Acronyms and Abbreviations

AEC	Atomic Energy Commission
AIG	American International Group
AQCR	Air quality control regions
ARAR	Applicable or relevant and appropriate requirement ARP Accidental Release Program
AST	Aboveground storage tank
ASTM	American Society for Testing and Materials
BOD	Biochemical oxygen demand
BTU	British thermal unit
BTEX	Benzene-toluene-ethylbenzene-xylene
^{o}C	Degrees Celsius
CA	California
CAA	(Federal) Clean Air Act
CCME	Canadian Council of Ministers of the Environment
CDEP	Connecticut Department of Environmental Protection
CEPA	Canadian Environmental Protection Act
CERCLA	(Federal) Comprehensive Environmental Response Compensation and Liability Act of 1980
CFC	Chlorofluorocarbon
C.F.R.	Code of Federal Regulations
CLP	(EPA) Contract Laboratory Program
CMHC	Canada Mortgage and Housing Corporation
CO	Carbon monoxide
CZMA	(Federal) Coastal Zone Management Act
DDT	Dichloro diphenyl trichloro ethane
DEC	Department of Environmental Conversation (New York State)
DEP	Department for Environmental Protection (Florida; Massachusetts; New Jersey)
DEPE	Department of Environmental Protection and Energy (New Jersey)
DEQ	Department of Environmental Quality (Louisiana)
DER	Department of Environmental Resources (Pennsylvania)
DMR	Discharge Monitoring Report DI Deionized
DNR	Department of Natural Resources (Michigan)
DOE	(U.S.) Department of Energy
DOH	Department of Health (New York State)
DOI	(U.S.) Department of Interior
DOL	(U.S.) Department of Labor
DOT	(U.S.) Department of Transportation
EIS	Environmental Impact Statement
EM	Electromagnetic
EP	Extraction procedure
EPA	(U.S.) Environmental Protection Agency
^{o}F	Degrees Fahrenheit
f/cc	fibers per cubic centimeter
Fed.Reg.	Federal Register
FID	Flame ionization detector
FOIA	(Federal) Freedom of Information Act
FWPCA	Federal Water Pollution Control Act
GC	Gas chromatograph
GC/MS	Gas chromatography/mass spectrometry
gal	gallon

gph	gallons per hour
GPR	Ground-penetrating radar
H2S	Hydrogen sulfide
HA	Halogenated aromatics
HAP	Hazardous air pollutant
HCFC	Hydrochlorofluorocarbons
HCS	(OHSA) Hazard Communication Standard
HREC	Historical Recognized Environmental Condition
HRS	Hazard Ranking System
HSWA	(Federal) Hazardous and Solid Waste Amendments of 1984
HWM	Hazardous waste management (facilities)
kPa	kilopascal
L	liter
LAER	Lowest achievable emission rate
LEL	Lower explosive limit
LNG	Liquid natural gas
LSP	Licensed site professionals (Massachusetts)
LUST	Fund Leaking underground storage tank (petroleum)
m3	cubic meter
MCL	Maximum contaminant level
MCLG	Maximum contaminant level goal
MCP	Massachusetts Contingency Plan
MeV	Million electron volts
mg/l	miligrams per liter
ml	milliliter
MMS	Minerals Management Service
MS	Mass spectrometry
MSDS	Material safety data sheet
NFA	No Further Action (letter)
NGWA	National Ground Water Association
N02	Nitrogen dioxide
Nox	Nitrogen oxides
NPDES	National Pollutant Discharge Elimination System
NPL	National Priorities List
NRC	Nuclear Regulatory Commission
O2	Oxygen
O3	Ozone
O&M	Operating and maintenance
ODCs	Other direct costs
OSHA	Occupational Safety and Health Act
OVA	Organic vapor analyzer
PCB	Polychlorinated biphenyl
PCi/l	Picocuries per liter
PEL	Permissible airborne exposure level
PID	Photoionization detector
POTW	Publicly owned treatment works
ppb	parts per billion
ppm	parts per million
PRPs	Potentially responsible parties
PSD	Prevention of significant deterioration
psi	pounds per square inch

PVC	Polyvinyl chloride
QA	Quality assurance
QC	Quality control
R.A.	Regional Administrator
R&D	Research and development
RAP	Remedial Assessment Plan
RCP	Response Claims Procedure
RCRA	(Federal) Resource Conservation and Recovery Act
REC	Recognized Environmental Condition
rem	Roentgen equivalent man [a measure of radiation]
RI/FS	Remedial Investigation & Feasibility Study
RMP	Risk management plan
RMPP	Risk Management and Prevention Programs
ROD	Record of Decision
RQ	Reportable quantity
RUST	Repair of Underground Storage Tank Program
SARA	(Federal) Superfund Amendments and Reauthorization Act of 1986
SDWA	(Federal) Safe Drinking Water Act
SEC	Securities and Exchange Commission
SOW	Scope of work
SPCC	Plan Spill Prevention Control and Countermeasure Plan
SPDES	State Pollutant Discharge Elimination System (New York)
SQG	Small quantity generator
SWDA	(Federal) Solid Waste Disposal Act of 1965
SWMA	Solid Waste Management Act (New Jersey)
SWMU	Solid waste management unit
T	Temperature
TAT	Turn-around time
TBC	To-be-considered (material)
TCLP	Toxicity characteristic leaching procedure
TOC	Total organic carbon
TSCA	(Federal) Toxic Substance Control Act
UEL	Upper explosive limit
USGS	United States Geological Survey
UST	Underground storage tank
UV	Ultraviolet
vs.	versus
VCP	Voluntary Cleanup
VOA	Volatile organic analyses
VOC	Volatile organic compound
WQA	(Federal) Water Quality Act

Glossary

Action-specific ARARS	usually technology-or activity-based requirements or limitations on actions or conditions involving specific substances.
Alpha particle	a positively charged nuclear particle, consisting of two neutrons and two I protons, emitted with high energy (3 to 8 Me V) during some nuclear I transformations.
Annual aggregate financial ability	the amount of money that would be required to pay for accidental releases that may occur within 12 months.
Area of concern	a term defined in (New Jersey's) Industrial Site Reclamation Act referring to any location where hazardous substances or wastes are or may be present.
As-Is Site Plan	drawing of the existing site layout, shows property boundaries, streets bordering the site, and building locations and configurations, other site features, and includes an accurate scale and the north direction.
Barrier remediation	prevents radon from entering the enclosure.
Becquerel	international unit of measurement for the rate of nuclear transformations (per second).
Beta particle	an electrically-charged particle [either positive (positron) or negative (electron)], ejected from the nucleus of an atom during radioactive decay; has the mass of an electron, can penetrate skin, up to about 1/4 inch.
Caveat emptor	meaning "let the buyer beware;" without a warranty the buyer takes the risk of quality upon himsel£
Certification (laboratories)	granted by some states to certain laboratories; ensures that laboratories meet certain minimum standards.
Chemical-specific ARARs	usually health-or risk-based values or methodologies used to determine acceptable concentrations of chemicals that may be found in, or discharged to, the environment. Maximum contaminant levels (MCLs) or other water quality criteria are examples of chemical-specific ARARs.
Composite sample	a single composite sample is made up of a combination of samples.
Conventional pollutant	EP A has identified five; biochemical oxygen demand, total suspended solids, pH, fecal coliform, and grease.

Criterial pollutant	a pollutant for which EP A has established, under the Clean Air Act, a national standard.
Curie	unit of measurement of the rate of nuclear transformations (per second), approximately equal to the radiation from one gram of radium.
Dilution ventilation	a method of radon remediation; increases the frequency of air exchange in a enclosure.
Direct discharge	one that is released into the 'waters of the United States.'
Discharge of dredged material	generally means any addition of reintroduction of the material, either directly or indirectly, including 'runoff or overflow from a contained land or water disposal area.'
Discharge of a pollutant	CW A defines this as any addition of a pollutant to receiving waters. Dredged material material excavated or dredged from water bodies.
Due diligence	identifying and evaluating environmental liabilities and risks is also known as performing due diligence.
Duplicate samples	provide information about the precision of a laboratory's results by providing a check to determine if the correct sampling technique or method was used; may be a mandatory requirement of some regulatory agencies. Duplicate samples should be collected at locations where suspected contaminant levels are believed to be at their highest concentrations.
Eminent domain	the inherent right of the state or its designated agents to appropriate or take private property provided that the property owner receives just compensation for the taking and there has been a determination that a valid public necessity exists for the taking.
Environmental due diligence process	the process used to investigate a commercial or industrial property (usually prior to completion of a real estate transaction) for contamination by hazardous wastes or hazardous substances.
Environmental professional	ASTM standards terminology used to describe a person possessing the necessary training and experience to conduct all aspects of the ESA and also the ability to develop valid conclusions regarding the presence of recognized environmental conditions. The terms is typically interchangeable with consultant, assessor, environmental assessor, engineering consultant, geologist, hydrogeologist, or certified engineering geologist.

Existing source	is one, the construction of which commenced before publication of an applicable proposed regulation setting NSPSs for that category.
Exposed	(to radiation) the individual is subjected to airborne concentration of radio nuclides with no allowance for the use of protective clothing, equipment or particle size.
Exposure assessment	the defining of exposure pathways and the calculation of the potential magnitude of exposure.
Field blanks	extra field samples that help to ensure "quality control" (QC).
Field-constructed tanks	vertical cylinders with a capacity of greater than 50,000 gallons. Field duplicates
Fill material	any material used primarily for either 'replacing an aquatic area with dry land' or raising the bottom elevation of water body.
First encountered ground water	the most-shallow ground water aquifer. Such an aquifer is the one most likely to be affected if surface discharges of waste have occurred.
Friable asbestos material	any material that contains more than one percent asbestos by weight, and can be crumbled, pulverized, or reduced to powder by hand pressure.
Gamma rays	electromagnetic radiation (similar to X-rays but higher in frequency spectrum) emitted by a radioactive substance. This radiation has no charge and is the most penetrating of the radiation forms.
General permit	authorizes a type of activity as long as it meets certain standards or conditions described in the permit.
Geophysical techniques	tests (including magnetometer surveys, ground penetrating radar, electrical resistivity, and seismic refraction) used to locate buried metallic objects, such as USTs and to map groundwater pathways.
Giga	a billion
Grab samples	uncomposited samples (usually taken for water).
Harmful quantities of oil discharge	any discharge that violates a water quality standard, or causes a film or sheen upon the surface of the water.
Hazard assessment	helps to define the potential adverse health or environmental effects associated with chemicals onsite, the potential magnitude of exposure, and the frequency of exposure.

Hazard identification	the identification of those chemicals that may pose a threat to human health or the environment.
Highest and best use	the most profitable likely use to which a property can be put.
Indemnification agreement	a written promise by one party that it will not hold another party liable; also called a "hold harmless clause."
Indirect point source discharges	discharges by industries of pollutants indirectly into U.S. waters through publicly-owned treatment works (POTWs).
Individual permit	authorizes a specific individual or entity to conduct a specific activity.
Joint and several liability	imposed in cases where the harm caused is indivisible-where there are multiple parties who are potentially responsible for the harm, but it cannot be determined with any degree of certainty which parties or defendants are responsible for which aspects of the damage.
Just compensation	the market value of the property in its highest and best use in cash as of the
Laboratory blanks	laboratory-grade samples that re analyzed in the same way as field samples.
Laboratory duplicates	unmarked samples whose results help to ensure QC.
Location-specific ARARs	restrict actions or contaminant concentrations in certain environmentally sensitive areas. Examples of areas regulated under various federal and state laws include floodplains, wetlands, and locations where endangered species or historically significant cultural resources are present
Matrix spikes	duplicate field samples that are spiked in the laboratory with measured quantities of contaminant; the volume of contamination in a matrix spike can then be subtracted from the overall quantity of contaminant in the pure sample to determine the contamination level in the original soil sample.
Maximum holding times	the total time a sample can be retained under proper storage conditions before analytical results are considered legally invalid.
Method blank	used to calibrate the instrument chosen to test a sample. For example, in spectrometry, a method blank containing deionized water is used to obtain a base reading; this reading is then deducted from the readings obtained from the samples.
Micro	one millionth

Negative declaration	a term defined in (New Jersey's) Industrial Site Reclamation Act.
New source	one for which construction began after publication of an applicable proposed regulation settings NSPS for that category.
New underground storage tanks (New USTs)	tanks used to contain regulated substances, and installed after December 22, 1988.
No Further Action letter	a term defined in (New Jersey's) Industrial Site Reclamation Act.
Opportunity costs	those costs associated with the loss of use of the property due to remedial activies.
Per occurrence financial ability	refers to the amount of money that must be available to pay the cost of one accidental release.
Permeability	the ability of liquid or gas to pass through; in this case, defined as the ability of a rock formation to transmit water.
Pesticide	any substance or mixture of substances intended to prevent, destroy, repel, or mitigate pests.
Phase I (ESA)	non-intrusive research conducted to evaluate the potential for significant onsite impacts.
Phase II (investigation)	an intrusive study of at the site's soil and ground water to evaluate the location and extent of impacts from historical uses.
Phase III	a framework for identifying remediation approaches so that a cleanup strategy can be developed.
Pico	one trillionth
Pits	floor drains that may be used to discharge hazardous wastes; also called "trenches."
Point source discharges	any discernible, confined and discrete conveyance, including but not limited to any pipe, ditch, channel, tunnel, conduit, well, discrete fissure, container, rolling stock, concentrated animal feed operation, or vessel or other floating craft, from which pollutants are or may be discharged into waters.

Pollutant	according to CW A, dredged spoil, solid waste, incinerator residue, sewage, garbage, sewage sludge, munitions, chemical wastes, biological materials, radioactive materials, heating wrecked or discharged equipment, rock, sand, cellar dirt and industrial, municipal, and agricultural waste discharged into water. See a/so conventional, non-conventional and toxic pollutants.
Portable organic vapor analyzer	used to screen volatile organic compounds, the most common contaminant present on commercial and industrial properties.
Potential to emit	calculated using the major stationary source's maximum design capacity (continuous year-round operation) following application of pollution controls.
Primary standards (for airborne pollutants)	EPA's standards which are designed to protect human health with an adequate margin of safety.
Pristine sites	sites unaffected by any negative impact from man or nature
Profiling	defining the subsurface features. This is used t define the lateral extent of a feature, such as a waste site, with little or no data on depth.
Proportional allocation method	involves allocating liability according to the percentage of total wastes found at the site that is clearly attributable to each potentially responsible party (pRP).
Pumping and treatment	a man-made system for extracting contaminated ground water and ~ treating it to remove contaminants; typically there is no re-injection of the water.
Quad map	a topographic map with an approximate scale of one inch to 2,000 feet; shows physical features such as wetlands, water bodies, roadways, mines, and buildings.
Quality assurance (QA)	a firm-wide program that establishes project policies, procedures, standards, and guidelines designed to produce an acceptable level of professional quality.
Quality control (QC) programs	establish project activities that apply the policies, procedures, standards, and guidelines designed to produce an acceptable level of professional quality.
Radioactive material	any material which emits, by spontaneous nuclear distergr4ation, corpuscle or electromagnetic emanations.
Radiation	includes alpha rays, beta rays, and gamma rays. Alpha and beta rays are corpuscle (particle) emanations; gamma rays are electromagnetic emanations.

Radiation area	any area accessible to personnel, in which radiation exposure could exceed 5 millirems in one hour, or 100 millirems in any five consecutive days.
Radon	a chemical element fomled by the disintegration of radium, is a heavy, colorless, odorless, and radioactive gas.
Real estate value	cost approach to value involves the estimation of the replacement cost of the utility of the improvements, from which is subtracted the estimated depreciation, to which is added to the value of the land. The land value is nomlally obtained from the market approach to value. income approach is applicable in estimating the value of real estate that is purchased primarily for its income-producing potential. Market data approach is an appraisal process in which the estimated market value of a property is based upon prices paid in actual market transactions, or upon current offering prices for similar real estate. Selected properties are compared to that under appraisal in order to arrive at an indicated value of the subject. The various features of the comparables are considered with respect to their absence, presence, and quality in the subject and adjustments are made to the unit sale price of the comparable property for these major differences.
Recharge	water management systems designed to inject water collected by surface systems back into ground water aquifers.
Regulated substances	"The teml regulated substances means (1) any substance defined [as hazardous substance under CERCLA]...(but not including any substance regulated as hazardous waste under [RCRA]), and (2) petroleum."
Releases	defined by federal and most state laws as any spilling, leaking, pouring, dumping, emitting, discharging, injecting, escaping, leaching, or disposing of hazardous waste or hazardous waste constituents into the environment.
Rem	(roentgen equivalent man) a measure of ionizing radiation dosage with the same biological effect as a roentgen of X- or gamma rays.
Remedial action	a teml defined in (New Jersey's) Industrial Site Reclamation Act.
Restricted area	any area where access is controlled by the employer for the purpose of limiting employee exposure to radiation or radioactive materials.
Restricted-use pesticides	pesticides that must be applied under the supervision of a certified applicator.

Risk characterization	combines information on the potential magnitude of exposure to chemicals from the site with dose-response information derived from the "hazard assessment." The result is a description of the potential nature and magnitude of health or environmental risk associated with each chemical onsite.
Roentgen	the international unit of measurement for X-radiation or gamma radiation
Sample price	the total price for all samples including samples necessary to test for QA.
Sampling round	a consultant's visit to the site to gather samples.
Secondary standards (for airborne pollutants)	EPA's standards designed to protect against environmental damage, such as damage to soils, crops, wildlife, weather, climate, and personal comfort.
Small quantity generators (SQGs)	defined as facilities producing less than 1,000 kilograms of hazardous waste per calendar month (kilograms per month), which is the equivalent of about 300 gallons or about five 55-gallon drums; note, however, some states define SQGs more narrowly.
Soil and ground water analyses	tests used to determine the presence of surficial or subsurface contamination and concentration levels; may involve soil borings and installations of test pits and/or observation wells.
Soil vapor surveys	surveys using gas chromatography equipment to map potential soil and groundwater contamination.
Sophisticated surface water sampling program	consists of more samples taken at several different depths and tests of such physical parameters as pH, conductivity, presence of dissolved oxygen, and temperature.
Sounding	a radar technique used to determine the depth of a buried object at a specific location.
Spikes	samples that have been fixed with a preservative.
Strict liability	indicates that fault is not a prerequisite to determining responsibility under the statue. The purchaser may be liable for cleanup costs even if the property was contaminated prior to his or her purchase. The original owner may also be held accountable for all or part of a property's cleanup costs despite compliance with all regulations in effect att he time of property transfer.

Suction piping	piping which does not require leak detection if it has the following two main characteristics Below-grade piping is sloped so that the contents will drain back into the storage tank if the suction is released. Each suction line has only one check valve which is located directly below the suction pump.
Super lien law	provides states the authority to impose a lien on any property requiring cleanup that involves state expense. The super lien law takes precedence over all other encumbrances, including first mortgage.
Tank testing	used to identify leaks in USTs.
Tax Assessor's Map	provides legal description, property boundaries, locations, types of easement (if any), and the locations of properties bordering the subject site.
Technology-based limits	the minimum level of water pollution control technology that a discharger must apply, regardless of which water body receives the effluent discharge.
Thief	a long, hollow, outer tube with evenly-spaced openings along its length and an inner tube of the same configuration. It is used for collecting samples by aligning the openings after inserting it into the material to be samples.
Title search	a process used to confirm legal ownership (of property).
To-be-considered materials	defined by EP A as "non-promulgated advisories or guidance used by federal or state government that are not legally binding and do not have the status of potential ARARs. In many cleanups, TBCs will be considered along with ARARs in determining the necessary level of cleanup.
Transportation-related release	a release of a hazardous substance during transportation or storage if the stored substance is moved under manifest and has not reached its designated destination.
Transported (radioactive materials)	not defined in OSHA regulations, but these are interpreted to mean moved from one location to another on a property, or from a restricted area to an unrestricted area.
Travel blanks	containers filled with deionized (DI) water that should accompany each container or sample.
Trenches	floor drains which may be used to discharge hazardous wastes; also called "pits."
Trier	a hollow rod that will produce a core sample when thrust into unconsolidated, moist materials.

Underground storage tanks (USTs)	tanks that store regulated substances and have at least 10 percent of their volume, including the contents of connected pipes, underground.
User	ASTM terminology for the person [usually the client] responsible for providing this data to the environmental professional.
Vadose	unsaturated zone.
Warranty	a pledge that a certain matter is true. For example, a seller may warrant that the facility has obtained all federal and state environmental permits required for continued operation.
Waste management units	physical areas of the site where hazardous wastes are generated, used, stored, or treated.
Waters of the United States	(i) navigable waters; waters of the u.s. subject to tidal action shore-ward to the mean high water mark and are presently used or may be used to transport interstate or foreign transport. The term includes coastal and inland waters, lakes, rivers, and streams that are navigable and the oceans; (ii) tributaries of navigable waters (iii) wetlands, including those adjacent to waters of the United States.
Water quality-limited requirements	the pollution controls that dischargers in selected locations must apply to ensure their discharges do not cause violations of the water quality standards set for that receiving body.
Well-casing volume	determined by multiplying the total depth of the well from ground surface to the bottom of the water column by the cross-sectional area.
Wellhead protection areas	surface and sub-surface areas surroundIng water wells or well fields supplying public water systems
Wetlands	definition varies by state, generally one or more of the following criteria apply . Whether or not the area is permanently wet during most of the year. . Whether or not wetlands-related submergent and emergent plants are present. . Whether or not characteristic soil types are present.

Project Summary

Executive Summary

Executive Summary

Site Description and Current Operations

Stantec Consulting Ltd. (Stantec) conducted a Phase I Environmental Site Assessment (Phase I ESA) on a portion of the property municipally described as 1900 Cyrville Road, Ottawa, Ontario (ON). The Phase I ESA was conducted for Costco Wholesale Canada Ltd. (Costco) for due diligence purposes in support of the proposed construction and operation of a new retail gasoline outlet at a 45 m x 65 m parcel of land (hereinafter referred to as the "Site"), situated at the northeastern portion of the 1900 Cyrville Road property. The purpose of the Phase I ESA was to assess if evidence of potential or actual environmental contamination exists in connection with the Site, as a result of current or past activities on the Site or neighboring properties.

Records Review

The Site consisted of a portion of access road, parking area, and associated landscaped areas and was situated on the northeastern portion of the property located at 1900 Cyrville Road, Ottawa, Ontario. The property at 1900 Cyrville Road was observed to be an operating Costco Business Centre at the time of the site visit and was situated within a commercial business area. Based on the records review, the 1900 Cyrville Road property which includes the Site, was developed after 1985 and was used for agricultural/ vacant land purposes prior to development.

Based on a review of the historical information gathered during the Phase I ESA, the following potential environmental concern was identified on-site:

- Presence of fill material of unknown environmental quality

The following potential environmental concerns were identified for the Site resulting from current and past activities at adjacent and neighbouring properties:

- Hazardous waste generation and a former automotive centre at the 1900 Cyrville Road property, located 30 m west of the Site
- Bus operation activities, hazardous waste generation, and the presence of a fuel storage tank at 1720 Innes Road and 1901 and 1925 Cyrville Road (formerly 1550 Innes Road), approximately 30 m east of the Site
- Oil spills of unknown quantity at 1901 Cyrville Road, located approximately 30 m east of the Site

Site Visit/ Interviews

The site visit was conducted by Mia Dinh of Stantec on May 9, 2025. Stantec was unaccompanied during the site visit and no interviews were conducted. At the time of the visit, the Site was used for parking and an access route to the Costco facility with some associated landscaped areas.

The following relevant observations were made at the time of the site visit:

- The Site was bounded to the north by a small Costco parking lot, followed by Innes Road and commercial building and residential dwellings beyond.
- The Site was bounded to the east by Cyrville Road and commercial properties beyond.
- The Site was bounded to the south by a Costco parking lot, followed by Green's Creek, commercial/ industrial properties, and a railway beyond.
- The Site was bounded to the west by Costco parking and the Costco Business Centre store, beyond which was a gas station, travel lodge, Green's Creek and Highway 417.

Conclusions

The Phase I ESA has revealed evidence of potential environmental contamination associated with the Site, as follows:

- Fill material of unknown environmental quality may be present at the Site based on information from water well records identified in the ERIS report and based on the anticipated placement of fill beneath the Site during the development of the Sitre as a parking lot and access road.

Conclusions (continued)

The Phase I ESA has also revealed evidence of potential environmental contamination associated with activities at properties neighbouring the Site, as follows:

- Bus operation activities, hazardous waste generation, and the presence of the fuel storage tank at properties east adjacent to the Site, at 1720 Innes Road and 1901 and 1925 Cyrville Road (formerly 1550 Innes Road)
- Oil spills of unknown quantity at 1901 Cyrville Road
- Hazardous waste generation and the presence the former automotive centre at 1900 Cyrville Road to the west of the Site.

Based on the findings from the Phase I ESA, a Phase II ESA is recommended to assess the potential concerns identified above.

The statements made in this Executive Summary are subject to the same limitations included in the Closure (Section 7.0) and are to be read in conjunction with the remainder of this report.

The environmental site assessment and preparation of this report were completed in general accordance with the objectives, requirements or standards of the Canadian Standards Association (CSA) Z768-01 *Phase I Environmental Site Assessment* Standard (R2022).

2.0 Introduction

2.1 Objectives

Stantec Consulting Ltd. (Stantec) conducted a Phase I Environmental Site Assessment (Phase I ESA) on a portion of the property municipally described as 1900 Cyrville Road, Ottawa, Ontario (ON). The Phase I ESA was conducted for Costco Wholesale Canada Ltd. (Costco) for due diligence purposes in support of the proposed construction and operation of a new retail gasoline outlet at a 45 m x 65 m parcel of land (hereinafter referred to as the "Site"), situated at the northeastern portion of the 1900 Cyrville Road property. The purpose of the Phase I ESA was to assess if evidence of potential or actual environmental contamination exists in connection with the Site, as a result of current or past activities on the Site or neighboring properties.

A site plan is included in **Appendix A** and selected photographs of the Site and adjacent and nearby properties are included in **Appendix B**.

2.2 Scope of Work

The Phase I ESA was conducted in general accordance with Stantec's Proposal Number 1146378 dated April 25, 2025 and the Canadian Standards Association's (CSA) *Phase I Environmental Site Assessment* Standard Z768-01 (R2022). The Phase I ESA consisted of the following tasks:

- Records review including, but not limited to, publicly available city directories, aerial photographs, fire insurance plans, geological and topographic maps;
- Purchase of a database report from Environmental Risk Information Services (ERIS) that consisted of a search of all available federal, provincial, and private databases within a 250 m radius from the boundaries of the Site;
- Purchase and review of two expanded radius reports from ERIS, consistent with the Costco development requirements. One of the expanded ERIS reports presents the results of a records search conducted for a 1600 m radius from the centroid of the Site within the Record of Site Condition (RSC), Ontario Regulation 347 Waste Receivers Summary (REC), Federal Conviction (FCON), Ontario Spills (SPL), and Waste Disposal Sites (WDS) databases. The other expanded radius report from ERIS presents the results of a records search for a 800 m radius from the centroid of the Site within the Contaminated Sites on Federal Land (FCS), Fuel Storage Tank (FST), and Private and Retail Fuel Storage Tanks (PRT) databases;
- A request to the Ontario Ministry of the Environment, Conservation, and Parks (MECP) for documents related to various environmental concerns associated with the Site;
- A request to Opta Information Intelligence (Opta) for fire insurance plans and/or property underwriters' reports/plans available for the Site;
- A review of available environmental databases and records;
- A review of previous environmental reports and existing title searches, if made available;
- Interviews with persons having knowledge of the Site, if available;
- A site visit; and
- Evaluation of information and preparation of the report provided herein.

A Phase I ESA does not include sampling or testing of air, soil, groundwater, surface water or building materials.

The assessment of the Site for the potential presence of hazardous building materials was based on the age of the building(s) and components, and a non-intrusive visual review of the Site. No sampling of materials was conducted. A Phase I ESA does not constitute a Hazardous Materials Survey or Designated Substances Survey.

The assessment of the Site for microbial contamination and moisture damage was made during the walk through of the Site. This assessment was visual only and not every area was assessed. No sampling or intrusive investigation was conducted.

For this Phase I ESA, the following enhancements to the CSA Standard were made:

- Select database parameters were searched up to a maximum of 1600 m from the centroid of the Site as required in the Section 16.E of the Costco Development Guidelines.
- A limited environmental site sensitivity search was conducted to identify water bodies, wetlands, and other selected sensitive features within 1 km of the Site. Available databases from the Ministry of Natural Resources and Forestry (MNRF), the Department of Fisheries and Oceans Canada (DFO), Bird Studies

Canada, and Environment and Climate Change Canada (ECCC) were searched as part of this desktop review.

The site visit was conducted by Mia Dinh of Stantec on May 9, 2025. The Site and readily visible and publicly accessible portions of adjoining and neighbouring properties were observed for the presence of potential sources of environmental contamination. No interviews associated with the Site were conducted during the Phase I ESA. The professional qualifications of the project team are provided in **Appendix C**.

2.3 Regulatory Framework

CSA Standard Z768-01 (R2022) establishes principles and practices that are applicable to a Phase I ESA. The purpose of a Phase I ESA is to identify actual and potential site contamination. Such identification involves the evaluation and reporting of existing information collected through records review, site visits, and interviews. Phase I ESAs may assist in reducing uncertainty about potential environmental liabilities and may be a basis for further investigation of a property. Phase I ESAs may be used to make informed decisions about property transactions, to identify certain baseline environmental conditions, to assist in meeting regulatory requirements, and as an initial step in site remediation. This Phase I ESA, however, was not completed for the purposes of meeting the Records of Site Condition requirements described in Ontario Regulation 153/04, as amended.

Because a Phase I ESA does not include such tasks as sample gathering, laboratory testing, or intrusive investigations, a Phase I ESA report can, in most cases, only describe the potential of contamination being present or absent at a property. If there are previous soil or groundwater sample results available, the data can be compared to applicable Federal and/or Provincial numerical standards for soil and groundwater quality for specific land and groundwater uses. A Phase I ESA performed in accordance with the requirements of CSA Standard Z768-01 (R2022) is intended to reduce, but not necessarily eliminate, uncertainty regarding the potential for contamination of a property.

In addition, a Phase I ESA in accordance with the requirements of CSA Standard Z768-01 (R2022) involves a review of any site buildings for the potential presence of hazardous materials related to building components and materials. Specific Federal and/or Provincial regulations, guidelines or codes of practice exist for the individual hazardous materials. Where required, this documentation was used to determine appropriate conclusions and formulate appropriate recommendations.

3.0 Records Review

3.1 Information Sources

The applicable search distance for the records review included the Site, properties immediately adjoining the Site and other neighbouring properties where activities considered to be potential sources of environmental contamination were apparent. Information sources obtained and reviewed as part of the records review are listed below.

SOURCE	INFORMATION/CONTACT
Aerial Photographs	1930 - National Air Photo Library, Roll A3068, Photo 0081 1945, 1955, 1985 - ERIS Historical Aerials - National Air Photo Library 1965, 1976, 1991, 2002, 2005, 2007, 2011, 2014, 2015, 2017, 2021 - City of Ottawa, geoOttawa
Fire Insurance Plans	Opta - A request was submitted for fire insurance plans and/or insurance underwriters' reports for the Site. No records were identified for the Site.
City Directories	Searched by ERIS: Digital Business Directory - 1960, 1966, 1971, 1976, 1981-82, 1987, 1991, 1994. 1997, 2000, 2006-07, 2012, 2017, 2021, 2023. Multiple retail store records were identified for 1900 Cyrville Road. Relevant findings from the city directory search for the Phase One Study Area are incorporated into Section 5.8
Previous Environmental Reports	"Phase One Environmental Site Assessment â€“ 1900 and 1960 Cyrville Road, Ottawa, Ontario", prepared for Costco Wholesale, prepared by Stantec Consulting Ltd. (Stantec), dated 2022
Company Records	No company records were provided to Stantec for review.
Geological and Geotechnical Reports	No geological and geotechnical reports were provided to Stantec for review.
Regulatory Infractions	A request submitted to the MECP's Freedom of Information and Protection of Privacy Office included a search for occurrence reports and general information from the District Office, investigation documents from the Investigations and Enforcement Branch, and orders from the Sector Compliance Branch pertaining to the municipal addresses of the Site, current/former tenants of the Site, owners of the Site, and the municipal addresses of adjoining properties.
Reportable Spill Occurrences	ERIS - Ontario Spills
Contaminated Sites	"Inventory of Coal Gasification Plant Waste Sites in Ontario" (April 1987) "Inventory of Industrial Sites Producing or Using Coal Tar and Related Tars in Ontario" (November 1988) ERIS - MECP Brownfield Environmental Site Registry

SOURCE	INFORMATION/CONTACT
Hazardous Waste Generator Registration	ERIS - Ontario Regulation 347 Waste Generators Summary
PCB Storage Sites	ERIS - National PCB Inventory database, Ontario Inventory of PCB Storage Sites
Landfill Records	"Waste Disposal Site Inventory" (June 1991) ERIS - Waste Disposal Sites - MOE CA Inventory, Ontario Regulation 347 Waste Receivers Summary
Underground & Aboveground Storage Tanks	ERIS - Technical Standards and Safety Authority (TSSA) Fuel Storage Tank Database
Water Well Records	ERIS - Water Well Information System (WWIS)
Other Available Information	"Bedrock Geology of Ontario", Ontario Geological Survey, GIS-based geological map, Data 126-REV 1, Scale 1:250,000, 2011. "Quaternary Geology of Ontario", Ontario Geological Survey, GIS-based geological map, Data 128-REV, Scale 1:1,000,000, 1991.

3.2 Previous Reports

Previous environmental reports provided to Stantec are described below.

