F2-Naphth represents the result where Naphthalene has been subtracted from F2. F3-PAH represents a result where the sum of Benzo(a)anthracene, Benzo(a)pyrene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Dibenzo(a,h)anthracene, Fluoranthene, Indeno(1,2,3-cd)pyrene, Phenanthrene, and Pyrene has been subtracted from F3.

Unless otherwise qualified, the following quality control criteria have been met for the F1 hydrocarbon range:
1. All extraction and analysis holding times were met.
2. Instrument performance showing response factors for C6 and C10 within 30% of the response factor for toluene.
3. Linearity of gasoline response within 15% throughout the calibration range.

Unless otherwise qualified, the following quality control criteria have been met for the F2-F4 hydrocarbon ranges:
1. All extraction and analysis holding times were met.
2. Instrument performance showing C10, C16 and C34 response factors within 10% of their average.
3. Instrument performance showing the C50 response factor within 30% of the average of the C10, C16 and C34 response factors.

Reference Information

4. Linearity of diesel or motor oil response within 15% throughout the calibration range.

F1-HS-WT Water F1 (O.Reg.153/04) E3421/CCME (HS)
Fraction F1 is determined by analyzing by headspace-GC/FID.

F2-F4-WT Water F2-F4 (O.Reg.153/04) MOE DECPH-E3421/CCME TIER 1
The petroleum hydrocarbons are extracted from the aqueous samples using solvent partition. The final concentrated extract is analyzed by gas chromatography (GC) using flame ionization detection (FID) and a 100% polydimethylsiloxane column.

The F2 fraction is determined by integrating the area in the chromatogram from the apex of nC10 to the apex nC16 and quantitating using external calibration using a standard mix containing nC10, nC16 and nC34. Similarly, the F3 fraction extends from the apex of nC16 to the apex nC34 and the F4 fraction covers the area from the apex nC34 to the apex nC50. If the chromatogram does not return to the baseline by the time nC50 elutes, a gravimetric determination of the F4 is performed.

FC-MF-WT Water Fecal Coliforms SM 9222D
A 100mL volume of sample is filtered through a membrane, the membrane is placed on mFC agar and incubated at 24–2h@44.5–0.2 C. Method ID: WT-TM-1200

HG-T-CVAA-WT Water Total Mercury in Water by CVAAS EPA 1631E (mod)

Water samples undergo a cold-oxidation using bromine monochloride prior to reduction with stannous chloride, and analyzed by CVAAS.

MET-T-CCMS-WT Water Total Metals by CRC ICPMS EPA 200.2/6020A (mod)
Water samples are digested with nitric and hydrochloric acids, and analyzed by CRC ICPMS.

Method Limitation (re: Sulfur): Sulfide and volatile sulfur species may not be recovered by this method.

Analysis conducted in accordance with the Protocol for Analytical Methods Used in the Assessment of Properties under Part XV.1 of the Environmental Protection Act (July 1, 2011).

NH3-WT Water Ammonia, Total as N EPA 350.1
Sample is measured colorimetrically. When sample is turbid a distillation step is required, sample is distilled into a solution of boric acid and measured colorimetrically.

NO2-IC-WT Water Nitrite in Water by IC EPA 300.1 (mod)
Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.

NO3-IC-WT Water Nitrate in Water by IC EPA 300.1 (mod)
Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.

P-T-COL-WT Water Total P in Water by Colour APHA 4500-P PHOSPHORUS

This analysis is carried out using procedures adapted from APHA Method 4500-P "Phosphorus". Total Phosphorus is deteremined colourimetrically after persulphate digestion of the sample.

PAH-CCME-WT Water CCME PAHs SW846 8270
Sample is extracted at neutral pH using separate aliquots of dichloromethane with a modified separatory funnel technique, extracts are then concentrated and analyzed by GC/MSD. Depending on the analytical GC/MS column used benzo(j)fluoranthene may chromatographically co-elute with benzo(b)fluoranthene or benzo(k)fluoranthene.

PH,TEMP-CLIENT-WT Water pH & Temperature Results supplied by client

PH-WT Water pH APHA 4500 H-Electrode
Water samples are analyzed directly by a calibrated pH meter.

Analysis conducted in accordance with the Protocol for Analytical Methods Used in the Assessment of Properties under Part XV.1 of the Environmental Protection Act (July 1, 2011).

PHENOLS-4AAP-WT Water Phenol (4AAP) EPA 9066
An automated method is used to distill the sample. The distillate is then buffered to pH 9.4 which reacts with 4AAP and potassium ferricyanide to form a red complex which is measured colorimetrically.

SO4-IC-N-WT Water Sulfate in Water by IC EPA 300.1 (mod)
Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.

SOLIDS-TDS-WT Water Total Dissolved Solids APHA 2540C
A well-mixed sample is filtered though glass fibres filter. A known volume of the filtrate is evaporated and dried at 105–5 C overnight and then 180–10 C for 1hr.

SOLIDS-TSS-WT Water Suspended solids APHA 2540 D-Gravimetric
A well-mixed sample is filtered through a weighed standard glass fibre filter and the residue retained is dried in an oven at 104–1 C for a minimum of four hours or until a constant weight is achieved.

TC-MF-WT Water Total Coliforms SM 9222B

Reference Information

A 100mL volume of sample is filtered through a membrane, the membrane is placed on mENDO LES agar and incubated at 35–0.5 C for 24–2h.
Method ID: WT-TM-1200

TKN-WT Water Total Kjeldahl Nitrogen APHA 4500-N
Sample is digested to convert the TKN to ammonium sulphate. The ammonia ions are heated to produce a colour complex. The absorbance measured by the instrument is proportional to the concentration of ammonium sulphate in the sample and is reported as TKN.

TURBIDITY-WT Water Turbidity APHA 2130 B
Sample result is based on a comparison of the intensity of the light scattered by the sample under defined conditions with the intensity of light scattered by a standard reference suspension under the same conditions. Sample readings are obtained from a Nephelometer.

** ALS test methods may incorporate modifications from specified reference methods to improve performance.

The last two letters of the above test code(s) indicate the laboratory that performed analytical analysis for that test. Refer to the list below:

Laboratory Definition Code	Laboratory Location
WT	ALS ENVIRONMENTAL - WATERLOO, ONTARIO, CANADA

Chain of Custody Numbers:

GLOSSARY OF REPORT TERMS
Surrogates are compounds that are similar in behaviour to target analyte(s), but that do not normally occur in environmental samples. For applicable tests, surrogates are added to samples prior to analysis as a check on recovery. In reports that display the D.L. column, laboratory objectives for surrogates are listed there.
mg/kg - milligrams per kilogram based on dry weight of sample
mg/kg wwt - milligrams per kilogram based on wet weight of sample
mg/kg lwt - milligrams per kilogram based on lipid weight of sample
mg/L - unit of concentration based on volume, parts per million.
< - Less than.
D.L. - The reporting limit.
N/A - Result not available. Refer to qualifier code and definition for explanation.

Test results reported relate only to the samples as received by the laboratory.
UNLESS OTHERWISE STATED, ALL SAMPLES WERE RECEIVED IN ACCEPTABLE CONDITION.
Analytical results in unsigned test reports with the DRAFT watermark are subject to change, pending final QC review.