Report Name:	Prepared By:	Date:	Scope and Conclusions:
Phase One Environmental Site Assessment – 1900 & 1960 Cyrville Road, Ottawa, Ontario	Stantec Consulting Ltd.	February 2022	Stantec Consulting Ltd. (Stantec) was retained by Costco Wholesale Corporation (Costco) to conduct a Phase One Environmental Site Assessment (ESA) for the properties located at 1900 and 1960 Cyrville Road in Ottawa, Ontario. The purpose of the investigation was for due diligence purposes as part of Costco's proposed plans to purchase the Phase One Property from the owner at the time of the investigation: Colonnade Bridgeport. The study identified five Areas of Potential Environmental Concern at the Phase One Property with thirteen associated Potentially Contaminating Activities. Petroleum hydrocarbons, volatile organic compounds, polycyclic aromatic hydrocarbons, metals and inorganics, and polychlorinated biphenyls were listed as Contaminants of Potential Concern. The report concluded that a Phase Two ESA is required at the Phase One Property.

3.0 Records Review (continued)

3.3 Regulatory Information

Available environmental databases and records were searched to determine if the Site and adjacent or neighbouring properties were listed. The databases and search results are presented below.

ERIS

Three ERIS Reports were purchased for the Site; the first consisted of a search of all databases within a 250 m radius of the perimeter of the Site, while the second and third ERIS reports consisted of a search of select databases within a 800 m and 1600 m radius, respectively, from the centroid of the Site, in accordance with section 16.E of Costco's development guidelines. Based on a review of the ERIS reports, the following records were available for 1900 Cyrville Road, on a portion of which the Site is located:

- A Certificate of Approval for municipal sewage at 1900 Cyrville Road for Cornerstone Builders Ltd. in 1998. This activity is not expected to represent potential environmental concerns to the Site.
- Registrations of heating system in 2012 and of standby power system in 2012 (two records). These registrations are not considered to represent potential environmental concerns to the Site.
- Price Club Canada Inc. (ON1315404), at 1900 Cyrville Road, generating Waste Class 264 (photoprocessing wastes) in 1992-2001 (three records). Costco (ON7840845), at 1900 Cyrville Road, was registered as a generator of hazardous wastes in 2016, 2018, 2020, and 2021 for various wastes, and represents a potential environmental concern to the Site.
- Four records within the Pesticides Register for Costco, at 1900 Cyrville Road. The records listed Costco as "Vendor", Limited Vendor", or "Retail Vendor Class 03" (no dates), or "Limited Vendor" in 2019. The activity does not represent a potential environmental concern to the Site
- Grey water and grease spill (unknown quantity) to catch basin was recorded in 2012 at 1900 Cyrville Road; environmental impact not anticipated. Discharge of refrigerant to atmosphere in 2014 was reported at 1900 Cyrville Road. These activities do not represent potential environmental concerns to the Site.

In summary, hazardous waste generation at 1900 Cyrville Road is considered to represent a potential environmental concern to the Site.

Complete copies of the ERIS reports are included in **Appendix D**. Relevant listings for neighbouring properties are discussed in Section 5.8.

MECP Freedom of Information and Privacy Protection Office

A request to the MECP regarding environmental concerns relating to the Site was submitted. A response from the MECP indicated that there was one inactive record for Municipal and Private Sewage Works at 1900 Cyrville Road in 1999. The activity does not represent a potential environmental concern to the Site. A copy of the request and the associated response is included in **Appendix D**.

Technical Standards and Safety Authority (TSSA)

A request was submitted to the TSSA for records pertaining to outstanding instructions, incident reports, fuel oil spills, contamination records, retail facilities or licensed underground storage tanks on the Site. A response from the TSSA dated May 1st, 2025 indicated that there are two propane tank records associated with the municipal address 1900 Cyrville Road. A copy of the response and the fuel safety records are included in **Appendix D**.

Inventory of Coal Gasification Plant Waste Sites in Ontario (dated April 1987)

No properties within 1 km of the Site were listed as a former coal gasification site.

Inventory of Industrial Sites Producing or Using Coal Tars in Ontario (dated November 1988)

No properties within 1 km of the Site were listed as a former coal tar industrial site.

MECP Waste Disposal Site Inventory (dated June 1991)

The report titled Waste Disposal Site Inventory, dated June 1991, prepared by the Ministry of the Environment (now the MECP) was also reviewed. This report is a native data source for the Waste Disposal Sites - MOE 1991 Historical Approval Inventory database. Based on the coordinates provided in the inventory, one closed Class A3 waste disposal site (A460703) was identified at a distance of approximately one kilometre southeast of the Site. The facility was reportedly closed on July 12, 1977. Class A3 sites are described as municipal/domestic waste disposal sites in urban areas which have been closed for less than 10 years (at the time). No other records for waste disposal sites were listed within one kilometre of the Site.

Stantec reviewed the report titled, Old Landfill Management Strategy, Phase 1 - Identification of Sites, City of Ottawa, Ontario, dated October 2004, prepared by Golder Associates Ltd. (Golder) for the City of Ottawa. Apart

from a record identifying the 44-hectare (ha) Ridge Road landfill approximately 1.4 kilometres southeast of the Site (i.e., the waste disposal site described above), no other records for waste disposal sites were listed for locations within one kilometre of the Site.
Given the separation distance of the closed waste disposal site from the Site, the presence of a tributary of Green's Creek located approximately 140 m north of the Ridge Road landfill, and the presence of Green's Creek situated approximately 140 m south and downgradient of the Site, the closed landfill is not anticipated to represent an environmental concern to the Site.

Area of Natural & Scientific Interest (ANSI)
Based on information reviewed on the MNFR Make a map: Natural Heritage Areas database, one area of natural and scientific interest (ANSI), identified as Green's Creek Conservation Area, is located approximately 920 m northeast of the Site. Additionally, the MNFR describes the wooded area of Green's Creek starting from approximately 20 m east of the 1900 Cyrville Road property as a "woodland area". The MNRF does not identify if a woodland area is "significant". Woodland areas are considered as a starting point for municipalities to help assess and determine significant woodlands within their jurisdictions.
The City of Ottawa geoOttawa online mapping tool was reviewed to determine the woodland area designation. The woodland area is only described as "wooded lot" and "tree canopy" by the City of Ottawa.
Based on the separation distance from Green's Creek Conservation Area, and the absence of a formal designation by the municipality for the woodland area, it is not anticipated that the Site is in proximity to an environmentally sensitive area.

HWIN Registered Generator List
Based on the ERIS report, the Costco facility at 1900 Cyrville Road, a portion of which encompasses the Site, was registered as a generator of hazardous wastes in 2016, 2018, 2020, and 2021 for various wastes. Based on the proximity of the building at 1900 Cyrville Road to the Site, the generation of hazardous wastes at 1900 Cyrville Road is considered to represent a potential environmental concern to the Site.

Records for hazardous waste generation for neighbouring properties within 250 m of the Site identified by ERIS are discussed in Section 5.8.

Ontario Inventory of PCB Storage Sites and National PCB Inventory
No records relating to PCB storage at the Site or surrounding properties within 250 m of the Site were identified by ERIS.

MECP Brownfields Environmental Site Registry
ERIS searched the Environmental Registry database for properties within 250 m of the Site boundaries. No records were listed for the site or the Phase I study area.
Stantec also attempted the online Brownfields Environmental Site Registry for RSCs and Transition Notices ("TNs") filed in the Registry since October 1, 2004. However, the registry data is under review and was not available to the public at the time of this report.

Water Well Information System (WWIS), searched by ERIS
The ERIS report listed twenty-one (21) water well records for wells within 250 m of the Site. The wells were reportedly installed between 1954 and 2020 for observation/monitoring purposes. Subsurface conditions encountered during installation of these wells generally consisted of sand, fill, gravel, underlain by loose clay and silt to a maximum depth of approximately 6.7 metres below ground surface (m BGS).

3.4 Physical Setting

3.4.1 Surficial Geology

Based on Ontario Geological Survey (OGS) surficial geology mapping, regional surficial geology in the area of the Site and neighbouring areas predominantly consists of fine-textured glaciomarine deposits comprised of silt and clay with minor sand and gravel, massive to well laminated. Older alluvial deposits comprised of clay, silt, sand and gravel, possibly containing organic remains, are present approximately 240 m northeast of the Site. Based on the water well records identified in the ERIS report, the surficial geology consisted of sand, fill, gravel,

underlain by loose clay and silt to a maximum depth of approximately 6.7 metres below ground surface (m BGS). Surficial geology at the Site and surrounding properties is illustrated on **Figure No. 3, Appendix A**.

3.4.2 Surface Water Drainage

The surface of the Site at the time of the site visit consisted of asphalt parking, access lanes, and landscaped areas. Surface water drainage is expected to be directed to catch basins which are likely directed towards Green's Creek.

3.4.3 Topography and Regional Drainage

Based on the MNRF topographic online mapping tool, the regional topography in the area of the Site and the neighbouring properties slopes towards the Ottawa River to the north and regional surface drainage (inferred regional groundwater flow direction) is expected to be northerly. Local groundwater flow direction may be to the south or east toward Green's Creek. The direction of groundwater flow may also be influenced by the presence of subsurface utility corridors. Locally, the topography is relatively flat with areas sloping towards Green's Creek (in various directions).

3.4.4 Bedrock Geology

Based on OGS bedrock geology mapping, bedrock in the area of the Site consists of Georgian Bay, Blue Mountain, and Billings Formation shale, limestone, dolostone, and siltstone of the Collingwood and Eastview Members as depicted on **Figure No. 4, Appendix A**.

ERIS searched the Borehole, Drill Hole Database, and Water Well Information System databases for properties within the Phase One Study Area. Twenty-one records were listed for the Site and the neighbouring properties. The records indicate that the depth to bedrock is variable. A domestic supply well record (1954) for 1494 Innes Road, adjacent and to the west of the 1900 Cyrville Road property, indicated loose black shale bedrock at 6.7 m BGS.

4.0 Site Description

4.1 Property Information

The Site is located to the northeast of the existing Costco Business Centre building at 1900 Cyrville Road, Ottawa ON. The Site is bounded by a parking area, followed by Innes Road to the north, parking area followed by the Costco Business Centre building to the west, a parking lot to the south, and Cyrville Road to the east. Local zoning details are illustrated on **Figure No. 5, Appendix A.**

4.2 On-Site Buildings and Structures

No buildings or structures were present at the Site at the time of site visit.

4.3 Historical Land Use

Historical land use for the Site was determined through historical records listed in Section 3.0.

Period/Date:	Land Use:
1930	The Site consists of undeveloped agricultural land. 1900 Cyrville Road and most of 1960 Cyrville Road are not visible. Innes Road is present, and Cyrville Road, north of Innes Road is also present. The resolution is poor.
1945 to 1955	Two to three structures, likely farmstead structures, are visible at 1900 Cyrville Road. The surrounding area appears relatively unchanged in the 1945 and 1955 aerial photographs compared to the 1930 aerial photograph. A railway line, located approximately 450 m south of the Site, is visible on both the 1945 and 1955 aerial photographs
1965	The Site appears relatively unchanged since 1955. Commercial structures and parking lots are present at 1501 Innes Road and 1750 Cyrville Road and residential dwellings are visible to the north
1976	The Site appears to be vacant land. A new structure is present at the corner of Innes Road and Cyrville Road, and the former structures are no longer present at 1900 Cyrville Road. Green's Creek appears to have been realigned to resemble the present-day alignment. Cyrville Road, south of Innes Road, is present. To the east of the 1900 Cyrville Road property, at 1720 Innes Road and 1901 and 1925 Cyrville Road, a large commercial building and large parking lot containing school buses is present. To the southeast of the 1900 Cyrville Road property, at 1951 Cyrville Road, a small commercial building and parking lot is present. Additional commercial development is visible to the northwest and additional residential development is present to the north of the 1900 Cyrville Road property. The commercial structure at 1750 Cyrville Road is no longer present. Highway 417 is present to the southwest of the 1900 Cyrville Road property
1985	A new structure is present at the Site. At 1486 and 1494 Innes Road, a large commercial structure with parking is present. Additional residential development has occurred to the north and commercial development is limited
1991	Parking lot area and a commercial structure are present at 1900 Cyrville Road similar to the present-day configuration. The property at 1960 Cyrville Road is undeveloped and vacant. Retail fuel outlets at 1494 Innes Road and 1741 Cyrville Road are present, and a pump island is visible at 1951 Cyrville Road. The remainder of neighbouring properties are relatively unchanged from the previous aerial photograph
1999	The Site aligns with the present-day configuration. The commercial structure and parking lot at 1960 Cyrville Road are present. To the east, the commercial building and bus parking lot are present at 1901 and 1925 Cyrville Road, and a new commercial development and parking lot is present at 1720 Innes Road. The property at 1616 Cyrville Road has been redeveloped to a commercial structure and parking lot and the commercial structure at 1501 Innes is no longer present.
2002	The Site and 1900 Cyrville Road property appear unchanged in the 2002 photograph. To the east, the commercial building and bus parking lot at 1901 and 1925 Cyrville Road are no longer present, and a new commercial structure has been developed. Further to the north and east, additional commercial development has occurred at 1880 and 1930 Innes Road and 1750 Cyrville Road. At 1497,

Period/Date:	Land Use:
	1499, and 1501 Innes Road, the previous commercial structure is no longer present, and earthworks are visible
2005, 2007, 2011, 2014, 2015, 2017, and 2021	No major changes to the Site and neighbouring properties. Three ASTs are visible at the former pump island at 1901 Cyrville Road in 2007 and 1925 Cyrville Road is developed into an electrical substation/ transformation station in 2008. In 2017, the construction of Ottawa Fire Station No.36 has been started at 1935 Cyrville Road and in 2019, the public works yard that previously spanned 1935 and 1951 Cyrville Road is now at 1951 Cyrville Road with a new commercial development at 1935 Cyrville Road.

5.0 Site Visit Findings

5.1 Current Site Operations

At the time of the site visit, the Site was used for parking and as an access lane to the Costco parking lots.

5.2 Waste Generation and Storage

5.2.1 Solid and Liquid Wastes

No hazardous waste generation or storage and no wastewater discharges were identified at the Site.

5.2.2 Drains, Sumps, Septic Systems and Oil Water Separators

Two catch basins were observed at the Site. No sumps, septic systems, interceptors, or separators were identified on the Site at the time of the site visit.

5.2.3 Air Discharges and Odours

No sources of air emissions that are suspected to result in residual land contamination were identified on the Site. Further, no strong, pungent, or unusual odours were observed at the Site during the site visit.

5.3 Fuel and Chemical Storage

5.3.1 Underground Storage Tanks (USTs)

No chemical or fuel storage USTs were identified on the Site. Further, no vent or fill pipes indicating the potential presence of an abandoned or decommissioned UST were observed.

5.3.2 Aboveground Storage Tanks (ASTs)

No chemical or fuel storage ASTs were identified on the Site.

5.3.3 Other Storage Containers

No chemical storage was observed on the Site.

5.4 Building Systems/Equipment

5.4.1 Heating and Cooling Systems

No heating or cooling systems were identified on the Site.

5.4.2 Hydraulic Equipment

No hydraulic equipment was identified on the Site.

5.5 Exterior Site Observations

5.5.1 Surface Features

The surfaces of the Site consisted of asphalt and some associated landscaped areas. No stained surficial materials or stressed vegetation were observed on the Site

5.0 Site Visit Findings (continued)

5.5 Exterior Site Observations (continued)

5.5.2 Fill Materials

Based on the water well records identified in the ERIS report, fill materials were identified present in multiple well records. It is expected that fill materials were imported to support the construction of the asphalt parking lot, the access lane and the associated landscaped areas.

5.5.3 Wells

No abandoned or existing wells (water, oil, gas or disposal) were identified on the Site.

5.6 Hazardous Building Materials

5.6.1 Asbestos-Containing Materials (ACMs)

The common use of friable (crumbles easily by hand pressure) asbestos-containing materials (ACMs) in construction generally ceased voluntarily in the mid to late 1970s. Non-friable asbestos-containing products continued to be manufactured, imported and used in Canada until asbestos products were formally banned in December 2018. Asbestos was used in thousands of building products and the common uses of friable ACMs included boiler and pipe insulation, and spray-on fireproofing. Asbestos was also used in many manufactured products such as floor tiles, ceiling tiles, transite cement products and various other construction materials. Vermiculite used as insulation may be contaminated with asbestos fibres.

No suspected ACMs were identified on the Site during the site visit.

5.6.2 Polychlorinated Biphenyls (PCBs)

Polychlorinated Biphenyls (PCBs) were imported into Canada from approximately the 1930s to the 1970s. PCBs were widely used in the following:

- Coolants and lubricants for electrical equipment such as transformers and capacitors, including capacitors that may have been used in ballasts for fluorescent light fixtures.
- Industrial materials, including sealant and caulking compounds, inks and paint additives.

PCBs were restricted in Canada in 1977 with the introduction of the *Chlorobiphenyls Regulations*, which prohibited the manufacture, processing, import and sale of PCBs for most commercial, manufacturing or processing uses immediately. The regulation also established similar prohibitions on sealed systems such as capacitors, electrical transformers and associated electrical equipment manufactured in or imported into Canada on or after July 1, 1980.

The potential for PCBs to be present in buildings is expected to decrease significantly after approximately 1977. Considering the potential that existing stocks of materials may have been distributed and used after the initial ban, along with information published by the Government of Canada in relation to whether or not buildings may be subject to the PCB Regulations, it is reasonable to expect that the potential for PCB-containing items to be present is limited in buildings constructed after 1985.

Subsequently, the *PCB Regulations* (SOR/2008-273), which came into effect in 2008 (with amendments coming into force in 2015), implemented deadlines on equipment already in use and in storage, in order to accelerate the elimination of PCBs from the Canadian environment. Under SOR/2008-273, the following general end-of-use deadlines are of current relevance (notwithstanding extensions granted by the Minister):

- December 31, 2009:
    - Equipment containing PCBs greater than 500 parts per million (ppm), with exceptions for equipment at electrical generation sites.
    - Equipment containing PCBs between 50 and 500 ppm at "prescribed sites" such as childcare facilities, hospitals, schools, seniors care facilities, and food/water processing facilities.

- December 31, 2025:

- Equipment containing PCBs greater than 500 ppm at electrical generation, transmission or distribution facilities.
- Equipment containing PCBs between 50 and 500 ppm at non "prescribed sites".
- Light ballasts, pole-mounted electrical transformers/auxiliary electrical equipment containing PCBs greater than 50 ppm.

No PCBs were identified on the Site during the site visit.

5.6.3 Lead-Based Materials

Lead is commonly found in buildings within materials including the following:

- Historical uses:
  - Plumbing pipes and parts such as faucets and valves (pre-1975)
  - Solder used on copper domestic pipes (1930 - 1986)
  - Mini vinyl window blinds (pre-late 1990s)

- Current common uses:
  - Caulking on bell fittings for cast iron drainage pipes
  - Electrical equipment and wiring
  - Batteries - potentially in terminal posts and lead-acid battery fluid (e.g., emergency exit signage batteries, stored vehicles, or other batteries)
  - Lead sheeting (e.g., x-ray rooms, bank safes/vaults, other secure rooms)
  - Stained glass
  - Vent and pipe flashings, typically on rooftop penetrations

Lead was also incorporated into paints and ceramic tile and pottery glazes to accelerate drying, increase durability, maintain a fresh appearance, enhance colours, and resist moisture that causes corrosion. In Canada, the *Surface Coating Materials Regulations* (SOR/2016-193) under the federal *Hazardous Products Act* indicate that surface coatings must not contain more than 90 milligrams/kilogram of lead (equivalent to 90 parts per million [ppm]), with the exceptions of the following:

- Anti-corrosive or anti-weathering coatings on interior or exterior surfaces of agricultural buildings
- Anti-corrosive or anti-weathering coatings on structures, other than buildings, having an agricultural or public purpose
- Touch-up paints
- Outdoor graphic art or art/craft/hobby paints if not used by children

No lead-based materials were identified on the Site.

5.6.4 Urea Formaldehyde Foam Insulation (UFFI)

Urea Formaldehyde Foam Insulation (UFFI) was developed in Europe in the 1950s as an improved means of insulating difficult-to-reach cavities in buildings with wood-framed walls. During the 1970s, when concerns about energy efficiency led to efforts to improve insulation in Canada, UFFI was widely used for insulating and retrofitting industrial, commercial, and older residential buildings. UFFI is more commonly found in homes built or retrofitted in the 1970s, often in basements, wall cavities, crawl spaces, and attics. Most installations occurred between 1977 and its ban in Canada in December 1980.

No UFFI was identified on the Site.

5.6.5 Ozone-Depleting Substances (ODSs)

Ozone-depleting substances (ODSs) are often described by the general term "halocarbons", and generally include the following:

- Halons, which have been mainly used in fire extinguishers and fire suppression systems.
- Chlorofluorocarbons (CFCs - e.g., R-12, R112), carbon tetrachloride, and methyl chloroform, which have been used in many applications, including refrigeration, air conditioning, cleaning of electronics components, and as solvents.
- Hydrochlorofluorocarbons (HCFCs - e.g., R-22, R-123), which were developed for use as transitional chemicals to replace CFCs.

The *Montreal Protocol on Substances that Deplete the Ozone Layer*, which went into effect on January 1, 1989, regulated the production and consumption of ODSs. Under the initial agreement and subsequent amendments, and with limited exceptions, target dates including, but not limited to the following were established in Canada:

- Halons - phased out by 1994
- CFCs, carbon tetrachloride, and methyl chloroform - phased out by 1996
- HCFCs - phased out by 2030

No equipment containing ODSs was identified on the Site.

5.7 Special Attention Items

5.7.1 Radon Gas

Radon is a naturally occurring radioactive gas associated with uranium rich black shale and/or granite bedrock. It cannot be readily detected without the use of technology as it is colourless, odourless, and tasteless. Radon is readily diluted by outdoor air when it is released from the ground, but it can concentrate when it is drawn into enclosed spaces in the lowest levels of buildings, notably basements and cellars. Radon can enter buildings through cracks in foundations, construction joints, gaps around pipes, sump pumps and drains, and small pores of hollow-block walls. Lung cancer is the only known health effect from exposure to radon.

Radon maps have been developed using knowledge of geological formations featuring granite or bedrock within different regions to illustrate the relative variation of radon risk across the country. They are used as a tool for public awareness. However, there is considerable variability in radon concentrations found in buildings in any given community and region, and testing is required to accurately define the risk. Therefore, there is limited value in using the radon maps to determine whether there is a risk of exposure to elevated levels of radon at any given building or property.

As the Site consists of an outdoor parking lot and access road, exposure to radon is unlikely.

There is insufficient existing data available to make an accurate assessment of the potential for radon gas issues at this Site. Given the underlying geology, it is anticipated that radon gas issues would not be significant at this location; however, such conditions would have to be determined by the completion of a study, which is beyond the scope of work of this assessment.

5.7.2 Microbial Contamination (Mould) and Indoor Air Quality

Conditions conducive to mould growth and other microbial contamination in indoor environments can be created when moisture issues occur. Moisture intrusion can impact building materials, and moist building materials can provide suitable conditions for mould growth. Moisture intrusion may be the result of failure or deficiencies in building envelope components or mechanical systems, design or operational issues leading to condensation, or as a result of environmental conditions such as floods. If left unaddressed, indoor mould growth can negatively impact indoor air quality. Although there is no practical way to eliminate all mould and mould spores in the indoor environment, significant mould growth can typically be mitigated by controlling moisture. Where mould is identified, it may require appropriately trained workers to remove it.

No buildings were present on the Site at the time of the site visit, and mould growth was not identified.

5.7.3 Electromagnetic Frequencies (EMFs)

Electromagnetic fields (EMFs) are a type of non-ionizing electromagnetic radiation with sources that are both natural and man-made. Atmospheric processes such as ionospheric currents, thunderstorms and lightning are examples of naturally occurring EMFs. Man-made EMFs fall into both the extremely low frequency (ELF) and radiofrequency (RF) categories of the electromagnetic spectrum. Sources of man-made EMFs may include the following:

- Sources of ELF-EMFs include power lines (notably high voltage transmission lines and electrical substations), electrical wiring, and electrical appliances such as shavers, hair dryers, and electric blankets.
- Common sources of RF-EMFs are wireless telecommunication devices and equipment, including cell phones and cell phone towers, smart meters, and portable wireless devices, such as tablets and laptop computers. Other common sources include radar, microwaves, induction cooktops, airport full-body scanners, and Magnetic Resonance Imaging (MRI) machines.

No mechanism by which ELF-EMFs or RF-EMFs could cause cancer has been identified in the scientific literature. Studies of animals have not provided indications that exposure to ELF-EMFs is associated with cancer. However, even a suggestion of risk would be of clinical importance given the widespread exposure to EMFs. Exposure to radiation is controlled in three ways; through time, distance and shielding. Given the ubiquitous nature of EMFs, the principal focus is on increasing distance from the source.

The Site is located proximal to a high voltage transmission line which may represent a potential source of EMFs at the Site.

5.7.4 Noise and Vibration

Environmental noise refers to any unwanted sound caused by human activities (excluding workplace noise) that is considered harmful or detrimental to human health and quality of life. Environmental vibration refers to vibration transmitted through the ground to the human body. Environmental noise and vibration are produced by transportation (e.g., aircraft, vehicles, trains), industry (e.g., heavy equipment, blasting), and recreational activities (e.g., motorized sports, shooting ranges, music events, sporting events). Exposure to unacceptable levels of environmental noise has been shown to cause a range of health problems ranging from stress, poor concentration, productivity, and fatigue from disrupted sleep, to more serious issues such as cardiovascular disease, cognitive impairment, and tinnitus. Prolonged noise exposure may set off the body's acute stress response, which raises blood pressure and heart rate, potentially mobilizing a state of hypertension. It is this response that can lead to cardiovascular disease and other health issues.

A busy traffic intersection is present northeast of the Site and was identified as a potential source of noise and vibration for the Site. No other major or persistent sources of noise and vibration were identified on the Site at the time of the site visit.

5.8 Neighbouring Property Information

The current activities on adjacent and neighbouring properties observed at the time of the site visit and a summary of historical information of environmental significance gathered through the records review are presented below.

<u>North of the Site:</u>

At the time of the site visit, the Site was bounded to the north by a small Costco parking lot, followed by Innes Road and a commercial property and residential dwellings beyond. Based on a review of available aerial

photographs, the properties north of the Site were used for commercial/residential purposes since at least 1965. The following notable records were identified north of the Site in the ERIS reports:

- Hurdman Bros. Limited, at 1501 Innes Road, approximately 130 metres northwest of the Site, was registered as a generator of various hazardous waste from 1986 to 1998. There are also records of expired fuels safety facilities and delisted fuel tanks at the same address. Based on the separation distance, these activities do not represent a potential environmental concern to the Site.
- There are multiple records of delisted fuel tanks, fuel storage tanks, and private and retail fuel storage tanks at 1741 Cyrville Road which is approximately 220 metres northwest of the Site. Two single-walled gasoline USTs were installed in 1992 (25,000 L each). One single-walled diesel UST was installed in 1992 (45,000 L). Two single-walled fiberglass gasoline USTs were installed in 1995 (45,400 L & 25,000 L). One single-walled fiberglass diesel UST was installed in 1995 (25,000 L). Based on the separation distance, these activities do not represent a potential environmental concern to the Site.
- The Decorators Choice Paint Ltd., at 1495 Innes Road, approximately 240 metres northwest of the Site, was registered as a generator of miscellaneous waste and inorganic chemicals in 2017. Based on the separation distance, the activity does not represent a potential environmental concern to the Site.
- There are multiple records of fuel storage tanks, and private and retail fuel storage tanks at 1627 Cyrville Road which is approximately 600 metres northwest of the Site. Three single-walled gasoline USTs were installed in 1989 (13,600 L; 35,000 L; and 22,700 L). One double-walled diesel UST was installed in 2018 (26,500). Based on the separation distance, these activities do not represent a potential environmental concern to the Site.
- Various historical spill/release records were identified north of the Site. The spills involved releases of hydraulic oil, mineral oil, diesel and gasoline, among others. Based on the separation distance between the spill locations and the Site, the identified historical spills are not considered to represent an environmental concern to the Site.

East of the Site:

At the time of the site visit, the Site was bounded to the east by Cyrville Road, followed by commercial properties. Based on a review of aerial imagery, the properties east of the Site were used for industrial purposes from at least 1976 to 1999. The following notable records were identified east of the Site in the ERIS reports:

- School bus operations at 1720 Innes Road and 1901 and 1925 Cyrville Road (formerly 1550 Innes Road) were registered as a generator of various hazardous waste from 1986 to 1990. In addition, one record of private fuel storage tank with a capacity of 68,190 litres was identified at the same address. A record documenting a 4-5 L diesel spill to ground while delivering at Laidlaw Transit Ltd. was documented in 1998; environmental impact was not anticipated. Based on the proximity to the Site (approximately 50 m), the activities at the identified addresses are considered to represent a potential environmental concern to the Site.
- PETM Canada Corp., a pet supply store at 1750 Innes Road, was listed as a hazardous waste generator for the generation of various hazardous waste from 2020 to 2021. Based on the nature of the business, the activity is not considered to represent an environmental concern to the Site.
- Laidlaw Transit Ltd., at 1901 Cyrville Road, was registered as a generator of hazardous waste from 1992 to 1999 and from 2002 to 2006. John Volken Foundation, at the same address, was registered for hazardous waste in 2014, 2015, and 2021. Three single-walled steel diesel USTs installed in 1978 (22,730 L each) were recorded at 1901 Cyrville Road. Records of oil spills of unknown quantity were reported in 1998 and 2015 at the same address resulting in a petroleum sheen in Green's Creek. Based on the proximity to the Site, the activities at the identified address are considered to represent a potential environmental concern to the Site.
- An electrical substation was identified at 1925 Cyrville Road which is approximately 190 metres southeast of the Site. Based on the separation distance from the Site, the activity is not considered to represent an environmental concern to the Site

In summary, bus operation activities, hazardous waste generation, and the presence of the fuel storage tank at 1720 Innes Road and 1901 and 1925 Cyrville Road (formerly 1550 Innes Road), and the oil spills of unknown quantity at 1901 Cyrville Road are considered to represent potential environmental concerns to the Site.

South of the Site:

5.0 Site Visit Findings (continued)

5.8 Neighbouring Property Information (continued)

At the time of the site visit, the Site was bounded to the south by Costco parking lot, followed by Green's Creek, commercial/ industrial properties, and a railway. Based on a review of aerial imagery, the Green's Creek alignment was modified since at least 1976, and the commercial/ industrial properties were developed from 1991 to 1999. The railway has been visible since 1945. The following notable records were identified south of the Site in the ERIS reports:

- Activities associated with multiple ERIS records for The Brick retail outlet, at 1960 Cyrville Road, approximately 220 metres south of the Site, are not anticipated to represent an environmental concern to the Site due to separation distance and the presence of Green's Creek.
- The City of Ottawa/ Municipality of Gloucester property, at 1951 Cyrville Road, approximately 270 metres south of the Site, was registered as a generator of various hazardous waste in years between 1989 to 2017. There are also has multiple records of delisted fuel tanks, fuel storage tanks, and private and retail fuel storage tanks. The records include two single-walled gasoline USTs installed in 1977 (22,700 L each); one single-walled diesel UST installed in 1977 (22,700 L); one double-walled steel gasoline horizontal AST installed in 2007 (4,780 L); and two double-walled steel diesel horizontal ASTs installed in 2007 (9,176 L and 4,870 L). MHL Holdings Corp., at the same address, obtained a water taking and discharge permit in 2017. There was also a spill record of 300 L of calcium and water to ground and ditch in 2008 and a record of unknown orange powder to catch basin/creek; environmental impact not anticipated. Based on the separation distance from the Site, these activities are not considered to represent an environmental concern to the Site.
- Various spill/release records related to historical spills were identified south of the Site. The spills involved releases of diesel and gasoline, among others. Based on the separation distance between these spill locations and the Site, these activities are not considered to represent an environmental concern to the Site.

<u>West of the Site:</u>

At the time of the site visit, the Site was bounded to the west by a portion of a parking lot and the Costco Business Centre building, followed by a gas station, hotel/motel, Green's Creek, and Highway 417 beyond. Based on a review of available aerial photographs, the properties west of the Site were developed between 1985 and 1991. The following notable records were identified in the ERIS reports for properties to the west of the Site:

- Esso/ On the Run/ Imperial Oil/ Macs Convenience Store, at 1494 Innes Road, approximately 160 metres west of the Site, were associated with multiple records for delisted fuel tanks, fuel storage tanks, and private and retail fuel storage tanks. The records include five single-walled fiberglass gasoline USTs installed in 1985 (22,700 L each); three double-walled fiberglass gasoline USTs installed in 2002 (46,400 L each), and one double-walled fiberglass diesel UST installed in 2002 (22,700 L). Based on the separation distance, the records do not represent a potential environmental concern to the Site.
- The National Pollutant Release record indicated that Innvest Hotels GP Ltd., at 1486 Innes Road, approximately 200 metres west of the Site, was registered in 2004 for emissions of nitrogen oxides, HFC-134a (hydrofluorocarbon), and sulphur dioxides. No other relevant information was available. Based on the nature of the emissions (gases), the activities at this property are not expected to represent a potential environmental concern to the Site. The address is also associated with two waste generator records and one oil spill record. Based on the separation distance, these records do not represent a potential environmental concern to the Site.
- Cascades Recovery+ (Plant 2), located at 2475 Sheffield Rd, approximately 720 metres west of the Site, provides recycling and waste management services based on observations made during the site visit. Based on the separation distance, the activity does not represent a potential environmental concern to the Site.
- Petro-Pass Truck Stop at 1400 Windmill Ln., a gas station, approximately 820 metres west of the Site, was associated with multiple records of fuel storage tanks, and private and retail fuel storage tanks. Pioneer gas station, at 1795 Bantree Street, was observed during the site visit. Based on the separation distance, these gas stations do not represent a potential environmental concern to the Site.
- Price Club Canada Inc. (ON1315404), at 1900 Cyrville Road, generating Waste Class 264 (photoprocessing wastes) in 1992-2001 (three records). Costco (ON7840845), at 1900 Cyrville Road, was registered as a generator of hazardous waste in 2016, 2018, 2020, and 2021 for various wastes. Record of a former automotive centre at the southern portion of the Costco Business Centre building was mentioned in the previous 2022 Phase One ESA (Phase One Environmental Site Assessment - 1900 &

1960 Cyrville Road, Ottawa, Ontario). The hazardous waste generation and the former automotive centre represent a potential environmental concern to the Site. One pad-mounted transformer was observed at the northwest corner of 1900 Cyrville Road. No staining was observed surrounding the transformer. In the absence of staining, spill records, or indication that the transformers are PCB-containing, the pad-mounted transformer is not considered to represent a potential environmental concern to the Site. No other activities present an environmental concern to the Site.