Contact: AIRESSE MACPHEE

Legend:

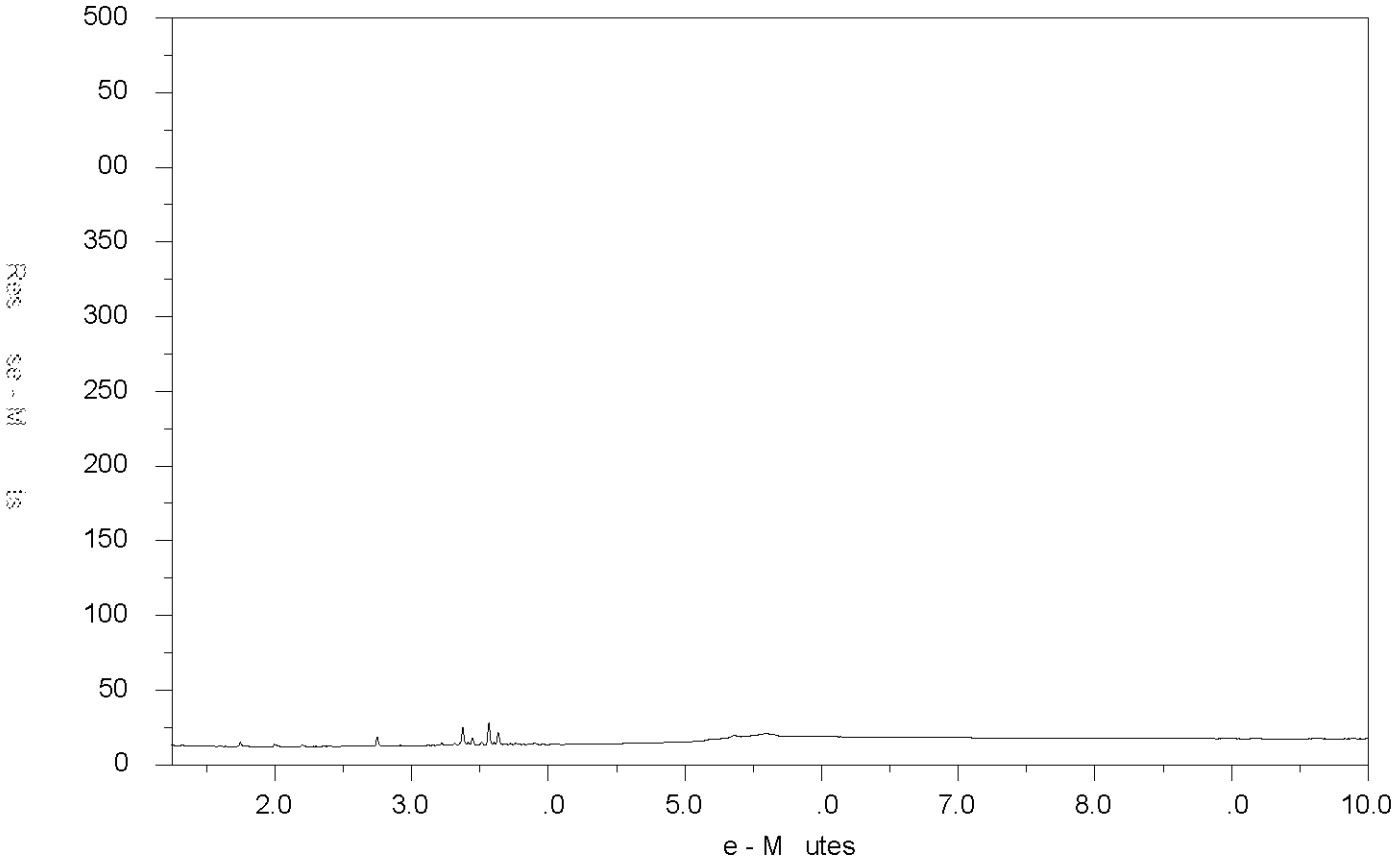
Limit	ALS Control Limit (Data Quality Objectives)
DUP	Duplicate
RPD	Relative Percent Difference
N/A	Not Available
LCS	Laboratory Control Sample
SRM	Standard Reference Material
MS	Matrix Spike
MSD	Matrix Spike Duplicate
ADE	Average Desorption Efficiency
MB	Method Blank
IRM	Internal Reference Material
CRM	Certified Reference Material
CCV	Continuing Calibration Verification
CVS	Calibration Verification Standard
LCSD	Laboratory Control Sample Duplicate

Sample Parameter Qualifier Definitions:

Qualifier	Description
DLDS	Detection Limit Raised: Dilution required due to high Dissolved Solids / Electrical Conductivity.
J	Duplicate results and limits are expressed in terms of absolute difference.
MS-B	Matrix Spike recovery could not be accurately calculated due to high analyte background in sample.
RPD-NA	Relative Percent Difference Not Available due to result(s) being less than detection limit.

Hold Time Exceedances:

All test results reported with this submission were conducted within ALS recommended hold times.



ALS recommended hold times may vary by province. They are assigned to meet known provincial and/or federal government requirements. In the absence of regulatory hold times, ALS establishes recommendations based on guidelines published by the US EPA, APHA Standard Methods, or Environment Canada (where available). For more information, please contact ALS.

The ALS Quality Control Report is provided to ALS clients upon request. ALS includes comprehensive QC checks with every analysis to ensure our high standards of quality are met. Each QC result has a known or expected target value, which is compared against pre-determined data quality objectives to provide confidence in the accuracy of associated test results.

Please note that this report may contain QC results from anonymous Sample Duplicates and Matrix Spikes that do not originate from this Work Order.

CCME F2-F4 HYDROCARBON DISTRIBUTION REPORT

ALS Sample ID: L1857475-1
Client Sample ID: SW-45804-111416-TS-001

←F2→	←F3→	←F4→

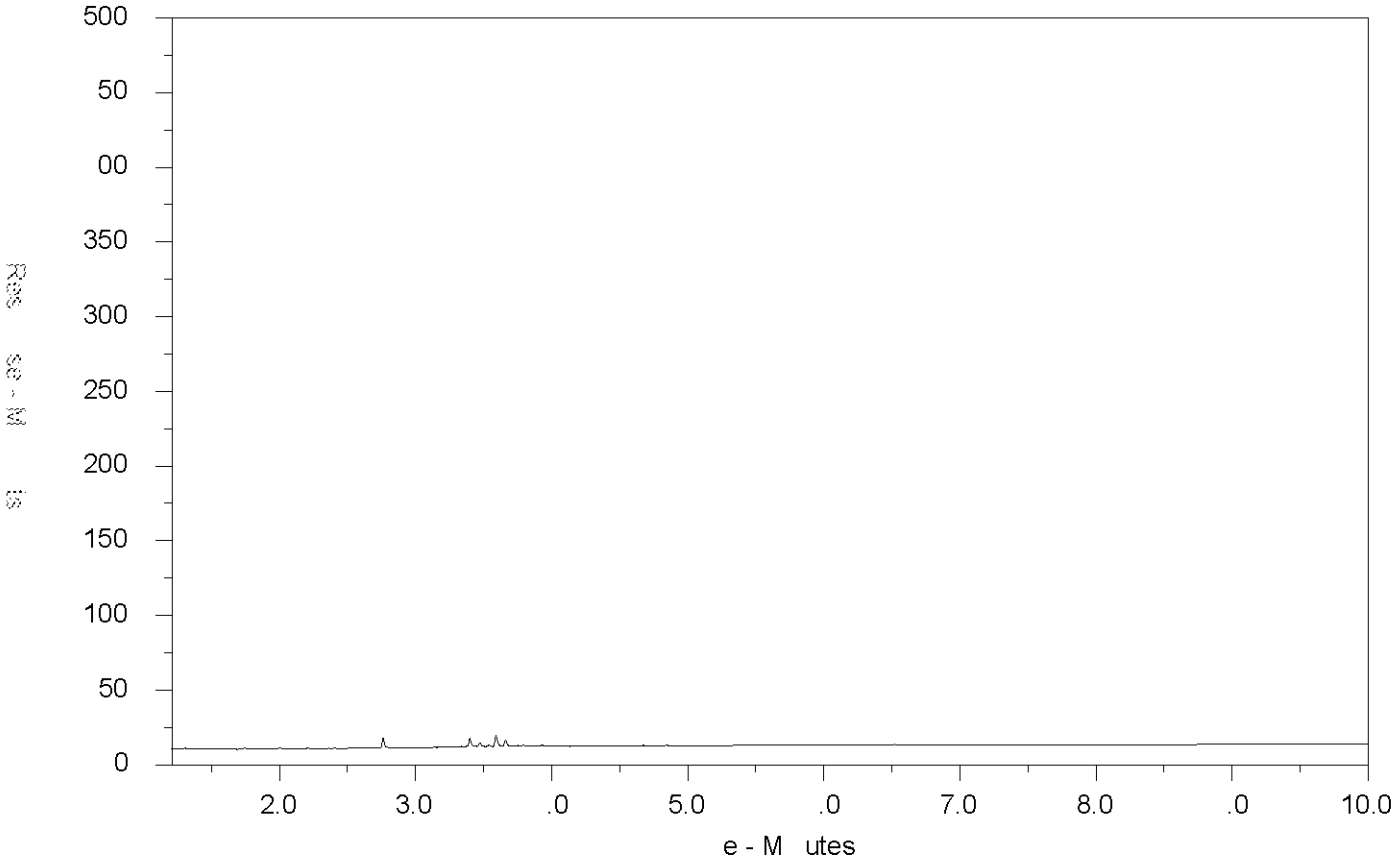
346°F	549°F	898°F	1067°F
Gasoline →	← Motor Oils/Lube Oils/Grease →		
← Diesel/Jet Fuels →			

The CCME F2-F4 Hydrocarbon Distribution Report (HDR) is intended to assist you in characterizing hydrocarbon products that may be present in your sample.



The scale at the bottom of the chromatogram indicates the approximate retention times of common petroleum products and four n-alkane hydrocarbon marker compounds. Retention times may vary between samples, but general patterns and distributions will remain similar.

Peak heights in this report are a function of the sample concentration, the sample amount extracted, the sample dilution factor and the scale at the left.

Note: This chromatogram was produced using GC conditions that are specific to ALS Canada CCME F2-F4 method. Refer to the ALS Canada CCME F2-F4 Hydrocarbon Library for a collection of chromatograms from common reference samples (fuels, oils, etc.). The HDR Library can be found at www.alsglobal.com.

Reference Information

QC Samples with Qualifiers & Comments:

QC Type Description	Parameter	Qualifier	Applies to Sample Number(s)
Matrix Spike	Boron (B)-Dissolved	MS-B	L1858227-1, -2, -3, -4, -5, -6, -7, -8
Matrix Spike	Copper (Cu)-Dissolved	MS-B	L1858227-1, -2, -3, -4, -5, -6, -7, -8
Matrix Spike	Iron (Fe)-Dissolved	MS-B	L1858227-1, -2, -3, -4, -5, -6, -7, -8
Matrix Spike	Manganese (Mn)-Dissolved	MS-B	L1858227-1, -2, -3, -4, -5, -6, -7, -8

Sample Parameter Qualifier key listed:

Qualifier	Description
DLDS	Detection Limit Raised: Dilution required due to high Dissolved Solids / Electrical Conductivity.
DLHC	Detection Limit Raised: Dilution required due to high concentration of test analyte(s).
DLM	Detection Limit Adjusted due to sample matrix effects (e.g. chemical interference, colour, turbidity).
MS-B	Matrix Spike recovery could not be accurately calculated due to high analyte background in sample.

ALS Test Code	Matrix	Test Description	Method Reference**
ALK-WT	Water	Alkalinity, Total (as CaCO3)	EPA 310.2
BOD-C-WT	Water	BOD Carbonaceous	APHA 5210 B (CBOD)

This analysis is carried out using procedures adapted from APHA Method 5210B - "Biochemical Oxygen Demand (BOD)". All forms of biochemical oxygen demand (BOD) are determined by diluting and incubating a sample for a specified time period, and measuring the oxygen depletion using a dissolved oxygen meter. Dissolved BOD (SOLUBLE) is determined by filtering the sample through a glass fibre filter prior to dilution. Carbonaceous BOD (CBOD) is determined by adding a nitrification inhibitor to the diluted sample prior to incubation.

C-DIS-ORG-WT Water Dissolved Organic Carbon APHA 5310 B-INSTRUMENTAL

Sample is filtered through a 0.45um filter, sample is then injected into a heated reaction chamber which is packed with an oxidative catalyst. The water is vaporized and the organic cabon is oxidized to carbon dioxide. The carbon dioxide is transported in a carrier gas and is measured by a non-dispersive infrared detector.

CL-IC-WT Water Chloride by IC EPA 300.1 (mod)

Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.

Analysis conducted in accordance with the Protocol for Analytical Methods Used in the Assessment of Properties under Part XV.1 of the Environmental Protection Act (July 1, 2011).

COD-T-WT Water Chemical Oxygen Demand APHA 5220 D

This analysis is carried out using procedures adapted from APHA Method 5220 "Chemical Oxygen Demand (COD)". Chemical oxygen demand is determined using the closed reflux colourimetric method.

COLOUR-WT Water Colour APHA 2120

Apparent Colour is measured spectrophotometrically by comparison to platinum-cobalt standards using the single wavelength method after sample decanting. Colour measurements can be highly pH dependent, and apply to the pH of the sample as received (at time of testing), without pH adjustment. Concurrent measurement of sample pH is recommended.

EC-MF-WT Water E. coli SM 9222D

A 100 mL volume of sample is filtered through a membrane, the membrane is placed on mFC-BCIG agar and incubated at 44.5 –0 .2 C for 24 – 2 h.
Method ID: WT-TM-1200

ETL-NH3-UNION-CLI-WT Water Un-ionized ammonia CALCULATION

F1-F4-CALC-WT Water CCME Total Hydrocarbons CCME CWS-PHC, Pub #1310, Dec 2001-L

Analytical methods used for analysis of CCME Petroleum Hydrocarbons have been validated and comply with the Reference Method for the CWS PHC.