- Various spill/release records related to historical spills were identified west of the Site. The spills involved releases of hydraulic oil, mineral oil, diesel and gasoline, among others. Based on the separation distance between these spill locations and the Site and the gradient location of the spills, these activities are not considered to represent an environmental concern to the Site.

In summary, hazardous waste generation, and the presence of the former automotive centre at 1900 Cyrville Road are considered to represent potential environmental concerns to the Site.

The remaining listings in the ERIS report were not expected to represent potential environmental concerns to the Site based on the distance from the Site and/or the nature of the records.

5.9 Client-Specific Items

No specific client requests were made with respect to this Phase I ESA.

6.0 Conclusions

The Phase I ESA has revealed evidence of potential environmental contamination associated with the Site, as follows:

- Fill material of unknown environmental quality may be present at the Site based on information from water well records identified in the ERIS report and based on the anticipated placement of fill beneath the Site during the development of the Sitre as a parking lot and access road.

The Phase I ESA has also revealed evidence of potential environmental contamination associated with activities at properties neighbouring the Site, as follows:

- Bus operation activities, hazardous waste generation, and the presence of the fuel storage tank at properties east adjacent to the Site, at 1720 Innes Road and 1901 and 1925 Cyrville Road (formerly 1550 Innes Road)
- Oil spills of unknown quantity at 1901 Cyrville Road
- Hazardous waste generation and the presence the former automotive centre at 1900 Cyrville Road to the west of the Site.

Based on the findings from the Phase I ESA, a Phase II ESA is recommended to assess the potential concerns identified above.

7.0 Closure

This report documents work that was performed in accordance with generally accepted professional standards at the time and location in which the services were provided. No other representations, warranties or guarantees are made concerning the accuracy or completeness of the data or conclusions contained within this report, including no assurance that this work has uncovered all potential liabilities associated with the identified property.

This report provides an evaluation of selected environmental conditions associated with the identified portion of the property that was assessed at the time the work was conducted and is based on information obtained by and/or provided to Stantec at that time. There are no assurances regarding the accuracy and completeness of this information. All information received from the client or third parties in the preparation of this report has been assumed by Stantec to be correct. Stantec assumes no responsibility for any deficiency or inaccuracy in information received from others.

The opinions in this report can only be relied upon as they relate to the condition of the portion of the identified property that was assessed at the time the work was conducted. Activities at the property subsequent to Stantec's assessment may have significantly altered the property's condition. Stantec cannot comment on other areas of the property that were not assessed.

Conclusions made within this report consist of Stantec's professional opinion as of the time of the writing of this report and are based solely on the scope of work described in the report, the limited data available and the results of the work. They are not a certification of the property's environmental condition. This report should not be construed as legal advice.

This report has been prepared for the exclusive use of the client identified herein and any use by any third party is prohibited. Stantec assumes no responsibility for losses, damages, liabilities or claims, howsoever arising, from third party use of this report.

The locations of any utilities, buildings and structures, and property boundaries illustrated in or described within this report, if any, including pole lines, conduits, water mains, sewers and other surface or sub-surface utilities and structures are not guaranteed. Before starting work, the exact location of all such utilities and structures should be confirmed and Stantec assumes no liability for damage to them.

The conclusions are based on the site conditions encountered by Stantec at the time the work was performed at the specific testing and/or sampling locations, and conditions may vary among sampling locations. Factors such as areas of potential concern identified in previous studies, site conditions (e.g., utilities) and cost may have constrained the sampling locations used in this assessment. In addition, analysis has been carried out for only a limited number of chemical parameters, and it should not be inferred that other chemical species are not present. Due to the nature of the investigation and the limited data available, Stantec does not warrant against undiscovered environmental liabilities nor that the sampling results are indicative of the condition of the entire site.

As the purpose of this report is to identify site conditions which may pose an environmental risk; the identification of non-environmental risks to structures or people on the site is beyond the scope of this assessment.

Should additional information become available which differs significantly from our understanding of conditions presented in this report, Stantec specifically disclaims any responsibility to update the conclusions in this report.

This report was prepared by Mia Dinh, M.Sc and reviewed by Netta Benazon, M.Sc., P.Eng. and Randy Sinukoff, M.A.Sc., P.Eng.

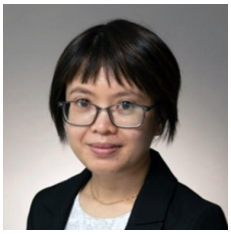
Assessor Qualifications



Mia Dinh M.Sc., E.I.T.

Environmental Engineer-In-Training

6 years of experience · Ottawa, Ontario

Mia Dinh is an Environmental Engineer in Training with 2.5 years of experience in Designated Substances Survey (DSS)/abatement, indoor air quality, mold inspection, Phase I Environmental Site Assessments, excess soil management, to hydrogeology. Mia is involved at different stages of projects from proposals, field work, data analysis, to reporting. Mia has prepared dozens of technical documents, including DSS reports, abatement specifications, asbestos management plans, phase I environmental site assessments, assessment of past uses, sampling and analysis plans, soil characterization reports, water taking and discharge plans, environmental compliance approval/permits to take water annual reports, etc.

Prior to her consulting career, Mia had a six-month contract as an Environmental Scientist with the Métis Nation of Saskatchewan. She involved in the Environmental Monitoring Initiative for the Pinehouse village. The project's scope was to monitor the safety of traditionally harvested country foods by collecting and testing representative water, fish, berries, and mammal tissue samples from the areas.

Mia has additional 2 years of experience as a Research Associate at the Naturally Acceptable and Technologically Sustainable (NATS) Toilet, Thailand which involved reinventing technologies for decentralized wastewater treatment in developing countries funded by the Bill and Melinda Gates Foundation. Mia helped to develop solar septic tank technology. Solar septic tank prototypes were installed in several provinces in Thailand.

EDUCATION

M.Sc., Environmental Engineering, Carleton University, Ottawa, ON, Canada, 2019

M.Eng., Asian Institute of Technology, Pathumthani, Thailand, 2015

B.Sc., Environmental Engineering, Ho Chi Minh City University of Technology, Ho Chi Minh City, Vietnam, 2013

CERTIFICATIONS & TRAINING

Certificate, Enbridge's 2025 Contractor Safety & Environment Orientation, Ottawa, Ontar, Canada, 2024

PROJECT EXPERIENCE

MOLD ASSESSMENT AND ABATEMENT

Mold Assessment – 160 Elgin – Gowling WLG | Ottawa, Ontario, Canada | 2024 | Environmental EIT

Mia performed mold inspection and air sample collection.

DESIGNATED SUBSTANCE SURVEYS

Pre-Construction Designated Substance Surveys, Aberdeen Pavilion – City of Ottawa | Ottawa, Ontario, Canada | 2024 | Environmental EIT

Designated substance surveys of the historic Aberdeen Pavilion prior to extensive retrofits and upgrades. Extensive lead paint sampling for full abatement of lead-containing materials. Mia performed fieldwork and prepared report.

Project Specific DSSs in Federal Buildings Portfolio, Various Federal Buildings in Ottawa – BGIS | Ottawa, Ontario, Canada | Environmental EIT

Mia worked independently to perform targeted asbestos and designated substance assessments ahead of a wide variety of building renovations, following client security, health, and safety, and reporting protocols. She helped with proposals, site visit coordination, and site visits. She prepared reports in accordance with federal and provincial (ON and QC) regulations (2022, 2023, and 2024).

DSSs, Various Pump Stations in Ottawa – City of Ottawa | Ottawa, Ontario, Canada | 2022 & 2023 | Environmental EIT

Mia performed fieldworks and prepared project specific DSS reports at six City Pump Stations.

DSS at Highway Infrastructure (Bridges, Culverts) – MTO Eastern Region | Ontario, Canada | 2022 & 2023 | Environmental EIT

Mia performed numerous designated substance surveys at bridges and culverts at various locations in eastern Ontario, both field work and reporting.

DSS at Various Condominiums – Condominium Management Group (CMG) | Ottawa, Ontario, Canada | 2022 & 2023 | Environmental EIT

Mia performed designated substance surveys for various project managers at CMG, from coordination to site work, to reporting.

DSS, Multiple Buildings – Hazelview Properties Inc.* | Toronto, Ontario, Canada | 2022 | Environmental Scientist

Mia performed hazardous material assessments and helped with reporting.

** denotes projects completed with other firms*

DSS, Ontario Science Centre – Colliers Project Leaders* | Toronto, Ontario, Canada | 2022 | Environmental Scientist

Mia was the field technician for the designated substance survey.

ASBESTOS ASSESSMENTS AND ABATEMENT DESIGN

Asbestos Inspection – Art Court – City of Ottawa | Ottawa, Ontario, Canada | 2024 | Environmental EIT

Mia coordinated field work with client, carried out the asbestos inspection and sample collection as well as authored the report.

Type 2 Asbestos Abatement Oversight, Accessibility Improvement, Jeanne Mance Building, 200 Eglantine Driveway – BGIS | Ottawa, Ontario, Canada | 2024 | Environmental EIT

Type 2 asbestos abatement oversight as well as perimeter and clearance airborne fiber testing at a 21-storey government office building. Mia performed fieldwork and helped with reporting.

Type 1 Asbestos Abatement Oversight, Geological Survey of Canada Asbestiform Mineral Storage Abatement Program, 601 Booth Street – BGIS | Ottawa, Ontario, Canada | 2023 | Environmental EIT

Type 1 abatement of asbestiform minerals and storage equipment of the Geological Survey of Canada's (GSC) National Mineral Collection, and transportation of selected specimens to the Canadian Museum of Nature in Gatineau, Quebec. Mia performed fieldwork and prepared report.

Type 1 Asbestos, Level 1 Mold & Lead Abatement Oversight, 705 Progress Avenue, Scarborough – City of Toronto* | Toronto, Ontario, Canada | 2022 | Environmental Scientist

Minimal abatement oversight and air monitoring for a multi-purpose complex (jewelry shop, dance studio, sprinkler room, shelter) at 705 Progress Avenue, Scarborough. Mia's tasks included abatement oversight, air sampling, PCM sample analysis followed NIOSH 7400.

Asbestos Containing Material Reassessment, Multiple Buildings in Ottawa – Morguard Corporation* | Ottawa, Ontario, Canada | 2022 | Environmental Scientist

Mia performed annual reassessment of asbestos-containing materials at various buildings in Ottawa.

Abatement Specification, University of Toronto, Mississauga – University of Toronto* | Mississauga, Ontario, Canada | 2022 | Environmental EIT

Mia prepared Type 1 asbestos abatement specification document.

INDOOR AIR QUALITY ASSESSMENT

Indoor Air Quality Monitoring, 2821 Birchmount Road – Toronto Community Housing Corporation* | Toronto, Ontario, Canada | 2022 | Environmental Scientist

Mia performed hazardous material assessments and helped with reporting.

CONTAMINANT MANAGEMENT

Excess Soils Assessment I Hunt Club Storm Water Management Facility Retrofit – City of Ottawa | Ottawa, Ontario, Canada | 2022 & 2023 | Environmental EIT

Mia's duties included conducting field work and generating reports. Scope of work included Sampling and Analysis Plan, Soil Characterization Report, and construction monitoring.

Excess Soils Assessments & Due Diligence Investigations – City of Ottawa | Ottawa, Ontario, Canada | 2023 | Environmental EIT

The project involved detail design and tendering of 13 small diameter culvert renewals, including in-kind replacement and liner rehabilitation. Mia helped with the Assessment of Past Uses report.

Excess Soils Assessment – Ashton Station Drainage Improvement – MTO, Ashton | Ontario, Canada | 2023 | Environmental EIT

Mia's duties included conducting field work and generating reports. Scope of work included Assessment of Past Uses, Sampling and Analysis Plan, and Soil Characterization Report.

Excess Soils Assessments & Due Diligence Investigations – MTO | Cobden, Ontario, Canada | 2023 | Environmental EIT

The project involved detail design and tendering of 3 culvert renewals. Mia helped with the Assessment of Past Uses and Soil Investigation report.

Excess Soils Assessments & Due Diligence Investigations Etienne Road Bridge Culverts – City of Ottawa | Ottawa, Ontario, Canada | 2023 | Environmental EIT

The project involved detail design and tendering of renewal of Etienne Road bridge culvert. Mia helped with soil sampling and site reconnaissance.

Phase 1 Environmental Site Assessment, Rehabilitation of Arthur Street – Town of Gananoque | Gananoque, Ontario, Canada | 2023 | Environmental EIT

Mia's duties included field work, reporting, communication with subcontractors, clients, and stakeholders. Scope of work included Sampling and Analysis Plan and Soil Characterization Report.

Phase I ESA, Meridian Road SE – McLeod Law, LLP | Calgary, Alberta, Canada | 2023 | Environmental EIT

Mia helped with the interview, site reconnaissance, and reporting for a Phase I ESA for an industrial site in Calgary.

Highway Engineering Services on Retainer, Mega 16 (4019-E-0019/20) & Mega 17 (4019-E-0021/22), Mega 18 (4019-E-0023/24) – MTO Eastern Region, Eastern Ontario | Ottawa, Ontario, Canada | 2020-2023 | Environmental EIT

Assignment 2 – Preliminary Design & Class EA for the Highway 416/Barnsdale Road Interchange, Ottawa, GWP 4057-20-00 – MTO – 2022 Mia participated in windshield surveys to support Contamination Overview Studies.

Highway Engineering Services on Retainer, Mega 16 (4019-E-0019/20) & Mega 17 (4019-E-0021/22), Mega 18 (4019-E-0023/24) – MTO Eastern Region, Eastern Ontario | Ontario, Canada | 2020-2023 | Environmental EIT

Assignment 14 – Detail Design, Class EA & Construction Ready Contract Package for the Replacement of the Aultsville Creek Culvert on Highway 401, East of Upper Canada Road, GWP 4134-16-00, WP 4178-16-01, Excess Soils Assessments & Due Diligence Investigations, Aultsville – 2023 The project involved removal and replacement of the Aultsville Culvert. Mia helped with the fieldwork and the soil management plan report.

HYDROGEOLOGIC ASSESSMENTS

Morgan's Grant Statewood Stormwater Management Facility Rehabilitation – City of Ottawa | Ottawa, Ontario, Canada | 2024 | Environmental EIT

Mia performed different types of fieldwork such as slug tests, hand augering, visual inspection, infiltration tests. She also works on reporting.

Water Taking & Discharge Plan for the Duford Street Pipe Repair – City of Ottawa | Ottawa, Ontario, Canada | 2024 | Environmental EIT

Mia prepared Water Taking and Discharge Plan (WTDP) report to support the registration of the pipe repair work on the Environmental Activity and Sector Registry (EASR).

Preliminary, Detail Design & Environmental Assessment, Highway 17, 2 New Rest Centres & Improvements to the Batchawana Bay Rest Area, District of Algoma, GWP 5049-20-00, 5021-E-0009, Water Taking & Discharge Plan | Ontario, Canada | 2024 | Environmental EIT

Mia prepared Water Taking and Discharge Plan (WTDP) report to support the registration of the proposed construction for the improvements to the Highway 17 Batchawana Bay Rest Area on the Environmental Activity and Sector Registry (EASR).

Water Taking & Discharge Plan for the Rehabilitation of Arthur Street – Town of Gananoque | Gananoque, Ontario, Canada | 2022 | Environmental EIT

Mia performed slug test, calculated groundwater flow, and prepared Water Taking and Discharge Plan (WTDP) report to support the registration of the Rehabilitation of Arthur Street from Stone Street to Charles Street on the Environmental Activity and Sector Registry (EASR).

Constraints Analysis for a Battery Energy Storage System (BESS) Project in Peterborough – Northland Power | Peterborough, Ontario, Canada | 2023 | Environmental EIT

Mia provided an overview of hydrogeology and contamination of the site to identify any significant constraints that would prevent construction and operation of the BESS project.

Groundwater Assessment | The Summer Village of Ghost Lake (SVGL) | Alberta, Canada | 2023 | Environmental EIT

Mia conducted interviews and groundwater sampling at six selected households in Ghost Lake Village, Alberta.

Permit to Take Water and Environmental Compliance Approval – Coco Properties Corporation now GIP | Ontario, Canada | Environmental EIT

Mia helped with the pumping record and groundwater monitoring tables for the permit renewal for different sites (2022, 2023 & 2024).

Amherst Island Shoreline Assessment, Water Well – Baird W.F. & Associates Coastal Engineers Ltd. | Amherst Island, Ontario, Canada | 2023 | Environmental EIT

Mia completed a water well desktop review to support the conceptual design of shoreline improvements at four separate segments on Amherst Island in the Loyalist Township.

Hydrogeology Assessment to Support Severance Application, Smiths Falls & Carleton Place – Private Landowners | Ontario, Canada | 2022-2023 | Environmental EIT

Mia participated in well surveys and hydrogeology assessment questionnaires to support severance applications for several sites.

ENVIRONMENTAL MONITORING

Métis Nation of Saskatchewan (MN-S)* | Regina, Saskatchewan, Canada | 2020-2021 | Environmental Scientist

Mia's main project at MN-S was Environmental Monitoring Initiative for Pinehouse village in Saskatchewan. Her duties included researching the area, locating potential contaminated sources from uranium mines north of Saskatchewan, and checking bathymetric maps and discharge data to locate sampling points. She also helped to organize a meeting to talk about collaboration with the Pinehouse community which was well received. She was responsible for coordinating and checking the sample results gathered by the community, and reporting findings to the Senior Scientist and Director at MN-S.

** denotes projects completed with other firms*

INTERNATIONAL

Naturally Acceptable and Technologically Sustainable (NATS) Toilet* | Pathum Thani, Thailand | 2015-2017 | Research Associate

Mia helped to develop solar septic tank technology that could improve the efficiency of current onsite sanitation systems in developing countries. She was on the technology team, her duties included performing the field survey, developing ideas for new products, communicating with the design team so they could design, optimize features of the products, and giving technical advice for management team.

** denotes projects completed with other firms*

Netta Benazon M.Sc., P.Eng., QPESA

Senior Project Manager

30 years of experience · Waterloo, Ontario

Netta is a Senior Project Manager within the Environmental Services division of Stantec and is based at the Stantec Waterloo, Ontario office. She has approximately 24 years of experience in the environmental field and has led a variety of environmental site assessment and remediation projects in the oil and gas and commercial, industrial and government sectors. As project manager, she has provided technical support and project management services through all the project phases from environmental site assessment, remediation planning, remediation and confirmation sampling, reporting and filing for a Record of Site Condition and has been sought for her ability to address and resolve technical issues. Netta has also designed and implemented ex-situ bioremediation to treat impacted soils at a former polystyrene facility and led the remediation of numerous industrial facilities. More recently, Netta served as project manager for an industrial/commercial facility undergoing redevelopment for institutional land use under an accelerated schedule and as a project manager for site investigation and remedial planning at several remote sites. Other services Netta regularly provides include data gap analysis, peer reviews, excess soil management, and remedial design for a variety of environmental properties. Netta is an experienced environmental consultant with a proven track record in successfully completing a variety of complex environmental projects. She has been sought by clients and peers alike for her project management and technical problem-solving capabilities, as well as her dedication and commitment to the environmental field.

EDUCATION

Bachelor of Chemical Engineering, McGill University, Montreal, Quebec, Canada, 1986

Master of Environmental Science, Université du Québec, Institute National de la Recherche Scientifique (INRS), Quebec City, Quebec, Canada, 1992

CERTIFICATIONS & TRAINING

Standard First Aid & CPR/AED Level C, Canadian Red Cross, Markham, Ontario, Canada, 2018

Certificate of Achievement, POST 2019 LEVEL 2 - BBS - Orientation and Test, Guelph, Ontario, Canada, 2019

REGISTRATIONS

Professional Engineer #90353848, Professional Engineers Ontario, 1986-present

PROJECT EXPERIENCE

ENVIRONMENTAL SITE ASSESSMENTS PHASE I, II, III

Phase I ESA, Portfolio Project, Business Park* | Confidential Client | London, Ontario | 2018 | Senior Project Manager

Netta directed the project team on the completion of Phase I ESAs at multiple properties within a business park in London, Ontario. The project was fast-tracked to meet the client's financial transaction deadlines. A total of eight (8) commercial/light industrial properties, each with multiple buildings and multiple tenants, were assessed. Netta coordinated the site visits and documentation review and conducted the senior review of the resulting Phase I ESA reports. The project was successfully completed within the schedule and budget.

Former Oakville Hospital Lands* | Town of Oakville | Oakville, Ontario | 2016-2018 | Senior Project Manager

Netta led the environmental services for the environmental assessment and remediation of a former hospital site prior to and during the decommissioning and redevelopment of the site for the next use. The site was located on a 6.7-hectare parcel of land in a mature residential area northeast of downtown Oakville. The past use of the land had resulted in impacts to both soil and groundwater. Netta led the delineation of several contaminant groupings across the site, the design and implementation of a product recovery system and the development and implementation of a soil management plan. Working closely with the Town of Oakville and the demolition contractor, Netta coordinated field work, responded to requests for technical assistance and oversaw soil stockpile sampling and soil handling and placement. In addition, Netta conducted water sampling and bench- and pilot-test investigations to assess the nature and extent of potential impacts from the site to the storm sewer system which discharged into a nearby surface water body.

** denotes projects completed with other firms*

Supplemental Phase Two ESA, Former Printing on Plastics Facility* | Confidential Client | Oakville, Ontario | 2017-2018

Netta directed the project team as a QPESA on the delineation of identified impacts at a former solvent-based printing on plastics facility. The work was conducted to support a Phase Two Conceptual Site Model to be submitted to the Ministry of Environment, Conservation and Parks (MECP) in advance of a planned risk assessment at the site. The hydrogeology and contamination components of the site were complex involving impacts from multiple contaminant groupings within a shallow shale bedrock aquifer. The identified impacts originated from the past use of the site as well as from surrounding properties and subsurface infrastructure played a significant role in distributing the impacts across the site. A Phase Two Conceptual Site Model with multiple plan view and cross-section figures was completed in accordance with the requirements of Ontario Regulation 153/04, as amended.

Phase II ESA, Metals Processing Facility | Confidential Client | 2019 | Task Manager

Stantec was retained to conduct an environmental site assessment (ESA) of a large metals processing facility in southern Ontario. Following a Phase I ESA conducted by Stantec, which identified numerous Areas of Potential Environmental Concern (APECs), a Phase II ESA targeting specific APECs was undertaken. A soil and groundwater sampling program was implemented at the three separate parcels comprising the site. The work was conducted under an aggressive schedule to support the purchase of the property by the client. Based on the results of the assessment, small localized areas of impacts were identified. As our findings found no extensive impacts, the site was purchased by our client within their real estate transaction deadline. As task manager, Netta was responsible for the overall management of the project including, schedule, coordination of field work, internal and external communications and reporting.

Bedrock Groundwater Investigation | Confidential Client | Southern Ontario | 2019 | Project Manager

Previous investigations conducted by others identified trichloroethylene (TCE), 1,1-dichloroethane (DCA) and their degradation products in one of the on-site wells. To support the sale of the property, Stantec was retained to delineate the horizontal and vertical extent of the impacts at the site. The project included the installation of six shallow bedrock monitoring wells and one deep telescope bedrock monitoring well and the testing of the groundwater in each of the wells for Volatile Organic Compounds (VOCs). Results indicated that the impacts were confined laterally to the northern portion of the site and were likely caused by the migration of the impacts onto the site from off-site source(s). Stantec recommended that the client request environmental reports completed for the upgradient adjacent property to the north of the site in an attempt to obtain information about a possible source at that property. In addition, Stantec recommended that a screening level risk assessment be completed for the site as a flow-through property to identify potential risks and risk management strategies for future users of the site. As project manager, Netta was responsible for the overall management of the project, including project finances, schedule, coordination of field work, reporting and internal and client communications.

Phase II ESA | Confidential Client | Southern Ontario | 2019 | Task Manager

Stantec completed a Phase II ESA at a parcel of land that was to be expropriated as part of a railway expansion project. A Phase I ESA was completed by others. While no PCAs were identified at the site, current and historical operations at surrounding properties were identified as APECs at the site. Five boreholes, each completed with a monitoring well, were installed and soil and groundwater samples were collected and tested. The results indicated that VOC impacts were present in the groundwater at a portion of the site that was opposite an industrial facility. The results were used as a baseline assessment of the site, prior to expropriation, and to identify risk mitigation measures for upcoming construction work. As task manager, Netta was responsible for all components of the project ,including project finances, scheduling, field work coordination, reporting and internal and client communications.

Due Diligence Phase I and II ESA*, Numerous Commercial and Industrial Properties* | Southern Ontario | 2013-2018 | Project Manager

Netta lead numerous due diligence Phase I and II ESAs at commercial and industrial properties across southern Ontario. The projects entailed, competitive proposal preparation, field implementation, reporting, schedule and budget management and client liaison.

** denotes projects completed with other firms*

Phase One ESA, Former Munitions Manufacturing Site | Confidential Client | Eastern Ontario | 2020 | Project Manager

Stantec was retained to conduct a Phase One ESA in support of a Record of Site Condition at a former munitions manufacturing facility. Netta oversaw the investigation and conducted additional research to obtain historical information on the nature of past activities at the site. In addition, Netta coordinated a desktop review of the unexploded explosive ordnance (UXO) risk at the site in preparation for field activities. The UXO risk was deemed to be low. As part of the work for this project, Netta prepared a sampling and analysis plan for a Phase Two ESA.

Environmental Site Investigation, Remote Island | Federal Client | Ontario | 2020-2021 | Project Manager

Stantec was retained to conduct an environmental site investigation, a human health and ecological risk assessment and a liability assessment for a site located on an island accessible only by boat. Netta managed the project to ensure deliverables were conducted on time and on budget and within the agreed upon statement of work. Netta oversaw the environmental site investigation portion of the work which encountered constraints related to weather and site conditions. A component of the investigation also included a forensic analysis of identified organics impacts to assess if they were of anthropogenic or biogenic origin. The environmental investigation report identified impacted areas relative to the applicable standards and guidelines and illustrated concentration distributions across the site for selected contaminants of concern.

Portfolio Due Diligence Phase II ESAs | Confidential Client | Southern Ontario | 2021 | Project Manager

Netta managed a series of due diligence Phase II ESAs completed simultaneously at commercial properties in southern Ontario. The sites were within busy commercial areas. Challenges included maintaining safety from vehicular traffic and drilling inside existing buildings. As project manager, Netta ensured that the project deliverables were completed within the agreed upon scope of work, budget and schedule.

Environmental Services for Large Infrastructure Project | Southern Ontario | 2021-Present | Project Manager

Stantec is contracted to provide environmental services to support a large infrastructure project. Over the course of the project, Netta has provided project management services and technical support for a variety of tasks at numerous properties, including development of ESA workplans, overseeing the implementation of Phase I and II ESAs, reporting, completion of data gap analysis, and coordination of environmental sampling with geotechnical drilling to gain efficiencies in time and resources. Netta also supports and mentors other field technicians and intermediate professionals in executing this work.

Environmental Site Investigation, Remote Island | 2022 | Project Manager

As part of a joint venture, Stantec has provided environmental investigation and remediation planning for a remote island site within the Great Lakes region. The site is vacant and difficult to access, requiring considerable travel time and a boat to shuttle equipment and field staff from the mainland to the site and back. A site investigation was completed in 2022 and indicated that elevated metals are present at two parcels located on the opposite ends of the island. As project manager, Netta was responsible for overall planning, overseeing field work, assisting in addressing technical issues, preparation of the deliverables, and budget and schedule management. The main challenges on this project were related to remote location, weather, and the rocky and steep cliff-like conditions at the shoreline adjacent to the site. Over the course of the 2022 field program, Netta worked closely with the project client and team members to address technical issues and ensure the objectives of the field work were accomplished and oversaw the completion of the associated deliverables.

Excess Soil Management - Pipeline Installation Proejct | 2022-Present | Task Manager

Stantec has been contracted to provide environmental services for excess soil management for an 80 km pipeline installation project in Southern Ontario. Excess soil management in Ontario must be undertaken in accordance with the new Ontario Regulation 406/19 - Onsite and Excess Soil Management, which requires the completion of an Assessment of Past Uses (APU), Site Characterization Report (SCR), and other supporting documents. The project was divided into four phases and excess soil sampling and analysis along the planned pipeline route was completed in 2022 for the first two phases of the project. Netta supported the project as a task manager and was responsible for planning and implementing the field program and overseeing report preparation. She is also supporting the field program and reporting for the last two phases which are currently underway.

ENVIRONMENTAL SITE REMEDIATION

Above-ground Bioremediation of Petroleum Impacted Clayey Soil* | Confidential Client | Montreal Area | 1990-1991 | Project Engineer

Approximately 10,000 m3 of petroleum impacted clayey soils required treatment at a petroleum refinery in Montreal. As project engineer, Netta designed a soil mixing area and biopile pad, complete with a leachate collection system, to mix and store the soil during above-ground (ex-situ) bioremediation of the soil. The clayey nature of the soil presented challenges in the ability to breakup and distribute oxygen and nutrients into the impacted soil. Several options were investigated to assess the most cost-effective solution. Windrows and a soil tilling unit were identified to be the most efficient means of breaking up the soil and mixing in the appropriate supplements.

Soil Vapour Intrusion Mitigation System, Commercial Facility* | Confidential Client | Montreal Area | 1987-1988 | Project Engineer

Fuel oil was identified in the subsurface beneath a commercial building in the Montreal area. Boreholes, instrumented with monitoring wells, were advanced through the basement floor slab of the building and soil and groundwater samples were collected to assess the extent of the impacts in the subsurface. Based on the results, which indicated that the impacts were localized in a specific area beneath the building, a soil vapour extraction system was installed to mitigate petroleum vapour intrusion into the building. The soil vapour extraction system, along with vapour levels in the building and petroleum concentrations in the ground water were monitored regularly to assess the efficacy in mitigating vapour intrusion and in recovering subsurface vapours.

Soil Vapour Intrusion Mitigation System - Airport Facility* | Confidential Client | Atlantic Canada | 1987 | Project Engineer

Aviation fuel leaked from an underground storage tank at an airport facility in Atlantic Canada, resulting in the intrusion of petroleum vapours beneath the airport terminal building. Netta designed a soil vapour extraction system, which consisted of a series of soil vapour ports connected to a vacuum extraction unit. Netta also assisted in the installation and monitoring of the soil vapour system and assessed its effectiveness in mitigating vapour intrusion into the building.

Gasoline Station Remediation* | Confidential Client | Northeastern United States | 1986-1988 | Technical Support

Based on her experience with a similar project, Netta assisted a team based in northeastern United States in designing, implementing and monitoring an in-situ bioremediation system at an operating gasoline station located in an urban area. The site was the location of a previous underground storage tank leak that impacted the subsurface beneath the site and migrated to the adjacent residential property. The in-situ remediation system consisted of recovery wells, injection wells for the addition of nutrients and oxygen into the impacted area, a bioremediation staging area for mixing and pumping supplements into the subsurface and a soil vapour extraction system to mitigate vapour generation at the adjacent impacted residential property. The system operated for approximately 3 years. Monitoring results showed substantial decline in concentrations of petroleum related parameters in the impacted soil and groundwater.

Gasoline Station Remediation* | Confidential Client | Montreal Area | 1986-1988 | Project Engineer

Netta designed and implemented in-situ bioremediation of soil and groundwater at an operating gasoline station located at a busy intersection in Montreal. The site was the location of a previous underground storage tank leak that impacted the subsurface beneath the site and migrated to the adjacent commercial property. The project entailed the installation of recovery and injection wells, bioremediation staging area consisting of mixing tanks and pumps for injection of nutrients and oxygen generating agents, groundwater treatment by activated carbon, and soil treatment by a soil vapour extraction system installed to address impacts beneath the adjacent impacted property. Liquid phase-separated petroleum was recovered from the recovery wells. Groundwater monitoring wells were monitored for the distribution of nutrients, oxygen levels, and trends in reduction of petroleum related parameters. The soil vapour extraction system was monitored for its effectiveness in capturing and treating petroleum related vapours from the subsurface. The system operated for approximately 4 four years and was successful in treating the highly impacted areas.

Former Skeet Range, CFD | Mountain View, Ontario | 2019 | Project Manager

Stantec was retained to conduct a risk management plan, environmental effects evaluation and the design and specifications for a soil cap at a former skeet range at the Canadian Forces Detachment in Mountain View, Ontario. The soil cap was identified by others in a remedial options evaluation as the most effective solution to mitigate potential impacts to human health and the environment associated with metals and polycyclic aromatic hydrocarbons (PAH) impacts in soil. As project manager, Netta was responsible for project management and integration of all aspects of the project including budget and schedule control, project team and client communication. Netta was also responsible for the preparation of the Risk Management Plan.

Former Bulk Fuel Storage Facility* | Confidential Client | Port Industrial Area, Toronto, Ontario | 1993-1995 | Senior Project Manager

Netta managed the environmental services associated with the assessment and remediation of a large former bulk fuel storage and pesticides packaging facility. The project entailed an extensive Phase II ESA, a remedial technology evaluation, preparation of a remedial action plan, implementation of site remediation, and follow-on monitoring. The selected remedial actions included treatment of petroleum impacted soil at an off-site thermal desorption facility, disposal of pesticide impacted soils at a licensed off-site disposal facility and the installation of a barrier wall at the property boundary to prevent the migration of off-site contaminants on the site. A site-specific risk assessment tailored to the new use of the site was conducted and guided the remedial objectives. Netta worked closely with the client, site contractor and other project stakeholders to ensure the project was conducted in a responsible, cost-effective and timely manner. The project was successfully completed and the site was redeveloped for commercial use.