In cases where results for both F4 and F4G are reported, the greater of the two results must be used in any application of the CWS PHC guidelines and the gravimetric heavy hydrocarbons cannot be added to the C6 to C50 hydrocarbons.
In samples where BTEX and F1 were analyzed , F1-BTEX represents a value where the sum of Benzene, Toluene, Ethylbenzene and total Xylenes has been subtracted from F1.

In samples where PAHs, F2 and F3 were analyzed, F2-Naphth represents the result where Naphthalene has been subtracted from F2. F3-PAH represents a result where the sum of Benzo(a)anthracene, Benzo(a)pyrene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Dibenzo(a,h)anthracene, Fluoranthene, Indeno(1,2,3-cd)pyrene, Phenanthrene, and Pyrene has been subtracted from F3.

Unless otherwise qualified, the following quality control criteria have been met for the F1 hydrocarbon range:
1. All extraction and analysis holding times were met.
2. Instrument performance showing response factors for C6 and C10 within 30% of the response factor for toluene.
3. Linearity of gasoline response within 15% throughout the calibration range.

Unless otherwise qualified, the following quality control criteria have been met for the F2-F4 hydrocarbon ranges:
1. All extraction and analysis holding times were met.
2. Instrument performance showing C10, C16 and C34 response factors within 10% of their average.
3. Instrument performance showing the C50 response factor within 30% of the average of the C10, C16 and C34 response factors.

Reference Information

4. Linearity of diesel or motor oil response within 15% throughout the calibration range.

F1-HS-WT Water F1 (O.Reg.153/04) E3421/CCME (HS)
Fraction F1 is determined by analyzing by headspace-GC/FID.

F2-F4-WT Water F2-F4 (O.Reg.153/04) MOE DECPH-E3421/CCME TIER 1
The petroleum hydrocarbons are extracted from the aqueous samples using solvent partition. The final concentrated extract is analyzed by gas chromatography (GC) using flame ionization detection (FID) and a 100% polydimethylsiloxane column.

The F2 fraction is determined by integrating the area in the chromatogram from the apex of nC10 to the apex nC16 and quantitating using external calibration using a standard mix containing nC10, nC16 and nC34. Similarly, the F3 fraction extends from the apex of nC16 to the apex nC34 and the F4 fraction covers the area from the apex nC34 to the apex nC50. If the chromatogram does not return to the baseline by the time nC50 elutes, a gravimetric determination of the F4 is performed.

FC-MF-WT Water Fecal Coliforms SM 9222D
A 100mL volume of sample is filtered through a membrane, the membrane is placed on mFC agar and incubated at 24–2h@44.5–0.2 C. Method ID: WT-TM-1200

HG-D-CVAA-WT Water Dissolved Mercury in Water by CVAAS EPA 1631E (mod)
Water samples are filtered (0.45 um), preserved with hydrochloric acid, then undergo a cold-oxidation using bromine monochloride prior to reduction with stannous chloride, and analyzed by CVAAS.

Analysis conducted in accordance with the Protocol for Analytical Methods Used in the Assessment of Properties under Part XV.1 of the Environmental Protection Act (July 1, 2011).

MET-D-CCMS-WT Water Dissolved Metals in Water by CRC ICPMS APHA 3030B/6020A (mod)
Water samples are filtered (0.45 um), preserved with nitric acid, and analyzed by CRC ICPMS.

Method Limitation (re: Sulfur): Sulfide and volatile sulfur species may not be recovered by this method.

Analysis conducted in accordance with the Protocol for Analytical Methods Used in the Assessment of Properties under Part XV.1 of the Environmental Protection Act (July 1, 2011).

NH3-WT Water Ammonia, Total as N EPA 350.1
Sample is measured colorimetrically. When sample is turbid a distillation step is required, sample is distilled into a solution of boric acid and measured colorimetrically.

NO2-IC-WT Water Nitrite in Water by IC EPA 300.1 (mod)
Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.

NO3-IC-WT Water Nitrate in Water by IC EPA 300.1 (mod)
Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.

P-T-COL-WT Water Total P in Water by Colour APHA 4500-P PHOSPHORUS

This analysis is carried out using procedures adapted from APHA Method 4500-P "Phosphorus". Total Phosphorus is deteremined colourimetrically after persulphate digestion of the sample.

PAH-CCME-WT Water CCME PAHs SW846 8270
Sample is extracted at neutral pH using separate aliquots of dichloromethane with a modified separatory funnel technique, extracts are then concentrated and analyzed by GC/MSD. Depending on the analytical GC/MS column used benzo(j)fluoranthene may chromatographically co-elute with benzo(b)fluoranthene or benzo(k)fluoranthene.

PH,TEMP-CLIENT-WT Water pH & Temperature Results supplied by client

PH-WT Water pH APHA 4500 H-Electrode
Water samples are analyzed directly by a calibrated pH meter.

Analysis conducted in accordance with the Protocol for Analytical Methods Used in the Assessment of Properties under Part XV.1 of the Environmental Protection Act (July 1, 2011).

PHENOLS-4AAP-WT Water Phenol (4AAP) EPA 9066
An automated method is used to distill the sample. The distillate is then buffered to pH 9.4 which reacts with 4AAP and potassium ferricyanide to form a red complex which is measured colorimetrically.

SO4-IC-N-WT Water Sulfate in Water by IC EPA 300.1 (mod)
Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.

SOLIDS-TDS-WT Water Total Dissolved Solids APHA 2540C
A well-mixed sample is filtered though glass fibres filter. A known volume of the filtrate is evaporated and dried at 105–5 C overnight and then 180–10 C for 1hr.

Reference Information

SOLIDS-TSS-WT	Water	Suspended solids	APHA 2540 D-Gravimetric

A well-mixed sample is filtered through a weighed standard glass fibre filter and the residue retained is dried in an oven at 104–1 C for a minimum of four hours or until a constant weight is achieved.

TC-MF-WT	Water	Total Coliforms	SM 9222B

A 100mL volume of sample is filtered through a membrane, the membrane is placed on mENDO LES agar and incubated at 35–0.5 C for 24–2h.
Method ID: WT-TM-1200

TKN-WT	Water	Total Kjeldahl Nitrogen	APHA 4500-N

Sample is digested to convert the TKN to ammonium sulphate. The ammonia ions are heated to produce a colour complex. The absorbance measured by the instrument is proportional to the concentration of ammonium sulphate in the sample and is reported as TKN.

TURBIDITY-WT	Water	Turbidity	APHA 2130 B

Sample result is based on a comparison of the intensity of the light scattered by the sample under defined conditions with the intensity of light scattered by a standard reference suspension under the same conditions. Sample readings are obtained from a Nephelometer.

** ALS test methods may incorporate modifications from specified reference methods to improve performance.

The last two letters of the above test code(s) indicate the laboratory that performed analytical analysis for that test. Refer to the list below:

Laboratory Definition Code	Laboratory Location
WT	ALS ENVIRONMENTAL - WATERLOO, ONTARIO, CANADA

Chain of Custody Numbers:

GLOSSARY OF REPORT TERMS

Surrogates are compounds that are similar in behaviour to target analyte(s), but that do not normally occur in environmental samples. For applicable tests, surrogates are added to samples prior to analysis as a check on recovery. In reports that display the D.L. column, laboratory objectives for surrogates are listed there.
mg/kg - milligrams per kilogram based on dry weight of sample
mg/kg wwt - milligrams per kilogram based on wet weight of sample
mg/kg lwt - milligrams per kilogram based on lipid weight of sample
mg/L - unit of concentration based on volume, parts per million.
< - Less than.
D.L. - The reporting limit.
N/A - Result not available. Refer to qualifier code and definition for explanation.

Test results reported relate only to the samples as received by the laboratory.
UNLESS OTHERWISE STATED, ALL SAMPLES WERE RECEIVED IN ACCEPTABLE CONDITION.
Analytical results in unsigned test reports with the DRAFT watermark are subject to change, pending final QC review.

Legend:

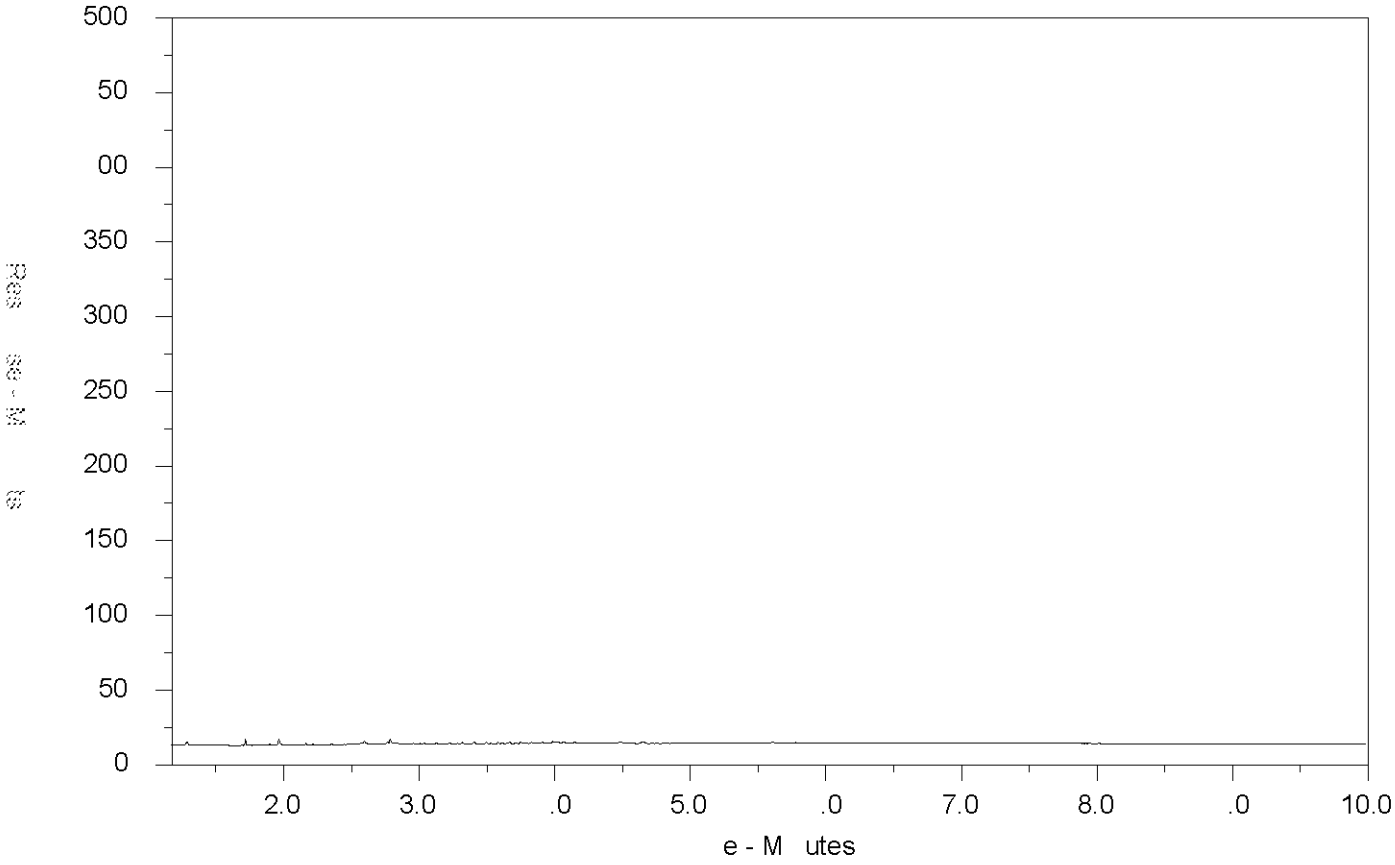
Limit	ALS Control Limit (Data Quality Objectives)
DUP	Duplicate
RPD	Relative Percent Difference
N/A	Not Available
LCS	Laboratory Control Sample
SRM	Standard Reference Material
MS	Matrix Spike
MSD	Matrix Spike Duplicate
ADE	Average Desorption Efficiency
MB	Method Blank
IRM	Internal Reference Material
CRM	Certified Reference Material
CCV	Continuing Calibration Verification
CVS	Calibration Verification Standard
LCSD	Laboratory Control Sample Duplicate

Sample Parameter Qualifier Definitions:

Qualifier	Description
J	Duplicate results and limits are expressed in terms of absolute difference.
MS-B	Matrix Spike recovery could not be accurately calculated due to high analyte background in sample.
RPD-NA	Relative Percent Difference Not Available due to result(s) being less than detection limit.

Hold Time Exceedances:

All test results reported with this submission were conducted within ALS recommended hold times.



ALS recommended hold times may vary by province. They are assigned to meet known provincial and/or federal government requirements. In the absence of regulatory hold times, ALS establishes recommendations based on guidelines published by the US EPA, APHA Standard Methods, or Environment Canada (where available). For more information, please contact ALS.

The ALS Quality Control Report is provided to ALS clients upon request. ALS includes comprehensive QC checks with every analysis to ensure our high standards of quality are met. Each QC result has a known or expected target value, which is compared against pre-determined data quality objectives to provide confidence in the accuracy of associated test results.

Please note that this report may contain QC results from anonymous Sample Duplicates and Matrix Spikes that do not originate from this Work Order.