** denotes projects completed with other firms*

Former Polystyrene Facility* | Confidential Client | Kitchener, Ontario | 1993-1995 | Senior Project Manager

Netta led the design and implementation of ex situ bioremediation (biopiles) of impacted soils at a former polystyrene facility. The piles were constructed with an oxygen and nutrient injection system and monitored with temperature and oxygen monitoring probes. Sharp declines in contaminant levels were achieved and a simultaneous increase in soil temperature was observed as a result of the high biodegradation activity. The impact levels declined to concentrations well below the treatment objectives and the remediated soil was replaced on-site.

Former Gasoline Station* | Confidential Client | Gormley, Ontario | 2013-2014 | Senior Project Manager

Netta oversaw the remediation of a site where heavy metal impacts were identified in groundwater. The project consisted of soil excavation and testing for heavy metals, placement of clean backfill at the groundwater table interface, installation of an in-situ groundwater injection and dispersion system as a contingency measure, and replacement of tested, non-impacted soil to ground surface. A total of 6,000 tonnes of soil were handled. Following remediation, groundwater confirmation sampling indicated that the heavy metal impacts in groundwater were mitigated. The existing wells and contingency groundwater injection and dispersion system were removed and the site was graded and prepared for sale.

Remediation Planning - Remedial Options Evaluation, Remedial Action Plan, Technical Specifications and Drawings | Southern Ontario | 2021-2022

Stantec was contracted to conduct remedial planning to address petroleum-impacted soil at a former federal navigational site on an island in southern Ontario. The scope of work entailed the completion of a supplemental site investigation (SSI), remedial action plan, species at risk study, and the preparation of technical plans and specification for site remediation by biopiles. Biopiles had previously been selected by others as the most suitable remedial option. Based on the findings of the SSI, Stantec identified that over half of the previously identified impacted soil did not require remediation and could be relocated on-site away from within 30 metres of a nearby drainage canal, leaving a much smaller volume requiring remediation. Given the lower volume of soil requiring remediation compared to the original estimate (190 m3 vs 450 m3), Stantec evaluated excavation and disposal as a potential remedial option. Based on the evaluation, both the biopile and the excavation and disposal option were similar in cost, however, the excavation and disposal option was selected over the biopile option due to greater certainty in achieving the remedial objectives. Stantec efficiently pivoted the tender specifications and drawings from the biopile to the newly identified excavation and disposal option and delivered the 100% submission within the agreed upon project timelines and budget. Netta oversaw the completion of all tasks and deliverables, provided technical support throughout the project, assisted with senior review, and tracked project progress, budget and schedule.

Sediment Remediation | Southern Ontario | 2021

A fire occurred at a metals manufacturing facility and firefighting efforts resulted in fire water runoff into a nearby tributary. A sediment sampling program was implemented that identified a 600 m section of tributary as impacted with heavy metals. Stantec selected excavation and off-site disposal as the most suitable remedial option to address the impacts in a timely manner and meet the remedial objectives, which were to meet the Provincial Sediment Quality Guidelines for sediment and the Provincial Water Quality Objectives for surface water. Stantec prepared a RAP, detailed instructions for procurement of the remediation contractor, assisted the client in selecting the remedial contractor, oversaw the implementation of remediation, and conducted confirmatory sampling and post remediation surface water sampling. As Project Manager, Netta lead these tasks by assembling the project team, supervising the work, providing technical input, assisting in senior review of the deliverables, and tracking project progress, budget and schedule. A total of 1,300 tonnes of impacted sediment was excavated and disposed off-site. Site restoration was implemented, and post remediation surface water sampling was undertaken at one month, six months, and one year following remediation. Challenges that arose over the course of remediation included soft ground surface conditions due to spring thaw, accumulation of high volumes of water during temporary coffer dam installation, and fluctuating weather conditions affecting water pumping equipment.

Soil Remediation at a Transformer Substation | Southern Ontario | 2021 | Project Manager

Stantec was contracted to assess the vertical and lateral extent of an oil leak from a transformer substation, oversee the excavation and off-site disposal of the impacted soil, collect confirmatory samples from the excavation limits, and backfill the excavation with clear stone. Challenges encountered on this project included the requirement to complete the work in one week, space constraints, and the presence of a network of subsurface utilities beneath the impacted area. Stantec engaged a contractor with a hydrovacuum truck to assist in soil sample collection, excavation, and backfilling and arranged for rapid soil sample analysis at a certified analytical laboratory. As Project Manager, Netta developed the project plan, selected the contractor, liaised with the project client, contractor, and electrical contractor responsible power supply to the transformer, supported the field work, reviewed the soil analytical results, and assisted in the preparation and senior review of the remediation report. Approximately 10 tonnes of impacted soil were excavated and disposed off-site. The work was completed within the one-week time limit within the agreed upon budget.

Remedial Options Cost Estimate | Southern Ontario | 2021 | Technical Lead

Stantec was contracted to prepare preliminary cost estimates for three remedial options at an impacted multi-parcel industrial site in a densely populated area. Historically, the site was used for industrial (foundry, rail line, waste transfer facility, lumber yard, and coal gasification plant), commercial (car dealerships, printing operations, restaurant, gasoline service station, autobody repair shops, car wash, parking lots, and store fronts), and community (transit loop) purposes and was impacted with a range of contaminants of concern. The site was to be redeveloped for residential and commercial purposes. Previous environmental investigations had been conducted at the site; however, additional investigation was required to vertically and laterally delineate the soil and groundwater impacts. As such, the remedial options cost estimate was considered to be preliminary and for high level planning purposes. As the key technical lead, Netta reviewed the existing data, documented assumptions on the vertical and lateral extent of the impacts based on existing data, identified impacted areas and depths, estimated soil volumes, and generated cost estimate for the three remedial options using industry standard rates and Stantec internal costing data for contaminated sites. The estimates for each remedial option included costs for all associated tasks, including Phase One and Two ESAs, supplemental investigation, remediation action plan, preparation of technical specifications and drawings, excavation and disposal, groundwater management, shoring and soil management.

Remediation and Excess Soil Management - Former Industrial Facility | 2022-Present | Project Manager

An industrial facility was to undergo redevelopment for institutional land use under a fast-track schedule. Since the property land use was transitioning to a more sensitive land use, a Record of Site Condition under Ontario Regulation 153/04 was required. Additionally, as part of site redevelopment, excess soil was to be generated and required management under Ontario Regulation 406/19 On-site and Excess Soil Management. Stantec was hired to support the environmental services for this project. As project Manager, Netta assembled a project team and oversaw the completion of Phase One and Two ESAs, a remedial options assessment, remedial action plan, implementation of site remediation and confirmatory sampling. Additionally, Netta led the site investigation and preparation of supporting documentation for excess soil management. The contaminants of concern at the site were delineated for off-site disposal and for off-site re-use. Approximately 5,600 tonnes of impacted soil were removed from the site and disposed of at a licensed waste disposal facility. Additionally, approximately 3,700 MT of excess soil was removed and placed at a reuse facility for beneficial use. The project was fast-tracked to meet scheduling requirements for the next use of the property. Netta led all phases of the work from the initial Phase One ESA to the planning, implementation and documentation of site remediation, and excess soil removal.

Remediation Planning, Remote Island Site | Federal Client | Northern Ontario | 2023 | Project Manager

Stantec, in joint venture with an indigenous environmental consulting company (CLAW Environmental Services Inc.), was engaged to conduct supplemental environmental site assessment and remedial planning. The site is remote and is located on two separate parcels of federal land situated on opposite ends of an island within Lake Superior and within First Nations Territory. Access to the site is by boat or helicopter and the terrain is rocky with steep cliffs surrounding one of the parcels on three sides. The scope of work included delineation of soil impacts, assessing background (reference) concentrations of contaminants of concern, conducting a species at risk (SAR) assessment, undertaking a marine assessment to identify the type of vessels that can be used for future remediation work, completing a Stage 1 Archaeological Assessment, a topographical and bathymetric survey, and an assessment of an existing structure to inform demolition requirements. Additionally, a feasibility study was conducted to assess if risk assessment could be used at the site to reduce the quantity of soil requiring remediation. Future tasks include a remedial options evaluation, remedial action plan, and specifications and drawings for site remediation. As project manager, Netta was involved on all technical and administrative aspects of the project, advising the client on project approach, budget and schedule tracking, reviewing deliverables, addressing technical issues, and liaising with the client. The project is currently on-going.

Randy Sinukoff M.A.Sc., P.Eng., EP, EP(CEA), EP(EMSLA), QP_{ESA}

Senior Associate and Technical Leader (Canada) for Facility Compliance and Auditing

41 years of experience · Markham, Ontario

Randy is a professional chemical engineer specializing in site assessment and remediation, hazard analysis and due diligence reviews, regulatory compliance, management systems, auditing and verifications, and sustainability. He is Stantec's Technical Leader (Canada) for Facility Compliance and Auditing and has designations as an Environmental Professional (Compliance Environmental Auditor), Environmental Professional (Environmental Management System Lead Auditor), and Environmental Professional (Site Assessment and Reclamation). Randy has performed the project management and senior technical evaluation functions for over 5000 projects, including those in chemical manufacturing and distribution, power generation and transmission, pipelines, transportation, construction, insurance, mining, telecommunications, pulp & paper, water treatment, food and beverage, real estate, and all levels of government. Randy was heavily involved in the development of the Environmental Compliance Auditing standard (Z773) for the Canadian Standards Association (CSA) and is part of the Canadian Mirror Committee advising the International Organization for Standardization (ISO) and CSA on technical matters for environmental site assessment, environmental management and auditing.

EDUCATION

Master of Applied Science, Chemical Engineering, University of Toronto, University of Toronto / Toronto, Ontario, Canada, 1984

Bachelor of Applied Science, Chemical Engineering, University of Toronto, University of Toronto / Toronto, Ontario, Canada, 1982

REGISTRATIONS

Environmental Management Systems Lead Auditor #21379, Environmental Careers Organization of Canada (ECO Canada)

Environmental Professional (Compliance Environmental Auditor) #21379, Environmental Careers Organization of Canada (ECO Canada), 2012/04/18

Environmental Professional (Site Assessment and Reclamation) #21379, Canadian Environmental Certification Approvals Board

Professional Engineer #42688705, Professional Engineers Ontario

MEMBERSHIPS

Member, Auditing Association of Canada

Member, Canadian Standards Association | Association canadienne de normalisation

PROJECT EXPERIENCE

DUE DILIGENCE AUDITS

Environmental Due Diligence and Management System Audit | Confidential Client | Ontario, Canada | Lead Auditor and Project Manager

Environmental Due Diligence and Management System Audit of 280 Gas Station Facilities in Ontario.

Environmental Risk and Site Audit Evaluation Program | Confidential Client | Canada | Project Manager

Evaluation of environmental risks and auditing processes for over 100 facilities across Canada.

Due Diligence Review of Environmental Baseline | Confidential Client | Guatemala | Senior Technical Reviewer

Due Diligence Review of Environmental Baseline for Mine Site in Central America.

Hazardous Waste Storage Assessment | Hamilton Health Sciences | Hamilton, Ontario, Canada | Senior Technical Advisor/Reviewer

Completed an evaluation of hazardous waste generation, waste stream compatibilities, waste storage, and transport practices for Hamilton Health Sciences Corporation, McMaster University Medical Centre.

Environment and Regulatory Compliance Audit | Confidential Client | Alberta, Saskatchewan, Manitoba, Canada | 2016 | Lead Auditor and Senior Advisor

Provided Environmental Audit Services for the NGL fractionation plant and associated infrastructure (pipeline, storage facilities and terminals) including, General Environmental & Regulatory Compliance, Liability and risk identification, NEB Environmental Management System requirements pursuant to the Onshore Pipeline Regulations, and EPP Compliance, for facilities across Alberta, Saskatchewan and Manitoba.

Due Diligence Environment, Health and Safety Audits | Confidential Client | Ontario, Canada | 2009-2023 | Project Manager, Lead Auditor

Performed environmental, health and safety audits of 17 Ontario, Alberta and British Columbia power generation facilities, including coal, biomass, gas turbine and wind, plus a coal mine. 2021 audits were completed remotely.

WASTEWATER TREATMENT

Stormwater Contaminant Treatment System | Confidential Client | Toronto, Ontario, Canada | Technical Expert and Peer Reviewer

Represented client technical interests in the design and implementation of a water treatment system to clean up stormwater discharges contaminated by groundwater with residual chlorinated volatile organic compounds.

Development and Design of Closed Loop Wastewater Treatment System | Black's Photography | Markham, Ontario, Canada | Lead Engineer, Project Manager

Development and Design of "System Crystal", a patented closed loop wastewater treatment and reuse system for Black's Photography, Markham, Ontario. Involved wastewater characterization, research on technology options, development of new chemical processes, full system design, and operational consulting.

Wastewater Characterization and Process Audits | Confidential Client | Ontario, Canada | Senior Engineer

Wastewater Characterization and Process Audits, numerous industrial clients in household chemicals, rubber and plastics manufacturing, adhesives, metal finishing, food processing, truck maintenance, etc., Ontario.

Closed Loop Wastewater Treatment Systems | Various Clients | Ontario, Canada | Project Manager and Lead Engineer

Development of Closed Loop Wastewater Treatment Systems (nickel plating, pigments/paints, and adhesives), Midland, Ontario, Toronto, Ontario, and Brampton, Ontario.

TRAINING AND EDUCATION

Environmental, Health and Safety Auditor Training | Confidential International Industrial Client | Worldwide | 2021-Present | Course Developer and Lead Instructor

Developed and instructed six auditor training courses for client internal auditors internationally. Courses delivered remotely (online) including practical group workshops.

Environmental Auditing Graduate School Course | University of Toronto Engineering | Toronto, Ontario, Canada | 2012-Present | Course Developer and Instructor

Developed and instructed Master of Engineering graduate school course for engineering students at University of Toronto. Course has included lecture, assignments and practical application of environmental auditing principles and techniques, both in-person and remotely.

Environmental Management System and Environmental Auditing Training Courses | Various Clients | Toronto, Ontario, Canada | 1996-2018 | Lead Instructor

Organized and taught 3-day Auditor Certification training courses on Environmental Management Systems and Environmental Auditing. Courses are recognized by ECO Canada as fulfilling the formal training requirements for participants to become Environmental Professionals in auditing and management systems.

Course Development | Envirogate Event Management | Toronto, Ontario, Canada | 2006-present | Lead Instructor and Course Developer

Instructed and developed 18 separate courses presented at public conferences and remotely on-line, and for private clients since 2006, on topics including integration of environment, health, safety & quality systems, environmental best practices, environmental, social, governance, standards and guidelines for due diligence and environmental management, environmental auditing, regulatory compliance, environmental site assessment, professional ethics, etc.

Drinking Water Quality Management Standard/ISO 9001 Training Course, York Region | Regional Municipality of York | Ontario, Canada | Trainer and Author

Trainer and Author of Drinking Water Quality Management Standard/ISO 9001 course for all levels of personnel associated with water treatment and distribution (approximately 80 people).

Environmental Awareness Training Courses | Various Clients | Canada | Author and Trainer

Environmental Training Courses for all levels of management personnel across Canada for the Environmental Management Program for Canadian Real Estate Investment Trust, for Bentall Real Estate/Capital, Sun Life, and Morguard REIT (total over 500 people).

Environmental Management System Strategic Workshops | Metro Vancouver Liquid Waste Services | British Columbia, Canada | 2016 | Project Manager and Technical Lead

Provided two strategic advisory workshops for Liquid Waste Services Department of Metro Vancouver to assist in the development of implementation plans for achieving various departmental and corporate metrics and goals. Developed and facilitated these 3-hour workshops to define EMS processes related to implementation, and to consider and confirm environmental risk management approaches.

ENVIRONMENTAL COMPLIANCE AUDITS

Environmental Compliance Reviews | Toronto Transit Commission | Toronto, Ontario, Canada | 2018-2020 | Lead Auditor/Advisor

Perform monthly compliance inspections and evaluation of construction contractor compliance to environmental regulations and project environmental management procedures at the McNicoll Bus Garage construction site for the Toronto Transit Commission.

Environmental Compliance Audits | Confidential Client | Fort Frances and Kenora, Ontario, Canada | Auditor

Environmental compliance audits of large pulp and paper mill and five supporting power stations.

Compliance Audits | Confidential Client | Mississauga, Ontario, Canada | Lead Auditor

Environmental Compliance Audit for large hospital, including cancer centre and offsite clinics.

Environmental, Health & Safety Compliance Audits, York Region | Regional Municipality of York | Ontario, Canada | 2006-2013 | Lead Auditor/Senior Advisor

Environmental, Health & Safety Compliance Audits, Regional Municipality of York, Water and Wastewater Treatment and Distribution Facilities, and Waste Management Facilities, covering over 100 sites (repeated program over two 3-year cycles).

Environment, Health & Safety Management System and Compliance Audit | Canadian Tire Corporation | Various Areas across Canada | Lead Auditor

Environment, Health & Safety Management System and Compliance Audit of Head Office and all Business Units of Canadian Tire Corporation.

Compliance Audits | Refrigerant Management Canada | Toronto, Ontario, Canada | 2002-present | Technical Reviewer and Client Advisor

Compliance Audits of ozone depleting substance (refrigerant) collection and disposal service providers. Audits include evaluating status of conformance to requirements for collecting processing and destroying obsolete refrigerants across Canada.

Audit Protocol Development | PWGSC | Toronto, Ontario, Canada | Technical and Project Manager

Development of Environmental Compliance and Management System Audit Protocols for Storage Tanks, and Air Emissions, at Federal Facilities in Ontario.

Environmental Compliance and Management Audit, Lower Mattagami Hydroelectric Reconstruction Project | Peter Kiewit Construction | Ontario, Canada | 2013 | Lead Environmental Auditor

Performed an environmental compliance and management audit of the construction and environmental management activities during the diversion of the Lower Mattagami River and reconstruction of the historic Little Long and Smoky Falls hydroelectric power stations. Completed to confirm implementation of environmental controls and monitoring for environmental approvals for the project.

Environmental Compliance Audits | Infrastructure Ontario/Ontario Realty Corporation | Ontario, Canada | 2005-2015 | Senior Program Manager

Environmental Compliance Audits of 46 Ontario Government complexes throughout Ontario, including hospitals, correctional facilities, water and wastewater treatment plants, fire centres, fish research centres, multi-building office properties, etc., for Infrastructure Ontario and the Ontario Realty Corporation.

Environmental, Health & Safety Compliance Reviews | 3M | Milton, Ontario, Canada | 2022 | Lead Auditor

Lead environmental auditor for an environmental, health & safety compliance review and risk evaluation of facility regulatory compliance for main product distribution facilities in Milton, ON.

Environmental, Health & Safety Compliance Audit | Confidential | St. John's, NF, Canada | 2022 | Lead Auditor

Lead environmental auditor for an environmental, health & safety compliance audit at a major brewery in Atlantic Canada. Worked with two separate legal counsel firms to assist them to provide legal advice to the client.

Five-Year Environmental Regulatory Review | Bruce Power | Ontario, Canada | 2021 | Project Manager, Lead Technical Advisor

In collaboration with CLAW Environmental Services Inc., Stantec provided an independent 3rd party compliance review summarizing Bruce Power's environmental activities and reporting for 2016 through 2020. Extensive documentation review and interviews were held. The work was required to confirm to Ontario Power Generation that Bruce Power was meeting applicable environmental compliance obligations.

ENVIRONMENTAL MANAGEMENT

Development of Guidance Manual for the Management and Disposal of PFAS-Impacted Waste Materials, Canada | Canada | 2017-2018 | Subject Matter Expert

Coordinated efforts of Stantec team and provided technical and strategy expertise for the identification of applicable regulatory and best practice information to assist Transport Canada with decision-making in the management of PFAS impacted wastes.

Environmental Quality Management Plan Development, East Rail Maintenance Facility | Metrolinx/Infrastructure Ontario | Ontario, Canada | 2015-2016 | Environmental Quality Manager

Stantec, as part of the Plenary Infrastructure team, developed and helped implement an Environmental Quality Management Plan (EQMP) for the design, construction and operation of the East Rail Maintenance Facility in Whitby, Ontario. The EQMP is consistent with ISO 14001 and covers the processes to maintain compliance with applicable environmental approvals, standards, regulations, guidelines, policies, and practices. The EQMP also includes sustainability processes in alignment with LEED requirements.

Environmental Management System Development | City of Edmonton Valley Line West Light Rail Transit | Edmonton, Alberta, Canada | 2020-2021 | EMS Technical Lead/ System Developer

Stantec, as part of Marigold Infrastructure Partners (MIP), developed the Valley Line West (VLW) Project Environmental Management System (EMS) to outline the minimum environmental protection measures to be implemented and management criteria to be met to minimize environmental impacts in Design and from Construction activities.

Environmental Management System Audits | Regina Airport Authority | Regina, Saskatchewan, Canada | 2014-2022 | Lead Auditor

Performed environmental management system (EMS) and compliance audits of the operations and activities conducted at Regina International Airport. Audit activities covered the client's EMS and regulatory compliance including maintenance of buildings and owned mobile equipment, snow removal and de-icing of runways and roads, emergency response, fuel storage and dispensing, waste removal, wildlife management and storm and sanitary sewer management.

ISO 14001 Development and Implementation | Telus | Toronto, Ontario, Canada | Project Strategy Lead/Project Manager

Project Leader for a 2-year ISO 14001 implementation program for TELUS across Canada. Registration to ISO 14001 for the corporation was achieved.

ISO14001 Internal Audit | Suncor Energy | Sarnia, Ontario, Canada | Lead Auditor

ISO14001 Internal Audit at the Suncor Sarnia Refinery, Sarnia, Ontario.

Environmental Management System Strategy | SunLife Financial | Waterloo, Ontario, Canada | Technical and Project Manager

Environmental Management System development and Corporate Strategic Advice, International Financial and Insurance Company.

Environmental, Health & Safety Management System | Canadian Tire Corporation | Toronto, Ontario, Canada | Project Manager

Corporate Environmental, Health & Safety Management System development and advisory for Canadian Tire Corporation.

Environmental Management Program Development and Implementation | Various Clients | Canada | 2000-2021 | Project Strategy Lead/Project Manager

Project Leader for development and updating environmental management programs for various corporations with operations across Canada (real estate management, construction, etc.).

ENVIRONMENTAL SITE ASSESSMENTS PHASE I, II, III

Phase I and II ESAs, Risk Assessments, and Records of Site Condition, North Maple Regional Park | City of Vaughan | Vaughan, Ontario | 2016-Present | Project Leader/Qualified Person

Completion of ESAs, risk assessments and obtaining Record of Site Conditions under Ontario Regulation 153/04 of this 62 ha area former municipal composting facility for use of the property as public parkland. The initial RSC was obtained in 2018 for 70% of the park. Work is ongoing to obtain additional RSCs to expand the usable park area. Randy is the project technical lead and Qualified Person overseeing completion of the Phase One and Two ESAs, and the Records of Site Condition.

Phase I and II ESA, Soil and Groundwater Remediation | Confidential Client | Toronto, Ontario, Canada | 2011-2018 | Project Manager and Senior Technical Lead

Led a team to complete a Phase I and II ESA and assessment of groundwater conditions, and associated remediation of an automotive service facility with historic petroleum hydrocarbon and chlorinated solvent contamination in soil and groundwater. Successfully implemented new-to-Canada groundwater remediation technology.

Completion of Records of Site Condition, Various Cities | Various Clients | Ontario, Canada | 2006-present | Qualified Person

Since 2006, completion of 27 Records of Site Condition under Ontario Regulation 153/04, for Property Redevelopment across Ontario.

Phase II ESA Groundwater Assessment, and Water Treatment Services | Confidential Client | Toronto, Ontario, Canada | 2012-Present | Project Manager and Senior Technical Lead

Led a team to complete a Phase II ESA and assessment of groundwater of a former industrial facility with historical chlorinated solvent contamination in soil and groundwater. Worked with adjacent property owner and legal counsel to advise on groundwater and stormwater treatment systems required for discharge compliance. Provided guidance and strategy to client legal counsel.

Phase I and II ESAs | Royal Bank | Various Cities across Canada | Project Manager, Technical Reviewer

Phase I and II Environmental Site Assessments of Royal Bank of Canada owned real estate portfolio (33 commercial office tower sites across Canada).

Environmental Site Investigations, Various Cities | Various Clients | Ontario, Canada | 1995-present | Senior Technical Reviewer, Project Manager, Project Engineer

Environmental Site Investigations, for petroleum service stations and bulk terminals, performed in conjunction with prospective site purchase or divestment, southern Ontario.

Phase II ESAs and Site Remediation, Various Cities | Confidential Client | Ontario, Canada | Senior Project Manager/Technical Advisor

Phase II Environmental Site Assessments and Site Remediation of six retail/commercial facilities in Ontario (insurance claim).

Phase I and II ESA | PWGSC, AANDC | Fort Frances, Ontario, Canada | 2010-2014 | Senior Reviewer and Technical Advisor

Assessment of a large former industrial property located on First Nations land with numerous third parties including a public open house. Intention of the Phase I ESA was to consolidate the previous environmental assessments to establish a baseline of environmental conditions at the property. Phase II/III ESA investigation of three areas of potential environmental concern and a background (reference) area. Former site activities included wood preservation. Contaminants of concern included polychlorinated dibenzo-dioxins and –furans that required rigorous decontamination and quality programs to prevent cross-contamination.

Phase I and II ESA | PWGSC | Penetanguishene, Ontario, Canada | Project Manager/Senior Technical Advisor

Randy was responsible to oversee the completion of a Phase I ESA and Phase II ESA at Penetanguishene Mental Health Centre property for environmental condition baseline and future facility expansion. Phase II ESA included delineation of abandoned on-site landfill. Randy was the project manager and senior advisor overseeing completion of the ESA programs and reports.

Environmental Baseline Assessments—Federal Departments and Other Federally Regulated Facilities | PSPC | Ontario, Canada | 2002-2017 | Principal Representing Stantec, Program Advisor and Quality Reviewer

Randy was the prime Stantec liaison to PSPC Ontario Region for standing offer agreements for over 15 years, and has been involved in site assessment, remediation, auditing and management system work for the Federal Government since the early 1990s. These projects have included more than 40 environmental baseline audits and/or Phase I Environmental Site Assessments covering facility regulatory compliance and risk of site contamination. Randy's responsibilities included determination of project scope and budgets, allocation of project team members, review of workplans, coordinating on-site audit/assessment work and conducting senior quality review of reporting.

Portfolio of Five First Nation Assessment Sites (4 Phase I ESAs and I Phase II ESA), Phase I ESAs at various Northern Ontario First Nations Reserves | PSPC | Ontario, Canada | 2016-2018 | Senior Technical Advisor

To help facilitate property transactions, the work included completion of Phase I ESAs of proposed land to be acquired for the Aroland, Alderville, Moose Deer Point and Nibinamik First Nations. Where applicable, potential environmental concerns, best management practices and health and safety concerns were noted at the sites and recommendations for future work were provided in technical reports. In addition, the work included the completion of a Phase II ESA of a potentially contaminated site adjacent to the Mattagami First Nation.

Enhanced Phase I ESAs at Agency ILA First Nation and Slate Falls First Nation, Fort Francis and Slate Falls | PSPC | Ontario, Canada | 2017-2018 | Senior Technical Advisor

The work included completion of Enhanced Phase I ESAs of the Agency ILA First Nation and Slate Falls First Nation with the objective of identifying areas of actual and potential environmental concerns (AEC/APEC), and to identify observed environmental reporting issues (ERIs), best management practices (BMPs), general environmental compliance observations, and health and safety concerns. In addition, Stantec was to conduct a preliminary surficial soil sampling program if AECs/APECs were identified where there was visual signs of impact (which occurred at Slate Falls First Nation, and soil was sampled for PHC F1-F4, BTEX, PAHs, metals, and pH). Based on the findings of the investigation, further recommendations were made for both sites. Randy's role was that of key SOA contact overseeing proper execution of the project within the SOA and call-up terms.

Seed Documents for the Revisions to CSA Z768-01 and Z769-00 | Canadian Standards Association | Canada | 2023 | Project Manager, Technical Lead

Led the project to provide seed documents for proposed revisions to the CSA Z768-01 Phase I Environmental Site Assessment and CSA Z769-00 Phase II Environmental Site Assessment standards. The project included review of existing background documentation, undertaking stakeholder engagement and providing a summary of specific issues and challenges the stakeholder community has with the existing Standards. The findings from the Project are being incorporated into pending revisions of each Standard by the CSA TC207 SC2 Mirror Committee.

Phase I and II ESAs | Metrolinx | Greater Toronto Area, Ontario, Canada | 2019-Present | Environmental Technical Lead and Qualified Person

Randy has been the senior technical lead and Qualified Person for more than 10 complex multi-property Phase I and Phase II ESAs required by Metrolinx to confirm the environmental condition of properties required for rail and transit expansion in the Greater Toronto Area. Types of properties included those to be developed into rail stations, maintenance facilities, construction laydown areas, roadway/rail grade separations, etc.

Excess Soil Investigations and Planning | Various | Greater Toronto Area, Ontario, Canada | 2021-Present | Qualified Person, Senior Technical Reviewer

Randy has been the senior technical reviewer and/or Qualified Person for more than 10 excess soil planning and investigation projects required by clients to facilitate redevelopment of properties. Project elements have included Assessment of Past Uses, Sampling and Analysis Plans, Soil Characterization Reports, Excess Soil Destination Assessment Reports, and logging information into the Ontario Regulation 406/19 excess soil registry.

Phase II ESAs and Remediation of PFAS Contamination in Groundwater | Confidential Client (insurance claim) | Ontario, Canada | Senior Technical Advisor

Worked with Stantec technical team to characterize, delineate and initiate the remediation of PFAS contaminated groundwater at a rural property where a fire occurred. Drinking water wells in the area were also impacted. Discussions held with provincial regulatory agencies regarding the assessment and remediation program.

Phase I and II ESA, Soil and Groundwater Remediation | Confidential Client | Toronto, Ontario, Canada | 2011-2018 | Project Manager and Senior Technical Lead

Led a team to complete a Phase I and II ESA and assessment of groundwater conditions, and associated remediation of an automotive service facility with historic petroleum hydrocarbon and chlorinated solvent contamination in soil and groundwater. Successfully implemented new-to-Canada groundwater remediation technology.

SUSTAINABILITY

Sustainability and Environmental Footprinting, Various Cities | Confidential Client | Ontario, Canada | Lead Engineer

Developed project methodology and led the performance of an environmental footprinting project for one of Canada's largest private sector analytical laboratories.

Environmental Options Review | Confidential Client | Toronto, Ontario, Canada | Lead Assessor and Project Manager

Environmental Options Review (sustainability baseline assessment).

AIR POLLUTION CONTROL

Odour Control Study and Odour Testing | Canada Blue Tanning | Cobourg, Ontario, Canada | Project Manager/Engineer

Conducted Odour Control Study and Odour Testing at tannery.

Compliance Stack Testing and Protocol Approvals | Confidential Client | Belleville, Ontario, Canada | Project Engineer/Site Supervisor, Compliance Stack Testing and Protocol Approvals

Compliance Stack Testing and Protocol Approvals, for total hydrocarbon/odour.

Industrial Air Quality and Ventilation Design Study | Confidential Client | Toronto, Ontario, Canada | Project Engineer

Plating chemical manufacturer, Toronto, Ontario.

AIR POLLUTION CONTROL SYSTEMS ENGINEERING

Design of Ventilation Systems | Ivoclar-Vivadent | Toronto, Ontario, Canada | Project Engineer

Design and construction management of flammable liquid dispensing room at plastics manufacturing facility & laboratory, Ontario.

Dear Mia Dinh:

RE: **MECP FOI A-2025-02856, Your Reference 121626297 – Decision Letter**

This letter is in response to your request made pursuant to the Freedom of Information and Protection of Privacy Act (the Act) relating to:

1900 Cyrville Road, Ottawa

Time Period: 1900/01/01 to 2025/04/30

The ministry's District Office has advised that there are inactive records in the Records Centre, Mississauga, and below is a description of these records:

- 3-1725-98-996, Municipal and Private Sewage Works (MPSW), Cornerstone Builders Ltd., Approved, Offsite, NA, 1999

If you would like us to retrieve these files, **please submit a new request** and inform the analyst below. In the request description section, indicate you are seeking records from the Record Centre in relation to file number A-2025-02856. The $5 application fee for your new FOI request will be applied towards any costs incurred with the retrieval of the records from the Records Centre.

You may request a review of my decision within 30 days from the date of this letter by contacting the Information and Privacy Commissioner/Ontario at http://www.ipc.on.ca. Please note there may be a fee associated with submitting the appeal.

If you have any questions, please contact Shannon Neita at shannon.neita@ontario.ca.

Yours truly,

Shannon Neita

Limitations and Notices:

TSSA Fuels Safety:

If you have environmental concerns regarding this property, you should consider hiring an environmental consultant to conduct an environmental assessment of the property in question.

- Sites that have not been licensed since 1987 may not be in TSSA records.

- Be advised, TSSA Fuels Safety Division did not register:
  - private fuel underground/ aboveground storage tanks prior to January of 1990; and
  - furnace oil tanks prior to May 1, 2002.

- Fuels Safety Division does not register
  - private waste oil tanks in apartments, office buildings, residences etc.; and
  - aboveground gas or diesel tanks.

- The *Technical Standards and Safety Act* and associated regulations do not require the registration of private fuel outlets, nor does it require that any documentation on these facilities be submitted to or reviewed or approved by TSSA. As a result, TSSA has limited information on these facilities. TSSA cautions that any information provided may be inaccurate, incomplete or out of date.

TSSA Elevating & Amusement Devices Program Notice:

- All orders and/or directions issued by the TSSA Inspector have a compliance date and the owner or designated contractor are required to comply within the specified time limit.

- All written declarations of compliance (where eligible) should be sent to TSSA. Once a declaration of compliance has been received, the outstanding order will be resolved.

- Each report shows the details and date of the inspection conducted by TSSA at the requested location.

- The Ontario Amusement Devices Regulation (O. Reg. 221/01) was adopted in 2001. Since that time, TSSA retains copies of technical dossiers of new amusement devices in Ontario (as per TSSA's retention policy). However, for rides that existed prior to the adoption of the Regulation, which were subject to a "grandfathering-in" clause, technical dossiers were not required to be filed with the TSSA. However, if the amusement ride remains in operation, as per ASTM requirements, the owner/licensee must possess an operations document for the device in question.

TSSA Boilers and Pressure Vessels (BPVs) Program Notice:

- Be advised, TSSA does not typically inspect BPVs. These inspections are usually performed by insurance companies.

- **Inspection reports are not always submitted to TSSA by insurance companies; therefore, while TSSA may have some evidence of a BPV at a location on file, there may be no inspection records pertaining to BPVs located at the address provided.

- As of July 1, 2018, BPVs in Ontario may not be operated unless the Director has issued a current certificate of inspection (COI) to the owner or operator. A COI will be issued to the owner or operator of the BPV by TSSA after TSSA has received a Record of Inspection (ROI) from the insurer/third-party inspector, the associated fees have been paid and the BPV has passed a periodic inspection.

- Please note that if the BPV in question is insured, the insurance company may have additional inspection records. Please contact the insurer directly should you wish to obtain further information.

FS Inspection Report

Service Request #	**2574612**
Inspection Report #	**7820501**

Inspection Address: **1900 CYRVILLE RD** **GLOUCESTER;ON** **CA K1B 1A5**	Reference Number(s):	Inspection Completion Date: **JUL 30, 2019**
	Facility Type: **FS Propane Refill Cntr - Cylr Fill**	Equipment Type:
Customer Name and Address: **COSTCO WHOLESALE CANADA LTD.** **415 WEST HUNT CLUB RD** **OTTAWA;ON** **CA K2E 1C5**	Task Type: FS-Periodic Propane Inspection **The facility/equipment is inspected in accordance with Ontario's Technical Standards & Safety Act and the appropriate regulations and codes. When an Inspector's order is issued, time limits for compliance reflect the severity of the violation and serve to avoid disruption of service.**	

Orders Issued To: COSTCO WHOLESALE CANADA LTD.

Task Notes

On July 29, 2019 the periodic Propane inspection was done at 1900 Cyrville Road in Ottawa Ontario of the (Costco propane refill).

I spoke with staff who were able to show me the site and viewed one employee filling 20lb propane cylinders safely.

The equipment is maintained by Superior Propane who was last on site for inspection on March 29, 2019.

There was a pressure test tag also affixed to the piping to reflect this inspection.

We tested the E-Stop and viewed the site with no visual infraction noted at this time.

Inspection complete.

TSSA's time involved with this inspection will be billed to the above named client in the form of cost recovery fees by authority of Section 19 of the TSSAct, 2011 and according to TSSA billing policy.

	The facility/equipment is inspected in accordance with Ontario's Technical Standards & Safety Act and the appropriate regulations and codes. When an Inspector's order is issued, time limits for compliance reflect the severity of the violation and serve to avoid disruption of service.	

Task Notes

TSSA Inspector David Barclay conducted a Propane Periodic Inspection at 1900 Cyrville rd; Ottawa, April 1, 2011 and found the following noncompliances:

- Purge vent pipe rusty needs to be painted.
- No smoking sign needed on cylinder cage.
-Piping in cylinder fill cabinet rusty.
-Cylinder fill hose worn down to wires due to dragging on cement pad also found Costco employees closing cylinder cabinet door on hose.
-Distance between posts for protection of supply tank more than 54" in one location, lamp post is not protection for tank.
-Purge nozzel missing neoprene gasket.
-Rusted pipes located in "chase" need attention.
The above Inspector's Orders are a result of the inspection. Cost recovery fees will be billed to the above named client by Authority of Section 19 of the TSSAct, 2000 and according to TSSA billing policy.
Pursuant to my Authority under Section 21 of the TSSAct, 2000, you are hereby Ordered to comply with the above Orders forthwith.
-Pipes located in "chase" rusted, need attention.
-Cylinder cage needs protection from trucks backing up to building to load/unload, spoke with Bruno Monderie who will relocate cages.

Appendix: Database Descriptions

Environmental Risk Information Services (ERIS) can search the following databases. The extent of historical information varies with each database and current information is determined by what is publicly available to ERIS at the time of update. ***Note:*** *Databases denoted with " * " indicates that the database will no longer be updated. See the individual database description for more information.*

Abandoned Aggregate Inventory: Provincial AAGR

The MAAP Program maintains a database of abandoned pits and quarries. Please note that the database is only referenced by lot and concession and city/town location. The database provides information regarding the location, type, size, land use, status and general comments.*

Government Publication Date: Sept 2002*

Aggregate Inventory: Provincial AGR

This database of licensed and permitted pits and quarries is maintained by the Ontario Ministry of Natural Resources and Forestry (MNRF), as regulated under the Aggregate Resources Act, R.S.O. 1990. Aggregate site data has been divided into active and inactive sites. Active sites may be further subdivided into partial surrenders. In partial surrenders, defined areas of a site are inactive while the rest of the site remains active.

Government Publication Date: Up to Nov 2024

Abandoned Mine Information System: Provincial AMIS

The Abandoned Mines Information System contains data on known abandoned and inactive mines located on both Crown and privately held lands. The information was provided by the Ministry of Northern Development and Mines (MNDM), with the following disclaimer: "the database provided has been compiled from various sources, and the Ministry of Northern Development and Mines makes no representation and takes no responsibility that such information is accurate, current or complete". Reported information includes official mine name, status, background information, mine start/end date, primary commodity, mine features, hazards and remediation.

Government Publication Date: 1800-Apr 2024

Anderson's Waste Disposal Sites: Private ANDR

The information provided in this database was collected by examining various historical documents which aimed to characterize the likely position of former waste disposal sites from 1860 to present. The research initiative behind the creation of this database was to identify those sites that are missing from the Ontario MOE Waste Disposal Site Inventory, as well as to provide revisions and corrections to the positions and descriptions of sites currently listed in the MOE inventory. In addition to historic waste disposal facilities, the database also identifies certain auto wreckers and scrap yards that have been extrapolated from documentary sources. Please note that the data is not warranted to be complete, exhaustive or authoritative. The information was collected for research purposes only.

Government Publication Date: 1860s-Present

Aboveground Storage Tanks: Provincial AST

Historical listing of aboveground storage tanks made available by the Department of Natural Resources and Forestry. Includes tanks used to hold water or petroleum. This dataset has been retired as of September 25, 2014 and will no longer be updated.

Government Publication Date: May 31, 2014

Automobile Wrecking & Supplies: Private AUWR

This database provides an inventory of known locations that are involved in the scrap metal, automobile wrecking/recycling, and automobile parts & supplies industry. Information is provided on the company name, location and business type.

Government Publication Date: 1999-Apr 30, 2024

Borehole: Provincial BORE

A borehole is the generalized term for any narrow shaft drilled in the ground, either vertically or horizontally. The information here includes geotechnical investigations or environmental site assessments, mineral exploration, or as a pilot hole for installing piers or underground utilities. Information is from many sources such as the Ministry of Transportation (MTO) boreholes from engineering reports and projects from the 1950 to 1990's in Southern Ontario. Boreholes from the Ontario Geological Survey (OGS) including The Urban Geology Analysis Information System (UGAIS) and the York Peel Durham Toronto (YPDT) database of the Conservation Authority Moraine Coalition. This database will include fields such as location, stratigraphy, depth, elevation, year drilled, etc. For all water well data or oil and gas well data for Ontario please refer to WWIS and OOGW.

Government Publication Date: 1875-Jul 2018

Certificates of Approval: Provincial CA

This database contains the following types of approvals: Air & Noise, Industrial Sewage, Municipal & Private Sewage, Waste Management Systems and Renewable Energy Approvals. The MOE in Ontario states that any facility that releases emissions to the atmosphere, discharges contaminants to ground or surface water, provides potable water supplies, or stores, transports or disposes of waste, must have a Certificate of Approval before it can operate lawfully. Fields include approval number, business name, address, approval date, approval type and status. This database will no longer be updated, as CofA's have been replaced by either Environmental Activity and Sector Registry (EASR) or Environmental Compliance Approval (ECA). Please refer to those individual databases for any information after Oct.31, 2011.

Government Publication Date: 1985-Oct 30, 2011*

Dry Cleaning Facilities: Federal CDRY

List of dry cleaning facilities made available by Environment and Climate Change Canada. Environment and Climate Change Canada's Tetrachloroethylene (Use in Dry Cleaning and Reporting Requirements) Regulations (SOR/2003-79) are intended to reduce releases of tetrachloroethylene to the environment from dry cleaning facilities.

Government Publication Date: Jan 2004-Dec 2022

Commercial Fuel Oil Tanks: Provincial CFOT

Locations of commercial underground fuel oil tanks. This is not a comprehensive or complete inventory of commercial fuel tanks in the province; this listing is a copy of records of registered commercial underground fuel oil tanks obtained under Access to Public Information.
Note that the following types of tanks do not require registration: waste oil tanks in apartments, office buildings, residences, etc.; aboveground gas or diesel tanks. Records are not verified for accuracy or completeness.

Government Publication Date: Oct 2023

Chemical Manufacturers and Distributors: Private CHEM

This database includes information from both a one time study conducted in 1992 and private source and is a listing of facilities that manufacture or distribute chemicals. The production of these chemical substances may involve one or more chemical reactions and/or chemical separation processes (i.e. fractionation, solvent extraction, crystallization, etc.).

Government Publication Date: 1999-Jan 31, 2020

Chemical Register: Private CHM

This database includes a listing of locations of facilities within the Province or Territory that either manufacture and/or distributes chemicals.

Government Publication Date: 1999-Apr 30, 2024

Compressed Natural Gas Stations: Private CNG

Canada has a network of public access compressed natural gas (CNG) refuelling stations. These stations dispense natural gas in compressed form at 3,000 pounds per square inch (psi), the pressure which is allowed within the current Canadian codes and standards. The majority of natural gas refuelling is located at existing retail gasoline that have a separate refuelling island for natural gas. This list of stations is made available by the Canadian Natural Gas Vehicle Alliance.

Government Publication Date: Dec 2012 -Feb 2025

Inventory of Coal Gasification Plants and Coal Tar Sites: Provincial COAL

This inventory includes both the "Inventory of Coal Gasification Plant Waste Sites in Ontario-April 1987" and the Inventory of Industrial Sites Producing or Using Coal Tar and Related Tars in Ontario-November 1988) collected by the MOE. It identifies industrial sites that produced and continue to produce or use coal tar and other related tars. Detailed information is available and includes: facility type, size, land use, information on adjoining properties, soil condition, site operators/occupants, site description, potential environmental impacts and historic maps available. This was a one-time inventory.*

Government Publication Date: Apr 1987 and Nov 1988*

Compliance and Convictions: Provincial CONV

This database summarizes the fines and convictions handed down by the Ontario courts beginning in 1989. Companies and individuals named here have been found guilty of environmental offenses in Ontario courts of law.

Government Publication Date: 1989-Mar 2025

Certificates of Property Use: Provincial CPU

This is a subset taken from Ontario's Environmental Registry (EBR) database. It will include CPU's on the registry such as (EPA s. 168.6) - Certificate of Property Use.

Government Publication Date: 1994 - Feb 28, 2025

Drill Hole Database: Provincial DRL

The Ontario Drill Hole Database (ODHD) is offered by the Province of Ontario's Ministry of Mines. The dataset contains information for over 164,000 percussion, overburden, sonic and diamond-drill holes. The presence of assay results with cutoff values for gold, silver, copper, zinc, lead, nickel and platinum group elements is noted. Drill hole data are compiled from assessment files that have been submitted to the ministry in accordance with the Ontario Mining Act (OMA). Source assessment file numbers are captured for cross reference with the Ontario Assessment File Database (OAFD). Please note that limited data is available for southern Ontario, as it was the last area to be completed. The database was created when surveys submitted to the Ministry were converted in the Assessment File Research Image Database (AFRI) project. However, the degree of accuracy (coordinates) as to the exact location of drill holes is dependent upon the source document submitted. Levels of accuracy used to locate holes are: centering on the mining claim; a sketch of the mining claim; a 1:50,000 map; a detailed company map; or from submitted a "Report of Work".

Government Publication Date: 1886 - Aug 2024

Delisted Fuel Tanks: Provincial DTNK

List of fuel storage tank sites that were once found in - and have since been removed from - the list of fuel storage tanks made available by the regulatory agency under Access to Public Information.

Government Publication Date: Oct 2023

Environmental Activity and Sector Registry: Provincial EASR

On October 31, 2011, a smarter, faster environmental approvals system came into effect in Ontario. The EASR allows businesses to register certain activities with the ministry, rather than apply for an approval. The registry is available for common systems and processes, to which preset rules of operation can be applied. The EASR is currently available for: heating systems, standby power systems and automotive refinishing. Businesses whose activities aren't subject to the EASR may apply for an ECA (Environmental Compliance Approval), Please see our ECA database.

Government Publication Date: Oct 2011-Mar 31, 2025

Environmental Registry: Provincial EBR

The Environmental Registry lists proposals, decisions and exceptions regarding policies, Acts, instruments, or regulations that could significantly affect the environment. Through the Registry, thirteen provincial ministries notify the public of upcoming proposals and invite their comments. For example, if a local business is requesting a permit, license, or certificate of approval to release substances into the air or water; these are notified on the registry. Data includes: Approval for discharge into the natural environment other than water (i.e. Air) - EPA s. 9, Approval for sewage works - OWRA s. 53(1), and EPA s. 27 - Approval for a waste disposal site. For information regarding Permit to Take Water (PTTW), Certificate of Property Use (CPU) and (ORD) Orders please refer to those individual databases.

Government Publication Date: 1994 - Feb 28, 2025

Environmental Compliance Approval: Provincial ECA

On October 31, 2011, a smarter, faster environmental approvals system came into effect in Ontario. In the past, a business had to apply for multiple approvals (known as certificates of approval) for individual processes and pieces of equipment. Today, a business either registers itself, or applies for a single approval, depending on the types of activities it conducts. Businesses whose activities aren't subject to the EASR may apply for an ECA. A single ECA addresses all of a business's emissions, discharges and wastes. Separate approvals for air, noise and waste are no longer required. This database will also include Renewable Energy Approvals. For certificates of approval prior to Nov 1st, 2011, please refer to the CA database. For all Waste Disposal Sites please refer to the WDS database.

Government Publication Date: Oct 2011-Mar 31, 2025

Environmental Effects Monitoring: Federal EEM

The Environmental Effects Monitoring program assesses the effects of effluent from industrial or other sources on fish, fish habitat and human usage of fisheries resources. Since 1992, pulp and paper mills have been required to conduct EEM studies under the Pulp and Paper Effluent Regulations. This database provides information on the mill name, geographical location and sub-lethal toxicity data.

Government Publication Date: 1992-2007*

ERIS Historical Searches: Private EHS

ERIS has compiled a database of all environmental risk reports completed since March 1999. Available fields for this database include: site location, date of report, type of report, and search radius. As per all other databases, the ERIS database can be referenced on both the map and "Statistical Profile" page.

Government Publication Date: 1999-Aug 31, 2024

Environmental Issues Inventory System: Federal EIIS

The Environmental Issues Inventory System was developed through the implementation of the Environmental Issues and Remediation Plan. This plan was established to determine the location and severity of contaminated sites on inhabited First Nation reserves, and where necessary, to remediate those that posed a risk to health and safety; and to prevent future environmental problems. The EIIS provides information on the reserve under investigation, inventory number, name of site, environmental issue, site action (Remediation, Site Assessment), and date investigation completed.

Government Publication Date: 1992-2001*

Emergency Management Historical Event: Provincial EMHE

List of locations of historical occurrences of emergency events, including those assigned to the Ministry of Natural Resources by Order-In-Council (OIC) under the Emergency Management and Civil Protection Act, as well as events where MNR provided requested emergency response assistance. Many of these events will have involved community evacuations, significant structural loss, and/or involvement of MNR emergency response staff. These events fall into one of ten (10) type categories: Dam Failure; Drought / Low Water; Erosion; Flood; Forest Fire; Soil and Bedrock Instability; Petroleum Resource Center Event, EMO Requested Assistance, Continuity of Operations Event, Other Requested Assistance. EMHE record details are reproduced by ERIS under License with the Ontario Ministry of Natural Resources © Queen's Printer for Ontario, 2017.

Government Publication Date: Apr 30, 2022

Environmental Penalty Annual Report: Provincial EPAR

This database contains data from Ontario's annual environmental penalty report published by the Ministry of the Environment, Conservation and Parks (MECP). These reports provide information on environmental penalties for land or water violations issued to companies in one of the nine industrial sectors covered by the Municipal Industrial Strategy for Abatement (MISA) regulations.

Government Publication Date: Jan 1, 2011 - Dec 31, 2024

List of Expired Fuels Safety Facilities: Provincial EXP

List of facilities and tanks for which there was once a fuel registration. This is not a comprehensive or complete inventory of expired tanks/tank facilities in the province; this listing is a copy of previously registered tanks and facilities obtained under Access to Public Information. Includes private fuel outlets, bulk plants, fuel oil tanks, gasoline stations, marinas, propane filling stations, liquid fuel tanks, piping systems, etc; includes tanks which have been removed from the ground.
Notes: registration was not required for private fuel underground/aboveground storage tanks prior to January 1990, nor for furnace oil tanks prior to May 1, 2002; registration is not required for waste oil tanks in apartments, office buildings, residences, etc., or aboveground gas or diesel tanks. Records are not verified for accuracy or completeness.

Government Publication Date: Oct 2023

Federal Convictions: Federal FCON

Environment Canada maintains a database referred to as the "Environmental Registry" that details prosecutions under the Canadian Environmental Protection Act (CEPA) and the Fisheries Act (FA). Information is provided on the company name, location, charge date, offence and penalty.

Government Publication Date: 1988-Jun 2007*

Contaminated Sites on Federal Land: Federal FCS

The Federal Contaminated Sites Inventory includes information on known federal contaminated sites under the custodianship of departments, agencies and consolidated Crown corporations as well as those that are being or have been investigated to determine whether they have contamination arising from past use that could pose a risk to human health or the environment. The inventory also includes non-federal contaminated sites for which the Government of Canada has accepted some or all financial responsibility. It does not include sites where contamination has been caused by, and which are under the control of, enterprise Crown corporations, private individuals, firms or other levels of government. Includes fire training sites and sites at which Per- and Polyfluoroalkyl Substances (PFAS) are a concern.

Government Publication Date: Jun 2000-Jan 2025

Fisheries & Oceans Fuel Tanks: Federal FOFT

Fisheries & Oceans Canada maintains an inventory of aboveground & underground fuel storage tanks located on Fisheries & Oceans property or controlled by DFO. Our inventory provides information on the site name, location, tank owner, tank operator, facility type, storage tank location, tank contents & capacity, and date of tank installation.

Government Publication Date: 1964-Sep 2019

Federal Identification Registry for Storage Tank Systems (FIRSTS): Federal FRST

A list of federally regulated Storage tanks from the Federal Identification Registry for Storage Tank Systems (FIRSTS). FIRSTS is Environment and Climate Change Canada's database of storage tank systems subject to the Storage Tank for Petroleum Products and Allied Petroleum Products Regulations. The main objective of the Regulations is to prevent soil and groundwater contamination from storage tank systems located on federal and aboriginal lands. Storage tank systems that do not have a valid identification number displayed in a readily visible location on or near the storage tank system may be refused product delivery.

Government Publication Date: Oct 31, 2021

Fuel Storage Tank: Provincial FST

List of registered private and retail fuel storage tanks. This is not a comprehensive or complete inventory of private and retail fuel storage tanks in the province; this listing is a copy of registered private and retail fuel storage tanks, obtained under Access to Public Information.
Notes: registration was not required for private fuel underground/aboveground storage tanks prior to January 1990, nor for furnace oil tanks prior to May 1, 2002; registration is not required for waste oil tanks in apartments, office buildings, residences, etc., or aboveground gas or diesel tanks. Records are not verified for accuracy or completeness.

Government Publication Date: Oct 2023

Fuel Storage Tank - Historic: Provincial FSTH

The Fuels Safety Branch of the Ontario Ministry of Consumer and Commercial Relations maintained a database of all registered private fuel storage tanks. Public records of private fuel storage tanks are only available since the registration became effective in September 1989. This information is now collected by the Technical Standards and Safety Authority.

Government Publication Date: Pre-Jan 2010*

Ontario Regulation 347 Waste Generators Summary: Provincial GEN

Regulation 347 of the Ontario EPA defines a waste generation site as any site, equipment and/or operation involved in the production, collection, handling and/or storage of regulated wastes. A generator of regulated waste is required to register the waste generation site and each waste produced, collected, handled, or stored at the site. This database contains the registration number, company name and address of registered generators including the types of hazardous wastes generated. It includes data on waste generating facilities such as: drycleaners, waste treatment and disposal facilities, machine shops, electric power distribution etc. This information is a summary of all years from 1986 including the most currently available data. As of January 1, 2023, businesses and institutions subject to the amended Reg. 347: General – Waste Management are required to report their activities and pay fees through Resource Productivity & Recovery Authority (RPRA) online Hazardous Waste Program Registry (HWPR) rather than the Hazardous Waste Information Network (HWIN) system previously operated by the Ministry of the Environment, Conservation and Parks (MECP). Some records may contain, within the company name, the phrase "See & Use..." followed by a series of letters and numbers. This occurs when one company is amalgamated with or taken over by another registered company. The number listed as "See & Use", refers to the new ownership and the other identification number refers to the original ownership. This phrase serves as a link between the 2 companies until operations have been fully transferred.

Government Publication Date: 1986-Jun 30, 2024

Greenhouse Gas Emissions from Large Facilities: Federal GHG

List of greenhouse gas emissions from large facilities made available by Environment Canada. Greenhouse gas emissions in kilotonnes of carbon dioxide equivalents (kt CO2 eq).

Government Publication Date: 2013-Apr 2024

TSSA Historic Incidents: Provincial HINC

List of historic incidences of spills and leaks of diesel, fuel oil, gasoline, natural gas, propane, and hydrogen recorded by the TSSA in their previous incident tracking system. The TSSA's Fuels Safety Program administers the Technical Standards & Safety Act 2000, providing fuel-related safety services associated with the safe transportation, storage, handling and use of fuels such as gasoline, diesel, propane, natural gas and hydrogen. Under this Act, the TSSA regulates fuel suppliers, storage facilities, transport trucks, pipelines, contractors and equipment or appliances that use fuels. Records are not verified for accuracy or completeness. This is not a comprehensive or complete inventory of historical fuel spills and leaks in the province. This listing is a copy of the data captured at one moment in time and is hence limited by the record date provided here.

Government Publication Date: 2006-June 2009*

Indian & Northern Affairs Fuel Tanks: Federal IAFT

The Department of Indian & Northern Affairs Canada (INAC) maintains an inventory of aboveground & underground fuel storage tanks located on both federal and crown land. Our inventory provides information on the reserve name, location, facility type, site/facility name, tank type, material & ID number, tank contents & capacity, and date of tank installation.

Government Publication Date: 1950-Aug 2003*

Fuel Oil Spills and Leaks: Provincial INC

Listing of spills and leaks of diesel, fuel oil, gasoline, natural gas, propane, and hydrogen reported to the Spills Action Centre (SAC). This is not a comprehensive or complete inventory of fuel-related leaks, spills, and incidents in the province; this listing in a copy of incidents reported to the SAC, obtained under Access to Public Information. Includes incidents from fuel-related hazards such as spills, fires, and explosions. Records are not verified for accuracy or completeness.

Government Publication Date: 31 Oct, 2023

Landfill Inventory Management Ontario: Provincial LIMO

The Landfill Inventory Management Ontario (LIMO) database is updated every year, as the Ministry of the Environment, Conservation and Parks compiles new and updated information. Includes small and large landfills currently operating as well as those which are closed and historic. Operators of larger landfills provide landfill information for the previous operating year to the ministry for LIMO including: estimated amount of total waste received, landfill capacity, estimated total remaining landfill capacity, fill rates, engineering designs, reporting and monitoring details, size of location, service area, approved waste types, leachate of site treatment, contaminant attenuation zone and more. The small landfills include information such as site owner, site location and certificate of approval # and status.

Government Publication Date: Mar 31, 2022

Canadian Mine Locations: Private MINE

This information is collected from the Canadian & American Mines Handbook. The Mines database is a national database that provides over 290 listings on mines (listed as public companies) dealing primarily with precious metals and hard rocks. Listed are mines that are currently in operation, closed, suspended, or are still being developed (advanced projects). Their locations are provided as geographic coordinates (x, y and/or longitude, latitude). As of 2002, data pertaining to Canadian smelters and refineries has been appended to this database.

Government Publication Date: 1998-2009*

Mineral Occurrences: Provincial MNR

In the early 70's, the Ministry of Northern Development and Mines created an inventory of approximately 19,000 mineral occurrences in Ontario, in regard to metallic and industrial minerals, as well as some information on building stones and aggregate deposits. Please note that the "Horizontal Positional Accuracy" is approximately +/- 200 m. Many reference elements for each record were derived from field sketches using pace or chain/tape measurements against claim posts or topographic features in the area. The primary limiting factor for the level of positional accuracy is the scale of the source material. The testing of horizontal accuracy of the source materials was accomplished by comparing the plan metric (X and Y) coordinates of that point with the coordinates of the same point as defined from a source of higher accuracy.

Government Publication Date: 1846-Feb 2025

National Analysis of Trends in Emergencies System (NATES): Federal NATE

In 1974 Environment Canada established the National Analysis of Trends in Emergencies System (NATES) database, for the voluntary reporting of significant spill incidents. The data was to be used to assist in directing the work of the emergencies program. NATES ran from 1974 to 1994. Extensive information is available within this database including company names, place where the spill occurred, date of spill, cause, reason and source of spill, damage incurred, and amount, concentration, and volume of materials released.

Government Publication Date: 1974-1994*

Non-Compliance Reports: Provincial NCPL

The Ministry of the Environment Conservation and Parks (MECP) provides information about non-compliant discharges of contaminants to air and water that exceed legal allowable limits, from regulated industrial and municipal facilities. A reported non-compliance failure may be in regard to a Control Order, Certificate of Approval, Sectoral Regulation or specific regulation/act. MECP publicly releases the Environmental Compliance Report (ECR) on the Ontario Data Catalogue. In Ontario, all facilities with regulated wastewater discharges or air emissions under the Ontario Water Resources Act and the Environmental Protection Act must monitor and report any cases where approved operating limits have been exceeded.

Government Publication Date: Dec 31, 2023

National Defense & Canadian Forces Fuel Tanks: Federal NDFT

The Department of National Defense and the Canadian Forces maintains an inventory of all aboveground & underground fuel storage tanks located on DND lands. Our inventory provides information on the base name, location, tank type & capacity, tank contents, tank class, date of tank installation, date tank last used, and status of tank as of May 2001. This database will no longer be updated due to the new National Security protocols which have prohibited any release of this database.

Government Publication Date: Up to May 2001*

National Defense & Canadian Forces Spills: Federal NDSP

The Department of National Defense and the Canadian Forces maintains an inventory of spills to land and water. All spill sites have been classified under the "Transportation of Dangerous Goods Act - 1992". Our inventory provides information on the facility name, location, spill ID #, spill date, type of spill, as well as the quantity of substance spilled & recovered.

Government Publication Date: Mar 1999-Nov 2023

National Defence & Canadian Forces Waste Disposal Sites: Federal NDWD

The Department of National Defence and the Canadian Forces maintains an inventory of waste disposal sites located on DND lands. Where available, our inventory provides information on the base name, location, type of waste received, area of site, depth of site, year site opened/closed and status.

Government Publication Date: 2001-Apr 2007*

National Energy Board Pipeline Incidents: Federal NEBI

Locations of pipeline incidents from 2008 to present, made available by the Canada Energy Regulator (CER) - previously the National Energy Board (NEB). Includes incidents reported under the Onshore Pipeline Regulations and the Processing Plant Regulations related to pipelines under federal jurisdiction, does not include incident data related to pipelines under provincial or territorial jurisdiction.

Government Publication Date: 2008-Dec 31, 2024

National Energy Board Wells: Federal NEBP

The NEBW database contains information on onshore & offshore oil and gas wells that are outside provincial jurisdiction(s) and are thereby regulated by the National Energy Board. Data is provided regarding the operator, well name, well ID No./UWI, status, classification, well depth, spud and release date.

Government Publication Date: 1920-Feb 2003*

National Environmental Emergencies System (NEES): Federal NEES

In 2000, the Emergencies program implemented NEES, a reporting system for spills of hazardous substances. For the most part, this system only captured data from the Atlantic Provinces, some from Quebec and Ontario and a portion from British Columbia. Data for Alberta, Saskatchewan, Manitoba and the Territories was not captured. However, NEES is also a repository for previous Environment Canada spill datasets. NEES is composed of the historic datasets ' or Trends ' which dates from approximately 1974 to present. NEES Trends is a compilation of historic databases, which were merged and includes data from NATES (National Analysis of Trends in Emergencies System), ARTS (Atlantic Regional Trends System), and NEES. In 2001, the Emergencies Program determined that variations in reporting regimes and requirements between federal and provincial agencies made national spill reporting and trend analysis difficult to achieve. As a consequence, the department has focused efforts on capturing data on spills of substances which fall under its legislative authority only (CEPA and FA). As such, the NEES database will be decommissioned in December 2004.

Government Publication Date: 1974-2003*

National PCB Inventory: Federal NPCB

Environment Canada's National PCB inventory includes information on in-use PCB containing equipment in Canada including federal, provincial and private facilities. Federal out-of-service PCB containing equipment and PCB waste owned by the federal government or by federally regulated industries such as airlines, railway companies, broadcasting companies, telephone and telecommunications companies, pipeline companies, etc. are also listed. Although it is not Environment Canada's mandate to collect data on non-federal PCB waste, the National PCB inventory includes some information on provincial and private PCB waste and storage sites. Some addresses provided may be Head Office addresses and are not necessarily the location of where the waste is being used or stored.

Government Publication Date: 1988-2008*

National Pollutant Release Inventory: Federal NPR2

The National Pollutant Release Inventory (NPRI) is Canada's public inventory of pollutant releases (to air, water and land), disposals, and transfers for recycling. The inventory, managed by Environment and Climate Change Canada, tracks over 300 substances. Under the authority of the Canadian Environmental Protection Act (CEPA), owners or operators of facilities that meet published reporting requirements are required to report to the NPRI.

Government Publication Date: Feb 2024

National Pollutant Release Inventory - Historic: Federal NPRI

Environment Canada has defined the National Pollutant Release Inventory ("NPRI") as a federal government initiative designed to collect comprehensive national data regarding releases to air, water, or land, and waste transfers for recycling for more than 300 listed substances. This data holds historic records; current records are found in NPR2.

Government Publication Date: 1993-May 2017

Oil and Gas Wells: Private OGWE

The Nickle's Energy Group (publisher of the Daily Oil Bulletin) collects information on drilling activity including operator and well statistics. The well information database includes name, location, class, status and depth. The main Nickle's database is updated on a daily basis, however, this database is updated on a monthly basis. More information is available at www.nickles.com.

Government Publication Date: 1988-May 31, 2024

Ontario Oil and Gas Wells: Provincial OOGW

In 1998, the Ministry of Natural Resources (MNR) handed over to the Ontario Oil, Gas and Salt Resources (OGSR) Corporation, the responsibility of maintaining a database of oil and gas wells drilled in Ontario. The OGSR Library has over 20,000+ wells in their database. Information available for all wells in the ERIS database includes well owner/operator, location, permit issue date, and well cap date, license number, status, depth and the primary target (rock unit) of the well being drilled. All geology/stratigraphy table information, plus all water table information is also provided for each well record.

Government Publication Date: 1800-Aug 2024

Inventory of PCB Storage Sites: Provincial OPCB

The Ontario Ministry of Environment, Waste Management Branch, maintains an inventory of PCB storage sites within the province. Ontario Regulation 11/82 (Waste Management - PCB) and Regulation 347 (Generator Waste Management) under the Ontario EPA requires the registration of inactive PCB storage equipment and/or disposal sites of PCB waste with the Ontario Ministry of Environment. This database contains information on: 1) waste quantities; 2) major and minor sites storing liquid or solid waste; and 3) a waste storage inventory.

Government Publication Date: 1987-Oct 2004; 2012-Dec 2013

Orders: Provincial ORD

This is a subset taken from Ontario's Environmental Registry (EBR) database. It will include Orders on the registry such as (EPA s. 17) - Order for remedial work, (EPA s. 18) - Order for preventative measures, (EPA s. 43) - Order for removal of waste and restoration of site, (EPA s. 44) - Order for conformity with Act for waste disposal sites, (EPA s. 136) - Order for performance of environmental measures.

Government Publication Date: 1994 - Feb 28, 2025

Canadian Pulp and Paper: Private PAP

This information is part of the Pulp and Paper Canada Directory. The Directory provides a comprehensive listing of the locations of pulp and paper mills and the products that they produce.

Government Publication Date: 1999, 2002, 2004, 2005, 2009-2014

Parks Canada Fuel Storage Tanks: Federal PCFT

Canadian Heritage maintains an inventory of known fuel storage tanks operated by Parks Canada, in both National Parks and at National Historic Sites. The database details information on site name, location, tank install/removal date, capacity, fuel type, facility type, tank design and owner/operator.

Government Publication Date: 1920-Jan 2005*

Pesticide Register: Provincial PES

The Ontario Ministry of the Environment and Climate Change maintains a database of licensed operators and vendors of registered pesticides.

Government Publication Date: Oct 2011-Mar 31, 2025

Ontario PFAS Spills: Provincial PFAS

This specific list of spills includes those incidents where one or more of the listed contaminants are identified in the PFAS Structure List and/or PFAS Chemicals Without Explicit Structure List made available by the United States Environmental Protection Agency (US EPA), is originally sourced from the Ministry of the Environment, Conservation and Parks spills related data. Information from 1988-2002 was part of the ORIS (Occurrence Reporting Information System). The SAC (Spills Action Centre) handles all spills reported in Ontario. Regulations for spills in Ontario are part of the MOE's Environmental Protection Act, Part X.