CCME F2-F4 HYDROCARBON DISTRIBUTION REPORT

ALS Sample ID: L1858227-1
Client Sample ID: GW-45804-111516-TS-001

←F2→	←F3→	←F4→	
nC10	nC16	nC34	nC50

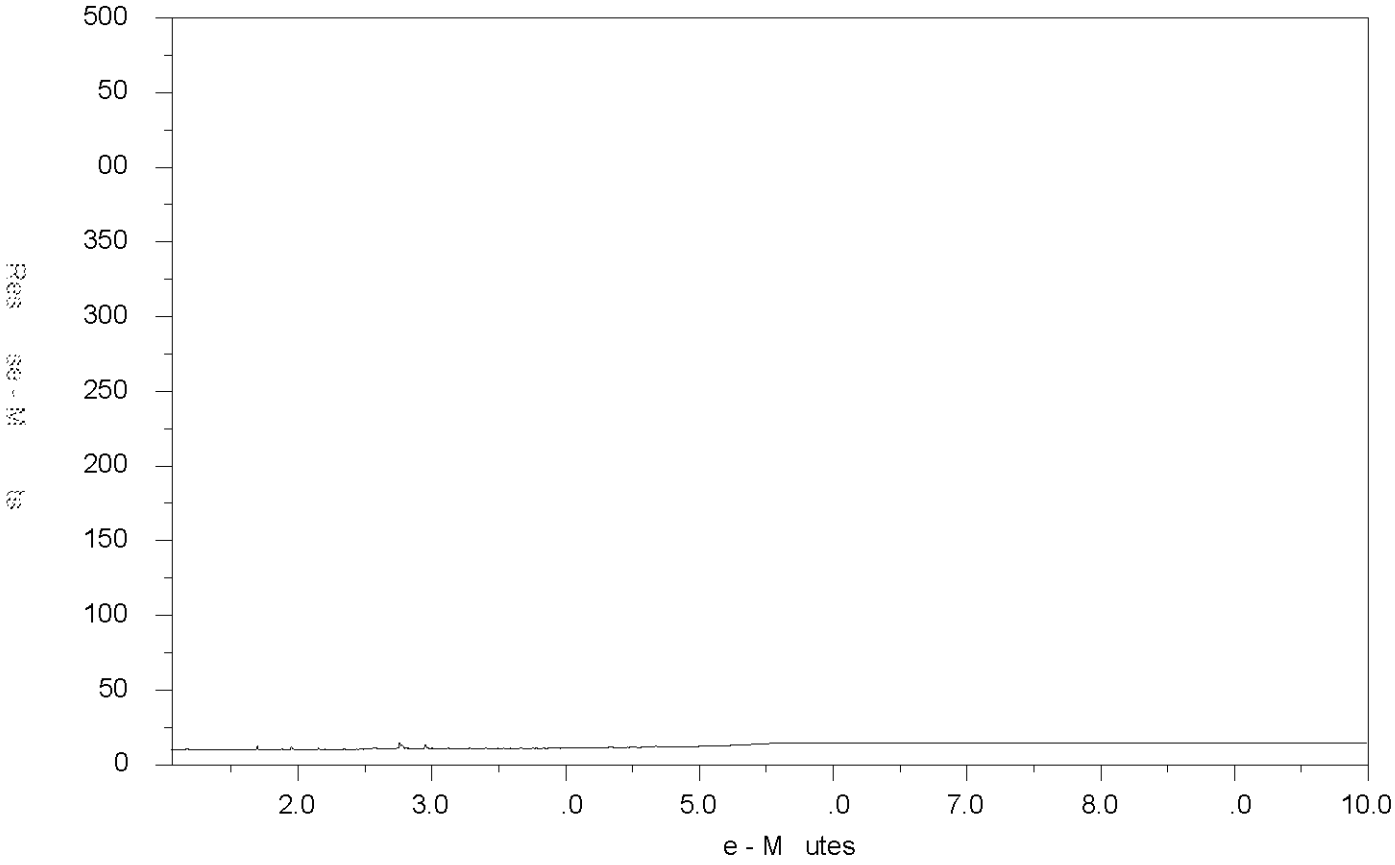
346°F	549°F	898°F	1067°F
Gasoline →	← Motor Oils/Lube Oils/Grease →		
← Diesel/Jet Fuels →			

The CCME F2-F4 Hydrocarbon Distribution Report (HDR) is intended to assist you in characterizing hydrocarbon products that may be present in your sample.



The scale at the bottom of the chromatogram indicates the approximate retention times of common petroleum products and four n-alkane hydrocarbon marker compounds. Retention times may vary between samples, but general patterns and distributions will remain similar.

Peak heights in this report are a function of the sample concentration, the sample amount extracted, the sample dilution factor and the scale at the left.

Note: This chromatogram was produced using GC conditions that are specific to ALS Canada CCME F2-F4 method. Refer to the ALS Canada CCME F2-F4 Hydrocarbon Library for a collection of chromatograms from common reference samples (fuels, oils, etc.). The HDR Library can be found at www.alsglobal.com.

Matrix Spike	Phosphorus, Total	MS-B	L1811895-1
Matrix Spike	Nitrate (as N)	MS-B	L1811895-1

Sample Parameter Qualifier key listed:

Qualifier	Description
DLDS	Detection Limit Raised: Dilution required due to high Dissolved Solids / Electrical Conductivity.
DLHC	Detection Limit Raised: Dilution required due to high concentration of test analyte(s).
DLM	Detection Limit Adjusted due to sample matrix effects (e.g. chemical interference, colour, turbidity).
MS-B	Matrix Spike recovery could not be accurately calculated due to high analyte background in sample.
PEHR	Parameter Exceeded Recommended Holding Time On Receipt: Proceed With Analysis As Requested.

Test Method References:

ALS Test Code	Matrix	Test Description	Method Reference**
BOD-C-WT	Water	BOD Carbonaceous	APHA 5210 B (CBOD)

This analysis is carried out using procedures adapted from APHA Method 5210B - "Biochemical Oxygen Demand (BOD)". All forms of biochemical oxygen demand (BOD) are determined by diluting and incubating a sample for a specified time period, and measuring the oxygen depletion using a dissolved oxygen meter. Dissolved BOD (SOLUBLE) is determined by filtering the sample through a glass fibre filter prior to dilution. Carbonaceous BOD (CBOD) is determined by adding a nitrification inhibitor to the diluted sample prior to incubation.

BOD-WT	Water	BOD	APHA 5210 B

This analysis is carried out using procedures adapted from APHA Method 5210B - "Biochemical Oxygen Demand (BOD)". All forms of biochemical oxygen demand (BOD) are determined by diluting and incubating a sample for a specified time period, and measuring the oxygen depletion using a dissolved oxygen meter. Dissolved BOD (SOLUBLE) is determined by filtering the sample through a glass fibre filter prior to dilution. Carbonaceous BOD (CBOD) is determined by adding a nitrification inhibitor to the diluted sample prior to incubation.

C-DIS-ORG-WT	Water	Dissolved Organic Carbon	APHA 5310 B-INSTRUMENTAL

Sample is filtered through a 0.45um filter, sample is then injected into a heated reaction chamber which is packed with an oxidative catalyst. The water is vaporized and the organic cabon is oxidized to carbon dioxide. The carbon dioxide is transported in a carrier gas and is measured by a non-dispersive infrared detector.

COD-T-WT	Water	Chemical Oxygen Demand	APHA 5220 D

This analysis is carried out using procedures adapted from APHA Method 5220 "Chemical Oxygen Demand (COD)". Chemical oxygen demand is determined using the closed reflux colourimetric method.