Government Publication Date: 1988-Jun 2024; Aug 2024; Oct-Nov 2024

NPRI Reporters - PFAS Substances: Federal PFCH

The National Pollutant Release Inventory (NPRI) is Canada's public inventory of releases, disposals, and transfers, tracking over 320 pollutants. Per - and polyfluoroalkyl substances (PFAS) are a group of over 4,700 human-made substances for which adverse environmental and health effects have been observed. This listing of PFAS substance reporters includes those NPRI facilities that reported substances that are found in either: a) the Comprehensive Global Database of PFASs compiled by the Organisation for Economic Co-operation and Development (OECD), b) the US Environmental Protection Agency (US EPA) Master List of PFAS Substances, c) the US EPA list of PFAS chemicals without explicit structures, or d) the US EPA list of PFAS structures (encompassing the largest set of structures having sufficient levels of fluorination to potentially impart PFAS-type properties).

Government Publication Date: Feb 2024

Potential PFAS Handlers from NPRI: Federal PFHA

The National Pollutant Release Inventory (NPRI) is Canada's public inventory of releases, disposals, and transfers, tracking over 320 pollutants. Per - and polyfluoroalkyl substances (PFAS) are a group of over 4,700 human-made substances for which adverse environmental and health effects have been observed. This list of potential PFAS handlers includes those NPRI facilities that reported business activity (NAICS code) included in the US Environmental Protection Agency (US EPA) list of Potential PFAS-Handling Industry Sectors, further described as operating in industry sectors where literature reviews indicate that PFAS may be handled and/or released. Inclusion of a facility in this listing does not indicate that PFAS are being manufactured, processed, used, or released by the facility - these are facilities that potentially handle PFAS based on their industrial profile.

Government Publication Date: Feb 2024

Pipeline Incidents: Provincial PINC

List of pipeline incidents (strikes, leaks, spills). This is not a comprehensive or complete inventory of pipeline incidents in the province; this listing in an historical copy of records previously obtained under Access to Public Information. Records are not verified for accuracy or completeness.

Government Publication Date: Feb 28, 2021

Potential PFAS Handlers from EASR: Provincial PPHA

The Ontario Environmental Activity and Sector Registry (EASR), described in Ontario Regulation 245/11, allows businesses with less complex operations - and hence not requiring an Environmental Compliance Approval - to register their activities with the Ontario Ministry of the Environment, Conservation and Parks (MECP). This list of potential PFAS handlers includes those EASR facilities that reported business activity (NAICS code) included in the US Environmental Protection Agency (US EPA) list of Potential PFAS-Handling Industry Sectors, further described as operating in industry sectors where literature reviews indicate that PFAS may be handled and/or released. Inclusion of a facility in this listing does not indicate that PFAS are being manufactured, processed, used.

Government Publication Date: Jun 30, 2024

Private and Retail Fuel Storage Tanks: Provincial PRT

The Fuels Safety Branch of the Ontario Ministry of Consumer and Commercial Relations maintained a database of all registered private fuel storage tanks and licensed retail fuel outlets. This database includes an inventory of locations that have gasoline, oil, waste oil, natural gas and/or propane storage tanks on their property. The MCCR no longer collects this information. This information is now collected by the Technical Standards and Safety Authority (TSSA).

Government Publication Date: 1989-1996*

Permit to Take Water: Provincial PTTW

This is a subset taken from Ontario's Environmental Registry (EBR) database. It will include PTTW's on the registry such as OWRA s. 34 - Permit to take water.

Government Publication Date: 1994 - Feb 28, 2025

Ontario Regulation 347 Waste Receivers Summary: Provincial REC

Part V of the Ontario Environmental Protection Act ("EPA") regulates the disposal of regulated waste through an operating waste management system or a waste disposal site operated or used pursuant to the terms and conditions of a Certificate of Approval or a Provisional Certificate of Approval. Regulation 347 of the Ontario EPA defines a waste receiving site as any site or facility to which waste is transferred by a waste carrier. A receiver of regulated waste is required to register the waste receiving facility. This database represents registered receivers of regulated wastes, identified by registration number, company name and address, and includes receivers of waste such as: landfills, incinerators, transfer stations, PCB storage sites, sludge farms and water pollution control plants. This information is a summary of all years from 1986 including the most currently available data.

Government Publication Date: 1986-1990, 1992-2021

Record of Site Condition: Provincial RSC

The Record of Site Condition (RSC) is part of the Ministry of the Environment's Brownfields Environmental Site Registry. Protection from environmental cleanup orders for property owners is contingent upon documentation known as a record of site condition (RSC) being filed in the Environmental Site Registry. In order to file an RSC, the property must have been properly assessed and shown to meet the soil, sediment and groundwater standards appropriate for the use (such as residential) proposed to take place on the property. The Record of Site Condition Regulation (O. Reg. 153/04) details requirements related to site assessment and clean up. RSCs filed after July 1, 2011 will also be included as part of the new (O.Reg. 511/09). The Government of Ontario states that it is not responsible for the accuracy of the information in this Registry.

Government Publication Date: 1997-Sept 2001, Oct 2004-Mar 2025

Retail Fuel Storage Tanks: Private RST

This database includes an inventory of retail fuel outlet locations (including marinas) that have on their property gasoline, oil, waste oil, natural gas and / or propane storage tanks.

Government Publication Date: 1999-Apr 30, 2024

Scott's Manufacturing Directory: Private SCT

Scott's Directories is a data bank containing information on over 200,000 manufacturers across Canada. Even though Scott's listings are voluntary, it is the most comprehensive database of Canadian manufacturers available. Information concerning a company's address, plant size, and main products are included in this database.

Government Publication Date: 1992-Mar 2011*

Ontario Spills: Provincial SPL

List of spills and incidents made available by the Ministry of the Environment, Conservation and Parks. This database identifies information such as location (approximate), type and quantity of contaminant, date of spill, environmental impact, cause, nature of impact, etc. Information from 1988-2002 was part of the ORIS (Occurrence Reporting Information System). The SAC (Spills Action Centre) handles all spills reported in Ontario. Regulations for spills in Ontario are part of the MOE's Environmental Protection Act, Part X.

Government Publication Date: 1988-Jun 2024; Aug-Jan 2025

Wastewater Discharger Registration Database: Provincial SRDS

Facilities that report either municipal treated wastewater effluent or industrial wastewater discharges under the Effluent Monitoring and Effluent Limits (EMEL) and Municipal/Industrial Strategy for Abatement Regulations. The Municipal/Industrial Strategy for Abatement (MISA) division of the Ontario Ministry of Environment keeps record of direct dischargers of toxic pollutants within nine sectors including: Electric Power Generation, Mining, Petroleum Refining, Organic Chemicals, Inorganic Chemicals, Pulp & Paper, Metal Casting, Iron & Steel, and Quarries.

Government Publication Date: 1990-Dec 31, 2021

Anderson's Storage Tanks: Private TANK

The information provided in this database was collected by examining various historical documents, which identified the location of former storage tanks, containing substances such as fuel, water, gas, oil, and other various types of miscellaneous products. Information is available in regard to business operating at tank site, tank location, permit year, permit & installation type, no. of tanks installed & configuration and tank capacity. Data contained within this database pertains only to the city of Toronto and is not warranted to be complete, exhaustive or authoritative. The information was collected for research purposes only.

Government Publication Date: 1915-1953*

Transport Canada Fuel Storage Tanks: Federal TCFT

List of fuel storage tanks currently or previously owned or operated by Transport Canada. This inventory also includes tanks on The Pickering Lands, which refers to 7,530 hectares (18,600 acres) of land in Pickering, Markham, and Uxbridge owned by the Government of Canada since 1972; properties on this land has been leased by the government since 1975, and falls under the Site Management Policy of Transport Canada, but is administered by Public Works and Government Services Canada. This inventory provides information on the site name, location, tank age, capacity and fuel type.

Government Publication Date: 1970 - Apr 2024

Variances for Abandonment of Underground Storage Tanks: Provincial VAR

Listing of variances granted for storage tank abandonment. This is not a comprehensive or complete inventory of tank abandonment variances in the province; this listing is a copy of tank abandonment variance records previously obtained under Access to Public Information. In Ontario, registered underground storage tanks must be removed within two years of disuse; if removal of a tank is not feasible, an application may be sought for a variance from this code requirement.
Records are not verified for accuracy or completeness.

Government Publication Date: Feb 28, 2022

Waste Disposal Sites - MOE CA Inventory: Provincial WDS

The Ontario Ministry of Environment, Waste Management Branch, maintains an inventory of known open (active or inactive) and closed disposal sites in the Province of Ontario. Active sites maintain a Certificate of Approval, are approved to receive and are receiving waste. Inactive sites maintain Certificate(s) of Approval but are not receiving waste. Closed sites are not receiving waste. The data contained within this database was compiled from the MOE's Certificate of Approval database. Locations of these sites may be cross-referenced to the Anderson database described under ERIS's Private Source Database section, by the CA number. All new Environmental Compliance Approvals handed out after Oct 31, 2011 for Waste Disposal Sites will still be found in this database.

Government Publication Date: Oct 2011 - Mar 31, 2025

Waste Disposal Sites - MOE 1991 Historical Approval Inventory: Provincial WDSH

In June 1991, the Ontario Ministry of Environment, Waste Management Branch, published the "June 1991 Waste Disposal Site Inventory", of all known active and closed waste disposal sites as of October 30st, 1990. For each "active" site as of October 31st 1990, information is provided on site location, site/CA number, waste type, site status and site classification. For each "closed" site as of October 31st 1990, information is provided on site location, site/CA number, closure date and site classification. Locations of these sites may be cross-referenced to the Anderson database described under ERIS's Private Source Database section, by the CA number.

Government Publication Date: Up to Oct 1990*

Water Well Information System: Provincial WWIS

This database describes locations and characteristics of water wells found within Ontario in accordance with Regulation 903. It includes such information as coordinates, construction date, well depth, primary and secondary use, pump rate, static water level, well status, etc. Also included are detailed stratigraphy information, approximate depth to bedrock and the approximate depth to the water table.

Government Publication Date: Dec 31 2023

Definitions

Database Descriptions: This section provides a detailed explanation for each database including: source, information available, time coverage, and acronyms used. They are listed in alphabetic order.

Detail Report: This is the section of the report which provides the most detail for each individual record. Records are summarized by location, starting with the project property followed by records in closest proximity.

Distance: The distance value is the distance between plotted points, not necessarily the distance between the sites' boundaries. All values are an approximation.

Direction: The direction value is the compass direction of the site in respect to the project property and/or center point of the report.

Elevation: The elevation value is taken from the location at which the records for the site address have been plotted. All values are an approximation. Source: Google Elevation API.

Executive Summary: This portion of the report is divided into 3 sections:

'Report Summary'- Displays a chart indicating how many records fall on the project property and, within the report search radii.

'Site Report Summary'-Project Property'- This section lists all the records which fall on the project property. For more details, see the 'Detail Report' section.

'Site Report Summary-Surrounding Properties'- This section summarizes all records on adjacent properties, listing them in order of proximity from the project property. For more details, see the 'Detail Report' section.

Map Key: The map key number is assigned according to closest proximity from the project property. Map Key numbers always start at #1. The project property will always have a map key of '1' if records are available. If there is a number in brackets beside the main number, this will indicate the number of records on that specific property. If there is no number in brackets, there is only one record for that property.

The symbol and colour used indicates 'elevation': the red inverted triangle will dictate 'ERIS Sites with Lower Elevation', the yellow triangle will dictate 'ERIS Sites with Higher Elevation' and the orange square will dictate 'ERIS Sites with Same Elevation.'

Unplottables: These are records that could not be mapped due to various reasons, including limited geographic information. These records may or may not be in your study area, and are included as reference.

Notice: IMPORTANT LIMITATIONS and YOUR LIABILITY

Reliance on information in Report: This report DOES NOT replace a full Phase I Environmental Site Assessment but is solely intended to be used as a database review of environmental records.

License for use of information in Report: No page of this report can be used without this cover page, this notice and the project property identifier. The information in Report(s) may not be modified or re-sold.

Your Liability for misuse: Using this Service and/or its reports in a manner contrary to this Notice or your agreement will be in breach of copyright and contract and ERIS may obtain damages for such mis-use, including damages caused to third parties, and gives ERIS the right to terminate your account, rescind your license to any previous reports and to bar you from future use of the Service.

No warranty of Accuracy or Liability for ERIS: The information contained in this report has been produced by ERIS Information Limited Partnership ("ERIS") using various sources of information, including information provided by Federal and Provincial government departments. The report applies only to the address and up to the date specified on the cover of this report, and any alterations or deviation from this description will require a new report. This report and the data contained herein does not purport to be and does not constitute a guarantee of the accuracy of the information contained herein and does not constitute a legal opinion nor medical advice. Although ERIS has endeavored to present you with information that is accurate, ERIS disclaims, any and all liability for any errors, omissions, or inaccuracies in such information and data, whether attributable to inadvertence, negligence or otherwise, and for any consequences arising therefrom. Liability on the part of ERIS is limited to the monetary value paid for this report.

Trademark and Copyright: You may not use the ERIS trademarks or attribute any work to ERIS other than as outlined above. This Service and Report (s) are protected by copyright owned by ERIS Information Limited Partnership. Copyright in data used in the Service or Report(s) (the "Data") is owned by ERIS or its licensors. The Service, Report(s) and Data may not be copied or reproduced in whole or in any substantial part without prior written consent of ERIS.

Unplottable Summary

Total: 0 Unplottable sites

DB	Company Name/Site Name	Address	City	Postal

Unplottable Report

No unplottable records were found that may be relevant for the search criteria.

Appendix: Database Descriptions

Environmental Risk Information Services (ERIS) can search the following databases. The extent of historical information varies with each database and current information is determined by what is publicly available to ERIS at the time of update. ***Note:*** *Databases denoted with " * " indicates that the database will no longer be updated. See the individual database description for more information.*

Abandoned Aggregate Inventory: Provincial AAGR

The MAAP Program maintains a database of abandoned pits and quarries. Please note that the database is only referenced by lot and concession and city/town location. The database provides information regarding the location, type, size, land use, status and general comments.*

Government Publication Date: Sept 2002*

Aggregate Inventory: Provincial AGR

This database of licensed and permitted pits and quarries is maintained by the Ontario Ministry of Natural Resources and Forestry (MNRF), as regulated under the Aggregate Resources Act, R.S.O. 1990. Aggregate site data has been divided into active and inactive sites. Active sites may be further subdivided into partial surrenders. In partial surrenders, defined areas of a site are inactive while the rest of the site remains active.

Government Publication Date: Up to Nov 2024

Abandoned Mine Information System: Provincial AMIS

The Abandoned Mines Information System contains data on known abandoned and inactive mines located on both Crown and privately held lands. The information was provided by the Ministry of Northern Development and Mines (MNDM), with the following disclaimer: "the database provided has been compiled from various sources, and the Ministry of Northern Development and Mines makes no representation and takes no responsibility that such information is accurate, current or complete". Reported information includes official mine name, status, background information, mine start/end date, primary commodity, mine features, hazards and remediation.

Government Publication Date: 1800-Apr 2024

Anderson's Waste Disposal Sites: Private ANDR

The information provided in this database was collected by examining various historical documents which aimed to characterize the likely position of former waste disposal sites from 1860 to present. The research initiative behind the creation of this database was to identify those sites that are missing from the Ontario MOE Waste Disposal Site Inventory, as well as to provide revisions and corrections to the positions and descriptions of sites currently listed in the MOE inventory. In addition to historic waste disposal facilities, the database also identifies certain auto wreckers and scrap yards that have been extrapolated from documentary sources. Please note that the data is not warranted to be complete, exhaustive or authoritative. The information was collected for research purposes only.

Government Publication Date: 1860s-Present

Aboveground Storage Tanks: Provincial AST

Historical listing of aboveground storage tanks made available by the Department of Natural Resources and Forestry. Includes tanks used to hold water or petroleum. This dataset has been retired as of September 25, 2014 and will no longer be updated.

Government Publication Date: May 31, 2014

Automobile Wrecking & Supplies: Private AUWR

This database provides an inventory of known locations that are involved in the scrap metal, automobile wrecking/recycling, and automobile parts & supplies industry. Information is provided on the company name, location and business type.

Government Publication Date: 1999-Apr 30, 2024

Borehole: Provincial BORE

A borehole is the generalized term for any narrow shaft drilled in the ground, either vertically or horizontally. The information here includes geotechnical investigations or environmental site assessments, mineral exploration, or as a pilot hole for installing piers or underground utilities. Information is from many sources such as the Ministry of Transportation (MTO) boreholes from engineering reports and projects from the 1950 to 1990's in Southern Ontario. Boreholes from the Ontario Geological Survey (OGS) including The Urban Geology Analysis Information System (UGAIS) and the York Peel Durham Toronto (YPDT) database of the Conservation Authority Moraine Coalition. This database will include fields such as location, stratigraphy, depth, elevation, year drilled, etc. For all water well data or oil and gas well data for Ontario please refer to WWIS and OOGW.

Government Publication Date: 1875-Jul 2018

Certificates of Approval: Provincial CA

This database contains the following types of approvals: Air & Noise, Industrial Sewage, Municipal & Private Sewage, Waste Management Systems and Renewable Energy Approvals. The MOE in Ontario states that any facility that releases emissions to the atmosphere, discharges contaminants to ground or surface water, provides potable water supplies, or stores, transports or disposes of waste, must have a Certificate of Approval before it can operate lawfully. Fields include approval number, business name, address, approval date, approval type and status. This database will no longer be updated, as CofA's have been replaced by either Environmental Activity and Sector Registry (EASR) or Environmental Compliance Approval (ECA). Please refer to those individual databases for any information after Oct.31, 2011.

Government Publication Date: 1985-Oct 30, 2011*

Dry Cleaning Facilities: Federal CDRY

List of dry cleaning facilities made available by Environment and Climate Change Canada. Environment and Climate Change Canada's Tetrachloroethylene (Use in Dry Cleaning and Reporting Requirements) Regulations (SOR/2003-79) are intended to reduce releases of tetrachloroethylene to the environment from dry cleaning facilities.

Government Publication Date: Jan 2004-Dec 2022

Commercial Fuel Oil Tanks: Provincial CFOT

Locations of commercial underground fuel oil tanks. This is not a comprehensive or complete inventory of commercial fuel tanks in the province; this listing is a copy of records of registered commercial underground fuel oil tanks obtained under Access to Public Information.
Note that the following types of tanks do not require registration: waste oil tanks in apartments, office buildings, residences, etc.; aboveground gas or diesel tanks. Records are not verified for accuracy or completeness.

Government Publication Date: Oct 2023

Chemical Manufacturers and Distributors: Private CHEM

This database includes information from both a one time study conducted in 1992 and private source and is a listing of facilities that manufacture or distribute chemicals. The production of these chemical substances may involve one or more chemical reactions and/or chemical separation processes (i.e. fractionation, solvent extraction, crystallization, etc.).

Government Publication Date: 1999-Jan 31, 2020

Chemical Register: Private CHM

This database includes a listing of locations of facilities within the Province or Territory that either manufacture and/or distributes chemicals.

Government Publication Date: 1999-Apr 30, 2024

Compressed Natural Gas Stations: Private CNG

Canada has a network of public access compressed natural gas (CNG) refuelling stations. These stations dispense natural gas in compressed form at 3,000 pounds per square inch (psi), the pressure which is allowed within the current Canadian codes and standards. The majority of natural gas refuelling is located at existing retail gasoline that have a separate refuelling island for natural gas. This list of stations is made available by the Canadian Natural Gas Vehicle Alliance.

Government Publication Date: Dec 2012 -Feb 2025

Inventory of Coal Gasification Plants and Coal Tar Sites: Provincial COAL

This inventory includes both the "Inventory of Coal Gasification Plant Waste Sites in Ontario-April 1987" and the Inventory of Industrial Sites Producing or Using Coal Tar and Related Tars in Ontario-November 1988) collected by the MOE. It identifies industrial sites that produced and continue to produce or use coal tar and other related tars. Detailed information is available and includes: facility type, size, land use, information on adjoining properties, soil condition, site operators/occupants, site description, potential environmental impacts and historic maps available. This was a one-time inventory.*

Government Publication Date: Apr 1987 and Nov 1988*

Compliance and Convictions: Provincial CONV

This database summarizes the fines and convictions handed down by the Ontario courts beginning in 1989. Companies and individuals named here have been found guilty of environmental offenses in Ontario courts of law.

Government Publication Date: 1989-Mar 2025

Certificates of Property Use: Provincial CPU

This is a subset taken from Ontario's Environmental Registry (EBR) database. It will include CPU's on the registry such as (EPA s. 168.6) - Certificate of Property Use.

Government Publication Date: 1994 - Feb 28, 2025

Drill Hole Database: Provincial DRL

The Ontario Drill Hole Database (ODHD) is offered by the Province of Ontario's Ministry of Mines. The dataset contains information for over 164,000 percussion, overburden, sonic and diamond-drill holes. The presence of assay results with cutoff values for gold, silver, copper, zinc, lead, nickel and platinum group elements is noted. Drill hole data are compiled from assessment files that have been submitted to the ministry in accordance with the Ontario Mining Act (OMA). Source assessment file numbers are captured for cross reference with the Ontario Assessment File Database (OAFD). Please note that limited data is available for southern Ontario, as it was the last area to be completed. The database was created when surveys submitted to the Ministry were converted in the Assessment File Research Image Database (AFRI) project. However, the degree of accuracy (coordinates) as to the exact location of drill holes is dependent upon the source document submitted. Levels of accuracy used to locate holes are: centering on the mining claim; a sketch of the mining claim; a 1:50,000 map; a detailed company map; or from submitted a "Report of Work".

Government Publication Date: 1886 - Aug 2024

Delisted Fuel Tanks: Provincial DTNK

List of fuel storage tank sites that were once found in - and have since been removed from - the list of fuel storage tanks made available by the regulatory agency under Access to Public Information.

Government Publication Date: Oct 2023

Environmental Activity and Sector Registry: Provincial EASR

On October 31, 2011, a smarter, faster environmental approvals system came into effect in Ontario. The EASR allows businesses to register certain activities with the ministry, rather than apply for an approval. The registry is available for common systems and processes, to which preset rules of operation can be applied. The EASR is currently available for: heating systems, standby power systems and automotive refinishing. Businesses whose activities aren't subject to the EASR may apply for an ECA (Environmental Compliance Approval), Please see our ECA database.

Government Publication Date: Oct 2011-Mar 31, 2025

Environmental Registry: Provincial EBR

The Environmental Registry lists proposals, decisions and exceptions regarding policies, Acts, instruments, or regulations that could significantly affect the environment. Through the Registry, thirteen provincial ministries notify the public of upcoming proposals and invite their comments. For example, if a local business is requesting a permit, license, or certificate of approval to release substances into the air or water; these are notified on the registry. Data includes: Approval for discharge into the natural environment other than water (i.e. Air) - EPA s. 9, Approval for sewage works - OWRA s. 53(1), and EPA s. 27 - Approval for a waste disposal site. For information regarding Permit to Take Water (PTTW), Certificate of Property Use (CPU) and (ORD) Orders please refer to those individual databases.

Government Publication Date: 1994 - Feb 28, 2025

Environmental Compliance Approval: Provincial ECA

On October 31, 2011, a smarter, faster environmental approvals system came into effect in Ontario. In the past, a business had to apply for multiple approvals (known as certificates of approval) for individual processes and pieces of equipment. Today, a business either registers itself, or applies for a single approval, depending on the types of activities it conducts. Businesses whose activities aren't subject to the EASR may apply for an ECA. A single ECA addresses all of a business's emissions, discharges and wastes. Separate approvals for air, noise and waste are no longer required. This database will also include Renewable Energy Approvals. For certificates of approval prior to Nov 1st, 2011, please refer to the CA database. For all Waste Disposal Sites please refer to the WDS database.

Government Publication Date: Oct 2011-Mar 31, 2025

Environmental Effects Monitoring: Federal EEM

The Environmental Effects Monitoring program assesses the effects of effluent from industrial or other sources on fish, fish habitat and human usage of fisheries resources. Since 1992, pulp and paper mills have been required to conduct EEM studies under the Pulp and Paper Effluent Regulations. This database provides information on the mill name, geographical location and sub-lethal toxicity data.

Government Publication Date: 1992-2007*

ERIS Historical Searches: Private EHS

ERIS has compiled a database of all environmental risk reports completed since March 1999. Available fields for this database include: site location, date of report, type of report, and search radius. As per all other databases, the ERIS database can be referenced on both the map and "Statistical Profile" page.

Government Publication Date: 1999-Aug 31, 2024

Environmental Issues Inventory System: Federal EIIS

The Environmental Issues Inventory System was developed through the implementation of the Environmental Issues and Remediation Plan. This plan was established to determine the location and severity of contaminated sites on inhabited First Nation reserves, and where necessary, to remediate those that posed a risk to health and safety; and to prevent future environmental problems. The EIIS provides information on the reserve under investigation, inventory number, name of site, environmental issue, site action (Remediation, Site Assessment), and date investigation completed.

Government Publication Date: 1992-2001*

Emergency Management Historical Event: Provincial EMHE

List of locations of historical occurrences of emergency events, including those assigned to the Ministry of Natural Resources by Order-In-Council (OIC) under the Emergency Management and Civil Protection Act, as well as events where MNR provided requested emergency response assistance. Many of these events will have involved community evacuations, significant structural loss, and/or involvement of MNR emergency response staff. These events fall into one of ten (10) type categories: Dam Failure; Drought / Low Water; Erosion; Flood; Forest Fire; Soil and Bedrock Instability; Petroleum Resource Center Event, EMO Requested Assistance, Continuity of Operations Event, Other Requested Assistance. EMHE record details are reproduced by ERIS under License with the Ontario Ministry of Natural Resources © Queen's Printer for Ontario, 2017.

Government Publication Date: Apr 30, 2022

Environmental Penalty Annual Report: Provincial EPAR

This database contains data from Ontario's annual environmental penalty report published by the Ministry of the Environment, Conservation and Parks (MECP). These reports provide information on environmental penalties for land or water violations issued to companies in one of the nine industrial sectors covered by the Municipal Industrial Strategy for Abatement (MISA) regulations.

Government Publication Date: Jan 1, 2011 - Dec 31, 2024

List of Expired Fuels Safety Facilities: Provincial EXP

List of facilities and tanks for which there was once a fuel registration. This is not a comprehensive or complete inventory of expired tanks/tank facilities in the province; this listing is a copy of previously registered tanks and facilities obtained under Access to Public Information. Includes private fuel outlets, bulk plants, fuel oil tanks, gasoline stations, marinas, propane filling stations, liquid fuel tanks, piping systems, etc; includes tanks which have been removed from the ground.
Notes: registration was not required for private fuel underground/aboveground storage tanks prior to January 1990, nor for furnace oil tanks prior to May 1, 2002; registration is not required for waste oil tanks in apartments, office buildings, residences, etc., or aboveground gas or diesel tanks. Records are not verified for accuracy or completeness.

Government Publication Date: Oct 2023

Federal Convictions: Federal FCON

Environment Canada maintains a database referred to as the "Environmental Registry" that details prosecutions under the Canadian Environmental Protection Act (CEPA) and the Fisheries Act (FA). Information is provided on the company name, location, charge date, offence and penalty.

Government Publication Date: 1988-Jun 2007*

Contaminated Sites on Federal Land: Federal FCS

The Federal Contaminated Sites Inventory includes information on known federal contaminated sites under the custodianship of departments, agencies and consolidated Crown corporations as well as those that are being or have been investigated to determine whether they have contamination arising from past use that could pose a risk to human health or the environment. The inventory also includes non-federal contaminated sites for which the Government of Canada has accepted some or all financial responsibility. It does not include sites where contamination has been caused by, and which are under the control of, enterprise Crown corporations, private individuals, firms or other levels of government. Includes fire training sites and sites at which Per- and Polyfluoroalkyl Substances (PFAS) are a concern.

Government Publication Date: Jun 2000-Jan 2025

Fisheries & Oceans Fuel Tanks: Federal FOFT

Fisheries & Oceans Canada maintains an inventory of aboveground & underground fuel storage tanks located on Fisheries & Oceans property or controlled by DFO. Our inventory provides information on the site name, location, tank owner, tank operator, facility type, storage tank location, tank contents & capacity, and date of tank installation.

Government Publication Date: 1964-Sep 2019

Federal Identification Registry for Storage Tank Systems (FIRSTS): Federal FRST

A list of federally regulated Storage tanks from the Federal Identification Registry for Storage Tank Systems (FIRSTS). FIRSTS is Environment and Climate Change Canada's database of storage tank systems subject to the Storage Tank for Petroleum Products and Allied Petroleum Products Regulations. The main objective of the Regulations is to prevent soil and groundwater contamination from storage tank systems located on federal and aboriginal lands. Storage tank systems that do not have a valid identification number displayed in a readily visible location on or near the storage tank system may be refused product delivery.

Government Publication Date: Oct 31, 2021

Fuel Storage Tank: Provincial FST

List of registered private and retail fuel storage tanks. This is not a comprehensive or complete inventory of private and retail fuel storage tanks in the province; this listing is a copy of registered private and retail fuel storage tanks, obtained under Access to Public Information.
Notes: registration was not required for private fuel underground/aboveground storage tanks prior to January 1990, nor for furnace oil tanks prior to May 1, 2002; registration is not required for waste oil tanks in apartments, office buildings, residences, etc., or aboveground gas or diesel tanks. Records are not verified for accuracy or completeness.

Government Publication Date: Oct 2023

Fuel Storage Tank - Historic: Provincial FSTH

The Fuels Safety Branch of the Ontario Ministry of Consumer and Commercial Relations maintained a database of all registered private fuel storage tanks. Public records of private fuel storage tanks are only available since the registration became effective in September 1989. This information is now collected by the Technical Standards and Safety Authority.

Government Publication Date: Pre-Jan 2010*

Ontario Regulation 347 Waste Generators Summary: Provincial GEN

Regulation 347 of the Ontario EPA defines a waste generation site as any site, equipment and/or operation involved in the production, collection, handling and/or storage of regulated wastes. A generator of regulated waste is required to register the waste generation site and each waste produced, collected, handled, or stored at the site. This database contains the registration number, company name and address of registered generators including the types of hazardous wastes generated. It includes data on waste generating facilities such as: drycleaners, waste treatment and disposal facilities, machine shops, electric power distribution etc. This information is a summary of all years from 1986 including the most currently available data. As of January 1, 2023, businesses and institutions subject to the amended Reg. 347: General – Waste Management are required to report their activities and pay fees through Resource Productivity & Recovery Authority (RPRA) online Hazardous Waste Program Registry (HWPR) rather than the Hazardous Waste Information Network (HWIN) system previously operated by the Ministry of the Environment, Conservation and Parks (MECP). Some records may contain, within the company name, the phrase "See & Use..." followed by a series of letters and numbers. This occurs when one company is amalgamated with or taken over by another registered company. The number listed as "See & Use", refers to the new ownership and the other identification number refers to the original ownership. This phrase serves as a link between the 2 companies until operations have been fully transferred.

Government Publication Date: 1986-Jun 30, 2024

Greenhouse Gas Emissions from Large Facilities: Federal GHG

List of greenhouse gas emissions from large facilities made available by Environment Canada. Greenhouse gas emissions in kilotonnes of carbon dioxide equivalents (kt CO2 eq).

Government Publication Date: 2013-Apr 2024

TSSA Historic Incidents: Provincial HINC

List of historic incidences of spills and leaks of diesel, fuel oil, gasoline, natural gas, propane, and hydrogen recorded by the TSSA in their previous incident tracking system. The TSSA's Fuels Safety Program administers the Technical Standards & Safety Act 2000, providing fuel-related safety services associated with the safe transportation, storage, handling and use of fuels such as gasoline, diesel, propane, natural gas and hydrogen. Under this Act, the TSSA regulates fuel suppliers, storage facilities, transport trucks, pipelines, contractors and equipment or appliances that use fuels. Records are not verified for accuracy or completeness. This is not a comprehensive or complete inventory of historical fuel spills and leaks in the province. This listing is a copy of the data captured at one moment in time and is hence limited by the record date provided here.

Government Publication Date: 2006-June 2009*

Indian & Northern Affairs Fuel Tanks: Federal IAFT

The Department of Indian & Northern Affairs Canada (INAC) maintains an inventory of aboveground & underground fuel storage tanks located on both federal and crown land. Our inventory provides information on the reserve name, location, facility type, site/facility name, tank type, material & ID number, tank contents & capacity, and date of tank installation.

Government Publication Date: 1950-Aug 2003*

Fuel Oil Spills and Leaks: Provincial INC

Listing of spills and leaks of diesel, fuel oil, gasoline, natural gas, propane, and hydrogen reported to the Spills Action Centre (SAC). This is not a comprehensive or complete inventory of fuel-related leaks, spills, and incidents in the province; this listing in a copy of incidents reported to the SAC, obtained under Access to Public Information. Includes incidents from fuel-related hazards such as spills, fires, and explosions. Records are not verified for accuracy or completeness.

Government Publication Date: 31 Oct, 2023

Landfill Inventory Management Ontario: Provincial LIMO

The Landfill Inventory Management Ontario (LIMO) database is updated every year, as the Ministry of the Environment, Conservation and Parks compiles new and updated information. Includes small and large landfills currently operating as well as those which are closed and historic. Operators of larger landfills provide landfill information for the previous operating year to the ministry for LIMO including: estimated amount of total waste received, landfill capacity, estimated total remaining landfill capacity, fill rates, engineering designs, reporting and monitoring details, size of location, service area, approved waste types, leachate of site treatment, contaminant attenuation zone and more. The small landfills include information such as site owner, site location and certificate of approval # and status.