EC-MF-WT	Water	E. coli	SM 9222D

A 100 mL volume of sample is filtered through a membrane, the membrane is placed on mFC-BCIG agar and incubated at 44.5 –0 .2 °C for 24 – 2 h.
Method ID: WT-TM-1200

EC-WT	Water	Conductivity	APHA 2510 B

Water samples can be measured directly by immersing the conductivity cell into the sample.

ETL-N2N3-WT	Water	Calculate from NO2 + NO3	APHA 4110 B
ETL-NH3-UNION-WT	Water	Un-ionized ammonia	CALCULATION
HG-T-CVAA-WT	Water	Total Mercury in Water by CVAAS	EPA 1631E (mod)

Water samples undergo a cold-oxidation using bromine monochloride prior to reduction with stannous chloride, and analyzed by CVAAS.

MET-T-CCMS-WT	Water	Total Metals by CRC ICPMS	EPA 200.2/6020A (mod)

Water samples are digested with nitric and hydrochloric acids, and analyzed by CRC ICPMS.

Method Limitation (re: Sulfur): Sulfide and volatile sulfur species may not be recovered by this method.

6

Reference Information

Analysis conducted in accordance with the Protocol for Analytical Methods Used in the Assessment of Properties under Part XV.1 of the Environmental Protection Act (July 1, 2011).

NH3-WT	Water	Ammonia, Total as N	EPA 350.1

Sample is measured colorimetrically. When sample is turbid a distillation step is required, sample is distilled into a solution of boric acid and measured colorimetrically.

NO2-IC-WT	Water	Nitrite in Water by IC	EPA 300.1 (mod)

Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.

NO3-IC-WT	Water	Nitrate in Water by IC	EPA 300.1 (mod)

Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.

O2-DIS-WT	Water	Dissolved oxygen	APHA 4500-O

OGG-TOT-WT	Water	Oil and Grease, Total	APHA 5520 B

The procedure involves an extraction of the entire water sample with hexane. This extract is then evaporated to dryness, and the residue weighed to determine Oil and Grease.

P-T-COL-WT	Water	Total P in Water by Colour	APHA 4500-P PHOSPHORUS

This analysis is carried out using procedures adapted from APHA Method 4500-P "Phosphorus". Total Phosphorus is deteremined colourimetrically after persulphate digestion of the sample.

PH-WT	Water	pH	APHA 4500 H-Electrode

Water samples are analyzed directly by a calibrated pH meter.

Analysis conducted in accordance with the Protocol for Analytical Methods Used in the Assessment of Properties under Part XV.1 of the Environmental Protection Act (July 1, 2011).

PHENOLS-4AAP-WT	Water	Phenol (4AAP)	EPA 9066

, automated method is used to distill the sample. The distillate is then buffered to pH 9.4 which reacts with 4AAP and potassium ferricyanide to form a red complex which is measured colorimetrically.

SOLIDS-TSS-WT	Water	Suspended solids	APHA 2540 D-Gravimetric

A well-mixed sample is filtered through a weighed standard glass fibre filter and the residue retained is dried in an oven at 104–1 .C for a minimum of four hours or until a constant weight is achieved.

TEMP-CLIENT-WT	Water	Temperature	Result supplied by Client

TKN-WT	Water	Total Kjeldahl Nitrogen	APHA 4500-N

Sample is digested to convert the TKN to ammonium sulphate. The ammonia ions are heated to produce a colour complex. The absorbance measured by the instrument is proportional to the concentration of ammonium sulphate in the sample and is reported as TKN.

** ALS test methods may incorporate modifications from specified reference methods to improve performance.*

The last two letters of the above test code(s) indicate the laboratory that performed analytical analysis for that test. Refer to the list below:

Laboratory Definition Code	Laboratory Location
WT	ALS ENVIRONMENTAL - WATERLOO, ONTARIO, CANADA

Chain of Custody Numbers:

GLOSSARY OF REPORT TERMS

Surrogates are compounds that are similar in behaviour to target analyte(s), but that do not normally occur in environmental samples. For applicable tests, surrogates are added to samples prior to analysis as a check on recovery. In reports that display the D.L. column, laboratory objectives for surrogates are listed there.
mg/kg - milligrams per kilogram based on dry weight of sample
mg/kg wwt - milligrams per kilogram based on wet weight of sample
mg/kg lwt - milligrams per kilogram based on lipid weight of sample
mg/L - unit of concentration based on volume, parts per million.
< - Less than.
- The reporting limit.
- Result not available. Refer to qualifier code and definition for explanation.

Test results reported relate only to the samples as received by the laboratory.
UNLESS OTHERWISE STATED, ALL SAMPLES WERE RECEIVED IN ACCEPTABLE CONDITION
Analytical results in unsigned test reports with the DRAFT watermark are subject to change, pending final QC review.

Hold Time Exceedances:

ALS Product Description	Sample ID	Sampling Date	Date Processed	Rec. HT	Actual HT	Units	Qualifier
Physical Tests							
Dissolved oxygen	1	10-AUG-16 09:00	11-AUG-16 14:00	0.25	29	hours	EHTR-FM

Legend & Qualifier Definitions:

EHTR-FM:	Exceeded ALS recommended hold time prior to sample receipt. Field Measurement recommended.
EHTR:	Exceeded ALS recommended hold time prior to sample receipt.
EHTL:	Exceeded ALS recommended hold time prior to analysis. Sample was received less than 24 hours prior to expiry.
EHT:	Exceeded ALS recommended hold time prior to analysis.
Rec. HT:	ALS recommended hold time (see units).

Notes*:
Where actual sampling date is not provided to ALS, the date (& time) of receipt is used for calculation purposes.
Where actual sampling time is not provided to ALS, the earlier of 12 noon on the sampling date or the time (& date) of receipt is used for calculation purposes. Samples for L1811895 were received on 10-AUG-16 13:30.

ALS recommended hold times may vary by province. They are assigned to meet known provincial and/or federal government requirements. In the absence of regulatory hold times, ALS establishes recommendations based on guidelines published by the US EPA, APHA Standard Methods, or Environment Canada (where available). For more information, please contact ALS.

The ALS Quality Control Report is provided to ALS clients upon request. ALS includes comprehensive QC checks with every analysis to ensure our high standards of quality are met. Each QC result has a known or expected target value, which is compared against pre-determined data quality objectives to provide confidence in the accuracy of associated test results.

Please note that this report may contain QC results from anonymous Sample Duplicates and Matrix Spikes that do not originate from this Work Order.

Reference Information

QC Samples with Qualifiers & Comments:

QC Type Description	Parameter	Qualifier	Applies to Sample Number(s)
Matrix Spike	Boron (B)-Total	MS-B	L1851386-1
Matrix Spike	Ammonia, Total (as N)	MS-B	L1851386-1
Matrix Spike	Nitrate (as N)	MS-B	L1851386-1
Matrix Spike	Total Kjeldahl Nitrogen	MS-B	L1851386-1

Sample Parameter Qualifier key listed:

Qualifier	Description
DLDS	Detection Limit Raised: Dilution required due to high Dissolved Solids / Electrical Conductivity.
DLHC	Detection Limit Raised: Dilution required due to high concentration of test analyte(s).
DLM	Detection Limit Adjusted due to sample matrix effects (e.g. chemical interference, colour, turbidity).
MS-B	Matrix Spike recovery could not be accurately calculated due to high analyte background in sample.
PEHR	Parameter Exceeded Recommended Holding Time On Receipt: Proceed With Analysis As Requested.