Government Publication Date: Mar 31, 2022

Canadian Mine Locations: Private MINE

This information is collected from the Canadian & American Mines Handbook. The Mines database is a national database that provides over 290 listings on mines (listed as public companies) dealing primarily with precious metals and hard rocks. Listed are mines that are currently in operation, closed, suspended, or are still being developed (advanced projects). Their locations are provided as geographic coordinates (x, y and/or longitude, latitude). As of 2002, data pertaining to Canadian smelters and refineries has been appended to this database.

Government Publication Date: 1998-2009*

Mineral Occurrences: Provincial MNR

In the early 70's, the Ministry of Northern Development and Mines created an inventory of approximately 19,000 mineral occurrences in Ontario, in regard to metallic and industrial minerals, as well as some information on building stones and aggregate deposits. Please note that the "Horizontal Positional Accuracy" is approximately +/- 200 m. Many reference elements for each record were derived from field sketches using pace or chain/tape measurements against claim posts or topographic features in the area. The primary limiting factor for the level of positional accuracy is the scale of the source material. The testing of horizontal accuracy of the source materials was accomplished by comparing the plan metric (X and Y) coordinates of that point with the coordinates of the same point as defined from a source of higher accuracy.

Government Publication Date: 1846-Feb 2025

National Analysis of Trends in Emergencies System (NATES): Federal NATE

In 1974 Environment Canada established the National Analysis of Trends in Emergencies System (NATES) database, for the voluntary reporting of significant spill incidents. The data was to be used to assist in directing the work of the emergencies program. NATES ran from 1974 to 1994. Extensive information is available within this database including company names, place where the spill occurred, date of spill, cause, reason and source of spill, damage incurred, and amount, concentration, and volume of materials released.

Government Publication Date: 1974-1994*

Non-Compliance Reports: Provincial NCPL

The Ministry of the Environment Conservation and Parks (MECP) provides information about non-compliant discharges of contaminants to air and water that exceed legal allowable limits, from regulated industrial and municipal facilities. A reported non-compliance failure may be in regard to a Control Order, Certificate of Approval, Sectoral Regulation or specific regulation/act. MECP publicly releases the Environmental Compliance Report (ECR) on the Ontario Data Catalogue. In Ontario, all facilities with regulated wastewater discharges or air emissions under the Ontario Water Resources Act and the Environmental Protection Act must monitor and report any cases where approved operating limits have been exceeded.

Government Publication Date: Dec 31, 2023

National Defense & Canadian Forces Fuel Tanks: Federal NDFT

The Department of National Defense and the Canadian Forces maintains an inventory of all aboveground & underground fuel storage tanks located on DND lands. Our inventory provides information on the base name, location, tank type & capacity, tank contents, tank class, date of tank installation, date tank last used, and status of tank as of May 2001. This database will no longer be updated due to the new National Security protocols which have prohibited any release of this database.

Government Publication Date: Up to May 2001*

National Defense & Canadian Forces Spills: Federal NDSP

The Department of National Defense and the Canadian Forces maintains an inventory of spills to land and water. All spill sites have been classified under the "Transportation of Dangerous Goods Act - 1992". Our inventory provides information on the facility name, location, spill ID #, spill date, type of spill, as well as the quantity of substance spilled & recovered.

Government Publication Date: Mar 1999-Nov 2023

National Defence & Canadian Forces Waste Disposal Sites: Federal NDWD

The Department of National Defence and the Canadian Forces maintains an inventory of waste disposal sites located on DND lands. Where available, our inventory provides information on the base name, location, type of waste received, area of site, depth of site, year site opened/closed and status.

Government Publication Date: 2001-Apr 2007*

National Energy Board Pipeline Incidents: Federal NEBI

Locations of pipeline incidents from 2008 to present, made available by the Canada Energy Regulator (CER) - previously the National Energy Board (NEB). Includes incidents reported under the Onshore Pipeline Regulations and the Processing Plant Regulations related to pipelines under federal jurisdiction, does not include incident data related to pipelines under provincial or territorial jurisdiction.

Government Publication Date: 2008-Dec 31, 2024

National Energy Board Wells: Federal NEBP

The NEBW database contains information on onshore & offshore oil and gas wells that are outside provincial jurisdiction(s) and are thereby regulated by the National Energy Board. Data is provided regarding the operator, well name, well ID No./UWI, status, classification, well depth, spud and release date.

Government Publication Date: 1920-Feb 2003*

National Environmental Emergencies System (NEES): Federal NEES

In 2000, the Emergencies program implemented NEES, a reporting system for spills of hazardous substances. For the most part, this system only captured data from the Atlantic Provinces, some from Quebec and Ontario and a portion from British Columbia. Data for Alberta, Saskatchewan, Manitoba and the Territories was not captured. However, NEES is also a repository for previous Environment Canada spill datasets. NEES is composed of the historic datasets ' or Trends ' which dates from approximately 1974 to present. NEES Trends is a compilation of historic databases, which were merged and includes data from NATES (National Analysis of Trends in Emergencies System), ARTS (Atlantic Regional Trends System), and NEES. In 2001, the Emergencies Program determined that variations in reporting regimes and requirements between federal and provincial agencies made national spill reporting and trend analysis difficult to achieve. As a consequence, the department has focused efforts on capturing data on spills of substances which fall under its legislative authority only (CEPA and FA). As such, the NEES database will be decommissioned in December 2004.

Government Publication Date: 1974-2003*

National PCB Inventory: Federal NPCB

Environment Canada's National PCB inventory includes information on in-use PCB containing equipment in Canada including federal, provincial and private facilities. Federal out-of-service PCB containing equipment and PCB waste owned by the federal government or by federally regulated industries such as airlines, railway companies, broadcasting companies, telephone and telecommunications companies, pipeline companies, etc. are also listed. Although it is not Environment Canada's mandate to collect data on non-federal PCB waste, the National PCB inventory includes some information on provincial and private PCB waste and storage sites. Some addresses provided may be Head Office addresses and are not necessarily the location of where the waste is being used or stored.

Government Publication Date: 1988-2008*

National Pollutant Release Inventory: Federal NPR2

The National Pollutant Release Inventory (NPRI) is Canada's public inventory of pollutant releases (to air, water and land), disposals, and transfers for recycling. The inventory, managed by Environment and Climate Change Canada, tracks over 300 substances. Under the authority of the Canadian Environmental Protection Act (CEPA), owners or operators of facilities that meet published reporting requirements are required to report to the NPRI.

Government Publication Date: Feb 2024

National Pollutant Release Inventory - Historic: Federal NPRI

Environment Canada has defined the National Pollutant Release Inventory ("NPRI") as a federal government initiative designed to collect comprehensive national data regarding releases to air, water, or land, and waste transfers for recycling for more than 300 listed substances. This data holds historic records; current records are found in NPR2.

Government Publication Date: 1993-May 2017

Oil and Gas Wells: Private OGWE

The Nickle's Energy Group (publisher of the Daily Oil Bulletin) collects information on drilling activity including operator and well statistics. The well information database includes name, location, class, status and depth. The main Nickle's database is updated on a daily basis, however, this database is updated on a monthly basis. More information is available at www.nickles.com.

Government Publication Date: 1988-May 31, 2024

Ontario Oil and Gas Wells: Provincial OOGW

In 1998, the Ministry of Natural Resources (MNR) handed over to the Ontario Oil, Gas and Salt Resources (OGSR) Corporation, the responsibility of maintaining a database of oil and gas wells drilled in Ontario. The OGSR Library has over 20,000+ wells in their database. Information available for all wells in the ERIS database includes well owner/operator, location, permit issue date, and well cap date, license number, status, depth and the primary target (rock unit) of the well being drilled. All geology/stratigraphy table information, plus all water table information is also provided for each well record.

Government Publication Date: 1800-Aug 2024

Inventory of PCB Storage Sites: Provincial OPCB

The Ontario Ministry of Environment, Waste Management Branch, maintains an inventory of PCB storage sites within the province. Ontario Regulation 11/82 (Waste Management - PCB) and Regulation 347 (Generator Waste Management) under the Ontario EPA requires the registration of inactive PCB storage equipment and/or disposal sites of PCB waste with the Ontario Ministry of Environment. This database contains information on: 1) waste quantities; 2) major and minor sites storing liquid or solid waste; and 3) a waste storage inventory.

Government Publication Date: 1987-Oct 2004; 2012-Dec 2013

Orders: Provincial ORD

This is a subset taken from Ontario's Environmental Registry (EBR) database. It will include Orders on the registry such as (EPA s. 17) - Order for remedial work, (EPA s. 18) - Order for preventative measures, (EPA s. 43) - Order for removal of waste and restoration of site, (EPA s. 44) - Order for conformity with Act for waste disposal sites, (EPA s. 136) - Order for performance of environmental measures.

Government Publication Date: 1994 - Feb 28, 2025

Canadian Pulp and Paper: Private PAP

This information is part of the Pulp and Paper Canada Directory. The Directory provides a comprehensive listing of the locations of pulp and paper mills and the products that they produce.

Government Publication Date: 1999, 2002, 2004, 2005, 2009-2014

Parks Canada Fuel Storage Tanks: Federal PCFT

Canadian Heritage maintains an inventory of known fuel storage tanks operated by Parks Canada, in both National Parks and at National Historic Sites. The database details information on site name, location, tank install/removal date, capacity, fuel type, facility type, tank design and owner/operator.

Government Publication Date: 1920-Jan 2005*

Pesticide Register: Provincial PES

The Ontario Ministry of the Environment and Climate Change maintains a database of licensed operators and vendors of registered pesticides.

Government Publication Date: Oct 2011-Mar 31, 2025

Ontario PFAS Spills: Provincial PFAS

This specific list of spills includes those incidents where one or more of the listed contaminants are identified in the PFAS Structure List and/or PFAS Chemicals Without Explicit Structure List made available by the United States Environmental Protection Agency (US EPA), is originally sourced from the Ministry of the Environment, Conservation and Parks spills related data. Information from 1988-2002 was part of the ORIS (Occurrence Reporting Information System). The SAC (Spills Action Centre) handles all spills reported in Ontario. Regulations for spills in Ontario are part of the MOE's Environmental Protection Act, Part X.

Government Publication Date: 1988-Jun 2024; Aug 2024; Oct-Nov 2024

NPRI Reporters - PFAS Substances: Federal PFCH

The National Pollutant Release Inventory (NPRI) is Canada's public inventory of releases, disposals, and transfers, tracking over 320 pollutants. Per - and polyfluoroalkyl substances (PFAS) are a group of over 4,700 human-made substances for which adverse environmental and health effects have been observed. This listing of PFAS substance reporters includes those NPRI facilities that reported substances that are found in either: a) the Comprehensive Global Database of PFASs compiled by the Organisation for Economic Co-operation and Development (OECD), b) the US Environmental Protection Agency (US EPA) Master List of PFAS Substances, c) the US EPA list of PFAS chemicals without explicit structures, or d) the US EPA list of PFAS structures (encompassing the largest set of structures having sufficient levels of fluorination to potentially impart PFAS-type properties).

Government Publication Date: Feb 2024

Potential PFAS Handlers from NPRI: Federal PFHA

The National Pollutant Release Inventory (NPRI) is Canada's public inventory of releases, disposals, and transfers, tracking over 320 pollutants. Per - and polyfluoroalkyl substances (PFAS) are a group of over 4,700 human-made substances for which adverse environmental and health effects have been observed. This list of potential PFAS handlers includes those NPRI facilities that reported business activity (NAICS code) included in the US Environmental Protection Agency (US EPA) list of Potential PFAS-Handling Industry Sectors, further described as operating in industry sectors where literature reviews indicate that PFAS may be handled and/or released. Inclusion of a facility in this listing does not indicate that PFAS are being manufactured, processed, used, or released by the facility - these are facilities that potentially handle PFAS based on their industrial profile.

Government Publication Date: Feb 2024

Pipeline Incidents: Provincial PINC

List of pipeline incidents (strikes, leaks, spills). This is not a comprehensive or complete inventory of pipeline incidents in the province; this listing in an historical copy of records previously obtained under Access to Public Information. Records are not verified for accuracy or completeness.

Government Publication Date: Feb 28, 2021

Potential PFAS Handlers from EASR: Provincial PPHA

The Ontario Environmental Activity and Sector Registry (EASR), described in Ontario Regulation 245/11, allows businesses with less complex operations - and hence not requiring an Environmental Compliance Approval - to register their activities with the Ontario Ministry of the Environment, Conservation and Parks (MECP). This list of potential PFAS handlers includes those EASR facilities that reported business activity (NAICS code) included in the US Environmental Protection Agency (US EPA) list of Potential PFAS-Handling Industry Sectors, further described as operating in industry sectors where literature reviews indicate that PFAS may be handled and/or released. Inclusion of a facility in this listing does not indicate that PFAS are being manufactured, processed, used.

Government Publication Date: Jun 30, 2024

Private and Retail Fuel Storage Tanks: Provincial PRT

The Fuels Safety Branch of the Ontario Ministry of Consumer and Commercial Relations maintained a database of all registered private fuel storage tanks and licensed retail fuel outlets. This database includes an inventory of locations that have gasoline, oil, waste oil, natural gas and/or propane storage tanks on their property. The MCCR no longer collects this information. This information is now collected by the Technical Standards and Safety Authority (TSSA).

Government Publication Date: 1989-1996*

Permit to Take Water: Provincial PTTW

This is a subset taken from Ontario's Environmental Registry (EBR) database. It will include PTTW's on the registry such as OWRA s. 34 - Permit to take water.

Government Publication Date: 1994 - Feb 28, 2025

Ontario Regulation 347 Waste Receivers Summary: Provincial REC

Part V of the Ontario Environmental Protection Act ("EPA") regulates the disposal of regulated waste through an operating waste management system or a waste disposal site operated or used pursuant to the terms and conditions of a Certificate of Approval or a Provisional Certificate of Approval. Regulation 347 of the Ontario EPA defines a waste receiving site as any site or facility to which waste is transferred by a waste carrier. A receiver of regulated waste is required to register the waste receiving facility. This database represents registered receivers of regulated wastes, identified by registration number, company name and address, and includes receivers of waste such as: landfills, incinerators, transfer stations, PCB storage sites, sludge farms and water pollution control plants. This information is a summary of all years from 1986 including the most currently available data.

Government Publication Date: 1986-1990, 1992-2021

Record of Site Condition: Provincial RSC

The Record of Site Condition (RSC) is part of the Ministry of the Environment's Brownfields Environmental Site Registry. Protection from environmental cleanup orders for property owners is contingent upon documentation known as a record of site condition (RSC) being filed in the Environmental Site Registry. In order to file an RSC, the property must have been properly assessed and shown to meet the soil, sediment and groundwater standards appropriate for the use (such as residential) proposed to take place on the property. The Record of Site Condition Regulation (O. Reg. 153/04) details requirements related to site assessment and clean up. RSCs filed after July 1, 2011 will also be included as part of the new (O.Reg. 511/09). The Government of Ontario states that it is not responsible for the accuracy of the information in this Registry.

Government Publication Date: 1997-Sept 2001, Oct 2004-Mar 2025

Retail Fuel Storage Tanks: Private RST

This database includes an inventory of retail fuel outlet locations (including marinas) that have on their property gasoline, oil, waste oil, natural gas and / or propane storage tanks.

Government Publication Date: 1999-Apr 30, 2024

Scott's Manufacturing Directory: Private SCT

Scott's Directories is a data bank containing information on over 200,000 manufacturers across Canada. Even though Scott's listings are voluntary, it is the most comprehensive database of Canadian manufacturers available. Information concerning a company's address, plant size, and main products are included in this database.

Government Publication Date: 1992-Mar 2011*

Ontario Spills: Provincial SPL

List of spills and incidents made available by the Ministry of the Environment, Conservation and Parks. This database identifies information such as location (approximate), type and quantity of contaminant, date of spill, environmental impact, cause, nature of impact, etc. Information from 1988-2002 was part of the ORIS (Occurrence Reporting Information System). The SAC (Spills Action Centre) handles all spills reported in Ontario. Regulations for spills in Ontario are part of the MOE's Environmental Protection Act, Part X.

Government Publication Date: 1988-Jun 2024; Aug-Jan 2025

Wastewater Discharger Registration Database: Provincial SRDS

Facilities that report either municipal treated wastewater effluent or industrial wastewater discharges under the Effluent Monitoring and Effluent Limits (EMEL) and Municipal/Industrial Strategy for Abatement Regulations. The Municipal/Industrial Strategy for Abatement (MISA) division of the Ontario Ministry of Environment keeps record of direct dischargers of toxic pollutants within nine sectors including: Electric Power Generation, Mining, Petroleum Refining, Organic Chemicals, Inorganic Chemicals, Pulp & Paper, Metal Casting, Iron & Steel, and Quarries.

Government Publication Date: 1990-Dec 31, 2021

Anderson's Storage Tanks: Private TANK

The information provided in this database was collected by examining various historical documents, which identified the location of former storage tanks, containing substances such as fuel, water, gas, oil, and other various types of miscellaneous products. Information is available in regard to business operating at tank site, tank location, permit year, permit & installation type, no. of tanks installed & configuration and tank capacity. Data contained within this database pertains only to the city of Toronto and is not warranted to be complete, exhaustive or authoritative. The information was collected for research purposes only.

Government Publication Date: 1915-1953*

Transport Canada Fuel Storage Tanks: Federal TCFT

List of fuel storage tanks currently or previously owned or operated by Transport Canada. This inventory also includes tanks on The Pickering Lands, which refers to 7,530 hectares (18,600 acres) of land in Pickering, Markham, and Uxbridge owned by the Government of Canada since 1972; properties on this land has been leased by the government since 1975, and falls under the Site Management Policy of Transport Canada, but is administered by Public Works and Government Services Canada. This inventory provides information on the site name, location, tank age, capacity and fuel type.

Government Publication Date: 1970 - Apr 2024

Variances for Abandonment of Underground Storage Tanks: Provincial VAR

Listing of variances granted for storage tank abandonment. This is not a comprehensive or complete inventory of tank abandonment variances in the province; this listing is a copy of tank abandonment variance records previously obtained under Access to Public Information. In Ontario, registered underground storage tanks must be removed within two years of disuse; if removal of a tank is not feasible, an application may be sought for a variance from this code requirement.
Records are not verified for accuracy or completeness.

Government Publication Date: Feb 28, 2022

Waste Disposal Sites - MOE CA Inventory: Provincial WDS

The Ontario Ministry of Environment, Waste Management Branch, maintains an inventory of known open (active or inactive) and closed disposal sites in the Province of Ontario. Active sites maintain a Certificate of Approval, are approved to receive and are receiving waste. Inactive sites maintain Certificate(s) of Approval but are not receiving waste. Closed sites are not receiving waste. The data contained within this database was compiled from the MOE's Certificate of Approval database. Locations of these sites may be cross-referenced to the Anderson database described under ERIS's Private Source Database section, by the CA number. All new Environmental Compliance Approvals handed out after Oct 31, 2011 for Waste Disposal Sites will still be found in this database.

Government Publication Date: Oct 2011 - Mar 31, 2025

Waste Disposal Sites - MOE 1991 Historical Approval Inventory: Provincial WDSH

In June 1991, the Ontario Ministry of Environment, Waste Management Branch, published the "June 1991 Waste Disposal Site Inventory", of all known active and closed waste disposal sites as of October 30st, 1990. For each "active" site as of October 31st 1990, information is provided on site location, site/CA number, waste type, site status and site classification. For each "closed" site as of October 31st 1990, information is provided on site location, site/CA number, closure date and site classification. Locations of these sites may be cross-referenced to the Anderson database described under ERIS's Private Source Database section, by the CA number.

Government Publication Date: Up to Oct 1990*

Water Well Information System: Provincial WWIS

This database describes locations and characteristics of water wells found within Ontario in accordance with Regulation 903. It includes such information as coordinates, construction date, well depth, primary and secondary use, pump rate, static water level, well status, etc. Also included are detailed stratigraphy information, approximate depth to bedrock and the approximate depth to the water table.

Government Publication Date: Dec 31 2023

Definitions

Database Descriptions: This section provides a detailed explanation for each database including: source, information available, time coverage, and acronyms used. They are listed in alphabetic order.

Detail Report: This is the section of the report which provides the most detail for each individual record. Records are summarized by location, starting with the project property followed by records in closest proximity.

Distance: The distance value is the distance between plotted points, not necessarily the distance between the sites' boundaries. All values are an approximation.

Direction: The direction value is the compass direction of the site in respect to the project property and/or center point of the report.

Elevation: The elevation value is taken from the location at which the records for the site address have been plotted. All values are an approximation. Source: Google Elevation API.

Executive Summary: This portion of the report is divided into 3 sections:

'Report Summary'- Displays a chart indicating how many records fall on the project property and, within the report search radii.

'Site Report Summary'-Project Property'- This section lists all the records which fall on the project property. For more details, see the 'Detail Report' section.

'Site Report Summary-Surrounding Properties'- This section summarizes all records on adjacent properties, listing them in order of proximity from the project property. For more details, see the 'Detail Report' section.

Map Key: The map key number is assigned according to closest proximity from the project property. Map Key numbers always start at #1. The project property will always have a map key of '1' if records are available. If there is a number in brackets beside the main number, this will indicate the number of records on that specific property. If there is no number in brackets, there is only one record for that property.

The symbol and colour used indicates 'elevation': the red inverted triangle will dictate 'ERIS Sites with Lower Elevation', the yellow triangle will dictate 'ERIS Sites with Higher Elevation' and the orange square will dictate 'ERIS Sites with Same Elevation.'

Unplottables: These are records that could not be mapped due to various reasons, including limited geographic information. These records may or may not be in your study area, and are included as reference.

DATABASE REPORT

Project Property:	*1900 Cyrville Road - Phase I ESA* *1900 Cyrville Road* *Ottawa ON K1B 3V5*
Project No:

Notice: IMPORTANT LIMITATIONS and YOUR LIABILITY

Reliance on information in Report: This report DOES NOT replace a full Phase I Environmental Site Assessment but is solely intended to be used as a database review of environmental records.

License for use of information in Report: No page of this report can be used without this cover page, this notice and the project property identifier. The information in Report(s) may not be modified or re-sold.

Your Liability for misuse: Using this Service and/or its reports in a manner contrary to this Notice or your agreement will be in breach of copyright and contract and ERIS may obtain damages for such mis-use, including damages caused to third parties, and gives ERIS the right to terminate your account, rescind your license to any previous reports and to bar you from future use of the Service.

No warranty of Accuracy or Liability for ERIS: The information contained in this report has been produced by ERIS Information Limited Partnership ("ERIS") using various sources of information, including information provided by Federal and Provincial government departments. The report applies only to the address and up to the date specified on the cover of this report, and any alterations or deviation from this description will require a new report. This report and the data contained herein does not purport to be and does not constitute a guarantee of the accuracy of the information contained herein and does not constitute a legal opinion nor medical advice. Although ERIS has endeavored to present you with information that is accurate, ERIS disclaims, any and all liability for any errors, omissions, or inaccuracies in such information and data, whether attributable to inadvertence, negligence or otherwise, and for any consequences arising therefrom. Liability on the part of ERIS is limited to the monetary value paid for this report.

Trademark and Copyright: You may not use the ERIS trademarks or attribute any work to ERIS other than as outlined above. This Service and Report (s) are protected by copyright owned by ERIS Information Limited Partnership. Copyright in data used in the Service or Report(s) (the "Data") is owned by ERIS or its licensors. The Service, Report(s) and Data may not be copied or reproduced in whole or in any substantial part without prior written consent of ERIS.

Executive Summary

Property Information:

Appendix: Database Descriptions

Environmental Risk Information Services (ERIS) can search the following databases. The extent of historical information varies with each database and current information is determined by what is publicly available to ERIS at the time of update. ***Note:*** *Databases denoted with " * " indicates that the database will no longer be updated. See the individual database description for more information.*

Abandoned Aggregate Inventory: Provincial AAGR

The MAAP Program maintains a database of abandoned pits and quarries. Please note that the database is only referenced by lot and concession and city/town location. The database provides information regarding the location, type, size, land use, status and general comments.*

Government Publication Date: Sept 2002*

Aggregate Inventory: Provincial AGR

This database of licensed and permitted pits and quarries is maintained by the Ontario Ministry of Natural Resources and Forestry (MNRF), as regulated under the Aggregate Resources Act, R.S.O. 1990. Aggregate site data has been divided into active and inactive sites. Active sites may be further subdivided into partial surrenders. In partial surrenders, defined areas of a site are inactive while the rest of the site remains active.

Government Publication Date: Up to Nov 2024

Abandoned Mine Information System: Provincial AMIS

The Abandoned Mines Information System contains data on known abandoned and inactive mines located on both Crown and privately held lands. The information was provided by the Ministry of Northern Development and Mines (MNDM), with the following disclaimer: "the database provided has been compiled from various sources, and the Ministry of Northern Development and Mines makes no representation and takes no responsibility that such information is accurate, current or complete". Reported information includes official mine name, status, background information, mine start/end date, primary commodity, mine features, hazards and remediation.

Government Publication Date: 1800-Apr 2024

Anderson's Waste Disposal Sites: Private ANDR

The information provided in this database was collected by examining various historical documents which aimed to characterize the likely position of former waste disposal sites from 1860 to present. The research initiative behind the creation of this database was to identify those sites that are missing from the Ontario MOE Waste Disposal Site Inventory, as well as to provide revisions and corrections to the positions and descriptions of sites currently listed in the MOE inventory. In addition to historic waste disposal facilities, the database also identifies certain auto wreckers and scrap yards that have been extrapolated from documentary sources. Please note that the data is not warranted to be complete, exhaustive or authoritative. The information was collected for research purposes only.

Government Publication Date: 1860s-Present

Aboveground Storage Tanks: Provincial AST

Historical listing of aboveground storage tanks made available by the Department of Natural Resources and Forestry. Includes tanks used to hold water or petroleum. This dataset has been retired as of September 25, 2014 and will no longer be updated.

Government Publication Date: May 31, 2014

Automobile Wrecking & Supplies: Private AUWR

This database provides an inventory of known locations that are involved in the scrap metal, automobile wrecking/recycling, and automobile parts & supplies industry. Information is provided on the company name, location and business type.

Government Publication Date: 1999-Apr 30, 2024

Borehole: Provincial BORE

A borehole is the generalized term for any narrow shaft drilled in the ground, either vertically or horizontally. The information here includes geotechnical investigations or environmental site assessments, mineral exploration, or as a pilot hole for installing piers or underground utilities. Information is from many sources such as the Ministry of Transportation (MTO) boreholes from engineering reports and projects from the 1950 to 1990's in Southern Ontario. Boreholes from the Ontario Geological Survey (OGS) including The Urban Geology Analysis Information System (UGAIS) and the York Peel Durham Toronto (YPDT) database of the Conservation Authority Moraine Coalition. This database will include fields such as location, stratigraphy, depth, elevation, year drilled, etc. For all water well data or oil and gas well data for Ontario please refer to WWIS and OOGW.

Government Publication Date: 1875-Jul 2018

Certificates of Approval: Provincial CA

This database contains the following types of approvals: Air & Noise, Industrial Sewage, Municipal & Private Sewage, Waste Management Systems and Renewable Energy Approvals. The MOE in Ontario states that any facility that releases emissions to the atmosphere, discharges contaminants to ground or surface water, provides potable water supplies, or stores, transports or disposes of waste, must have a Certificate of Approval before it can operate lawfully. Fields include approval number, business name, address, approval date, approval type and status. This database will no longer be updated, as CofA's have been replaced by either Environmental Activity and Sector Registry (EASR) or Environmental Compliance Approval (ECA). Please refer to those individual databases for any information after Oct.31, 2011.

Government Publication Date: 1985-Oct 30, 2011*

Dry Cleaning Facilities: Federal CDRY

List of dry cleaning facilities made available by Environment and Climate Change Canada. Environment and Climate Change Canada's Tetrachloroethylene (Use in Dry Cleaning and Reporting Requirements) Regulations (SOR/2003-79) are intended to reduce releases of tetrachloroethylene to the environment from dry cleaning facilities.

Government Publication Date: Jan 2004-Dec 2022

Commercial Fuel Oil Tanks: Provincial CFOT

Locations of commercial underground fuel oil tanks. This is not a comprehensive or complete inventory of commercial fuel tanks in the province; this listing is a copy of records of registered commercial underground fuel oil tanks obtained under Access to Public Information.
Note that the following types of tanks do not require registration: waste oil tanks in apartments, office buildings, residences, etc.; aboveground gas or diesel tanks. Records are not verified for accuracy or completeness.

Government Publication Date: Oct 2023

Chemical Manufacturers and Distributors: Private CHEM

This database includes information from both a one time study conducted in 1992 and private source and is a listing of facilities that manufacture or distribute chemicals. The production of these chemical substances may involve one or more chemical reactions and/or chemical separation processes (i.e. fractionation, solvent extraction, crystallization, etc.).

Government Publication Date: 1999-Jan 31, 2020

Chemical Register: Private CHM

This database includes a listing of locations of facilities within the Province or Territory that either manufacture and/or distributes chemicals.

Government Publication Date: 1999-Apr 30, 2024

Compressed Natural Gas Stations: Private CNG

Canada has a network of public access compressed natural gas (CNG) refuelling stations. These stations dispense natural gas in compressed form at 3,000 pounds per square inch (psi), the pressure which is allowed within the current Canadian codes and standards. The majority of natural gas refuelling is located at existing retail gasoline that have a separate refuelling island for natural gas. This list of stations is made available by the Canadian Natural Gas Vehicle Alliance.

Government Publication Date: Dec 2012 -Feb 2025

Inventory of Coal Gasification Plants and Coal Tar Sites: Provincial COAL

This inventory includes both the "Inventory of Coal Gasification Plant Waste Sites in Ontario-April 1987" and the Inventory of Industrial Sites Producing or Using Coal Tar and Related Tars in Ontario-November 1988) collected by the MOE. It identifies industrial sites that produced and continue to produce or use coal tar and other related tars. Detailed information is available and includes: facility type, size, land use, information on adjoining properties, soil condition, site operators/occupants, site description, potential environmental impacts and historic maps available. This was a one-time inventory.*

Government Publication Date: Apr 1987 and Nov 1988*

Compliance and Convictions: Provincial CONV

This database summarizes the fines and convictions handed down by the Ontario courts beginning in 1989. Companies and individuals named here have been found guilty of environmental offenses in Ontario courts of law.

Government Publication Date: 1989-Mar 2025

Certificates of Property Use: Provincial CPU

This is a subset taken from Ontario's Environmental Registry (EBR) database. It will include CPU's on the registry such as (EPA s. 168.6) - Certificate of Property Use.

Government Publication Date: 1994 - Feb 28, 2025

Drill Hole Database: Provincial DRL

The Ontario Drill Hole Database (ODHD) is offered by the Province of Ontario's Ministry of Mines. The dataset contains information for over 164,000 percussion, overburden, sonic and diamond-drill holes. The presence of assay results with cutoff values for gold, silver, copper, zinc, lead, nickel and platinum group elements is noted. Drill hole data are compiled from assessment files that have been submitted to the ministry in accordance with the Ontario Mining Act (OMA). Source assessment file numbers are captured for cross reference with the Ontario Assessment File Database (OAFD). Please note that limited data is available for southern Ontario, as it was the last area to be completed. The database was created when surveys submitted to the Ministry were converted in the Assessment File Research Image Database (AFRI) project. However, the degree of accuracy (coordinates) as to the exact location of drill holes is dependent upon the source document submitted. Levels of accuracy used to locate holes are: centering on the mining claim; a sketch of the mining claim; a 1:50,000 map; a detailed company map; or from submitted a "Report of Work".

Government Publication Date: 1886 - Aug 2024

Delisted Fuel Tanks: Provincial DTNK

List of fuel storage tank sites that were once found in - and have since been removed from - the list of fuel storage tanks made available by the regulatory agency under Access to Public Information.

Government Publication Date: Oct 2023

Environmental Activity and Sector Registry: Provincial EASR

On October 31, 2011, a smarter, faster environmental approvals system came into effect in Ontario. The EASR allows businesses to register certain activities with the ministry, rather than apply for an approval. The registry is available for common systems and processes, to which preset rules of operation can be applied. The EASR is currently available for: heating systems, standby power systems and automotive refinishing. Businesses whose activities aren't subject to the EASR may apply for an ECA (Environmental Compliance Approval), Please see our ECA database.

Government Publication Date: Oct 2011-Mar 31, 2025

Environmental Registry: Provincial EBR

The Environmental Registry lists proposals, decisions and exceptions regarding policies, Acts, instruments, or regulations that could significantly affect the environment. Through the Registry, thirteen provincial ministries notify the public of upcoming proposals and invite their comments. For example, if a local business is requesting a permit, license, or certificate of approval to release substances into the air or water; these are notified on the registry. Data includes: Approval for discharge into the natural environment other than water (i.e. Air) - EPA s. 9, Approval for sewage works - OWRA s. 53(1), and EPA s. 27 - Approval for a waste disposal site. For information regarding Permit to Take Water (PTTW), Certificate of Property Use (CPU) and (ORD) Orders please refer to those individual databases.

Government Publication Date: 1994 - Feb 28, 2025

Environmental Compliance Approval: Provincial ECA

On October 31, 2011, a smarter, faster environmental approvals system came into effect in Ontario. In the past, a business had to apply for multiple approvals (known as certificates of approval) for individual processes and pieces of equipment. Today, a business either registers itself, or applies for a single approval, depending on the types of activities it conducts. Businesses whose activities aren't subject to the EASR may apply for an ECA. A single ECA addresses all of a business's emissions, discharges and wastes. Separate approvals for air, noise and waste are no longer required. This database will also include Renewable Energy Approvals. For certificates of approval prior to Nov 1st, 2011, please refer to the CA database. For all Waste Disposal Sites please refer to the WDS database.

Government Publication Date: Oct 2011-Mar 31, 2025

Environmental Effects Monitoring: Federal EEM

The Environmental Effects Monitoring program assesses the effects of effluent from industrial or other sources on fish, fish habitat and human usage of fisheries resources. Since 1992, pulp and paper mills have been required to conduct EEM studies under the Pulp and Paper Effluent Regulations. This database provides information on the mill name, geographical location and sub-lethal toxicity data.