Test Method References:

ALS Test Code	Matrix	Test Description	Method Reference**
BOD-C-WT	Water	BOD Carbonaceous	APHA 5210 B (CBOD)

This analysis is carried out using procedures adapted from APHA Method 5210B - "Biochemical Oxygen Demand (BOD)". All forms of biochemical oxygen demand (BOD) are determined by diluting and incubating a sample for a specified time period, and measuring the oxygen depletion using a dissolved oxygen meter. Dissolved BOD (SOLUBLE) is determined by filtering the sample through a glass fibre filter prior to dilution. Carbonaceous BOD (CBOD) is determined by adding a nitrification inhibitor to the diluted sample prior to incubation.

BOD-WT	Water	BOD	APHA 5210 B

This analysis is carried out using procedures adapted from APHA Method 5210B - "Biochemical Oxygen Demand (BOD)". All forms of biochemical oxygen demand (BOD) are determined by diluting and incubating a sample for a specified time period, and measuring the oxygen depletion using a dissolved oxygen meter. Dissolved BOD (SOLUBLE) is determined by filtering the sample through a glass fibre filter prior to dilution. Carbonaceous BOD (CBOD) is determined by adding a nitrification inhibitor to the diluted sample prior to incubation.

C-ORG-WT	Water	Dissolved Organic Carbon	APHA 5310 B-INSTRUMENTAL

Sample is filtered through a 0.45um filter, sample is then injected into a heated reaction chamber which is packed with an oxidative catalyst. The water is vaporized and the organic cabon is oxidized to carbon dioxide. The carbon dioxide is transported in a carrier gas and is measured by a non-dispersive infrared detector.

COD-T-WT	Water	Chemical Oxygen Demand	APHA 5220 D

This analysis is carried out using procedures adapted from APHA Method 5220 "Chemical Oxygen Demand (COD)". Chemical oxygen demand is determined using the closed reflux colourimetric method.

EC-MF-WT	Water	E. coli	SM 9222D

A 100 mL volume of sample is filtered through a membrane, the membrane is placed on mFC-BCIG agar and incubated at 44.5 –0 .2 □C for 24 – 2 h.
Method ID: WT-TM-1200

EC-WT	Water	Conductivity	APHA 2510 B

Water samples can be measured directly by immersing the conductivity cell into the sample.

ETL-N2N3-WT	Water	Calculate from NO2 + NO3	APHA 4110 B
ETL-NH3-UNION-WT	Water	Un-ionized ammonia	CALCULATION
HG-T-CVAA-WT	Water	Total Mercury in Water by CVAAS	EPA 1631E (mod)

Water samples undergo a cold-oxidation using bromine monochloride prior to reduction with stannous chloride, and analyzed by CVAAS.

MET-T-CCMS-WT	Water	Total Metals by CRC ICPMS	EPA 200.2/6020A (mod)

Water samples are digested with nitric and hydrochloric acids, and analyzed by CRC ICPMS.

Method Limitation (re: Sulfur): Sulfide and volatile sulfur species may not be recovered by this method.

Analysis conducted in accordance with the Protocol for Analytical Methods Used in the Assessment of Properties under Part XV.1 of the Environmental Protection Act (July 1, 2011).

N-WT	Water	Ammonia, Total as N	EPA 350.1

Sample is measured colorimetrically. When sample is turbid a distillation step is required, sample is distilled into a solution of boric acid and measured colorimetrically.

NO2-IC-WT	Water	Nitrite in Water by IC	EPA 300.1 (mod)

Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.

NO3-IC-WT	Water	Nitrate in Water by IC	EPA 300.1 (mod)

Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.

Reference Information

O2 DIS-WT	Water	Dissolved oxygen	APHA 4500-O
OGG-TOT-WT	Water	Oil and Grease, Total	APHA 5520 B

The procedure involves an extraction of the entire water sample with hexane. This extract is then evaporated to dryness, and the residue weighed to determine Oil and Grease.

P-T-COL-WT	Water	Total P in Water by Colour	APHA 4500-P PHOSPHORUS

This analysis is carried out using procedures adapted from APHA Method 4500-P "Phosphorus". Total Phosphorus is deteremined colourimetrically after persulphate digestion of the sample.

PH-WT	Water	pH	APHA 4500 H-Electrode

Water samples are analyzed directly by a calibrated pH meter.

Analysis conducted in accordance with the Protocol for Analytical Methods Used in the Assessment of Properties under Part XV.1 of the Environmental Protection Act (July 1, 2011).

PH-WT	Water	pH	MOEE E3137A-R511

Water samples are analyzed directly by a calibrated pH meter.

Analysis conducted in accordance with the Protocol for Analytical Methods Used in the Assessment of Properties under Part XV.1 of the Environmental Protection Act (July 1, 2011).

PHENOLS-4AAP-WT	Water	Phenol (4AAP)	EPA 9066

An automated method is used to distill the sample. The distillate is then buffered to pH 9.4 which reacts with 4AAP and potassium ferricyanide to form a red complex which is measured colorimetrically.

SOLIDS-TSS-WT	Water	Suspended solids	APHA 2540 D-Gravimetric

A well-mixed sample is filtered through a weighed standard glass fibre filter and the residue retained is dried in an oven at 104–1□C for a minimum of four hours or until a constant weight is achieved.

TEMP-CLIENT-WT	Water	Temperature	Result supplied by Client
N-T-WT	Water	Total Kjeldahl Nitrogen	APHA 4500-N

Sample is digested to convert the TKN to ammonium sulphate. The ammonia ions are heated to produce a colour complex. The absorbance measured by the instrument is proportional to the concentration of ammonium sulphate in the sample and is reported as TKN.

"* ALS test methods may incorporate modifications from specified reference methods to improve performance.

The last two letters of the above test code(s) indicate the laboratory that performed analytical analysis for that test. Refer to the list below:

Laboratory Definition Code	Laboratory Location
WT	ALS ENVIRONMENTAL - WATERLOO, ONTARIO, CANADA

Chain of Custody Numbers:

GLOSSARY OF REPORT TERMS

Surrogates are compounds that are similar in behaviour to target analyte(s), but that do not normally occur in environmental samples. For applicable tests, surrogates are added to samples prior to analysis as a check on recovery. In reports that display the D.L. column, laboratory objectives for surrogates are listed there.
mg/kg - milligrams per kilogram based on dry weight of sample
mg/kg wwt - milligrams per kilogram based on wet weight of sample
mg/kg lwt - milligrams per kilogram based on lipid weight of sample
mg/L - unit of concentration based on volume, parts per million.
< - Less than.
D.L. - The reporting limit.
N/A - Result not available. Refer to qualifier code and definition for explanation.

Test results reported relate only to the samples as received by the laboratory.
UNLESS OTHERWISE STATED, ALL SAMPLES WERE RECEIVED IN ACCEPTABLE CONDITION.
Analytical results in unsigned test reports with the DRAFT watermark are subject to change, pending final QC review.