Government Publication Date: 1992-2007*

ERIS Historical Searches: Private EHS

ERIS has compiled a database of all environmental risk reports completed since March 1999. Available fields for this database include: site location, date of report, type of report, and search radius. As per all other databases, the ERIS database can be referenced on both the map and "Statistical Profile" page.

Government Publication Date: 1999-Aug 31, 2024

Environmental Issues Inventory System: Federal EIIS

The Environmental Issues Inventory System was developed through the implementation of the Environmental Issues and Remediation Plan. This plan was established to determine the location and severity of contaminated sites on inhabited First Nation reserves, and where necessary, to remediate those that posed a risk to health and safety; and to prevent future environmental problems. The EIIS provides information on the reserve under investigation, inventory number, name of site, environmental issue, site action (Remediation, Site Assessment), and date investigation completed.

Government Publication Date: 1992-2001*

Emergency Management Historical Event: Provincial EMHE

List of locations of historical occurrences of emergency events, including those assigned to the Ministry of Natural Resources by Order-In-Council (OIC) under the Emergency Management and Civil Protection Act, as well as events where MNR provided requested emergency response assistance. Many of these events will have involved community evacuations, significant structural loss, and/or involvement of MNR emergency response staff. These events fall into one of ten (10) type categories: Dam Failure; Drought / Low Water; Erosion; Flood; Forest Fire; Soil and Bedrock Instability; Petroleum Resource Center Event, EMO Requested Assistance, Continuity of Operations Event, Other Requested Assistance. EMHE record details are reproduced by ERIS under License with the Ontario Ministry of Natural Resources © Queen's Printer for Ontario, 2017.

Government Publication Date: Apr 30, 2022

Environmental Penalty Annual Report: Provincial EPAR

This database contains data from Ontario's annual environmental penalty report published by the Ministry of the Environment, Conservation and Parks (MECP). These reports provide information on environmental penalties for land or water violations issued to companies in one of the nine industrial sectors covered by the Municipal Industrial Strategy for Abatement (MISA) regulations.

Government Publication Date: Jan 1, 2011 - Dec 31, 2024

List of Expired Fuels Safety Facilities: Provincial EXP

List of facilities and tanks for which there was once a fuel registration. This is not a comprehensive or complete inventory of expired tanks/tank facilities in the province; this listing is a copy of previously registered tanks and facilities obtained under Access to Public Information. Includes private fuel outlets, bulk plants, fuel oil tanks, gasoline stations, marinas, propane filling stations, liquid fuel tanks, piping systems, etc; includes tanks which have been removed from the ground.
Notes: registration was not required for private fuel underground/aboveground storage tanks prior to January 1990, nor for furnace oil tanks prior to May 1, 2002; registration is not required for waste oil tanks in apartments, office buildings, residences, etc., or aboveground gas or diesel tanks. Records are not verified for accuracy or completeness.

Government Publication Date: Oct 2023

Federal Convictions: Federal FCON

Environment Canada maintains a database referred to as the "Environmental Registry" that details prosecutions under the Canadian Environmental Protection Act (CEPA) and the Fisheries Act (FA). Information is provided on the company name, location, charge date, offence and penalty.

Government Publication Date: 1988-Jun 2007*

Contaminated Sites on Federal Land: Federal FCS

The Federal Contaminated Sites Inventory includes information on known federal contaminated sites under the custodianship of departments, agencies and consolidated Crown corporations as well as those that are being or have been investigated to determine whether they have contamination arising from past use that could pose a risk to human health or the environment. The inventory also includes non-federal contaminated sites for which the Government of Canada has accepted some or all financial responsibility. It does not include sites where contamination has been caused by, and which are under the control of, enterprise Crown corporations, private individuals, firms or other levels of government. Includes fire training sites and sites at which Per- and Polyfluoroalkyl Substances (PFAS) are a concern.

Government Publication Date: Jun 2000-Jan 2025

Fisheries & Oceans Fuel Tanks: Federal FOFT

Fisheries & Oceans Canada maintains an inventory of aboveground & underground fuel storage tanks located on Fisheries & Oceans property or controlled by DFO. Our inventory provides information on the site name, location, tank owner, tank operator, facility type, storage tank location, tank contents & capacity, and date of tank installation.

Government Publication Date: 1964-Sep 2019

Federal Identification Registry for Storage Tank Systems (FIRSTS): Federal FRST

A list of federally regulated Storage tanks from the Federal Identification Registry for Storage Tank Systems (FIRSTS). FIRSTS is Environment and Climate Change Canada's database of storage tank systems subject to the Storage Tank for Petroleum Products and Allied Petroleum Products Regulations. The main objective of the Regulations is to prevent soil and groundwater contamination from storage tank systems located on federal and aboriginal lands. Storage tank systems that do not have a valid identification number displayed in a readily visible location on or near the storage tank system may be refused product delivery.

Government Publication Date: Oct 31, 2021

Fuel Storage Tank: Provincial FST

List of registered private and retail fuel storage tanks. This is not a comprehensive or complete inventory of private and retail fuel storage tanks in the province; this listing is a copy of registered private and retail fuel storage tanks, obtained under Access to Public Information.
Notes: registration was not required for private fuel underground/aboveground storage tanks prior to January 1990, nor for furnace oil tanks prior to May 1, 2002; registration is not required for waste oil tanks in apartments, office buildings, residences, etc., or aboveground gas or diesel tanks. Records are not verified for accuracy or completeness.

Government Publication Date: Oct 2023

Fuel Storage Tank - Historic: Provincial FSTH

The Fuels Safety Branch of the Ontario Ministry of Consumer and Commercial Relations maintained a database of all registered private fuel storage tanks. Public records of private fuel storage tanks are only available since the registration became effective in September 1989. This information is now collected by the Technical Standards and Safety Authority.

Government Publication Date: Pre-Jan 2010*

Ontario Regulation 347 Waste Generators Summary: Provincial GEN

Regulation 347 of the Ontario EPA defines a waste generation site as any site, equipment and/or operation involved in the production, collection, handling and/or storage of regulated wastes. A generator of regulated waste is required to register the waste generation site and each waste produced, collected, handled, or stored at the site. This database contains the registration number, company name and address of registered generators including the types of hazardous wastes generated. It includes data on waste generating facilities such as: drycleaners, waste treatment and disposal facilities, machine shops, electric power distribution etc. This information is a summary of all years from 1986 including the most currently available data. As of January 1, 2023, businesses and institutions subject to the amended Reg. 347: General – Waste Management are required to report their activities and pay fees through Resource Productivity & Recovery Authority (RPRA) online Hazardous Waste Program Registry (HWPR) rather than the Hazardous Waste Information Network (HWIN) system previously operated by the Ministry of the Environment, Conservation and Parks (MECP). Some records may contain, within the company name, the phrase "See & Use..." followed by a series of letters and numbers. This occurs when one company is amalgamated with or taken over by another registered company. The number listed as "See & Use", refers to the new ownership and the other identification number refers to the original ownership. This phrase serves as a link between the 2 companies until operations have been fully transferred.

Government Publication Date: 1986-Jun 30, 2024

Greenhouse Gas Emissions from Large Facilities: Federal GHG

List of greenhouse gas emissions from large facilities made available by Environment Canada. Greenhouse gas emissions in kilotonnes of carbon dioxide equivalents (kt CO2 eq).

Government Publication Date: 2013-Apr 2024

TSSA Historic Incidents: Provincial HINC

List of historic incidences of spills and leaks of diesel, fuel oil, gasoline, natural gas, propane, and hydrogen recorded by the TSSA in their previous incident tracking system. The TSSA's Fuels Safety Program administers the Technical Standards & Safety Act 2000, providing fuel-related safety services associated with the safe transportation, storage, handling and use of fuels such as gasoline, diesel, propane, natural gas and hydrogen. Under this Act, the TSSA regulates fuel suppliers, storage facilities, transport trucks, pipelines, contractors and equipment or appliances that use fuels. Records are not verified for accuracy or completeness. This is not a comprehensive or complete inventory of historical fuel spills and leaks in the province. This listing is a copy of the data captured at one moment in time and is hence limited by the record date provided here.

Government Publication Date: 2006-June 2009*

Indian & Northern Affairs Fuel Tanks: Federal IAFT

The Department of Indian & Northern Affairs Canada (INAC) maintains an inventory of aboveground & underground fuel storage tanks located on both federal and crown land. Our inventory provides information on the reserve name, location, facility type, site/facility name, tank type, material & ID number, tank contents & capacity, and date of tank installation.

Government Publication Date: 1950-Aug 2003*

Fuel Oil Spills and Leaks: Provincial INC

Listing of spills and leaks of diesel, fuel oil, gasoline, natural gas, propane, and hydrogen reported to the Spills Action Centre (SAC). This is not a comprehensive or complete inventory of fuel-related leaks, spills, and incidents in the province; this listing in a copy of incidents reported to the SAC, obtained under Access to Public Information. Includes incidents from fuel-related hazards such as spills, fires, and explosions. Records are not verified for accuracy or completeness.

Government Publication Date: 31 Oct, 2023

Landfill Inventory Management Ontario: Provincial LIMO

The Landfill Inventory Management Ontario (LIMO) database is updated every year, as the Ministry of the Environment, Conservation and Parks compiles new and updated information. Includes small and large landfills currently operating as well as those which are closed and historic. Operators of larger landfills provide landfill information for the previous operating year to the ministry for LIMO including: estimated amount of total waste received, landfill capacity, estimated total remaining landfill capacity, fill rates, engineering designs, reporting and monitoring details, size of location, service area, approved waste types, leachate of site treatment, contaminant attenuation zone and more. The small landfills include information such as site owner, site location and certificate of approval # and status.

Government Publication Date: Mar 31, 2022

Canadian Mine Locations: Private MINE

This information is collected from the Canadian & American Mines Handbook. The Mines database is a national database that provides over 290 listings on mines (listed as public companies) dealing primarily with precious metals and hard rocks. Listed are mines that are currently in operation, closed, suspended, or are still being developed (advanced projects). Their locations are provided as geographic coordinates (x, y and/or longitude, latitude). As of 2002, data pertaining to Canadian smelters and refineries has been appended to this database.

Government Publication Date: 1998-2009*

Mineral Occurrences: Provincial MNR

In the early 70's, the Ministry of Northern Development and Mines created an inventory of approximately 19,000 mineral occurrences in Ontario, in regard to metallic and industrial minerals, as well as some information on building stones and aggregate deposits. Please note that the "Horizontal Positional Accuracy" is approximately +/- 200 m. Many reference elements for each record were derived from field sketches using pace or chain/tape measurements against claim posts or topographic features in the area. The primary limiting factor for the level of positional accuracy is the scale of the source material. The testing of horizontal accuracy of the source materials was accomplished by comparing the plan metric (X and Y) coordinates of that point with the coordinates of the same point as defined from a source of higher accuracy.

Government Publication Date: 1846-Feb 2025

National Analysis of Trends in Emergencies System (NATES): Federal NATE

In 1974 Environment Canada established the National Analysis of Trends in Emergencies System (NATES) database, for the voluntary reporting of significant spill incidents. The data was to be used to assist in directing the work of the emergencies program. NATES ran from 1974 to 1994. Extensive information is available within this database including company names, place where the spill occurred, date of spill, cause, reason and source of spill, damage incurred, and amount, concentration, and volume of materials released.

Government Publication Date: 1974-1994*

Non-Compliance Reports: Provincial NCPL

The Ministry of the Environment Conservation and Parks (MECP) provides information about non-compliant discharges of contaminants to air and water that exceed legal allowable limits, from regulated industrial and municipal facilities. A reported non-compliance failure may be in regard to a Control Order, Certificate of Approval, Sectoral Regulation or specific regulation/act. MECP publicly releases the Environmental Compliance Report (ECR) on the Ontario Data Catalogue. In Ontario, all facilities with regulated wastewater discharges or air emissions under the Ontario Water Resources Act and the Environmental Protection Act must monitor and report any cases where approved operating limits have been exceeded.

Government Publication Date: Dec 31, 2023

National Defense & Canadian Forces Fuel Tanks: Federal NDFT

The Department of National Defense and the Canadian Forces maintains an inventory of all aboveground & underground fuel storage tanks located on DND lands. Our inventory provides information on the base name, location, tank type & capacity, tank contents, tank class, date of tank installation, date tank last used, and status of tank as of May 2001. This database will no longer be updated due to the new National Security protocols which have prohibited any release of this database.

Government Publication Date: Up to May 2001*

National Defense & Canadian Forces Spills: Federal NDSP

The Department of National Defense and the Canadian Forces maintains an inventory of spills to land and water. All spill sites have been classified under the "Transportation of Dangerous Goods Act - 1992". Our inventory provides information on the facility name, location, spill ID #, spill date, type of spill, as well as the quantity of substance spilled & recovered.

Government Publication Date: Mar 1999-Nov 2023

National Defence & Canadian Forces Waste Disposal Sites: Federal NDWD

The Department of National Defence and the Canadian Forces maintains an inventory of waste disposal sites located on DND lands. Where available, our inventory provides information on the base name, location, type of waste received, area of site, depth of site, year site opened/closed and status.

Government Publication Date: 2001-Apr 2007*

National Energy Board Pipeline Incidents: Federal NEBI

Locations of pipeline incidents from 2008 to present, made available by the Canada Energy Regulator (CER) - previously the National Energy Board (NEB). Includes incidents reported under the Onshore Pipeline Regulations and the Processing Plant Regulations related to pipelines under federal jurisdiction, does not include incident data related to pipelines under provincial or territorial jurisdiction.

Government Publication Date: 2008-Dec 31, 2024

National Energy Board Wells: Federal NEBP

The NEBW database contains information on onshore & offshore oil and gas wells that are outside provincial jurisdiction(s) and are thereby regulated by the National Energy Board. Data is provided regarding the operator, well name, well ID No./UWI, status, classification, well depth, spud and release date.

Government Publication Date: 1920-Feb 2003*

National Environmental Emergencies System (NEES): Federal NEES

In 2000, the Emergencies program implemented NEES, a reporting system for spills of hazardous substances. For the most part, this system only captured data from the Atlantic Provinces, some from Quebec and Ontario and a portion from British Columbia. Data for Alberta, Saskatchewan, Manitoba and the Territories was not captured. However, NEES is also a repository for previous Environment Canada spill datasets. NEES is composed of the historic datasets ' or Trends ' which dates from approximately 1974 to present. NEES Trends is a compilation of historic databases, which were merged and includes data from NATES (National Analysis of Trends in Emergencies System), ARTS (Atlantic Regional Trends System), and NEES. In 2001, the Emergencies Program determined that variations in reporting regimes and requirements between federal and provincial agencies made national spill reporting and trend analysis difficult to achieve. As a consequence, the department has focused efforts on capturing data on spills of substances which fall under its legislative authority only (CEPA and FA). As such, the NEES database will be decommissioned in December 2004.

Government Publication Date: 1974-2003*

National PCB Inventory: Federal NPCB

Environment Canada's National PCB inventory includes information on in-use PCB containing equipment in Canada including federal, provincial and private facilities. Federal out-of-service PCB containing equipment and PCB waste owned by the federal government or by federally regulated industries such as airlines, railway companies, broadcasting companies, telephone and telecommunications companies, pipeline companies, etc. are also listed. Although it is not Environment Canada's mandate to collect data on non-federal PCB waste, the National PCB inventory includes some information on provincial and private PCB waste and storage sites. Some addresses provided may be Head Office addresses and are not necessarily the location of where the waste is being used or stored.

Government Publication Date: 1988-2008*

National Pollutant Release Inventory: Federal NPR2

The National Pollutant Release Inventory (NPRI) is Canada's public inventory of pollutant releases (to air, water and land), disposals, and transfers for recycling. The inventory, managed by Environment and Climate Change Canada, tracks over 300 substances. Under the authority of the Canadian Environmental Protection Act (CEPA), owners or operators of facilities that meet published reporting requirements are required to report to the NPRI.

Government Publication Date: Feb 2024

National Pollutant Release Inventory - Historic: Federal NPRI

Environment Canada has defined the National Pollutant Release Inventory ("NPRI") as a federal government initiative designed to collect comprehensive national data regarding releases to air, water, or land, and waste transfers for recycling for more than 300 listed substances. This data holds historic records; current records are found in NPR2.

Government Publication Date: 1993-May 2017

Oil and Gas Wells: Private OGWE

The Nickle's Energy Group (publisher of the Daily Oil Bulletin) collects information on drilling activity including operator and well statistics. The well information database includes name, location, class, status and depth. The main Nickle's database is updated on a daily basis, however, this database is updated on a monthly basis. More information is available at www.nickles.com.

Government Publication Date: 1988-May 31, 2024

Ontario Oil and Gas Wells: Provincial OOGW

In 1998, the Ministry of Natural Resources (MNR) handed over to the Ontario Oil, Gas and Salt Resources (OGSR) Corporation, the responsibility of maintaining a database of oil and gas wells drilled in Ontario. The OGSR Library has over 20,000+ wells in their database. Information available for all wells in the ERIS database includes well owner/operator, location, permit issue date, and well cap date, license number, status, depth and the primary target (rock unit) of the well being drilled. All geology/stratigraphy table information, plus all water table information is also provided for each well record.

Government Publication Date: 1800-Aug 2024

Inventory of PCB Storage Sites: Provincial OPCB

The Ontario Ministry of Environment, Waste Management Branch, maintains an inventory of PCB storage sites within the province. Ontario Regulation 11/82 (Waste Management - PCB) and Regulation 347 (Generator Waste Management) under the Ontario EPA requires the registration of inactive PCB storage equipment and/or disposal sites of PCB waste with the Ontario Ministry of Environment. This database contains information on: 1) waste quantities; 2) major and minor sites storing liquid or solid waste; and 3) a waste storage inventory.

Government Publication Date: 1987-Oct 2004; 2012-Dec 2013

Orders: Provincial ORD

This is a subset taken from Ontario's Environmental Registry (EBR) database. It will include Orders on the registry such as (EPA s. 17) - Order for remedial work, (EPA s. 18) - Order for preventative measures, (EPA s. 43) - Order for removal of waste and restoration of site, (EPA s. 44) - Order for conformity with Act for waste disposal sites, (EPA s. 136) - Order for performance of environmental measures.

Government Publication Date: 1994 - Feb 28, 2025

Canadian Pulp and Paper: Private PAP

This information is part of the Pulp and Paper Canada Directory. The Directory provides a comprehensive listing of the locations of pulp and paper mills and the products that they produce.

Government Publication Date: 1999, 2002, 2004, 2005, 2009-2014

Parks Canada Fuel Storage Tanks: Federal PCFT

Canadian Heritage maintains an inventory of known fuel storage tanks operated by Parks Canada, in both National Parks and at National Historic Sites. The database details information on site name, location, tank install/removal date, capacity, fuel type, facility type, tank design and owner/operator.

Government Publication Date: 1920-Jan 2005*

Pesticide Register: Provincial PES

The Ontario Ministry of the Environment and Climate Change maintains a database of licensed operators and vendors of registered pesticides.

Government Publication Date: Oct 2011-Mar 31, 2025

Ontario PFAS Spills: Provincial PFAS

This specific list of spills includes those incidents where one or more of the listed contaminants are identified in the PFAS Structure List and/or PFAS Chemicals Without Explicit Structure List made available by the United States Environmental Protection Agency (US EPA), is originally sourced from the Ministry of the Environment, Conservation and Parks spills related data. Information from 1988-2002 was part of the ORIS (Occurrence Reporting Information System). The SAC (Spills Action Centre) handles all spills reported in Ontario. Regulations for spills in Ontario are part of the MOE's Environmental Protection Act, Part X.

Government Publication Date: 1988-Jun 2024; Aug 2024; Oct-Nov 2024

NPRI Reporters - PFAS Substances: Federal PFCH

The National Pollutant Release Inventory (NPRI) is Canada's public inventory of releases, disposals, and transfers, tracking over 320 pollutants. Per - and polyfluoroalkyl substances (PFAS) are a group of over 4,700 human-made substances for which adverse environmental and health effects have been observed. This listing of PFAS substance reporters includes those NPRI facilities that reported substances that are found in either: a) the Comprehensive Global Database of PFASs compiled by the Organisation for Economic Co-operation and Development (OECD), b) the US Environmental Protection Agency (US EPA) Master List of PFAS Substances, c) the US EPA list of PFAS chemicals without explicit structures, or d) the US EPA list of PFAS structures (encompassing the largest set of structures having sufficient levels of fluorination to potentially impart PFAS-type properties).

Government Publication Date: Feb 2024

Potential PFAS Handlers from NPRI: Federal PFHA

The National Pollutant Release Inventory (NPRI) is Canada's public inventory of releases, disposals, and transfers, tracking over 320 pollutants. Per - and polyfluoroalkyl substances (PFAS) are a group of over 4,700 human-made substances for which adverse environmental and health effects have been observed. This list of potential PFAS handlers includes those NPRI facilities that reported business activity (NAICS code) included in the US Environmental Protection Agency (US EPA) list of Potential PFAS-Handling Industry Sectors, further described as operating in industry sectors where literature reviews indicate that PFAS may be handled and/or released. Inclusion of a facility in this listing does not indicate that PFAS are being manufactured, processed, used, or released by the facility - these are facilities that potentially handle PFAS based on their industrial profile.

Government Publication Date: Feb 2024

Pipeline Incidents: Provincial PINC

List of pipeline incidents (strikes, leaks, spills). This is not a comprehensive or complete inventory of pipeline incidents in the province; this listing in an historical copy of records previously obtained under Access to Public Information. Records are not verified for accuracy or completeness.

Government Publication Date: Feb 28, 2021

Potential PFAS Handlers from EASR: Provincial PPHA

The Ontario Environmental Activity and Sector Registry (EASR), described in Ontario Regulation 245/11, allows businesses with less complex operations - and hence not requiring an Environmental Compliance Approval - to register their activities with the Ontario Ministry of the Environment, Conservation and Parks (MECP). This list of potential PFAS handlers includes those EASR facilities that reported business activity (NAICS code) included in the US Environmental Protection Agency (US EPA) list of Potential PFAS-Handling Industry Sectors, further described as operating in industry sectors where literature reviews indicate that PFAS may be handled and/or released. Inclusion of a facility in this listing does not indicate that PFAS are being manufactured, processed, used.

Government Publication Date: Jun 30, 2024

Private and Retail Fuel Storage Tanks: Provincial PRT

The Fuels Safety Branch of the Ontario Ministry of Consumer and Commercial Relations maintained a database of all registered private fuel storage tanks and licensed retail fuel outlets. This database includes an inventory of locations that have gasoline, oil, waste oil, natural gas and/or propane storage tanks on their property. The MCCR no longer collects this information. This information is now collected by the Technical Standards and Safety Authority (TSSA).

Government Publication Date: 1989-1996*

Permit to Take Water: Provincial PTTW

This is a subset taken from Ontario's Environmental Registry (EBR) database. It will include PTTW's on the registry such as OWRA s. 34 - Permit to take water.

Government Publication Date: 1994 - Feb 28, 2025

Ontario Regulation 347 Waste Receivers Summary: Provincial REC

Part V of the Ontario Environmental Protection Act ("EPA") regulates the disposal of regulated waste through an operating waste management system or a waste disposal site operated or used pursuant to the terms and conditions of a Certificate of Approval or a Provisional Certificate of Approval. Regulation 347 of the Ontario EPA defines a waste receiving site as any site or facility to which waste is transferred by a waste carrier. A receiver of regulated waste is required to register the waste receiving facility. This database represents registered receivers of regulated wastes, identified by registration number, company name and address, and includes receivers of waste such as: landfills, incinerators, transfer stations, PCB storage sites, sludge farms and water pollution control plants. This information is a summary of all years from 1986 including the most currently available data.

Government Publication Date: 1986-1990, 1992-2021

Record of Site Condition: Provincial RSC

The Record of Site Condition (RSC) is part of the Ministry of the Environment's Brownfields Environmental Site Registry. Protection from environmental cleanup orders for property owners is contingent upon documentation known as a record of site condition (RSC) being filed in the Environmental Site Registry. In order to file an RSC, the property must have been properly assessed and shown to meet the soil, sediment and groundwater standards appropriate for the use (such as residential) proposed to take place on the property. The Record of Site Condition Regulation (O. Reg. 153/04) details requirements related to site assessment and clean up. RSCs filed after July 1, 2011 will also be included as part of the new (O.Reg. 511/09). The Government of Ontario states that it is not responsible for the accuracy of the information in this Registry.

Government Publication Date: 1997-Sept 2001, Oct 2004-Mar 2025

Retail Fuel Storage Tanks: Private RST

This database includes an inventory of retail fuel outlet locations (including marinas) that have on their property gasoline, oil, waste oil, natural gas and / or propane storage tanks.

Government Publication Date: 1999-Apr 30, 2024

Scott's Manufacturing Directory: Private SCT

Scott's Directories is a data bank containing information on over 200,000 manufacturers across Canada. Even though Scott's listings are voluntary, it is the most comprehensive database of Canadian manufacturers available. Information concerning a company's address, plant size, and main products are included in this database.

Government Publication Date: 1992-Mar 2011*

Ontario Spills: Provincial SPL

List of spills and incidents made available by the Ministry of the Environment, Conservation and Parks. This database identifies information such as location (approximate), type and quantity of contaminant, date of spill, environmental impact, cause, nature of impact, etc. Information from 1988-2002 was part of the ORIS (Occurrence Reporting Information System). The SAC (Spills Action Centre) handles all spills reported in Ontario. Regulations for spills in Ontario are part of the MOE's Environmental Protection Act, Part X.

Government Publication Date: 1988-Jun 2024; Aug-Jan 2025

Wastewater Discharger Registration Database: Provincial SRDS

Facilities that report either municipal treated wastewater effluent or industrial wastewater discharges under the Effluent Monitoring and Effluent Limits (EMEL) and Municipal/Industrial Strategy for Abatement Regulations. The Municipal/Industrial Strategy for Abatement (MISA) division of the Ontario Ministry of Environment keeps record of direct dischargers of toxic pollutants within nine sectors including: Electric Power Generation, Mining, Petroleum Refining, Organic Chemicals, Inorganic Chemicals, Pulp & Paper, Metal Casting, Iron & Steel, and Quarries.

Government Publication Date: 1990-Dec 31, 2021

Anderson's Storage Tanks: Private TANK

The information provided in this database was collected by examining various historical documents, which identified the location of former storage tanks, containing substances such as fuel, water, gas, oil, and other various types of miscellaneous products. Information is available in regard to business operating at tank site, tank location, permit year, permit & installation type, no. of tanks installed & configuration and tank capacity. Data contained within this database pertains only to the city of Toronto and is not warranted to be complete, exhaustive or authoritative. The information was collected for research purposes only.

Government Publication Date: 1915-1953*

Transport Canada Fuel Storage Tanks: Federal TCFT

List of fuel storage tanks currently or previously owned or operated by Transport Canada. This inventory also includes tanks on The Pickering Lands, which refers to 7,530 hectares (18,600 acres) of land in Pickering, Markham, and Uxbridge owned by the Government of Canada since 1972; properties on this land has been leased by the government since 1975, and falls under the Site Management Policy of Transport Canada, but is administered by Public Works and Government Services Canada. This inventory provides information on the site name, location, tank age, capacity and fuel type.

Government Publication Date: 1970 - Apr 2024

Variances for Abandonment of Underground Storage Tanks: Provincial VAR

Listing of variances granted for storage tank abandonment. This is not a comprehensive or complete inventory of tank abandonment variances in the province; this listing is a copy of tank abandonment variance records previously obtained under Access to Public Information. In Ontario, registered underground storage tanks must be removed within two years of disuse; if removal of a tank is not feasible, an application may be sought for a variance from this code requirement.
Records are not verified for accuracy or completeness.

Government Publication Date: Feb 28, 2022

Waste Disposal Sites - MOE CA Inventory: Provincial WDS

The Ontario Ministry of Environment, Waste Management Branch, maintains an inventory of known open (active or inactive) and closed disposal sites in the Province of Ontario. Active sites maintain a Certificate of Approval, are approved to receive and are receiving waste. Inactive sites maintain Certificate(s) of Approval but are not receiving waste. Closed sites are not receiving waste. The data contained within this database was compiled from the MOE's Certificate of Approval database. Locations of these sites may be cross-referenced to the Anderson database described under ERIS's Private Source Database section, by the CA number. All new Environmental Compliance Approvals handed out after Oct 31, 2011 for Waste Disposal Sites will still be found in this database.

Government Publication Date: Oct 2011 - Mar 31, 2025

Waste Disposal Sites - MOE 1991 Historical Approval Inventory: Provincial WDSH

In June 1991, the Ontario Ministry of Environment, Waste Management Branch, published the "June 1991 Waste Disposal Site Inventory", of all known active and closed waste disposal sites as of October 30st, 1990. For each "active" site as of October 31st 1990, information is provided on site location, site/CA number, waste type, site status and site classification. For each "closed" site as of October 31st 1990, information is provided on site location, site/CA number, closure date and site classification. Locations of these sites may be cross-referenced to the Anderson database described under ERIS's Private Source Database section, by the CA number.

Government Publication Date: Up to Oct 1990*

Water Well Information System: Provincial WWIS

This database describes locations and characteristics of water wells found within Ontario in accordance with Regulation 903. It includes such information as coordinates, construction date, well depth, primary and secondary use, pump rate, static water level, well status, etc. Also included are detailed stratigraphy information, approximate depth to bedrock and the approximate depth to the water table.

Government Publication Date: Dec 31 2023

Definitions

Database Descriptions: This section provides a detailed explanation for each database including: source, information available, time coverage, and acronyms used. They are listed in alphabetic order.

Detail Report: This is the section of the report which provides the most detail for each individual record. Records are summarized by location, starting with the project property followed by records in closest proximity.

Distance: The distance value is the distance between plotted points, not necessarily the distance between the sites' boundaries. All values are an approximation.

Direction: The direction value is the compass direction of the site in respect to the project property and/or center point of the report.

Elevation: The elevation value is taken from the location at which the records for the site address have been plotted. All values are an approximation. Source: Google Elevation API.

Executive Summary: This portion of the report is divided into 3 sections:

'Report Summary'- Displays a chart indicating how many records fall on the project property and, within the report search radii.

'Site Report Summary'-Project Property'- This section lists all the records which fall on the project property. For more details, see the 'Detail Report' section.

'Site Report Summary-Surrounding Properties'- This section summarizes all records on adjacent properties, listing them in order of proximity from the project property. For more details, see the 'Detail Report' section.

Map Key: The map key number is assigned according to closest proximity from the project property. Map Key numbers always start at #1. The project property will always have a map key of '1' if records are available. If there is a number in brackets beside the main number, this will indicate the number of records on that specific property. If there is no number in brackets, there is only one record for that property.

The symbol and colour used indicates 'elevation': the red inverted triangle will dictate 'ERIS Sites with Lower Elevation', the yellow triangle will dictate 'ERIS Sites with Higher Elevation' and the orange square will dictate 'ERIS Sites with Same Elevation.'

Unplottables: These are records that could not be mapped due to various reasons, including limited geographic information. These records may or may not be in your study area, and are included as reference.

Terms and Conditions

Report

The documents (hereinafter referred to as the "Documents") to be released as part of the report (hereinafter referred to as the "Report") to be delivered to the purchaser as set out above are documents in Verisk's records relating to the described property (hereinafter referred to as the "Property"). Verisk makes no representations or warranties respecting the Documents whatsoever, including, without limitation, with respect to the completeness, accuracy or usefulness of the Documents, and does not represent or warrant that these are the only plans and reports prepared in association with the Property or in Verisk's possession at the time of Report delivery to the purchaser. The Documents are current as of the date(s) indicated on them. Interpretation of the Documents, if any, is by inference based upon the information which is apparent and obvious on the face of the Documents only. Verisk does not represent, warrant or guarantee that interpretations other than those referred to do not exist from other sources. The Report will be prepared for use by the purchaser of the services as shown above hereof only.

Disclaimer

Verisk disclaims responsibility for any losses or damages of any kind whatsoever, whether consequential or other, however caused, incurred or suffered, arising directly or indirectly as a result of the services (which services include, but are not limited to, the preparation of the Report provided hereunder), including but not limited to, any losses or damages arising directly or indirectly from any breach of contract, fundamental or otherwise, from reliance on Verisk Reports or from any tortious acts or omissions of Verisk's agents, employees or representatives.

Entire Agreement

The parties hereto acknowledge and agree to be bound by the terms and conditions hereof. The request form constitutes the entire agreement between the parties pertaining to the subject matter hereof and supersedes all prior and contemporaneous agreements, negotiations and discussions, whether oral or written, and there are no representations or warranties, or other agreements between the parties in connection with the subject matter hereof except as specifically set forth herein. No supplement, modification, waiver, or termination of the request shall be binding, unless confirmed in writing by the parties hereto.

Governing Document

In the event of any conflicts or inconsistencies between the provisions hereof and the Reports, the rights and obligations of the parties shall be deemed to be governed by the request form, which shall be the paramount document.

Law

This agreement shall be governed by and construed in accordance with the laws of the Province of Ontario and the laws of Canada applicable therein.

RE: CITY DIRECTORY RESEARCH
1900 Cyrville Rd
Ottawa,ON K1B 3V5

Thank you for contacting ERIS regarding our City Directory Search services. Our staff has conducted a reverse listing City Directory search to determine prior occupants of the subject site and adjacent properties. When searching a range of addresses, all civic addresses within that range found in the Directory are included.

Note: Reverse Listing Directories generally are focused on highly developed areas, while newly developed areas may be covered in the more recent years, older directories tend to cover only "central" parts of the city. To complete the search, we have either utilized the Toronto Reference Library, Library & Archives Canada and multiple digitized directories. While these do not claim to be a complete collection of all reverse listing city directories produced, ERIS has made every effort to provide accurate and complete information. ERIS shall not be held liable for missing, incomplete, or inaccurate information. If you believe there are additional addresses or streets that require searching, please contact us.

Search Criteria:

1750 - 1935 of Cyrville Road

1500 - 1750 of Innes Road
